THE ENCYCLOPAEDIA OF ISLAM

THE ENCYCLOPAEDIA OF ISLAM

NEW EDITION

PREPARED BY A NUMBER OF
LEADING ORIENTALISTS

EDITED BY

C.E. BOSWORTH, E. VAN DONZEL
W.P. HEINRICHS AND *the late* CH. PELLAT

ASSISTED BY F.TH. DIJKEMA (pp. 1-384), P.J. BEARMAN (pp. 385-1058) AND MME S. NURIT

UNDER THE PATRONAGE OF
THE INTERNATIONAL UNION OF ACADEMIES

VOLUME VII

MIF — NAZ

LEIDEN — NEW YORK
E.J. BRILL
1993

AUTHORS OF ARTICLES IN THIS VOLUME

For the benefit of readers who may wish to follow up an individual contributor's articles, the Editors have decided to list after each contributor's name the pages on which his signature appears. Academic but not other addresses are given (for a retired scholar, the place of his last known academic appointment).

In this list, names in square brackets are those of authors of articles reprinted or revised from the first edition of this Encyclopaedia or from the *Shorter Encyclopaedia of Islam.* An asterisk after the name of the author in the text denotes an article reprinted from the first edition which has been brought up to date by the Editorial Committee; where an article has been revised by a second author his name appears within square brackets after the name of the original author.

A. Abdesselem, University of Tunis. 437, 452
Feroz Ahmad, University of Massachusetts. 526
Hamid Algar, University of California, Berkeley. 763, 871, 934, 936, 937
M. Athar Ali, Aligarh Muslim University. 323, 574, 592, 600, 632
[J. Allan, London]. 133, 221
R.M.A. Allen, University of Pennsylvania, Philadelphia. 815
the late Joan Allgrove. 57
A. Amanat, Yale University. 1005
Edith G. Ambros, University of Vienna. 24, 840, 905, 917, 1054
P.A. Andrews, University of Cologne. 2, 140, 194, 354, 550
Sarah Ansari, Royal Holloway College. 356
A. Arazi, Hebrew University, Jerusalem. 540, 842, 843
A. Arioli, University of Rome. 581
M. Arkoun, University of Paris. 144
R. Arnaldez, University of Paris. 467
K͟halīl ʿAt͟hāmina, Birzeit University. 868
A. Ayalon, Tel Aviv University. 916
[F. Babinger, Munich]. 7, 35, 906, 1030, 1034
J.L. Bacharach, University of Washington, Seattle. 411
C. Bailey, Tel Aviv University. 921
M.A. Bakhit, University of Jordan, Amman. 463
Çiğdem Balim, University of Manchester. 1054
the late A.S. Bazmee Ansari. 446
[C.H. Becker, Berlin]. 152
[N.A. Bées, Athens]. 218
A.F.L. Beeston, Oxford. 705
M.A.J. Beg, University of Malaysia, Kuala Lumpur. 1029
[F. Béguinot]. 894, 895
Doris Behrens-Abouseif, Universities of Bamberg and Munich. 506, 511
J.E. Bencheikh, University of Paris. 103, 393, 404
[M. Bencheneb, Algiers]. 759, 824, 826
Marie Bernand, Centre National de la Recherche Scientifique, Paris. 257
[E. Berthels]. 439, 442, 478, 481, 557, 707, 864, 926, 975, 1006, 1047, 1053
[A. Beveridge]. 127, 557
Th. Bianquis, University of Lyon. 123, 652
J.R. Blackburn, University of Toronto. 270, 445, 720, 721, 762, 779, 780, 912, 996
[Tj. de Boer, Amsterdam]. 1034
C.E. Bosworth, University of Manchester. 21, 26, 35, 61, 93, 94, 115, 138, 145, 146, 188, 189, 192, 212, 218, 221, 258, 269, 273, 291, 327, 358, 390, 404, 407, 408, 413, 433, 439, 457, 477, 501, 507, 508, 542, 543, 557, 575, 580, 583, 602, 608, 628, 652, 653, 663, 664, 666, 671, 678, 679, 719, 723, 724, 754, 776, 777, 794, 799, 800, 801, 807, 822, 845, 861, 869, 898, 909, 918, 923, 926, 957, 960, 965, 966, 967, 984, 988, 1009, 1015, 1016, 1034, 1045, 1047, 1048, 1050
[H. Bowen, London]. 575, 995, 1018
Y. Bregel, Indiana University, Bloomington. 575
Barbara Brend, London. 340
[C. Brockelmann, Halle]. 445, 470, 634, 1041
A. Brockett, Durham University. 562
J.T.P. de Bruijn, University of Leiden. 478, 531, 663, 944, 1017
[F. Buhl, Copenhagen]. 61, 66, 389, 403, 649, 757, 825, 943
R.M. Burrell, University of London. 282, 432, 464, 655, 819
J. Burton, University of St. Andrews. 475, 669, 1012, 1029
J. Burton-Page, Church Knowle, Dorset. 80, 88, 113, 129, 131, 132, 135, 142, 195, 204, 289, 316, 346, 680, 898, 910, 926, 933, 943, 947, 957, 965, 966
H. Busse, University of Kiel. 295, 485
J. Calmard, Centre Nationale de la Recherche Scientifique, Paris. 20, 225, 304
[E.E. Calverley, Hartford Seminary Foundation, Hartford, Conn.]. 883
P. Chalmeta, University of Saragossa. 192, 249, 289, 591, 808
A. Chenoufi, University of Tunis. 719
W.C. Chittick, State University of New York, Stony Brook. 476
V. Christides, University of Ioannina, Athens. 46, 160, 886
A. Cohen, Hebrew University, Jerusalem. 126
[C. Collin Davies]. 548, 899
Patricia Crone, University of Cambridge. 357, 360
F. Dachraoui, University of Tunis. 489
H. Daiber, Free University, Amsterdam. 260, 400, 605, 1052
M.T. Danesh Pajuh, Tehran. 132
G. Dávid, Eötvös Loránd University, Budapest. 220, 900
R. Deladrière, University of Lyon. 465
Anne-Marie Delcambre, University of Paris. 61
[J. Deny, Paris]. 473, 678, 733
A. Dietrich, University of Göttingen. 58, 143, 556, 1035
S. Digby, Rozel, Jersey. 189
M. Djebli, University of Paris. 904
C.H. Dodd, University of London. 189
F.M. Donner, University of Chicago. 797, 825
E. van Donzel, Leiden. 236, 290, 497, 516, 864
Trude Ehlert, University of Bonn. 387
H. Eisenstein, University of Vienna. 279
N. Elisséeff, University of Lyon. 947
P.G. Emery, Sultan Qaboos University, Muscat. 838
W. Ende, University of Freiburg im Breisgau. 294, 781
Nüket Esen, Boğaziçi University, Istanbul. 255, 469
J. van Ess, University of Tübingen. 975, 1058
T. Fahd, University of Strasbourg. 558, 565, 838, 920, 960, 1012
[Bichr Farès, Cairo]. 310, 638
[H.G. Farmer, Glasgow]. 191, 210, 518, 611, 671
Suraiya Faroqhi, University of Munich. 350, 472

G. Féhérvari, University of London. 15
A. Fernández-Puertas, University of Granada. 501, 1029
R.W. Ferrier, Lewes, East Sussex. 890
J.M. Fiey, Centre des Pères Dominicains, Beirut. 973
C.V. Findley, Ohio State University, Columbus. 466, 468, 521, 547, 775
W. Fischer, University of Erlangen-Nürnberg. 262
A. Fisher, Michigan State University. 713
Carol G. Fisher, Kresge Art Museum, Michigan State University, East Lansing. 931, 932
M. Fleischhammer, University of Halle. 561
A.D.W. Forbes, Watton-at-Stone, Hertfordshire. 81
G.S.P. Freeman-Grenville, York. 35, 80, 213, 227, 246, 250, 839, 1048
P. Freimark, Institut für Geschichte der deutschen Juden, Hamburg. 496

P. 138ᵃ, **MISĀḤA**. 1., *add* at end of the article: In the Yemen, the normal measurement of surface area was the *maʿād*, a large, square surface which has two *ḳaṣaba* per side or two *ḥabl*, a unit of measurement equal to 50 cubits. The *maʿād* is subdivided into *ḳīrāṭ*, which is a square with a side of 25 cubits; it is thus equivalent to 625 square cubits. There are 16 *ḳīrāṭs* in a *maʿād*, which contains 10,000 *libna*, a unit of surface measurement which has a side of one cubit.

The cubit of the surveyor is, in the Yemen, appreciably longer than that of the trader. This last contains 24 *iṣbaʿs* or fingers, equivalent each one to 6 *shaʿīras*. But the surveyors' cubit in use at Wādī Zabīd contained 6 *ḳabḍas*, to which there was added a seventh *ḳabḍa* minus the thumb, which would make a total of 40 *iṣbaʿs* or about 83 cm (cf. Ibn al-Daybaʿ, *al-Faṣl al-mazīd*, ed. J. Chelhod, Arabic introd., 12 ff.). (J. Chelhod)

SUPPLEMENT

P. 387[a], **IBN FARĪGHŪN**, *add to Bibl.*: H.H. Biesterfeldt, *Ibn Farīgūn's chapter on Arabic grammar in his* Compendium of the Sciences, in K. Versteegh and M.G. Carter (eds.), *Studies in the history of Arabic grammar II. Procs. of the 2nd Symposium on the history of Arabic grammar, Nijmegen, 27 April-1 May 1987*, Amsterdam 1990, 49-56.

M

CONTINUATION

MIFRASH (A.), more usually in its Persian form *mafrash*, or the Ottoman *mifresh*, denotes a travelling pack for bedding. Derived from the Arabic verb *farasha* "to spread out or furnish a house or tent", it is thus cognate with *mafrūshāt* [*q.v.*] in the sense of "bedding".

Two early examples made from waxed canvas, reinforced with patterns of brass studs, are preserved in the harem of the Topkapı Sarayı, Istanbul (8/460 and 8/465 *khurdj*). These are flat-bottomed, 90 × 55 cm, with D-shaped ends 30 cm high around which the long sides curve inwards. A grip was fitted at each end, and the pack was secured by seven straps buckled from side to side and one lengthwise. The original colour seems to have been vine green.

The term is now generally applied to the woven rectangular bedding packs still used by nomads, and normally made in pairs to balance on either side of the camel carrying them. It appears in the following variants: Āzäri (lit.) *mäfräsh*, (Pushkin, Nakhčivān, Djebrāyil, and Shusha, also Karapapakh in Kars province) *farmash*, (Shahsevän and Karadaghi) *färmäsh* or *fermesh*; Kurdish (Djalālī) *mashraf* or *mafrash*; Kashkā'ī Türki *mäfredj* or (Farsimadan) *märfädj*; Özbek (lit.) *mapramač*, (Kaučin) *naprač*, (Kungrat of the Surkhān-daryā) *napramač*, (Lakay) *mepremeč*, (Aksha and Tashkūrghān) *maframač*. The Karakalpak equivalent is called *karshïn*. It is not clear whether *mafrash* as attributed to the Türkmen is due only to Iranian dealers; it does not appear in Baskakov's dictionary, nor is it usual among the Yomut of Iran. It is applied only to a small pouch. The term survives in various parts of Anatolia as *mafrač* (*Derleme sözlüğü*, ix, 1977), and among the Türkmen of Kayseri (Akkışla) and the Karadağli of Afyon as *mavrash*, but in the latter two cases it is used for a woven pouch for soft goods.

In Iran, the form is particularly developed among the Shahsevän [*q.v.*] and Karadaghlï, not only in Mūghān and Arasbārān, but among the outlying tribes in Hashtrūd and Miyāna, Bīdjār, Kazwīn and Sāwa, and Miyāndōāb; since substantial parts of the Kharakān groups appear to have been moved there from northeast Ādharbāydjān under Nādir Shāh or later in the 12th/18th century, it was quite probably known to the main body of Shahsevän there by 1700, that is from the beginning of the federation (cf. Tapper in *Bibl.*, 804 ff.). Its use in Fārs is typical of the Kashkā'ī, and it seems not to be known among the tribes of Kirmān; it may therefore have been brought south by those elements of the Kashkā'ī who came from Ādharbāydjān in Ṣafavid times or earlier. In both regions the packs are usually flat-woven, though those of the Shahsevän are woven on a vertical loom, while those in Fārs are woven on a ground loom; the usual technique is progressive weft float brocading (*soumak*), though examples in pilework can also be found. The Shahsevän also use tapestry weave. Kashkā'ī packs are characterised by leather binding along all the edges, a handle at either end, three straps across the width, and one lengthwise, with buckles, and flaps to close the top: they are thus close to the Ottoman model. They measure about 120 cm long, 40 cm wide and 55 cm high. Mūghān Shahsevän packs are slightly smaller, at about 100 × 50 × 50 cm, and generally lack both straps and flaps, though the latter are occasionally provided. Instead, the open top is provided with rings at the edges through which lacing can be passed. In both cases the woven design appears on all four sides, the bottom being simply in plain weave. In brocaded packs from Miyāna, the design is sometimes on three sides only, whereas in those from Hashtrūd, Khamsa and Bīdjār, only one face is decorated (Tanavoli, in *Bibl.*, 161 ff.). Tapestry-woven packs are, however, four-faced in all regions. Both types are some 10 cm lower than in Mūghān, as are those from Kars. Kurdish packs in both Turkey and Iran, are used by the Djalālī and Mīlān, resemble the Mūghān format in size and in tending to have three bands of ornament continuous on all faces, but the handling of the motifs is more compact, and a technique of reversed extra-weft knotted wrapping is sometimes used. A few packs of the Kashkā'ī format were made by the Bakhtiyārī and other Lur, but with Luri ornament: these too were usually in progressive brocading.

Lakay *mepremeč* are also small in format, up to 95 × 30 × 40 cm, and are decorated with pilework or embroidery on one long side and the ends only; they are fitted with five or six loops on each of the long top edges. It is said that staves are passed through these to stiffen the pack as it is packed up, a procedure absent among nomads in Iran. Such packs appear to be associated particularly with the Kïpčak group of Özbek. They are also found among some Iranian-speaking groups in southern Tādjikistān, including the ʿArab and Larkhābī. Somewhat similar packs, called *teng-tük* (100 × 60 × 30) are used by some Kazak (Kïzïl Orda *oblast*), and may be compared to the felt covers, *sandïk kap*, used to house their chests.

Bedding packs hold a complete bed, of mattress, quilt and pillow, rolled up, or even two, and can be lifted by two people with difficulty when full. They are ranged along the rear wall of the tent, forming the basis of the baggage pile, *yük*, where the decorated face can be displayed to advantage.

The equivalent Persian term is *rakht-i khwāb-pīč*. In northern India the same function is performed by the bedding roll, *bistarāband* or "holder";

Bibliography: Some Āzäri variants of the term can be found in R. Ä. Rüstämov and M. Sh. Shiraliyev, *Azärbaydjan dilinin dialektolozhi lüghäti*, Baku 1964; see also W. Radloff, *Versuch eines Wörterbuches der Türk-Dialekte*, repr. The Hague 1960, and B. Kh. Karmuisheva, *Lokayskie "mapramači"*, in *Soobshčeniya Respublikanskogo Istoriko-Kraevedčeskogo Muzeya*, vuip. ii, Stalinabad 1955, 122 n. 6. Other variants are recorded from the author's fieldwork. Shahsevän packs are discussed in J. Housego, *Some flat weaves of Azerbaijan*, in *Hali*, iv/2 (1981), 118-23; eadem, *Tribal rugs*, London 1978; S. Azadi and P.A. Andrews, *Mafrash*, Berlin and Munich 1985 (also showing a Kashkāʾī pack, pl. facing p. 256, and two attributed to the Lur, facing pp. 242-4), and P. Tanavoli, *Shahsavan*, New York 1985 (also in German, Fribourg 1985). For the technique, see also R.L. and N. Tapper and P.A. Andrews, *Farmash weaving among the Shahsevan*, in *Oriental carpet and textile studies*, i, London 1985, 124-30. For Shahsevän history, see R.L.Tapper, *The Shahsavan of Azarbaijan*, London Ph.D. thesis, 1971, unpubl., Appendix iii. For a Lurī example and discussion, see A. de Franchis and J.T. Wertime, *Lori and Bakhtiyari flatweaves*, exhibition catalogue, Tehran 1976, 16 and pl. 26 A. For Özbek packs, see Karmuisheva, *op. cit.*, 121-45, and for the Kazak types, M.S. Mukanov, *Kazakhskaya yurtas*, Alma Ata 1981, pls. 36-86.
(P.A. ANDREWS)

MIHMINDĀR (P.), the title of the 18th dignity, out of the 25 at the Mamlūk sultan's court; succeeding to the duties of the Fāṭimid *nāʾib ṣāḥib al-bāb* (see M. Canard, *Le ceremonial fâtimite et le ceremonial byzantin*, in *Byzantion*, xxi [1951], 371, 377, 412), he was in charge of receiving ambassadors and delegations of Bedouins (*ʿurbān*), of providing them with accommodation suitable to their rank, of providing for their needs during their stay and of presenting them, at the appropriate moment, in the audience chamber of the ruler. Whilst the *nāʾib* was an official of the pen (*min arbāb al-aḳlām*), the office of *mihmindāriyya* was reserved for an official of the sword (*min arbāb al-suyūf*) in the public service (see esp. al-Ḳalḳashandī, *Ṣubḥ*, i, 484, iv, 187, 218 and index).

It is under his title of AL-MIHMINDĀR that al-Amīr al-Ḥamdānī, Badr al-Dīn Abu 'l-Maḥāsin Yūsuf b. Sayf al-Dawla b. Zammākh b. Thumāma al-Thaʿlabī/al-Taghlibī, author of a work on genealogy and a treatise on rhetoric, who claimed to belong to the Banū Ḥamdān and be the descendant of Sayf al-Dawla [*q.v.*], is best known. He was born in 602/1205 and probably died towards the end of the 7th/13th century, after having held the post of *mihmindār* under the last Ayyūbid and then in the reign of the Mamlūk al-Manṣūr Ḳalāwūn [*q.v.*]. Since he was constantly in contact with the Bedouins, from whom he himself sprang, he put into a *Kitāb al-Ansāb* all the items of knowledge about their genealogies and histories, which earned him the sobriquet of *al-Nassāba* ("the genealogist"). This work has not survived, but its subject-matter is in part preserved by later authors, amongst whom one should mention al-Ḳalḳashandī, in the *Nihāyat al-arab*, the *Ḳalāʾid al-djumān* and even the *Ṣubḥ*, when he deals with the Bedouins and the Arab tribes. Al-Maḳrīzī also utilised al-Mihmindār's work, but without acknowledging it.

Al-Mihmindār was furthermore a poet and littérateur. The only work of his to survive is his *Izālat al-iltibās fi 'l-farḳ bayn al-ishtiḳāḳ wa 'l-djinās* (ms. in Cairo, see *Fihrist-al kutub al-ʿarabiyya al-mahfūẓa bi 'l-kutubkhāna al-miṣriyya*, 1306/1888-9, iv, 122, 1926, ii, 175).

MIḤNA [see ṢINĀʿA, ṢINF].

MIḤNA (A.), a term meaning in general usage a "testing" or "trial", whether by the accidents of fortune or the actions of men (Patton, 1). This general sense is reflected in the *Kitāb al-Miḥan* by Abu 'l-ʿArab [*q.v.*] where the author sets out to give an account of "those who have been afflicted (*ubtuliya*) by being killed, imprisoned, flogged, or threatened..." (47). More particularly, the term (together with its counterpart *imtiḥān*) signifies the procedure adopted by the caliph al-Maʾmūn [*q.v.*], and officially applied under his two immediate successors, for the purpose of imposing the view that the Ḳurʾān had been created.

1. *The course of historical events.* The circumstances of this initiative, which was set in motion by al-Maʾmūn in a letter written in Rabīʿ I 218/April 833, four months before his death, are most fully described by al-Ṭabarī (iii, 1112 ff.) and have been examined in detail by Patton (56 ff.). In the first instance, al-Maʾmūn, who was at al-Raḳḳa (or Damascus, according to al-Yaʿḳūbi, ii, 571), desired his deputy in Baghdād, Isḥāḳ b. Ibrāhīm, to test the *ḳāḍīs* in his jurisdiction concerning God's creation of the Ḳurʾān. The language of his letter to this effect is powerful and direct: God has the right to have His religion carried out properly, and the great mass of the common people, who know no better, being without the light of knowledge, are mistaken when they espouse the view that the Ḳurʾān is eternal (*ḳadīm awwal*); for God has said in the Ḳurʾān "We have made it (*djaʿalnāhu*) an Arabic Ḳurʾān" (XKIII, 3), and everything He has made (*djaʿala*) He has created (*khalaḳa*). In addition, they have made a fallacious link between themselves and the *sunna*, making themselves out to be "the people of truth, religion and unity" and characterising those who do not agree with them as "people of falsehood, unbelief and schism", but in reality they are, *inter alia*, "the worst of the *umma*" and "the tongue of the Devil" and are in no way to be trusted. The Commander of the Faithful will not rely on anyone who does not conform in this regard, nor are *ḳāḍīs* to accept the testimony of such people.

This letter to Isḥāḳ was followed by another instructing him to send to al-Maʾmūn seven named

individuals, including the traditionists Ibn Saᶜd, Yaḥyā b. Maᶜīn and Zuhayr b. Ḥarb [*q.vv.*]. All seven were tested and, having acknowledged the doctrine of the created Ḳurʾān, were returned to Baghdād where their acknowledgement was publicised. By this time, too, *miḥna* letters from al-Maʾmūn were reaching other centres: the text of the letter which reached Miṣr in Djumādā II 218/July 833 was closely modelled on, or identical with, the first letter to Isḥāḳ (Ibn Taghrībirdī, ed. Cairo, ii, 218 f.; cf. al-Kindī, 193, 445 ff.). But it was at Baghdād that the impact of the *miḥna* was felt most at this time: in response to further instructions from al-Maʾmūn, Isḥāḳ went on to test about thirty leading *fuḳahāʾ* and *ḥadīth* specialists, who, with only two exceptions, and in certain cases under some duress, acknowledged the doctrine of the created Ḳurʾān. The exceptions, Aḥmad b. Ḥanbal [*q.v.*] and Muḥammad b. Nūḥ al-ᶜIdjlī, were despatched in irons to be dealt with by al-Maʾmūn at Tarsus on his return from Byzantine territory, but the sudden death of the caliph (mid-Radjab 218/mid-August 833) saved them from this particular predicament and they were sent back. Muḥammad b. Nūḥ died on the return journey, and Aḥmad was kept in detention after reaching Baghdād.

Al-Maʾmūn had set in motion in the last four months of his life something which his brother and successor as caliph, al-Muᶜtaṣim, was left to cope with. He had moreover stipulated in his last will and testament that al-Muᶜtaṣim should, *inter alia*, hold to his policy on the Ḳurʾān and make (the Muᶜtazilī) Aḥmad b. Abī Duʾād [*q.v.*] his closest confidant (al-Ṭabarī, iii, 1137, 1139; al-Subkī, ii, 59); and al-Subkī with some justification advances this as the reason why, for all that al-Muᶜtaṣim himself was destitute of *ᶜilm*, he nonetheless required adherence to the doctrine of the created Ḳurʾān. Concerning the question of how this was achieved, it would seem that a distinction should be made between *miḥna* as a regular formality in courts of law and *miḥna* as a "test" applied beyond the confines of the courtroom: as an example of *miḥna* in the first of these senses, we are told that in Miṣr the *ḳāḍī* would accept the testimony only of those witnesses who acknowledged that the Ḳurʾān had been created and that "this [type of] *miḥna* lasted from 218 until [after] the accession of al-Mutawakkil in 232" (al-Kindī, 447). On the matter of where the *miḥna* was applied, the evidence points to Baghdād, Kūfa, Baṣra, Damascus, Mecca and Medina (Patton, 62 f.; Abu 'l-ᶜArab, 448 ff.; Ḥanbal b. Isḥāḳ, 38 f.; Wakīᶜ, i, 268 f.; also Ifrīḳiya, see below) in addition to Miṣr. The situation in the Ṭāhirid-controlled East is not clear: the *ḳāḍī* of Balkh is reported to have objected to a *miḥna* letter which stated that the Ḳurʾān had been created (al-Balkhī, *Faḍāʾil*, 210), and the author of the *Tārīkh-i Sīstān* says that, after the flogging of Aḥmad b. Ḥanbal, al-Muᶜtaṣim circulated letters to each community calling upon people to believe in the created Ḳurʾān (185 f.; Eng. tr. Gold, 147: one may suspect here a fusion of al-Maʾmūn's letters with al-Muᶜtaṣim's treatment of Aḥmad); but that appears to be the sum total of our present knowledge about the matter as far as the East is concerned.

The sources give the impression that al-Muᶜtaṣim himself was in general predisposed to settle for *miḥna* as no more than a courtroom formality, and al-Kindī even remarks that "the matter of the *miḥna* was easy (*sahl*an) during the reign of al-Muᶜtaṣim" (451), but there are nonetheless two instances early in his reign where it was applied outside the courtroom. The first of these does not seem to have been particularly important: al-Muᶜtaṣim wrote to his governor of Miṣr, Muẓaffar b. Kaydur (held office Rabīᶜ II-Shaᶜbān 219/May-Sept. 834), instructing him to test the *ᶜulamāʾ* on the creation of the Ḳurʾān and he tested a group of them (Ibn Taghrībirdī, ii, 230; al-Kindī makes no mention of this, and it is possible that Ibn Taghrībirdī is misrepresenting the al-Maʾmūn letter transmitted by the future caliph al-Muᶜtaṣim to Muẓaffar's father Kaydur, when the latter was governor of Egypt and al-Maʾmūn was still caliph, al-Kindī, 193, 445 ff.). The second instance, the matter of the unfinished business of what should be done with Aḥmad b. Ḥanbal, was far more significant: indeed, the story of the *miḥna* of the *Imām* Aḥmad at the hands of al-Muᶜtaṣim looms large in later Sunnī hagiography. Abū Nuᶜaym, Ibn al-Djawzī, al-Subkī and others, drawing freely on material transmitted by members of Aḥmad's family, regale us with the details of how the courageous and intransigent *Imām* resisted all attempts to make him acknowledge the created Ḳurʾān, was ultimately flogged on al-Muᶜtaṣim's orders until he was unconscious (but cf. the alternative version given by Abū Nuᶜaym, ix, 205 f.), and was released shortly afterwards when commotion among the population of Baghdād threatened to get out of hand. These accounts include some striking embellishments, e.g. how Aḥmad's *sarāwīl* were supernaturally restored to their proper place (by a golden hand in some versions) when they were in the process of slipping off while he was being flogged. In sum, what is portrayed is an archetypal Sunnī hero, quietist by disposition but resolute when pressed to espouse a view he regards as religiously improper; there is no room for *taḳiyya* here (for a detailed treatment of all this, see Patton, 93 ff.).

That Aḥmad was flogged is not in doubt, for all that the incident is ignored by al-Ṭabarī and Ibn Miskawayh; the sources give as the date of this event both Ramaḍān 219/Sept. 834 and Ramaḍān 220/Sept. 835, the second of which is to be preferred if it is correct that the total period of his detention was about two-and-a-half years (see e.g., Ṣāliḥ b. Aḥmad, 278; Ḥanbal b. Isḥāḳ, 42). There are, however, certain respects in which the received Sunnī account may in fact be questioned, in view of what some of the sources have to say. In the first place, these sources are under the impression that Aḥmad was flogged until he actually acknowledged the created Ḳurʾān: al-Yaᶜḳūbī knew this to be the case (ii, 577), and Aḥmad's contemporary al-Djāḥiẓ tells us that it took only 30 strokes (*Rasāʾil*, ed. Sandūbī, 152); al-Masᶜūdī thought that it took 38 strokes (*Murūdj*, § 2797), while Ibn al-Murtaḍā opts for 68 (*Ṭabaḳāt al-Muᶜtazila*, 125). Secondly, these sources know nothing about Aḥmad's release having been occasioned by a public commotion; for them, his release was the consequence of his acknowledgement, although Ibn al-Murtaḍā would have us believe that it took place only after he had acknowledged the created Ḳurʾān before the assembled population of Baghdād. Thirdly, what these sources have to say provides an alternative explanation of why Aḥmad was subsequently left alone by the authorities; it was not because they lacked the nerve to test him again, but because he had capitulated. None of these sources can be regarded as other than more or less hostile to Aḥmad, but even so it is difficult to explain away the essence of what they have to say. The *en passant* remark by al-Djāḥiẓ, in particular, with its casual and matter-of-fact tone, has a convincing ring to it; Ibn al-Murtaḍā's reference to Aḥmad's public acknowledgement of defeat may well be dismissed as an embellishment, although it would have made good sense from the point of view of Ibn

Abī Duʾād, who was by this time *ḳāḍī al-ḳuḍāt* and thus in effect chief inquisitor; and even Ibn al-Djawzī was aware of such accounts, for all that he eschewed them (337: *ḥikāyāt fī ḳiṣṣat ḍarbihi lam yathbut ʿindanā siḥḥatuhā fa-tanakkabnāhā*).

However the case of Aḥmad is to be viewed, it is apparent that this was the last occasion on which al-Muʿtaṣim involved himself in any conspicuous way with the prosecution of the *miḥna*. Thereafter he was preoccupied with moving his capital to Sāmarrāʾ [*q.v.*], dealing with the rebel Bābak [*q.v.*], mounting his celebrated offensive against Amorium [see ʿAMMŪRIYA], coping with the revolt of Māzyār [*q.v.*], and in 226/841, the year before his death, overseeing the trial and execution of Afshīn [*q.v.*]. Although al-Kindī is (presumably) referring only to Miṣr when he says that the matter of the *miḥna* was easy during the rule of al-Muʿtaṣim (see above), his remark appears also to be true more generally; Ibn Taghrībirdī even goes so far as to suggest that al-Muʿtaṣim at some point banned the testing of *ʿulamāʾ* (ii, 259); and the relative inactivity of Ibn Abī Duʾād during these years remains in need of explanation. Not until the last year of al-Muʿtaṣim's reign can any changes be observed in respect of the application of the *miḥna*, at Miṣr in one case and Baghdād in another. The first of these changes came when the Mālikī *ḳāḍī* of Miṣr, Hārūn b. ʿAbd Allāh al-Zuhrī, who had accepted the doctrine of the created Ḳurʾān since the time of al-Maʾmūn and had henceforward tested witnesses in court, baulked at transporting *fuḳahāʾ* (sc. to ʿIrāḳ) for testing and was suspended from duty in Ṣafar 226/Dec. 840 (al-Kindī, 447, 449). Ibn Abī Duʾād immediately put in charge of the *miḥna* in Miṣr a certain Muḥammad b. Abi 'l-Layth al-Aṣamm, who was a *faḳīh* according to the "*madhhab* of the Kūfans" (al-Kindī, 449) and is identified as a Muʿtazilī (al-Kindī, 467). He set about transporting people to ʿIrāḳ for interrogation, among them the traditionist Nuʿaym b. Ḥammād and al-Shāfiʿī's discipline Yūsuf b. Yaḥyā al-Buwayṭī (al-Kindī, 447), both of whom later died there in prison (Patton, 119; Ibn al-Djawzī, 397 f.; Ibn Ḥadjar, *Tahdhīb*, x, 460 ff., xi, 427 ff.). Two months later, Ibn Abi 'l-Layth was formally appointed *ḳāḍī* of Miṣr (al-Kindī, 449). Secondly, there were the activities of Shuʿayb b. Sahl, one of the Baghdād *ḳāḍīs*, who "tested" people and adorned the mosque of al-Ruṣāfa with writing to the effect that the Ḳurʾān had been created. In Rabīʿ I 227/Jan. 842, only days after the death of al-Muʿtaṣim and the accession of his son al-Wāthiḳ, Shuʿayb's residence was plundered and he himself was obliged to flee (Wakīʿ, iii, 277; cf; *Taʾrīkh Baghdād*, ix, 243). This too would seem to be indicative of an intensification of *miḥna* activity on the part of Ibn Abī Duʾād, and that at a time when al-Muʿtaṣim had fallen ill (al-Ṭabarī, iii, 1323).

According to al-Kindī's account, al-Wāthiḳ wrote immediately after his accession to Ibn Abi 'l-Layth in Miṣr instructing him to prosecute the *miḥna* with vigour, and the energetic *ḳāḍī* "left no *faḳīh, muḥaddith, muʾadhdhin* or *muʿallim* untested. Many people fled and the prisons were full of those who had denied the *miḥna*"; he ordered that the words "There is no god but God, the Lord of the created Ḳurʾān" be inscribed on the mosques of Fusṭāṭ; and he denied Mālikī and Shāfiʿī *fuḳahāʾ* access, or even proximity, to the [main] mosque (al-Kindī, 451; cf. Abu 'l-ʿArab, 253). In recognition of his efforts, the poet al-Djamal al-Akbar praised him for having "protected" the *ḳawl* of Abū Ḥanīfa and having "smashed" the *ḳawl* of the Shāfiʿīs and Mālikīs (al-Kindī, 452); and it was this same *ḳāḍī* who is reported to have tested the Mālikī Muḥammad (or ʿAbd al-Ḥakam) b. ʿAbd Allah b. ʿAbd al-Ḥakam and to have had him flogged in the *masdjid* of Miṣr clad only in his underwear (Abu 'l-ʿArab, 437, cf. 253).

Ibn Taghrībirdī, on the other hand, says it was in 231/845-6 that the caliph wrote to the provinces (*aʿmāl*) instructing that the *ʿulamāʾ* be tested with regard to the created Ḳurʾān (ii, 259), and this apparently included the people of the marches (*ahl al-thughūr*) (al-Ṭabarī, iii, 1352); in the same year, he declined to ransom those Muslims held by the Byzantines who would acknowledge that the Ḳurʾān had been created (al-Ṭabarī, iii, 1353 f; al-Yaʿḳūbī, ii, 589; Patton, 120). In this same year, too, Aḥmad b. Naṣr al-Khuzāʿī became involved in a planned uprising in Baghdād that misfired. This Aḥmad, the scion of a distinguished partisan of the ʿAbbāsids in the day of the coup that brought them to power, opposed the doctrine of the created Ḳurʾān and was much frequented by the Baghdādī *aṣḥāb al-ḥadīth*. On being brought before al-Wāthiḳ, he was questioned not about the uprising but about the Ḳurʾān, and his responses drove the enraged caliph to make a personal start on decapitating him; his head was thenceforward placed on public view in Baghdad as a grisly warning to potential nonconformists, while his cadaver stayed in Sāmarrāʾ, also on display (al-Ṭabarī, iii, 1342-9; al-Yaʿḳūbī, ii, 589; Patton, 116-18). Coincidentally, it was also in the year 231/846 that Abū Djaʿfar Aḥmad b. al-Aghlab seized power in Ifrīḳiya from his brother Muḥammad (briefly, as it turned out), proclaimed the doctrine of the created Ḳurʾān, instituted a *miḥna*, and had the distinguished Mālikī jurist Saḥnūn [*q.v.*] arraigned at al-Ḳayrawān before the Muʿtazilī *ḳāḍī* Ibn Abi 'l-Djawād; Saḥnūn held to the view that the Ḳurʾān was "the speech of God and not created" and was sentenced to house arrest (Talbi, *L'émirat aghlabide*, 228; Abu 'l-ʿArab, 454 ff., can be added to Talbi's references).

Al-Wāthiḳ is said to have left off the doctrine of the created Ḳurʾān after a *shaykh* from Adana, who was one of *ahl al-fiḳh wa 'l-ḥadīth*, bested Ibn Abī Duʾād in argument on the subject (Patton, 121 ff.; al-Masʿūdī, *Murūdj*, §§ 3132-8, *Taʾrīkh Baghdād*, iv, 151 f., and Ibn al-Djawzī, 350 ff. can be added to Patton's references). But it was his brother al-Mutawakkil, who succeeded him in Dhu 'l-Ḥidjdja 232/August 847, who put an end to the *miḥna*. Al-Subkī tells us (ii, 54) that this happened in 234/848-9, and Patton (122) concurs. Certainly, it appears to have been in Djumādā I-II 234/Jan.-Feb. 849 that al-Mutawakkil prohibited argument about the Ḳurʾān and sent instructions to this effect throughout his domains (al-Kindī, 197; al-Ṭabarī, iii, 1412 (*lammā afḍat ilayhi 'l-khilāfa*); Ibn Taghrībirdī, ii, 275); and this decision may well have been facilitated by the fact that Ibn Abī Duʾād had become paralysed in the preceding year (al-Ṭabarī, iii, 1379). But there are grounds for holding the view that it was not until 237/851-2 that the *miḥna* episode was completely phased out. In the first place, it was in that year that the mortal remains of Aḥmad b. Naṣr were taken down and given over to his relatives and that those who had been imprisoned on account of the doctrine of the created Ḳurʾān were released (al-Ṭabarī, iii, 1412 f.; Ibn Taghrībirdī, ii, 290; cf. al-Yaʿḳūbī, ii, 592, which implies that the prisoners were released earlier); it was in that year too that Aḥmad b. Abī Duʾād and his sons were deprived of all influence, together with their estates and most of their wealth, and were sent by al-Mutawakkil away from Sāmarrāʾ to Baghdād (al-Ṭabarī, iii, 1410 f.).

Secondly, it is instructive to take note of the dates

when *ḳāḍīs* who had implemented the *miḥna* were replaced: Ibn Abi 'l-Layth̲ was dismissed as *ḳāḍī* of Miṣr in Sha'bān 235/Feb.-March 850 at the order of al-Mutawakkil, who instructed that he be cursed from the *minbar* (al-Kindī, 463), and his replacement was appointed in D̲jumādā I 237/Nov. 851 (al-Kindī, 467); the *ḳāḍī* of Mecca throughout the *miḥna* period, 'Abd al-Raḥmān b. Zayd b. Muḥammad b. Ḥanẓala al-Makh̲zūmī (who was "doctrinally corrupt (*k̲h̲abīth̲ al-raʾy*) and used to test the people and frighten them"), was dismissed at an unspecified date and his replacement was appointed in 238/852-3 (Wakī', i, 268 f.); the *ḳāḍī* of Kūfa for practically the whole of the *miḥna* period, G̲h̲assān b. Muḥammad al-Marwazī (who "used to test the people ... and was one of the *aṣḥāb* of Ibn Abī Duʾād"), was dismissed by al-Mutawakkil in 235/849-50 and his replacement was appointed in the same year (Wakī', iii, 194); and one of the Baghdad *ḳāḍīs*, 'Ubayd Allāh b. Aḥmad b. G̲h̲ālib (who was one of the *aṣḥāb* of Ibn Abī Duʾād), was dismissed by al-Mutawakkil in 234/848-9 (Wakī', iii, 277; Ibn Abi 'l-Wafāʾ, i, 237), while another, 'Abd Allāh b. Muḥammad b. Abī Yazīd al-K̲h̲alandjī ("one of the *aṣḥāb* of Ibn Abī Duʾād who used to test the people"), was dismissed at an unspecified date (probably 237) and his replacement was appointed in 237/851-2 (Wakī', iii, 291 f., which reads "al-K̲h̲alīdjī"; al-Ṭabarī, iii, 1411. Cf. Ibn Abi 'l-Wafāʾ, i, 290, no. 764 ("al-K̲h̲alīdjī") and ii, 304, no. 397 ("al-K̲h̲alandjī")). In short, al-Mutawakkil apparently thought it prudent to proceed cautiously in bringing the *miḥna* period to an end; the beginning of the end was the edict of 234; the end of the end was the deportation of Ibn Abī Duʾād and his sons in 237.

2. *Theological aspects.* Why should al-Maʾmūn have wished to institute a *miḥna* at all and why should the issue have been the createdness of the Ḳurʾān? In attempting to answer these questions, we should first note that the prevailing view among early traditionists was an insistence that the Ḳurʾān was truly the speech of God and a denial that it had been created, "without turning this denial into a positive doctrine affirming its eternity of pre-existence" (Madelung, *Controversy*, 513). In other words, in opposing the view that the Ḳurʾān had been created, such people were not saying that it was uncreated but simply that it was God's personal speech, a view that was usually accompanied by a more general anthropomorphism and ran counter to the notion of stripping God of His attributes (*ta'ṭīl*); as God's personal speech, the Ḳurʾān was perceived as an expression of the essence of God and was "associated with God much more closely than any part of his creation" (Madelung, 511). It is also clear, however, that, during at least part of his career, Abū Ḥanīfa had taught that the Ḳurʾān had been created (Madelung, 509 f.), and that this contributed to serious differences of opinion within the ranks of his followers (see, e.g., Watt, *Formative period*, 197-285), notably as between, on the one hand, those who were tradition-minded and adhered to the notions of the Ḳurʾān as the speech of God, "neither creator nor created" (Madelung, 508), and, on the other hand, those who were robustly critical of *ḥadīth̲* and held the view that the Ḳurʾān had been created. Thus in the course of the *miḥna*, we find followers of Abū Ḥanīfa among both the "testers" and the "tested" (Watt, 286).

Al-Maʾmūn himself, we are told, "excelled in *fiḳh* according to the *mad̲h̲hab* of Abū Ḥanīfa" (Ibn Tag̲h̲rībirdī, ii, 225). At the same time, his views on the Ḳurʾān, as spelled out in his *miḥna* letters/edicts, are quite unambiguous: he accused the objects of his odium of putting God and the Ḳurʾān on an equal level, of claiming that it is eternal and primordial, and that God has not created, originated or produced it; they are like the Christians, who claim that Jesus was not created because he is the Word of God (Madelung, 517, citing al-Ṭabarī, iii, 1113, 1118). What was he trying to achieve? According to Sourdel, "jamais auparavant on n'avait vu un calife se présenter comme un 'docteur', chargé par Dieu d'éclairer la communauté et de lui communiquer la science qui lui avait été confiée" (*Politique religieuse*, 44); Lapidus, on the other hand, sees the *miḥna* as part of a general effort to restore (*sic*) the ideological authority of the caliphate (*Separation*, 379); and this idea is taken further by Crone and Hinds (*God's Caliph*, ch. v,) who propose that the type of caliphal religious authority which al-Maʾmūn sought to re-establish was one which had indeed been familiar in the time of the Umayyad caliphate. Whether he would have succeeded if he had lived longer is one of the great questions of counterfactual history, although the odds were certainly against him: for he had to contend not only with the choice of his 'Abbāsid predecessors to play up their roles as kinsmen of the Prophet (at the expense of their role as deputies of God) but also with the fact that by his time the transformation of *sunna* into Prophetic *Sunna* documented by *ḥadīth̲* had gone a long way.

According to Watt, the point of insisting on a created Ḳurʾān as the central feature of the *miḥna* was that it had less prestige than an uncreated Ḳurʾān (since God might have created it otherwise), and "there could not be the same objections to its provisions being overruled by the decree of an inspired imam. Thus the doctrine of createdness enhanced the power of the caliph and the secretaries, that of uncreatedness the power of the ulama" (*Formative period*, 179). But this misses the point: for one thing, the doctrine of the created Ḳurʾān is a doctrine about God, and more specifically about God's unity, rather than a doctrine about the Ḳurʾān, and there is in any case no evidence whatsoever to support the view that al-Maʾmūn wanted to overrule the Ḳurʾān; for another, it is clear that it was the populist *ḥadīth̲* enthusiasts who were al-Maʾmūn's target. What al-Maʾmūn in fact appears to have been doing is espousing that form of what may be called "hardline" Ḥanafī thinking which was eautious about *ḥadīth̲* and held to the doctrine of the created Ḳurʾān, and which to that extent had an affinity with the early Mu'tazilī insistence that the Ḳurʾān be "the only basis for their system of religious doctrine ... [an insistence which] led them to the rejection of most traditions and, by implication, of legal doctrines based on traditions" (Schacht, *Origins*, 258). This is not to say that the inspiration for the *miḥna* necessarily came from Mu'tazilīs or that its initial purpose was the imposition of Mu'tazilī doctrine; indeed, van Ess (*Ḍirār*, 34) has drawn attention to Ibn Ṭayfūr's important indications (i) that the truly influential figure behind al-Maʾmūn was the D̲jahmite Ḥanafī Bis̲h̲r al-Marīsī [*q.v.*], who, while he shared with the Mu'tazila a belief in the doctrine of the created Ḳurʾān, did not hold with their doctrine of free will; and (ii) that al-Maʾmūn himself also left off *al-ḳawl bi 'l-ḳadar*. But this would appear to have been the only point of major difference between the two stances. Otherwise, there are simply further similarities. For example, Abu 'l-'Arab (451) knew of a *miḥna* letter from al-Maʾmūn to Isḥāḳ which stipulated not only the doctrine of the created Ḳurʾān but also the denial of *'ad̲h̲āb al-ḳabr* [*q.v.*] and other aspects of popular eschatology: this

was very much in line with Muʿtazilī thinking. In addition, there is the striking association of many Muʿtazilīs of the period with Ḥanafī *fiḳh* (e.g. Watt, 286); and since the Muʿtazilīs never elaborated a system of legal doctrine of their own, it can be concluded that such people found "hardline" Ḥanafī *fiḳh* perfectly congenial. In short, in the context of the *miḥna*, Muʿtazilī interests overlapped considerably with those of al-Maʾmūn, for all that they were not identical; and this is reflected in al-Maʾmūn's testamentary stipulation that al-Muʿtaṣim should make Ibn Abī Duʾād his closest confidant.

Al-Maʾmūn's own commitment to vigorous prosecution of the *miḥna* comes across strongly in his letters/edicts on the subject. In the case of his successors al-Muʿtaṣim and al-Wāthiḳ, however, no evidence attests to the same degree of commitment, and it would seem to be fair to conclude that they simply did not share al-Maʾmūn's vision in this regard. They were in addition functioning in the new military environment of Sāmarrāʾ and were thus more remote than al-Maʾmūn had been from the civilian Muslim population; al-Muʿtaṣim in particular was preoccupied with other important matters; and al-Wāthiḳ, for all his early enthusiasm, may in the end have convinced himself that the *miḥna*, on any level beyond that of a courtroom formality, was simply not going to work. The tradition-minded *fuḳahāʾ* and the *muḥaddithūn* and their constituencies among the *ʿāmma* were manifesting seemingly inexhaustible dumb insolence in defence of their personal God and the lowbrow accretions that went with Him. With the advent of the apoplexy of Ibn Abī Duʾād, al-Mutawakkil can only have felt that he had more to gain than to lose by putting an end to the whole unfortunate affair.

The principal consequences of the failure of the *miḥna* are clear enough: it brought to a decisive end any notion of a caliphal role in the definition of Islam and it permitted the unchecked development of what in due course would become recognisable as Sunnism. The Muʿtazila and what they stood for were discredited, while populist sentiments and what passed as Prophetic *ḥadīth* were the order of the day. It was now unquestionably the *ʿulamāʾ*, rather than the caliphs, who were "the legatees of the prophets" (*warathat al-anbiyāʾ*); and henceforward it would be they who, armed with this spiritual authority, and at a distance from those who held temporal power, elaborated classical Islam.

MIHR [see TAʾRĪKH].

MIHR-I MĀH SULṬĀN, daughter of the Ottoman sultan Süleymān II the Magnificent (926-74/1520-66). Mihr-i Māh (sometimes also written Mihr-ü-māh: cf. Ḳaračelebi-zāde, *Rawḍat ul-ebrār*, 458) was the only daughter of Süleymān *q.v.*, as well as F. Babinger, in *Meister der Politik*, ii², Berlin 1923, 39-63).

While still quite young she was married to the grand vizier Rüstem Pasha (cf. Babinger, *GOW*, 81-2) at the beginning of December 1539 (cf. J.H. Mordtmann, in *MSOS*, xxxii, Part 2, 37), but the marriage does not seem to have been a happy one. She used her enormous wealth—St. Gerlach in 1576 estimated her daily income at not less than 2,000 ducats (cf. *Tagebuch*, Frankfurt, 1674, 266)—for many pious endowments. Among these the most important were the two mosques built by her, one in Istanbul at the Adrianople gate (*Edirne Ḳapusu Djāmiʿi*; cf. Ewliyā, *Seyāḥet-nāme*, i, 165; Ḥāfiẓ Ḥüseyin, *Ḥadīḳat al-djawāmiʿ*, i, 24, and J. von Hammer, *GOR*, ix, 50, no. 1) and the other (*Mihr-i Māh Sulṭān Djāmiʿi*; cf. Ewliyā, *op. cit.*, i, 472-3; Ḥāfiẓ Ḥüseyin, *op. cit.*, ii, 186, and von Hammer, *GOR*, ix, 128, no. 741) near the landing stage in Üsküdār. The second was the work of the great architect Sinān [*q.v.*], who built it in 954/1547 and also erected a palace for Mihr-i Māh in Üsküdār near this mosque. After her husband's death (8 July 1561), Mihr-i Māh Sulṭān intervened in political matters on several occasions; for example, she continually urged upon her father that the conquest of Malta should be one of the main undertakings of the Holy War and offered to equip 400 galleys for this campaign at her own expense. She was still alive at the reconciliation with her brother Selīm and

his accession. The correct date for her death, 25 Jan. 1578, is given only by Gerlach, *Tagebuch*, 449; the date in Karačelebi-zāde, *op. cit.*, 458, namely Dhu 'l-Ḳaᶜda 984/20 January-18 February 1577, is a whole year off. She was buried beside her father in his *türbe* (tomb-mosque) in Istanbul. From her marriage with Rüstem Pasha, two sons and a daughter ᶜĀʾishe Khānum were born; the latter married the grand vizier Semīr Aḥmed Pasha and then the *Nishāndji* Ferīdūn Aḥmed Beg (see A.D. Alderson, *The structure of the Ottoman dynasty*, Oxford 1956, Table XXX).

(F. Babinger*)

MIḤRĀB (a.), pl. *maḥārīb*, the prayer niche in the mosque.

Etymological origin of the word. In Islamic religious practice and in Islamic architecture, the word denotes "the highest place in a mosque", a "niche" which shows the direction of the *ḳibla* [*q.v.*], or "the station of the *Imām* in a mosque" (Lane, 1865, 541). The word includes the radicals *ḥ-r-b*, from which comes the verb *ḥariba*, which in Form I means "to be violently angry", "to be affected by canine madness"; in Form II "to provoke", "to sharpen", or "to excite s.o."; in Form III "to fight", "to wage war with ...", or "to battle with..." and in Form VI "to make war", or "to wage war with one another". Due to these definitions, some scholars expressed their doubts that *miḥrāb* derives from the above verb. Lane put forward "... that the explanation of this is because the person praying wars with the devil and with himself by causing the attention of his heart" (*loc. cit.*). A similar interpretation was offered by Goldziher when he suggested that the *miḥrāb* was a "place of struggle", a "battlefield", and he referred to the Prophet Muḥammad who said that "as blood circulates in people, likewise Satan circulates around them" (Goldziher, 1872, 220). The above explanations are clearly not satisfactory. It was because of this difficulty that some scholars surmised that it was a loan-word in Arabic. Dillman tried to connect it with the Ethiopian *mekʷerab* (Dillman, 1865. 836). The possible Ethiopian origin of the word and its connexion with *mekʷerab* was refuted by Praetorius who, after studying some early South Arabian inscriptions, concluded that the word *miḥrāb* at that time meant some kind of a building, but conceded that the origin of the word was still obscure (Praetorius, 1907, 621). Others, as e.g. Beer (1895, 19) and Daiches (1908, 637-9) tried to connect it with Hebrew *ḥorbôt* which occurs several times in the Old Testament and means "ruins", "ruined cities", "ruined dwellings" or even "palaces" or "fortified buildings". This theory was again considered to be very unlikely by Nöldeke (1910, 52).

The majority of scholars have never doubted that the word is Arabic and, accordingly, have tried to find its provenance and original meaning by examining pre-Islamic Arab literature and one of the earliest and most important sources of the Islamic period, the Ḳurʾān. Rhodokanakis was one of the first scholars to study these early sources and to publish his observations in two articles. In the first article he concluded that the word in pre-Islamic literature meant a "palace", a "niche", a "recess" or a "room", a "balcony" or a "gallery". Then he quoted a sentence from the *ḥadīth* where the word can be interpreted as "sanctuary" (Rhodokanakis, 1905, 296). In his second article, Rhodokanakis narrowed down the meaning of the word and suggested that it actually referred to a part of a king's or a prince's building, namely to a "meeting-room", or more precisely to a "throne-recess" within such a room, as mentioned in Ḳurʾān, XXXIV, 12. Such throne-recesses can be found, Rhodokanakis continued, in the Umayyad palaces such as Ḳuṣayr ᶜAmra and Mshattā (we can now add also Khirbat al-Mafdjar). In other verses of the Ḳurʾān, namely in XIX, 12, it refers to a "sanctuary", while in III, 36, the word is used for "a lady's private chamber" (see also Dozy, 1927, i, 265). Rhodokanakis mentions that in XXVIII, 21, it was not clear whether the Prophet meant a complete "palace" or only a "chamber" (Rhodokanakis, 1911, 71). Horovitz referred to some of the occurrences in pre-Islamic poetry, among them one of al-Aᶜshā's poems (al-Buḥturī, *Ḥamāsa*, CDIV, 4) where the word, he claimed, meant a "throne-recess" (Horovitz, 1927, 260). In a more recent article, Serjeant explained that the basic meaning was a "row of columns with their intervening spaces". He also suggested that under the Umayyads, "while retaining its other senses, it was the name given to the *maḳṣūra* [*q.v.*] (Serjeant, 1959. 453). Maḥmūd ᶜAlī Ghūl claimed that the ancient South Arabian *midhkān* was almost identical in usage with the *miḥrāb*. It was a kind of *masdjid* or *muṣallā* [*q.vv.*], or even a "burial place in the shape of a portico, place for prayers, and services for the dead" (Ghūl, 1962, 331-5). In connexion with this last interpretation, the present author in an article called attention to the fact that flat marble, stucco, stone, or faience *maḥārīb* strongly resemble tombstones. Tombstones from early Islamic times onward frequently depict a *miḥrāb* design. He re-examined one of al-Aᶜshā's poems (al-Buḥturī, *Ḥamāsa*, CDIV, 4) where the word *miḥrāb* occurs and suggested that it can be interpreted as a "burial place", as opposed to Horovitz's explanation as a "throne-recess". Other literary examples also use the word in the same context (Fehérvári, 1972, 241-54; also, idem, 1961, 32 f.). From these interpretations it would appear that in pre- and in early Islamic times, the word *miḥrāb* was basically used for a special place within a "palace" or in a "room"; it was "the highest", "the first" and "the most important place". At the same time it also denoted "the space between columns" and was equally used for a "burial place". Its architectural origin and introduction into Islamic religious practices as the most prominent feature in a mosque should be examined from these various angles.

Architectural origin. In his *EI*[1] article on the *miḥrāb*, Diez mentioned that orientalists and art historians give a twofold origin for the *miḥrāb*: the Christian apse and the Buddhist niche (Diez, 1936, iii, 485). Both features were alien to the Arabs and were not required by Islamic religious practices. Thus it could never have been introduced and accepted by the early Muslims without an adequate theological explanation. As an architectural feature, the *miḥrāb* is made up of three basic elements: an arch, the supporting columns and capitals, and the space between them. Whether in a flat or in a recessed form, the *miḥrāb* gives the impression of a door or a doorway.

The application of this feature can be as varied as the pre- and early Islamic meaning of the word suggests. The idea of a decorated recess or a doorway in the form of what we know and accept today as a *miḥrāb* goes back to remote antiquity in the Near East. In its secular sense it was used in palaces as a raised platform with a dome above supported by four columns under which the divine ruler carried out his most important functions (Smith, 1956, 197). It was a royal baldachin, "the first place" in a *madjlis*, a "throne-recess". In its religious context it was a "sanctuary", fixed or portable, under which the cult images were placed and were provided with a shelter. The tradition of these domical shelters can be traced back to some of the tent traditions of the Near East, particularly to those among the Semitic people (Smith, 1950, 43; idem, 1956, 197). Such domical tents or structures were also used over burial places. These ancient oriental traditions were later adopted by Judaism and Christianity. The direction of prayer and divine service in ancient religions, particularly in Judaism, added greater importance and widened the scope of these antique traditions. Orientation was especially important among the Semitic peoples and it was not a matter of choice. The Jews turned towards Jerusalem, and in this respect all monotheistic people looked up to the Jews and followed their practice (Krauss, 1922, 317). Early synagogues, however, had no orientation; only the prayer was directed towards Jerusalem. The Ark of the Law, the *ʾaron ha-kodesh*, had no permanent place in the building. It was only in the second phase of the development of synagogue architecture that it received a permanent station within the building, an apse or a niche which was orientated towards Jerusalem (Sukenik, 1934, 27). The earliest known synagogue with such an apse was excavated at Dura-Europos dating from the 3rd century A.D. (Lambert, 1950, 67-72; Goodenough, 1953, figs. 594-5, 599). From subsequent centuries there are several other examples known, some of these depicting the Ark in mosaic decoration on the floor of the apse (Hachlili, 1976, 43-53). The essential part of these decorations include a pair (or two pairs) of columns supporting a semicircular arch framing a conch, while below, within the columns, the Ark is shown as a pair of doors, thus symbolising a doorway, the portal of the life beyond, or the "portal of the dead" (Goldman, 1966, 101 f.). Christianity followed the same tradition. Early churches had an east-west orientation, the entrance was facing the east and the altar was towards the west. There was usually an apse, a *haykal*, with a pulpit. Churches and funerary chapels (*martyria*) generally had a large dome in Syria and in Palestine, not because of the structural function but rather because of the importance attached to this form (Smith, 1950, 92). The domical form with a portal below was frequently depicted on coins from the 4th century A.D. onwards (Smith, 1950, figs. 17-21), and later appears on tombstones (Goldman, 1966, 105). The form of the Christian and Coptic apse was so strikingly similar to a *miḥrāb* that it was not surprising that Arabic sources mention it as a feature borrowed from Christian churches (Lammens, 1912, 246; Creswell, 1932, 98).

The form was, however, not unfamiliar to the Arabs. Pre-Islamic sanctuaries in Arabia had a round tent, a *kubba* [*q.v.*] over their idols or over some of their burials (Lammens, 1920, 39-101; idem, 1926, 39-173). It seems reasonable to surmise that the Arabs wanted to preserve this ancient Semitic Arabian custom, but intended to dress it in an Islamic garb by offering a new interpretation to the pagan tradition. By examining the life of the first Muslim community in Medina we may understand how and why this feature was adopted and introduced into Muslim religious practices. During his lifetime the Prophet was not only a religious leader, but also a statesman who used the first primitive mosque in Medina not only as a place for communal prayer but also for public ceremonies where he received delegations and delivered judgements. He used to sit on his *minbar* [*q.v.*] which was set against the *ḳibla* wall. Thus in the strictest contemporary interpretation of the word, the place was a *miḥrāb*. When the Prophet died he was buried in a room next to the *ḳibla* wall, whereby in every sense his grave was in a *miḥrāb*, coinciding with the definition of a "burial place". His grave was most probably marked, we may presume, with a stone which included in its decoration all the elements already known from Judaic and Christian funerary art. That this must have been the case is perhaps attested by the references given by Ibn Rusta and Ibn Baṭṭūṭa (Fehérvári, 1972, 252). Furthermore, there is ample evidence suggesting that early *maḥārīb* were not recessed niches but flat panels reminiscent of tombstones.

History. Primitive Islam and the Umayyad period. After the Prophet's death, in the early primitive mosques the *miḥrāb* was indicated by a stripe of paint or by a block of stone embedded in the *ḳibla* wall. It appears that this practice was followed for a considerable time, since al-Maḳrīzī informs us that when ʿAmr b. al-ʿĀṣ built his mosque at Fusṭāṭ in the winter of 20/641-2, he placed "no hollow *miḥrāb*" in it (*Khiṭaṭ*, ii, 247). In the Prophet's mosque at Medina, the *ḳibla* was indicated by a large block of stone which was first placed to the north, i.e. towards Jerusalem, but in the second year of the *Hidjra* was moved to the south side, facing Mecca (Burton, 1893, 361). In the earliest mosque at Wāsiṭ, built by al-Ḥadjdjādj b. Yūsuf [*q.v.*], the excavators found no *miḥrāb* recess (Safar, 1945, 20). This was also the case in the mosque of Banbhore in Pakistan, built at the end of the 1st/early 8th century (anon., in *Pakistan Archaeology*, i [1964], 52). That must indicate that in both cases the *ḳibla* was most likely marked either by a flat stone or by a stripe of paint.

The earliest known surviving *miḥrāb* is a marble panel known as the *miḥrāb* of Sulaymān in the rock-cut chamber under the Ḳubbat al-Ṣakhra [*q.v.*] in Jerusalem (Pl. I, 1). Creswell has already indicated that this was most likely the earliest surviving *miḥrāb*. His argument was based on the shape of the arch, on the primitive Kūfic inscription on the lintel, and the simple scroll motif on the arch and the rectangular frame (Creswell, 1932, i, 70, pl. 120a in ii; idem, 1969, i/l, 100, fig. 374). Several other points can now be added to Creswell's remarks. The crenellations and pearl motifs on top of the panel recall pre-Islamic, i.e. Sāsānid, monuments with identical decorations. The vertical bands down the pilasters are similar to those on the mosaics of the circular arcade and on the drum of the dome (Creswell, 1932, figs. 189-9, 201, 205, pls. 33b, 37b). Further evidence is provided by coins depicting *miḥrāb* designs on their reverse, most likely accepting the *miḥrāb* of Sulaymān as their model (Miles, 1952, 156-71; idem, 1957, 187-209, nos. 7-8; idem, 1959, 208, pl. I/1; Fehérvári, 1961, 90-105). All of these coins are attributed to the period when ʿAbd al-Malik introduced his financial reforms in 75/694-5.

The first concave *miḥrāb*, i.e. *miḥrāb mudjawwaf*, was introduced by ʿUmar b. ʿAbd al-ʿAzīz, governor of Medina, when he rebuilt the Prophet's Mosque in 87-

8/706-7 (al-Maḳrīzī, *Khiṭaṭ*, ii, 247; Ibn Taghrībirdī, *al-Nudjūm al-zāhira*, i, 76). It was richly decorated with precious material (Sauvaget, 1947, 83-4). After that, semicircular *maḥārīb* rapidly spread throughout the Muslim world. Such a *miḥrāb* was introduced into the Great or Umayyad Mosque at Damascus when al-Walīd I took over the entire building and rebuilt it between 87/706 and 96/714-15. According to early accounts, it was set with jewels and precious stones. This *miḥrāb* was destroyed in 475/1082 and then was subsequently rebuilt but destroyed again by fire in 1893. The third concave *miḥrāb* was built in the Mosque of ᶜAmr at Fusṭāṭ in 92/710. Semicircular *maḥārīb* flanked by pairs of columns were found in almost all of the Umayyad desert palaces (Creswell, 1932, fig. 438, pl. 120b, e; idem, 1969, i/2, figs. 538, 638, pls. 66 f., 103e and 115b). The earliest surviving concave *miḥrāb* in a mosque is, according to Cresswell, in the Mosque of ᶜUmar at Boṣrā, built during the late Umayyad period (1969 i/2, 489, fig. 544, pl. 809).

ᶜIrāḳ. The Khāṣṣakī *miḥrāb* in Baghdād (Pl. I, 2) is the earliest known surviving example in the country, as it may date from the end of the Umayyad or from the beginning of the ᶜAbbāsid period (Sarre and Herzfeld, 1920, ii, 139-45, Abb. 185-7, Taf. XLV-XLVIa-d; Creswell, 1940, 35-6, fig. 26, pl. Ia-c; al-Tutunčī, 54-62, figs. 3-5, pl. 4). It was carved out of a simple block of marble in a shallow semi-elliptical form. The spiral columns are crowned by acanthus capitals which support the bell-shaped niche-head, which is framed by a frieze of acanthus leafs, followed by a narrow stripe of astragals and a band of palmettes alternating with bunches of grapes. A vertical ornamental band runs down at the back, the lower part of which is missing. The most interesting part of the design is the shell which is contained within a horseshoe shape. The shell as niche-head occurred for the first time in a grotto at Bāniyās in Syria, dating from the 1st century B.C. (Wheeler, 1857, 37). Later, it was frequently used in classical art but was more popular in the eastern part of the Roman Empire. The motif was associated with funerary monuments and as such was often depicted in Jewish and in early Christian sepulchral art. The rounded shape of this *miḥrāb* and the fact that it was made of marble, which was not available in ᶜIrāḳ, may indicate that it was imported from Syria or from the southern part of Asia Minor. As a rule, *miḥrāb* niches are rectangular in ᶜIrāḳ and in Persia. The origin of this form may be found either in the rectangular recesses of Nestorian churches in ᶜIrāḳ or in the Persian *īwān* [*q.v.*]. The earliest known rectangular *miḥrāb* in the country survives in the fortress palace of Ukhayḍir, dating from the latter half of the 2nd/8th century (Creswell, 1940, pl. 120e; al-Tutunčī, figs. 6-9, pl. 5). *Maḥārīb* which were erected in mosques, palaces and in private houses at Sāmarrā mark the first turning point in the development of this feature in Islamic religious architecture. The significant role of the *maḥārīb* was emphasised by their size, which became considerably larger during the 3rd/9th century, e.g. in the Great Mosque of Sāmarrā (Creswell, 1940, pl. 66c) or in the Mosque of Abū Dulaf, where the excavators discovered two *miḥrābs*, one within the other (Francis, 1947, pls. 5/1-2; al-Tutunčī, figs. 15-7, pl. 9). By then, they were more lavishly decorated with carved stucco. A large *miḥrāb* with stucco decoration was excavated in the Djawsak al-Khāḳānī palace in Sāmarrā, built by the caliph al-Muᶜtaṣim between 224/838 and 228/842, close to his throne-room. The niche was more than one metre deep and was flanked by two pairs of columns. The walls of the niche and the columns were coated with stucco (Herzfeld, 1923, Abb. 132; Creswell, 1940, fig. 191). Flat *miḥrāb* panels were used in smaller mosques, mausolea and in private houses. The prototype for these flat *maḥārīb* was clearly provided by the *miḥrāb* of Sulaymān in Jerusalem. Evidence for this is to be found in the *miḥrāb* of the Djāmiᶜ al-ᶜUmariyya at Mawṣil. It is made up of six panels, the lowest central one being the earliest, probably of the 3rd/9th century, and a close copy of Jerusalem flat *miḥrāb* (Sarre and Herzfeld, 1911, ii, 285-6, Abb. 275, Taf. CXXXV). Several stucco flat *maḥārīb* were discovered in private houses in Sāmarrā, presenting all the three styles of the Sāmarrā stucco decorations (Herzfeld, 1923, Abb. 167-70, 269-60, 316, Taf. LXII and XCVII). An interesting combination of flat *maḥārīb* can be seen in two small mausolea in Mawṣil, the Mausoleum of Yaḥyā b. Ḳāsim (Pl. II, 3) and in the Mausoleum of *Imām* ᶜAwn al-Dīn (al Tutunčī, fig. 59, pl. 34), both erected during the 7th/13th century (Sarre and Herzfeld, 1911, 249, 263-8, Taf. CXXXV). These two *maḥārīb* are almost identical. They are made up of two flat panels showing the correct *ḳibla* direction. In each of these two *miḥrābs* there is a mosque-lamp hanging down from the pointed arch.

Out of the later rectangular *maḥārīb* in ᶜIrāḳ, mention should be made of the main prayer niche of the Great Mosque in Mawṣil which appears to be a combination of flat and rectangular types (al-Tutunčī, figs. 34-6, pls. 17-9). It is flanked by a pair of octagonal pilasters decorated by intertwined scrolls and crowned by what Herzfeld called "lyra" capitals (Sarre and Herzfeld, 1911, ii, Abb. 230-3). The spandrels and the canopy have rich arabesque decoration. Below, at the back of the recess there is a decorated panel showing a pair of spiral pilasters on bell-shaped bases and topped by identical capitals supporting the arabesque-decorated spandrels and canopy. This *miḥrāb* may also be regarded as a transitional form between the simple and multi-recessed *maḥārīb* that played an important role later in Persian religious architecture. The inscription round the niche bears the signature of the artist, one Muṣṭafā from Baghdād, and the date 543/1148 (Van Berchem in Sarre and Herzfeld, 1911, i, 17; Herzfeld, 1911, ii, 216-24). There was a free-standing *miḥrāb* built of stone in the courtyard of this Great Mosque in Mawṣil, but it was moved to the ᶜAbbāsid Palace Museum in Baghdād. It was attributed to Nūr al-Dīn Arslān Shāh I (589-607/1193-1211). It has two recesses, the outer one being rectangular in plan while the inner one set back from it is pentagonal. There is an interesting innovation here, namely, the frame is composed of small compartments (Sarre and Herzfeld, 1911, i, 18, ii, 227, Taf. V; Francis, 1951, pl. 3, no. 10; al-Tutunčī, fig. 38, pl. 20). A similar frame, but decorated with human figures, appears around a niche that was discovered near Sindjār on the site of Gū Kummat and which might have been a *miḥrāb* (Reitlinger, 1938, 151-3, figs. 14-7; Francis, 1951, pl. 5, no. 16; al-Tutunčī, figs. 39-9, pls. 29-30). The marble *miḥrāb* of the Pandja ᶜAlī in Mawṣil (built in 686/1287) can be regarded almost as a triple *miḥrāb* since the central pentagonal recess is flanked by a small niche on either side. All three recesses are crowned by *muḳarnas* [*q.v.*] semi-domes, while each panel in the central niche is decorated by a hanging mosque-lamp (Sarre and Herzfeld, 1911, ii, 270-8, fig. 268, Taf. VII; Francis, 1951, pl. 2, no. 5).

Syria and Palestine. *Maḥārīb* were usually concave in these countries, but flat panels were used from time to time. A small and somewhat simple marble

miḥrāb panel decorates the first pilaster under the western portico in the Umayyad Mosque in Damascus. It is attributed to the Ṭūlūnid period (Creswell, 1940, ii, pl. 123c). Another flat *miḥrāb*, a stucco panel, probably of the same period, is in the Maḳām ᶜAbd al-ᶜAzīz at al-Gharrā. Two pairs of pilasters support the rectangular frame which surrounds the richly decorated canopy and spandrels (Herzfeld, 1910, 53-6, Abb. 18, Taf. IV-V; idem, 1923, Taf. LXXVIII; Creswell, 1940, 356, pl. 121c). Rectangular *maḥārīb* with stucco decoration came to light during the excavations at Meskene, ancient Bālis [see MASKANA]. One of these was in the central room of the Great Mosque. Another triple *miḥrāb* with a central deeper rectangular recess flanked by shallow openings was found in room no. 1, while a third one was in room no. 2 (Salles, 1939, 221-4, pls. XCIXa-b, Ca). Two stucco *miḥrābs*, almost identical in shape and decoration were discovered at Palmyra. The shallow semicircular niches are flanked by pairs of pilasters supporting round arches, with shell-shaped canopies inside. The spandrels have arabesque decoration and the panels are surrounded by floriated Kūfic inscriptions. Marble coating for *maḥārīb* was first introduced in Syria, which was always rich in this material. As one of the possible prototypes and earliest examples for these polychrome marble-lined *maḥārīb*, the one in the Madrasa Shādbakhtiyya in Aleppo, made of polychrome stones, should be considered. An interesting innovation can be observed here: the upper part of the *miḥrāb*, namely the rectangular frame surrounding the spandrels, is much wider than the lower part (Herzfeld, 1942, fig. 72; Sauvaget, 1931, 79, no. 21; Creswell, 1959, 103). The same form can be observed in the polychrome marble-lined *miḥrāb* of the Madrasa Sulṭāniyya in Aleppo, dated 620/1223 (Herzfeld, 1921, 144; Creswell, 1959, 102). A slightly earlier and similar example can be found in the Madrasa Ashrafiyya (607/1210). Polychrome marble work, however, reached its apogee in the *miḥrāb* of the Madrasa al-Firdaws, erected in 633/1235 (Pl. II, 4). It is the most developed and the largest of the polychrome marble prayer niches. The spandrels depict skilfully interlaced ornaments, the lines of which also form the frame of the upper part. Above there is a semi-circular panel filled by three coloured interlacing patterns and framed by an inscription. This type of marble-work found its way to Egypt and greatly influenced the decoration of later Ayyūbid and Mamlūk *maḥārīb* in Cairo. An interesting example of polychrome marble-work is a small flat *miḥrāb* in the courtyard of the Bimāristān Nūr al-Dīn in Damascus which was built in 549/1152. It is of white marble, but the arch and the spandrels have polychrome marble decoration. Creswell attributed it to Maḥmūd b. Zankī b. Aḳsunḳur, whose name appears in an inscription on the building and the date of construction. Creswell has also suggested that this was the earliest marble mosaic work (Creswell, 1959, 202). On stylistic grounds, however, Herzfeld claimed that it must have been erected at least a century later, possibly in the late 7th/13th century (Herzfeld, 1942, 10).

Egypt. The first concave *miḥrāb* in the country was built by Ḳurra b. Sharīk [*q.v.*], governor of Egypt, in 92/710-11, in the Mosque of ᶜAmr at Fusṭāṭ. The structure of the main *miḥrāb* in the Mosque of Ibn Ṭūlūn (265/878-9) is original and so are its four flanking columns and capitals. The polychrome marble of the recess and the wooden lining of the canopy and that on the archivolt are later in date (Creswell, 1940, 348-9, pl. 122; Fattal, 1960, 22-4, pls. 10-11). There are five flat *maḥārīb* in the mosque, two of which are contemporary with the building. They are placed on piers in the fourth arcade of the sanctuary. One of them is badly damaged, but the other one is well preserved (Creswell, 1940, 349, pls. 123a-b; Fattal, 1960, 24-5, pls. 17, 18 and 29). The two panels must have been almost identical. A pair of pilasters on bell-shaped bases and topped by identical capitals support a pointed arch, the outline of which can also be observed on the damaged panel. A row of pearl motifs provides the border for both and an inscription runs across on top. A difference can be noted in the decoration of the spandrels and in the spaces below the arches within the pilasters. In both instances the influence of Sāmarrā is obvious, just as it is evident in the overall plan and decoration of the mosque. The main *miḥrāb* of the Mosque of al-Azhar, built between 359/969-70 and 361/971-2, although several times altered and restored, still retains some of its original decoration. The canopy with its elaborate and deeply-cut floral design, the soffit of its arch covered by finely executed scrollwork, together with the floriated Kūfic inscription on the archivolt, are most probably of the same period as the mosque (Creswell, 1952, 55-6, pls. 4a, 7c; Hill, Golvin and Hillenbrand, 1976, fig. 22). This original stucco work was covered by a wooden lining until 1933 (for a picture of this, see Hautecour and Wiet, 1932, ii, pl. 91). The marble lining of the niche and the flanking columns are much later in date.

One of the finest stucco *maḥārīb* in Cairo which survives in its original form, is that of the Mosque of al-Djuyūshī, built in 478/1085 (Pl. III, 5). Its stucco decoration, after that of the Mosque of Ibn Ṭūlūn, and that of the al-Azhar, is the third outstanding example in Egypt. The design here is nevertheless richer and more refined (Creswell, 1952, 157-9, fig. 80, pls. 48c, 116a; Hill, Golvin and Hillenbrand, 80, figs. 31-2). None of the prayer niches built in Egypt in the following two centuries has ever surpassed it. The decoration of the Sayyida ᶜĀtika, built during the first quarter of the 6th/12th century, is more restrained but presents some new ideas. The frame, which is an epigraphic band, does not surround the entire niche, but only its stilted and pointed arch; then it turns at right angles and runs all around the interior. Furthermore, in the spandrels there are large fluted paterae in high relief surrounded by pearl motifs. Finally, above there is a geometric band of overlapping ovals (Creswell, 1952, 229-30, pls. 80e, 117b). Somewhat similar but more elaborate patterns appear above the *maḥārīb* of the Mausoleum of Sayyida Ruḳayya, built in 527/1133 (Pl. III, 6). The horizontal panel over these *maḥārīb* recall the Sāmarrā ornaments (Creswell, 1952, 249, fig. 143, pls. 87b, 119c-d, 120a; Hill, Golvin and Hillenbrand, 82, figs. 37-8). All the recesses in this building have scalloped canopies. Three phases can be observed in the development of these canopies. In the first phase, the slightly projecting frame follows the outline of the scallop. One of the earliest examples of this is the *miḥrāb* of Umm Kulthūm, built in 516/1122 (Creswell, 1952, 239-40, fig. 135, pls. 82b, 118b). The second phase of the development is connected with the *muḳarnas*, where the frame of the scallop is combined with *muḳarnas* cones, placed in one, two or three lines above the other (e.g. the *maḥārīb* of the Sayyida Ruḳayya). The third phase was used in Turkey and will be discussed further below. There are two stucco *miḥrābs* in Cairo which present a special group. They are triple-recessed. The earlier of these two is in the mausoleum of Ikhwat Yūsuf, built during the last

quarter of the 6th/12th century (Creswell, 1952, 235-6, pl. 118a). These recesses here are plain, but their upper parts are surrounded by a continuous band of floriated Kūfic which runs all around the interior of the building. The spandrels are filled by carefully-executed arabesques which are comparable to earlier stucco work in Cairo and accordingly may indicate an earlier date for this *miḥrāb*. The decoration of the second triple-*miḥrāb*, in the mausoleum of Muṣṭafā Pas̲h̲a (middle of the 7th/13th century), is so deeply cut that it looks like openwork. The recesses here have keel-arches which most probably originated in Egypt and were widely used there during the 6th/12th and 7th/13th centuries (Creswell, 1959, 178-80, pls. 57c, 107c). An interesting and somewhat bold experiment can be observed in the *miḥrāb* of the mausoleum of Aḥmad b. Sulaymān al-Rifāʿī, erected in 690/1291 (Pl. IV, 7). The *ḳibla* wall has pieces of glass embedded in the stucco background and these are painted in green (Creswell, 1959, 220-1, pl. 109c; Lamm, 1927, 36-43). The experiment was not successful and was never attempted again.

It has already been pointed out that the polychrome marble-work of Syria had greatly influenced *miḥrāb* decorations in Egypt from the mid-7th/13th century onwards. One of the earliest examples is the comparatively simple but very large *miḥrāb* in the mausoleum of Nad̲j̲m al-Dīn, built in 647-8/1249-50 (Creswell, 1959, 102, pl. 106c). A marble lining for the main *miḥrāb* of the Mosque of Ibn Ṭūlūn was executed at the order of Lād̲j̲īn [*q.v.*] in the same year, and that of the Mosque of al-Azhar in 665/1266. The *miḥrāb* of the Madrasa of Ḳalāwūn [*q.v.*] and the almost identical one in his mausoleum, both erected in 684/1285 (Pl. IV, 8), are perhaps the most outstanding examples of polychrome marble work in Egypt. Both niches are of horseshoe shape instead of the conventional concave one. Inside of the *miḥrāb* in the mausoleum there are four rows of small arcades, each crowned by a shell, while in that of the *madrasa* there are only two rows. The canopies and the spandrels of these two *miḥrāb*s are covered with gold mosaic, showing grapes and vine leaves. The arches are also horseshoe-shaped, being made up of white and coloured voussoirs. The influence of the Mag̲h̲rib is well demonstrated here in the shape of the niches and the arches and the coloured voussoirs, while the row of small arcades reveals Syrian traditions (Creswell, 1959, 202, pls. 108b, c).

Mag̲h̲rib. The earliest known surviving *miḥrāb* in the Mag̲h̲rib is in the Mosque of Bū Fatātā at Sūsa in Tunisia, erected between 223/838 and 226/841. It is a low plain niche of horseshoe form with an arch of the same shape (Creswell, 1940, 247, pls. 58e, 121a; Hill, Golvin and Hillenbrand, fig. 129). In the Great Mosque of Sūsa we find for the first time a *miḥrāb* in front of which a dome was built (Hill, Golvin and Hillenbrand, 100-1, figs. 140-1). This example was shortly followed in the Great Mosque of Ḳayrawān, when it was rebuilt by Abū Ibrāhīm Aḥmad II. He was also responsible for the decoration of the new *miḥrāb*. The niche has a horseshoe form flanked by a pair of marble columns crowned by Byzantine-style capitals supporting a horseshoe arch (Creswell, 1940, 308-14, fig. 232, pl. 121b; Marçais, 1926, i, 19-22, 68 f., figs. 7, 36; Hill, Golvin and Hillenbrand, 92-3, figs. 96-9). The canopy has wooden panelling which was most probably added later. The walls of the niche are covered with marble openwork. The archivolt and the surface of the *miḥrāb* are adorned with polychrome and monochrome lustre tiles imported from ʿIrāḳ in 248/862-3 (Marçais, 1928). The date of these tiles and the introduction of lustre has recently been questioned; nevertheless, it is clear that stylistically these tiles are related to those excavated at Sāmarrā. Another horseshoe-shaped *miḥrāb* is that in the Great Mosque of Cordova (Pl. V, 9), which was erected and decorated at the order of al-Ḥakam II in 354/965 (Marçais, 1926, i, 222 f., 264-66, figs. 146, 154; Creswell, 1940, 143). This *miḥrāb* is remarkable in its size and in its extremely rich decoration of polychrome marble and gold mosaics. Several new decorative features which appeared here for the first time were accepted and applied to later *maḥārīb* in the Mag̲h̲rib. The niche itself is very spacious and high, crowned by a complete dome, the earliest such example in a *miḥrāb* niche. The lower part of the niche has plain marble panels, followed by a cornice with a Kūfic inscription. Above there are seven trefoil arches supported by marble columns with gold capitals. These arches are almost identical to those which decorate the upper part of the *miḥrāb*. Inside the arcade there are floral decorations in Byzantine style. The horseshoe arch rests on the wall and on two pairs of marble columns, one behind the other. The archivolt is decorated with voussoir stones, all with rich floral designs, and in white and in polychrome alternately. Acanthus scrolls with a rosette decorate the spandrels. The cusped arcades inside the niche and on top of the *miḥrāb* are most probably imitations of the false window-openings found over the library portal in the Great Mosque of Ḳayrawān (Terrasse, 1932, 110); but as Marçais once suggested, they can ultimately be traced back to Syria (Marçais, 1926, i, 266, n. 1, fig. 147). The *miḥrāb* is one of the most beautiful examples in the whole Muslim world. Its form and decorative style has several times been copied, but its fineness and richness has never been surpassed. Certain elements in this *miḥrāb* like the horseshoe form of the recess, the cusped arches inside and on top of the *miḥrāb*, the broad archivolt with voussoir stones and floral decorations became the accepted features of later *maḥārīb* in the Mag̲h̲rib.

The *miḥrāb* in the Great Mosque of Tlemcen in Algeria is one which reveals close connexions to that in Cordova. It was built in 530/1135. The decorated and cusped archivolt closely resembles that of Cordova but is more elaborate, although executed only in stucco. The arch and the spandrels are surrounded, as in Cordova, with an epigraphic band of floriated Kūfic. The niche itself is pentagonal, a form that was to be frequently used in the Mag̲h̲rib and also in Turkey. The niche is flanked by an opening on either side giving access all round the *miḥrāb* (W. and G. Marçais, 1903, 140 f.; Marçais, 1926, i, 313 f., figs. 213-4, 381-5; Hill, Golvin and Hillenbrand, 111, figs. 208-9). This *miḥrāb* in Tlemcen is clearly a deliberate copy of the Cordova *miḥrāb*, albeit executed in cheaper material. Some architectural and decorative details which were new elements in Cordova appeared here, but in more developed forms, and were used again in later examples. These can be best observed in the *miḥrāb* of the Kutubiyya Mosque in Marrākes̲h̲, built *ca.* 541/1146 (Marçais, 1926, i, 321 f., fig. 179; Hill, Golvin and Hillenbrand, 125: Basset and Terrasse, 1926, 119). The canopy here is decorated with a *muḳarnas*, as is the large dome in front of the *miḥrāb*. The *muḳarnas* was a new feature in the architecture of the Mag̲h̲rib and was introduced there during the first half of the 6th/12th century. The horseshoe arch of the niche rests on three pairs of engaged columns. The broad and cusped archivolt is decorated with trefoil arcaded compartments. A frame filled with geometrical and star patterns surrounds the arch,

while above there are five blind window-openings with lobed arches. In the Great Mosque of Tinmāl in the High Atlas, the *miḥrāb*, built in 548/1153, closely resembles that of the Kutubiyya. The same arrangements, sc. a *muḳarnas* canopy inside the pentagonal niche, a similarly decorated dome in front of the *miḥrāb*, and a horseshoe arch supported by three pairs of pilasters and a frame not unlike that in the Kutubiyya, can be observed here. Again there are flanking niches and an open path behind, once more presenting a free-standing *miḥrāb* (Marçais, 1926, i, 323, 385, figs. 181, 216-17; Hill, Golvin and Hillenbrand, 128, figs. 472-3). There is another *miḥrāb* in the Mosque of Yaᶜḳūb al-Manṣūr (also known as the Mosque of the Ḳaṣba) in Marrākesh, which stylistically is related to this group. This is perhaps the latest example of this type. It was built in 592/1195 (Hill, Golvin and Hillenbrand, fig. 413).

In southern Tunisia, at Tozeur, the *miḥrāb* built in 592/1195 represents an entirely different type. The pentagonal recess is considerably smaller than any of the previous examples, and is crowned by a semi-dome coated with carefully-carved stucco decoration of floral designs and epigraphic bands. The horseshoe arch has an incomplete double archivolt interrupted by the attached rectangular frame. Once again the floral decoration of the wedge-shaped compartments on the archivolt recalls Cordova (Marçais, 1926, i, 385-94, fig. 218; Hill, Golvin and Hillenbrand, 107, figs. 174-6). The unusual form and decoration of this *miḥrāb* was due to an Almoravid patron and to the presence of Andalusian craftsmen.

Iran, Afghanistan and Central Asia. During the last two or three decades, several new monuments, among them mosques and mausolea, have been discovered and excavated in this area. The mosque known as the Tārī Khāna in Dāmghān, built probably during the latter half of the 2nd/8th century, no longer stands alone as an early mosque in Iran. The comparatively deep rectangular recess with an oblique wall at its back for correcting the *ḳibla* direction, may be regarded as the original *miḥrāb* in this mosque. It has no decoration now, but we may presume that once it was coated with stucco (Godard, 1934, 226; *Survey*, 933-4). The recently-excavated Great Mosque in Sīrāf (late 2nd/8th or early 3rd/9th century) had a rectangular *miḥrāb* but only the foundation walls were discovered *in situ* (Whitehouse, 1970, 2 f., figs. 1-2). The Masdjid-i Djāmiᶜ in Fahradj near Yazd (probably of the 3rd/9th century) has its main *miḥrāb* in the original place but the walls are of more recent date (Pirniyā, 1349/1970, 2-13; Alfieri, 1977, 65-76, pls. X, XIa, b; Shokoohy, 1978, 67, pl. 106). In the old part of the Masdjid-i Djāmiᶜ in Shīrāz the tilted back wall of the niche, together with the horseshoe arch and the fragmentary stucco decoration on its soffit were regarded as original and dated to the end of the 3rd/9th century (Pope, 1934, 324; idem, *Survey*, 1264-6, fig. 455, pls. 259A-B; idem, 1965, 80-1, fig. 75). As far as it is known today, the *miḥrāb* of the Masdjid-i Djāmiᶜ of Nāyin is the earliest example surviving in its original form (Pl. V, 10). It is a double-recessed rectangular niche, the prototype of which may be found in the Djawsaḳ al-Khāḳānī, mentioned above. The canopies, frame, columns and capitals are covered with stucco. Unfortunately, the decoration is missing from the lower part of the inner pair of columns and from the back wall of the niche. Stylistically, this *miḥrāb* was dated to the latter part of the 4th/10th century (Flury, 1921, 230-4, 305-16; *Survey*, fig. 921, pls. 265B, 267, 269A-D, 511B-C; Pope, 1965, 84, fig. 76). Details of the stucco patterns can be traced back to Sāmarrā, but here they appear in a more developed form.

Later *maḥārīb* were double- or triple-recessed, e.g. like that in Mashhad-i Miṣriyān [*q.v.*] in Soviet Central Asia, dated to the end of the 5th/11th century (Kotov, 1939, 10-8, pls. XLV-XLVIII; *Survey*, 2721-5, figs. 922-4; Pugačenkova, 1958, 169-74). The decorative patterns are similar to those of Nāyin. Stucco *maḥārīb* have also been discovered in Afghānistān. One of them was excavated in the Audience Hall in the Great Palace at Lashkarī Bāzār [*q.v.*] (Schlumberger and Sourdel-Thomine, 1978, i/B, 39 f., pls. 73d, 147-9), and it was attributed to the Ghaznavid period. Two small mausolea at Sar-i Pul in northern Afghanistan had fine stucco *miḥrābs* with inscriptions. These inscriptions were published by Bivar, who suggested that one of these two mausolea, namely the Imām-i Khurd and its *miḥrāb* (Pl. VI, 11) cannot be earlier than 450/1058-9, while the second one in the Ziyārat of Imām-i Kalān most likely dates from the 6th/12th century (Bivar, 1966, 57-63). Unfortunately, both *miḥrābs* have disappeared during the last few years (Shokoohy, 1978, 110-11, figs. 88-94, pls. 193-4, colour pl. 47). The *miḥrāb* of the Masdjid-i Djāmiᶜ of Zawāra, dated 551/1156-7 (Godard, 1936, fig. 199) and those in the Masdjid-i Djāmiᶜ in Ardistān (553-5/1158-60); Godard, 1936, fig. 195; *Survey*, pls. 322-4) may be regarded as combinations of flat and multi-recessed *maḥārīb*. The *miḥrāb* of the Imāmzāda Karrār at Buzān (now in the Archaeological Museum in Tehran, acc. no. 3268) should also be mentioned. The niche is very deep like an *īwān*, and it is covered by a vault instead of a semi-dome. A floriated Kūfic inscription in the frame gives the date of construction as 528/1143. This inscription is very interesting since the *hastae* of the letters end in human heads. The stucco work here is richer and more refined than in any of the previous examples, showing the wide scope of this technique (Pope, 1934, 114; Smith, 1935, 65-81; *Survey*, pls. 331A-C, 312A). The two most outstanding stucco *miḥrābs* in Iran are those in the Madrasa Ḥaydariyya in Ḳazwīn and in the Gunbad-i ᶜAlawiyān in Hamadān. Both are remarkable not only because of their enormous size, but mainly because of the extreme refinement of the stucco decoration. The designs appear as if superimposed in two or three layers. In Ḳazwīn, the lower part of the *miḥrāb* is missing, but the remaining upper half indicates that stucco work may very well have been at its finest here (Godard, 1936, 200, fig. 136; *Survey*, pls. 313A, 316A-C, 512D). The *miḥrāb* in the Gunbad-i ᶜAlawiyān in Hamadān perhaps does not surpass that of Ḳazwīn, but certainly comes close to it (Herzfeld, 1922, 86-99; *Survey*, pls. 330, 331A-B; Wilber, 1959, 151-2, fig. 116, cat. no. 55). Herzfeld and Wilber attributed this latter *miḥrāb* to the Il-Khānid period, while Pope dated it to the end of the 6th/12th century (*Survey*, 1301; idem, 1965, fig. 186). It seems most likely that both *miḥrābs* were erected about the same time, before the Mongol invasion of Iran in 617/1220. With the coming of the Mongols, the style slowly changed, and that change is already apparent in the stucco *miḥrāb* of the Imāmzāda Abu 'l-Faḍl wa-Yaḥyā in Maḥallat Bālā, dated to 700/1300 (Wilber, 137, pl. 67, cat. no. 44), and in two others, one of them in an *īwān* outside Shīrāz (Fehérvári, 1969, 3-11; idem, 1972, fig. 8) and the other one in the Pārs Museum (Fehérvári, 1972, fig. 7). The finest example of Il-Khānid stucco *miḥrābs* are in the Masdjid-i Djāmiᶜ in Reza'iye (Riḍāʾiyya) (Wilber, 112-3, pl. 9, cat. no. 16), dated 676/1277 and in the Masdjid-i Djāmiᶜ of Iṣfahān, built at the order of

Öldjeytü Muḥammad Khudābanda in 714/1314 (Wilber, 141, pls. 87-8, cat. no. 48; *Survey*, pls. 396-397A-B; Pope, 1965, fig. 189. In both *miḥrābs*, the stucco work is of superb quality and is executed in openwork. The gradual change in taste and style resulted in the application of two new techniques in the decoration of *maḥārīb*: the usage of mosaic faience and the application of lustre tiles.

Mosaic faience originated in Iran, and the earliest examples are to be found in the monuments of Khurāsān and Central Asia dating from the 6th/12th and early 7th/13th centuries. The technique was, however, perfected and first applied in the decoration of *maḥārīb* in Turkey (see below). Mosaic faience decoration in Iran was not introduced in *miḥrābs* before the 8th/14th century. The earliest known such *miḥrāb* is in the Imāmzāda Shāh Ḥusayn in Warāmīn, erected *ca.* 730/1330 (Wilber, 1955, cat. no. 86, 177-8, pl. 184). Two other outstanding examples are in the Masdjid-i Djāmiᶜ of Yazd, dated 777/1375 (Pl. VI, 12; *Survey*, pl. 443; Pope, 1965, 185, colour pl. VII and fig. 246), and the second one is in the Masdjid-i Djāmiᶜ in Kirmān, dated *ca.* 957/1550 (*Survey*, pls. 401, 540).

Flat *maḥārīb* were also used in Iran. At first, these were of carved stone or alabaster. By the 6th/12th century faience tiles were used, with the decoration in relief painted in cobalt blue or turquoise under the glaze. During the early 7th/13th century lustre painting was introduced on these tiles. Occasionally cobalt blue and turquoise colours were added. There are some ten such large lustre *maḥārīb* known today which were made up of several tiles. All of these were made in Ḳāshān. One of the earliest dated large lustre *maḥārīb* is preserved in the shrine of Imām Riḍā in Mashhad, dated Rabīᶜ II 612/July 1215 (Donaldson, 1935, 125-7; Bahrami, 1944-5, 37-8, pls. 20-1). These lustre tiles have recently been studied by O. Watson in great detail (see Watson, 1985). A somewhat unusual *miḥrāb* is the Masdjid-i ᶜAlī in Ḳuhrūd [*q.v.*] near Ḳāshān (Pl. VII, 13). The recess and the lower part of the *ḳibla* wall are covered with monochrome-glazed and with some hundred lustre-painted tiles. Although the *miḥrāb* in its present form was built probably during the last century, some of its lustre tiles bear the date of 700/1300. At the back of the rectangular recess there is a monochrome-glazed *miḥrāb* tile, slightly tilted for correcting the *ḳibla* direction, dated 708/1308 (Watson, 1975, 59-74, pls. Ia-c, Vd).

Turkey. Early *maḥārīb* in Anatolia were constructed of stone with a comparatively small and shallow recess which could be three-sided, such as the *miḥrāb* of the Ulu Cami in Erzurum, dated 575/1179 (Ünal, 1968, 31, fig. 20). Others are pentagonal, like that of the ᶜAlāʾ al-Dīn Mosque in Niğde (620/1223), which is a double-recessed *miḥrāb* with both recesses crowned by *muḳarnas* canopies (Gabriel, 1931, i, 120, pl. XXXVI). *Maḥārīb* with *muḳarnas* canopies became popular in the country, and they were equally used in stone and in faience, and later in the Ottoman period in marble. Scalloped canopies were also used in Turkey, and here we find them in the third phase of their development (for the earlier two phases, see above, under Egypt); they are all double-recessed, the inner recess is crowned by a scallop, while the arch of the outer niche is cusped. One such *miḥrāb* was placed in the Ulu Cami of Kızıltepe (Dunaysir), dated to 601/1204 (Gabriel, 1937; idem, 1940, i, 51, ii, pls. XXXI/1-2, XXXII/1-3). The second such *miḥrāb* is in the Madrasa Masᶜūdiyya in Diyarbakir, which is similar to the previous example (Gabriel, 1940, i, 197, ii, pl. LXXIII/3; Bakirer, *Kat.* no. 20, 143-4, res. 55-7, şek. 20).

The second decorative technique applied for *maḥārīb* in Turkey was mosaic faience. There are more than twenty such *maḥārīb* known in the country (for a complete list of these, see Meinecke, 1976, and for tile work in Turkey, Öney, 1976). The tiles were coloured in cobalt blue, turquoise, black, aubergine and white. They form epigraphic and geometric bands round the niches and cover the walls, the *muḳarnas* canopy and the spandrels. The most beautiful of these faience *maḥārīb* are in Konya, which was the capital of the Saldjūḳs of Rūm. One such *miḥrāb* was installed in the Sadrettin Konevi, dated 673/1274-5 (Pl. VII, 14; Meinecke, 1976, cat. no. 85, i, 64, ii, 352-5, Taf. 36/4; Bakirer, *Kat.* no. 49, 182-3, res. 111-13, şek. 49). Towards the end of the 7th/13th century, tiles were used together with stucco and terracotta, as is the case in the *miḥrāb* of the Arslanhane Cami in Ankara, built in 689/1290 (Otto-Dorn, 1957; Akurgal, Mango and Ettinghausen, 1966, 149, colour pl. on p. 132; Aslanapa, 1971, 121; Meinecke, cat. no. 18, i, 41-3, ii, 66-74, Taf. 8/3; Bakirer, *Kat.* no. 58, 196-8, res. 132-4, şek. 58). In the 9th/15th century, faience mosaic is replaced by the *cuerda seca* technique, and perhaps one of the most beautiful *maḥārīb* with such decoration is that of the Green Mosque in Bursa, dated 824/1421 (Öney, 1976, 62; Goodwin, 1971, 66, fig. 60; Aslanapa, 1971, fig. 214). Simultaneously with the *cuerda seca*, underglaze-painted tiles were also introduced during the 9th/15th century. At first, these were painted in blue and white and later in polychrome.

India. The earliest known and reported *miḥrāb* in India which survives is in the so-called Arhai-din-ka-Jhompra Mosque at Adjmēr, completed in 596/1199-1200. It reveals strong Hindu and Buddhist elements in its decoration and in its arch, which is cusped and is carved out of a single block of marble (Nath, 1978, 17, pl. XXI). Three *maḥārīb* in the tomb of Shams al-Dīn Iltutmish (died in 633/1235) are more in the traditional Islamic styles and in a way serve as models for later Indian prayer niches. The central *miḥrāb* here (Pl. VIII, 15) is a combination of a rectangular and a flat *miḥrāb*. The frame is filled by an epigraphic band. The pair of polygonal and richly decorated columns and capitals support the cusped arch. The canopy of the recess, just like that of the *miḥrāb* panel at the back, is filled with plaited Kūfic. In the centre of the back panel there is a rosette in relief. Such patterns can be observed in the centres of several Indian *maḥārīb*. It is possible that the architects tried to imitate, either consciously or not, the black meteorite stone which is in the centre of the *miḥrāb* of Sulaymān in Jerusalem.

One of the characteristics of Indo-Muslim architecture was to place three or more *maḥārīb* in the *ḳibla* wall, as it had already been done in Iltutmish's tomb, where this principle was applied perhaps for the first time. The lotus flower, a hanging mosque-lamp or a vase from which a scroll emerges, become permanent decorative features of the back panels of later prayer niches. Such decorations appear in the five *maḥārīb* of the Royal Mosque, the Ḳila-yi Kuhna in Dihlī, which was built by Shēr Shāh Sūr in about 949/1542. The *maḥārīb* of the Ḳila-yi Kuhna are enormous in size. They are multi-recessed, with a cusped arch over the outer recesses, and a *miḥrāb* panel at the back of each one decorated with a hanging mosque-lamp (Brown, 1964, 93, pl. LXII/2). By the late 9th/15th and early 10th/16th centuries, Persian influence becomes stronger and more apparent in Indo-Muslim architec-

ture. It was perhaps most obvious in the decoration of prayer niches. Most of the Indian elements were omitted and were replaced by Persian motifs. The cusped arch, however, remains. A good example for this strong Persian influence is the *miḥrāb* of the Dj̲āmiʿ Masdj̲id in Fatḥpur Sikrī which is decorated with polychrome inlaid stonework and which reminds us of contemporary Ṣafawid faience-tiled *maḥārīb* (Brown, pl. LXXII/1). Later prayer niches in Āgra and Dihlī are built of marble and decorated in polychrome in the *pietra dura* technique.

Wooden and portable *maḥārīb*. *Maḥārīb* either as large niches or small portable wooden panels appeared during the Fāṭimid period in Egypt. They were found in excavations in Fusṭāṭ, but several others are known from later periods and are preserved in the Museum of Islamic Art in Cairo (Weill, 1936, pl. X). Large wooden *miḥrābs* were also introduced and these were popular all over the Islamic world. One of the earliest of these large wooden *maḥārīb* is from the Masdj̲id-i Maydān in Abyāna in Iran, dated 497/1103 (Ettinghausen, 1952, 77, pl. XII). An interesting wooden *miḥrāb* was discovered in Afg̲h̲ānistān in the upper Logar Valley in the village of Čarkh, in the Mosque of S̲h̲āh Muḥyī al-Dīn. It has an overall geometrical decoration and an inscription in Kūfic (Pl. VIII, 16). It is dated to the 6th/12th century (Bombaci, 1959, figs. 13-4; Rogers, 1973, 249, no. 82). The wooden *miḥrāb* of the Madrasa Halawiyya in Aleppo (dated 643/1245) is considerable in size, measuring 350 cm. in height and well over 100 cm. in width. It is richly decorated with geometrical patterns and is inlaid with ivory (Guyer, 1914, 217-31; Sauvaget, 1931, no. 15).

(G. Fehérvári)

MIHRAGĀN (P. *Mihragān/Mehregān*; A. *Mihradjān*; *Meherangān* among the Parsees), name of an Iranian Mazdaean festival dedicated to Mithra/Mihr, traditionally celebrated in Iran around the autumn equinox. Its origins, its place in the calendar, its duration, its rituals and the beliefs connected with it, its diffusion in other cultural areas and its survivals in the Islamic period present several problems which are the subject of discussions and controversies. It is also a word used in toponymy, patronymy and music (see below, iv).

i. The name of the festival. It comes from the Pahlavi *mihrakān/mihragān*, ancient *mithrakāna* (Darmesteter, ii, 443), a noun derived from a proper noun, i.e. Mithra (Benveniste, 1966, 14; on the suffix *akāna* becoming *agān*, of Parthian origin, see Gignoux, 1979, 43 ff.). According to another attractive but faulty interpretation, the *kāna* component (no longer *akāna*) is a variant of *ghna* (Vedic *han*, Old Persian *jan*) meaning to strike or kill; *mithrakāna* is then the killing (or sacrifice) for Mithra, the expression being parallel to that designating the Indo-Iranian god Verethragna (Campbell, 235; on Verethragna, slayer of dragons, and its dialectal variants, see Benveniste and Renou, 68-90; Skjaervø, 192). In the Islamic period there no longer appears to be any reference to Mithra. The most prolific author on the pre-Islamic festival, al-Bīrūnī, thinks that the Arabised form *mihradjān* means love (*mihr*) of the spirit or the soul (*djān*; *Āthār*, 223, tr. 209; the majority of Muslim authors followed his interpretation, and the Persian poets often make *mihrdjān* rhyme with *mihrbān*, friendly, benevolent). However, the meaning "sun" has also been given for *mihr* and several myths which are associated with it (see below). Other interpretations which connect this name with death (*mīr*) are equally erroneous (on traditions and anecdotes reported by al-Bīrūnī and other authors, see Ṣafā, 30; al-Masʿūdī, *Murūdj*, iii, 404 = § 1287), as is also the view that it is a form of plural in the suffix *gān/djān* coupled with a noun of divinity given to the months and days of the Mazdaean months or of ceremonies forming the names of festivals (an error of the Persian editor of the *Tafhīm* of al-Bīrūnī, 254, n. 1).

ii. Problems of calendars. The historical evolution of the various types of calendars used by the Iranians, notably under the influence of the Babylonians, Egyptians, Greeks and the Arabs, is difficult to trace, but it determined the place and duration of their ceremonies and periodic festivals. The festivals celebrated at the solstice assumed a particular importance among the Indo-Iranians. They may have begun the year with the autumn equinox although, as for example among the Jews, several "beginnings" of the year could have been recognised simultaneously (Boyce, *HZ*, i, 174). The Achaemenid administration used a "luni-solar" year beginning with the spring equinox, similar to, but different from, that of the Babylonian calendar (Hartner, 747). This practice was taken over by the Seleucids, then by the Arsacid Parthians, at least as far as royal chronology was concerned (Bickerman, 778 ff.; see also below). Alongside the "Old Persian" calendar, we should take note of an "Old Avestan" calendar beginning the year in mid-summer. Both were abandoned for an "Egyptian" or "New Avestan" calendar (around 510 B.C.?; on the first reform see Taḳīzāda, *Maḳālāt*, vi, 77 ff.; Hartner, 749 ff.). Another difficulty arises from the adjustment of time between the Zoroastrian calendar of 360 days and the solar year of 365 days and a quarter. This problem, never solved in a satisfactory manner, led, under the Sāsānids, to a resort to "epagomenes" i.e. intercalary or "stolen" days (*duzdīda*), at the end of the year and one month every 120 years to recover the quarter of an annual day (see Taḳīzāda, *ibid.*, 85 ff.; Bickerman, 786 ff.). Not well received by the faithful, this Sāsānid reform led to a duplication of Zoroastrian religious festivals: *Naw-rūz, Mihragān* and the six *Gāhāmbārs* (Christensen, *Types*, ii, 143 ff.; Boyce, 1970, 513 ff.). Today, the Iranians use, alongside the lunar *hidjrī* calendar, a solar calendar beginning the year from the spring equinox (*Naw-rūz*), based on the *Djalālī* [*q.v.*] calendar inaugurated under the Saldjūḳ sultan Djalāl al-Dīn Malikshāh (465-85/1073-92 (cf. Hartner, 772 f., 784 f.).

Until the Sāsānids, *Mithrakāna/Mihragān* remained, at least officially, a single day (Boyce, 1970, 518 f.; idem, *HZ*, ii, 34). Celebrated in autumn, the seventh month of the year, under the Achaemenids (6th/4th century B.C.), the festival was, inexplicably, observed in the spring, and *Naw-rūz* in autumn, under the Arsacid Parthians (3rd century B.C.-2nd century A.D.) who, following the Macedonian calendar established under the Seleucids, made the year begin with the autumn equinox (Boyce, 1975, 107; idem, 1976, 106). The introduction of the reform under the Sāsānids (who inherited the Parthian system) led, at
1. Jerusalem, *Miḥrāb* of Sulaymān under the Ḳubbat al-Ṣakhra, 72/962.

2. Baghdād, The Khāṣṣakī *miḥrāb*, late Umayyad or early ᶜAbbāsid period.

3. Mawṣil, Corner *miḥrāb* in the Mausoleum of Imām Yaḥyā b. Ḳāsim, 7th/13th century.

4. Aleppo, marble *miḥrāb* in the Madrasa al-Firdaws, 633/1235.
6. Cairo, stucco *miḥrāb* in the Mausoleum of Sayyida Rukayya, 527/1133.

5. Cairo, stucco *miḥrāb* in the Mosque of al-D̲j̲uyūs̲h̲ī, 478/1085.
7. Cairo, stucco and glass *miḥrāb* in the Mausoleum of Sulaymān al-Rifāʿī, 690/1291.

8. Cairo, marble *miḥrāb* in the Mausoleum of Ḳalāwūn, 684/1285.
9. Cordova, *miḥrāb* in the Great Mosque, 354/965.
10. Nāyin, stucco *miḥrāb* in the Masd̲j̲id-i D̲j̲āmi^{c}, second half of 4th/10th century.
11. Sar-i Pul, Afg͟hānistān. Stucco *miḥrāb* which was standing until recently in the *Ziyārat* of Imām-i K͟hurd, 6th/12th century. (Photographed and reproduced courtesy of Prof. A.D.H. Bivar).
12. Yazd, faience *miḥrāb* in the Masd͟jid-i D͟jāmiʿ.

13. Ḳuhrūd, Iran, *miḥrāb* in the Masdjid-i ʿAlī, lustre-painted and monochrome glazed tiles, 700-8/1300-8.
14. Konya, faience *miḥrāb* in the Sadrettin Konevi, 673/1274-5. (Photographed and reproduced courtesy of Mr. H. Dewenter)
15. Dihlī, *miḥrāb* in the tomb of Shams al-Dīn Iltutmish, *ca.* 633/1235. (Photographed and reproduced courtesy of Mr. J. Burton-Page)
16. Čarkh-Afghānistān, wooden *miḥrāb* in the Mosque of Shāh Muḥyī al-Dīn, 6th/12th century. (Photographed and reproduced courtesy of Prof. A.D.H. Bivar).

least in popular practice, to the duplication of the festival: the 16th day (*mihr rūz*) of the seventh month (*mihr māh*), was celebrated as the "little" (*khurdak* or *kūček*) or "general" (*ʿāmma*) *Mihragān* and the 21st day (*rām rūz*), as the "great" (*buzurg*) or "special" (*khāṣṣa*) Mihragān. According to al-Bīrūnī, the Sāsānid king Hormizd I (272-3 A.D.), joined together the festival days of *Naw-rūz* and *Mihragān* which were observed respectively over six days. Then, the kings and people of Iran celebrated the two festivals over thirty days (al-Bīrūnī, *Āthār*, 223 f., tr. 208 f.; idem, *Tafhīm*, 254 f.). The whole month of Farwardīn (that of *Naw-rūz*) had been consecrated to a festival divided into six sets of five days, respectively for the princes, nobles, servants of princes, the people, the shepherds and stock-breeders (after Djamshīd, according to al-Bīrūnī, *Āthār*, 218, tr. 203; under Djamshīd, according to Ps.-Djāḥiẓ, *Maḥāsin*, 360, tr. 97, with some variants as to the social groups.) But the circumstances concerning the duration of the festival remain vague (al-Bīrūnī, *ibid.*, also mentions for the Sāsānid *Naw-rūz* a duration of five days for the reception by the king of the people of all ranks and a sixth day of private royal celebration). One thing remains certain; the Zoroastrians festivals were still being adjusted for time in relation to the solar year, to keep them at a normal date, a second reform of the calendar was undertaken under the Sāsānids between 507 and 511. At first, *Mihragān* apparently continued to be celebrated for six days by the Zoroastrians until after the 10th century A.D.; the Zoroastrian festivals were then reduced to five days, *Mihragān* also losing the *rām rūz* which represented for the Zoroastrian faithful the authentic ancient day of the festival (Boyce, 1975, 106 f.; idem, 1983, 807 f.). The Parsees of India and the Zoroastrians of Iran use different calendars for their periodic festivals (see below). After Islamisation, some caliphs and Muslim rulers celebrated *Nay-rūz*/*Naw-rūz* and *Mihradjān* at the spring and autumn equinoxes (see below).

iii. Evolution and diffusion of the ritual. This festival probably represents a pre-Zoroastrian Iranian new year celebrated in autumn. It seems also that before the adoption of Zoroastrianism, the Iranians established, by contact with the Babylonians, their new year (**Navasarda*, then *Nō-rōz*/*Naw-rūz*) in the spring, while preserving their autumn festival which they then called *Mithrakāna* (Boyce, *HZ*, ii, 34), celebrated on the 16th day of the 7th month according to the calendar introduced by the Zoroastrian magi (between 457 and 454 B.C. and not, as Taḳīzāda states, in 441 B.C.; see Hartner, 776 f.). From then on, the characteristics of the festival were influenced by the multiple aspects of Mithra, which involve a simple concept (friend, alliance, friendship, love, contract, etc.) of the Vedic Mitra, a divinity with the juridico-priestly, beneficent, conciliatory, luminous, etc. aspect, often associated with Varuna, of the Avestan *yazata* (not known by Zoroaster but integrated in *yasht* 10: see Zaehner, 98 f.; see also Boyce, 1969, 14 ff.), similar to Verethragna, *yazata* of victory, and the Vedic Indra, the Mithra-Ahura syzygy, later Ahura-Mithra, corresponding to the Vedic-Mithra-Varuna (on Mithra and his place in Zoroastrianism, see Boyce, 1969; idem, *HZ*, i, 24 ff. and index; concise account in Turcan, 5 ff. and bibliography.)

Mithrakāna was celebrated in the 7th month of the ancient Achaemenid year called *Bāgayādish* (Hartner, 746), supposedly as this name was taken to mean (the month of) the cult of Baga, assimilated with Mithra (Taḳīzāda, *op. cit.*, 98 ff.). This interpretation has now been rejected for philological reasons and because the festival was established, in Mesopotamia, under foreign influences (see below), well after the ancient Iranian names had been given for the first time to the months (Boyce, 1981, 67 f.; idem, *HZ*, ii, 16 ff., 24 ff.; on the name Baga, see also Gignoux, 1979, 88-90). Another problem arises from the fact that on 10 *Bāgayādish* the festival *Magophonia* was celebrated, a commemoration of the murder of the magi (or "of the magus", Gaumāta) under Darius I (on *Magophonia*, some of whose rites may have influenced *Mithrakāna*, see Henning; Taḳīzāda, *op. cit.*, 99 ff.; Dandamaev, 138 f., 575 f.; Widengren, *Religions*, 163 ff.; Boyce, *HZ*, ii, 86-89; Hartner, 749).

Mithrakāna may have been established in Mesopotmia under the influence of a Babylonian autumn festival placed under the protection of Shamash, the equivalent of Mithra, this influence having developed the solar aspect of this myth. It was apparently the first time that the Iranians dedicated a festival to a single god (Boyce, *HZ*, ii, 35). Its rites have been made known to us especially by the Greek authors and, in their later elaborated form, by the authors writing in Arabic. The dominant aspect is that of a royal festival of a new year or renewal, celebrated by festivities, present-giving, animal sacrifices. The numerous features common to this festival and *Naw-rūz* show that the two festivals may have been treated together (notably by Ps.-Djāḥiẓ). According to the epic-religious tradition, the festival was founded by the hero-king Thraētaona/Frētōn/Farīdūn who killed with his bull-headed club the dragon Azhdahāk/Dahāka/Ḍaḥḥāk; (Widengren, *Religions*, 60 f., 68 f., 258 f.; see also G. Dumézil, *Le problème des centaures*, Paris 1929, 72f.; according to the tradition of Ṭabaristān/Māzandarān, Farīdūn was brought up in the north of Lārīdjān [*q.v.*] where he used to hunt mounted on a cow). The myth has been historicised in the Iranian epic in which the legitimate king Farīdūn institutes the festival of *Mihragān* to celebrate his triumph over the usurping tyrant Ḍaḥḥāk whom he chains to Mt. Dunbāwand/Damāvand. He inaugurates the month of *Mihr* by putting the crown on his head; the nobles perform libations. He introduces the practice of celebrating *Mihragān* with rest, festivities and banquets. He is remembered in the month of *Mihr* in which one should not wear a worried and sad expression (Firdawsī, ed. Mohl, i, 114; ed. Moscow, i, 9-10; Asadī, 329, 474 f., Fr. tr., ii, 164, 271 f.). The hero-smith Kāva [see KĀWAH], after having triumphed over Bēvarasp/Ḍaḥḥāk, asks the people to pay homage to Farīdūn (al-Bīrūnī, *Āthār*, 222, tr. 207 f.).

The dominant feature of the festival was its royal and solar aspect. Mithra being the mediator between Ohrmazd and Ahriman. According to various traditions, the sun appeared for the first time on the day of *Mihragān*; God made the contract between light and darkness on the day of *Naw-rūz* and *Mihragān* (al-Bīrūnī, *op. cit.*, 222, tr. 208; Widengren, *Hochgott*, 94, 99 f., 158). According to other traditions, on the day of *Mihragān*, God created the earth and bodies; he illuminated the moon which was until then a sphere without light. *Mihragān* is regarded as a sign of resurrection and the end of the world, for everything which grows then reaches its perfection (al-Bīrūnī, *ibid.*). The rituals are still little known. According to the Greek sources, the Achaemenids apparently celebrated *Mithrakāna* more than *Navasarda*/*Naw-rūz* at Persepolis, the autumn season being pleasanter there and more convenient for bringing tribute (Nylander, 143, citing Athenaeus; Boyce, *HZ*, ii, 110). It seems

that they also used to sacrifice horses to Mithra there; the satrap of Armenia sent them annually 20,000 colts for the *Mithrakāna* (Boyce, *HZ*, i, 173; ii, 110, according to Strabo). *Mithrakāna* was celebrated joyfully, notably with dances (according to Duris); it was the only annual occasion on which the king of Persia became inebriated (according to Ctesis, physician to Artaxerxes II); cf. Boyce, *HZ*, ii, 35. It is thought that *soma/haoma* was used for these libations (Boyce, *HZ*, i, 173; Turcan, 9; and see below).

We have little information as to the diffusion, in eastern Iran, of *Mithrakāna*, whose Sogdian counterpart may have been *Bagakāna*, a contracted form of *Bagamithrakāna*, celebrated on the 16th day of the 7th month (Boyce, 1981, 68 f.). The name *mihrakān/mihragān* is to be found in the Jerusalem Talmud (*moharnakī*) and in that of Babylon (*muharnekaī*); see Taḳīzāda, *op. cit.*, 192. The Seleucid and Arsacid periods are much less documented. According to the epic tradition, the festivals of *Mihragān* and *Sada* were revived by the last Arsacid, Ardavān, and by the first Sāsānid, Ardas͟hīr-i Pāpakān (Firdawsī, ed. Mohl, v, 302, 328; ed. Moscow, vii, 442, 769). Although apparently more orthodox Zoroastrians than their Sāsānid successors, the Arsacids transposed *Naw-rūz* and *Mihragān* (see above, and Boyce, 1983, 805). Under their influence, some Iranian cults and sanctuaries, some of which were dedicated to Mithra, were introduced into Armenia. With Christianisation, the great *Mihragān* (Arm. *Mehekan*, 21 *Mehek* = *Mihr*) was reconsecrated to St. George the Soldier (Taḳīzāda, *op. cit.*, 194 ff.; Boyce, *Zoroastrians*, 89; eadem, 1981, 67; eadem, 1983, 804 f.; Turcan, 17). As far as we can see, it was in Asia Minor, rather than in Mesopotamia, that Greco-Roman contacts were established out of which arose the mysteries of Mithra (Turcan, 18). It is also possible to interpret the identification of Mithra with Helios-Apollo as more of a symbiosis than a syncretism (at least at Sardis; Boyce, *HZ*, ii, 268 f.). But the Mithra of the mysteries is very different from the Median-Persian Mithra and the diffusion in the Greco-Roman world of the rituals of *Mithrakāna* (across Armenia?) remains conjectural, notably inasmuch as we are concerned with their direct influence on the Mithraic celebration, then the Christian one of *Natalis invicti* on 25 December (Cumont, 167) or of *Mithrakāna* celebrated in Phrygia, at the time of the wine-harvest, with libations of wine and animal sacrifices (Campbell, 239 f.). The epic legends and heroic character attached to the ritual of *Mihragān*, celebrated especially by men, have supplied more definite links with Roman Mithraism (Boyce, 1966, 107, n. 3; idem, 1969, 26, n. 83; idem, 1983, 802).

With the Sāsānid reform, the religious calendar consisted of seven obligatory festivals: the *Gāhāmbārs* (instituted, according to tradition, by Zoroaster; see al-Bīrūnī, *Āt͟hār*, 219, tr. 205) and *Naw-rūz* (Boyce, 1983, 794 f.). Despite its optional character, *Mihragān* preserved all its prestige. Some preferred it, just as they preferred the autumn to the spring (al-Bīrūnī, *op. cit.*, 223, tr. 208 f.). *Mihragān* was also regarded as the beginning of winter (al-Masʿūdī, *Tanbīh*, 216, Fr. tr. 289; idem, *Murūd͟j*, iii, 404 f. = § 1287). The mythological elements, beliefs and rituals connected with *Naw-rūz* and *Mihragān* mentioned in the Islamic sources seem nevertheless to date back to earlier periods or even to refer to Iranian customs held in honour under some caliphs (see below). While the connections between Zoroastrian festivals and epic tradition are probably ancient (according to Ps.-D͟jāḥiẓ, "*Naw-rūz* belongs to D͟jam and *Mihrad͟jān* to Afrīdūn", *Maḥāsin*, 360, tr. 97), their duplication leads to a re-elaboration of the epic traditions; the little *Mihragān* commemorates the joy of all human beings when they heard tell of Farīdūn's expedition, whereas on the great *Mihragān* he triumphed over Ḍaḥḥāk and bound him (al-Bīrūnī, *Āt͟hār*, 222 f., tr. 207 ff.; al-Ḳazwīnī, 123; Boyce, 1983, 807). According to various traditions, on the day of *Mihragān* the kings of Persia used to wear (in the manner of Farīdūn?) a crown on which was engraved the image of the sun and the wheel on which he turns. A valiant warrior would stand at the gate of the palace to invoke the aid of the angels (who came to the help of Farīdūn?): al-Bīrūnī, *ibid.* According to Ps.-D͟jāḥiẓ, the bearer of good omen, at *Naw-rūz* and *Mihragān*, was said to come through the agency of two spirits (according to Inostrantzeff, the *ames͟ha spentas* or "archangels" Haurvatat and Ameretat connected respectively with water and plants): *Maḥāsin*, 361, tr. 97, 3. Then, expressing his good wishes, he would place before the king, on a silver table, cakes prepared with different grains; seven grains of each kind; seven branches of an auspicious tree (and auspicious inscriptions), seven white earthenware plates, seven silver-*dirhams* minted that year, a new *dīnār* and a bouquet of wild rue. On this day, the king would abstain from discussing any matter. The first thing that was presented to him was a gold or silver vase containing white sugar, Indian nuts and silver or gold cups. He would then drink fresh milk in which dates had been soaked. He would give the dates to his favourites and sample whatever sweets he liked (*ibid.*, 361 f.; tr. 98 f.).

Although *Naw-rūz* may have been more important than *Mihragān* in certain respects (welcoming the New Year, collecting the land-tax, nominating governors, transferring posts, minting coins, etc.), it was a right of the ruler to receive presents and his courtiers, relatives and dependents on the two festivals. Each one gave what he liked best or something in which he excelled. The donors were able to record the value of the gift in the *dīwān*. The king had to remunerate these presents with gifts or rewards. On the day of *Mihragān*, he would wear new clothes of poplin (*k͟hazz*), silk or closely-woven fabric. He would distribute to his courtiers and relatives, at *Naw-rūz*, their winter clothes and, at *Mihragān*, their summer clothes (Ps.-D͟jāḥiẓ, *Tād͟j*, 146 ff., Fr. tr. 165 ff.; these gifts of clothing were called *āyēn*, Christensen, *Sassanides*, 125, 407 ff.; on the presents that the king of Persia received from all quarters, see also Ps.-D͟jāḥiẓ, *Maḥāsin*, 367-8, tr. 100-1).

At *Naw-rūz* and *Mihragān*, the king held a public audience to which all, great and small, had access (Ps.-D͟jāḥiẓ, *Tād͟j*, 159-60, Fr. tr. 178-9; Niẓām al-Mulk, 57, tr. 42 f.; al-G͟hazālī, *Naṣīḥa*, 167 ff., tr. 102 ff.). These audiences were abolished by Yazdgard I (399-421) or Bahrām Gūr (421-39) and his son Yazdgard II (439-57); see Ps.-D͟jāḥiẓ, *Tād͟j*, 163-4, Fr. tr. 181-2; al-G͟hazālī, *ibid.* and tr. 103, n. 3; Christensen, *op. cit.*, 283, 303. This custom may have been borrowed by *Naw-rūz* from *Mihragān*, the festival of Mithra Lover of Justice (*Dāvar Mihr*): Boyce, 1975, 110, n. 18. The ruler could grant forgiveness for an offence committed at *Naw-rūz* or *Mihragān* (Ps.-D͟jāḥiẓ, *Tād͟j*, 101-2, Fr. tr. 126-7, anecdote concerning K͟husraw I Anūs͟hirwān and Muʿāwiya). Moreover, it was at *Mihragān* that Kavād I (488-531) organised, in 528-9, a massacre of the Mazdakites (just as Darius I had massacred the magus Gaumāta and his followers at the *Mithrakāna*): Ibn al-Balk͟hī, 90; cf. Widengren, *Religions*, 343.

As at *Naw-rūz*, a fair was held at *Mihragān*. The Persians wished to live for a thousand years (in the manner of Ḍaḥḥāk). Eating pomegranate and smelling the perfume of rose-water secured them against illness (al-Bīrūnī, *op. cit.*). During the festivities of *Mihragān*, particular musical tunes were played (see below, iv).

With the installation of the ᶜAbbāsid caliphate in the ancient Sāsānid territory, socio-cultural life was strongly influenced by Iranian traditions in Baghdād and in the provinces. While the Zoroastrians continued to celebrate their ceremonies according to their own practices (see below), *Naw-rūz* and *Mihragān* survived, deprived of their original religious functions, in an Islamic context. Presents had been sent to the caliphs on these occasions before the ᶜAbbāsid period. Muᶜāwiya had imposed heavy contributions at *Naw-rūz* and al-Ḥadjdjādj had attempted to re-establish the Sāsānid custom of obligatory presents at the two festivals; this was abolished by ᶜUmar b. ᶜAbd al-ᶜAzīz (see Ṣafā, 51 f.). With other borrowings from the Sāsānid fiscal system, the ᶜAbbāsids also adopted the contributions in the form of presents. They celebrated *Naw-rūz* at their court with wine and music (al-Masᶜūdī, *Murūdj*, vii, 277 f. = § 2962). According to some poetic fragments attributed to the caliphs (al-Ma'mūn, al-Mutawakkil) and various poets writing in Arabic, these same festivities were to develop into *yawm al-mihradjān* (see Ṣafā, 52 f., and Sādāt Nāṣirī, 4, 426 ff., following Ps.-Djāḥiẓ, *Maḥāsin*, and Ibn al-Muḳaffaᶜ, *Bulūgh al-arab*; al-Masᶜūdī, *Murūdj*, viii, 340 f. = § 3502).

From the time of the appearance of the first dynasties more or less independent of the ᶜAbbāsid caliphate, the celebration of *Mihragān* assumed, until the Mongol invasion, great importance at the courts of most princes, great and small, in the Turko-Iranian environment. The Ṭāhirid ᶜAbd Allāh b. Ṭāhir arranged for the distribution of clothing at *Naw-rūz* and *Mihragān* (Ps.-Djāḥiẓ, *Tādj*, 149, Fr. tr. 169). ᶜUbayd Allāh b. ᶜAbd Allāh b. Ṭāhir wrote some verses in Arabic on *Mihradjān* (Sādāt Nāṣirī, *Mihragān*). The sultans of Khurāsān arranged for the distribution of autumn and winter clothes to their soldiers at *Mihradjān* (al-Bīrūnī, *Āthār*, 223, tr. 209). Some contributions at *Naw-rūz* and *Mihradjān* were imposed in Ḳum on the *bāzār* folk; they were suppressed (in Ḳum, then in Āba) from the reign of the Būyid Rukn al-Dawla (335-66/947-77); Ḳumī, 164 f.).

By comparison with those *bayts* in Arabic of which we are aware, the poetic production in Persian on *Mihragān* is considerable. *Naw-rūz* and *Mihragān*, often synonyms of spring and autumn, form a part of the nature themes celebrated by Persian poets. Among the best known who wrote poetry on *Mihragān* we may cite (excluding the epic poets such as Firdawsī and Asadī):

* Abbreviations: DS = Dabīr Siyāḳī *LN* = *Lughat-nāma* SN = Sādāt Nāṣirī

Apart from the usual themes (nature, love and wine), these poetic evocations contain numerous mentions of and allusions to the celebration of *Mihragān*, the happy autumn festival of good omen, which takes the place of spring, with wine and the flute replacing the rose and nightingale. It was also the festival of Farīdūn and the great festival of the kings (Fouchécour, 24 f., citing Muʿizzī, Manūčihrī, ʿUnṣurī and Farrukhī). Although this kind of information may be quite rare in the narrative sources, the *Tārīkh-i Bayhaḳī* supplies us with complementary information on the festival (*djashn*) and the custom (*rasm*) of *Mihradjān* at the court of the Ghaznawid Masʿūd [*q.v.*], observed around the autumn equinox. The celebration of Ramaḍān may have provided an obstacle for that of *Mihragān* (see Farrukhī, for the years 419-21/1028-30: cited by Dabīr-Siyāḳī, 53 ff.; Fouchécour, 25 f.). In 422, Masʿūd received the presents of the princes and governors, many of them horses, on the day of *Mihragān* (28 Ramaḍān/18 September 1031). He celebrated the festival with great pomp two days later, on the breaking of the fast (*fiṭr*). He organised a reception "such as no-one had ever seen". The sultan and his entourage were inebriated. Musicians and poets enlivened the festivities at the court and outside. Considerable rewards were distributed: 1,000 *dīnārs* for ʿUnṣurī; 20,000 *dirhams* for the foreign poets at the court, 50,000 for Zaynabī ʿAlawī; 30,000 for the musicians and jesters (*Tārīkh-i Bayhaḳī*, 359 f.; Bosworth, 132). This celebration is mentioned more briefly for the years 426/1035, 429 (9 Dhu 'l-Ḥidjdja/12 September 1038!) and 430/1039 (at that time he sent to India Masʿūd-i Rāzī who ventured to advise him in a *ḳaṣīda*): *Tārīkh-i Bayhaḳī*, 642 f., 734 f.

It seems that the celebration of *Mihragān*, like that of *Sadak/Sada* [*q.v.*], had been abandoned, in its Islamic context, after the rupturing of traditions provoked in Iran by the Mongol invasion (Ṣafā, 58, 118). This theme, however, continued to inspire poets (e.g. Ḍamīrī, d. 973/1565, a contemporary of Shāh Ṭahmāsp I: *LN*). It has been suggested that some Shīʿī festivals following their solar computation may be survivals of *Mihragān* (e.g. in the ceremonies of *ḳālī-shūyān/shūrān* at Mashhad-i Ardahāl, near Kāshān, celebrated in the month of Mihr; see Āl-i Aḥmad, 200 ff.; A. Boloukbachi, in *Objets et Mondes*, xi, Paris 1971, 133-40). There is also continuity in the celebration of *Mihragān* by the Zoroastrians, who use different calendars in Iran and India (Boyce, 1968, 213, n. 86; eadem, *Stronghold*, 164 ff. and index; eadem, *Zoroastrians*, 221 and index). Although the Parsees of India seem to have stopped observing this non-obligatory festival during the 19th century (Boyce, 1969, 32), they retained the ritual (Dhabhar, *Rivayats*, 343; *Mehr and Jashne Meherangan*, Bombay 1889; idem, *LN*; *Ceremonies*, 429 ff.). One of the causes of their neglect of *Mihragān* is probably, under pressure from their Hindu surroundings, the opposition to animal sacrifice which they were still practising in the 18th century (witnessed by Anquetil-Duperron; cf. Boyce, 1966, 197; eadem, 1975, 106). Their celebration is now limited to a cult restricted to 16 Mihr (Boyce, 1969, 32). By contrast, the Zoroastrians of Iran have continued to observe this festival. At the beginning of the 20th century, those of Yazd used to celebrate it (from 16 to 20 Mihr), in February-March according to the time adjustment of the *ḳadīmī* calendar of 365 days, with notably, in each house, the sacrifice of an animal: sheep, goat, poultry for the very poor, and the eating of unleavened bread. Despite the objections of their coreligionists in Tehran and Bombay, the Zoroastrians of the villages of Yazd were still celebrating it for five days in 1960, under the name *Djashn-i Mihrīzed*. It was a joyful and convivial festival, to which the "migrants" from Tehran were invited, the principal elements of the ritual still being the cult of Mihr, to whom the animal sacrifice was dedicated (essentially a sheep or goat, whose flesh was roasted, shared out and eaten) and the offerings of products of the season preserved and brought for the festival (Boyce, 1975, 108 ff.; eadem, *Stronghold*, 54 ff., 83ff., 200 ff.). These rituals were probably survivals of *Mithrakāna*, the sacrifice of livestock symbolising the immolation of the primordial bull (Boyce, 1975, 108, 117 f.). A large sanctuary of Kirmān is dedicated to "Shāh Mihr Ized" (Boyce, *Stronghold*, 83).

iv. Other usages of the noun.

(1) As a toponym, Mihragān designates, in a compound or adjoining forms, various localities and districts:

Mihradjān, ancient name of Isfarāyin [*q.v.*] in Khurāsān. According to Yāḳūt (7th/13th century), it was still a village near the ruined town; 51 villages were under its control. It was also a small town between Iṣfahān and Ṭabas (Yāḳūt, v, 233; Barbier de Meynard, 552; Le Strange, 393).

Mihradjānāvādh (= Mihradjānābād), a town in Fars (Le Strange, 283; Schwarz, i, 30, iii, 180).

Mihradjān-ḳadhaḳ/Mihradjān-kadak (Mihradjān-ḳudhaḳ), a densely populated and very fertile district in the 4th/10th century in Djibāl, near Ṣaymara (Yāḳūt and Barbier de Meynard; al-Masʿūdī, *Tanbīh*, Fr. tr. 74, 453; Le Strange, 202; Schwarz, iv, 470 and index).

Mihriḳān, one of the villages in the region of Rayy (Yāḳūt, 233; Barbier de Meynard, 552; Schwarz, vi, 805).

Mihrkān, a village in Fārs (Schwarz, i 37).

Mihrīdjān, a small town in the country of Marw; a major village in Fārs, near Kāzarūn [*q.v.*] (Yāḳūt, 234; Barbier de Meynard, 553).

Without being able to establish their antiquity, some of these toponyms are still attested. There are also, according to *Farhang-i djughrāfyāʾī-yi Īrān* (ed. Razmārā, Tehran 1949-53), the following villages:

Mihrakān, a region in Linga, Lāristān (vii, 229).

Mihrandjān, two villages, region of Kāzarūn, Fārs *ibid.*.

Mihrgān, two villages, region of Bandar ʿAbbās (viii, 400).

Mihrgān, region of Nāyīn; Mihrgān, Mihrandjān-i arāmītra, in ruins, and Mihradjānī turkhā, region of Isfahan (x, 88).

(2) As a personal name. Mihradjān was given rarely as a patronym (see e.g. Mihradjān b. Rūzbih; Schwarz, iii, 136, n. 3). However, there exist many proper Persian names derived from Mihr. According to a Zoroastrian custom, a name with Mihr was given to a child born on this day (Farevashi, 306). As well as names such as Mihrān, Mihrbān, Mihrdād, etc., many female names are also formed, such as Mihrbānū, Mihrdukht, Mihrmāh/Mihr-i māh [*q.v.*], Mihrvash, etc. Several people were also known by their *nisba*s derived from toponyms (Mihradjānī, Mihrdjānī, Mihrīdjānī, Mihriḳānī, etc.).

(3) Mihragān and music. As with *Naw-rūz*, *Mihragān* also gave its name to some musical themes whose origin goes back to the Sāsānid period (see Christensen, 1918, 376). Several names were given to these tunes (*āvāz, dastgāh, laḥn, naghma, navā, parda*), whose tenor is not known in the general body of *maḳāms* [*q.v.*]. We can distinguish essentially *mihragān-i buzurg*, the eleventh of the twelve *maḳāms* according

to al-Farābī; *mihragān-i khurdak* or *kūčik*, a *parda* or a *maḳām (LN*; Dabīr-Siyāḳī, citing Manūčihrī).

(4) Apart from its use for *nisbas* and music, the adjective of relationship *mihragānī/mihradjānī* is also used in Persian to designate anything which relates to the festival, the season and its products, with the meaning of autumnal or wintry, especially in poetry (*LN*, s.v.).

(J. Calmard)

MIHRĀN, the name generally given by the classical Islamic geographers to the Indus river (Skr. Sindhu, Grk Σίνθος, Ἴνδος, Lat. Sindus, Indus), but Nahr al-Sind, Sind-Rūdh, Nahr Multān, etc. were also used by them.

There was, in fact, considerable confusion over the precise nomenclature of the Indus and its constituents, with, in particular, uncertainty over what was to be regarded as the main river channel. Thus al-Iṣṭakhrī, followed by Ibn Ḥawḳal, records the Nahr Multān or Mihrān as rising in the mountains of Central Asia. They compare it to the Nile, in its breadth, its becoming swollen seasonally with waters which flood and fertilise the agricultural areas along its banks and its having crocodiles; together with this river are the Sind-Rūdh, situated three days' journey from Multān [*q.v.*], and the Djandrāwar, which joins the Indus lower than the Sind-Rūdh (Ibn Ḥawḳal, ed. Kramers, 322, 328, tr. Kramers-Wiet, 315, 320-1; cf. al-Mas'ūdī, *Murūdj*, i, 372-3, 377-8 = §§ 412-13, 419; al-Bīrūnī, *India*, tr. Sachau, i, 259-60). Al-Muḳaddasī, 482-3, resumes this information: that the Mihrān is the main river, and the Nahr Sindarūd a tributary flowing at a distance three stages from Multān. As Marquart pointed out, *Ērānšahr*, 258-61, the Sind-Rūdh is in fact the genuine Indus, but the geographers took the system of the Chenab-Ravi-

Jhelum, on which Multān was situated and which formed part of the Pančanada or Pandjnad "Five rivers" [see PANDJĀB], as the main stream, whose waters unite near modern Ucch and then join the Indus proper near Mithankot, about 100 miles/160 km. below Multān. The Djandrāwar must have been one of the main arms of the lower Indus within the province of Sind [*q.v.*] just below the town of Rōr or Arūr/al-Rūr [*q.v.*], modern Rohri. Likewise, the *Ḥudūd al-ʿālam*, § 6. 13-15, cf. Minorsky's comm., 209-10, 371-2, regards the Indus river system as essentially comprising three streams: the Sindh-Rūdh (= the modern upper Indus, north of Atak [*q.v.*] or Attock), the river of Lamghān (= the Kābul river, which the author considers to be the principal channel of the Indus) and the Hīvān (apparently the Sutlej, the longest affluent of the Indus). After the junction of these three, the author says, the river is called the Mihrān, and empties into the "Great Sea" at Kūlī (= the Kori creek, the ancient estuary of the Indus, now in the Rann of Cutch); he also mentions (§ 6.16) a "Lesser Mihrān" to the east, perhaps the Narbadā of central India, which flows into the Gulf of Cambay. Al-Idrīsī uses only the term Mihrān, and describes the main course of its lower reaches in Sind as flowing in his time near al-Manṣūra; cf. S. Maqbul Ahmad, *India and the neighbouring territories in ... al-Sharīf al-Idrīsī*, Leiden 1960, text 41, etc., comm. 111.

Of the historians, al-Balādhurī uses the term Mihrān in his account of Muḥammad b. al-Ḳāsim's conquest of Sind (*Futūḥ*, 438). The Ghaznawid chroniclers al-ʿUtbī and Gardīzī, if they give the Indus a specific name at all, use that of Sayḥūn, normally used by the geographers for the Sīr Daryā or Jaxartes, in parallel to the name Djayḥūn for the Amū Daryā or Oxus; its application to the Indus is presumably by analogy with the Central Asian river, both being long and wide and both marking the frontier zone between Islam and the lands of paganism (cf. ʿUtbī-Manīnī, *Yamīnī*, ii, 67, 72, etc.; Gardīzī, *Zayn al-akhbār*, ed. Nāẓim, 87, 88, 89). The later traveller Ibn Baṭṭūṭa, iii, 91, 93, speaks of the Indus as the Nahr/Māʾ/Wādī al-Sind, "called Pandj Āb", lumping the Indus and its major tributaries together under the Persian name; cf. also i, 79.

The Indus is approximately 1,800 miles/2,900 km. long. It rises in western Tibet in lat. 31°25′ N. and long. 81°30′ E., flows through Kashmīr State of the Indian Union and then enters Pakistani (Āzād) Kashmīr and completes the rest of its course within Pakistan. The main rivers of the Indus system are fed by the snows of the Inner Asian mountain massif, and the Indus water level rises in the spring to a peak around early August, bringing down silt, so that Sind is largely an alluvial plain built up by the very wide, slow-flowing river. The river has always been used for irrigation. An extensive canal system was constructed in British Indian times, and since 1947, various barrages have been made on the main river and its affluents both for irrigation and for hydro-electric power, with the Indus Waters Agreement of 1960 allotting the flow of the western rivers (Indus, Jhelum and Chenab) to Pakistan and that of the eastern ones (Ravi, Sutlej and Beas) to India. Until the advent of railways and the extension of irrigation projects, i.e. till *ca.* 1880, the Indus and the other Pandjāb rivers had been used for a certain amount of navigation; in mediaeval times, the Ghaznawid sultan Maḥmūd b. Sebüktigin [*q.v.*] had sent a large fleet downriver from Multān to attack the Djāts [*q.v.*], and sharp clashes had taken place between the opposing sides (see M. Nāẓim, *The life and times of Sulṭān Maḥmūd of Ghazna*, Cambridge 1931, 121-2).

The channels of the lower Indus, in the plains of Sind below Rohri, have changed considerably in the course of recorded history. Formerly, it followed a more easterly course than at present, the Eastern Nava riverbed, emptying into the Kori creek; but already in the 2nd/8th century, the time of the Islamic conquest of Sind, the Arabs found it flowing further westwards, past Brahmanābād or al-Manṣūra [*q.v.*], though still to the east of its present course. The questions involved are studied, with relevant maps, by H.G. Raverty, *The Mihrān of Sind and its tributaries*, in *JASB*, lxi (1892), 155-297; H. Cousens, *The antiquities of Sind = Memoirs of the Archaeological Survey of India*, xlvi, Calcutta 1929; and H.T. Lambrick, *Sind, a general introduction*, Hyderabad, Sind 1964. Finally, one should mention that the lower course and the delta region of Sind were the home of the Jhāts, Arabic Zuṭṭ [*q.v.*], who played a certain role in the early history of the caliphate as well as a local, Indian one (see above).

(C.E. BOSWORTH)

MIḤRĀTH (A.) and its plur. *maḥārīth* are used more frequently than the doublet *miḥrath*, plur. *maḥārith*, to designate today a plough, but these terms are applied more specifically, in mediaeval literature, to the tiller, which is not equipped with wheels or a mould-board or a coulter, but consists essentially of a ploughshare, a crossbeam, a handle and a pole (or beam). Although it goes back to the earliest antiquity, this agricultural implement is still in use, without modification of note, throughout the Islamic world.

While *miḥrāth*, unknown in the Ḳurʾān, appears in classical dictionaries only in the sense of "poker", or figuratively, of "kindler of war", it was not unknown to agronomists, notably Andalusians, who, nevertheless, tended to consider it as colloquial (see Dozy, *Suppl.*, s.v.); for his part, Ibn Khaldūn is prepared to use it, especially with reference to a famous *ḥadīth* which bears witness after all to the existence of the tiller in ancient Arabia. Having seen in the house of one of his Companions a ploughshare (*sikka*) and other parts of a ploughing implement, the Prophet is said to have exclaimed: "These things do not enter a house (*dār*) without also bringing in debasement" (see al-Bukhārī, *Ṣaḥīḥ, k. al-wakāla, mā djāʾa fī 'l-ḥarth wa 'l-muzāraʿa*, ed. Ḥalabī, Cairo n.d., iii, 135; cf. Houdas et Marçais, *Les traditions musulmanes*, ii, 91). Ibn Khaldūn (*Muḳaddima*, i, 258, Fr. tr. de Slane, i, 297, Eng. tr. Rosenthal, i, 289-90), specifies that, in the *ḥadīth* in question, it is a tiller's ploughshare (*sikkat miḥrāth*), and, without dwelling on the interpretations that could be put on it so as to mitigate the effect, he goes on to show that taxes (payable on products of the land) degrade people.

The use of the tiller at an early date is further attested, but less clearly, by the use that the classical lexicographers make of terms that designate it, although possessing a much less exact and certain meaning than *miḥrāth*; this is the case with *luʾama/ luʾma/laʾma* (see below) and especially of a word that seems to have been applied at the same time to the yoke, to the pair of oxen and to the implement that they pull to till the land and that the *Lisān* (s.v. *s-k-k*) uses, exactly like *miḥrāth* in Ibn Khaldūn, to define *sikka* in the preceeding *ḥadīth*: *fadān*^{un} (see *LA*, s.v. *f-d-n*); in fact, it is this term that most regularly designates the tiller. An evolved form, *faddān*^{un}

(comp. in dialect *dukhān*>*dukhkhān* "smoke, etc."), by quite an expected extension of meaning, came to designate also the area that a pair of oxen could till in a given time [see MISĀḤA].

By force of circumstances, the mediaeval philologists inevitably concerned themselves with the tiller and noted its terminology; but, cut off from rural realities, doubtless embarrassed by the diversity of the terms attested in different regions and perhaps also hindered by the *ḥadīth* cited above, they do not seem to have possessed a very clear idea of the structure and function of an implement that they could not, however, neglect. It is thus that we find a rather obscure and fairly contradictory account of a lexicographical character, for the elements were drawn from various sources and probably concern slightly different types, in the *Mukhaṣṣaṣ* of Ibn Sīduh (x, 152-4) and a brief description in the *Lisān* (s.v. *d-dj-r*). There follows an attempt at translating the passage in question of the *LA*; "*Dadjr, dudjr* and *dudjūr*, the name of the piece of wood (*khashaba*) to which is fixed the iron (*ḥadīda*) of the tiller (*faddān*); some use the dual (*dadjrānⁱ*), as if they were speaking of two ears (*udhunānⁱ*); the iron is called *sunba* (*sic*; read *sinna?*), *Fad(d)ān* is the name of all assembled parts (*adawāt*) of the implement. The *khashaba* placed on the neck (*ʿunuḳ*) of the ox (*sic*) is the *nīr*. The two *samīḳs* are pieces of wood attached to the neck. To the pole which [ends in] the centre [of the yoke], is fixed the strap (read *ʿiyān* instead of *ʿinān*) of the *waydj*, i.e. the *ḳunnāḥa*. *Waydj* and *mays* (read *hays* as in the *Mukhaṣṣaṣ* and in *LA*, s.v. *h-y-s*) in Yemeni are the name of the long *khashaba* which passes between the two oxen. The piece of wood that the ploughman holds is the *miḳwam*."

The preceding description is not of blinding clarity, but by means of the terminology retained by the author of the *Lisān* and with the help of the list supplied by Ibn Sīduh, it nevertheless allows us to form an idea of the elements constituting the tillers at an early date.

The ploughshare (*sikka*, but also *sinn, sinna, naʿl*) was joined by means of a strap (*ʿiyān*) of iron to the crossbeam, which could also be called *dadjr* (and vars.), sometimes used in the dual (*dadjrānⁱ*) because it was in two parts with one joined to the other by another strap and/or a cord (*fatīl*), which could indicate that the transition from the tied object to the object fitted together had still not been totally achieved (?). The *Mukhaṣṣaṣ* says also that the two *dadjrs* were placed at the meeting point of the *luʾama* and the *silb*, and defines this last as being the piece of wood whose end (one should probably read *fī ṭarafih* instead of *fī ṭaraf*) joins on to the ploughshare; but as it says that the *silb* is the longest element of the tiller, it is clearly the pole (or beam) called *waydj* and *hays* in Yemen or in ʿUmān) and to which it also gives the name *luʾama*; the *Lisān* (s.v. *s-l-b*) specifies that the end of this part was driven into the hole pierced in the beginning of the *luʾama*; this last, rather imprecise, term would designate on the one hand all the parts of the tiller, whether of wood or iron, and on the other only the ploughshare—which is not very likely—or, more probably, like *silb*, the beam tied to the cross-beam at a point called *djidār*. *Ḳunnāḥa*, for its part, presents a difficulty; the *Lisān* (s.v. *ḳ-n-ḥ*) explains this word as designating a polo-stick and, in general, a curved piece of wood, whereas, according to Ibn Sīduh, it is a kind of joining pin used to connect the ploughshare (or rather the cross-beam) to the beam.

Fig. 1
Possible sketch of the ancient tiller

1. *silb* = beam
2. *dadjr* = cross-beam
3. *ʿiyān* = strap
4. *sikka* = ploughshare
5. *ḳunnāḥa* = joining pin
6. *miḳwam* = handle
7. *sayfānⁱ* = holding bar

The ploughman ensures the proper functioning of the tiller and drives the ploughshare in the earth by putting pressure on the handle (*miḳwam*; Ibn Sīduh also gives *dastaḳ*, from Persian *dastah*; cf. Dozy, *Suppl.*, s.v. *dastadj*); this part has not been double for a long time, but it doubtless has a holding bar, which is what the *Mukhaṣṣaṣ* calls *sayfānⁱ*.

The team itself is not described very exactly, and we know simply that the beam was attached to the centre of the yoke by means of a trace called *djarr*. Regarding the yoke, the *Mukhaṣṣaṣ* supplies a list of terms supposedly synonymous, of which *nīr* is the best known today; it also cites *nīra, arʿuwwa* (which designates a pair of ploughing oxen) and *miḍmad/miḍmada*, of which the *Lisān* (s.v. *ḍ-m-d*) gives an explanation which is lacking in clarity. However, we understand that yokes could assume various forms, one of which seems to consist of two yokelets (*samīḳānⁱ*) which, according to the *Lisān* (s.v. *s-m-ḳ*), are "two pieces of wood [each] encircling the neck of the ox like a collar and joining under the animal's dewlap (*ghabghab*); they are then attached (*usirā*, but *shuddā* in the *Mukhaṣṣaṣ*) to each other by means of a rope". Other terms are also cited, notably the *miḳran* which designates a piece of wood fixed on the oxen's head, when they plough, by means of a rope called *tawthīḳ*. No pole under the belly is mentioned, but there is mention of a *ḳirān* or *ḳaran*, which is a rope passing over the oxen's neck and attached to the *luʾama*, here the beam.

The two principal sources used mention, immediately after enumerating the parts of the tiller, a still more rudimentary implement for levelling the earth after ploughing and burying completely the seed which was sown there before the ploughshare had turned over the soil; this is the *mālaḳ* or *mimlaḳa*, a wide board that the ploughman presses on with all his weight and was pulled along by two oxen (which is rather the Egyptian *zaḥḥāfa*).

As W. Marçais (*Takroûna*, i, 88-9) remarks, the terminology that can be noted in the work of the classical lexicographers "probably contains a certain proportion of inexactitudes and errors"; not only is it not uniform, but furthermore, agriculture being left to slaves and foreign elements, loan words have been detected (see Fraenkel, *Aramäische Fremdwörter*, 131 ff.; cf. M. Feghali, *Étude sur les emprunts syriaques dans les parlers du Liban*, 93) which risked increasing the confusion. In addition, several types of tiller were bound to exist, to judge by mediaeval practice [see FILĀḤA] that the Andalusian agronomists, in particular, describe (see L. Bolens, 97 ff.) and by the present or recent situation. In fact, in detail, the forms and parts of the various implements that can be seen today present perceptible differences, and the corresponding ter-

minology is itself too dissimilar, both in Arabic dialects and in Berber—for the use of the tiller is still widespread in Barbary—for one to consider giving even a rough idea of it here. So we will merely repeat the brief description given by Ayrout (*Fellahs*, 59) of the tiller used in Egypt and in other countries of the East. This implement, which weighs about 40 kg, "consists of a wooden cross-beam fitted with a flat, ogival-shaped ploughshare of about 25 cm and a long beam of about 3,50 m to which the harnessed animals are attached by means of a straight yoke resting on the withers and not, as in Europe, on the brow. Two water buffaloes are used or the smallholder's water buffalo and donkey, or two camels hired for the occasion, or even a camel and a donkey. The ploughman leans on the single handle to drive in the ploughshare and follows the walking animals, guiding them with his voice and hand, for he does not use reins or a whip."

The tiller thus described does not differ fundamentally from that which was in use in ancient Arabia, where the very best team consisted of two oxen, just as the description of *faḍ(d)ān* implies. It is possible that the Arabs, who no doubt did not have to respect the prohibition of Deuteronomy (xxii, 10: "You shall not plough with a donkey and an ox yoked together") any more than do the Egyptians of today, used some ill-matched teams, but we do not have any immediately usable evidence.

No more do we have information at our disposal on the use of camels [see IBIL] for ploughing in ancient Arabia. Nevertheless, the use of a single camel appears characteristic of southern Tunisia and Libya (see W. Marçais, *Takroûna*, i, 182, 189-90). In this case, the tiller is somewhat different, in that the beam is shorter and that a swingle-bar is attached to the ends, traces leading from them to a collar (or half-collar) held in place, on the withers, by a system of

Fig. 2
Tiller drawn by a camel

ropes passing over the neck, as well as behind the hump and on the crupper; long reins allow the animal to be driven (see the detail and local terminology in G. Boris, *Documents linguistiques et ethnographiques sur une région du Sud Tunisien (Nefzaoua)*, Paris 1951, 19). After rejecting (in *Mots et choses berbères*, 290) the current assertion that the Berber peasant sometimes makes his wife and donkey draw the tiller, and on the whole doubting the evidence of Pliny who claimed to have observed such a team, E. Laoust considers (in *Hespéris*, x/1 [1930], 47) that it is advisable not to impugn it, for he has meanwhile been able to study a very similar implement used in the east of Barbary and to establish that it is both rudimentary and light. Just as the terminology of the ancient Arab's tiller is partially borrowed from Aramaic, so, in Berber, that which relates to the team is partly adapted from Latin, showing a Roman influence, but not prejudging at all the origin of the North African types, which may well be considered autochthonous.

In the opinion of specialists (e.g. V. Mosséri and C. Audebeau, *Le labourage en Égypte*, in *BIE*, 5th series, x [1916], 83-127), the tiller in use "constitutes the implement par excellence of regions where it is sufficient to scratch the ground in order to bury the seed and allow it to germinate before the top soil dries out. This tiller is also all that is needed when, owing to a limited water supply, it is necessary to prevent the rapid evaporation of the soil." The tiller with a light ploughshare has moreover been used until recently in Spain for ploughing on the flat, and it has not been entirely replaced by modern ploughs in the regions of North Africa where the peasants have to be satisfied with it and where the arable land bed will not support deep ploughing.

Bibliography: Apart from the reference cited, the classic study of the plough is that of A.G. Haudricourt and M.J.B. Delamare, *L'homme et la charrue à travers le monde*, Paris, 1955; a short article by the first of these authors appears in the *Dictionnaire archéologique des techniques*, Paris, 1963, i, 263-5. The terminology of the tiller in Arabic-speaking countries has been made the subject of a certain number of research studies enumerated in a long critical note by W. Marçais in his *Textes arabes de Takroûna*, i, Paris, 1925, 187-90. As far as the Berber region is concerned, an excellent monograph by E. Laoust, *Mots et choses berbères*, Paris, 1920, 275-301, was completed in an article by the same author, *Au sujet de la charrue berbère*, in *Hespéris*, x/1 (1930), 37-47. The account of H.H. Ayrout, *Moeurs et coutumes des fellahs*, Paris, 1938, has been consulted with profit. For Islamic Spain, the work of Lucie Bolens, *Agronomes andalous du Moyen Âge*, Geneva-Paris, 1981, 97 ff. and bibl. cited, contains an interesting chapter on ploughing. See also P. Behnstedt and M. Woidich, *Die ägyptisch-arabischen Dialekte* (Wiesbaden, 1985), i, 62-3, 91-2, ii, maps 474-510. (CH. PELLAT)

MIHRGĀN [see MIHRAGĀN].

MIHRĪ KHĀTŪN, an important Turkish poetess of the end of the 9th/15th and beginning of the 10th/16th centuries. Although ʿĀshıḳ Čelebi clearly states that Mihrī was her given name as well as her *makhlaṣ*, later on Ewliyā Čelebi writes (*Seyāḥat-nāme*, ii, 192) that it was Mihrmāh. (It is possibly as her cognomen that Fakhr al-nisāʾ is mentioned in *ʿOthmānlī müʾellifleri.*) Mihrī Khātūn was a descendant of Pīr Ilyās, the Khalwetī *sheykh* of Amasya. Her father was a *ḳāḍī* who wrote poetry under the *makhlaṣ* Belāyī. Mihrī Khātūn herself spent her whole life, about which very little is known, in and around Amasya. She belonged to the literary circle of prince Aḥmed, son of Bāyezīd II, during his governorship of Amasya in the years 886/1481 (or possibly 890/1485, according to Reindl, *op. cit.* below, 80) to 919/1513. Indeed, almost all of the *ḳaṣīdes* in her *Dīwān* are addressed to him.

Mihrī Khātūn is known to have fallen in love repeatedly, her best documented loves being Müʾeyyed-zāde ʿAbd al-Raḥmān Čelebi, who was born in Amasya in 860/1456, later became *ḳāḍī ʿasker*, and wrote poetry under the *makhlaṣ* Khātemī, and Iskender Čelebi, son of Sinān Pasha. She sang of her loves in her *ghazels*, and the *tedhkiredjis* recorded this, especially citing a *ghazel* on Iskender Čelebi in which she names him through *īhām* (allusion). Yet, at the same time, they all agree in emphasing her chastity and virtuousness, reiterating that these were innocent

loves and that she lived a blameless life. In fact, she is reported to have remained unmarried in spite of being blessed with beauty, an ardent temperament, and no lack of wooers.

Mihrī Khātūn died in Amasya after 27 Dhu 'l-Ḥidjdja 917/16 March 1512 and, according to Ewliyā Čelebi, was buried in her ancestor Pīr Ilyās's *tekye* in Amasya.

Mihrī Khātūn was well educated for her sex and day, being sufficiently versed in Persian poetic imagery and the art of rhetorical embellishment to venture on writing *Dīwān* poetry. (According to Ewliyā Čelebi, she even wrote treatises on matters related to *fiḳh* and *farāʾiḍ*.) She made the poet Nedjātī (d. 914/1509) her chief model and many of her poems are *naẓīre*s (parallels) to his. It is said that this irritated him somewhat, especially as her manner could at times be rather self-congratulatory. However, Mihrī Khātūn did not reach his level of accomplishment. What she did achieve in her poems was a striking naturalness, a freshness and directness, and an often remarkable impact of feeling. In keeping with the effect of spontaneity and sincerity given by many of her lines, her language is not rhetorically over-burdened but rather simple. It is true, however, that her images do not display originality, her metaphors and similes being mostly the conventional ones.

Mihrī Khātūn left a not particularly voluminous *Dīwān* and at least one treatise in rhyme. A number of her poems had been made accessible by Smirnov and translated by Gibb (*op. cit.* below) before a critical edition of the *Dīwān* based on four mss. was published by E.I. Mashtakova (*Mikhri Khātūn. Divan. Kritičeskiy tekst i vstupitel'naya stat'ya*, Moscow 1967). This contains 208 *ghazel*s, 11 *ḳaṣīde*s, a *müstezād* and a *terdjīʿ-i bend*, 7 *murabbaʿ*s and a *mukhammes* as well as 4 *naẓm*s and 6 *müfred*s. These poems are preceded in the *Dīwān* by a *tewḥīd* in the form of a *methnewī* of 29 *beyt*s (which start with the Arabic letters in their alphabetical order) and, more importantly, by her *risāle* in verse, *Taḍarruʿ-nāme*. Composed mainly in the form of a *methnewī*, but interspersed with about ten poems in the form of a *ghazel* as well as one *ḳaṣīde* and one *murabbaʿ*, this contains *münādjāt*s, *naʿt*s, *mewʿiẓe*s, etc. The whole *risāle* totals about 460 *beyt*s and ends with a touching *khātime*, which includes a few lines which Mihrī Khātūn said in defence of women.

Bibliography (in addition to the titles cited above): The *tedhkire*s of Sehī, Laṭīfī, ʿĀshiḳ Čelebi, Ḳinali-zāde Ḥasan Čelebi, Beyānī, Ḳāf-zāde Fāʾiḍī; ʿĀlī's *Künh al-akhbār*; Ewliyā Čelebi's *Seyāḥat-nāme*, Istanbul 1314, i. 342; Medjdī, *Terceme-yi Shaḳāʾiḳ-i nuʿmāniyya*, Istanbul 1269, 93 f., 308 f.; Meḥmed Dhihnī, *Meshāhīr al-nisāʾ*, Istanbul 1295, ii, 240 f.; Muʿallim Nādjī, *Esāmī*, Istanbul 1308, 310; Aḥmed Mukhtār Ḥādjdjī-bey-zāde, *Shāʿir khanîmlarîmîz*, Istanbul 1311, 59 f.; *Sidjill-i ʿOthmānī*, iv, 527; Fāʾiḳ Reshād, *Tārīkh-i edebiyyāt-î ʿothmāniyye*, Istanbul 1327 (*rūmī*) 195 f.; Shihāb al-Dīn Süleymān and Köprülüzāde M. (TH. MENZEL-[E.G. AMBROS])

MIHTAR [see MEHTER].

MIHYĀR B. MARZAWAYH (Marzōye) AL-DAYLAMĪ, Abu 'l-Ḥusayn (Ibn Khallikān) or Abu 'l-Ḥasan (other sources), poet who used the Arabic language, originally a Zoroastrian but becoming a convert to Islam in 394/1004 at the hands of al-Sharīf al-Raḍī (359-406/970-1016 [*q.v.*]), dying in 428/1037.

The famous Shīʿī poet and *naḳīb* of the descendants of the Prophet took charge of the education of his protégé, into whom he inculcated not only the basic principles of Shīʿism but also the necessary skills for him to act as a secretary in the administration. He naturally took care also to teach him the rules of versification, but his pupil very soon showed the natural talents which were to make him one of the most famed poets of the 5th/11th century.

Apart from the items of information concerning his relations with the Sharīf, under whose protection he seems to have lived, we have virtually no other biographical information about Mihyār, whose extensive *Dīwān* nevertheless in itself supplies material for a substantial study.

This poet, who amply copied his master, attempted almost all the poetic genres, but did not display an equal talent for all of them. Thus his descriptions were considered to be prosaic, as also his eulogies, which seem lengthy; but on the other hand, he excelled in the sphere of the *ghazal* [*q.v.*], friendly or amorous reproach (*ʿitāb*), versified epistles addressed to his friends (*ikhwāniyyāt*) and above all in the funeral eulogy or elegy or *rithāʾ* [see MARTHIYA]. As a good disciple of al-Sharīf al-Raḍī, he successfully celebrated the memories of ʿAlī and al-Ḥusayn (see e.g. *Dīwān*, Cairo 1344-50/1925-31, ii, 259-62, 367-70, iii, 109, etc.), and his poems of condolence (*taʿāzī*; *Dīwān*, i, 72-4, iii, 6-8, 54-8, etc.) are highly appreciated; but the poem in *-mīm* (*Dīwān*, iii, 366-70), in which he laments the death of his master, is considered to be a masterpiece and is used as a basis for comparison. The Sunnī sources, which naturally blame him for his Rāfiḍī beliefs and which cite a witticism according to which his conversion to Islam merely transferred him from one corner of Hell to another, nevertheless adjudge his poetry to be of an "extreme beauty" (e.g. Ibn Taghrībardī, *Nudjūm*, v, 26-7), and even the Spaniard Ibn Bassām (in Ibn al-ʿImād, *Shadharāt*, iii, 243) is said to have praised him highly. A critic like ʿAlī Dj. al-Ṭāhir (*al-Shiʿr al-ʿarabī fi 'l-ʿIrāḳ wa-bilād al-ʿAdjam fi 'l-ʿaṣr al-saldjūḳī*, Baghdād 1958-61, ii, 205, 209) considers that the decline of Arabic poetry begins

after Mihyār and that the Saldjūḳ period is characterised by a tendency towards imitation and even towards making a pastiche of al-Raḍī and his pupil.

Bibliography (in addition to references given in the text): al-Khaṭīb al-Baghdādī, *Taʾrīkh Baghdād*, xiii, 276; Ibn al-ʿImād, *Shadharāt*, iii, 242-3; Ibn Khallikān, *Wafayāt*, ii, 195-7; Ibn Kathīr, *Bidāya*, xii, 41-2; Ibn al-Athīr, *Kāmil*, ix, index; D.S. Margoliouth, *The poems of Mihyar the Dailemite*, in *Oriental studies in honour of Cursetji Erachji Pavry*, London 1933, 286-92; Brockelmann, I, 82, S I, 132; ʿAlī al-Ḳallāl, *Mihyār al-Daylamī wa-shiʿruhu*, Cairo 1948; Ismāʿīl Ḥusayn, *Mihyār al-Daylamī, baḥth wa-naḳd wa-taḥlīl*, Cairo n.d.; Muḥammad ʿAlī Mūsā, *Mihyār al-Daylamī*, Beirut 1961; Ziriklī, *Aʿlām*, vii, 264; Kaḥḥāla, *Muʿdjam*, xiii, 32-3; Sezgin, *GAS*, ii, 566-7, ix, 301. (CH. PELLAT)

MĪKĀL, the archangel Michael [see also MALĀʾIKA], whose name occurs once in the Ḳurʾān, viz. in II, 92: "Whosoever is an enemy to God, or his angels, or his apostles, or to Gabriel or to Michael, verily God is an enemy to the unbelievers." In explanation of this verse two stories are told. According to the first, the Jews, wishing to test the veracity of the mission of Muḥammad, asked him several questions, to all of which he gave the true answer. Finally, they asked him, who transmitted the revelations to him? When he answered, Gabriel, the Jews declared that this angel was their enemy and the angel of destruction and penury, in opposition to Michael whom they said to be their protector and the angel of fertility and salvation (al-Ṭabarī, *Tafsīr*, i, 324 ff.). According to the second story, ʿUmar once entered the synagogue (*midrās*) of Medina and asked the Jews questions concerning Gabriel. They gave an account of that angel as well as of Michael similar to the one mentioned above, whereupon ʿUmar asked: What is the position of those two angels with God? They replied: Gabriel is to His right and Michael to His left hand, and there is enmity between the two. Whereupon ʿUmar answered: If they have that position with God, there can be no enmity between them. But you are unbelievers more than asses are, and whosoever is an enemy to one of the two, is an enemy to God. Thereupon ʿUmar went to meet Muḥammad, who received him with the words: Gabriel has anticipated you by the revelation of "Whosoever is an enemy", etc. (sūra II, 92; al-Ṭabarī, *Tafsīr*, i, 327; al-Zamakhsharī, 92; al-Bayḍāwī *ad* sūra II, 91).

We do not know of any Jewish traditions which ascribe to Gabriel a hostile attitude towards the Jews. For the statements regarding Michael as communicated above, there is sufficient literary evidence. In Daniel, xii, 1, Michael is called the great prince, the protector of the people of Israel; cf. *Targum Canticum*, viii, 9: "Michael, the lord of Israel"; Daniel x, 13, 21, where Michael is said to have protected the Jews against the kings of Persia and Greece; further I Enoch, xx, 5, where he is called the protector of the best part of mankind; *Testamentum Levi*, xv, 6; *Test. Dan.*, vi, 2.

In *Vita Adami et Evae*, ch. xii ff., it is Michael who orders Satan and the other angels to worship Adam. Although the story is mentioned several times in the Ḳurʾān [see IBLĪS], there is no trace in Muslim literature of the role ascribed to Michael in *Vita Adami et Evae*; the only mention of Michael in the Muslim legend is that he and Gabriel were the first to worship Adam, in opposition to Iblīs who refused to do so (al-Kisāʾī, 27).

Neither does Muslim literature seem to have preserved other features ascribed to Michael in Jewish Apocrypha (mediator between God and mankind, I Enoch xl, 9; *Test. Dan.*, vi, 2; 3 Baruch, xl, 2), or in the New Testament (*Jude*, v. 9: Michael disputing with the devil about the body of Moses; Revelation, xii, 7 ff.: Michael and his angels fighting against the dragon and the final discomfiture of the latter). Perhaps a faint recollection of Michael as the protector of mankind (the Jews, the Christians) may be found in the tradition according to which Michael has never laughed since the creation of Hell (Aḥmad b. Ḥanbal, iii, 224). Further, however, Michael is rarely mentioned in *ḥadīth* (al-Bukhārī, *Badʾ al-khalk*, *bāb* 7, where he, together with Mālik, the guardian of Hell, and Gabriel, appears to Muḥammad in a dream; al-Nasāʾī, *Iftitāḥ*, *bāb* 37, where Michael incites Gabriel to urge Muḥammad to recite the Ḳurʾān according to seven *aḥruf*).

Al-Yaʿḳūbī mentions a story of which we have no counterpart in Jewish or Christian literature either, which is not surprising, the story bearing an outspoken Shīʿī tendency. One day, God announced to Gabriel and Michael that one of them must die. Neither, however, was willing to sacrifice himself on behalf of his partner, whereupon God said to them: Take ʿAlī as an example, who was willing to give his life on behalf of Muḥammad (sc. on the night before the *hidjra*; al-Yaʿḳubī, ii, 39).

Michael is further mentioned by name as one of the angels who opened the breast of Muḥammad before his night journey (al-Ṭabarī, i, 1157-9; Ibn al-Athīr, ii, 36-7), and as one of those who came to the aid of the Muslims in the battle of Badr (Ibn Saʿd, ii/1, 9, 18).

In the text of the Ḳurʾān, as well as in a verse cited by al-Ṭabarī (i, 329), the form of the name is Mīkāl as if it were a *mifʿāl* form from *wakala* (Horovitz). A direct reminiscence of the Greek, probably also of the Hebrew and Aramaic, forms of the name is to be found in the tradition preserved by al-Kisāʾī (12), which calls Mīkhāʾīl the attendant of the second heaven, in contradistinction to Mīkāʾīl, who is the guardian of the sea in the seventh heavens (15). Other forms of the name are Mīkaʾil, Mīkāʾil, Mīkaʾīl, Mīkāʾīn and Mīkāʾill. It is hardly necessary to say that, in the magical use of the names of the archangels, that of Mīkāʾīl is on the same level as that of his companions (see e.g. S.M. Zwemer, *The influence of animism on Islam*, 193, 197).

MĪKĀLĪS, an Iranian family of Khurāsān prominent in the cultural and social worlds there and also active as local administrators and town officials under the Sāmānids and early Ghaznawids [*q.vv.*].

They were apparently of Soghdian origin, and amongst their pre-Islamic forebears is mentioned the Prince of Pandjkent Shīr Dīvāstič, killed at Mount Mugh by the Arabs in 104/722-3 [see MĀ WARĀʾ AL-NAHR. 2. History]; al-Samʿānī traces the family back to the Sāsānids Yazdagird II and Bahrām Gūr (*K. al-Ansāb*, facs. edn., fols. 548b-549b). It must nevertheless have become Muslim, for Islamic names now appear in its genealogy, and like many other families

from Khurāsān and the far eastern fringes of the Islamic world, its members were drawn westwards to the new capital Baghdād by the early ʿAbbāsids. Shāh b. Mīkāl (d. 302/914-15) was a protégé of the Ṭāhirids and the *mamdūḥ* of the poet al-Buḥturī [*q.v.*]. Shāh b. Mīkāl's nephew ʿAbd Allāh b. Muḥammad began in the service of the Ṣaffārids [*q.v.*] and became governor of Ahwāz. His son Abu 'l-ʿAbbās Ismāʿīl had the philologist Ibn Durayd [*q.v.*] as his tutor, and the latter wrote for him his great dictionary, the *Djamharat al-lugha*, and dedicated to him his *Maḳṣūra* poem [*q.v.*].

Under Abu 'l-ʿAbbās Ismāʿīl, the family moved back to Khurāsān and settled in Nīshāpūr. He himself was given the headship of the *Dīwān al-rasāʾil* or chancery in 347/958 by the Sāmānid vizier Abū Djaʿfar al-ʿUtbī, holding this post till his death in 362/973, and was also apparently the first Mīkālī *raʾīs* (i.e. municipal head and representative of the town notables *vis-à-vis* the central government; see on this office, C.E. Bosworth, *The Ghaznavids*, 184-5; A.K.S. Lambton, in *Camb. hist. of Iran*, v, 279-81; and R.M. Bulliet, *The patricians of Nishapur*, Cambridge, Mass. 1972, 66-8), corresponding as such with the author and stylist Abū Bakr al-Khwārazmī [*q.v.*]. His son Abū Muḥammad ʿAbd Allāh (d. 379/989-90) followed his father in these offices, and was known as an authority on *fiḳh* and as a fine poet, specimens of whose verses are given by al-Thaʿālibī (*Yatīmat al-dahr*, Damascus, iv, 397-8, Cairo 1375-7/1956-8, iv, 417-18); the geographer al-Muḳaddasī [*q.v.*] stayed with him when visiting Nīshāpūr and participated in his *madjālis* (see A. Miquel, *Aḥsan at-taqāsīm fī maʿrifat al-aqālīm (La meilleure répartition ...)*, Damascus 1963, 350 and refs. there). Another son Abū Djaʿfar also became *raʾīs* and was praised as a poet and traditionist by Badīʿ al-Zamān al-Hamadhānī [*q.v.*], with whom he frequently corresponded.

With the decay and collapse of the Sāmānid amīrate in Khurāsān, the Mīkālīs subsequently transferred their allegiance to the new masters of the province, the Ghaznawids. Abū Djaʿfar's grandson, Khwādja Abu 'l-Ḳāsim ʿAlī, is often mentioned by the historian Bayhaḳī in his *Taʾrīkh-i Masʿūdī* as *raʾīs* of Nīshāpūr; sultans Maḥmūd and Masʿūd employed him as a high-level diplomatic envoy, and in 423/1032 he led the glittering pilgrimage caravan of Transoxania and Khurāsān to the Holy Cities.

A parallel line of the Mīkālīs was that of Abū Muḥammad 'Abd Allāh's elder brother Abu 'l-Ḳāsim ʿAlī (d. 376/986-7), known from his love of *djihād* as al-Muṭṭawwiʿ; he fought against the Byzantines in Cilicia and against the pagan Turks on the Central Asian desert fringes, founding *ribāṭs* at Farāwa and endowing them with *awḳāf* (al-Muḳaddasī, 320 n. *s*). His son Abū ʿAbd Allāh Ḥusayn was *katkhudā* or quartermaster of the Ghaznawid army in Khurāsān during its campaigns to stem the tide of Oghuz incursions; captured by the Turkmens in 426/1035, he went over to the Saldjūḳ side, and Ibn al-Athīr lists him as Ṭoghrïl Beg's second vizier, the *Raʾīs al-ruʾasāʾ* the Ṣāḥib Ibn Mīkāl (see H. Bowen, *Notes on some early Seljuqid viziers*, in *BSOAS*, xx [1957], 107-8; ʿAbbās Iḳbāl, *Wizārat dar ʿahd-i salāṭīn-i buzurg-i Saldjūḳī*, Tehran 1338/1959, 39-40). Abū ʿAbd Allāh Ḥusayn's nephew Abu 'l-Faḍl ʿUbayd Allāh (d. 436/1044-5) was perhaps the Mīkālī who enjoyed the greatest literary reputation as poet, stylist and traditionist, friend of the anthologist ʿAbd Allāh al-ʿAbdalkānī, author of a (lost) commentary on the *Ḥamāsa* of Abū Tammām, compiler of anthologies, including *al-Muntakhab al-Mīkālī* (extant in an Istanbul ms.), and composer of epistles and poetry (the latter edited by A. Moberg, *Die Gedichte* ..., Leipzig 1908). See Brockelmann, I², 340-1, S I, 503 (where the names given as ʿAbd al-Raḥīm and/or ʿAbd Allāh are to be corrected); Sezgin, *GAS*, ii, 70, 77-8, 642-3; al-Bākharzī, *Dumyat al-ḳaṣr*, Aleppo 1348/1930, 122-3, Cairo 1388/1968, ii, 147-52; Ibn Shākir al-Kutubī, *Fawāt al-wafayāt*, Cairo 1951, ii, 52-8, ed. ʿAbbās, Beirut 1973-4, ii, 428-33.

Yet another collateral branch of the Mīkālīs was that whose best-known representative was Abū ʿAlī Ḥasan b. Muḥammad, called Ḥasanak [*q.v.*], vizier and favourite of sultan Maḥmūd, but to be executed by Masʿūd in 432/1031 on a trumped-up charge of Ismāʿīlī sympathies. He, like other members of his family, had the reputation of a maecenas, being the *mamdūḥ* of the Ghaznawid court poet Farrukhī [*q.v.*], and was active in public and charitable works in Nīshāpūr. There seems to have been a feud between Ḥasanak and the sons of Abū Naṣr Aḥmad Mīkālī, father of the Abu 'l-Faḍl ʿUbayd Allāh mentioned above, for Ḥasanak dispossessed them of lands and rights in Nīshāpūr, and all these were only restored to them in 424/1033 by the Ghaznawid vizier Aḥmad b. ʿAbd al-Ṣamad Shīrāzī.

Finally, it should be noted that the Mīkālīs exercised political and social influence beyond the confines of Nīshāpūr itself: Ibn Funduḳ devotes a section of his local history of Bayhaḳ to the Mīkāliyān (*Taʾrīkh-i Bayhaḳ*, ed. Aḥmad Bahmanyār, Tehran 1317/1938, 117).

We lack information on the family after the mid-5th/11th century; it seems improbable that their influence could disappear abruptly, though it may well be that Saldjūḳ domination in Khurāsān was, in the long term, unfavourable to the maintenance of their social and political power in Nīshāpūr.

Bibliography: In addition to the references given in the article, see Muhammad, Shafi, *The sons of Mīkāl*, in *Procs. of the Idara-i Maarit-i Islamia, Lahore 1933, first session*, Lahore 1935, 107-68; Bosworth, *The Ghaznavids*, 179-85, and R.W. Bulliet, art. *Āl-e Mīkāl*, in *Encycl. Iranica*. Saʿid Nafisi gathered together uncritically much information on the Mīkālīs in the notes to his edition of Bayhaḳī, Tehran 1319-32/1940-53, ii. 969-1009, with a genealogical table at p. 1008; according to Bulliett, *Patricians*, 67 n. 23, the biographical historian of Nīshāpūr ʿAbd al-Ghāfir al-Fārisī mentions several further Mīkālīs not recorded by Nafīsī. See also H. Ritter, *Die Geheimnisse des Wortkunst des ʿAbdalqāhir al-Curcānī*, Wiesbaden 1959, 27-32 (= n. 17) [with family tree]. (C.E. Bosworth)

MĪḲĀT (A., *mifʿāl* form from *w-ḳ-t*, plural *mawāḳīt*) appointed or exact time. In this sense the term occurs several times in the Ḳurʾān (II, 185; VII, 138, 139, 154; XXVI, 37; XLIV, 40; LVI, 50; LXXVIII, 17).

1. Legal aspects. In *ḥadīth* and *fiḳh*, the term is applied to the times of prayer and to the places where those who enter the *ḥaram* are bound to put on the *iḥrām*. For the latter meaning of the term, see IḤRĀM.

Although some general indications for the times at which some *ṣalāts* are to be performed occur in the Ḳurʾān (cf. II, 239; XI, 116; XVII, 80; XXIV, 29), it may be considered above doubt that during Muḥammad's lifetime neither the number of the daily *ṣalāts* nor their exact times had been fixed and that this happened in the first decades after his death.

A reminiscence of that period of uncertainty may be preserved in those traditions which apply a deviating nomenclature to some of the *ṣalāts*. The *ṣalāt al-ẓuhr*, e.g., is called *al-hadjīr al-ūlā*; the *ṣalāt al-maghrib*, *ʿishāʾ*;

the *ṣalāt al-ʿis̲h̲āʾ*, *ʿatama*; the *ṣalāt al-fad̲j̲r*, *g̲h̲adāt* (al-Buk̲h̲ārī, *Mawāḳīt al-ṣalāt, bāb* 13, 19). In other traditions, the term *al-ʿatama* as applied to the *ṣalāt al-ʿis̲h̲āʾ* is ascribed to the Bedouins and prohibited (Muslim, *Masād̲j̲id*, trads. 228, 229; Abū Dāwūd, *Ḥudūd, bāb* 78; Aḥmad b. Ḥanbal, *Musnad*, 11, 10, etc.); cf. on the other hand, al-Buk̲h̲ārī, *Mawāḳīt, bāb* 20; Muslim, *Ṣalāt*, trad. 129, etc., where the term *ʿatama* is used without censure.

From some traditions so much may be gathered, that the—or at least some of the—Umayyads showed a predelection for postponing the times of the *ṣalāt* (al-Buk̲h̲āri, *Mawāḳīt, bāb* 7; Muslim, *Masād̲j̲id*, trads. 166, 167; al-Nasāʾī, *Imāma, bāb* 18, 55; Zayd b. ʿAlī, *Mad̲j̲mūʿ al-fiḳh*, no. 113).

In opposition to this, a *ṣalāt* in due time is declared the best of works (al-Buk̲h̲ārī, *D̲j̲ihād, bāb* 1; *Mawāḳīt, bāb* 5; Muslim, *Īmān*, trads. 138, 139; al-Tirmid̲h̲ī, *Ṣalāt, bāb* 13; *Birr, bāb* 2). In other traditions, this is said of a *ṣalāt* at its earliest time (al-Tirmid̲h̲ī, *Ṣalāt, bāb* 13).

This early state of things is reflected in several respects in a tradition according to which ʿUmar b. ʿAbd al-ʿAzīz once postponed one of the *ṣalāt*s and was rebuked for this by ʿUrwa b. al-Zubayr, who related to him that al-Mug̲h̲īra b. S̲h̲uʿba had once been rebuked for the same reason by Abū Masʿūd al-Anṣārī, on account of the fact that Gabriel himself had descended five times in order to perform the five *ṣalāt*s at their exact times in the presence of Muḥammad. Thereupon ʿUmar admonished ʿUrwa to be careful in his statements (al-Buk̲h̲ārī, *Mawāḳīt, bāb* 1; Muslim, *Masād̲j̲id*, trads. 166, 167; al-Nasāʾī, *Mawāḳīt, bāb* 10).

Some early groups of traditions affect to reproduce reminiscences of the practice in Medina in Muḥammad's lifetime.

a. The *ṣalāt al-ẓuhr* was performed at noon, when the sun was beginning to decline (al-Buk̲h̲ārī, *Mawāḳīt, bāb* 11);

b. the *ṣalāt al-ʿaṣr* when the sun was shining into ʿĀʾis̲h̲a's room, no shadows being yet cast there (al-Buk̲h̲ārī, *Mawāḳīt, bāb* 13; Muslim, *Masād̲j̲id*, trad. 168). After this *ṣalāt*, people had still time to visit the remotest parts of the town, while the sun was still "alive" or "pure" (al-Buk̲h̲ārī, *Mawāḳīt, bāb*s 1, 13, 14, 18, 21);

c. the *ṣalāt al-mag̲h̲rib* was finished at a time when people could still perceive the places where their arrows fell down (al-Buk̲h̲ārī, *Mawāḳīt, bāb* 21);

d. the *ṣalāt al-ʿis̲h̲āʾ* was sometimes postponed till a late hour, sometimes till the first third of the night had passed (al-Buk̲h̲ārī, *Mawāḳīt, bāb*s 11, 20, 21, 24);

e. the *ṣalāt al-fad̲j̲r* was performed by Muḥammad at a time when a man could discern his neighbour (al-Buk̲h̲ārī, *Mawāḳīt, bāb* 13); but the women on their way home could not yet be recognised (al-Buk̲h̲ārī, *Mawāḳīt, bāb* 27).

In a second layer of traditions, these general indications are specified by the mention of the first and the last limits allowed for the different prayers (cf. e.g. Muslim, *Masād̲j̲id*, trads. 176, 177). On one day, Muḥammad performed:

a. the *ṣalāt al-ẓuhr* when the sun began to decline;

b. the *ṣalāt al-ʿaṣr* when the sun was still high, white and pure;

c. the *ṣalāt al-mag̲h̲rib* immediately after sunset;

d. the *ṣalāt al-ʿis̲h̲āʾ* when the twilight had disappeared;

e. the *ṣalāt al-fad̲j̲r* at daybreak.

On the following day Muḥammad performed:

a. the *ẓuhr* later than the day before;

b. the *ʿaṣr* later than the day before, the sun being still high up;

c. the *mag̲h̲rib* before the twilight had disappeared;

d. the *ʿis̲h̲āʾ* when the first of the night had passed;

e. the *fad̲j̲r* when sunrise was near (*asfara bihā*).

In a tradition communicated by al-S̲h̲āfiʿī (*Kitāb al-Umm*, i, 62), the fixing of the *mawāḳīt* just mentioned is ascribed to the example of Gabriel (cf. Zayd b. ʿAlī, *Mad̲j̲mūʿ al-fiḳh*, no. 109). These *mawāḳīt* have for the most passed into the books of *fiḳh*. We cannot reproduce all details here. The following scheme may suffice:

a. *ẓuhr*: from the time when the sun begins to decline till the time when shadows are of equal length with the objects by which they are cast, apart from their shadows at noon. The Ḥanafīs alone deviate in one of their branches, in so far as they replace the ultimate term by the time when the shadows are twice as large as their objects. In times of great heat, it is recommended to postpone the *ẓuhr* as late as possible;

b. *ʿaṣr*: from the last time allowed for *ẓuhr* till before sunset. According to Mālik, the first term begins somewhat later;

c. *mag̲h̲rib*: from the time after sunset till the time when the red twilight has disappeared. Small deviations only, in connection with a predilection for the first term;

d. *ʿis̲h̲āʾ*: from the last term mentioned for the *ṣalāt al-mag̲h̲rib* till when a third, or half of the night has passed, or till daybreak;

e. *fad̲j̲r*: from daybreak till before sunrise.

Side-by-side with these *mawāḳīt*, we find in the books of Tradition and of Law the times at which it is not allowed to perform prayer, viz. sunrise, noon, and sunset (al-Buk̲h̲ārī, *Mawāḳīt, bāb*s 30-2; Muslim, *Ṣalāt al-musāfirīn*, trads. 285-94; cf. al-Nawawī's commentary for controversies regarding this point, and further Wensinck, *A handbook of early Muh. trad.*, 192a). According to ʿĀʾis̲h̲a, it is only forbidden to await sunrise and sunset for prayer (Muslim, *Musāfirīn*, trad. 296). In Mecca, prayer is allowed at all times (al-Buk̲h̲ārī, *Ḥad̲j̲d̲j̲, bāb* 42).

(A.J.WENSINCK)

2. Astronomical aspects. *ʿIlm al-mīḳāt* is the science of astronomical timekeeping by the sun and stars and the determination of the times (*mawāḳīt*) of the five prayers. Since the limits of the permitted intervals for the prayers are defined in terms of the apparent position of the sun in the sky relative to the local horizon, their times vary throughout the year and are dependent upon the terrestrial latitude. When reckoned in terms of a meridian other than the local meridian, the times of prayer are also dependent upon terrestrial longitude.

The definitions of the times of prayer outlined in the Ḳurʾān and *ḥadīt̲h̲* [see 1, Legal aspects] were standardised in the 2nd/8th century and have been used ever since. According to these standard definitions, the Islamic day and the interval for the *mag̲h̲rib* prayer begin when the disc of the sun has set over the

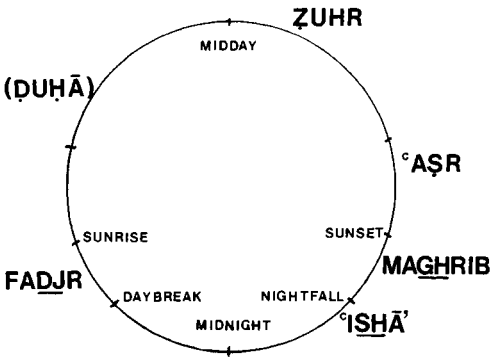
horizon. The intervals for the *ʿis̲h̲āʾ* and *fad̲j̲r* prayers begin at nightfall and daybreak. The permitted time for the *ẓuhr* begins either when the sun has crossed the meridian, or when the shadow of any object has been observed to increase, or, in mediaeval Andalusian and Mag̲h̲ribī practice, when the shadow of any vertical object or gnomon has increased over its midday minimum by one-quarter of the length of the object. The interval for the *ʿaṣr* begins when the shadow increase equals the length of the gnomon and ends either when the shadow increase is twice the length of the gnomon or at sunset. See Figs. 1 and 2.


Fig. 1. The Islamic day.
Fig. 2. Shadow increases at the *ẓuhr* (Andalusī/Mag̲h̲ribī definition) and at the beginning and end of the *ʿaṣr*.

The names of the prayers are derived from the names of the corresponding seasonal hours [see SĀʿA] in pre-Islamic classical Arabic, the seasonal hours (*al-sāʿāt al-zamāniyya*) being one-twelfth divisions of the day and night. The definitions of the times of the daylight prayers in terms of shadow increases (as opposed to shadow lengths in the *ḥadīt̲h̲*) represent a practical means of regulating the prayers in terms of the seasonal hours.

In some circles, a sixth prayer, the *ḍuḥā*, was performed at the same time before midday as the *ʿaṣr* was performed after midday. These definitions of the *ḍuḥā*, *ẓuhr*, and *ʿaṣr* correspond to the third, sixth and ninth seasonal hours, the links being provided by an approximate Indian formula relating shadow increases to the seasonal hours (see below). The Umayyad Caliph ʿUmar b. ʿAbd al-ʿAzīz [*q.v.*] is reported to have used a (Graeco-Roman) sundial (marked with the seasonal hours) for regulating his prayers. The early ʿAbbāsid astronomer al-K̲h̲ʷārazmī [*q.v.*] was still toying with different definitions of the *ẓuhr* intended to associate it with the sixth and the seventh seasonal hours.

The regulation of the times of prayer was conducted at two different levels. At the popular level, the simple techniques of folk astronomy were used. Muslim astronomers, on the other hand, used sophisticated tables and instruments for timekeeping.

As we see from treatises on folk astronomy and on the sacred law, in popular practice the daylight prayers were regulated by simple arithmetical shadow schemes of the kind also attested in earlier Hellenistic and Byzantine folk astronomy. The night prayers were regulated by observation of the lunar mansions [see MANĀZIL]. As the 7th/13th century Yemeni legal scholar al-Aṣbaḥī wrote in his treatise on folk astronomy: "The times of prayer are not to be found by the degrees (marked) on an astrolabe and not by calculation using the science of the astronomers; they are to be found only by direct observation ... The astronomers took their knowledge from Euclid and the *Sindhind*, and from Aristotle and other philosophers; all of them were infidels."

Some twenty different shadow schemes have been located in the Arabic sources. In most cases, they are not the result of any careful observations. Usually a single one-digit value for the midday shadow of a man 7 *ḳadams* ("feet") tall is given for each month of the year. One such scheme, attested in several sources, is (starting with a value for January):

9 7 5 3 2 1 1 2 4 5 (or 6) 8 10.

The corresponding values for the shadow length at the beginning of the *ʿaṣr* prayer are 7 units more for each month.

Other arithmetical schemes are sometimes presented in order to find the shadow length at each seasonal hour of day. The most popular formula advocated in order to find the increase (Δs) of the shadow over its midday minimum at T (<6) seasonal hours after sunrise or before sunset is:

$$T = 6\ n\ /\ (\Delta s + n),$$

where n is the length of the gnomon. This is the formula which was first used to establish the values $\Delta s = n$ for the 3rd and the 9th seasonal hours of daylight, the beginnings of the *ḍuḥā* and *ʿaṣr* ($T = 3$), and $\Delta s = 2n$ for the 10th hour, sometimes taken as the end of the *ʿaṣr* ($T = 2$).

The Muslim astronomers had a passion for compiling tables, and some of these were specifically for the purpose of timekeeping. Al-K̲h̲ʷārazmī prepared the first known tables for regulating the times of the daylight prayers. Computed for the latitude of Bag̲h̲dād, his tables display the shadow lengths at the *ẓuhr* and the beginning and end of the *ʿaṣr*, with values for each 6° of solar longitude (corresponding roughly to each six days of the year): see Pl. IX, 1. He also compiled some simple tables displaying the time of day in seasonal hours in terms of the observed solar altitude.

The 3rd/9th century astronomer ʿAlī b. Amād̲j̲ūr compiled a more extensive table for timekeeping based on a simple approximate formula which serves all latitudes. The underlying formula is

$$T = 1/15 \text{ arc sin } (\sin h\ /\ \sin H),$$

where h is the observed altitude and H is the meridian altitude. (Note that $T = 0$ when $h = 0$ and $T = 6$ when $h = H$, as required for the cases when the sun is on the horizon and the meridian; in fact this formula is accurate only when the sun is at the equinoxes.) Ibn Amād̲j̲ūr simply tabulated $T(h, H)$ for each degree of both arguments ($h \leq H$).

In astronomical handbooks [see ZĪD̲J̲] from the 3rd/9th century onwards, we find descriptions of an

accurate method for finding $T(h, H)$. These involve the semi-diurnal arc D and the use of the versed sine function (vers $\theta = 1 - \cos \theta$). The standard mediaeval formula is (in modern notation):

$$\text{vers}(D-T) = \text{vers}\, D - \sin h \,\text{vers}\, D \,/\, \sin H,$$

which can be derived with facility by means of an analemma construction applied to the celestial sphere. This formula was adopted by Muslim astronomers from Indian sources.

The modern formula for the hour-angle t ($= D - T$) can also be derived by these procedures. It is:

$$\cos t = (\sin h - \sin \delta \sin \varphi) \,/\, (\cos \delta \cos \varphi),$$

where δ is the solar declination and φ is the local latitude (note that $H = 90° - \varphi + \delta$), and is used in this form by later Muslim astronomers (see al-Khalīlī, below).

Likewise, from the 3rd/9th century onwards, we find descriptions of how to find the time of day or night using an analogue computer such as an astrolabe [see ASṬURLĀB] or using a calculating device such as a sine quadrant [see RUBᶜ]. In the first case, there is no need to know the formula; in the second case, one uses the formula to compute specific examples.

ᶜAlī b. Amādjūr also compiled a table of $T(h, H)$ for Baghdād based on an accurate trigonometric formula. Some prayer-tables for Baghdād preserved in the *Zīdj* of the 7th/13th century astronomer al-Ḳāsim b. Maḥfūẓ al-Baghdādī, which display, for example, the duration of twilight for each day of the year, were probably another early ᶜAbbāsid production. Quantitative estimates of the angle of depression of the sun at nightfall and daybreak occur in the *Zīdj* of the 3rd/9th century astronomer Ḥabash al-Ḥāsib [*q.v.*]. Quantitative estimates of the effect of refraction at the horizon were first made in the 4th/10th century by the Cairene astronomer Ibn Yūnus [*q.v.*]. Isolated tables displaying the altitudes of the sun at the *ẓuhr* and *ᶜaṣr* prayers and the duration of morning and evening twilight occur in several early mediaeval Islamic astronomical works, usually of the genre known as *zīdj*. Several early examples of extensive tables for reckoning time by day from the solar altitude or for reckoning time of night from altitudes of certain prominent fixed stars have come to light. All of these tables were computed for a specific locality, and to use any of them one needed an instrument, such as an astrolabe, to measure celestial altitudes or the passage of time. There is no evidence that these tables were widely used.

In practice, at least before the 7th/13th century, the regulation of the prayer-times was the duty of the *muʾadhdhin* or muezzin [see ADHĀN and MASDJID]. The muezzins were appointed for the excellence of their voices and their character, and they needed to be proficient only in the rudiments of folk astronomy. They had to know the shadows at the *ẓuhr* and the *ᶜaṣr* for each month, and which lunar mansion was rising at daybreak and setting at nightfall, information which was conveniently expressed in the form of mnemonics. They did not need astronomical tables or instruments. The necessary techniques are outlined in the chapters on prayer in the books of sacred law [see FIḲH], and the qualifications of the muezzin are sometimes detailed in works on public order [see ḤISBA and IḤTISĀB]. See, for example, the discussion of their responsibilities by Ibn al-Ukhuwwa [*q.v.*] (ed. R. Levy, text, 176-8, tr. 63-5) and the criticism of their mentality by the scientist al-Bīrūnī [*q.v.*] (E.S. Kennedy, *Shadows*, i, 75-6, 226-30, and ii, 28-9, 142-3).

In the 7th/13th century, there occurred a new development whose origins are obscure. In Egypt we find the first mention of the institution of the *muwaḳḳit* [*q.v.*], a professional astronomer associated with a religious institution, whose primary responsibility was the regulation of the times of prayer. Simultaneously, there appeared astronomers with the epithet *mīḳātī* who specialised in spherical astronomy and astronomical timekeeping (*ᶜilm al-mīḳāt*), but who were not necessarily associated with any religious institution.

In Cairo later in that century, a *mīḳātī* named Abū ᶜAlī al-Marrākushī [*q.v.*] compiled a compendium of spherical astronomy and instruments from earlier sources which was to set the tone of *ᶜilm al-mīḳāt* for several centuries. His treatise, appropriately entitled *Djāmiᶜ al-mabādiʾ wa-'l-ghāyāt fī ᶜilm al-mīḳāt* ("An A to Z of astronomical timekeeping"), was investigated by the Sédillots *père et fils* in the 19th century.

Al-Marrākushī's contemporary, Shihāb al-Dīn al-Maḳsī, compiled a set of tables displaying the time since sunrise as a function of solar altitude h and solar longitude λ for the latitude of Cairo (based on an earlier set by the 4th/10th century astronomer Ibn Yūnus [*q.v.*]), which in the 8th/14th century was expanded and developed into a corpus of tables covering some 200 manuscript folios and containing over 30,000 entries. The Cairo corpus of tables for timekeeping was used for several centuries and survives in numerous copies, no two of which contain the same tables. Besides tables displaying the time since sunrise / hour-angle (time remaining until midday) / solar azimuth for each degree of solar altitude, which make up the bulk of the corpus (see Pl. X, 3), there are other tables displaying the solar altitude and hour-angle as the *ᶜaṣr*, the solar altitude and hour-angle when the sun is in the direction of the *ḳibla* [*q.v.*], and the duration of morning and evening twilight. In some later copies of the corpus, there are tables for regulating the time when the lamps on minarets during Ramaḍān should be extinguished (*ṭafy al-ḳanādīl*) and when the muezzin should pronounce a blessing (*salām*) on the Prophet Muḥammad: see Pl. X, 4. In some copies, early and late, there is a table for orienting the large ventilators (*bādahandj* [see BĀDGĪR in Suppl.]) on Cairo rooftops so that their south-eastern sides face winter sunrise [see MAKKA. 4. As the centre of the world].

Al-Maḳsī also compiled an extensive treatise on sundial theory, including tables of coordinates for marking the curves on horizontal sundials for different latitudes and vertical sundials for Cairo with any inclination to the local meridian [see MIZWALA]. The latter were particularly useful for constructing sundials on the walls of mosques in Cairo, and the special curves for the *ẓuhr* and *ᶜaṣr* enabled the faithful to see how much time remained until the muezzin would announce the call to prayer.

A contemporary of al-Marrākushī and of al-Maḳsī named Nadjm al-Dīn al-Miṣrī was clearly disturbed by the fact that the available tables for timekeeping served only specific latitudes and that they were either for timekeeping by day of for timekeeping by night. He compiled a table for timekeeping which served all latitudes and could be used for timekeeping by the sun or by the stars. In his table, one feeds in the instantaneous altitude of the sun or any star, as well as the meridian latitude and half arc of visibility of the sun or of that star, and simply reads off the time since rising of the sun or of the star. The table contains over 250,000 entries and survives in a unique manuscript probably copied by Nadjm al-Dīn himself.

Another region of the Islamic world in which the writings of al-Marrākushī and the output of the early

Cairo *muwaḳḳits* were influential was the Yemen. Under the Rasūlids [*q.v.*], mathematical astronomy was practiced and patronised. In particular, the Sultan al-As͟hraf (1295-6) compiled a treatise on instrumentation inspired by that of al-Marrākus͟hī. The Yemeni astronomer Abu 'l-ʿUḳūl, who worked for the Sultan al-Muʾayyad in Taʿizz, compiled a corpus of tables for timekeeping by day and night which is the largest such corpus compiled by any Muslim astronomer, containing over 100,000 entries.

In Cairo in the 8th/14th century there were several *muwaḳḳits* producing works of scientific merit but the major scene of *ʿilm al-mīḳāt* was Syria. The Aleppo astronomer Ibn al-Sarrād͟j, who is known to have visited Egypt, devised a series of special quadrants and universal astrolabes and trigonometric grids; his works represent the culmination of the Islamic achievement in astronomical instrumentation.

Two other major Syrian astronomers, al-Mizzī and Ibn al-S͟hāṭir, studied astronomy in Egypt under Ibn al-Akfānī [*q.v.*] and others. Al-Mizzī returned to Syria and compiled a set of hour-angle tables and prayer-tables for Damascus modelled after the Cairo corpus. Ibn al-S͟hāṭir compiled some prayer-tables for an unspecified locality with latitude 34° (the new Mamlūk city of Tripoli?). Al-Mizzī also compiled various treatises on instruments, but Ibn al-S͟hāṭir turned his attention to theoretical astronomy and devised a new series of models which represent the culmination of the Islamic endeavour in this field [see ʿILM AL-HAYʾA]. This notwithstanding, he also devised the most splendid sundial known from the Islamic Middle Ages, the fragments of which are preserved in the garden of the Archaeological Museum in Damascus; a replica made in the late 19th century by the last Syrian *muwaḳḳit* of any reknown, al-Ṭanṭāwī, is still *in situ* on the main minaret of the Umayyad Mosque [see MIZWALA].

It was a colleague of al-Mizzī and Ibn al-S͟hāṭir named S͟hams al-Dīn al-K͟halīlī who made the most significant advances in *ʿilm al-mīḳāt*. Al-K͟halīlī recomputed the tables of al-Mizzī for the new parameters (local altitude and obliquity of the ecliptic [see MAYL]) derived by Ibn al-S͟hāṭir. His corpus of tables for timekeeping by the sun (*i.e.* functions $t(h,\lambda)$ and $T(h,\lambda)$) and for regulating the times of prayer for Damascus was used there until the 13th/19th century: see Pl. XI, 5. In addition, he compiled some tables of auxiliary trigonometric functions for solving all of the standard problems of spherical astronomy for any latitude. The functions tabulated are:

$$f(\varphi,\theta) = R \text{ Sin } \theta \ / \text{ Cos } \varphi,$$
$$g(\varphi,\theta) = \text{Sin } \theta \text{ Tan } \varphi \ / \ R, \text{ and}$$
$$K(x,y) = \text{arc Cos } (R\ x \ / \ y),$$

where the trigonometric functions are to base $R = 60$. Values are given to two sexagesimal digits and are invariably computed accurately. Using these tables, the hour-angle can be found with a minimum of calculation. Al-K͟halīlī describes a procedure equivalent to:

$$t(h,\ \delta,\ \varphi) = K\{\, [f(\varphi,h) - g(\varphi,\delta)],\ \delta\ \}$$

which is mathematically equivalent to the modern formula noted above. Al-K͟halīlī also compiled a table displaying the *ḳibla* or local direction of Mecca as a function of terrestrial longitude and latitude [see ḲIBLA]. These tables represent the culmination of the Muslim achievement in the computation of tables for spherical astronomy.

Some of the activities of the Damascus school became known in Tunis in the 8th-9th/14th-15th centuries. Extensive auxiliary tables and prayer tables for the latitude of Tunis were compiled there by astronomers whose names are not known to us. Prayer-tables were also prepared for various latitudes in the Mag͟hrib.

More significant was the influence of the Cairo and Damascus schools on the development of *ʿilm al-mīḳāt* in Ottoman Turkey. Cairene and Damascene astronomers of the 8th/14th century had already prepared sets of prayer-tables for the latitude of Istanbul, as well as for Jerusalem, Mecca, and Aleppo, but several new sets of tables were prepared by Ottoman astronomers for Istanbul and elsewhere in Turkey after the model of the corpora for Cairo and Damascus. Prayer-tables for Istanbul are contained in the very popular almanac [see RŪZNĀMA] of the 9th/15th Ṣūfī S͟hayk͟h Wefāʾ (see Pl. IX, 2), and in the less widely distributed almanac of the 10th/16th century scholar Darendeli. These remained in use until the 19th century.

Large sets of tables for timekeeping by the sun and/or stars were prepared for Istanbul and for Edirne. One set for the sun was compiled by Taḳī 'l-Dīn b. Maʿrūf [*q.v.*], director of the short-lived Istanbul Observatory in the late 10th/16th century. In the 12th/18th century, the architect Ṣāliḥ Efendī produced an enormous corpus of tables for timekeeping which was very popular amongst the *muwaḳḳits* of Istanbul. A feature distinguishing some of these Ottoman tables from the earlier Egyptian and Syrian tables is that values of the time of day are based on the convention that sunset is 12 o'clock. This convention, inspired by the fact that the Islamic day begins at sunset (because the calendar is lunar and the months begin with the sighting of the crescent shortly after sunset), has the disadvantage that clocks registering "Turkish" time need to be adjusted by a few minutes each few days. Prayer-tables based on this convention were compiled all over the Ottoman Empire and beyond; examples have been found in the manuscript sources for localities as far apart as Algiers and Yarkand, and Crete and Ṣanʿāʾ: see Pl. XI, 6.

In the 19th/20th centuries, the times of prayer were and are tabulated in annual almanacs, wall calendars and pocket diaries, and the times for each day are listed in newspapers. In Ramaḍān, special sets for the whole month are distributed. These are called *imsākiyyas* and indicate in addition to the times of prayer, the time of the early morning meal (*suḥūr*) and the time before daybreak—called the *imsāk*—when the fast should begin. Modern tables are usually prepared by the local survey department or observatory or some other agency approved by the religious authorities (see Fig. 3). Recently, electronic clocks and watches have appeared on the market which are programmed to beep at the prayer times for different localities, and to pronounce a recorded prayer-call [see AD͟HĀN].

Bibliography: On the definition of the times of prayer as they appear in the astronomical sources, see E. Wiedemann and J. Frank, *Die Gebetszeiten im Islam*, in *SBPMSE*, lviii (1926), 1-32, repr. in E. Wiedemann, *Aufsätze zur arabischen Wissenschaftsgeschichte*, Hildesheim 1970, ii, 757-88. For al-Bīrūnī's detailed discussion, see E.S. Kennedy, *The Exhaustive Treatise on Shadows by ... al-Bīrūnī: translation and commentary*, Aleppo 1976, i, 210-30, ii, 132-43, and idem *et alii*, *Studies in the Islamic exact sciences*, Beirut 1983, 299-310. On the formulae for timekeeping used by the Muslim astronomers, see the papers by M.-L. Davidian, N. Nadir and B.R. Goldstein repr. in Kennedy *et alii*, *Studies*, 274-96, and the studies listed below. On the detailed treatment of spherical astronomy by Ibn Yūnus and al-Bīrūnī, see, respectively, D.A. King,

Fig. 3. Extracts from some modern tables for regulating the times of prayer for different localities. The examples shown serve (a) Yemen; (b) Mecca (?); (c) Tunis; (d) Tashkent; (e) Istanbul, Ankara, Izmir and Erzerum; and (f) Nābulus (for Ramaḍān, 1396/1975).

Spherical astronomy in medieval Islam: the Ḥākimī Zīj *of Ibn Yūnus* (forthcoming), and M.-Th. Debarnot, *La trigonométrie sphérique chez les Arabes de l'est à la fin du Xe siècle*, Damascus 1985. On al-Marrākus͟hī and his treatise, and the rise of the institution of the *muwaķķit*, see King, *The astronomy of the Mamluks*, in *Isis*, lxxiv (1983), 531-55, esp. 539-40 and 534-5, repr. in idem, *Islamic mathematical astronomy* (hereafter *IMA*), London 1986, III. On the earliest known tables for regulating the prayer times and reckoning time of day from solar altitude, see King, *Al-Khwārizmī and new trends in mathematical astronomy in the ninth century*, in *Occasional Papers on the Near East* (New York University, Hagop Kervorkian Center for Near Eastern Studies), ii (1983), 7-11. On the corpora of tables for Cairo, Taʿizz, Damascus and Jerusalem, Tunis and Istanbul, see respectively, King, *Ibn Yūnus'* Very Useful Tables *for reckoning time by the sun*, in *Archive for history of exact sciences*, x (1973), 342-94, repr. in idem, *IMA*, IX; *Mathematical astronomy in medieval Yemen* ..., Malibu, Calif. 1983, 31-2; *Astronomical timekeeping in fourteenth-century Syria*, in *Procs. of the First International Symposium for the History of Arabic Science (Aleppo, 1976)*, ii, 75-84 and plates, repr. in idem, *IMA*, X; (with E.S. Kennedy) *Indian astronomy in fourteenth-century Fez* ..., in *Journal for the History of Arabic Science*, vi (1982), 3-45, repr. in idem, *IMA*, VIII, esp. 8-9; and *Astronomical timekeeping in Ottoman Turkey*, in *Procs. of the International Symposium on the Observatories in Islam (Istanbul, 1977)*, 245-69, repr. in idem, *IMA*, XII. Three sets of auxiliary tables are analysed in R.A.K. Irani, *The* Jadwal al-taqwīm *of Ḥabash al-Ḥāsib*, unpubl. Master's diss., American University of Beirut 1956; C. Jensen, *Abū Naṣr's approach to spherical astronomy as developed in his treatise* The Table of Minutes, in *Centaurus*, xvi (1972), 1-19; and King, *Al-K͟halīlī's auxiliary tables for solving problems of spherical astronomy*, in *Journal for the History of Astronomy*, iv (1973), 99-110, repr. in idem, *IMA*, XI. See further King, *Studies in astronomical timekeeping in Islam, I. A survey of tables for reckoning time by the sun and stars; II. A survey of tables for regulating the times of prayer; III. A survey of shadow schemes for simple time-reckoning; IV. On the origin of the prayers in Islam;* and *V. On the role of the Muezzin and the Muwaqqit in medieval Islamic society* (forthcoming, I-II with Springer-Verlag, New York, III-IV in *Oriens*). On the Ottoman convention of reckoning sunset as 12 o'clock, see J. Würschmidt, *Die Zeitrechnung im Osmanischen Reich*, in *Deutsche optische Wochenschrift* (1917), 88-100. On the *muwaķķit-k͟hānas*, the buildings adjacent to the major Ottoman mosques which were used by the *muwaķķits*, see A.S. Ünver, *Osmanlı Türklerinde ilim tarihinde muvakkithaneler*, in *Atatürk konferensları*, v (1975), 217-57. See also the *Bibl.* to MIZWALA. (D.A. KING)

AL-**MIĶDĀD** B. **ʿAMR** b. T͟HAʿLABA AL-BAHRĀʾĪ, a well-known Companion of the Prophet. He is attested in all the available historical sources, which more or less concur that his father ʿAmr fled to the Kinda [*q.v.*] tribe after he had become involved in a blood feud in his own tribe of Bahrāʾ [*q.v.*], a group of Ķuḍāʿa. There, in Kinda, al-Miķdād was born *ca.* 585 A.D. Then al-Miķdād, in his turn, had to flee Kinda after he had wounded a fellow-tribesman in the foot. He made good his escape to Mecca. Having been adopted by al-Aswad b. ʿAbd Yag͟hūt͟h al-Zuhrī, he became a *ḥalīf* (confederate) of the Banū Zuhra. It is reported that he used to be called al-Miķdād b. al-Aswad until Ķurʾān, XXXIII, 5, declaring adoption in Islam illegal, was revealed, whereupon he once more became known as the son of ʿAmr b. T͟haʿlaba. He is listed among the first seven persons who openly professed Islam (al-D͟hahabī, *Siyar*, i, 251), but, initially, the *mus͟hrikūn* may have forced him to recant. Then al-Miķdād participated in the emigration to Abyssinia (the second wave, cf. Watt, *Mecca*, 111f.), from where he returned just before the *hid͟jra* to accompany Muḥammad to Medina (contrary to what is implied in Watt, *Medina*, 3). As part of the *muʾākhāt* [*q.v.*] or "brothering" measures, Muḥammad paired him with D͟jabr b. ʿAtīk (Ibn Ḥabīb, *Muḥabbar*, 73), but we also find D͟jabbār b. Ṣak͟hr (Ibn Saʿd, iii/2, 115).

During a raid under the leadership of ʿUbayda b. al-Ḥārit͟h in the year 1/623, al-Miķdād and another man sought to curry favour with the Meccans, but their intentions seem to have been thwarted and they had to fall back on the Muslims. Then al-Miķdād is recorded as having fought at Badr, where he was the only one, or one of the very few, who rode his own horse. He is said to have participated in all the other campaigns launched during the Prophet's lifetime. Al-Miķdād was one of Muḥammad's archers. On subsequent raids he was given several commands, e.g. at Uḥud he was the commander of the main body of the army together with Ḥamza b. ʿAbd al-Muṭṭalib [*q.v.*], and at the G͟hazwat al-G͟hāba he commanded the cavalry. When a delegation of his South Arabian tribe came to Medina, they were lodged by him (Ibn Saʿd, i/2, 66).

After the Prophet's death, al-Miķdād is listed among those who took part in the conquest of Syria and his name is mentioned particularly in connection with Ḥimṣ. The people of Ḥimṣ used to rely on al-Miķdād's Ķurʾān recitation (cf. Ibn al-At͟hīr, iii, 86), a report rejected by Bergsträsser (*G. des Q.*, iii, 172), but which could conceivably be read in connection with his having been appointed as the official Ķurʾān reciter of the army fighting in Syria in the year 13/634 (cf. al-Ṭabarī, i, 2059). Then the sources depict al-Miķdād as the commander of a force of one thousand men sent by ʿUmar in aid of ʿAmr b. al-ʿĀṣ, who dispatched him to Dimyāṭ. Al-Miķdād conquered it. It is also alleged that he was present at a raid into Ifrīķiya. He supposedly was one of eighty people who helped in establishing the *ķibla* in the mosque said to have been built at the instigation of ʿAmr in Fusṭāṭ. His last military activities seem to have been displayed during a raid on Cyprus in 28/649 under Muʿāwiya.

After ʿUmar's assassination, al-Miķdād is said to have actively been engaged in the organisation of the *s͟hūrā* [*q.v.*], the electoral body which was to determine ʿUmar's successor. Al-Miķdād is recorded as having been a staunch adherent of ʿAlī, so much so in fact that this earned him the esteem of the later Imāmiyya [*q.v.*], who declared him to be one of the few Companions who had not become unbelievers when ʿUt͟hmān, and not ʿAlī, received the nomination.

Al-Miķdād seems to have become a man of affluence. Not only is it reported that he acquired some possessions at K͟haybar at one time, but he also had an estate built for himself three miles outside Medina at a place called al-D͟juruf. Here he died, possibly as the result of an unsuccessful medical operation performed by a Byzantine servant of his who had sought to rid his master of his obesity. According to another account he died after drinking a potion made of the castor-oil plant. As seems to have been the custom with other people who died in al-D͟juruf (e.g. Usāma b. Zayd, cf. Ibn Saʿd, iv/1, 51), his body is said to have been carried to Medina, where

1. Al-Khʷārazmī's prayer-tables for latitude 33° (Baghdād). For each 6° of solar longitude the lengths of the shadow of a gnomon of length 12 units are tabulated for the beginning of the *ẓuhr* and for the beginning and end of the *ʿaṣr*. Note that some entries are written in Hindu-Arabic numerals [see ḤISĀB] and others in the more usual alpha-numerical system [see ABDJAD]. Taken from Ms Berlin Ahlwardt 5793 (Landberg 56), fol. 94a, with kind permission of the Deutsche Staatsbibliothek, Preußischer Kulturbesitz, Orientabteilung.

2. An extract from some anonymous prayer-tables for an unspecified latitude (about 40°). The function tabulated is the ascendant at ten different times of the day and night, and values are given for each 6° of solar longitude. The times served are dusk (*mughīb al-shafaḳ*) and daybreak (*al-fadjr al-ṣādiḳ* and *al-fadjr al-kādhib*) and the seven moments which divide the length of daylight into eight equal parts. The table is evidence of a survival of the early tradition of associating the *ḍuḥā* and the *ʿaṣr* with the seasonal hours. Taken from Ms Cambridge U.L. O.1, fol. 179a, with kind permission of Cambridge University Library.

3. An extract from the corpus of tables used for timekeeping in mediaeval Cairo. These tables display the time since sunrise (*al-dā᾽ir*), the hour-angle (*faḍl al-dā᾽ir*) and the solar azimuth (*al-samt*) as a function of solar altitude (here 15°) and each degree of solar longitude (*al-ʿadad*). Time is reckoned in equatorial degrees (1° = 4 minutes since 360° = 24 hours). Taken from Ms Cairo Dār al-Kutub *mīḳāt* 690, fols. 15b-16a, with kind permission of the Egyptian National Library.

4. Another extract from the tables in the Cairo corpus displaying the times since sunrise up to the prescribed moments for the *mu᾽adhdhin* to extinguish the lamps on the minarets during Ramaḍān and to announce a benediction on the Prophet Muḥammad. Taken from Ms Cairo Dār al-Kutub *mīḳāt* 954,2, fols. 3b-4a, with kind permission of the Egyptian National Library.

5. An extract from al-Khalīlī's corpus of tables for Damascus showing some 12 functions for regulating the times of prayer. Values are displayed for each degree of solar longitude (this extract serves the first few degrees of Aquarius). Taken from Ms Paris B.N. ar. 2558, fols. 10b-11a, with kind permission of the Bibliothèque Nationale.

6. An extract from some Ottoman prayer-tables for the latitude of Algiers. For each day of each month (here February) the times of the *ḍuḥā* (here called *ṣadjāḳ*), the *ʿaṣr* and the *imsāk* are tabulated. The times are expressed in hours and minutes and are reckoned according to the Ottoman convention that sunset is 12 o'clock. Taken from Ms Cairo Ṭalʿat *falak turkī* 9, fol. 41a, with kind permission of the Egyptian National Library.

ʿUthmān performed the funeral *ṣalāt* for him. This was in 33/653-4, when al-Miḳdād was allegedly some 70 (lunar) years old (Ibn Saʿd, iii/1, 115).

Al-Miḳdād is supposed to have transmitted a few traditions from the Prophet. An analysis of the *isnāds* seems to suggest that his role in these traditions is to be regarded as fictitious, the majority of these *isnāds* showing up "common links" who may be held responsible for the *matns* attached to these *isnāds*. Thus al-Miḳdād is said to have lost a hand in the fighting at Badr, a report which, after analysis, is most likely due to Ibn Shihāb al-Zuhrī (cf. al-Bukhārī, *diyāt* 1 = ed. Krehl-Juynboll, iv, 314 f., and al-Mizzī, *Tuḥfat al-ashrāf*, viii, no. 11547); then there is the story of how he was on one occasion tempted by the Devil (cf. Muslim, *ashriba* 174, and al-Mizzī, viii, no. 11546). Perhaps the best-known report featuring al-Miḳdād is the one in which he maintains that sycophants deserve no more than having earth thrown in their faces (apparently a severe humiliation, cf. Ibn Saʿd, ii/1, 93). This report seems to have later been raised to the level of a Prophetic *ḥadīth* at the hands of Sufyān al-Thawrī [*q.v.*], imitated by Shuʿba b. al-Ḥadjdjādj [*q.v.*].

(G.H.A. Juynboll)

MĪKHĀʾĪL al-ṢABBĀGH, Arab scholar and littérateur. He was born *ca.* 1775 (thus acc. to Shaykhū, in *Mashriḳ*, viii [1905], 29) in Acre, Palestine, into a Melkite family, and died in 1816 in Paris. His grandfather was Ibrāhīm al-Ṣabbāgh, the personal physician and steward of Ẓāhir al-ʿUmar, ruler of ʿAkkā (so Shaykhū, *op. cit.*, 27), and also his secretary and minister (so al-Khūrī Ḳusṭanṭīn al-Bāshā al-Mukhalliṣī in his introduction to M. al-Ṣabbāgh, *Taʾrīkh al-Shaykh Ẓāhir al-ʿUmar al-Zaydānī*, 5).

Mīkhāʾīl spent his early years in Damascus, from where he and his family fled to Egypt, and he then pursued his studies there. He returned to Syria in 1792, but had to leave again in 1794. The French invasion of Egypt in 1798 offered him new opportunities. He served General Reynier as secretary, and accompanied him to France in 1801. Mīkhāʾīl al-Ṣabbāgh found employment there as a compositor and corrector of oriental languages at the State Printing House until the government elected him to become one of the secretaries of the Royal Library (Bibliothèque du Roi), charged with the preservation and restoration of Oriental manuscripts. In this latter function, he copied some 60 mss., among them Abū Tammām's *Ḥamāsa* and the *Maḳāmāt* of al-Ḥarīrī. He was praised for his work by orientalists like A.I. Sylvestre de Sacy, L.M. Langlès, H.G.L. Kosegarten, C.F. von Schnurrer and J. Humbert. Mīkhāʾīl al-Ṣabbāgh's own writings consist of a curious book about the use and training of carrier-pigeons, a number of historical works, which, with one exception, have remained in manuscript form, an essay on poetry, a number of poems in honour of Pope Pius VII, in honour of Napoleon on the occasion of his marriage, and again on the occasion of the birth of the King of Rome, and one congratulating Louis XVIII. All were translated into French and published in booklets containing both versions. There is also a study of the Arabic vernaculars, published by H. Thorbecke in 1886.

Mīkhāʾīl al-Ṣabbāgh's works comprise: 1. *Kitāb Musābaḳat al-barḳ wa 'l-ghamām fī suʿāt al-ḥamām*, tr. Silvestre de Sacy, Paris 1805, as *La colombe, messagère plus rapide que l'éclair, plus prompte que la nue.* Other translations mentioned by Shaykhū (*op. cit.*, 30) and by Graf (*GCAL*, iii, 250) are an Italian one by A. Cattaneo, Milan 1822, and a German one by Lorsbach, 1806, not mentioned by Graf), repr. with appendices by G. Löper, Strassburg 1879. 2. *Taʾrīkh al-shaykh Ẓāhir al-ʿUmar al-Zaydānī ḥākim ʿAkkā wa-bilād Ṣafad ʿuniya bi-nashrihi wa-taʿlīḳ ḥawāshīhi al-Khūrī Ḳusṭanṭīn al-Bāshā al-Mukhalliṣī*, Ḥarīṣa [*ca.* 1928]. In this, Mīkhāʾīl al-Ṣabbāgh describes the rise and fall of Shaykh Ẓāhir al-ʿUmar, whom Mīkhāʾīl's grandfather had served as a physician; this concern "prevails over the traditional pattern used for annals" (T. Philipp, in *IJMES*, xvi [1984], 161-75, esp. 168). "In his unpublished history of Ibrahīm aṣ-Ṣabbāgh and his family, Mīkhāʾīl did not even try to uphold the form of annals" (*loc. cit.*). The manuscript of the *Taʾrīkh* is in the Bayerische Staatsbibliothek, Munich (Cod. Arab. 901). The same collection also comprises literary selections by Mīkhāʾīl al-Ṣabbāgh (Munich, Cod. Arab. 899) as well as the manuscript of his "*Short history of the Melkites*" (Mukhtaṣar taʾrīkh ṭāʾifat al-Rūm al-Kāthūlīk) (Shaykhū, *op. cit.*, 31 ff.). Al-Khūrī Isḥāḳ Armala (*Mashriḳ*, xxxiv, 381) mentions two more "histories": *Taʾrīkh Ḳabāʾil ahl al-bādiya* ("History of Bedouin tribes"), and *Taʾrīkh al-Shām wa-Miṣr* ("History of Syria and Egypt"). 3. His *Risāla al-tāmma fī kalām al-ʿāmma wa 'l-manāhidj fī aḥwāl al-kalām al-dāridj* (Munich, cod. Arab. 880, 644-80) was published by H. Thorbecke under the title *Mîḫâʾîl Ṣabbâg's Grammatik der arabischen Umgangssprache in Syrien und Aegypten*, Strassburg 1886. The author writes that he had to rely on actual speech only, written documentation on the subject being non-existent and the field until then unexplored. The first chapter deals with the Arab language as it was "before and immediately after Islam", the beginning of its corruption, the intrusion of alien matter and the diversification of the present vernaculars in the various countries. Then follow chapters on elisions, additions and contractions, on pronouns, nouns, verbs, and particles. The ninth chapter deals with inversions, and the tenth with loanwords and their origins. Thorbecke describes the manuscript as an unfinished draft, with many corrections, additions and deletions, written in a scrawling, barely legible hand (pp. III-X). 4. The *Kitāb fi 'l-Shiʿr wa-fi 'l-arūd wa-mulḥaḳātihi ka 'l-zadjal wa 'l-muwashshaḥ wa 'l-mawāliyā*, a study of poetry and its metres, is mentioned by Freytag in his *Darstellung der arabischen Verskunst*, 458-61. Freytag writes that this study is of little value and unreliable in detail, but interesting since it describes poetical forms such as the *mawwāl*, the *zadjal* and the *kān wa-kān*. 5. The *Nashīd ḳaṣīdat tahānī li-saʿādat al-Ḳayṣar al-muʿaẓẓam Nābūliyyūn* has been translated into French by Silvestre de Sacy as *Cantique à S.M. Napoléon le grand, empereur des Français et roi d'Italie, à l'occasion de la naissance de son fils Napoléon II, Roi de Rome. Allégorie sur le bonheur futur de la France*

et la paix de l'univers, Paris, Imprimerie impériale, 1811; and the *Nashīd tahānī li-saʿādat al-kullī al-diyāna Lūʾīs al-thāmin ʿashar malik Faransā wa Nāwār* by Grangeret de Lagrange, as *Cantique de félicitation à sa M. très-chrétienne Louis le Désiré, Roi de France et de Navarre*, Paris 1814. Humbert, *Anthologie arabe*, 293, mentions three more poems: *Hommage au Grand-juge Ministre de la justice, visitant l'Imprimerie de la république*, 1803; *Vers à la louange du Souverain Pontife Pie VII*, 1805; and *Vers à l'occasion du mariage de Napoléon*, 1810.

(C. Nijland)

MĪKHĀL-OGHLU, an old Ottoman noble family.

This family traced its descent to the feudal lord Köse Mīkhāl ʿAbd Allāh, originally a Greek (cf. F.-A. Geuffroy, in Ch. Schefer, *Petit traicte de l'origine des Turcqz par Th. Spandouyn Cantacasin*, Paris 1696, 267: *L'ung desdictz Grecz estoit nommé Michaeli ... Dudict Michali sont descenduz les Michalogli*), who appears in the reign of ʿOthmān I as lord of Chirmenkia (Khirmendjik) at the foot of Mount Olympus near Edrenos, and later as an ally of the first Ottoman ruler earned great merit for his share in aiding the latter's expansion (cf. J. von Hammer, in *GOR*, i, 48, 57, following Idrīs Bidlīsī and Neshrī). Converted to Islam, Köse Mīkhāl appears again in the reign of ʿOthmān's son Orkhan. The rank of commander of the *akîndjîs* [*q.v.*] became hereditary in the family of Köse Mīkhāl, which is even said to have been related to the royal house of Savoy and of France (cf. Paolo Giovio, *Michalogli di sangue Turcheco e per via di donna si fa parente del Duca di Savoia e del Re di Francia*; in this case Mīkhāl [Μιχαὴλ], alias Köse Mīkhāl, must have been descended from the Palaeologi; cf. *GOR*, i, 572), and along with the Malkoč-oghlu (properly Malkovič, i.e. Markovič), the Ewrenos-oghlu [*q.v.*], Tīmūrtash-oghlu [*q.v.*] and Turakhan-oghlu [*q.v.*], was among the most celebrated of the noble familes of the early Ottoman empire. Köse Mīkhāl, called ʿAbd Allāh, died in Edirne and was buried in the mosque founded there by him in the western Yîldîrîm quarter. As Edirne was certainly not conquered till 763/1362 (see F. Babinger, in *MOG*, ii, 311), he must therefore have lived into the reign of Murād I and had a remarkably long life.

Köse Mīkhāl had two sons, namely Meḥmed Beg and Yakhshî (Bakhshî?), of whom only the former acquired some renown. He was vizier under Mūsā Čelebi and a close friend of Shaykh Badr al-Dīn of Simaw [*q.v.*]. Under Mūsā he was *Beglerbeg* of Rūmeli, and died in 825/1422 at Isnīḳ at the hand of the judge Tādj al-Dīn-oghlu and is said to have been buried at Plevna in Bulgaria (cf. Ewliyā Čelebi, *Seyāḥat-nāme*, iii, 305), after being previously (816/1413) detained as a state prisoner in the prison of Bedewī Čardak near Toḳat. His son was Khiḍr Beg, who distinguished himself in the wars of Murād II's reign. He died in 870/1465 and was buried at Edirne beside his ancestor Köse Mīkhāl. Khiḍr Beg seems to have had three sons, namely Ghāzī ʿAlī Beg, Ghāzī Iskandar Beg and Ghāzī Balî Beg, of whom only the first two are of any historical importance. Ghāzī ʿAlī Beg in 865/1461 distinguished himself in the battle against Vlad (see *GOR*, ii, 64), in 878/1473 ravaged the lands of Uzun Ḥasan (*ibid.*, ii, 118), invaded Hungary in 880/1475 (*ibid.*, ii, 144) with his brother Iskandar Beg, in 881/1476 (*ibid.*, ii, 156) was in command of the *akîndjîs* before Scutari in Albania, and appears once again in Transylvania (*ibid.*, ii, 172); but in the next 13 years nothing is heard of him. In 897/1492 he seems to have met his death at Villach in Carinthia, defeated by Count Khevenhüller, although other sources mention him at a still later date. According to them, he died in Plevna. His brother Iskandar Beg in 881/1476 commanded the light cavalry at the siege of Scutari, as *sandjaḳ beg* of Bosnia (880/1475, 885/1480 and 890/1485, *GOR*, ii, 156); and in 895/1490 in the Ḳaramān campaign, in which he lost his son, the governor of Ḳayṣariyye Mīkhāl Beg (see *GOR*, ii, 300), who was taken prisoner and sent to Egypt. He seems to have lived till 903/1498. The military exploits of Ghāzī ʿAlī Beg were celebrated by Sūzī Čelebi (d. 930/1534 at Prizren; cf. Babinger, *GOW*, 34-5) in a long epic (said to have been 15,000 couplets), fragments of which have recently been discovered (one in Berlin, ms. Or., no. 1468 containing 1,700 *bayts* and the other in Zagreb, South Slav Academy of Sciences, Coll. Babinger, no. 535, i, with 212 *bayts*). In some sources, a Meḥmed Beg, who was distinguishing himself at that time, is described as a fourth son of Ghāzī Khîḍr Beg; in others, however, he appears as the son of Ghāzī ʿAlī Beg, which is not at all probable if he really was twice governor of Bosnia, namely as early as 897/1492 and again in 949/1542, and did not die till 950/1543.

The family of the Mīkhāl-oghlu now begins to fall into the background. About the middle of the 10th/16th century, an Aḥmad Beg is again mentioned, perhaps as the last of the Mīkhāl-oghlu holding the hereditary office in the family of leader of a body of *akîndjîs* (see *GOR*, iii, 293); and lastly, a Khîḍr Pasha is mentioned in a history as a descendant of Köse Mīkhāl (see *GOR*, iv, 512). The family at a later date had estates in Bulgaria (around Ihtiman, cf. Ewliyā Čelebi, iii, 390, and C. Jireček, *Das Fürstenthum Bulgarien*, Vienna 1891, 138, and at Filibe, Ewliyā Čelebi, iii, 379-80) and survived down to modern times. As we learn, however, from the *Sālnāme* of Edirne for 1309, 82 ff., the Mīkhāl-oghlus had already at an early date large estates around Edirne. They had the country round Buñar-Ḥiṣār, Tirnovo, Ḳîrḳ Kilīse and Wīze as a hereditary fief. The Anatolian district of Mīkhālidj (Μιχαηλίτζη, Μιχαλιχίου in Chalkondyles, 225; Ewliyā Čelebi, v. 293-4; W. Tomaschek, *Zur historischen Topographie von Kleinasien im Mittelalter*, in *SBAK. Wien*, Phil-hist. Cl., cxxiv [Vienna 1891], 95 and J.H. Mordtmann, in *ZDMG*, lxv [1911], 101) seems to be connected with the family of the Mīkhāl-oghlu. Ewliyā, *loc. cit.*, further mentions estates and *awḳāf* of the family in the Amasya and Bursa regions.

Bibliography: The well-known histories of von Hammer, Zinkeisen and Jorga. Under the title *Aḥwāl-i Ghāzī Mīkhāl* (Istanbul 1315; cf. Babinger,

GOW, 35, n. 1), Nuzhet Meḥmed Pas͟ha published a work glorifying Köse Mīk͟hāl and his descendants. See also *İA* art. *Mihal-Oğulları* (M. Tayyib Gökbilgin), with a detailed genealogical tree.

(Fr. Babinger)

MIK͟HLĀF (a., pl. *mak͟hālīf*), a term of mediaeval Islamic administrative geography used particularly in Yemen. The sources usually state that it is the equivalent of Arabic *kūra* [*q.v.*]"administrative province" (Nas͟hwān al-Ḥimyarī, *Die auf Südarabien bezüglichen Angaben im Šams al-ʿulūm*, Leiden-London 1916, 34) or Persian *rustāḳ* [*q.v.*] "rural area" (al-K͟halīl b. Aḥmad, cited by Yāḳūt, *Buldān*, Beirut 1374-6/1955-7, i, 37, tr. Wadie Jwaideh, *The introductory chapters of Yāqūt's Muʿjam al-buldān*, Leiden 1959, 56-7), with a fanciful explanation that the progeny of Ḳaḥṭān, the Yemen, remained behind (*tak͟hallafa*) in the region of that name, hence the district of each tribe was called its *mik͟hlāf*. The term may be tenuously related to Sabaic *k͟h.l.f* "vicinity of a town", cf. Conti Rossini, *Chrestomathia arabica meridionalis epigraphica*, Rome 1931, 136. Al-Yaʿḳūbī states in his *K. al-Buldān*, 317-19, tr. 156-8, that Yemen comprises 84 *mak͟hālīf*, with a list, and in his *Taʾrīk͟h*, i, 227-9, gives a further one; however, the total number of names amounts to only 74, and some of these are tribal and not geographical names.

From the period of Ayyūbid rule in Yemen onwards, the term gradually falls out of use there and is no longer used at the present time, although Ibn al-Mud͟jāwir (early 6th/13th century) defined it in his *Taʾrīk͟h al-Mustabṣir* (ed. O. Löfgren, Leiden 1954, ii, 170) as having the restricted sense of the settled and cultivated lands around a fortress as well as having the larger one of a district or province, and noted that the term was only used in the mountain zone of Yemen and not in the coastal Tihāma.

Bibliography: Given in the article.

(C.E. Bosworth)

MIKINDANI (in Swahili, "the places of young coconut trees") a small East African port which has now yielded in importance to its modern neighbour of Mtwara.

It lies near the Tanzanian border with Mozambique. The nearby coast is thick with mangrove plantations, whose wood is the principal attraction today for Arab dhow traffic from ʿUmān and the Gulf. The Swahili traditional history *Asili ya Mikindani* ("The origin of Mikindani") states that it began as a centre for the slave and gum copal trades, in exchange for grain and cloth, for which Sayyid Barg͟has͟h of Zanzibar (1870-88) established a customs post. Before this there was a resident local "sultan"—in Swahili the word *sultani* need not mean more than a headman—of Arab descent, but intermarried with the Makonde tribe, with the result that the descent and succession of the ruler was reckoned matrilineally. Alexander Dalrymple, hydrographer to the East India Company, mentions the sultanic residence on a chart dated 1796. Lt. Thomas Boteler, who visited Mikindani in H.M.S. *Barracouta* in 1824, says that the place consisted of three "neat and extensive villages" inhabited by Arabs. On a nearby hill there were the remains of a fort, which he ascribes to the Portuguese, albeit Portuguese records do not record one here. Rather, it may have been an Arab slave barracoon, of which no trace now remains. Livingstone began his last journey from here in 1866. Boteler's villages had now become six. Livingstone hired a house in Pemba village which still exists; it had ninety houses and a ruined mosque of coral and lime. There was another Arab stone ruin on the other side of the bay. He formed a poor opinion of the local Arabs: "The Arabs here are a wretched lot physically, thin, washed-out creatures—many with bleared eyes ... They are low coast Arabs, three-quarters African, and, as usual, possess the bad without the good qualities of both parents. Many of them came and begged brandy, and laughed when they remarked that they could drink it in secret, but not openly." A report by a naval officer in 1874 mentions three villages only. By then there was a prosperous trade in wild rubber, gum copal, millet, rice, ivory and, surreptitiously, in slaves.

(G.S.P. Freeman-Grenville)

MIKNĀS and Miknās al-Zaytūn, French form meknès, a town of Morocco which is one of the traditional residences of the ruler (long. 5° 32′ W., lat. 33° 53′ N.; average altitude 1,700 feet/520 m.), situated 80 miles/130 km. to the east of Rabat and 40 miles/60 km. to the south-west of Fās.

It occupies the centre of the transitional zone which lies between the Middle Atlas, 30 miles/50 km to the south, and the Sebū. It commands the exit towards the G͟harb of the depression which separates the massif of the Zarhūn from the plateau of al-Ḥād͟jib. At Meknès intersect the roads from Rabat to Fās, from Tāfīlālt through the land of the Benī Mgīld and Azrū, from Marrākus͟h through the Tādlā.

The temperature rarely exceeds 30° C. or falls below 5°. The rainfall is remarkably equal from one year to the other. The excellent water supply of the plain of Meknès and the quality of its light soil, resting on a subsoil of permeable limestone, make it one of the best agricultural districts of Morocco.

The population in 1902 was estimated at 20,000, of whom 9,000 were Bwāk͟her and 5,000 Jews, but it grew considerably during the Protectorate (175,900 inhabitants in 1960).

Meknès is built on the flank of a mountain spur. Beyond the ravine dug out by the Wādī Bū Fekrān, the modern town has been built. The houses of the *mdīna*, often substantial, are always very simple. There are only fifteen or so houses of an artistic interest. They date for the most part from the reigns of the sultans Muḥammad b. ʿAbd al-Raḥmān and Mawlāy al-Ḥasan. The *sūḳs*, which lie between the Madrasa Bū ʿInāniyya and the D͟jāmiʿ al-Nad͟jd͟jārīn (*sūḳs* of the jewellers, carpenters and curiosity shops), have no remarkable features except the covered *ḳayṣariyya* [*q.v.*], the booths of which were ornamented with shutters of painted wood. The *mellāḥ* [*q.v.*] of Meknès is to the south of the *mdīna*. A new *mellāḥ*, three times the extent of the old one, has been occupied since 1925. The *mdīna* of Meknès is one of those which have retained their local character most unaffected. Only one artery, the Rouāmzīn (<*rwābziyyīn* "bellows-makers") street, is accessible to European trade and traffic. The centre of the town's activity is the Hedīm square. To the south-east lie the vast ruins of the *ḳaṣba* of Mawlāy Ismāʿīl. They now reveal nothing but chaos and disorder, but surround the Djinān Ben Ḥalīma, a charming garden, and the Dār al-Bayḍāʾ which is now a school for Moroccan officers. The Dār al-Mak͟hzen is sometimes used as a royal residence. Begun at the end of the 17th century, this palace was built in several periods. The Bāb Dār al-Mak͟hzen dates from 1889. In the old Agdāl of Mawlāy Ismāʿīl, among waste lands, an

ostrich farm, the origin of which goes back to Mawlāy ʿAbd Allāh, has been laid out, beside an experimental garden. Farther on there is a horse-breeding establishment. The visitor goes along miles of massive walls and finds enormous ruins: the Herī 'l-Manṣūr (used as a stable and storehouse for forage), the stables, the granary and the ornamental waterbasin left to go to ruins.

There is very little industry in Meknès: only carpentry and particularly weaving, already noted by al-Idrīsī. The most notable artistic industries are the many coloured embroideries of large irregular point lace and painted wood. The public services endeavour to keep these trades going, in which purely Berber influence is marked. European competition is severely affecting, at Meknès as elsewhere, some classes of artisans, like the tailors, smiths and potters. The building trades, on the other hand, are flourishing. *Sūḳs* are held outside the town and are attended by the country people: the Sūḳ of Bāb Jdīd, before the gate on which the heads of rebels used to be placed for the edification of the tribes, the Sūḳ al-Khamīs and that of the Lanterns. The market of Meknès does not extend beyond the environs of the town; it exports nothing except in years of abundant harvest. The region was already famed in the last century for its fruits, its vines, its gardens and its vegetables. The mills, four or five of which are still working, date from the same period. During the French occupation, colonisation developed considerably. The colonists, most of whom came from Algeria, cultivated mainly wheat, of which they obtained increasing yields. The cultivation of the vine is increasing each year.

The government of Meknès, which is a *makhzaniyya* town, was in the hands of a *bāshā*. He was also *bāshā* of the Bwākher, who till 1912 provided the garrison of the town (800 men according to Le Chatelier). In the administrative organisation of the protectorate, Meknès was made the capital of a very considerable area.

The population of Meknès consists of many distinct elements: Shorfāʾ, Bwākher, Berbers and Jews. The Idrīsid Shorfāʾ, who have played their part in the history of the town and retain privileges (of the numerous descendants of Mawlāy Idrīs, only the families residing in Fās and Meknès are allowed to share in the income of the *zāwiya* of Fās), and the Ḥasanī Shorfāʾ, who have many privileges of their own, form a kind of aristocracy, generally penurious. The Bwākher, descendants of the *ʿabīd al-Bukhārī*, a black guard of Mawlāy Ismāʿīl, up till 1912 formed an unreliable element, which was always a nucleus of trouble. Since that date they have been taking up the trades of mat-makers and farriers. They lived close to the town of old *ḳaṣbas* and gardens which belong to the Makhzen, and in the old *ḳaṣba* of Mawlāy Ismāʿīl in the Bāb Mrāḥ quarter. Their houses, roofed with thatch, looked like African encampments. But it is the Berber (*Brāber*) element which predominated at Meknès and gave it its desire for independence, a feature of which has for centuries been a jealousy of Fās. It is the Berbers of the mountains who gave it its tone; when they come down to the town, their women give colour to the streets of the *mdīna* with their short skirts, their leather gaiters and their wide-brimmed hats. The Berber elements of the plain are much more mixed, having undergone many vicissitudes since the day when Mawlāy Muḥammad b. ʿAbd Allāh inaugurated the policy, considerably practised by his successors, of transferring tribes. A considerable part of the population of Meknès consists of transient elements who come, usually between harvests, to work as artisans. These immigrants almost all come from the south, from Tāfīlālt in particular (potters, tanners and porters), from Sūs (grocers), from Tuwāt (oil-makers), from Figīg and Darʿa (masons). The Rīfans and Jbāla supply most of the agricultural labourers. A small number of Fāsīs, who have in recent years merged into the population of the town, are cloth-merchants, dealers in old clothes and shoemakers.

Jews formed a quarter of the native population. Père Ch. de Foucauld estimated the *mellāḥ* of Meknès to be half that of Fās. Chénier remarked on its prosperity.

Religious life. From the presence of the Idrīsid and Ḥasanid *Shorfāʾ*, the proximity of the sanctuary of Mawlāy Idrīs and the religious event of the celebrations of his *mūsem* (class. *mawsim* [*q.v.*]) every year, Meknès is one of the most important centres of Sharīfism. At the same time, for the Berber population it is a centre of marabout rites of the most elementary kind. All the brotherhoods that have *zāwiyas* in Morocco are represented in Meknès. The most important are those of the Ḳādiriyya, Tīdjāniyya, and especially Ḥmādsha [see ḤAMĀDISHA in Suppl.] and the largest, the ʿIsāwa, to which half the population are attached. Meknès, whose patron saint is Sīdī Muḥammad b. ʿĪsā and which contains his tomb under the *ḳubba* erected by Mawlāy Muḥammad b. ʿAbd Allāh, is the centre of the order. This saint came here at the end of the 9th/15th century. His teaching at first met with a vigorous resistance, which he overcame so completely that, when the governor of the town sought to take steps against him, the people protected him. Before his death he acquired an estate, constituted in *ḥubūs*, and men of religion are buried there. The celebration of his *mūsem* on the first day of the *mūlūd* (*mawlid* [*q.v.*]) festival is the great event of the year. The preparations for it begin forty days before. On the day before or on the preceding day of the festival, delegations flock in from all parts of Morocco, following the traditional routes. The most generous hospitality is given to the pilgrims by the descendants of Shaykh al-Kāmil, who have the *niḳāba* (Brunel). The excesses committed on the occasion of ths pilgrimage have been frequently described. Many other special cults are observed in Meknès, including that of a contemporary holy man, Mawlāy Aḥmad Wazzānī. As it was his custom to wear simple dress and to sit by the highway, he was in 1917 granted clothes and a *ḳubba* at the request of Mawlāy Yūsuf. The *ḳubba* is at the entrance to a dispensary, and the admirers of the saint came there daily to keep him company.

History. We know nothing certain about the history of the region in the Roman period nor in the centuries which followed. The most advanced Roman stations were on the slopes of the Zarhūn guarding the plain, out of which the warriors of the Central Atlas might debouch, and perhaps throwing out a screen as far as the plateau of al-Ḥādjib.

We do not know at what date the people here had their first contact with Islam, nor even if it was not till the Hilālī invasion that Islām became securely established here. The Berber tribes of the Sāʾis and Sebū made the most of the fertility of their country. A tradition records that a fire destroyed the gardens there in 305/917. It was at this period that the country was covered, from Tāzā to Meknès, by the migration of a Zenāta tribe, the Miknāsa, a section of whom, who received the name of Miknāsa al-Zaytūn to distinguish them from the Miknāsa Tāzā, who lived father to the east, established themselves securely in

the plain. The Idrīsids met with a vigorous resistance from the Miknāsa. They always found in them opponents whom they could not overcome in spite of several campaigns, and who were the instigators of Umayyad intervention.

At this date, a few villages stood on the site of Meknès. One cannot say at what date, perhaps in the 4th/10th century, they were grouped together to form the Tākrart (Tagrart) mentioned by al-Idrīsī (*Opus geogr.*, iii, 244, 245). The population seems to have been more numerous in the Almoravid period than later, and prosperous. Enclosed by a wall, Meknès looked like a pleasure resort, with its gardens, cultivated fields, its mosques, its baths and water channels.

The Miknāsa vigorously opposed the Almohad onslaught. When passing through this region in 514/1120-1, Ibn Tūmart [*q.v.*] preached here but he was not well received. Twenty years later, ʿAbd al-Muʾmin laid siege to Meknès, but it was not he who took it. He left it to enter Fās, leaving the conduct of the siege in the hands of Yaḥyā b. Yag͟hmur. The *Ḳirṭās* says the siege lasted seven years. The town fell in 545/1150. It was plundered, the defences dismantled, a part of its wealth confiscated and all its garrison put to death, except the governor, who is said to have escaped. On the site, or beside the ruins, Meknès rapidly rose again under the shelter of the fortifications built by the Almohads. At the end of the century, it had regained some importance and the mosque of al-Nad͟jd͟jārīn was finished. This is the oldest monument in Meknès: in 1170/1756-7 Muḥammad b. ʿAbd Allāh had it restored and built the present minaret. The Almohads brought water hither from Tad͟jenna, five miles away. In 578/1182 the *k͟huṭba* was said in five different places in Meknès and there were six gates in the wall which surrounded the town.

In the course of the following century, the intrigues of the Marīnids [*q.v.*] disturbed the country, where the fighting that accompanied the fall of the Almohads was particularly lively. In 629/1231-2, al-Maʾmūn had to intervene against the Banū Fāzāz and Meklāta, who were ravaging Meknès. In 634/1236-7, as a result of the Marīnid success in the battle in which al-Saʿīd's son was slain, Abū Bakr entered the town. This occupation was only temporary, but the Almohad restoration was not secure. In 643/1245-6, the governor left there by al-Saʿīd was slain in a rising in the town in favour of the Ḥafṣid Abū Zakariyyāʾ. Al-Saʿīd again returned victorious, causing Yaḥyā b. ʿAbd al-Ḥaḳḳ to fly to Tāzā. The Marīnid had only two years to wait; after the death of the Almohad governor, he returned to Meknès to occupy it definitely.

The first period of greatness for Meknès dates from the Marīnids. They set out to make it beautiful like Rabat and Fās. Abū Yūsuf moved from Fās Jdīd to Meknès, which owed to him a *ḳaṣba* and a mosque (675/1276). Abu 'l-Ḥasan improved its water supply, built bridges on the road to Fās and began the *Madrasa D͟jadīda* which Abū ʿInān was to finish. It bears the latter's name and is still the most notable building in Meknès, in spite of the indiscreet restorations carried out in 1917-22. Other *madrasas*, the ʿAṭṭārīn and Filāla, were built by the Marīnids.

During this period the politieal organisation of the country was developing in quite a different direction. The Idrīsid S͟horfāʾ, having assisted the Marīnids to gain power, prepared to take advantage of the organisation which the latter had given them. Thus the foundations were laid for the movement which was to end in the partition of Morocco in the last years of the 9th/15th century into practically independent divisions. The S͟horfāʾ were numerous in Meknès. When the weakening of the Marīnids and the decline of their prestige made it possible, the S͟horfāʾ supplied leaders. History has preserved the name of Mawlāy Zayyān. The Waṭṭāsids only intervened, it appears, when at the beginning of the 10th/16th century Masʿūd b. al-Nāṣir, having rebelled against Muḥammad al-Burtuḳālī, found an asylum at Meknès. The Sultan besieged the town and took it, then installed his brother al-Nāṣir al-Ḳiddīd there, who however did not prove faithful to him. The few years of independence enjoyed by Meknès were not particularly glorious. They mark, however, an epoch in the history of the town destined at other periods to be only the prey of anarchy or the plaything of a tyrant.

The rise of the brotherhoods of the 9th/15th century found a favourable soil among the Miknāsa. The *zāwiya* of the D͟jazūliyya was established there, as in other places in Morocco. A few years later, Muḥammad b. ʿĪsā was teaching there.

Meknès was thus well prepared to welcome the Saʿdids [*q.v.*]. When Maḥammad al-S͟hayk͟h approached in 955/1548 he entered the town without much trouble. The Marīnid al-Nāṣir al-Ḳaṣrī is said to have agreed to hand over the town in return for the liberty of his father Aḥmad Bū Zekrī, and the marabouts to have demanded the conclusion of such an agreement. Maḥammad al-S͟hayk͟h however took a sufficiently sure method to establish his authority; when the *k͟haṭīb* Abu 'l-Ḥasan ʿAlī b. Ḥarzūz began to preach against him, he had him scourged to death. When he returned two years later, he was welcomed with gifts. The estimates of travellers of this time put the population of the town at 6-8,000 hearths. It was the only town in the region. The Saʿdids took little interest in Meknès, which never attracted their attention. The country was well in hand and the Berber tribes peaceful to such a degree that the road from Marrākus͟h by the Tādlā was regularly used. It was the practice to make Meknès the residence of one of the sons of the Sultan. There was, however, no important command attached to it. Leo Africanus credits it with a revenue equal to half that of the viceroyalty of Fās, which is astonishing. Under Aḥmad al-Manṣūr, Abu 'l-Ḥasan ʿAlī lived there and then after the second partition, Zaydān and, lastly Mawlāy al-S͟hayk͟h, but as a prisoner in the last years of his father's life.

The civil war which broke out on the death of al-Manṣūr placed Meknès at the mercy of the Berber risings and marabout intrigues. In the midst of this disorder an authority gradually made itself felt, that of the *zāwiyas*, and especially the Zāwiya of Dilāʾ [*q.v.* in Suppl.]. In 1023/1640-1, Muḥammad al-Ḥād͟jd͟j was even able to seize the sovereign power and get himself recognised by Fās and Meknès after his victory over Mawlāy Maḥammad al-S͟hayk͟h b. Zaydān. He won over the Berber tribes, and Mawlāy al-Ras͟hīd in 1076/1666 found the Banī Mṭīr against him, allied with the Dilāʾī Abū ʿAbd Allāh, and he had to fight them again in 1076/1668.

Mawlāy al-Ras͟hīd seems to have been interested in Meknès, the *ḳaṣba* of which he restored. In burying him in the mausoleum of al-Mad͟jd͟hūb [*q.v.*], Mawlāy Ismāʿīl said he was fulfilling the last wishes of the deceased. But the most important event was that al-Ras͟hīd sent Mawlāy Ismāʿīl to Meknès. The latter lived before his accession in the Almohad *ḳaṣba*, as a landed proprietor managing his estates. In his choice of a capital, we see the attraction of a rich district like

this. He wished it to be in his own image and realised his desire. For fifty years, Meknès was simply the framework for his splendour, the scene of his extravagances.

He at once decided to build himself a palace, and a grandiose scheme was projected. He began by clearing a space. The houses adjoining the Almohad wall east of the town were destroyed and their owners forced to carry the débris off to a site which has retained the name of Hedīm, then to rebuild on a site which the *sharīf* enclosed by a wall to the north-west of the *mdīna*. The site which he chose for himself was also separate from the town. His palace was built, and another one even more splendid for his women. This first edifice, Dār Kbīra, was finished in 1090/1679. It was a series, without intelligible plan, of *riyāḍs* embellished with fountains, paved with marble, surrounded by galleries which were supported by columns of marble; the apartments opened on to three galleries. The sovereign's palace was in two suites, that of his ladies in four and larger than his. His four wives and his favourites were equally splendidly housed. The other concubines, of whom he had 500 of all nations, were housed in rooms along the passage. At the end was a common hall, on a higher level, which gave a view over the gardens through iron grilles. The reception pavilions were planned on the same scale; one of them had forty rooms. The palace contained in all 45 pavilions and twenty *ḳubbas*. The whole was surrounded by a crenelated wall, pierced by twenty gates. It was triple in the north-east with a road round it and it could be defended equally well against the interior of the *ḳaṣba*. The bastions supported batteries of guns and mortars. The women being subject to rigorous confinement and Mawlāy Ismāʿīl being very meticulous in the performance of the duties of religion, a mosque was set aside for them. Another had been begun in 1083/1672, communicating with the town by the Bāb ʿĪsā. Lastly, the palace with its dependencies contained four mosques; two are still in use, the Djāmiʿ al-Akhḍar and in the quarter of the mews, very broken down, the Djāmiʿ al-Ruwā. To the south was a garden, the area of which is equal to that of the present *mdīna*, an orchard in which olive trees predominated. Farther on were the stables to which the sultan admitted only picked horses, to the number of 1,200: two parallel rows of arcades about 100 feet apart. In the centre ran running water. Each animal had its stall and a shelter for its equipment. Opposite was a storehouse, the *herī*, which supported a supplementary palace with twenty pavilions. Between the palace and the stables was the granary, forty feet high and big enough, it was said, to contain the whole harvest of Morocco. At the side was a pond for irrigation purposes and also subterranean reserves of water in case of a siege.

The buildings did not stop here. To the south-west of the town lay a city of pleasure, Madīnat al-Riyāḍ, where the officials had palaces, where Mawlāy Ismāʿīl himself had his mosque, his *madrasa*, his *ḥammām*, his *funduḳs* and the offices of the *umanāʾ* of the Treasury, with the shops of the Sharīfian tailors. In 1145/1732-3 Mawlāy ʿAbd Allāh on returning from an unsuccessful expedition into the Sūs, had the Madīnat al-Riyāḍ destroyed by Christian slaves. There is nothing left of it to-day except the Bāb al-Khamīs, dated 1078/1667, one of the finest and best proportioned gates in the city.

Lastly, a site was reserved for the troops. To the west of Meknès a large *duwwār* was settled with *ʿAbīd* and their families. To the east of the Dār al-Makhzen, five *ḳaṣbas* for the 130,000 men of the *gīsh* were gradually incorporated in the great *ḳaṣba*.

After fifty years of unorganised but superhuman effort, the buildings were not yet completed. It was in 1144/1731-2 that Mawlāy ʿAbd Allāh finished the surrounding wall and the Bāb Manṣūr, the most finished example of the Ismāʿīlian gateway, ponderous, of proportions by no means perfect but imposing, of which the Bāb al-Bardāʿīn and the Bāb al-Nuwwār are the two other finest examples at Meknès at the present day. Mawlāy Ismāʿīl directed all the operations himself. During the first twenty-four years of his reign, he never spent twelve months on end at Meknès. But he returned there after each expedition; in proportion as his ambition and his power increased, his despotism and the needs of his government, his army and his family grew, his scheme became more and more grandiose; the work done was found unsatisfactory, modifications were made, buildings taken down and the work began all over again. The result certainly was sumptuous and imposing but also odd and varied.

All the country helped in the work. Mawlāy Ismāʿīl collected materials wherever he could. Volubilis, Chella and Marrākush were plundered. If he destroyed al-Badīʿ, it was perhaps out of jealousy of Saʿdid work, or perhaps simply to get material. Like Aḥmad al-Manṣūr, he procured marble from Pisa. One day when a corsair ship had become stranded near Tangier, he ordered the Ghumāra to bring the cannon from it by unaided manual labour. When he died the columns of marble which were still on their way were left at the roadside.

Labour was recruited by a similar means. The Sultan imposed days of labour on the tribes, levied forced labour as he pleased, sent his ministers to the workshops, but relied mainly on renegades and Christian slaves who were his permanent workmen. From 1091/1680 the work was pushed on frantically. All the Christians in Morocco were collected there and were at first housed in siloes [see MAṬMŪRA] near the building-yards, then they were moved to the Dār al-Makhzen, then to near the stables, under the arches of a bridge, where their lot was particularly miserable, finally to lodgings built from mud brick along the north wall of the Dār al-Makhzen. They were able to organise themselves a little there, to build themselves a church, to have chapels, a convent and infirmaries. A pharmacist monk made up a medicine, the "Christian decoction"; this was the means by which humane relations were established with the local people, even with the dwellers in the palace. Their latest historian has reduced the number of Christian prisoners in the service of Mawlāy Ismāʿīl to its real figure: they did not as a rule reach a thousand, and the Sultan, in the course of over fifty years, himself killed only one hundred and nine (Koehler).

The Sultan revealed in his palaces his extravagance and his cupidity; he accumulated wealth as he did buildings, but not only to hide it. The consuls and ambassadors, who came to negotiate the ransom of captives, he received with a mixture of buffoonery and splendour. Frequent mention is made of the cruelty and the terror which this ruler inspired; he loved to torture his wives and cut off heads to show his skill. His amusements were of a similar character; he liked to shoot with his *ḳāʾids* at the deer in his menageries then to finish them off with spear thrusts. "Let us avert our eyes from all these horrors which make nature shudder," says Chénier.

Mawlāy Ismāʿīl was buried like his brother in the mausoleum of Sīdī ʿAbd al-Raḥmān al-Madjdhūb. His sons, the rebel Mawlāy Muḥammad, killed at Tārūdānt in 1118/1706, and Mawlāy Zaydān in 1191/707, had already joined Mawlāy Rashīd. In

1859 the ashes of Mawlāy ʿAbd al-Raḥmān were also deposited there.

On the death of Mawlāy Ismāʿīl, the Bwāk͟her and the soldiers of the *gīs͟h* stirred up a palace war which lasted twenty years. Mawlāy ʿAbd Allāh lost and regained his throne six times. The civil war extended to the tribes of the plain and the garrisons of Fās, especially in the Ūdāya; pretenders stirred up the flames, readily giving the signal to plunder and, in the rivalries of races and tribes, easily finding a party to support them. Gradually the Bwāk͟her sank into misfortune. It was in vain that Mawlāy ʿAbd Allāh and his sons expended the treasure of Mawlāy Ismāʿīl for them. The worst of it for Meknès was that every one ended or began by plundering it.

Muḥammad b. ʿAbd Allāh almost re-established order and restored to the town its past glory. He did a great deal for it; his palace of Dār al-Bayḍāʾ, the severe architecture of which, not without charm, can still be seen in a part of the olive grove of al-Ḥamriyya; in the *ḳaṣba*, he built the portal of the D̲j̲āmiʿ al-Anwār and in the *mdīna*, the minaret of the D̲j̲āmiʿ al-Bad̲j̲d̲j̲ārīn, the *ḳubba* of Sīdī Muḥammad b. ʿĪsā, and several mosques (al-Azhar, al-Bardāʿīn, Bāb Mrāḥ, Berrīma and Sīdī Bū ʿUt̲h̲mān). It was he who made the 12,000 books of the library of Mawlāy Ismāʿīl *ḥubūs* for the benefit of all the mosques of Morocco. As regards the tribes, his policy was to break them up. He transplanted many of them and tried several repressive measures. The end of his reign was marked by the success of the Berbers, whose attacks had been resumed about 1189/1775.

Soon nothing was left of the work of Mawlāy Ismāʿīl. The Christian community lost its Franciscan mission in the reign of Mawlāy Yazīd and did not survive the persecution of this *s͟harīf*. The earthquake of 1168/1755 had destroyed their church, convent and hospice. The renegades, who had gathered together at Ḳaṣba Agūrāy, were gradually absorbed.

The Berber crisis was again acute from 1811. Communication with Fās was continually being cut and it was something to boast about for the sultan to go out of Meknès. Mawlāy Slīmān (Sulaymān), who had undertaken to restore the *ḳaṣba* and rebuild the bridges on the road to Fās and who would have liked to get rid of the Bwāk͟her, decided to settle in Fās. Mawlāy ʿAbd al-Raḥmān, whom Delacroix saw there and who built a *ḳubba* in Jnān Ben Ḥalīma, left the Berbers in semi-independence and at last disbanded the *ʿabīd* without even granting those who remained in Meknès the character of Mak͟hzen troops. His son carefully avoided all quarrels.

Mawlāy al-Ḥasan revived the tradition of the great sultans and made his authority felt. He was able to enter Meknès after his accession only by crushing the power of the tribes. In 1879 he conducted a campaign against the Benī Mṭīr. In 1887 he forced his way through the country of the Benī Mgild in his campaign towards the Nūn. On his death, the Berbers regained their independence. After the fall of Mawlāy ʿAbd al-ʿAzīz, Meknès recognised all the competitors in succession. It was Meknès that proclaimed ʿAbd al-Ḥafīẓ, who had come via the Berbers of Tādlā in 1908; in 1909 it summoned the *s͟harīf* al-Kattānī; and in 1911 rallied to Mawlāy Zayn. It was in this year that General Moinier entered Meknès.

(C. FUNCK-BRENTANO)

MIḲYĀS (A.), measurement, means of measuring, any simple measuring instrument; in Egypt the name of the Nilometer, i.e. the gauge in which the annual rise of the river can be measured.

Originally the rising of the Nile was measured by the gauge (*al-raṣāṣa*). According to Ibn ʿAbd al-Ḥakam, al-Ḳuḍāʿī, and others, Joseph, the son of Jacob, built the first Nilometer at Memphis; at a later date, the "aged Dalūka" built Nilometers in Ak͟hmīm and Anṣinā (Antinoë). These were the Nilometers in use throughout the Hellenistic period till the conquest of Egypt by ʿAmr b. al-ʿĀṣ. The latter erected a Nilometer at Assuan and a second at Dendera. Others were built in the reigns of Muʿāwiya and al-Walīd b. ʿAbd al-Malik. Finally, the caliph al-Mutawakkil had a large Nilometer built on the island of Rawḍa at Fusṭāṭ on the site of a Nilometer built in the reign of al-Walīd, which had subsequently been swept away by floods. This Nilometer, which still exists, was completed in 247/861-2 by Muḥammad al-Ḥāsib according to the inscription around the top of the pit. Ibn Abī Uṣaybiʿa (i, 207-8) says that the construction was supervised by Aḥmad b. Kat̲h̲īr al-Farg̲h̲ānī but speaks disparagingly of his technical ability, so it may well be that al-Farg̲h̲ānī acted simply as the caliph's representative and had little to do with the actual con-

struction of the instrument. When it was complete, al-Mutawakkil appointed Abu 'l-Raddād to look after it, and the office remained hereditary in his family down to the time of al-Maḳrīzī, who died in 846/1442 (*Khiṭaṭ*, Būlāk, 1270, i, 57 ff.).

The Nilometer was surveyed and described by K.A.C. Creswell (*A short account of early Muslim architecture*, Harmondsworth 1958, 292-6, with a diagram at p. 293). It consits of a tall graduated octagonal column, which serves as a measuring gauge, standing in a stone-lined pit, roughly 6.20 metres square, with a staircase running down to the bottom. Below this is a cylindrical section with steps cut into its masonry walls. The four sides of the square pit are relieved by recesses, each covered by a pointed arch vault resting on a pair of engaged colonettes with clock-formed capitals and bases. This type of arch was, of course, an essential part of Gothic architecture, but the arches in the Nilometer are three centuries older than any Gothic example. The measuring column is a tall octagonal shaft measured into 16 cubits, averaging 54.05 cm, by transverse lines, and the ten uppermost are each subdivided into 24 "fingers" by 24 divisions, grouped four by four alternately on either side of a vertical line. Creswell then mentions that the column has been broken in two places: "(1) in the twelfth cubit, the length of which has been reduced, between 1798 and 1853, to 22.5 cm (9 in.), and (2) at the junction of the 16th and 17th (*sic*), the length of the cubits remaining unchanged." The column rests on a pedestal 83 cm square and 1.17 metres in height and this rests on a millstone 1.50 metres in diameter and 32 cm thick. The length of the column before it was broken, including these supports, was 19 cubits. The millstone rests on a floor of wooden planking supported by four heavy timber beams. Connection to the Nile is made by three tunnels, all opening into the east side.

Descriptions by Arab writers agree essentially with the foregoing details given by Creswell, except for the length of the column. According to Ibn Djubayr (ed. Wright-de Goeje, 54-5), this was 22 cubits; a water-level of 17 cubits was most beneficial for agriculture but up to 19 was acceptable; the sultan was entitled to levy *kharādj* if the level reached 16 cubits and the actual amount of tax levied depended upon the measured level above that point. Al-Idrīsī, writing perhaps three decades earlier than Ibn Djubayr, has much the same information, including the fact that the sultan could levy *kharādj* once the level had reached 16 cubits. If the level exceeded 20 cubits it was detrimental because trees were uprooted and houses ruined, while a maximum level below 12 means a year of drought and sterility (ed. Dozy-de Goeje, Arabic, 144, French tr. 173). There is therefore an indication that the column was longer in the 6th/12th century than it is today.

Al-Muḳaddasī (206) gives little information about the construction of the Nilometer, saying simply that it was a pit in the centre of which was a long column divided into cubits and fingers. He tells us something, however, about the importance of the device to the people of the Nile Delta. When the water started to rise, the supervisor reported daily to the sultan the mark reached by the water on the measuring column. No public annoucements were made until the level reached 12 cubits. Thereafter the crier made his rounds every day, announcing "Allah increased the blessed Nile today by such-and-such an amount." The people rejoiced when the water level reached 16 cubits, since they knew it would be a good year.

(J. Ruska-[D.R. Hill])

MĪLĀD (a.). According to some Arabic lexicographers, the meaning of this term is time of birth in contradistinction to *mawlid*, which may denote also "place of birth". The latter is the usual term for birthday, especially in connection with the birthday of the Prophet Muḥammad and Muslim saints [see MAWLID]; *mīlād* denotes also Christmas. For other special meanings, cf. Dozy, *Supplément, s.v.*

Bibliography: See the Arabic lexicons.

(A.J. Wensinck)

MILĀḤA (a.) "navigation, seamanship; seafaring". Like its English and French counterparts, *navigation*, the Arabic term has both a narrower and a broader connotation. The former refers to the mariner's art of determining the ship's position, charting her course and assuring that her progress and ultimate arrival is performed efficiently and safely; the latter, to seafaring in general. The term is attested in its *faʿʿāl* form, *mallāḥ*, at least since the ʿAbbāsid period (Lane, vii, 2733); it appears to go back to Akkadian and ultimately Sumerian (*Chicago Akkadian dictionary, Letter M*, Part 1, Chicago 1977, 149-52: Akk. *malāḫu* "sailor, boatman"; R. Labat, *Manuel d'épigraphie akkadienne*[2], Paris 1976, 93: MÁ "boat", MÁ.LAḪ$_4$ ("boatman"), no doubt via Hebrew (*mallāḥ*) and Aramaic. Association of the term with *milḥ* "salt [water]", already proposed by early Arabic lexicographers (Lane, citing the *Tahdhīb* of al-Azharī, the *Ṣiḥāḥ* and the *Ḳāmūs*), as also by the Hebrew Bible commentators, would thus probably be a case of popular etymology. (S. Soucek)

1. In the pre-Islamic and early mediaeval periods.

I. NAVIGATION IN PRE-ISLAMIC TIMES. The early Near Eastern civilisations. In spite of the geopolitical position of the Arabs, with the Arabian peninsula being bounded by the Red Sea, the Indian Ocean and the Persian Gulf, they were not among the first seafaring nations of the Near East, like the inhabitants of Mesopotamia, the Egyptians and the Phoenicians, because most of their ports were not accessible for navigation in ancient times (G.F. Hourani, *Arab seafaring*, New York 1975, 5 ff.).

In Mesopotamia, swimming floats or float-supported rafts were used on the Euphrates, as appears from Assyrian reliefs of the 4th millennium. The first Mesopotamian vessels were rivercraft, and even when the inflated skins were replaced by a line of pots the hulls were not constructed with any pre-erect inner structure, but instead they had a "backbone" (a prominent keel plank) and "ribs" (inserted frames) (L. Casson, *Ships and seamanship in the Ancient World*, Princeton 1971, 27; and for the Islamic descendant of the inflated skin craft, see KELEK).

It seems that the Mesopotamian vessels in ancient times carried no sails and were only propelled by oars. They were used for carrying timber, etc., but depictions on Assyrian reliefs show that such vessels could also become warships and carry soldiers.

The artistic evidence from Egypt is especially rich and offers ample light on the types of the Egyptian vessels of ancient times. Again, the shell-of-planks technique is used for the construction of ships. By the year 3100 B.C. a sail appears in an Egyptian drawing of a vessel, while a great number of drawings of Egyptian ships offer us detailed depictions of masts, oars, steering oars and spoon-shaped hulls (C. Lefebvre des Noëttes, *De la marine antique à la marine moderne*, Paris 1935, Pls. III ff.). The Egyptian depictions reveal that

Egyptian vessels were used as cargo ships and warships as well. The vessels which the Egyptians used in the Red Sea were constructed on the River Nile, then dismantled and reassembled on the Red Sea (Abdel M.A.H. Sayed, *New light on the recently-discovered port on the Red Sea Shore*, in *Chronique d'Égypte*, lviii [1983], fasc. 115-16, 23).

It is likely that ancient Egyptian vessels sailed coastwise to avoid the dangers of the open sea, and that the lengths of voyages were limited, going as far as Punt, i.e. Somaliland and Ḥaḍramawt, whence the Egyptians imported such products as ebony, myrrh, ivory, gold and wild animals (see Casson, *The ancient mariners*, London 1960, 12-13). Vessels were also used for warfare in Egypt, as is shown by a relief of the Pharaoh Sahure's pyramid (*ca.* 2550 B.C.), depicting ships carrying troops.

The mariners *par excellence* of the Near East were, however, the Phoenicians. Phoenician ships appear already in a relief of the third millennium B.C. at the time of the Pharaoh Snefru, sailing to Egypt loaded with cedar trees, but their maritime strength reached its peak in the first millennium, when they replaced the naval dominance of the Minoans and Greeks who had first dominated the Mediterranean.

In contrast to Egyptian naval architecture, which was based on riverboats, the vessels of the Phoenicians were from the beginning intended for seafaring, being half-moon in shape with high stern, and with bows distinguished by a wide beam. Phoenician galleys were surmounted by broad square sails and were often two or three-banked. Phoenician ships were propelled by oars and/or sails and two huge oars were used as rudders.

The Phoenicians firmly established the spice route to be followed for centuries later by the Persians and Arabs. Already at the time of King Solomon, Hiram, the Phoenician king from Tyre, sent his sailors to serve Solomon's newly-established fleet in Ezion Geber. King Solomon's fleet, as stated in I Kings, ix, 26-8, was manned by Phoenicians and sailed as far as Ophir, by which it is understood Oman and India. Gold, myrrh, parrots and other goods were thus transported by the Phoenicians from India and South Arabia to Palestine (see V. Christides, *L'énigme d'Ophir*, in *Revue Biblique*, lxxvii [1970], 240-7).

After the 9th century B.C., the Greeks started taking the upper hand in navigation in the Mediterranean, so that by the 5th century B.C., the Mediterranean had become a Greek lake and later a Roman one.

The pre-Islamic Arabs. The role which the pre-Islamic Arabs played in navigation in this early period was marginal, but should not be ignored. Certain Arabs used float-supported rafts in the Red Sea and appear in Greek sources as Ἀσχῖται. From such primitive rafts—whose model should be traced to Mesopotamia—boats sewn together with fibre, whose flat bottom consisted of a single plank, developed for navigation on the Red Sea.

In order to safeguard sea traffic, the Ptolemies had planted a number of coastal towns—or renewed and renamed old ports—on both sides of the upper part of the Red Sea: Clysma-Cleopatra, Arsinoe, Philothera, Myos Hormos, Berenice and Leuke Kome.

Goods from the Orient were unloaded in Myos Hormos on the African coast, from where they were transmitted, via the river Nile, to Koptos (Strabo, 780, 781), whilst Leuke Kome on the Arabian side of the Red Sea served as a port of discharge for these goods. With the advent of the Romans, Leuke Kome diminished in importance and the little island Iotabe at the entrance of the Gulf of ʿAḳaba acquired great importance, serving as a customs clearing-house for the ships which headed towards Ayla [*q.v.*], which developed into an important emporium in the 4th century A.D.

Meanwhile, the participation of Arab vessels, merchants, shipowners and seamen in the Red Sea traffic is explicitly attested in the Greek and Latin sources of the Hellenistic and Roman period. As pirates, some Arab tribes, living on the coastline of the Red Sea, forced the Romans to embark guards in their merchant ships (Pliny, *Natural History*, vi, 173). But it was mainly as sailing traders that they were known; Strabo reports that the Arabs of South Arabia used float-supported rafts (δερματίνοις πλόιοις) to sail across the Red Sea towards the African coast in order to trade with the African (Strabo, xvi, 4, 19).

The best information about Arabian ports, trade and seamen is found in the *Periplus of the Erythraean Sea*, written in the early Christian era, which mentions that Muzza at the southern tip of the Arabian peninsula, not far from the inland capital of the Ḥimyarites, Ẓafār, and the nearby port of Okelis, were the most important starting points for sailing to Western India.

For the 6th century, two contemporary Byzantine sources give information on Arab seafaring. The first, the *Martyrium of Arethas* (ed. Boissonade, in *Anecdota Graeca*, v, Paris 1833, 44-5), refers to Indian ships; since we know that Indian ships usually did not sail beyond the island of Ceylon or the Bāb al-Mandab, we should probably understand by the term "Indian" "South Arabian" vessels. In the second source, the *Acts of Gregentius*, there are also references to Arabian ports (see Christides, *The Himyarite-Ethiopian war and the Ethiopian occupation of South Arabia in the Acts of Gregentius* [*ca. 530 A.D.*], in *Annales d'Éthiopie*, ix [1972], 115-46).

Arabic sources have only scanty references to Arab navigation in pre-Islamic times. The nautical terminology found in the Ḳurʾān and in the Arab lexicographers is exigous, but betrays a triple influence, i.e. Persian, Indian and Graeco-Roman, on Arab navigation. Thus the word *nāk͟hudāh* "captain" comes from the Hindi *nāo* and the Persian *k͟hudā* (cf. S.S. Nadvi, *Arab navigation*, in *IC*, xv [1941], 437, and for the Ḳurʾānic evidence, W. Barthold, *Der Koran und das Meer*, in *ZDMG*, lxxxiii [1929], 37-43).

Sea traffic in the Red Sea from the 4th to the middle of the 7th centuries A.D. The period from the 4th to the middle of the 7th century A.D. marks the most intensive sea traffic in the Red Sea and its extension on the one hand towards the Indian Ocean and on the other—through Egypt and Syria—towards Constantinople. At this time, Persian ships dominated in this busy traffic; Byzantine ships held the second place in this traffic, while there was also participation of Arab and Ethiopian ships.

The hagiographical works of the 5th and 6th centuries describe how the spices and aromatics from the Orient, along with Chinese silk, were sent to Tyre and Sidon and then forwarded to Constantinople via Rhodes and the coast of Asia Minor (see H. Magoulias, *The lives of the saints as sources of data for the history of commerce in the Byzantine Empire in the VIth and VIIth centuries*, in Κληρονομία, iii [1971], 303-30). This was the time of the florescence of Byzantine navigation and its international sea trade, and Byzantine shipowners enjoyed great freedom and prestige, one never to be repeated in later times when strict state controls were imposed.

The Red Sea traffic reached its peak in the reigns of the emperors Justin I (518-27) and Justinian (527-

65), with commercial competition in this area among the rival powers of the Persians and the Byzantines. There was no direct confrontation between Byzantines and Persians at sea or on land, but the Persians tried to infiltrate Yemen in order to support the local pagans and the Jewish Ḥimyarite rulers, while the Byzantines through their allies, the Christian Ethiopians, strongly supported the Christian Ḥimyarites.

Justin I, taking profit from the upheaval in Yemen, allied with the most important powers in the southern part of the Red Sea on both sides of the coast: the Ethiopians and the Blemmyes, who extended in a loose confederation from ʿAydhāb [*q.v.*] as far as Ethiopia, hoping to use his Christian Ḥimyarite allies in order to extend his power as far as Aden, transforming the Red Sea into a Byzantine lake (see Christides, *Ethnic movements in southern Egypt and northern Sudan: Blemmyes-Beja in late antique and early Arab Egypt until 707 A.D.*,, in *Listy Filologicke*, ciii [1980], 136).

Unfortunately for the Emperor, the situation was reversed when the Persians occupied Yemen, and his successor Justinian I failed equally in his attempt to persuade the Ethiopians to try to undertake the sailing to India in order to gain control of the silk trade with China and to exclude the Persian intermediaries.

Thus in practice, Persian cargo ships dominated the navigation, sailing side-by-side with the Byzantine ships; the 6th-century author Cosmas Indicopleustes informs us that Byzantine ships dared to sail as far as Ceylon, where again they competed with the Persian ships, and Greek inscriptions discovered in various parts of the Arabian and African coasts of the Red Sea and numerous coins discovered in Ceylon attest to the activities of Byzantine traders in these areas (N. Ahmad, *The Arabs' knowledge of Ceylon*, in *IC*, xix [1945], 224-5; B.J. Perera, *The foreign trade and commerce of ancient Ceylon*, in *Ceylon Historical Journal* [1951],, 110 ff.). During the time of K͟husraw I (531-78) the Persians imposed their rule on Yemen and their ships based on the port of Aden, controlled the Bāb al-Mandab, the entrance to the Red Sea, and nearly shut off the Byzantine route to the East (D. Whitehouse and A. Williamson, *Sasanian maritime trade*, in *Iran*, xi [1973], 44).

II. Navigation in Islamic times. Although the newly-established Islamic caliphate did not possess any ample reservoir of trained navigators, it did control the Egyptian shipyards and their workers; it inherited the Phoenician tradition from the conquered Byzantine Orient; and there were a number of Arabs living on the southern coasts of the Arabian peninsula who were experienced sailors and skilful ship caulkers.

We know something of the nature of the ships sailing from the Phoenician shores in the period preceding Islam from e.g. the depiction of a Phoenician cargo ship incised on the wall of a burial chamber in the catacombs of Bet͟h-S͟heʾarim, between Haifa and Nazareth, dating between *ca.* the 2nd and 4th centuries A.D., in which this ship strongly resembles the late Roman vessels (see R.L. Bowen, *A Roman merchantman from Israel*, in *The Mariner's Mirror*, xlviii/1 [1962], 68-70); and the Phoenician tradition of the stern post ending in a horse's head was transmitted to Muslim naval architecture.

However, the construction of Muslim merchant ships owes also certain of its features to pre-Islamic Arab naval traditions; thus the imitation of the sewn boat—common in the Arabian Gulf from the pre-Islamic period until the present day—in the construction of Arab cargo ships can be easily understood (see Bowen, *Primitive watercraft of Arabia*, in *The American Neptune*, xii [1952], 196 ff.). The average mediaeval Arab dhow had a length of about 75 feet with a displacement of about 100 tons. Modern Arab dhows can be as small as 1-10 tons (*būt*) and as big as 100-200 tons (*būm*) (M. Lesourd, *Notes sur les nawakhid, navigateurs de la mer Rouge*, in *Bulletin de l'Institut Français d'Arch. Naut.*, xxxii, ser. B, no. 25/1-2 [1960], 352).

The Umayyad period (661-750). After the most important Islamic conquests were accomplished in land warfare, the Umayyads eagerly undertook the development of the Islamic navy. The Umayyad period is characterised by efforts of the Arabs to construct warships; they realised that the consolidation of the rapidly acquired Islamic conquests and further expansion could not be achieved without a strong navy. But although there is ample information about the construction of ships and the recruitment of sailors at this period, little is known about attempts to build cargo ships and about the encouragement of the sea trade and activities of merchant shipping.

The recruitment of sailors in the Umayyad period, at least in Egypt, is recorded meticulously. Requisitions by the central government were addressed to the community, which had collectively the responsibility to recruit its share of sailors. The draftees were not forced to serve without pay, but received regular wages (H.I. Bell, *Greek papyri in the British Museum. The Aphrodito Papyri*, iv, London 1910, pp. xxxi ff.). The wages of the recruited crews were not, however, uniform. The marines who functioned as fighting men (μάχοι) received higher salaries than the sailors (ναῦται), and even among the marines, the *muhājirūn* (μωαγαρῖται) were paid higher salaries than the *mawālī* (Muslims of non-Arab descent) (μαυλοῖς) (Bell, *op. cit.*, Papyrus no. 2 1447). In addition, the bread which was prepared for the marines, as one Arabic papyrus states, was of better quality than that of the sailors (Christides, *The conquest of Crete by the Arabs (ca. 824). A turning point in the struggle between Byzantium and Islam*, Athens 1984, 54 ff.). During the Umayyad period, most of the skilful sailors of Egypt were Christians, while the marines were Muslims; but by the end of this period, the situation gradually changed.

We do not have much information about the recruitment of sailors in Syria during the Umayyad period. Undoubtedly, a number of the inhabitants of the coastal towns were drafted into the Syrian fleets. There was, nevertheless, a considerable reshuffling of this population, famous from ancient times for its expertise in naval activities; Muʿāwiya (41-60/661-80) transferred many Persian workers from Baʿlabakk to the Syrian coastal towns of Tyre and Acre to be used for ship building, perhaps an indication of the diminishing number of the Christian, Phoenician, shipbuilding workers.

Dockyards and naval bases; Muslim naval expeditions. After the conquest of Egypt, the Arabs continued the use of the Byzantines' dockyards [see dār al-ṣināʿa] in Alexandria and Clysma in Egypt as well as those in Syrian, that of Clysma (Ḳulzum [*q.v.*]) being of particular importance.

Trajan's canal, uniting Egyptian Babylon with Ḳulzum, had become silted up, but was cleaned and used before 23/644 for the corn fleet which now, instead of going to Constantinople, was diverted to D͟jār, the port of Medina, to feed the inhabitants of the holy cities. Later Jedda (D͟judda [*q.v.*]), the port of Mecca used for the pilgrims, replaced D͟jār. On their way to Mecca, the pilgrims stopped in ʿAyd͟hāb, the port controlled by the Sudanese people of the Bed͟ja [*q.v.*]. Thus the corn trade and the pilgrimage traffic contributed to the sea traffic on both sides of the

upper part of the Red Sea, whilst at the same time, the old incense route to the ports in the southern part of the Arabian Gulf and the Indian ports was also maintained. The Greek papyri of Aphrodito, in addition to the numerous references which they make to the construction and repairing of ships in Ḳulzum, report that Ḳulzum was also used as a naval military base, no doubt against the Red Sea pirates, whose activities had been notorious since Roman times.

The port of Alexandria still retained its fame in the Islamic period, though to a diminishing extent. Most of the Byzantines left Alexandria after its conquest by the Arabs, but a strong Jewish community, composed mainly of traders, remained there; moreover, the skilful Egyptian craftsmen continued the Byzantine tradition (see M. Rodziewicz, *Graeco-Islamic elements at Kom el Dikka in the light of new discoveries*, in *Graeco-Arabica*, i [1982], 44). The landmark of Hellenism, the Pharos (lighthouse) [see AL-ISKANDARIYYA and MANĀRA], was partly preserved during the Umayyad period; and even three centuries later, the Persian author Nāṣir-i Khusraw describes the torches which were lit at night and which led safely the ships to the port of Alexandria. It is not, therefore, surprising that already from the time of Muʿāwiya, a great number of ships were constructed and repaired in Alexandria, and it was also from there that the most important Muslim sea raids originated.

While Alexandria in the Islamic period lost ground as a great entrepôt, the port of al-Faramā acquired great prominence. The group of Jewish merchants, known as al-Rādhāniyya [*q.v.*] sailed from southern France, carrying merchandise which was unloaded in al-Faramā, from where it was transported on the back of camels as far as Ḳulzum, thence by ship to the Orient.

Meanwhile, naval bases were established in other parts of Egypt, e.g. at Rosetta and Damietta [see DIMYĀṬ] at the mouths of the river Nile in the Mediterranean, and at Tinnis. Damietta, in particular, on the eastern arm of the Nile delta, acquires great importance in the ʿAbbāsid period, whilst the Tinnis base near Damietta was founded on a little island. Moreover, in 94/713, a base was also established in the Pentapolis of Cyrenaica [see BARḲA].

Syria also acquired bases from the beginning of the Umayyad period; the first dockyards started operating in ʿAkkā (Acre) in 49/669, while those of Ṣūr (Tyre) were also busy shortly afterwards (A.H. Fahmy, *Muslim sea power in the eastern Mediterranean*, London 1950, 52-3). The Syrian dockyards had the great advantage of drawing timber from the Syro-Lebanese forests, which also exported timber to Egypt, while iron was imported from the Sudan. These dockyards functioned also as bases from where naval expeditions originated, these being launched from the time of the governorship in Syria of Muʿāwiya, in 27/648 or 28/649 onwards. For details, see BAḤRIYYA. I. The navy of the Arabs up to 1250, in Suppl., and for the great naval battle off the Lycian coast in 31/651-2 or shortly afterwards between the Arabs and Byzantines, the so-called "Battle of the Masts", see DHĀT AL-ṢAWĀRĪ in Suppl. To the bibliographies given there and in ḲUBRUS should be added, for the Arab attacks on Cyprus, R. Browning, *Byzantium and Islam in Cyprus in the early Middle Ages*, in *'Επετηρίς Κέντρου 'Επιστη Ουικῶν 'Ερευνῶν*, ix (1977-9), 101-16; C.P. Kyrris, *The nature of the Arab-Byzantine relations in Cyprus from the middle of the 7th to the middle of the 10th century A.D.*, in *Graeco-Arabica*, iii (1984), 149-75; and for the "Battle of the Masts", the not very satisfying study by A.N. Stratos, *The naval engagement at Phoenix*, in *Charanis studies*, New Brunswick 1980, 229-47; and V. Christides, *The naval engagement of Dhāt aṣ-Ṣawārī A.H. 34/A.D. 655-656, a classical example of naval warfare incompetence*, in Βυζαντινά, xiii (1985), 1331-45. For the Arab naval attacks on Constantinople, see AL-ḲUSṬANṬĪNIYYA, to the bibliography of which should be added, for the image of Constantinople in the popular Islamic mind, M. Canard, *Les expéditions des Arabes contre Constantinople dans l'histoire et dans la légende*, repr. in *Byzance et les Musulmans du Proche-Orient*, London 1973, 80 ff.

The ʿAbbāsid period (750-1258). It was not until well into the ʿAbbāsid period at the turn of the 3rd/9th century that the Byzantine supremacy at sea was seriously challenged, and during the early ʿAbbāsid centuries there was a gradual development of the Muslim merchant and war fleets, reaching its peak in the 4th/10th century. The Arabs' land victories, in e.g. Sicily and Crete, were the result of a patient and persistent military preparation, backed by scientific progress in such fields as nautical instruments, efficient war machines and weapons. Also, the formation of large commercial Arab fleets was completed by this time, so that Muslim ships not only sailed side-by-side with the Byzantine vessels in the Mediterranean but dared to reach as far as India, South-East Asia and China (see S.M. Yusuf, *Al-Ranaj, the route of Arab mariners across the Bay of Bengal and the Gulf of Siam*, in *IC*, xxix/1 [1955], 75-103). One should also note that in Egypt, the semi-independent dynasty of the Ṭūlūnids [*q.v.*] paid special attention to their navy, and the Egyptian fleet in its attacks on the Byzantines, often cooperted with the Syrian fleets, i.e. those of the semi-independent naval states of Tarsus and Tripoli.

Arabic manuals of seafaring and warfare. The early Arabic manuals of navigational science are all lost. In his navigational text *Kitāb al-Fawāʾid fī uṣūl ʿilm al-baḥr wa 'l-ḳawāʿid*, written in 895/1490, Ibn Mādjid [*q.v.*], a pilot as well as an author, mentions that the earliest dated pilots were Aḥmad b. Tabarūya and Khwāsh b. Yūsuf (both apparently Persians) who sailed in *ca.* 400/1009-10 and were also authors of navigational texts. In addition, Ibn Mādjid informs us that one hundred years later three writers appeared, known as the "three lions" (*luyūth*), whose texts were read by him but which are no longer extant (see further below, 3. Muslim navigation in the Indian Ocean).

Information on Arabic naval warfare was usually incorporated into more general manuals of warfare, of which a certain number existed by the 4th/10th century. Ibn al-Nadīm mentions in his *Fihrist* two such war manuals composed at the time of the caliphs al-Manṣūr (136-58/754-75) and al-Maʾmūn (198-218/813-33) respectively (cf. J.T. Reinaud, *De l'art militaire chez les Arabes*, in *JA* [Sept. 1848], 195 ff.; Christides, *The conquest of Crete*, 29-31). Special mention should be made of the works of the Mamlūk author Ibn Manglī [*q.v.* in Suppl.], whose works are a mine of information about Muslim ships, their technology, "Greek fire", etc. Most of his works are still unpublished, but his treatise *al-Aḥkām al-mulūkiyya fī fann al-ḳitāl fi 'l-baḥr wa 'l-ḍawābiṭ al-nāmūsiyya*, has been recently published by M. ʿAbd al-Raḥīm in a typewritten dissertation of the University of Cairo (n.d.). In this treatise there are explicit references to and fragments of an Arabic translation of Leo VI's *Tactica* (see Christides, *Naval warfare in the eastern Mediterranean (6th-14th centuries): an Arabic translation of Leo VI's Naumachica*, in *Graeco-Arabica*, iii [1984], 137-48). Information about navigation is also found abun-

dantly in the Arab geographers from Ibn Khurradādhbih onwards, and also in al-Masʿūdī, in whose *Murūdj al-dhahab* there is ample information about the seas, sailors and navigation in general [see further, DJUGHRĀFIYA], and in such material as that of the Cairo Geniza (see S.D. Goitein, *A Mediterranean society*, Berkeley and Los Angeles, 1967 ff.).

The replacement of the Byzantine merchant fleet by Muslim fleets in the Mediterranean. During the ʿAbbāsid period, although Arab navigation developed in the Mediterranean, the Byzantine long-distance navigation and trade heavily diminished. This is less to be attributed, according to H. Pirenne's theory, to the Muslim conquests which supposedly shattered the commercial unity of the Mediterranean (cf. A. Riising, *The fate of Henri Pirenne's theses on the consequences of the Islamic expansion*, in *Classica et Mediaevalia*, xiii [1952], 87-130; R. Lopez, *Beati monoculi: the Byzantine economy in early Middle Ages*, in *Cultus et cognitio, Festschrift Alexander Gieysztor*, Warsaw 1976, 341-52) than to the effects of the strictly-controlled Byzantine financial system and the loss of several important Byzantine ports in the Near East and North Africa. Heavy taxation and strictly-controlled profits choked the maritime activities of the Byzantines, leaving little room for personal incentive; and simultaneously, the activities of foreign ships in the territorial Byzantine waters were heavily curtailed, limited, out of fear of spying, to restricted areas and compulsory lodging houses known as μιτατα. Thus the great maritime Byzantine boom of the 7th century suffered a mortal blow, never to recover. Previously, at the end of the 6th and in the first half of the 7th century, Byzantine merchant ships had been very active in long-distance voyages. At this time, the word ναύκληρος was used almost interchangeably for "captain" and "shipowner", manifesting the participation of captains in the profits, and Byzantine hagiographical works describe the financial support of these long-distance voyages by the Patriarch of Alexandria and the great prestige which the shipping magnates enjoyed (see Magoulis, *op. cit.*, 303-30). But after this time, the land-bound Byzantine aristocracy showed little interest in investment in maritime ventures. Short-distance sailing uniting the various parts of the Empire continued, but this was a pale echo of former activities, and it was only in the second half of the 14th century that the Byzantine aristocracy, having lost its lands to the Turks, invested again its capital in maritime ventures (see N. Oikonomidès, *Hommes d'affaires grecs et latins en Constantinople (XIIIe-XVe siècles)*, Montreal 1979; A.E. Laiou-Thomadakis places this new tendency somewhat earlier in *The Greek merchant of the Palaeologan period, a collective portrait*, in Πρακτικὰ τῆς Ἀκαδημίας Ἀθηνῶν, lvii [1982], 105).

Nevertheless, some Byzantine ships continued to visit the Arabian ports; Ibn Ḥawḳal (4th/10th century) complains that, from the time when the Byzantine merchants were allowed to frequent the Muslim Mediterranean ports, the Muslims were exposed to dangerous Byzantine spying.

Muslim commercial navigation in the Mediterranean reached its peak in the 3rd/9th and 4th/10th centuries, when vessels plied as far as Spain [see TIDJĀRA]. The most important trade routes at this period were those connecting the Egyptian port of al-Faramā with Constaninople; al-Faramā with southern France; al-Mahdiyya [*q.v.*] in Ifrīḳiya with Sicily and Italy; and two maritime routes connecting Algeria with Spain (see T. Lewicki, *Les voies maritimes de la Méditerranée dans le haut moyen âge d'après les sources arabes*, in *La navigazione mediterranea nell'alto medioevo*, in *Settimane di Studio del Centro Italiano di Studi sull' Alto Medioevo, Spoleto 1977*, xxv [1978], 439-80).

Nautical instruments. During the ʿAbbāsid period, the Muslims invented or improved some important nautical instruments—astrolabes were already used by them by the 4th/10th century—and their legacy contributed to the discoveries of the new lands by the Portuguese and other European nations in the 15th century (T.A. Shumovsky, *A fifteenth century Arabian marine encyclopaedia*, in *Procs. of the 25th Internat. Congress of Orientalists*, Moscow 1960; for the Arab astrolabes, see ASṬURLĀB). They also used detailed sailing directories (*dafātir*) and charts (*ṣuwar*). In contrast to our scanty knowledge of Byzantine maps and portolans, of which little has remained, there is ample information about the cartography of the Arabs, with many Arabic maps preserved [see KHARĪṬA].

Ships and crews; naval tactics. Like the regular Byzantine type of warship called *dromon*, the average Muslim warship, the *shīnī*, carried a crew of about 140 to 180 oarsmen. The *shīnī* was a two-banked vessel, with a special officer in charge of each bank. The Arab warships were still equipped with the ram, but it was not used for sinking enemy ships; it was used for inflicting minor blows on them and for immobilising them in order to hit them with projectiles. The main characteristic of Arab warships was the use of superstructures on the ships, a sort of forecastle, which transformed the ships into fortified towns. Mariners, taking protection under them, engaged in throwing various types of missiles, e.g. heavy stones, pieces of iron, etc. Moreover, flame throwers, usually mounted in the bows, launched "Greek fire" onto the enemy ships [see NAFṬ].

The recruitment of sailors and marines, as recorded mainly in the papyri of Egypt, was done very carefully. Theoretically, men from various social classes and professions were liable to maritime service, but personal service could be usually replaced by a money compensation, and many recruits must have been experienced sailors. Thus the maritime expenses fell upon the entire population of Egypt, but the actual duties were performed mainly by professionals. It was not till the Fāṭimid and especially the Mamlūk periods that this system was changed, and non-professional sailors were recruited (Y. Lev, *The Fāṭimid navy, Byzantium and the Mediterranean Sea 909-1036 C.E./297-427 A.H.*, in *Byzantium*, liv [1984], 250).

Within the crews of ships, there was a rigid differentiation between oarsmen and marines. Ibn Manglī mentions ten officers who ran the ship (*al-Aḥkām*, ed. ʿAbd al-Raḥīm, 39), among them the officer in charge of weather observations, the pilot and two lieutenants. There was also a clear distinction between the military commander of a warship (*ḳāʾid* or *muḳaddam*), in charge of the marines, and the captain (*raʾīs al-milāḥa*); and at the top, the Egyptian fleet had an *amīr* of the water (*amīr al-māʾ*) or the *amīr* of the sea (*amīr al-baḥr*). The numbers of ships employed in operations were not usually large, and as tactics, the Arabs, as their naval manuals advised them, generally preferred to fight in a crescent formation and less often in a compact one, trying to outmanœuvre the enemy by using various stratagems such as feigned flights, etc. Weapons employed are described in detail by Ibn Manglī, who further adds information about "Greek fire" and its use by the Arabs (*al-Aḥkām*, 54 ff.).

The decay of Muslim naval power. At the end of the 4th/10th century, there was an obvious decay of

Muslim naval power in the Mediterranean, signalled by the Byzantine reconquest of Crete (962) and Tarsus (965), and that of Sicily by the Normans (1090). In Spain, the reign of ʿAbd al-Raḥmān III (300-50/912-61) marks the turning-point in the development of its naval power. By the 4th/10th century, the Muslims of Spain had constructed formidable war flotillas in their shipyards as well as merchant ships whose naval architecture influenced the Western European equivalents (for the types of Spanish Muslim ships, see G. Oman, section "Imbarcazioni: tipi, costruzione", in his *Voci marinaresche usate dal geografo arabo al-Idrīsī (XII secolo) nelle sue descrizioni delle coste settentrionali dell'Africa*, in *AIUON*, xiii [1963], 9-13). The historian Ibn Ḥayyān [*q.v.*] describes in his *Muḳtabas* (*ca.* 450/1057) the activities of the Spanish Muslim ships against the "Franks", and also the commercial relations between al-Andalus and Italy (*Muḳtabas*, v, ed. P. Chalmeta and M. Ṣulḥ, Madrid 1979). But after 'Abd al-Raḥmān's death, the palmy days of the Spanish Muslim navy were over.

A similar decline is visible in commercial navigation. All this was not due to any single factor such as severe depletion of the forests of the Mediterranean Muslim countries, as is sometimes suggested, but mainly to internal weaknesses of the Islamic states system, and to the rise of new powers, i.e. those of the Italian towns of Pisa, Venice and Genoa which became the dominant powers in both merchantile navigation and naval warfare (see A.R. Lewis, *Naval power and trade in the Mediterranean A.D. 500-1100*, Princeton 1951, 183).

The decadence of Muslim navigation was accelerated by the Crusaders' seizure of such Syrian ports as Tyre and Acre, although Alexandria still remained a trade centre where foreign ships were allowed to approach and passengers were permitted to remain in the *funduḳs* [*q.v.*], whilst the Franks in the Latin Orient established their own *funduḳs* in which foreigners were allowed to remain.

While at the beginning of the 6th/12th century, Muslim ships were still sailing as far as the Maghrib and Italy, by the end of this century most of the sailing between Western Europe and the Muslim Orient had fallen into the hands of the Italians (Cl. Cahen, *Orient et Occident au temps des Croisades*, Paris 1983, 137 ff.). Meanwhile, the Crusaders' conquest of Ayla opened up the Red Sea to the Franks, until it was retaken by Ṣalāḥ al-Dīn in 1170, who transported thither dismantled ships on camel-back (see A.S. Ehrenkreutz, *The place of Saladin in the naval history of the Mediterranean Sea in the Middle Ages*, in *JAOS*, lxxv [1955], 104). It was he who gave to the Egyptian navy a last ephemeral glory, using it in his reconquest of the coastal towns in Palestine and Syria in 583/1187, being the last mediaeval Arab ruler who understood the importance of the navy in military affairs.

The coming of the Mamlūks in the 7th/13th century marks the end of Muslim naval power. The Mamlūks' naval policy was marked by two actions which brought about the destruction of Muslim naval power. After their conquest of the Frankish cities in the Levant, they applied a deliberate policy of destroying the Syrian ports in order to make them unattractive to any further Crusades (see D. Ayalon, *The Mamluks and naval power*, in *Procs. of the Israel Academy of Sciences and Humanities*, i/8 [1965], 7-12; D. Baraq, *A new source concerning the ultimate borders of the Latin Kingdom of Jerusalem*, in *Israel Exploration Jnal.*, xxix [1979], 213); and the system of recruiting for the navy was altered. Al-Maḳrīzī laments that, while in the 4th/10th century the best were selected for naval service, which was considered an honour, now only the wretched served. Simultaneously, Muslim merchant ships lost their leading role not only in the Mediterranean but also in the Red Sea, where they were replaced after the 9th/15th century by the Portuguese.

The newly-developed science of underwater archaeology has yielded important information concerning navigation in the Mediterranean and Arab shipping activities in this sea. The recently-discovered ship wreck, dating to *ca.* 1025 A.D., at Serçe Liman off the southern coast of Asia Minor, just opposite Rhodes, is the most eloquent example of the invaluable services which underwater archaeology can offer.

The Serçe Liman wreck furnishes concrete evidence of an important change on the technology of shipbuilding in the early 5th/11th century. It is the earliest example we know of a seagoing ship, constructed in the modern skeleton-first manner (see G.F. Bass and F.H. van Doorninck, Jr., *An 11th century shipwreck at Serçe Liman, Turkey*, in *International Jnal. of Nautical Archaeology and Underwater Exploration*, vii/2 [1978], 119-32; J.R. Steffy, *The reconstruction of the 11th century Serçe Liman vessel*, in *ibid.*, xi/1 [1982], 13-14; Bass, *The nature of the Serçe Limani glass*, in *Jnal. of Glass Studies*, xxvi [1984], 64; van Doorninck Jr., *The Medieval shipwreck at Serçe Limani: an early 11th century Fatimid-Byzantine commercial voyage*, in *Graeco-Arabica*, iv [1986].

Moreover, the shipwreck of Serçe Liman reveals that by the 11th century A.D. an international flavour prevailed in the composition of the crews of the merchant ships in the Mediterranean and that their cargoes could easily consist of objects originating from both the Byzantine and the Arab worlds. Some of the objects which were found in the Serçe Liman wreck, such as cooking utensils, remains of food, arms and luxury items, betray that there were, side-by-side, both Muslims and Christians among the members of the crew and passengers. The origin of the owner of the shipwreck of Serçe Liman cannot be identified, but most probably he was from Fāṭimid Egypt. It should be noted that this vessel, before its sinking at Serçe Liman, had headed freely towards the Byzantine ports of Asia Minor. Thus the evidence of underwater archaeology corroborates the information of the Greek and Arab literary sources, as well as that of the Geniza documents, that freedom of navigation for Arab and Byzantine cargo ships in the Mediterranean reached its peak at the turn of the 5th/11th century.

2. In the later mediaeval and early modern periods.

This section will deal with both aspects of *milāḥa*, the mariner's art and seafaring in general, as they developed, chiefly among the Muslims of the Mediterranean, in the later Middle Ages and the early modern period; the treatment will also endeavour to reflect two stages, the earlier Arab one and the later Turkish one: although partly overlapping, they were distinctive in emphasis and intrinsic achievements.

The decline of Arab seafaring in the Mediterranean, mentioned in section 1 above of the article as beginning in the Fāṭimid and Ayyūbid periods, became pronounced under the Mamlūks, and encompassed its three main aspects: military-naval, merchant shipping and corsair. It was contemporary with and partly due to the dramatic rise of European shipping in the Mediterranean that gained momentum in the 11th century.

An eventual result of the decline of Arab merchant shipping was the lack of Muslim participation in the new stage of improved navigational methods that characterised Mediterranean seafaring from the 13th century onwards. Three interrelated innovations marked these methods: the mariner's compass, the portolan chart, and an improved and expanded type of sailing directions.

The mariner's compass is first attested for 1187, and its perfection and widespread use became the domain of the Europeans. The term, of Latin derivation, only marginally appeared in Arabic (*kunbāṣ*: as in Ibn Khaldūn, *Muḳaddima*, ed. Muṣṭafā Muḥammad, Cairo n.d., 54; tr. Rosenthal, i, 117), and then only with a shift in the meaning characteristic also of contemporary Italian, where it referred not to the instrument but to the portolan chart. The name of the instrument itself was replaced in the Mediterranean *lingua franca* by the Italian word *bussola* ("small box", on account of this improvement on the older unprotected magnetic needle; a "compass card", a windrose indicating four, eight or sixteen or thirty-two points of compass, attached to the needle and revolving with it, further characterised this improvement). This term does not appear to have been current in pre-modern Arabic, a symptom of the little use which the instrument received on the part of seafaring Arabs in the Mediterranean; on the other hand, it later became the standard term in Turkish, where its form *pusul* or *pusla* is attested from 1513 onwards (R. Kahane-A. Tietze, *The Lingua Franca in the Levant: Turkish nautical terms of Italian and Greek origin*, Urbana 1957, no. 133).

The portolan chart—also called compass chart—was a map of the Mediterranean, or of one part of it, produced specifically for use by mariners. It differed from contemporary land maps in several respects, the most prominent being a network of rhumb lines (lines indicating the points of compass) emanating from one or more centres, usually emphasised by a more or less elaborate windrose. The portolan charts, drawn with the help of the compass, reached a higher degree of accuracy than contemporary land maps, a fact of obvious importance to sailors; the rhumb lines had the additional function of facilitating the seaman's task of charting the ship's course. The earliest known portolan charts date from the 13th century; by the 15th they proliferated, and dominated the Mediterranean scene until the 17th. Most were produced by Italians and Catalans. Arabic portolan charts are known to have existed, but the small number of the extant ones, as well as the fact that they appear to be visual copies and lexical adaptations of the European ones, once more reflect the domination of Mediterranean seafaring, in the later Middle Ages, by the Christian half of that sea. The oldest known specimen dates from the 14th century and covers the western half of the Mediterranean (J. Vernet-Ginés, *The Maghreb chart in the Bibliotheca Ambrosiana*, in *Imago Mundi*, xvi [1962], 1-16). A case apart is a group of atlases produced during the 16th and 17th centuries at the Tunisian workshop of the Safāḳusī family. They are a hybrid between the Italian portolan chart type and the world maps made by al-Idrīsī. Here, the non-functional (as far as use by mariners was concerned), mainly intellectual and aesthetical purpose, was carried to the extreme.

In addition to the portolan chart, there appeared the portolan proper: a text of sailing directions for a smaller or larger portion of the Mediterranean, as a verbal reflection and development in detail of the chart. Like the portolan chart, the portolan became possible only in the 13th century with the spread of the magnetic needle, for its essential feature was the indication of respective positions according to the points of compass. Here, the imbalance between the Christian and Arab Muslim halves of the Mediterranean is even more striking: in contrast to the great number of Christian portolans—again, chiefly Italian and Catalan—that have come down to us, not a single Arab one is known to have existed. The often mentioned "rutters", sailing directions included in the works of al-Bakrī (ed. de Slane, 81-6) and al-Idrīsī (*Opus geographicum*, 257-309 = 3rd climate, sections 1-3) belong to an earlier, pre-compass method of navigation that went back all the way to classical antiquity.

Aside from using the above-mentioned three types of tools—mariner's compass, portolan chart and portolan text—Mediterranean seamen of the later Middle Ages continued to avoid availing themselves of the more sophisticated though still rudimentary instruments of incipient astronomical navigation such as the astrolabe [see ASṬURLĀB and section 3. below], characteristic of Muslim seafaring in the Indian Ocean. This was due, on the part of the Christians, not only to unfamiliarity with the methods of a different tradition, language and culture, but also to the reduced size of the Mediterranean where, unlike on the oceans, coasts and landmarks were never too far away; relative position according to the points of compass rather than latitude and longitude was the chief determining factor.

When viewed from a broader perspective, Muslim *milāḥa*, seafaring, in these final centuries of the Middle Ages lacked the rest of the growth features characteristic of the Christian one. A rapid evolution in ship-building technology was one of them. Enriched by elements introduced from the Atlantic, this technology developed newer and larger types of sailing ships driven by square sails and later by a combination of lateen and square sails; it remained the domain of the Christians and further contributed to the domination of long-distance Mediterranean shipping by them. The large Genoese and other Frankish (sailing) ships, called in the *lingua franca* simply that—a gamut of variations on the Romance terms derived from the Latin *navis*—or given more specific names such as adaptations of the Germanic "cog" or the

etymologically intriguing "carrack", became the great freighters of east-west trade, and their arrivals and departures were among the memorable events in the economic life of such ports as Alexandria. Venetian galleys, however, tenaciously endured the competition, partly by pushing their volume capacity to the limit, at which point they became the *gallere grosse di mercato*, the great merchant galleys of the Republic's convoys. We see nothing of the sort on the Muslim side. Although Arab coastal shipping must have retained its local vigour and importance, the galley—*s̲h̲īnī* or *ḳiṭʿa* in Arabic (cf. H. Kindermann, *"Schiff" im Arabischen*, Zwickau 1934, s.vv.)—did not develop into a large commercial vessel but remained essentially the traditional warship. Arab long-distance shipping between Egypt and the Syro-Palestinian coast on one hand and the Mag̲h̲rib and Spain on the other, still vigorous in the Fāṭimid period, appears to have receded under the Ayyūbids and Mamlūks. Characteristic of this are the voyages of Ibn D̲j̲ubayr and Ibn Baṭṭūṭa. Ibn D̲j̲ubayr, the pious Muslim from Granada whose principal purpose was the *ḥad̲j̲d̲j̲*, nevertheless crossed the entire length of the Mediterranean on Christian ships (in 1183, Ceuta-Alexandria, in 1184-5, ʿAkkā-Cartagena; cf. *Riḥla*², ed. Wright and de Goeje, Leiden 1907, 35, 312); Ibn Baṭṭūṭa sailed in the 1330s from Lād̲h̲iḳiyya to Alanya on a large Genoese *ḳurḳūra* (probably a carrack), and from Sinope to Kefe on a Greek (*Rūm*) ship (*Riḥla*, ii, 254, 354).

This imbalance manifested itself not only in peaceful commercial relations between the Christian and Muslim halves of the Mediterranean, but also in their confrontational aspect: Muslim coasts and coastal cities suffered considerably more from Christian naval raids than Christian coasts did from the Muslim ones, a situation of which the Crusades were a component, a partial cause and a symptom. On rare occasions, one of the Muslim states would muster enough determination to give an effective naval response to the Christians, e.g. the Mamlūk attack on Cyprus in 1425 in retaliation for the 1365 sack of Alexandria.

The naval imbalance was up to a point compensated by the activities of Muslim corsairs, especially in the western Mediterranean [see ḲURṢĀN]. In the latter zone, Muslim refugees from Spain swelled the ranks of local corsairs, making especially the harbours of Algeria bases for efficient pirate fleets that were using small and fast types of galleys. Even their activities, however, lacked the magnitude of "Sarasin" corsair fleets of the early centuries of Islam, and did not match the grand scale of the contemporary semi-official Christian, especially Catalan, piracy.

The later Middle Ages were thus marked in the Mediterranean by a relative Arab passivity on all maritime fronts: navigational techniques, shipbuilding technology, merchant shipping, military-naval enterprises. This situation changed up to a point with the expansion of the Ottoman Turks in the course of the 15th century.

Like the Arabs of the first decades of Islamic expansion, the pre-Ottoman Turks who spread over Anatolia in the last decades of the 11th century were nomads unfamiliar with the sea. Again like the Arabs of the 7th century, some of these Turks proceeded forthwith (perhaps—as in the case of the Arabs—due to a predisposition derived from the nomad's mobility and reliance on his *markab*) to learn the seafarer's art: the *g̲h̲azāʾ* of the Turkish horsemen quickly changed into a maritime *g̲h̲azāʾ*. It was led by the Sald̲j̲ūḳid prince Čaḳa Bey and his followers in the bay of Izmir: the conquests of the islands of Lesbos [see MIDILLI] and Chios [see SAḲĪZ] during the 1080s and 1090s were examples of their signal, though only ephemeral, achievements (see A.N. Kurat, *Çaka Bey*, Ankara 1966).

After a few years, the Turks withdrew from the Aegean coast, but filtered back in the course of the 13th and 14th centuries when they formed the coastal principalities of Ḳarasī, Ṣaruk̲h̲ān, Aydīn and Mentes̲h̲e [*q.vv.*]. Some of them—especially those of Aydīn—launched a maritime *g̲h̲azā* that rivalled in scope and energy the Umayyad and Cretan Arabs' campaigns against Byzantium. The exploits of Umur Beg of Aydīn (1328-48 [*q.v.*]) became legendary to the point of being evoked, a century later, by the epic of Enverī (see I. Mélikoff-Sayar, *Le Destan d'Umur Pacha*, Paris 1953; P. Lemerle, *L'Émirat d'Aydin, Byzance et l'Occident. Recherches sur "La Geste d'Umur Pacha"*, Paris 1957). The Anatolian coasts and nearby islands of the Aegean were the principal area of the Turks' contact with the sea. It was there that they first learned the mariner's trade, and their teachers were the indigenous Greeks who had been practising this art since antiquity. Conversion to Islam, intermarriage, turkicisation, all converged to produce a special seafaring population whose maritime vocation reflected this fusion in many ways. Turkish maritime terminology is one eloquent example. Thus the most characteristic type of the Mediterranean ships, the galley, became known in Turkish by its Greek loanword, *ḳadīrg̲h̲a* (Kahane and Tietze, no. 785).

Vigorous though it was, pre-Ottoman Turkish seafaring remained confined to the Aegean part of the Mediterranean. Turkish expansion over the rest of that sea took place only under the Ottomans, and became one of the most dramatic and noteworthy features of late 15th and 16th century Mediterranean history. Commensurably, Turkish maritime terminology further grew and absorbed much of the special professional vocabulary of Mediterranean seamen—the *lingua franca* that was based mainly on Italian but also included other components from Greek to Albanian and Arabic; this Turkish dimension of the Mediterranean *lingua franca* has been the subject of an outstanding scholarly study, the above-mentioned work by Kahane and Tietze.

The Ottoman Turkish *milāḥa* thus eclipsed the earlier achievements of the Mediterranean Arabs, but it retained some of the basic aspects of their seafaring that distinguished it from the Christian one. Thus in addition to its above-mentioned initial derivativeness from pre-Islamic elements, a characteristic feature of the Turkish *milāḥa* was its being based on the intimate relationship between the military-naval and corsair dimensions of seafaring; Ottoman merchant shipping, especially long-distance merchant shipping that crossed the boundaries between the Muslim and Christian halves of the Mediterranean, remained as restricted as it had been in the case of the Arabs.

The Ottoman Turks caught up with the Christians in those aspects of *milāḥa* where the Arabs had slipped behind since the Mamlūk period: in the art of navigation itself, in using and producing the principal types of nautical instruments, and in familiarising themselves with some of the newer types of ships and shipbuilding navigation technology. The Italian portolan chart and portolan text found their Turkish counterpart in the *Kitāb-i Baḥriyye*, a book where the two principles became combined so as to produce a unique type of navigational tool that also asserted the Turkish individuality within the framework of Mediterranean seafaring. Its author, Pīrī Reʾīs (*q.v.*; see also P.

Kahle, *Pīrī Reʾīs, Bahrije*, Berlin 1926; S. Soucek, *A propos du Livre d'Instructions Nautiques de Pīrī Reʾīs*, in *REI*, xli [1973] 241-55), compiled it in two versions (926/1520 and 932/1526 respectively), producing a navigational description of the entire Mediterranean; the book is divided into a number of chapters of text, each of which is accompanied by a chart of the respective segment. Moreover, the second and longer version (one of whose manuscripts has been published in facsimile by the Türk Tarih Kurumu, Piri Reis, *Kitabı Bahriye*, 1935) is preceded by a versified introduction where the author expounds in considerable detail the art of navigation besides describing in broad terms the world's oceans and the ongoing voyages of Great Discoveries. As a book of sailing directions encompassing the entire Mediterranean and an atlas of enlarged charts of smaller segments of that sea, the *Kitāb-i Baḥriyye* is unique in portolan literature; and as a text that includes, in the second version, the latest information about the discovery of America and another great voyages, it stands out in contemporary Islamic literature.

Pīrī Reʾīs is also characteristic of the Ottoman *milāḥa* in another sense. His early training and vocation was that of a maritime *ghāzī*, whose trade combined piracy in quest of booty with the conviction of performing the *ghazāʾ*, Holy War for Islam, whenever the target was the Christian elements of the Mediterranean; intermittently, and especially in his later years, he also served the Ottoman sultan by joining the fleet on its naval campaigns. This double nature of the Ottoman *milāḥa*, sc. the individual, private one as an assortment of Turkish corsairs in constant struggle with the Christians, and the organised, governmental one as the *donanma-yi hümayūn*, the Imperial Fleet, represented two faces of the same coin, and carried to its extreme a phenomenon that was universal (cf. for example the role—not devoid of a religious hue whenever the Catholic Spanish were the target—of Sir Francis Drake in Queen Elizabeth's time). It was its degree and exclusiveness that set the Ottoman case apart from the rest. Another and steadily revitalising and growing source of strength for contemporary and early modern navies of the Christian powers, sc. the merchant marine, remained negligible in the Ottoman empire.

Corsair participation thus played an often decisive role in most of the naval campaigns of the Turkish fleet, in the extension of the Ottoman maritime frontier all the way to the western Mediterranean, and in the occupation of the post of chief admiral [see KAPUDĀN PASHA]. The case of Khayr al-Dīn Barbarossa [see KHAYR AL-DĪN] illustrates and combines all these three elements. In 1520, he presented Algiers to the Ottoman sultan as the nucleus of a new *eyālet*; in 1534 he was appointed to the upgraded post of *ḳapudān pasha*; in 1538, he led the Turkish fleet to the victory at Preveza that gave the Ottoman empire its reputation of naval invincibility which lasted until the battle of Lepanto [see AYNABAKHTĪ] in 1571.

Although the Ottoman fleet was rebuilt remarkably rapidly after Lepanto, the decline—of which that battle was an incipient symptom—became accentuated in the course of the 17th century. The chief cause was the overall decline of the empire's earlier vigour, but among the contributing factors was the loss of ability to keep in step with the Christian powers' continuing modernisation of nautical sciences. Thus the shift from oar-driven galleys to sailing ships as the lynchpin of 16th and 17th century European war fleets only belatedly ocurred in the Ottoman navy, and then again due to the efforts of a former pirate and governor of Algiers, Mezzomorto Hüseyn Pasha [*q.v.*]. This seaman, appointed *ḳapudān pasha* in 1689, introduced this aspect of modernisation that had spread among the Algerian corsairs since 1605. The improvement bore fruit in two naval victories over the Venetians a few years later (1695). The inability to keep modernising on a par with European navies subsequently reasserted itself, however, and contributed to the destruction of the Ottoman fleet by a Russian one at the battle of Česhme [*q.v.*] in 1770.

The Turkish polygraph Kātib Čelebi (1609-57 [*q.v.*]) wrote a history of the Ottoman naval campaigns (*Tuḥfat al-kibār fī asfār al-biḥār*; 1st printing, Ibrāhīm Müteferriḳa Press, Istanbul 1141/1728-9), where he also recorded the organisation and structure of the Ottoman navy. The time of this compilation, mid-17th century, coincided with the first low ebb of the Ottoman Turkish sea power, exemplified by the recurrent Venetian blockade of the Dardanelles during the protracted conquest of Crete (1645-69), and the difficulties of the Ottoman fleet to break through it. This naval intrusion of a Christian war fleet into the Ottoman home waters was paralleled by a growing dependence on Christian merchant shipping. If in the Middle Ages and early modern period Christian shipping dominated only that part of the traffic that crossed the boundaries between Islam and Christendom, by the 18th century it began to assume an ever greater share of the Ottoman carrying trade as well, when European, especially French, vessels circulated along the entire stretch between Istanbul, Izmir and Alexandria (D. Panzac, *Les échanges maritimes dans l'Empire Ottoman au XVIIIe siècle*, in *Revue de l'Occident Musulman et de la Méditerranée*, no. 39 [1985], 7-34).

In the final decades of the 18th century, there began efforts to embark on a fundamental modernisation of the Ottoman navy that included the unprecedented novelty of theoretical training in naval schools established with the help of French and other European experts (İ.H. Uzunçarşılı, *Osmanlı devletinin merkez ve bahriye teşkilâtı*, Ankara 1948, 507-11; S.J. Shaw, *Between old and new: the Ottoman Empire under Sultan Selim III, 1789-1807*, Cambridge, Mass. 1971, 160-6). It was at this point that a counterpart to the term "navigation" in the narrow sense appeared, probably for the first time, in an Islamic language: *sayr-i sufun* or *sayr-i safāʾin*, no doubt a calque on the French model, as in a report of 1211/1797 to the sultan (Uzunçarşılı, *op. cit.*, 535). These efforts heralded a growing awareness at the centre of the state that adoption of European scientific methods was a prerequisite for the empire's survival; a realisation of Turkey's potential, based on her strategic maritime-economic position, to develop a strong merchant marine, however, occurred more gradually and only in the 20th century.

Navigation in the Indian Ocean and its Persian Gulf and Red Sea ramifications is covered in section 3 below, chiefly in the specific sense of the word; it may thus be appropriate to add a brief survey of Muslim seafaring there during the later Middle Ages and the early modern period as a counterpart to the sketch of its development in the Mediterranean.

The radical and all-embracing difference between the Muslim *milāḥas* of the Mediterranean and of the Indian Ocean could hardly be over-emphasised, and is one of the intriguing aspects of Islamic history. Real enough since the appearance of Islam and during the Umayyad and early ʿAbbāsid periods, it became even more pronounced in the later Middle Ages. An almost total absence of military navies and naval warfare, in

contrast to their importance in the Mediterranean, continued to mark the oriental dimension until the arrival of the Europeans in 1498. Another difference was the complete mutuality of Muslim and non-Muslim merchant shipping in the Indian Ocean, in contrast to its increasing one-sidedness in the Mediterranean; this mutuality was compounded and in a sense caused by remarkably peaceful relations, in fact, the coexistence of Muslims and non-Muslims in India. The western coast of the Indian subcontinent could be compared in the maritime sense to that of southern Europe; but whereas the Arabs and Turks of the Mediterranean rarely and reluctantly crossed the religious boundary as merchant shippers, their Arab and Persian coreligionists of the Indian Ocean kept sailing to India and East Africa just as their ancestors had done before Islam. This activity had two significant results. One was the "maritime" spread of Islam to the Malabar [*q.v.*] region of India, East Africa and, eventually, also Indonesia; the other, more directly relevant to our subject, was a certain degree of "Islamisation" of seafaring in the Indian Ocean. If in the early 'Abbāsid period Arab or Persian shippers calling at such ports as Kh̲ambāyat [*q.v.*; anglicised as Cabay] were Muslims, the Indians sailing to Aden or other Near Eastern ports were not; by the time the Mamlūks ruled in Egypt, Kh̲ambāyat had become the most important port of Muslim-ruled north-western India (a good example of the two stages are the accounts of al-Masʿūdī (*Murūd̲j̲*, i, 253-4 = § 269) and of Ibn Baṭṭūṭa (iv, 53), who visited Kh̲ambāyat in the 4th/10th and 8th/14th centuries respectively); its Gud̲j̲arātī sailors and merchants became the third group of Muslim seafarers, after the Arabs and Persians, characteristic of the Indian Ocean *milāḥa*. The Arabs and Persians retained primacy as the seafarers of the western Indian Ocean; in its eastern half and beyond to Indonesia, on the other hand, Gud̲j̲arātī Muslims appear to have played the principal role, especially when the Chinese in the post-Yung-lo (ruled 1403-24) period and after the final expedition of 1433 withdrew from those waters and chose Malacca, instead of such South Indian ports as Kūlam and Kalikat [*q.vv.*], as the western terminus of their voyages. Alongside the Gud̲j̲arātīs, the Māppilas [*q.v.*] of Malabar deserve mention as a prominent Muslim seafaring people of the Indian Ocean from the late Middle Ages onwards. In a sense relevant to our subject, the Māppilas stand out among all others, for they were formed as a distinct human group directly through the effect of Arab and Persian sailors and merchants visiting this part of the Indian coast, often settling there and intermarrying with certain castes of the Hindu population. This integration of Muslim seafaring and maritime trade with the non-Muslim ones in the Indian Ocean, in contrast to the rigid separation in the Mediterranean, is further exemplified by the fact that the Gud̲j̲arātīs pursued their maritime enterprise alongside the Hindu Vanyas (or Banyas), while both groups were subjects of an Indian Ocean sultanate (and eventually, of the Mug̲h̲al empire), and that the Māppilas never rose to the positions of the ruling class, but in this early period lived peacefully alongside the dominant Brahmi, Nayar and other Hindu groups (as well as the Christians of Malabar) and were well treated and in fact favoured by the Hindu rulers of Kalikat, the "Zamorin" (al-Sāmarī, in Ibn Baṭṭūṭa, iv, 88, who gives an excellent account of this situation).

One of the significant results of this purely commercial nature of seafaring (except for the often bothersome piracy, endemic on most seas) in the Indian Ocean was the above-mentioned lack of a military-naval tradition. This circumstance, no doubt beneficial for centuries, had near-catastrophic consequences when the Europeans made their entry on the scene once Vasco da Gama, guided by the Arab *muʿallim* Ibn Mād̲j̲id, crossed the Indian Ocean from Malindi [*q.v.*] to Kalikat in 1498. The Portuguese immediately began to suppress native seafaring between India and the ports of the Near East both for economic reasons—re-routing the Spice Route trade around the Cape of Good Hope to Lisbon was the goal—and religious ones, especially when the target of their attack was Muslim ships or those whose destination was the Islamic Near East. Eventually, native seafaring recovered from the initial shock and by the 1540s, through its sheer volume and resilience, broke the Portuguese blockade; it was this vitality of the chiefly Muslim merchant marines of the Indian Ocean, rather than the sometimes over-emphasised effect of the entry of the Ottoman naval power on the scene, that caused the recovery of the Spice Route traffic through the Near Eastern ports. On the other hand, the natives never managed to create navies that could seriously challenge those of the Europeans; after the failure of the Mamlūks and Ottomans to defeat the Portuguese in the western Indian Ocean (roughly between 1508 and 1552), and of the Javanese to wrest Malacca from the Portuguese in 1541, all the major naval battles were fought among the Europeans themselves once the British, Dutch and French joined the fray in the 17th century. This inability appears to have been caused by the absence of a native naval tradition rather than by a lack of the appropriate shipbuilding technology: for the natives, especially Indian shipwrights, had both the skill and resources to build large and sturdy sailing ships in no way inferior to European ones like the Portuguese carracks.

Finally, mention must be made of an aspect of commercial seafaring in the Indian Ocean whose effect was powerful and lasting: the *ḥad̲j̲d̲j̲* or pilgrimage traffic to Mecca. Despite the perils of sea voyages, the maritime route was the only really feasible way for most Muslims of peninsular India, Malaysia, Indonesia and East Africa, and the large numbers of pilgrims from such ports as Surat or Acheh contributed to the economic vigour and resiliency of Muslim *milāḥa* in the Indian Ocean.

The Arab-Persian inspiration of Muslim navigation in the Indian Ocean also left its permanent stamp on the maritime vocabulary of the seafaring peoples all the way to Indonesia. Thus *muʿallim* (whose principal connotation is "teacher"), the standard Arabic word for ship's captain or pilot, spread in this connotation over the entire span of the Indian Ocean; similarly, the Persian word *nāk̲h̲udhā* "ship's master, owner" (G. Ferrand, *L'élément persan dans les textes nautiques arabes des XV^e et XVI^e siècles*, in *JA* [1924], 238-9), also found universal application all the way to Indonesia.

Lorch, *The Aegean sea-chart of Mehmed Reis ibn Menemenli, A.D. 1590/1*, University of Manchester Seminar on Early Islamic Science, Monograph no. 2 (1977).

Literature on Muslim navigation south and east of Suez is vast, and only a brief typology combined with a few examples can be attempted here. The most important and directly relevant primary sources are the Indian Ocean/Red Sea/Persian Gulf counterparts of the Mediterranean portolans, the sailing directions by Ibn Mād̲j̲id and Sulaymān al-Mahrī discussed in section 3 below. Travel accounts are the next fundamental source; the Muslim ones are relatively few, but Ibn Baṭṭūṭa's is probably the single most valuable source. European travellers, whose testimony chronologically coincides with the period discussed in this section (13th century onwards) are truly remarkable, not only for their multitude but frequently also for their power of observation and comprehension of an initially alien world. The earliest generation, in which Marco Polo and Odoric of Pordenone stand out, is accessible in Sir Henry Yule's *Cathay and the way thither*; a later generation has recorded the situation at the inception of the Great Discoveries; here, the Bolognese Ludovico di Varthema and the Portuguese Duarte Barbosa and Tomé Pires (English trs., the Hakluyt Society, 1863, 1921 and 1944 respectively) tower above all the others. Finally, the British, French and Dutch accounts compiled in the 17th and 18th centuries gradually evolved into reports by employees of the semi-official trading companies and eventually of the incipient colonial administrations now often integrated in governmental archives; Alexander Hamilton's *A New Account of The East Indies*, 1st ed. Edinburgh 1727, new ed. William Foster, London 1930, can serve as an example. Official documents in the archives of European powers have been fairly exhaustively used by historians, but those of Ottoman Turkey, relevant for the period of the Great Discoveries, have only recently begun to be studied. Aside from the pioneering essays by Ṣafvet (for example *Bir ʿot̲h̲mānlī filosunun Sumatra seferi*, in *TOEM*, i [1327], 606-9, 680), it has been chiefly the late C. Orhonlu (*Hint kaptanlığı ve Piri Reis*, in *Belleten*, xxxiv [1970], or his *Osmanlı imparatorluğunun siyaseti: Habeş eyâleti*, Istanbul 1974) and S. Özbaran who have worked on this subject; the latter's concomitant use of Portuguese and other European archival documents (his ongoing research is at this point exemplified by *Osmanlı imparatorluğu ve Hindistan yolu*, in *Tarih Dergisi*, no. 31 [1977]) complements J. Aubin's recourse to Portuguese, Persian and Arabic sources (see e.g. his *Les Princes d'Ormuz du XIII^e au XV^e siècle*, in *JA* [1953], 77-138, and *Le royaume d'Ormuz au début du XVI^e siècle*, in *Mare Luso-Indicum*, ii [1972], 77-179). The brief but significant "report" by Selmān Reʾīs published by M. Lesure, *Un document ottoman de 1525 sur l'Inde portugaise et les pays de la Mer Rouge*, in *ibid.*, iii (1976), 137-60, is revealing for an Ottoman naval commander's perception of seafaring in the Indian Ocean. The usefulness of Arabic sources in conjunction with the European ones has also been demonstrated by R.B. Serjeant, *The Portuguese off the South Arabian coast: Hadrami chronicles, with Yemeni and European accounts of Dutch pirates off Mocha in the seventeenth century*, Oxford 1963. The extensive secondary literature has so far focused chiefly on the European dimension of seafaring in the Indian Ocean; here, C.R. Boxer's *Dutch seaborne empire*, New York 1965, and *Portuguese seaborne empire 1415-1825*, London 1969, alongside his articles such as *A note on the Portuguese reactions to the revival of the Red Sea spice trade and the rise of Atjeh, 1550-1600*, in *Jnal. of Southeast Asian History*, xxv (1969), as well as V. Magalhaes-Godinho's *L'Économie de l'Empire Portugais aux XV^e et XVI^e siècles*, Paris 1969 (and the still more recent expanded editions of the Portuguese original), stand foremost. The more specifically Islamic or Asian focus is best represented by such works as W. Moreland, *The ships of the Arabian Sea about 1500 A.D.*, in *JRAS* (1939); A.R. Lewis, *Maritime skills in the Indian Ocean, 1358-1500*, in *Islam and the trade of Asia*, Oxford 1970, 238-64; A.C. Hess, *The evolution of the Ottoman seaborne empire in the age of the oceanic discoveries, 1453-1525*, in *American Historical Review*, lxxv (1970), 1892-1919; K.N. Chaudhuri, *Trade and civilization in the Indian Ocean. An economic history from the rise of Islam to 1750*, Cambridge 1985, M.A.M. Meilink-Roelofsz, *Asian trade and European influence in the Indonesian archipelago between 1500 and about 1630*, The Hague 1962; A. Das Gupta, *Indian merchants and the decline of Surat, c. 1700-1750*, Wiesbaden 1979; A. Jan Qaisir, *Merchant shipping in India during the 17th century*, in *Medieval India: a miscellany*, ii, Aligarh 1972; M.N. Pearson, *Merchants and rulers in Gujarat: the response to the Portuguese in the 16th century*, Berkeley 1976; S.D. Dale, *Islamic society on the South Asian frontier. The Mappilas of Malabar, 1498-1922*, Oxford 1980; T. Raychaudhuri, ch. "Foreign trade" in *The Cambridge Economic History of India*, i (1982), 382-433. Finally, the contributions published as a result of the meetings of the *Colloque International d'Histoire Maritime*, which convened under the leadership of Michel Mollat for the first time in Paris in 1956, should also be mentioned (especially the eighth *Colloque*, Beirut 1966, with the theme "Sociétés et compagnies de commerce en Orient dans l'Océan indien", and the tenth *Colloque*, Brussels 1968, with the theme "Les Grandes Escales").

(S. SOUCEK)

3. In the Indian Ocean.

Navigation was well developed in the Indian Ocean by mediaeval times, and utilised the regular monsoon winds of that Ocean. These winds and the general shape and situation of the Indian Ocean encouraged homogeneity in nautical matters throughout the whole area, and the techniques of navigation were probably common throughout the Ocean in spite of the different cultures which could be found around its coasts. However, our knowledge of Indian Ocean methods comes almost entirely from Muslim sources, hence it is difficult to generalise. These navigational techniques differed considerably from those used in the Mediterranean, which were again common throughout that Sea, and Muslim sailors were usually conversant with the techniques used in their own sea and were not normally capable of navigating in both seas.

Quite a corpus of Middle Eastern navigational literature has survived in Arabic and Turkish relating to the Indian Ocean, so that we are able to reconstruct easily and in some detail the methods used. The earliest navigational texts to survive are those of Aḥmad b. Mād̲j̲id [see IBN MĀD̲J̲ID], who was also the most prolific and most important writer of such

works. He was an Arab from Djulfār, who lived in the second half of the 9th/15th century, and his dated works range from 866/1462 to *ca.* 1500. About forty of his writings are extant (although not all navigational), and most are short treatises in rhyme used for mnemonic purposes. His longest poem, the *Ḥāwiya*, and his large prose work, the *Fawāʾid*, are mines of information regarding Indian Ocean navigation.

Ibn Mādjid was followed by Sulaymān al-Mahrī from Shiḥr, who wrote around 917/1511 and died some time before 960/1553. His works are arranged more clearly than those of his predecessor, and deal systematically with theory and with practical results. It is from his works that the principles of mediaeval Arab navigation can be extracted and formulated. The details can then be filled in from the more verbose works of Ibn Mādjid.

Finally, the Turkish naval commander Sīdī ʿAlī Čelebi wrote a work on navigation in 961/1554 entitled *al-Muḥīṭ* which is a compilation of material translated directly from the Arabic of the two preceding authors (mainly from Sulaymān al-Mahrī).

The art of navigation was known as *ʿilm al-baḥr* or *al-ʿulūm al-baḥriyya*. Arab sailors and ocean pilots (*muʿallimūn*) presumably learned their profession through a long apprenticeship, and much of their art was learned by rote through the medium of *radjaz* poems. It is these poems, written down by the more literary Ibn Mādjid, which form the basis of the surviving literature. Ibn Mādjid then devoted himself to writing navigational poems in *ḳaṣīda* and other forms, finally attempting his long prose work as a sort of navigational encylopaedia.

As all the precepts of this art were committed to memory, no actual recording or logging of information was regarded as necessary. No charts of the oceans seem to have been kept; at least, charts are never mentioned by the writers. Measurements were taken, but the only instrument for measurement used was a plate of wood through which a knotted string was threaded. This is called a *khashaba* by Ibn Mādjid and Sulaymān al-Mahrī, and in the Turkish of Sīdī Čelebi, a *lawḥ*. The *khashaba* was used for measuring the altitude of a star above the horizon. It was held at fixed distances from the eye using the knots placed on the string, and this enabled the height of the plate to measure different angular altitudes. Some models, however, had strings of different length for the different measurements, and some had several different-sized plates. The latitude of the observer could then be estimated from the altitudes of certain stars. Latitudes of well-known ports, as well as the latitude of the observer, were given in terms of the height of the Pole Star (*al-Djāh*) above the horizon, and when the Pole Star was out of sight, the Guards of the Little Bear (*al-Farḳadān*) (Bγ Ursae Minoris) were used and after them the handle of the Plough (δεζη Ursae Majoris) (*Banāt Naʿsh*). Measurements were taken on many bright stars and often on combinations of stars, and the readings were usually converted to a figure representing one of the groups given above. However, some altitudes like those of the Southern Cross (*al-Murabbaʿ*) were memorised as they were and not converted.

The *khashaba* originally represented the hand of the navigator held at arms' length and the unity of measurement was a finger (*iṣbaʿ*) [*q.v.*]. The standard *khashaba* was four *iṣbaʿ*s wide, i.e. a handbreadth, and this angular distance was known as a *dhubbān*. This art of measurement (*ḳiyās*) of stellar altitudes became very involved. The navigators took into account the variation in the height of the Pole Star at certain seasons (*bāshī*) and many other refinements (see Tibbetts, *Arab navigation*, 312-53).

In addition to the *khashaba*, in the later Middle Ages the Indian Ocean sailors used the magnetic compass [see MAGHNĀṬĪS. 2]. At the time of Ibn Mādjid, the compass was so well-known to the ordinary navigator and its use was so self-explanatory that the texts have very little to say about it. It was known in Arabic as *al-ḥuḳḳa*, with the compass needle as *al-ibra*. The latter was re-magnetised by a loadstone (*al-maghnāṭīs* [see MAGHNĀṬĪS. 1.]). One must possibly imagine some form of a dry compass, perhaps with the needle fixed to a pivoted card. However, this is by no means certain from the text. The compass rose, known as *bayt al-ibra*, consisted of a circle divided into thirty-two rhumbs (*akhnān*) and these were named after prominent stars whose risings (*maṭlaʿ*) and settings (*maghīb*) were approximately on these rhumbs. Thus each star name was used twice, e.g. *maṭlaʿ Suhayl* and *maghīb Suhayl*, the rising and setting of Canopus for SSE and SSW respectively. In addition, the North Pole was *ḳuṭb al-Djāh* (Polaris) and the South Pole *ḳuṭb Suhayl*, so that the latter star (Canopus) was used three times in the system. The finer points of compass work, like the recognition of magnetic variation, were hinted at by the Arab authors but were probably circumvented by them in practice. Bearings (*madjrā*) were known for all well-known routes, and as bearings were never read off a chart, magnetic variations would be incorporated into the bearing. As the risings and settings of stars were used for the equidistant rhumb system in conjunction with the magnetic compass, it seems certain that a system based on these risings and settings was used in earlier times before the compass was available. Polynesian sailors used a similar system in much more recent times, and traces of this system occur in Arabic classical literature, when al-Masʿūdī speaks of *ḳuṭb Suhayl* and al-Hamdānī uses *maṭlaʿ Suhayl*. Other stars are occasionally mentioned by Ibn Mādjid in connection with bearings, and these may be survivals from an earlier period.

These two components, stellar altitude (*ḳiyās*) and bearings (*madjrā*), enabled the Indian Ocean navigator to make a course across the ocean, but there were other fundamental tenets of their art. *Ishārāt* were landmarks and signs in the sea such as fish life, sea snakes and the occurrence of certain weeds. All this was important for locating one's position, especially as, with only stellar altitude available for position finding, one could only find one's position latitudinally and could not pinpoint it accurately. *Masāfāt* were distances; but technically, only distances which were due east-west along a latitude line. How they were measured practically is not given, although much is said about measuring them theoretically, using departures (*tirfāt*) and working by triangulation. They were measured in watches (*zām*) and the difference between practical and theoretical *zām*s were given prominence in the texts. *Siyāsāt* was the art of dealing with the crew and the passengers, and was regarded as a serious part of navigational practice. Legally, the navigator was responsible for maintaining order and seeing that the ship and its contents, human and material, arrived safely at its destination.

Finally, the theory of the monsoon [see MAWSIM] and also of irregular winds was an important part of navigational technique. It involved a knowledge of the calendar, using the stars as a guide, i.e. a knowledge of what the position of the heavens was at any date and time. A corollary of this was the use of the Great Bear as a clock for calling the watches during the night. The calendar was based on 365 days counted

from the new year (*Nayrūz*) which was originally the Sāsānid year of Yazdagird III. However, as this had no intercalation, the *Nayrūz* made a slow retrograde movement through the solar year until it appeared in November in the time of Ibn Mād̲j̲id and Sulaymān. In more modern times, it reached mid-September, when it coincided with the beginning of the South Arabia-India sailing season and at that date became fixed.

Using this calendar, the navigator memorised the correct times for starting any major voyage so as to coincide with the correct monsoon wind, the word monsoon itself being derived from the Arab word used for these sailing seasons, sc. *mawsim*, pl. *mawāsim*. *Mawsim* was actually the time for setting out on a particular voyage. The navigational texts give long and detailed lists of these *mawāsim*, divided into three sailing seasons, one with the north-east wind (*azyab*) and two with the south-west monsoon (*kaws*). There was a closed period (*g̲h̲alḳ*) during the middle of the *kaws* season, because of the height of the swell and generally heavy seas. Before this was the *awwal al-kaws* and after it the *dāmānī* seasons.

How much of the Indian Ocean was covered by this system of navigation, and for how long a period of time, is difficult to determine, as the detailed texts come only from the Arabian peninsula shores and from the mid-9th/15th century to the mid-10th/16th century. As shown above, al-Masʿūdī uses a term common in the navigational texts, and he claimed to have interrogated sailors in the Persian Gulf. These sailors sailed during the heyday of Sīrāf [*q.v.*] when there was considerable trade between the Persian Gulf and China, and there is no reason to suppose that the same navigational techniques were not used then as were used in the time of Ibn Mād̲j̲id, except for the use of the magnetic compass (which first appear around 1230 A.D. in the western Indian Ocean). This same tradition could have gone back to the beginning of Muslim trading journeys, but the close relationship between the Indian navigators' code of the *D̲j̲atakamāla* dating from the 1st century A.D. and Ibn Mād̲j̲id's section on *siyāsāt* would incline one to believe that navigation almost a millennium back was based on the same principles, although we have no proof for the more practical side of the art.

The Arab texts refer to navigation from D̲j̲idda as far east as Formosa and the Banda Islands and from Hormuz to Sofala and Madagascar. Ibn K̲h̲urradād̲h̲-bih (272/885) mentions trading almost as far south and south-east, but in the China region his text covers as far as Silla (Korea?). Thus for most of the mediaeval period, Muslim ships sailed to the majority of the ports of the Indian Ocean and the South China Sea, but there is a fringe area where navigational details are sparse and where only general directions are given. This is the area where other races probably had the sailing monopoly and Arab knowledge was second-hand, but alternatively, it may be direct knowledge remembered indistinctly from an earlier period. Such areas were beyond Kilwa [*q.v.*] on the coast of Africa and beyond Malacca and Fanṣūr (Barus) in South-East Asia. Peculiar omissions in the more important navigational texts are the Persian Gulf and the Red Sea north of Djidda. There is, however, a separate poem by Ibn Mād̲j̲id dealing with the Persian Gulf alone.

The end of this navigational tradition began with the arrival of the Portuguese. The Arabs were not slow to pick up information from Europeans. Sulaymān al-Mahrī already quotes them concerning the route round South Africa, and Sīdī Čelebi, being brought up as a Mediterranean sailor, was well-acquainted with European methods, although it is doubtful if his work had any influence on Indian Ocean practice. Among other things, the Arabs soon learnt from the Portuguese how to use the sun for navigation. However, there is a gap in Arab navigational literature until the 19th century when the few surviving pilot guides were written, and these are based completely on European guides of the same sort. Surviving examples of Ibn Mād̲j̲id's *k̲h̲as̲h̲aba* were found in the Maldives in the early 19th century and were known there as a *kamal*, and the same century produced examples of a compass rose on which appear the mediaeval names for the rhumbs. There are little beyond these few traces, and the dhow captains of the 20th century have forgotten even these, so that Ibn Mād̲j̲id's methods of navigation have become a lost art.

Bibliography: A guide to the publications relating to this subject can be found in G.R. Tibbetts, *Arab navigation in the Indian Ocean before the coming of the Portuguese*, London 1971, General introd. pp. xi-xv. There is also a bibliography of works on the subject, pp. xix-xxvi. This work was based on the manuscripts from the Bibliothèque Nationale given by G. Ferrand, *Instructions nautiques et routiers arabes et portugais*, 3 vols., Paris 1921-8, and those from Leningrad given by T.A. S̲h̲umovski, *Tri neizvestnie lotzii Aḥmada ibn Mād̲j̲ida*, Moscow 1957, together with a manuscript which is now in the library of the Arab Academy in Damascus.

While this work was in the press, an edition of the Arabic texts was prepared by Ibrahim Khouri, *Arab nautical sciences: navigational texts and their analysis (al-ʿUlūm al-baḥriyya ʿind al-ʿarab)*, 3 vols., Damascus 1970-1. For this edition, another text from Baḥrayn was used in conjunction with the preceding. He also mentions another manuscript existing in Baḥrayn and several other navigational manuscripts.

Other recent contributions not mentioned in the above works are J. Custódio de Morais, *Determinação das coordienadas geográfias no Oceano Indico pelos pilotos portugueses e árabes no princípio do seulo xvi*, Lisbon 1961; Moura Braz, *O encontro das marinharias oriental e occidental na era dos descobrimentos*, Lisbon 1962; S. Teixeira da Mota, *Méthodes de navigation et cartographie nautique dans l'Océan indien avant le XVIᵉ siècle*, in *Studia*, xi (1963), 49-90; H. Grosset-Grange, *La navigation arabe de jadis*, in *Navigation*, Paris 1966, 227-36 and (1969), 432-48; Tibbetts, *The navigational theory of the Arabs in the fifteenth and sixteenth centuries*, Lisbon 1969; Grosset-Grange, *La navigation dans l'Ocean Indien au temps de Vasco da Gama*, in *Tilas*, xii (1972), 28-36; L. Albuquerque, *Quelques commentaires sur la navigation orientale à l'époque de Vasco da Gama*, in *ibid.*, 37-47; Grosset-Grange, *Les traités arabes de navigation. De certaines difficultés particulières à leur étude*, in *Arabica*, xix/3 (1972), 240-54; Tibbetts, *Stellar navigation in the medieval Indian Ocean*, in *Jnal. of the Institute of Navigation*, xix (Washington 1972), 139-44; idem, *Comparisons between Arab and Chinese navigational techniques*, in *BSOAS*, xxxvi (1973), 97-108; idem, *Arabia in the fifteenth century navigational texts*, in *Arabian Studies*, i (1974), 86-101; Grosset-Grange, *An Arabian sea-chart of the Middle Ages*, in *Jnal. of Navigation*, xxviii (1975), 434-48; idem, *Les marins arabes du moyen âge. De certaines étoiles observées en Océan Indien*, in *Arabica*, xxiv (1977), 42-57; Tibbetts, *A comparison of medieval methods of navigation with those of the Pacific Islands*, Coimbra 1979. Recently, T. S̲h̲umovski has edited manuscripts of Ibn Mād̲j̲id's *Fawāʾid* and translated

them into Russian in *Kniga pol'z ob osnovakh i pravilakh morskoy nauki*, Moscow 1985 (this work contains a full bibliography). Grosset-Grange has also produced *Les manuscrits nautiques anciens (Ocean Indien). Considérations relatives à certains termes particuliers*, in *Arabica*, xxvi (1979), 90-9, and *Les marins arabes de l'Océan Indien* in *Jeune Marine*, xlvii-xlviii (1983). (G.R. Tibbetts)

4. In modern times.

There exist at least four lists of names of boats of the historical past: Gildemeister 1882, Kindermann 1934, Ḥabīb al-Zayyāt 1949 and Darwīsh al-Nukhaylī 1974. The number of the Arabic names for boats ranges from Gildemeister's 40 to al-Nukhaylī's 247 [see safīna]. It should be noted that these lists were probably put together by combing through the literary sources. Consequently, they do not usually have any mention of technical details, such as tonnage, length, breadth or crew, which might give a clue to what type of vessel is involved. Also, in the second place, these names have no geographical locus and appear to be hard to date; taking into account their number, one might imagine that these names vary according to the place of construction. In this section of the article, the region under consideration is restricted to the seas around the Arabian peninsula; the terminology has been brought into prominence by specialists, and its chronological stretch is, *grosso modo*, from 1900 to 1980.

The geographical conditions along the coasts of the Arabian peninsula washed by the Persian Gulf, the Arabian Sea and the Red Sea would not appear very much to favour human settlement. In fact, the number of ports there is relatively limited. In the Red Sea, along the Saudi coasts which stretch for about 2,000 km, there are only six ports, only two of which are important. Along the 640 km of the Sudan coast, there is practically only one port, Port Soudan, since Sawākin was abandoned. In Ẓufār (Dhofar), there exist two ports, Raysūt and Mirbāṭ [*q.v.*], and this last is virtually just an anchorage. In the north, apart from Masḳaṭ and Maṭraḥ [*q.vv.*] there are Sūr, once upon a time famed for its shipyards, and Shināṣ.

It is extremely difficult to estimate the proportion of the human population engaged in nautical activities, since in certain areas of the Gulf, in particular, some types of fishing activity have almost disappeared. Boat building has equally ceased with the adoption of vessels constructed from plastic materials or aluminium. In 1942, Hornell mentioned 17 centres of boat building: In the Gulf, Kuwayt and Baḥrayn; in the Arabian Sea, Masḳaṭ and Sūr (ʿUmān) and Mukallā and Aden (South Yemen), and in the Red Sea, Ḥudayda and Djudda. To these, six more in Africa should be added: Sawākin and Port Soudan in the Sudan; Maṣawwaʿ (Massawa) in Eritrea; Djibouti and Ras Aloula in Somalia; and finally, Zanzibar. These centres of construction, rather than shipyards, owe their fame to the master carpenters and certainly not to the tools used, which are restricted to the simplest of instruments: saws, a plane, an adze, a bow drill, a hammer and nails. This makes it possible to set up a workshop on any coast, provided that there is a master carpenter and a certain amount of wood available.

Regarding the description of boats, these are all fairly brief and lack, above all, any sort of uniformity. One element which seems to be common to every type of boat and on which the authors all seem to be in agreement, is the sails (A. *shirāʿ*, pl. *ashriʿa*). The wooden boats of the seas around the Arabian peninsula hoist on their masts a sort of lateen sail, but one which is not exactly triangular because the lower, external end is cut off to form more precisely a rectangular trapezoid. The proportion between the two parallel sides is in general 1:6. The sails are made locally from canvas of cotton generally imported from India. Yet there existed at Ṣuḥār and Madjis some manufacturing involving the weaving of canvas. Occasionally one finds some indications about the functions of the various members of the crews, but usually, their number is only rarely mentioned. Moreover, the number of sailors may be increased according to the function of the bọat, e.g. those used for pearl fishing.

The criteria for classification of the boats are based either on their use (pearl fishing, ordinary fishing, the transportation of people or goods) or on the type of construction (square or pointed poop). Amongst the boats typical of local use, one should mention: (1) the open boats made from palm fibres, known in Kuwayt by he name *wardjiyya* (see Al Saidan, *Encyclopedia*), simplified into *wariyya* or *huwayriyya* (see Dickson, *The Arab of the desert*) and in ʿUmān and the United Arab Emirates as *shāsha* (see Lorimer, *Gazetteer*); (2) dug-out canoes, carved out of a tree-trunk, generally known as *hūrī*, which seems to be of Indian origin; (3) rafts or sorts of rafts made up of tree trunks or lengthy pieces of wood tied together by coconut fibre, and called *ramath* (vars. *ramas* at Massawa and Port Soudan, *ramaṣ* at Ghardaḳa in Upper Egypt); at ʿAḳaba, in Jordan, the raft is called *safīna*, a classical term which is used for ships in general.

Boats driven by a motor include: (1) *abū būz* (= "having a snout"), a simple but functional transport vessel with a prow which resembles that of a schooner and with a square stern, built at Sūr in ʿUmān; (2) *landj* or *lansh* (<Eng. "launch"), in Kuwayt, a motor launch, provided with one or two sails, and employed, though not a great deal, along the Bāṭina, whereas in the Red Sea, the term is found from ʿAḳaba to as far as Ghardaḳa and Port Soudan; (3) *balāns* and (4) *māʿūna*, which according to Cifoletti, *La terminologia*, are large boats with motor drive.

The two generic terms which are most frequently applied to "local" type boats are, for French speakers, *sambouc* and for English ones, *dhow*. In fact, there still exist some thirty names, several of which refer to types of boat which have at present completely disappeared. Amongst those still in use, two further types may be mentioned, the *balam* and the *badan*, as being, in some ways, model types, representing precisely-defined sectors. *Balam* is a typically ʿIrāḳī term for a barque which has both bows and stern pointed in shape, with a flat deck and a capacity of transporting from 5 to 10 tonnes, and used on the Euphrates river. The *badan* is typical of northern ʿUmān, and is constructed according to two models, one for fishing (*badan ṣayyād*), and the other for the transportation of goods and for cabotage (*badan saffār*). This is the typical boat with an entirely sewn hull, a procedure which is resorted to in order to avoid damage to the hull in case of a collision with reefs at water level; it is however a procedure which appears to have been completely abandoned at the opening of the present century.

AL-MILAL WA 'L-NIḤAL (A.), "the religions and the sects", one of the stock phrases employed, in the literature known as "heresiographical" (which would be more accurately described as "doxographical"), to denote an enumeration of religious and occasionally philosophical doctrines, as well as the various groups or schools which profess them.

The origin of the expression is obscure, and its meaning is imprecise and variable. On the general sense of the first term, see MILLA. Al-<u>Sh</u>ahrastānī claims, in one passage, to establish a distinction between *milla* and *dīn*, the latter signifying religion as such while the former would represent a certain "form of society" (*ṣūrat al-id<u>j</u>timāᶜ*), in other words, the community of adherents of this religion (*al-Milal wa 'l-niḥal*, ed. Badrān, Cairo 1951-5, 48, ll. 13-16). In fact, the usage current in the classical period does not seem to make this distinction, seeing *milla* simply as an equivalent of *dīn* or *<u>sh</u>arīᶜa*, as is attested, *inter alia*, by various formulae of al-Masᶜūdī, such as *al-<u>sh</u>arāʾiᶜ wa 'l-milal, al-ma<u>dh</u>āhib wa 'l-milal, al-ārāʾ wa 'l-milal* (*al-Tanbīh*, ed. de Goeje, 4, ll. 2 and 19; 155, l. 10; 334, l. 18). As for the adherents of a given religion, thery are called *ahl millat* (*ka<u>dh</u>ā*): thus Ibn al-Nadīm, *al-Fihrist*, ed. Ta<u>dj</u>addud, Tehran 1971, 411-12 (on the various faiths of India), Ibn Ḥazm, *al-Fiṣal*, i, 98, l. 19 (on the Jews); *ahl al-milla* without further qualification being the Muslims (cf., for example, al-Bāḳillānī, *al-Tamhīd*, ed. McCarthy, 358, l. 8 and 359, l. 4).

While *milla* is widely represented in the Ḳurʾān, *niḥla* occurs there only once, in the verse IV, 4: *wa ātū 'l-nisāʾa ṣaduḳātihinna niḥlat^an*, and its interpretation is controversial; see especially the commentary of al-Rāzī. One of the meanings accepted by the exegetes makes it an equivalent of *dīn, diyāna, milla* and *<u>sh</u>arīᶜa*. The only distinction normally established by the "heresiographers" seems to be that *niḥla* is said to be a concept of narrower scope than *milla*; *al-niḥal* is said to denote the various doctrinal trends within a particular religion. In any case, this is the sense in which it is quite clearly meant by Ibn Ḥazm (cf. *al-Fiṣal*, i, 98, ll. 19-20; ii, 110, l. 11, and 111, ll. 2-6 on the *niḥal ahl al-Islām*); the same applies apparently to al-Nā<u>sh</u>iʾ al-Akbar, presumed author of the book published by J. van Ess under the title *K. Uṣūl al-niḥal* (*Frühe muᶜtazilitische Häresiographie*, Beirut-Wiesbaden 1971, Arabic text, 9, § 2), and also to al-<u>D</u>jāḥiẓ. *al-Ḥayawān*, i, 9, l. 8, and iv, 206, l. 12.

The expression *ahl al-milal* is attested in *ḥadī<u>th</u>* (al-Bu<u>kh</u>ārī, *<u>sh</u>ahādāt*, 29, in a formula attributed to al-<u>Sh</u>aᶜbī; Ibn Ḥanbal, *Musnad*, iv, 410, l. 1 and 17), to denote the followers of religions other than Islam, essentially, no doubt, Jews and Christians. Among the works of the Muᶜtazilī theologian Ḍirār b. ᶜAmr, there is mention of a refutation of the *ahl al-milal* (Ibn al-Nadīm, *Fihrist*, 215, ll. 4-5).

It is not known how the expression *al-milal wa 'l-niḥal*, which hardly seems to have been used before the end of the 4th/10th century, came to be constituted. It is found (for the first time?) in the *K. Mafātīḥ al-ᶜulūm* of Abū ᶜAbd Allāh al-<u>Kh</u>ʷārazmī, ed. G. van Vloten, 35, l. 12: *al-faṣl al-<u>kh</u>āmis fī asāmī arbāb al-milal wa 'l-niḥal al-mu<u>kh</u>talifa*. Under this heading, al-<u>Kh</u>ʷārazmī describes the followers of religions other than Islam, Christianity and Judaism (which form the subject of the three preceding chapters), these being atheists, Buddhists and Brahmans, Sabians, Mazdaeans, dualists of various persuasions and "sophists".

The first work to have born the title of *K. al-Milal wa 'l-niḥal* is that of the A<u>sh</u>ᶜarī theologian and "heresiographer" Abū Manṣūr al-Ba<u>gh</u>dādī [*q.v.*]. This book, unfortunately, has not been preserved. Albert N. Nader claims to have rediscovered it, following information from the *<u>shaykh</u>* al-Kaw<u>th</u>arī, in an unheaded ms. of Ba<u>gh</u>dād, which he has published under this title (Beirut, Dār al-Ma<u>sh</u>riḳ, 1970); but in the opinion of the present writer, examination of the text shows that this identification is mistaken (see on this point, Gimaret-Monnot, *Shahrastani, Livre des religions et des sectes*, i, Peeters/Unesco 1986, 11, n. 2). As for the ms. of Istanbul mentioned by Brockelmann, S. I, 667, this is in fact a copy of the *K. al-Fiṣal* of Ibn Ḥazm (information supplied by S. Yıldırım). However, from various references made to it by al-Ba<u>gh</u>dādī in his *K. al-Farḳ bayn al-firaḳ* (ed. ᶜAbd al-Ḥamīd, 109, l. 15, 230, ll. 9-11, 272, ll. 1-2, 276, ll. 20-1, 334, ll. 2-3, 358, ll. 22 ff.) as well as in his *Tafsīr asmāʾ Allāh al-ḥusnā* (ms. B.L., Or. 7547, fol. 273b, ll. 1-3), it emerges that the work in question dealt with all religions and doctrines without exception: Muslims of all sects, adepts of metempsychosis, philosophers, "astrologers" and other varieties of *mulḥidūn*. The work seems also to have contained (as is implied by *Farḳ*, 334, ll. 2-3) considerations comparable to those of *Tafsīr*, fols. 257a-273a, concerning dualists, Mazdaeans, Sabians, etc. The fact remains that it is not known exactly what al-Ba<u>gh</u>dādī means by the two words *milal* and *niḥal* and how he distinguishes between them.

Well-known, on the other hand, is the work of Ibn

Ḥazm [*q.v.*] entitled *K. al-Fiṣal fi 'l-milal wa 'l-ahwā' wa 'l-niḥal*. Although the author does not explain the precise meaning of his title, it may be assumed that the first element, *al-milal*, corresponds to the first part of the book, i.e. as far as ii, 110 (cf. ii, 111 ll. 2-3: *ḳad akmalnā... al-kalām fi 'l-milal*), where there is discussion of religions and doctrines other than Islam: "sophists", *Dahriyya*, philosophers, Mazdaeans, dualists, Brahmans, Jews and Christians; and that the second element, *al-ahwā' wa 'l-niḥal*, corresponds to the second part, from ii, 111, to iv, 227 (cf. iv, 227 l. 21: *tamma 'l-kalām fī shunaᶜ al-mubtadiᶜa ahl al-ahwā' wa 'l-niḥal al-muḍilla)*, which deals with heresies internal to Islam.

A disciple of Ibn Ḥazm, Ṣāᶜid al-Andalusī [*q.v.*] refers in his *K. Ṭabaḳāt al-umam* (Cairo ed. Maṭbaᶜat al-Saᶜāda n.d., 18, ll. 15-16), in the context of the religions of the Indians, to a book which he says he has written *fī maḳālāt ahl al-milal wa 'l-niḥal*.

Al-Shahrastānī [*q.v.*], author of a very famous *K. al-Milal wa 'l-niḥal*, gives, for his part, a new sense to these conventional terms. Linking *diyānāt* with *milal* and *ahwā'* with *niḥal* (in the context of the formula *arbāb al-diyānāt wa 'l-milal wa-ahl al-ahwā' wa 'l-niḥal*, cf. ed. Badrān, 1. ll. 8-9, 6, ll. 18-19, 44, ll. 3-5), he compares these two pairs of terms as representing two contrary types of doctrines: on the one hand, revealed religions, based on obedience to a Book, authentic or otherwise; on the other hand, doctrines of purely human origin, the product of "free thought" (*al-istibdād bi 'l-ra'y*, cf. *ibid.*, 45-6, 659-60, 666, ll. 5-6). It is to these major categories that the two parts of the work correspond: (1) *arbāb al-diyānāt wa 'l-milal* (47 ff.), dealing with, in this order, Muslims, Jews, Christians, then Mazdaeans and dualists, labelled as disciples of a "pseudo-Book" *shubhat kitāb*); (2) *ahl al-ahwā' wa 'l-niḥal* (659 ff.), where there is consideration of Sabians, philosophers, pre-Islamic Arabs, and then Indians.

In the bibliography of Fakhr al-Dīn al-Rāzī [*q.v.*], Ibn Abī Uṣaybiᶜa and al-Ṣafadī mention a *K. al-Milal wa 'l-niḥal*; the reference is apparently—although these terms do not appear in it—to a monograph otherwise known, and edited, under the title *Iᶜtiḳādāt firaḳ al-Muslimīn wa 'l-mushrikīn* (cf. Fathalla Kholeif, *A study on Fakhr al-Dīn al-Rāzī...*, Beirut 1966, 193, no. 38). In an extremely condensed fashion, al-Rāzī deals here successively with the whole range of religions or doctrines (Muslims, Jews, Christians, Mazdaeans, dualists, Sabians and philosophers), without taking account of the distinction proposed by al-Shahrastānī, whose work, in fact, he criticises very severely (cf. F. Kholeif, *op. cit.*, text of the *Munāẓarāt*, §§ 98-100).

To be mentioned in conclusion is a *Kitāb al-Milal wa 'l-niḥal* by the Zaydī Imām Aḥmad b. Yaḥyā b. al-Murtaḍā (d. 840/1437), placed at the head of the corpus entitled *al-Baḥr al-zakhkhār...*; to this there corresponds, at the head of the second corpus of the same author (and commentary on the first) entitled *Ghāyāt al-afkār...*, a commentary bearing the title *K. al-Munya wa 'l-amal fī sharḥ Kitāb al-Milal wa 'l-niḥal*. The two works have recently been published by Djawād Mashkūr (Beirut, Dār al-Fikr 1399/1979). It is from the second of these, it may be recalled, that there are drawn the *Ṭabaḳāt al-Muᶜtazila*, definitively edited by S. Diwald-Wilzer (Beirut-Wiesbaden 1961).

Bibliography: Given in the article, with the addition of G. Monnot, *Les écrits musulmans sur les religions non-bibliques*, in *MIDEO*, xi (1972), 5-48.

(D. Gimaret)

MĪLĀS, modern Turkish spelling Milas, in mediaeval and modern Western sources Milaso, Milaxo, Melaso, Melaxo, the classical Mylasa, capital of Caria, a town in south-western Anatolia and an important centre of the *beylik* of Menteshe [see MENTESHE-ELI and MENTESHE OGHULLARĪ] in pre-Ottoman times. It lies at an altitude of 60 m./185 feet in lat. 37°19′ N. and long. 27°48′ E. and is 25 km./15 miles inland from its seaport Güllük on the Gulf of Mendelia (Mandalya Körfezi).

1. Geography and history. Mīlās lies on a low eastern spur of the Sodra Dağı (Gr. St. Elias) in the centre of a very fertile plain surrounded on all sides by hills, and watered by the Sarı Çay which flows round the Sodra Dağı on the north and west. The road to the sea, however, does not follow this marshy watercourse but crosses the hills south of the Sodra Dağı, here commanded by the once powerful mediaeval fortress of Pečin (three miles south of Mīlās). The bay itself was in the Middle Ages defended by the island citadel of Asīn Kalᶜesi (Judeich, Iasos; *Athen. Mitteil.*, xv, 139) and later by a castle at the harbour built by Meḥemmed II (Pīrī Re'īs, *Baḥriyye*, ed. P. Kahle, ch. 21). At Milas met the old, and although difficult, only roads to the west to the important mediaeval port of Balāṭ [*q.v.*] (Miletus), to the north into the fertile plain of Karpuzlu Ovası and Çine and into the Maeander valley, and eastward to Mughla [*q.v.*], the other important town of the district. This, and its protected situation near the sea within a broad fertile plain, destined the town to be once more a capital when the region again attained political independence under the Turkish dynasty of the Menteshe-Oghullarī.

The region first passed temporarily under Turkish rule when after the victory of the Saldjūḳs at Mantzikert in 463/1071 [see MALĀZGIRD], the western Anatolian coast with Nicaea, Smyrna and Ephesus and even islands like Samos and Rhodes were occupied by the Turks. Although we have no definite information about Mīlās itself, we know that the monks of the neighbouring Patmos had to leave their monasteries on account of the Turks (in 1079; cf. Th. Wiegand, *Milet*, iii/1, 185). But Byzantine rule was soon restored. It was only when the centre of the imperial government was withdrawn to Constantinople after the victory over the Latins in 1261 that this region finally passed into Turkish hands. When and how the final conquest took place we do not exactly know. Melanudion, which with Mīlās formed a theme from the period of the Comnenoi (W. Tomaschek, *Zur hist. Topographie Kleinasiens im Mittelalter*, in *Abh. Wiener Ak. W* (1891), 38), and is therefore to be located in the neighbourhood of Mīlās and was Byzantine till 1273 at least, was again taken for a time from the Turks of Menteshe in 1296, so that it must have been occupied by them a few years before (Wiegand, *op. cit.*). That Menteshe is called Σαλπάχις (= Sāḥil Begi, Amīr al-Sawāḥil) in Pachymeres (i, 472; Bonn ed. ii, 211), in Sanudo (Hopf, *Chron. gréco-romaines*, 145) Turquenodomar (read: Turqmenodomar = "Turkoman of the sea") suggests a conquest from the sea. There is no longer any record at this period of the bishopric of Mīlās, which as a church of the eparchy of Caria (see G. Parthey, *Hieroclis Synecdemus et notitiae graecae episcopatuum*, 32, 112, etc.) was under the metropolis of Stavrupolis, which still existed in the 14th century (A. Wächter, *Der Verfall des Griechentums in Kleinasien im XIV. Jahrh.*, 34 ff.) (Stavrupolis, the ancient Aphrodisias, at the village of Gere, twenty miles west of Denizli).

Mīlās appears as the capital of the principality of Menteshe about 730/1330 in Ibn Faḍl Allāh al-ᶜUmarī (ed. Taeschner, 21: ملاس, corrupted from

ملاس, while Fōkeh = Phocaea which appears as a capital in the Genoese report, *ibid.*, 47, is probably an error of the writer and is not to be corrected to Mughla) and in Ibn Baṭṭūṭa (ed. Defrémery and Sanguinetti, ii, 278-80, Eng. tr. Gibb, ii, 428-9) also, who here enjoyed the hospitality of the Akhī [*q.v.*] gild (on a *Futuwwet-nāme* written in Mīlās at the end of the 8th/14th century, see Taeschner, in *Islamica*, iv, 40) and who admires the wealth of the town in gardens and orchards and gives the name of the lord of the country as Shudjāʿ al-Dīn Orkhan b. Menteshe, whom he visited in his capital Pečin, not far away. The Menteshe-Oghullarî built very little in Mīlās, as they were engaged in embellishing their residence. It is noteworthy that the two mosques of this period lie outside the old town, still largely enclosed in its old walls; one to the south, in the Ḥādjdjī Ilyās quarter, the little Ṣalāḥ al-Dīn Djāmiʿi with outer court and stepped minaret, built under Orkhan Bey in 730/1330; the other just outside the walls to the east, the mosque of Aḥmed Ghāzī, built in 780/1378, which with its entrance in the narrow side (without an outer court) and the stepped minaret built above it (Ismail Hakkı, *Kitabeler*, Istanbul 1929, fig. 47) looks as if it had once been a church (cf. Wulzinger, *Die Piruz-Moschee zu Milas*, in *Festschr. d. Techn. Hochschule in Karlsruhe*, 1925, p. 10 of the reprint). The *minbar* of this mosque, also dated 780/1378, is now in the Çinili Kiosk in Istanbul. From the position of these mosques, it may be deduced that the old town remained in the occupation of the Christians, who still held most of it in quite recent times. The only mosque in the old town, just in its centre, and in the highest part of it, the Bülend Djāmiʿ, seems also to have been a church and was probably used by the garrison, if it is old. The *madrasa* of Khōdja Bedr al-Dīn, which dates from the period of the Menteshe-Oghullarî, unfortunately cannot be exactly dated (*TOEM*, v, 58).

Mīlās received its first important building from the first Ottoman governor Fīrūz, whom Bāyezīd I appointed over Menteshe-ili (*Düsturnāme-i Enwerī*, ed. Mükrimin Halil, Istanbul 1928, 88) after the conquest (792/1390) (the date given by most Turkish sources is supported by Bāyezīd's confirmation of the Venetian privileges for Balāṭ of 21 May 1390, *Diplomatarium Veneto-Levantinum*, Venice 1899, ii, no. 134). The Menteshe who fled to Egypt (*Düsturnāme, l.c.*) was probably the prince of the house ruling in Balāṭ, while the senior Aḥmed Ghāzī may have held out in Mīlās and Pečin till July 1391 (according to his tombstone, he died in Pečin in Shaʿbān 793 as a *shahīd*). In 796/1394, Fīrūz built to the north of the old town and outside of it a splendid mosque in the style of the Bursa private mosques (cf. Wulzinger's monograph). Ottoman rule was interrupted by Tīmūr, who passed through Mīlās on his return from Izmir in the winter after the battle of Ankara (1402) (Ducas, Bonn ed., 76), for about twenty years by the restoration of the former dynasty. This last period of the Menteshe-Oghullarî has left no memorials in Mīlās or Pečin. The Ottoman commanders then made their headquarters in Pečin, after which this *ḳaḍāʾ* of the Menteshe *sandjak* was long called (Abū Bakr b. Bahrām, in Ḥādjdjī Khalīfa, *Djihān-numā*, 638, i.e. in the second half of the 11th/17th century) and only moved to Mīlās at a later date, when a magnificent official residence was erected, with defensive towers, which is still partly inhabited.

From the second half of the 11th/17th century we have Ewliyā's description of the town (in vol. ix of his *Siyāḥet-nāme*, ms. Beşir Ağa, no. 452, fol. 51 = ed. Istanbul 1935, 208-11). He says the town had 4 mosques, 3 *masdjids* and two large *khāns*. At this time, the garrison was still in Pečin. He praises the gardens of the town but rightly describes the climate as unhealthy. Among the products, he mentions tobacco, with which Mīlās supplied the whole of Anatolia. Among the holy places mentioned by him, we may note that of Shaykh Shushtarī because it probably belongs to the Baba al-Shushtarī met here by Ibn Baṭṭūṭa. Ewliyā's description of the old ruins is much exaggerated, although he saw a good deal more than now exists. Pococke (*Travels*, ii/2, ch. 6) at the end of the 18th century was still able to sketch a temple of Augustus and Roma here. All that now survives in addition to the town walls is the Balṭa Ḳapu (a Corinthian gateway with the Carian double axe) and a mausoleum called Gümüshkesen (filigree worker) (Choiseul-Gouffier, *Voyage dans l'Empire Ottoman*, i, 234 ff., pls. 85-92). In the adjacent village of Shaykh Köy is the *türbe* of Shaykh Bedr al-Dīn b. Shaykh Ḳāsim, who died at Bursa in 884/1479 and is buried here, a *khalīfa* of Sayyid Muḥammad al-Bukhārī (see *TOEM*, v. 311 ff.), on the site of a church of St. Xene, who died here (*Bull. de Corr. Hell.*, xiv, 616-17).

In late Ottoman times, Mīlās was the chef-lieu of a *ḳaḍāʾ* of the same name in the *wilāyet* of Mughla, earlier the *sandjak* of Menteshe; it is now the chef-lieu of an *ilçe* or district in the *il* or province of Muğla. Towards the end of the 19th century, Cuinet numbered the town's population at 9,373 Muslim Turks and 1,930 Greeks, but the *Sālnāme-yi Aydīn* of 1326/1908 gave a total population of 7,261, including 3,200 Greeks and 739 Jews. The Greeks were removed in the exchange of populations of 1922, and the urban population in 1955 was 10,145, which has grown now (1985 final census reports) to 23,622 for the town itself and 67,765 for the surrounding rural area, marking a grand total for the *ilçe* of 91,387.

2. Mīlās rugs. A notable product of Mīlās has for centuries been fine rugs (used in the modern definition of small pile objects, "carpets" being larger ones). They are predominantly village products of medium size, made in the hinterland of the town. The three main types are *Ada Milas* ("island", after an offshore island), *Tahtacı* (after the Türkmen group called "woodmen") and *Karaova* (after a village to the south-west of the town). Warp, weft and pile are of wool. and the symmetric or "Turkish" knot is used for the medium-to-coarse pile. Most surviving examples date from the late 18th century, though earlier ones are known, but the largest output was during the middle

to late 19th century. Like other provincial Turkish rugs, including those of Gördes and Bergama, they show the influence of 17th century Uşak and Transylvanian carpets, particularly in the borders of meandering plant ornament. Mīlās knotters used only plant and geometric ornament, and these are stylised, with flattened palmettes, serrated leaves, carnations and rosettes. A features of Mīlās rugs is the choice of soft yellow as the second colour to red instead of the more common blue. Ivory and aubergine are used for detail. "Traditional" floor rugs are distinguished by very narrow central fields, the so-called "stripe" group, or the less common square boxes or "compartments" with wide borders which predominate in late 19th century pieces. A later "Baroque" or "Medjīdian" style is a Europeanised one popularised by Sultan ʿAbd al-Medjīd (1839-61 [*q.v.*]), builder of the Dolmabahçe Palace in Istanbul. The most distinctive type is the prayer rug, which retains the *miḥrāb* arch and columns of earlier Ottoman prayer rugs but in different detail. The distinctive Mīlās type has an angular, waisted arch, supposedly derived from the horseshoe arch, on a ground of sharp red, the "columns" made up of floral ornament, and ivory spandrels filled with plant detail. The wide floral borders are generally on a yellow ground.

MILETUS [see BALĀṬ].

MILḤ (A.), salt.

1. In the mediaeval Islamic world. In pre-Islamic times, the ancient Arabs were already familiar with salt and used it, not only for seasoning their food but also in certain rites, e.g. for the oath which cemented an alliance, made around a fire (al-Djāḥiẓ, *Ḥayawān*, iv, 472-3; Ibn Ḳutayba, *ʿUyūn*, iii, 39; al-Nadjīramī, *Aymān*, 1924, 30-1; al-Rāghib al-Iṣfahānī, *Muḥāḍarāt*, ii, 623; al-Marzūḳī, *Amkina*, ii, 155; cf. T. Fahd, *Le feu chez les anciens Arabes*, in *Le feu dans le Proche-Orient antique*, Leiden 1973, 61). But it appears that certain tribes were not able, or did not want, to utilise salt for these rites, Now following their custom, even when the salt used symbolically to seal this alliance was substituted by milk, the latter substance continued to bear the name of *milḥ*.

The two types of salt known in the Islamic world were sea salt (*milḥ baḥrī*) and rock salt (*milḥ barrī*, lit. "earth salt") (see Ibn Sīnā, *Ḳānūn*, ed. Dj. Djabbūr after the 1593 edn., Beirut 1980, 196). Certain salt mines were well-known: e.g. in Africa, Awlīl was called "the salt town" (see Gaden, *Les salines d'Aoulil*, in *RMM*, xii, 436-43); on the trade in salt within the Sahara, see AZALAY. In the Persian province of Fārs, salt was produced; thus it was extracted from the fringes of the Djankan lake. Mountains of salt which remained unexploited are mentioned in the sources, near the Dead Sea, whilst near Dārābdjird in Persia, the "salt mountain" was situated; its deposits contained salt (probably in a sense wider than that of table salt, see below) in a very solid form, from which various objects were carved, e.g. trays, platters, etc., which were exported to other countries (Ibn Ḥawḳal, 300/294; *Ḥudūd al-ʿālam*, Tehran 1963, 134, tr. Minorsky, 128; Yāḳūt, *Buldān*, ii, 560; al-Ibshīhī, *al-Mustaṭraf*, Beirut 1983, ii, 314). Speaking of these deposits, Yāḳūt, *loc. cit.*, explains that, in all the mines of other countries, fairly deep mining was necessary to reach and extract the salt; the author thus reveals to us a very important factor regarding the exploitation of rock salt. Salt was also obtained from certain salt marshes (*sibākh*, sing. *sabkha*) near al-Baṣra, where a great number of slaves were employed in the production of salt (Yāḳūt, iii, 30; Sontheimer, *Ebn Baithar*, ii, 531. *sandjī*; Dozy, *Suppl.*, i, 625: *milḥ sabkhī*). Near Alexandria, on the sea coasts, according to a 17th century traveller, "holes and channels were made into which the sea water ran, and then the sun's heat evaporated this water and in the end turned it into salt", whilst another traveller in the same century describes how quantities of salt were derived from the Nile's bed (probably in the Delta; the exact region is not pinpointed), for "when the Nile recedes, one finds salt on the surface of the ground like a white covering". He adds that Egyptian salt is the best in the world and is cheap (J. Wild, in the series *Voyage en Égypte*, Fr. tr., 152 [298], and E. Brown, in ibid., 160 [310-11]). Alpin (*Hist. naturelle d'Égypte*, Fr. tr. 21 [14] and n. 36, 270 [140] in the 16th century and G. de Nerval in the 19th one (*Voyage*, 1, 286) praise the Delta salt, above all that called *rashīdī*, i.e. of Rosetta, which was very cheap. In 1320 the Egyptian authorities levied a tax on the sale of salt (E. Ashtor, *Histoire des prix et des salaires dans l'Orient médiéval*, Paris 1969, 323). Despite its low price, it is related that a certain person gave a box full of salt to someone as a present, but it appears that the originality of the idea was much more important than the present itself and indicates that it was an isolated case (Ibn Ḳutayba, *ʿUyūn*, 111, 39; al-Khālidiyyān, *Tuḥaf*, ed. S. Dahhān, 120, 192, 207; al-Rāghib al-Iṣfahānī, *op. cit.*, i, 261; al-Waṭwāṭ, *Ghurar*, Cairo 1248/1832-3, 448).

As in other languages, the word denoting salt contains several senses in Arabic: not only that of table salt (sodium chloride, see A. Siggel, *Ǧābir*, Wiesbaden 1968, 215) but also several kinds of natron and other substances resembling salt. There is found tanners' salt (*milḥ al-dabbāgha*), naphtha salt, goldsmiths' salt (*milḥ al-ṣāgha*), etc. (Thābit b. Ḳurra, ed. Sobhy, 39; Sontheimer, *op. cit.*, ii, 531; Meyerhof, *Maïmonide*, glossary; Anawati, *Drogues*, 142). The medical qualities of salt, with or without garlic, etc., are well-known in medical literature and in *ḥadīth* (al-Rāzī, *Manāfiʿ al-aghdhiya*, Beirut 1982, 203; Ibn Ḳayyim al-Djawziyya, *al-Ṭibb al-nabawī*, Cairo 1957, 309-10; *al-Raḥma fi 'l-ṭibb*, attributed to al-Suyūṭī, Beirut n.d., ch. 85; Sontheimer, *loc. cit.*; and see section 2 below); It is called "the king of spices" (Ibn Ḳayyim, *loc. cit.*); it was added to several items of food and used to preserve the freshness of fish and other products (al-Djāḥiẓ, *Bukhalāʾ*, ed. al-Ḥādjirī, 120; Rodinson, in *REI* [1949], 141, 152, 154), and mixtures of salt and spices were prepared called *milḥ muṭayyab* (lit. "perfumed salt") (*K. al-Ṭabīkh*, ms. Oxford, Hunt. 187, fols. 33a ff. = Ibn Sayyār al-Warrāḳ, *K. al-Ṭabīkh*, ed. Kaj Öhrnberg and Sahban Mroueh, Helsinki 1987).

Bibliography: Given in the article. See also H. Kindermann, *Über die guten Sitten*, Leiden 1964, 308-9.

(J. SADAN)

2. In medicine. Knowledge of the manifold healing powers of salt, already praised by Dioscurides, was taken over by the Arabs and enlarged by their own observations. Together with common salt, rock-salt (ἅλες ὀρυκτόν), to which probably corresponded Ar. *milḥ andarānī*, was considered to be the most valuable. Distinction was also made between salt

smelling of naptha (*al-nafṭī*) and of boiled eggs (*al-bayḍī*), the black Indian salt, uric salt (*milḥ al-bawl*), potassium salt (*al-ḳily*), and others. All salts have astringent power, while many are effective as emetics and laxatives, dissolve viscous phlegm and purge the bowels. Salt stimulates the appetite and aids the digestion, but excessive use heats the blood, weakens the power of vision, diminishes potency and causes itching and scabies. Bitter salt (*al-milḥ al-murr*) purges black bile, Indian salt the gastric juices. Wool saturated in a salt solution, if put on a fresh wound, stops the bleeding. According to the *K. al-Tadjribatayn ʿalā adwiyat Ibn Wāfid* of Avempace [see IBN BĀDJDJA], the manuscript of which has been lost but which is quoted at length by Ibn al-Bayṭār, salt also plays an important rôle in dentistry: dissolved in vinegar and used as mouthwash, it stops the bleeding of the gums and of open wounds after an extraction; the same solution, if heated, soothes teeth and, used as gargle, removes phlegm from the mouth.

3. The salt trade in the Ottoman empire. Salt was a very significant contributor to Ottoman state treasury revenues, both from taxation (*resm-i milḥ*) and through export to foreign countries. Although Meḥmed ʿĀshiḳ [*q.v.*] distinguishes seven distinct types and grades of salt in his *Menāẓir al-ʿawālim* (ms. Topkapı Saray, III. Ahmed 1578, fol. 369b), his categories may be simplified to two basic ones: salt produced through evaporation in above-ground pools (*mamlaḥa tuzu*), and subterranean deposits of crystallised or rock salt (*maʿden tuzu*). Based on Ḥüseyn Hezārfenn's [*q.v.*] description of goods supplied in 1071/1671 to the palace kitchens as part of the housekeeping funds (*odjāklïḳ*), sent in cash and kind from various part of the empire (Barkan, in *IFM*, xvii, 335), it may be inferred that salt from three different regions was regarded as top grade:

provenance	*quantity supplied in 1071/1661*
1. *nemek-i Eflāḳ* (Wallachian or Transylvanian rock salt)	460 *kiles* = 11.8 tons
2. *nemek-i Akhyolu* (sea salt from the Black Sea coast)	2,295 *kiles* = 58.9 tons
3. *nemek-i Ḳočḥiṣār* (lake salt from the central Anatolian salt flats near Sherefli Ḳočḥiṣār)	2,000 *oḳkas* (100 *kiles*) = 2.6 tons

Like other minerals, salt was subject to the assessment of a one-fifth tithe, the *khums-i sharʿī*, and the state typically farmed out the management of salt works to private interests and collected its share by means of the *muḳāṭaʿa* [*q.v.*] mechanism. However, in order to ensure maximum profitability and productivity of this resource, the government imposed special conditions on the operation of salt works. A detailed description of the terms of leasing and conditions of operation at a salt bed in Zwornik province (Handžić, in *Prilozi...*, 171-3) provides a solid framework for analysing state concerns. From this document, we learn that to prevent the works from remaining idle due to lack of sufficient fuel to operate the crystallising pans, the state ensured that the available wood supplies should first be distributed for use on the days devoted exclusively to the production of treasury salt (*mīrī tuz*), and only if any surplus should remain was it to be made available for production benefitting the mine workers and shareholders (*rendjberān*) at the salt works. Furthermore, to prevent loss of revenues due to price competition, government regulations provided that all treasury salt had to be sold first before the shareholders' salt could be put on to the market. These measures helped to ensure a regular and steady income to the treasury from its tax-farm leases for salt production. The location and level of production of some of the principal sites in Anatolia and Rumelia as indicated by the *aḳče*-value of a one-year's lease of the tax-farm are shown in Tables A and B below.

Table A: Anatolia

Location (province name)	*Annual Valuation of the tax farm in* akčes
1. Belas (Ḥaleb)	30,000
2. Djabbūl (Ḥaleb)	1,800,000
3. Ḳočḥiṣār (Ḳïrshehir)	450,000
4. Ṣarïḳamïsh of Čorūm (Ankara)	100,000
4. Khorkhūn (Sivas)	230,000
6. Ḥïnïs (Erẓurūm)	66,640
7. Ṭortūm (Erẓurūm)	84.252
8. Čanḳïrï (Ankara)	117,879

4. ʿUrfān/ʿOrfāni (Selānik)*	586,000
Total for the four sites in Rumelia	7,207,501**

Source: Aḵẖyolu—Istanbul, BBA, KK 2024, 127; entry dated 1051/1641. Avlonya, etc.—State treasury budget for the year 1079-80/1669-70; Barkan, in *IFM*, xvii, 210; notations dated 1101/1690-1.

* The salt works at ʿUrfān situated east of Thessaloniki on the Gulf of Stromonikos (Mostras, *Dict. Géographique*, 34; Inciciyan, *Osmanli Rumelisi*, 37) is also singled out for mention in the *Menaẓir al-ʿawālim, loc. cit.*, as one of the empire's most important sources of sea salt, a concentrated form extensively used for both industrial and domestic purposes.

** cf. the figure of 92,000 ducats (× 50 = 4,600,000 *aḳčes*) in Iacopo de Promontorio's account (Babinger, *op. cit.*, 63). Güčer (in *IFM*, xxiii, table at 130-1) calculates the composite revenues derived from 27 separate Rumelian and Anatolian *muḳāṭaʿa*s, dating mostly from the late 10th/16th century and about equally distributed between the two halves of the empire, as having yielded an annual revenue of 8,387,943 *aḳčes*.

Although the combined production of these scattered salt works in the Anatolian and Rumelian provinces was by no means inconsequential, major concentrations of salt lay in areas outside the sphere of direct Ottoman administrative control. Large quantities of salt entered the Ottoman territories via the Danubian ports from Wallachia. According to the data presented by Güčer (in *IFM*, xxiii, 115) a yearly quantity amounting to some 4,000 wagon loads of salt entered Ottoman lands as a commodity of trade, and it is known that still further amounts were sent as part of a yearly tribute to the Ottoman sultan, both from the voyvodas of Wallachia and from the *ḵẖān*s of the Crimea. According to a document housed in the Istanbul archives (BBA, KK 5024, 122), the annual contribution of the *ḵẖān*s was set at the level of 40,000 *kile*s which, using the conversion rate of 32 *oḳḳa*s per *kile* or 41 kg. specified in the document, equalled 1,640 tons. Of the several sites in the Crimea which were exploited for purposes of salt extraction, Perekop (Or-ḳapî) was the most productive. The vital importance of the salt trade to the *ḵẖān*s as a source of revenue was already noted in the mid-13th century account of William of Rubruck (*Hakluyt Soc.*, 2nd Series, iv, 52), and the continuing large scale of operations at Perekop is indicated in a succession of later sources as well. Ewliyā Čelebi estimated the value of the state-operated concession at Perekop in the mid-11th/17th century as 10,000 *guruṣẖ* (× 100 = 1,000,000 *aḳčes*) (*Seyāḥat-nāme*, viii, 561), but this clearly only represented a fraction of the total production which was estimated *ca.* 1900 to have been in the neighbourhood of 759 million pounds or 345,000 metric tons (Rubruck, *loc. cit.*). A large proportion of this was consumed internally and used for preservation of the fish catch and as an important element in regulating the diet of the sheep flocks, both mainstays of the Crimean economy (on the use of salt to help maintain the body weight of sheep, administered on a regular basis after their return from evening pasture, see Peysonnel, *Traité*, i, 172-3; and S. Parkes, *A letter to farmers...*, 50-2, 66-7). The extent of the export trade in salt in the 10th/16th century may be gauged from the figure of 4,000 wagon loads referred to above. While a "wagon load" constitutes a rather imprecise basis for measurement, and varied from as little as 1,000 to as much as 8,000 *oḳḳa*s, if we take the conservative value of 1,500 *oḳḳa*s or 1,942 tons to represent the average *araba*, and use it as a basis for estimating the proportion of total production destined for export, the 4,000 *araba* figure corresponds to about 7,768 tons, only a small fraction of what was consumed locally. This situation, in fact, matches rather well with what we know of the strictly-controlled system of market distribution, both for salt and for other minerals, which was based on spatially-confined production districts known as *örü* [see MAʿDIN. 3]. As was the case with other forms of mining, the method of labour organisation involved registration of elements among the population of villages near the centres of salt production as *tuzdju reʿāyā*. For salt production, the labour force was divided, according to the scale of production at each evaporation pond (*gölek*), into work crews of various sizes with 30, 50, 60 or even 80 members, each group under its individual foreman called *reʾīs*, each of whom in turn reported to their common administrative director, either a tax-farmer (*ʿāmil*) or the sultan's commissioner (*emīn*) (for further details and examples, see Güčer, in *IFM*, xxiii, 101-8).

On the celebrated salt mines of Wallachia and Transylvania, we have information dating from a variety of different periods which indicates a continuous, intensive production of salt throughout the Ottoman period. Fichtel's classic account of the late 12th/18th century refers to the operation of as many as 120 separate mines in Transylvania alone, while from the mines centred around Targu-Ocna on the eastern skirts of the Carpathian mountains (presumably the same as the "Hosni" mentioned in Peysonnel's account, i, 188), the annual production of the five principal state-operated mines approached the 100,000 ton mark (detailed figures for the years 1887 and 1888 may be found in Istrati, *Steinsalzwerke...*, 423).

After the state monopoly (*inḥiṣār*) on salt production in the Ottoman empire passed to the jurisdiction of the Public Debt Administration in 1882, a more centralised system of accounting was introduced to replace the system of individual taxfarm leases (*muḳāṭaʿa*). Under the new system, the empire was divided into regional and provincial bureaux (*müdüriyyets*), each of which regularly reported its production statistics to the central office in Istanbul (for a report of one of the roving treasury inspectors (*māliyye müfettishi*) named ʿAlī Bey on the operations of the salt flats at Djabbūl and at Siirt in the late 19th century, see his *Seyāḥat zhurnalî*, 6, 15-16). As a consequence of these administrative changes, very detailed and accurate figures are available, both for overall salt

production, and for export destinations in the post-*Tanẓīmāt* [*q.v.*] period. From figures for the first decade of the 20th century, it appears that, despite the existence of much greater potential reserves, production of salt was deliberately limited to about one-half of full capacity, presumably in part to maintain a resonably high price on the international market. The regular annual production of all mines and salt ponds in the empire at this time varied between 230,000 tons (table in the *Iḥṣāʾiyyāt-i māliyye* for 1325 A.H., 192-3) and 300,000 tons (table in Solakian, 83). In contrast to the situation of the 10th-11th/16th-17th centuries, a very large proportion of this increased production, ranging from one-third (Solakian, 3) to almost one-half (*Iḥṣāʾiyyāt*, 194: 114,000 tons exported out of a total production of 240,000 tons) was set aside for export, especially to the Muslim East (on this, see *Iḥṣāʾiyyāt, loc. cit.*; 114,000 tons were sent to the following destinations:

India	79,000 tons
Singapore	23,000 tons
Rangoon	9,500 tons
Montenegro	2,500 tons
Total exports	114,000 tons).

The explanation for this reversal of traditional patterns is clearly to be sought in the compelling necessity, especially after the fiscal crisis of the 1870s, of generating expanded sources for revenues in cash in order to help reduce the national debt. As part of this process, production of salt at certain sites was greatly increased over former levels in the late 19th and early 20th centuries. The largest contributor for export to the Indian market was the Yemen, where the salt works at Salif alone sent a quantity of 40,000 tons in 1324/1906 (*Iḥṣāʾiyyāt*, 191). This quantity represented nearly 40% of the total production of the Yemen for that year (Solakian, 83; the Yemen's total production for 1908 was 100,500 tons).

(R. Murphey)

MILIANA [see MILYĀNA].

MILITIA, MILITARY [see DJAYSH; DJUND].

MILK (A.), a legal term denoting ownership.

One must not expect to find in the earliest *fiḳh* texts a definition of ownership. Certainly, the term *milk* is found, but forms part of such expressions as *fī milkihi* "in his ownership", *fī ghayr milkihi* "not in his ownership" and *kharadja min milkihi* "it left his ownership". The verb "to own", *malaka*, is often used, and the phrase *malaka ʿalayhi* is employed when the object in question passes from one person's ownership into another's. Ownership (*milk*) is to be distinguished from possession (*yad*). The characteristic feature of ownership is its perpetual nature. If a tenant or lessee has only temporary possession, the ownership itself cannot be the subject of an act of relinquishment (*isḳāṭ* [*q.v.* in Suppl.]).

The person exercising ownership is the owner or proprietor. The term *mālik* is very little used; *rabb al-māl* or *ṣāḥib* is prefered to it.

The object of ownership is the thing taken into ownership, *mamlūk*. Slaves, landed estates, houses, etc., can be the subject of this.

Ways of acquiring ownership. The thing, the object of ownership, can be acquired or become the property of a person by means of purchase (*shirāʾ*), of a gift (*hiba*), an act of charity (*ṣadaḳa*) or of a testamentary disposition (*waṣiyya*).

Confusion between the right of ownership

and the thing or object of ownership. Al-Djurdjānī defines the term *milk* thus: "It is a legal relationship (*ittiṣāl sharʿī*) between a person (*insān*) and a thing (*shayʾ*) which allows that person to dispose of it to the exclusion of everyone else". Yet for the classical Muslim jurists, the right of ownership became confused with the thing which is its object. For them, ownership is not a right (*ḥaḳḳ*) but a piece of property (*māl*) which has become ownership. Moreover, *milk* is so typically a material thing forming part of a person's patrimony that the question arose whether *milk* could have as its object an immaterial thing. The difficulty arises in effect from the fact that in Islamic law, a piece of property can only be corporeal and material, and a thing which is not considered to be a piece of property cannot be the object of an act of disposition. This is the reason why claims are not transmissible. By a kind of legal fiction, certain departures from this principle are admitted in practice. Ḥanafī law, for example, allows ownership of a tenure. On the other hand, the term *milk* is sometimes applied to an obligation (*dayn* [*q.v.* in Suppl.]). In any case, the ideal of ownership (*milk*) predominates over that of obligation (*dayn*), and in certain texts, one even reaches a point where the obligation is reduced to a kind of ownership whose object is a piece of property taken in a figurative sense (*māl ḥukmī*).

(A.M. Delcambre)

MILLA (A.), religion, sect.

Although the Arab philologists claim this term as a native Arabic word (cf. Nöldeke, in *ZDMG*, lvii [1903], 413), their explanations are so farfetched as to render it almost certain that the term stems from Hebrew and Jewish and Christian Aramaic *milla*, Syriac *melltā* "utterance, word", translating the Greek *logos*. It does not seem to have any pre-Islamic attestations, hence may have been a borrowing by Muḥammad himself. In the Ḳurʾān, it always means "religion". It occurs fifteen times, including three times for the heathen religions (VII, 86-7/88-9; XIV, 16; XVIII, 19/20), once for the religion of the Christians and Jews (II, 14/15) and twice for the religion of former prophets (XIV, 6, and ? XXXVIII, 6/7). The word acquired a special significance in the Medinan period, in which the Ḳurʾān speaks no fewer than eight times of the "religion of Abraham", the *millat Ibrāhīm* [see IBRĀHĪM] (II, 124/130, 129/135; III, 89/95; IV, 124/125; VI, 162/161; XII, 38; XVI, 124/123; XXII, 77/78). Islamic literature follows this Ḳurʾānic usage, but the word is not in frequent use. With the article, *al-milla* means the true religion revealed by Muḥammad and is occasionally used elliptically for *ahl al-milla*, the followers of the Islamic religion (al-Ṭabarī, iii, 813, 15, 883, 4), just as its opposite *al-dhimma* is an abbreviation for *ahl al-dhimma*, the non-Muslims who are under the protection of Islam; e.g., Ibn Saʿd, iii/1, 238, 21; cf. also the derivative *millī* opposed to *dhimmī*, client (al-Bayhaḳī, *K. al-Maḥāsin*, ed. Schwally, 121).

In more recent and modern Arabic, *milla* still means "religion, confession, religious community", although the word is largely obsolete; but in Persian and Turkish, it has undergone semantic change. In modern Persian, *millat* means "people, nation", and the adjective from it, *millī*, means "national". In Ottoman Turkish, *millet* [*q.v.*] became a technical term and came latterly to denote the internally-autonomous religious groups within the Ottoman empire (Jews, Armenians, Greek Orthodox, etc.); but in 20th century Turkish it has come rather to mean (as in Persian) "nation, people", with *millî* meaning "national", *milliyet* "nationality" and *milliyetçi* "nationalist".

Bibliography: Ṭabarī, *Glossarium*, p. CDXC; Snouck Hurgronje, *Het Mekkaansche Feest*, Leiden 1880, 30 ff.; T.P. Hughes, *A dictionary of Islam*, London 1885, 248-9: Th. Nöldeke, *Orientalische Skizzen*, Berlin 1892, 40, Eng. tr. *Sketches from eastern history*, London 1892, 38; A. Jeffery, *The foreign vocabulary of the Qur'ān*, Baroda 1938, 268-9; B. Lewis, *The political language of Islam*, Chicago and London 1988, 38-9, 41-2, 131-2 n. 27. See also AL-MILAL WA 'L-NIḤAL. (F. Buhl [-C.E. Bosworth])

MILLET (Tkish. rendering of A. *milla* [*q.v.*]) indicates religion, religious community, and nation. These three basic meanings of the term were used in the Ottoman empire concurrently until the *Tanẓīmāt* period and afterwards.

(1) Religion, confession, rite. In the Ḳurʾān, *milla* is largely identical with *dīn* and in fact only to be translated with "religion" (R. Paret, *Der Koran. Kommentar und Konkordanz*, 30-1). The term occurs here most frequently as the *millat Ibrāhīm*, "the religion of Abraham", i.e. "the only true, monotheistic religion" and less frequently *milla* refers to the religion of the heathens; only rarely does it indicate the Christian and Jewish religions (in contrast with the confession of Muḥammad, 120). For further details, see MILLA. No example in the Ḳurʾān suggests the translation of *milla* as "congregation, people, nation".

In post-Ḳurʾānic usage, *milla/millet/millat* (the latter being the Persian form) appears in the meaning of "religion" or has this as it sole legitimate meaning. Whenever *al-milla* (with the article) indicates "the followers of the religion (of Muḥammad)" (e.g. al-Ṭabarī, iii, 813, 883), it is used as an ellipse for *ahl al-milla* [cf. MILLA]. Documentary evidence for this is found in a decree of Ṭalāʾiʿ, a vizier of the Fāṭimid caliph al-Fāʾiz, dated 593/1158, *al-milla wa 'l-dhimma* stands here for "Muslims and non-Muslims" (S.M. Stern, *Fāṭimid decrees*, 76 ff.). *Milla/millet/millat* in the (Ḳurʾānic) meaning of "religion, confession, rite" is still recorded in the 19th century. The term appears here primarily in the language of official documents, such as those of the Ottoman empire and neighbouring Muslim states, including Mamlūk Egypt and Ṣafawid Persia, and in particular, when they are intended for (prominent) Christians (and occasionally Jews). Such documents are not necessarily limited to the international correspondence between states; they can also originate from internal administration. For example, a letter of Ḳāʾit Bāy to the Doge Nicolo Trono, dated 10 Shaʿban 877/10 January 1473, is addressed to the "Glory of the Christian religion" (*madjd al-milla al-masīḥiyya*), an expression which, in the contemporary Venetian translation, is rendered by "Honor de la fede de christiani" (J. Wansbrough, in *BSOAS*, xxiv/2 [1961], 204-5). A permit for the Carmelites of Iṣfahān of 1052/1642, issued by Shāh ʿAbbās II, speaks of the Pope as "Chief and leader of the followers of the Christian religion" (*muḳaddam wa muḳtadā-yi tābiʿān-i millat-i masīḥiyya*) (H. Busse, *Untersuchungen zum islamischen Kanzleiwesen*, 191). In a *hüküm*, containing the answer to a petition of the Armenians of Istanbul and dated 1108/1697, the *dhimmī*s (whose names are listed) are said "to have abandoned their old customs and to be now ready to follow the papal rite" (*kadimi âyinlerin terk idüb papa milletine mütabaat eylediklerinden*) (A. Refiḳ [Altınay],

Istanbul hayatı 1100-1200, 21-2, no. 34). Parallel to *papa milleti*, the same text uses *firenk medhhebi* with the meaning of "Latin rite". Likewise, *millat* and *madhhab* are used analogously in an undated charter which Shāh Sulṭān Ḥusayn adressed to Pope Innocent XII (*ca.* 1113/1701-2, see L. Fekete, *Einführung in die persische Paläographie*, 543-8, no. 99). The formula *īn millat-i bayḍā*ʾ is here found in parallel to the expression *īn madhhab-i gharrā*ʾ, both meaning something like "this shining, radiating confession". Fekete-Lorenz's translation of *millat* by "people" does not seem acceptable, because the meaning "religion, confession" (see Wansbrough, quoted above) can also be based on lexicographical sources of approximately the same period. Bernardo di Parici, for example, in his *Vocabulario Italiani-Turchesco* (1665) renders *millet* with "religione", and *millet-il-mesīḥiyye* with "religione di Christo" (this was followed by Meninski and other lexicographers, see B. Braude, *Foundation myths*, 72). The formula *ḳudwet ümerā*ʾ *el-millet el-mesīḥiyye*, often used and enlarged upon in Ottoman chancelleries at the reception of high-ranking Christians, is translated by Zenker with "Model of the chiefs of the Christian religion" (J. Zenker, *Türkisch-Arabisch-Persisches Handwörterbuch*, 876). Examples of early usage of this formula are found in a *firmān* and a *nīshān* of Bāyazīd II, both of 891/1486, for Mara Branković, stepmother of Meḥemmed II (see Boškov, in *Hilandarski zbornik*, v, 208 f.; however, he interprets *millet* as "people"). *Millet-i mesīḥiyye* in the meaning of "Christian creed" is still part of the formula used in a *berāt* for the metropolitan bishop of Manāstīr (Bitola), Gerasimos, of the year 1249/1833 (see P. Džambazovski (ed.), *Turski dokumenti za makedonskata istorija V (1827-1839)*, 71, no. 230). It should be pointed out here that the expression *millet-i mesīḥiyye* is also the equivalent of "Christianity", and not only in documents originating from Ottoman chancelleries. A document to be dated before November 1650, issued by Islām Girāy III, ruler of the Crimean Tatars, and addressed to the Polish king, mentions John Casimir IV as "the noble ruler of the entire Christianity" (*barča millet-i mesīḥiyyeniñ ulugh pādīshāhī*; T. Gemil (ed.), *Relaţiile Ţărilor Române cu Poarta Otomam în Documente Turceşti 1601-1712*, Bucharest 1984, 274-5, no. 123).

(2) When *millet* is mentioned in the meaning of "religious community, community of the same confession or the same rite", the question whether those who are designated in this way are (Ottoman) *dhimmīs* is important in view of the discussion around the so-called *millet* system. For, on the one hand, this system is traditionally understood as being the structural framework which was destined specifically for the Ottoman *dhimmīs* whereas, on the other hand, it has been maintained that *millet*, in one of its traditional meanings, indicated "the Christians outside the (Ottoman) empire", and that it was not typically used to indicate the *ahl al-dhimma* specifically until the 19th century (Braude, *Foundation myths*, 73-3). It has rightly been pointed out that *millet* may very well also denote the Islamic religious community. But it is not correct that, before the beginning of the period of reform, the notion has been used in Ottoman-Turkish sources mainly in the meaning of "the community of Muslims" (Braude, *op. cit.*, 79). The documents from the *mühimme defterleri* of the *dīwān-i hümāyūn*, published by Refīḳ in *Istanbul ḥayātī*, which are informative for the Ottoman practice, rather bear witness of the opposite. Wherever the term *millet* is used here in the meaning of "religious or confessional community" (at least fifty times in eleven documents dating from before the beginning of the *Tanẓīmāt*: 1689-1785, nos. 34, 194, 223, 224, 249, 264, 265, 268; 1786-1839, nos. 20-2), it refers invariably to non-Muslim subjects of the Ottoman empire (Greek Orthodox, Armenian and Roman Catholic Christians as well as Jews with the status of *dhimmīs*). A few examples may illustrate this. In the above-mentioned document of 1108/1697, the activities of Latin missionaries are described as follows: "they travelled from province to province and instigated the Greek Orthodox, Armenian and (many) other Christian religious communities to give up their former practices and to submit to the Latin rite, while sowing discord and trying to divert them from the right path" (*vilâyet vilâyet gezüb gerek Rum ve gerek Ermeni ve gerek sair milleti nasarayı idlal ve ifsad ile kadimî âyinlerinden döndürüb firenk mezhebine mütabaat itdirüb*). The formulation used here proves that, at least from the end of the 17th century onwards, the Orthodox and Armenian religious communities, comprising Ottoman *dhimmīs*, were known as *millets* to the Ottoman authorities in the capital of the empire, or at least to the inditer of the document. Even if this document does not indeed give information about whether and to what extent such a *millet* was already understood as being an empire-wide corporation (i.e. as a religious community holding the same status throughout the entire empire and as such deserving the same protection everywhere), yet such a claim is already clearly expressed here by part of the members of the *millet*, namely the Armenians of Istanbul, who request the same position, and consequently the same treatment, as was given to their co-religionists in the province of Ṭarābulus al-Shām.

In another document from the *mühimme defterleri*, dated 1591/746, the *millet-i Ermeniyan* is already designated as an empire-wide religious community (*memaliki mahrusede sakin milleti Ermeniyān*) (see Refīḳ, *op. cit.*, 160 ff., no. 194). In the same *mühimme defterleri*, the Greek-Orthodox *millet* is mentioned as *millet-i Rūm* for the first time in a document of 1170/1757 (*ibid.*, 183 ff., no. 223; other examples of *millet-i Rūm*/*Rūm milleti* in 184 ff., no. 224, 205-6, no. 249, 219 ff., no. 264, 227 ff., no. 268), while the notion *Yahūd milleti* (religious community of the Jews) and *Katolik milleti* (religious community of the Roman Catholics) occurs here only in 1255/1839 (Refīḳ, 31 ff., no. 22). Towards the end of the 18th century, the Ottoman fiscal administration even used the collective notion of "the three (non-Muslim) religious communities" (*milel-i thelāthe*; see Y. Cezar, *Osmanlı maliyesinde bunalım ve değişim dönemi*, 185). Evidently, Muslims cannot be meant here, for the subject is the dues on alcoholic beverages (*zedjriyye*). The term thus can refer only to the Orthodox, Armenian and Jewish *millets*, and should be considered as an indication that the notion *millet* had become an accepted element in the administrative language of the central bureaucracy to indicate the non-Muslim religious communities of the Ottoman empire before the 19th century had even begun.

On the analogy of the above-mentioned communities of Ottoman *dhimmīs* of the same confession, *mustaʾmina* of the same nationality, living in the Ottoman empire under the Capitulation Treaties, have apparently been indicated as both a *ṭāʾife* and a *millet* [see IMTIYĀZĀT]. Even non-Muslim religious communities who did not live (or no longer lived) under Islamic rule, such as the Ḳipčaḳ Turkish-speaking Armenians in the kingdom of Poland, occasionally indicated themselves and others as *millets* (or as *ṭāʾifes*) (J. Deny, *L'Arméno-Coman et les "Ephémérides" de Kamieniec 1604-1613*, 62: *Ermeni*

mivlati [for *Ermenī millati*]). They also indicated "nations" or "peoples" with these terms, e.g. *Olakh millati* "la nation valaque (ici: moldave)" (*ibid.*, cf. *Noms propres*, 85 ff.: Alans, Syrian Christians, Abyssinians, Hellenes, Indians, Huns, Goths, Medes, Persians and Egyptians were all designated as *millets*). This use of the term may have been influenced by the notion of *nationes* in the Middle Ages, if *millet* is not simply the translation of *natio*. This observation leads to a third use of the term.

(3) Millet in the meaning of "[sovereign] nation, part of a people". In various Ottoman documents of the period between 1652 and 1687, the so-called Transylvanian "three nations", called Madjar, Sigel and Saz in the Turkish sources, are indicated as the *üč millet*. Here are meant "nations" as the term is used in the context of estates whose delegates, together with the ruler of Transylvania, represented the territory which was a vassal state (*Erdel* [*q.v.*] in Turkish) of the Ottoman empire, until it was officially annexed by the Ottomans in 1691 (Gemil (ed.), *op. cit.*, 40, and nos. 126, 175, 178). *Millet* in the meaning of "peoples under direct Islamic rule" occurs in translations from western languages. In the Turkish translation of a document issued by George Rájozcy I, Prince of Transylvania, dated 4 Radjab 1046/2 December 1636, the peoples ("Nations") of the Ottoman empire are designated as *ʿOthmānlu milletleri* (*ibid.*, 233, no. 101). In the Turkish text of the Treaty of Küčük Ḳaynarča (1774), the European nations (i.e. England and France) which are provided with commercial privileges, are occasionally designated as *millets*. art. xi of the Treaty in Aḥmed Djewdet, *Taʾrīkh*, 1st ed., i, 283). From the Islamic point of view, these states belong to the *dār al-ḥarb* [*q.v.*] and thus the term *millet* means something like "a sovereign nation in the enemy's territory". The rebellious Serbs who, as Ottoman *reʿāyā*, had risen in armed revolt against Ottoman rule, were also considered as *ḥarbīs* (*memleketleri dār ül-ḥarb we kendüleri ḥarbī*, in *Manāstīr sidjilli*, no. 82, fol. 27a, dated *ewāʾil-i Ṣafer* 1222/10-19 April 1807), because they had forfeited the protection which had been granted to them and lost their *dhimmī* status. Some years later, the Porte commented upon this by saying that the Serbs had claimed to form a "separate nation (*bashkadja bir millet*) with Belgrade and the other fortresses and fortified places under their own control, with Ḳara Yorgi as chief of all of them" (S. Kemura, *Prvi Srpski Ustanak pod Karagjorgjem*, Sarajevo 1332/1914, 314). In the official correspondence with the Bosnian governors after the Peace of Bucharest (28 May 1812), published in Kemura's work, the Serbs are indeed more often than not mentioned as "the Serbian nation" (*ṣīrb milleti*) (*ibid.*, 313-25), and it is repeatedly emphasised that one should try at any price to bring the Serbs back into the *raʿiyyet* relationship. After this had been realised, the same documents, inasmuch as discernible, speak only of "Serbs" (*ṣīrblu* or *ṣīrb ṭāʾifesi*), "Serbian rebels" (*ṣīrb ʿuṣātī*) or "Serbian traitors" (*ṣīrb khawenesi*). As in the case of the Serbs, the Porte began to speak of the rebellious Greeks of the Peloponnesus as "nation, group of people" (*millet*) only after it had become clear that the "treaty of protection" (*dhimma*) had to be considered as definitely retracted. In November 1827, one-and-a-half years after the fall of Missolonghi, representatives of the Porte indignantly stated that the Greeks "by having infringed upon the frontiers established by the *raʿiyyet* relation, finally had begun to call for (the status of an independent) group of people (*millet*)" (*ḥadd-i raʿiyyeti tedjāwüz ile millet daʿwāsīna čīkub*; Aḥmed Luṭfī, *Taʾrīkh*, i, 330) (quoted after the Ottoman text of the minutes of a confidential discussion between the Porte and the representatives of the great powers in the office of the Reʾīs Efendi on 5 Djumādā I 1243/24 November 1827. This text contains important information about the way the Ottomans understood *millet* before the beginning of the *Tanẓīmāt*). An undated document from the *sidjills* of Manāstīr (*ca.* Shaʿbān 1243/February 1828) says that both England and France, in collaboration with Russia, "would try to tear the people of the Greeks (of the Peloponnesus) completely away from their *raʿiyyet* relation (with the Porte) and to establish them as an independent power" (*Rūm milletini külliyyen raʿiyyetden čīkarub ḥükūmet-i mustaḳilla ṣūretine ḳonmaḳ üzere*; no. 97, fol. 81-b). Yet, until long afterwards it was being argued on the Ottoman side that "all the Greeks (including those of the Peloponnesus) form one (single) *millet*, because even their rites and their patriarch are one and the same" (*Rūmlarīn djümlesi bir millet olub ḥattā āyīnleri we paṭrīḳlarī dakhī bir oldīghīndan*; Aḥmed Luṭfī, *Taʾrīkh*, i, 332). Here, in the uniform garment of *Rūm milleti*, the meanings of *millet* as given above under (2) and (3) are irreconcilably opposed to one another.

Some general remarks may follow the expositions given above of the three basic meanings of *millet* until the beginning of the *Tanẓīmāt*. From the apparent "lack of a general administrative term" for the non-Muslim religious communities of the Ottoman empire (Braude, *op. cit.*, 74), it has been concluded—though in unawareness of the evidence given above under (2)—"that there was no overall administrative system, structure, or set of institutions for dealings with non-Muslims.... As for the so-called *millet* system, or, perhaps better, the communal system, it was not an institution or even a group of institutions, but rather it was a set of arrangements, largely social, with considerable variation over time and place" (*ibid.*). Although the premise for such a conclusion cannot be considered unlimitedly valid any more, it remains nevertheless true that the term *millet*, in the meaning of "non-Muslim religious community (in the Ottoman empire)", was by no means used exclusively or at all consistently before the 19th century. This turns out to be true even in documents where the notion occurs more or less regularly. So far, this regular use can only be demonstrated in some central organisations of the Ottoman empire, but not in provincial or local administrations, *ṭāʾife*, for example, being a frequently used alternative in the latter. Occasionally, *millet* and *ṭāʾife* are found in the same document next to one another with the same meaning, or also in combination: *millet-i mezbūre ṭāʾifesi* (see Refīḳ, *op. cit.*, no. 194). Sometimes, in writings of the same date, the *reʾīs ül-küttāb* used *millet*, the Grand Vizier on the other hand *ṭāʾife* (*ibid.*, no. 268). It is in any case noteworthy that, even when the documents of the sultan do not shrink from using the notion *millet* (see the charters published by Kemura, mentioned above), the term is missing in the corresponding documents issued by governors and *ḳāḍīs*. This state of affairs reflects certainly more than just the inadequate stage of research. It rather looks as if the individual religious communities, which, on the local level, had to live under conditions which were varying according to place and time, in the perspective of the central government were seen as parts of religious and juridical communities which, under the leadership of their (ecclesiastical) heads, ideally had an empire-wide dimension. At a period as yet to be determined more closely, the term *millet*, probably current in the office of the *reʾīs ül-küttāb* in the first place, was used for this

viewpoint of the central authorities. It is perhaps permitted to interpret the material provided by Refīḳ's *Istanbul ḥayātī* in such a way that the term *millet* was given the above-mentioned meaning only after the religious regulations of the empire became increasingly threatened by the intensified missionary activities from the West in the 17th century. The consequence of the latter may have been that the central government, as the guarantor of the existing order, saw itself more and more forced to interfere in extensive parts of the empire in order to protect the traditional religious communities (for the missions of Jesuits, Lutherans, Calvinists and Anglicans in the Ottoman empire, and the attitude of the Porte towards them, see S. Runciman, *The Great Church in captivity*, 226-319). It is conceivable that the idea of describing as empire-wide *millets* traditional religious communities based on identity of confession may only have emerged in the course of the development of this kind of empire-wide "religious policy" of the Porte.

Bibliography: An extremely informative collection of sources for the use of the notion *millet* in Ottoman administration is Aḥmed Refīḳ [Altinay]'s work in 4 vols. on life in Istanbul: vol. i. *On altïncï ʿaṣïrda Istanbul ḥayātī (1553-1591)*, Istanbul 1917; vol. ii: *Hicrî on birinci asırda İstanbul hayatı (1000-1100)*, Istanbul 1931; vol. iii: *Hicrî on ikinci asırda İstanbul hayatı (1100-1200)*, Istanbul 1930; vol. iv: *Hicrî on üçüncü asırda İstanbul hayatı (1200-1255)*, Istanbul 1932 (reprint of all four volumes, Enderun Kitabevi, Istanbul 1988, under slightly different titles). The most comprehensive and critical discussions on the notion and the phenomenon of *millet* are found in B. Braude and B. Lewis (eds.), *Christians and Jews in the Ottoman Empire. The functioning of a plural society*, New York-London 1982, in particular, Braude, *Foundation myths of the Millet system*, i, 69-88, containing the severest criticism so far of the traditional concept of the Ottoman *millet* system. From the point of view of legal history, serious doubts of the traditional interpretation, overlooked in the above-mentioned discussions, had already been formulated by H. Scheel, *Die staats-rechtliche Stellung der ökumenischen Kirchenfürsten in der alten Türkei*, in *Abh. Pr. Ak. Wiss.* (1942), Phil.-hist. Kl., no. 9, Berlin 1943. (M.O.H. Ursinus)

MILYĀNA, Miliana, a town of Algeria, situated 56 miles/91 km to the southwest of Algiers. It is built on a raised plateau at an altitude of 2,361 ft./720 m. on the side of the Zakkār G͟harbī (5,179 ft./1,579 m.) and dominates to the east and south the valley in which an important river, the Chélif, flows and drives numerous mills. The comparative freshness of the temperature and the abundance of flowing streams support a rich vegetation. The town itself is surrounded by gardens and orchards cultivated by the indigenous people, whilst European colonists raised on the nearby slopes vines with notable products. Miliana is an agricultural and market centre for the peoples, mainly Berber, who occupy the Zakkār massif, and has acquired a certain importance as a centre for mineral exploitation, sc. for the iron extracted near to the town itself. Moreover, it is a centre of pilgrimage for the Muslims of the region and even for those of the Mitid͟ja and Algiers, who come to visit the tomb of Sīdī Aḥmad b. Yūsuf, a marabout who lived at the beginning of the 8th/14th century and who was famed for his satirical pronouncements about the towns of Algeria. In *ca.* 1930, the town had some 12,000 inhabitants.

Miliana has grown up on the site of the Roman town of Zucchabar, whose ruins were still visible in the time of al-Bakrī and of which some traces, noted by Schaw in the 18th century, still existed at the time of the French occupation. The actual town dates from the 4th/10th century, its foundation being attributed by al-Bakrī to the Ṣanhād͟jī chief Zīrī b. Manād, who assigned it to his son Buluggīn. The same author mentions it as a prosperous, well-populated town, well-supplied with foodstuffs and with a well-frequented market. Al-Idrīsī records the many streams there and the fertility of the surrounding countryside. After the fall of the Ḥammādid dynasty, Miliana passed into the power of the Almohads, was temporarily occupied by ʿAlī and Yaḥyā b. G͟hāniya, and was then, for a century and a half, disputed by the Ḥafṣids, the ʿAbd al-Wādids of Tlemcen and the Marīnids.

In the 9th/15th century, Miliana, together with Médéa and Tenès, formed part of an independent principality founded by a Zayyānid pretender; it became once again dependent on Tlemcen when this pretender's son brought together under his own control the united principality. Nevertheless, Leo Africanus states that the inhabitants enjoyed a virtually complete independence. But they lost this when the Turks arrived, for ʿArūd͟j [*q.v.*] seized control of Miliana soon after the capture of Algiers. Under the Turkish rule, the town came within the *dār al-sulṭān*, sc. the territory directly administered by the Pas͟ha of Algiers. Various Turkish officials resided there, one of them having the job of going round the tribes each year and extracting taxation with the aid of troops specially sent for this task from the capital. After the capture of Algiers by the French, Miliana was for a while independent, and was then occupied in 1834 by ʿAbd al-Ḳādir [*q.v.*], who installed there a bey. The French in turn took control of the town on 8 June 1840, but were closely blockaded within it by the *amīr*'s partisans until 1842, when operations conducted in the western part of the Mitid͟ja, in the district of Médéa and in the Chélif valley, assured freedom of communications.

(G. Yver)

MĪM, the twenty-fourth letter of the Arabic alphabet, transliterated as *m*, with the numerical value of 40 according to the eastern order [see abd͟jad].

Definition: *occlusive, bilabial, voiced, nasal* (Cantineau, *Études*, 28; Fleisch, *Traité*, i, 58). For Sībawayh (*Kitāb*, ii, 454), its place of articulation is situated between the lips; it is an "open sound" (*mad͟jhūr*), emitted from a base in the mouth and the nasal cavities (*k͟hayās͟hīm*), where nasalisation (*g͟hunna*) is produced; it is also a "hard sound" (*s͟hadīd*), by means of which the sound (*ṣawt*) is transmitted. As for al-K͟halīl, he calls this letter "occlusive" (*muṭbiḳ*), because it closes the mouth when one articulates it (*K. al-ʿAyn*, 65). For Ibn Sīnā, the place of articulation of *mīm* is partly between the lips and partly the nasal region, so that the air, when it passes through the nasal cavities and the open space there, produces a humming sound (*dawī*) (Roman, *Étude*, i, 263).

In phonology, the phoneme *m* is defined by the oppositions *m-f*, *m-b* and *m-n* (Cantineau, 167).

Alterations: in final place in a word, *-m* in Semitic tends to pass into *-n* in Arabic. Between the final place in a word and the initial of the following one, one finds either the assimilation *-mb*>*bb* or its disappearance (*ikhfāʾ*) leaving just nasalisation. Before a dental, palatal or velar, one has the assimilation *m*>*n*. In the neighbourhood of a nasal *n* or *m* of the bilabial *w*, one finds the dissimilation *m*>*b* (Cantineau, 29-30; Fleisch, i, 74, 80, 94).

Derenbourg, Paris 1889. (G. Troupeau)

MIME, MIMIC [see ḥikāya].

MĪMIYYA [see muḥammadiyya].

MINĀ, later often pronounced *Munā*, a place in the hills east of Mecca on the road from it to ʿArafa [*q.v.*]. The distance between the two is given by al-Muḳaddasī as one *farsakh*, while Wavell calls it five miles and says the continuation to ʿArafa is nine miles. Minā lies in a narrow valley running from west to east, 1,500 paces long according to Burckhardt, surrounded by steep barren granite cliffs. On the north side rises a hill called Thabīr. Travellers from Mecca come down into the valley by a hill path with steps in it; this is the *ʿAḳaba* [*q.v.*] which became famous in connection with Muḥammad's negotiations with the Medinans. The town consists of stone houses of fair size which form two long streets. Close beside the ʿAḳaba is a rudely-hewn short pillar leaning against a wall: this is the "great *djamra*" or the "ʿAḳaba *djamra*", at which the pilgrims cast stones [see djamra]. A little to the east in the middle of the street is the "middle *djamra*" also marked by a pillar and lastly at a similar distance the third (the so-called "first *djamra*"). As one approaches the east end of the valley, there is on the right of the road a square mosque surrounded by a wall, the Masdjid al-Khayf, which was rebuilt by Ṣalāḥ al-Dīn and in 874/1467 reconstructed by the Mamlūk Sultan Ḳāʾit Bey. Along the west side of the surrounding wall is a colonnade with three rows of pillars, but there is none on the other sides. It was different earlier, for Ibn Rusta (*ca.* 300/912-13) tells us that the mosque had 168 pillars, of which only 78 supported the west wing. The north side of the wall is pierced by several doors. In the centre of the court of the mosque is a little domed building with a minaret built over a fountain. There is another dome over the colonnade on the west side.

The most striking feature of Minā is the very great difference, noted already by al-Muḳaddasī, between the quiet and empty streets of the greater part of the year and the tremendous throng and bustle of the pilgrimage month when, as Wavell says, half a million people with heavily laden beasts of burden hope to cover nine miles in the period between sunrise and 10 a.m. Every spot in the valley is then covered with tents in which the pilgrims spend the night. Al-Muḳaddasī talks of fine houses built of teak and stone (among them was a frequently-mentioned *Dār al-Imāra*), and large stone buildings are still to be found in Minā; but these are usually empty and are only let at the pilgrimage to the more wealthy pilgrims and even among these many prefer to live in tents. This depopulation of the city has been a subject for discussion among the legists, for some held that this circumstance enables Minā and Mecca to be regarded as one city (*miṣr*), a view which others reject. But another circumstance must have contributed to prevent a permanent settlement of the town, which is also true of other places on the pilgrims' route, namely the incredible filth and dreadful stench which is caused by such masses of humanity at the Ḥadjdj. Complaints are made even of the uncleanness of the Masdjid al-Khayf, and at Minā there are further the decomposing remains of the countless animals sacrificed.

The Ḥadjdj ceremonies in Minā date back to the old pagan period [see ḥadjdj], for Muḥammad, as usual in taking over old customs, contented himself with cutting out the too obviously pagan elements, the result being that we can no longer reconstruct the old forms with certainty. The old poets make only passing references to them [see djamra]; that they were similar to the Muslim practices is evident, for example, from an interesting passage in the Medinan poet Ḳays b. Khaṭīm (ed. Kowalski, no. 4, pp. i ff.), where there is a reference to the "three days in Minā" and where we further learn that the festival held there offered an occasion for entering into and carrying on love-affairs. The stone throwing is certainly very ancient; its significance is quite unintelligible in Islam, although it is doubtful if there were already three heaps of stones in the pre-Islamic period [see djamra]. It is also clear that the ceremonies in Minā formed the conclusion of the Ḥadjdj even in ancient times. Muḥammad, however, made some serious alterations here, for he inserted a visit to Mecca before the stay in Minā, whereby the ceremony first received its legitimate Islamic character; but the old elements remained the important factors, for the Ḥadjdj ends not in Mecca but, as before, in Minā, to which the pilgrims return after the digression to Mecca. A survival of the pagan period probably exists in the slaughtering place preferred by the majority on the southern slopes of Thabīr "the place of sacrifice of the ram" (cf. sūra XXXVII, 101 ff.), as its association with the story of Abraham probably enabled an old pagan sacred spot to be adopted into Islam. From Burton's description, it is a square rocky platform reached by a few steps. Muḥammad himself did not directly forbid the use of the pagan place of slaughter, but deprived it of its importance by saying that all Minā is a place of sacrifice: a clever procedure which he also followed at ʿArafāt and Muzdalifa.

According to the law of Islam, pilgrims who arrive in Mecca on 8 Dhu 'l-Ḥidjdja should leave this town in time to be able to perform the mid-day *ṣalāt* in Minā and remain there till sunrise on the 9th and only then go on to ʿArafāt. The majority, however, do not do this but go on the 8th straight on to ʿArafāt where they arrive in the evening. After performing the ceremonies of the pilgrimage in ʿArafāt and Muzdalifa [*q.v.*], they go before sunrise on the 10th to Minā to celebrate the day of the great sacrifice (*yawm al-aḍḥā* or *yawm al-naḥr*) (in contrast to the pre-Islamic practice, which was to start only after sunrise). Here the concluding rites are gone through, the slaughtering, the clipping of the hair and nails and the lapidation. There is not complete agreement on the order of these ceremonies, which one tradition (al-Wāḳidī, tr. Wellhausen, 429) makes Muḥammad declare to be quite irrelevant. The modification of the stone throwing is noteworthy, for on the day of sacrifice it is only done at the ʿAḳaba heap, while on the three following days each pilgrim daily throws seven little stones on all three heaps (see Burton, ii, 205). The conclusion of the whole pilgrimage is the three Minā or *tashrīḳ* days, the 11th, 12th and 13th Dhu 'l-Ḥidjdja [see tashrīḳ]. They are days of rejoicing which are celebrated with great jubilation, illumination and the firing of shots. All the pilgrims, however, do not wait for these three days but set off on their return journey before then.

(FR. BUHL)

MĪNĀ' (A.), port, harbour.

(a) *The term.* Arabic *mīnā'* has been little used in either Persian or Turkish, although it is routinely listed in their dictionaries (thus J.W. Redhouse, *A Turkish and English lexicon*, 205; F. Steingass, *A comprehensive Persian-English dictionary*, 1364; 'Alī-Akbar Dihkhudā, *Lughat-nāma*, Tehran n.d., s.v.).

In Persian, the standard term is *bandar* [*q.v.*], in Turkish, *liman*. *Bandar* was widely used in Ottoman Turkish and, in later centuries, also in Arabic (thus Ibn Baṭṭūṭa, iv, 89, in reference to Ḳāliḳūṭ, has *iḥdā 'l-banādir al-'iẓām*; Ibn Mādjid: *bandar Djudda*, in G. Ferrand, *Instructions nautiques et routiers arabes et portugais des XV[e] et XVI[e] siècles*, Paris 1921-23, i, fol. 78b; S. de Sacy, *Chrestomathie arabe*, Paris 1827, iii, 132, in a late 18th century reference: *bandar Maskat*).

Mīnā' itself is attested since the 3rd/9th century (al-Balādhurī, *Futūḥ*, ed. Munadjdjid, 151; al-Ya'ḳūbī, *Buldān*, 327), and appears to be of non-Arabic origin, derived either from the accusative of the Greek *limen* (Nöldeke), or from ancient Egyptian; if the latter is the case, the word would have entered Arabic either via the above-mentioned *limena*, or directly through Egyptian's Coptic stage (M. Lubetski, *The early bronze age origin of Greek and Hebrew liman, "Harbor"*, in *JQR*, n.s., lxix/3 [Jan. 1979], 158-68). The non-Arabic origin of *mīnā'* is also suggested by the hesitancy of classical Arab authors whether to treat this word as a masculine or a feminine, and whether to write it with or without a *hamza*. Moreover, a passage in Nāṣir-i Khusraw's *Safar-nāma*, ed. Wazīnpūr, Tehran 1350/1971, 20, shows that the term was new to this author otherwise familiar with Arabic, and that he understood it to denote a special type of harbour along the Syro-Palestinian coast, the region where the borrowing is believed to have taken place.

Mīnā' has become the comprehensive term for both nuances expressed by the English words "port" and "harbour", at the expense of the classical terms *marsā*, *furḍa* and *marfa'*, of which the first two were common in the early centuries and expressed the two nuances: *marsā* (as well as *mīnā'*) referring more specifically to the maritime aspect implied by "harbour", *furḍa* to the economic function implied by "port" (thus Abu 'l-Fidā', *Taḳwīm*, 248: *Bayrūt furḍat Dimashḳ ... wa-lahā mīnā' djalīl* = "Beirut is the port of Damascus, and has a fine harbour". Moreover, *marsā* is attested in the Ḳur'ān, XI, 41, in the passage *Irkabū fīhā bismi 'l-Lāhi madjrīhā wa-mursāhā* = "Embark in it! In God's name shall be its course and its berthing."

In contrast to this relative proliferation and differentiation in Arabic, *bandar* remained the only widely used term in Persian; on the other hand, Ottoman Turkish, in addition to *liman* and *bandar*, also used *iskele*, a Mediterranean word that has been used both in the general sense and for designating the specific landing place rendered in English as pier, wharf or quay (thus Meḥemmed II orders Yūnus to go to the *iskele* [of Istanbul] and sail with ten ships to the *limun* of Enoz (Enez); cf. 'Āshiḳ-Pasha-zāde, *Ta'rīkh*, ed. F. Giese, 135-6; see also A. Tietze and A. Kahane, *The lingua franca in the Levant*, Urbana 1958, no. 801 (*liman*), no. 841 (*iskele*); the broader meaning approached the connotation of Arabic *furḍa*, as in Ewliyā Čelebi, *Seyāḥat-nāme*, ix, 803, *Mekke'nin iskelesi Djiddedir* "Djudda is the port of Mecca."

(b) *Historical survey.* A general distinction can be made between the Islamic ports of the Mediterranean basin and those on the other side of the isthmus of Suez. The harbours of the Mediterranean often displayed a sophisticated building technique, a bequest of their Phoenician or Roman past: those of the Syro-Palestinian coast, the prime examples, found their counterparts in Carthage and Izmir. The distinctive feature was that of an inner harbour, partly man-made, and an outer one, as a rule a natural harbour formed by a bay or just an adequate anchorage. The inner harbour was symptomatic of the military dimension of the Mediterranean where ships had to be shielded not only from natural elements but also from enemy fleets. Inner harbours often had a special entry gate formed by guard-towers on either side; the entrance was further protected by a chain stretched at will, especially at night, between the two towers. In contrast, the ports south and east of Suez lacked such features and were as a rule natural bays or inlets, coastal or island anchorages, or river estuaries: Ubulla, Sīrāf, Ṣuḥār, Aden, Djudda, for example, although some of them did have fortifications protecting them from landward. This was due to a relative absence, in comparison with the Mediterranean, of naval warfare in those seas until the arrival of the Europeans and Ottomans in the 16th century.

It is worth nothing that this dichotomy, which antedates Islam, was reinforced and received a special character due to the confrontational nature of the Islamic and Christian halves of the Mediterranean; Muslims displayed a lasting reluctance to frequent Christian ports as cargo shippers and traders, whereas Christians seldom suffered from reciprocal inhibitions (in this respect, a *fatwā* given by a *faḳīh* of Mahdiyya in 484-6/1091-3 is significant; see H.R. Idris, *La Berbérie orientale*, 664). In eastern waters, on the other hand, no religious confrontation of such magnitude and nature occurred, and Arab and Persian Muslims kept sailing, chiefly as merchants, to India and East Africa. As a result, a number of harbours along the western coast of India became regular ports of call of these Muslims, some of whom proceeded further east to the ports of Malaya and Indonesia, a penetration that proved of capital importance for the eventual Islamisation of those regions.

1. *The ports of Arabia.* The ports of the Arabian peninsula—from 'Umān in the east to those of Ḥidjāz in the west—were those from where the Arab seafaring tradition had issued well before the appearance of Islam. It was at the same time an international tradition: Persians, Ethiopians, Indians had a share in

it as well. Persian participation was the strongest; some of the basic Arabic maritime terminology is of Persian origin, and Persian was the language of one of the principal ports of ʿUmān in the ʿAbbāsid period, Ṣuḥār [*q.v.*]. To quote the 4th/10th century geographer al-Muḳaddasī, "The language of this province (i.e. ʿUmān) is Arabic except in Ṣuḥār, where they speak Persian; the majority of the people of ʿAdan and Djudda are Persians [too] but [now] they speak Arabic..." (96). The Arab mariners of Ṣuḥār and Masḳaṭ, as well as their companions from the ports of the southern coast, acquired a remarkable skill at exploiting the seasonal monsoon winds for voyages to India and East Africa.

The ports of Arabia were connected by caravan routes with inland market towns such as Mecca, or by coastal shipping with ports in the Persian Gulf and the Red Sea. These market towns and ports in turn often functioned as relay posts for goods that ultimately reached the Mediterranean ports of the Syro-Palestinian coast and Egypt. At the height of the prosperity of ʿIrāḳ in the ʿAbbāsid period, however, the Persian Gulf ports rose proportionately in importance and some of the Orient trade passed directly to Sīrāf, Ubulla and Baṣra; at other times, Aden may have been bypassed by ships that proceeded directly to Djudda. However, both the Persian Gulf and the Red Sea were fraught with navigational problems and dangers different from those of the Indian Ocean, and it seems that except for the three centuries of ʿAbbāsid prosperity, during which Baghdād and Baṣra resembled magnets attracting "China ships" to their outposts of Sīrāf and Ubulla, most of this long-distance ocean traffic preferred to use the more familiar termini along the coast of ʿUmān, Ḥaḍramawt and Yemen. In the later Middle Ages, Aden [see ʿADAN] became the most important trans-shipment port for the Orient trade, much like Alexandria did for Mediterranean trade. The two ports, linked by a combination of local maritime, overland and river connections, functioned in tandem as the two termini of the Spice Route, the maritime counterpart of the transcontinental Silk Road. The heyday of Aden's supremacy coincided with the Fāṭimid, Ayyūbid and Mamlūk periods, but the port stood out already in the early ʿAbbāsid centuries. Thus al-Yaʿḳūbī (319) mentions it as "the port of the China [traffic] ships"; al-Muḳaddasī (97), describing its trade, speaks of the wealth of its merchants much as other contemporary authors do of the wealth of those of Sīrāf [*q.v.*], stating that "the wealth of its merchants has become proverbial." Aden may have been the most international of Arab ports. Its principal direct partners overseas were the ports of India, and Indians as well as Egyptians seem to have formed a sizeable proportion of Aden merchants, judging from Ibn Baṭṭūṭa's description (ii, 177-9). Another important segment of the business people of Aden in this period were Jews, who stood out among all others on account of their far-flung connections from Europe to India (S. D. Goitein, *A Mediterranean society*, see *Bibl.*).

2. *Baṣra and the Persian Gulf.* Baṣra, founded by Muslims in 17/638 on the order of the caliph ʿUmar b. al-Khaṭṭāb, lay some 4 *farsakhs* (about 24 km) west of the Shaṭṭ al-ʿArab (Ibn Ḥawḳal, 235), with which it was connected by two canals, the Nahr al-Ubulla on the south and the Nahr al-Maʿḳil on the north. These two, issuing from the Shaṭṭ, formed a semi-circle and met in the vicinity of Baṣra, ramifying into a network of smaller canals that criss-crossed the city. The two principal canals were affected by the tide and ebb which, if expertly exploited, allowed sea-going ships of lesser tonnage to reach Baṣra's harbour quarter of al-Kallāʾ (Abu 'l-Fidāʾ, *Taḳwīm*, 57; Ibn Ḥawḳal, *loc. cit.*, and map on p. 20; this map shows a third canal to the south of the Nahr al-Ubulla, not mentioned in the text). The large merchantmen did not proceed to Baṣra but stopped at Ubulla, situated on the Shaṭṭ's western bank, or at Sīrāf on the Persian coast; these two ports were the termini of the ships that came from India and China (al-Yaʿḳūbī, 323, 365; al-Ṭabarī, i, 2384). Islamic al-Ubulla was the classical Apologos, the port of the maritime merchant kingdom of Mesene or Characene [see MAYSĀN], thus suggesting a continuity in the role played by the Shaṭṭ in long-distance maritime and caravan trade. The importance of Sīrāf, despite the obvious convenience of Ubulla as a place of trans-shipment closer to Baṣra, may be sought in two factors. One was the difficulty of approach and entry into the Shaṭṭ's estuary. The dangers facing ships heading for Ubulla were first of all treacherous shoals, whose avoidance was sought by means of wooden scaffoldings, the *khashabāt* [*q.v.*], some distance offshore, with guards and fires lit at night forewarning the arriving ships (al-Masʿūdī, *Murūdj*, i, 230 = §242); the other danger was a whirlpool (*khūr*) inside the Shaṭṭ close to Ubulla's harbour itself, where many ships met their doom until an ʿAbbāsid princess reportedly solved the problem, at her own expense, by dumping large quantities of rubble on the site (Ibn Ḥawḳal, 237). The other reason for Sīrāf's prosperity was its additional function as a terminus for caravan routes linking it with Shīrāz and other centres of Iran's interior.

The fact that large sea-going ships could not proceed beyond Ubulla was no obstacle. Goods were transferred on to smaller craft that could reach not only Baṣra but also Baghdād and even proceed further north; in any case, the river harbour of al-Kallāʾ on the eastern side of Baṣra was paralleled by the caravan quarter of al-Mirbad [*q.v.*] on the west, just as the river harbour of Baghdād was near the place where the Tigris communicated with the Euphrates by means of the ʿĪsā canal. All these factors combined to form an interdependent network of maritime, river and caravan routes between Sīrāf, Ubulla, Baṣra and Baghdād, playing an essential role in the vast dimension of East-West trade. Classical Arab historians and geographers recorded this in their works, e.g. al-Ṭabarī, who makes the caliph al-Manṣūr, while founding Baghdād in 145/762, assess the role of its location in the following manner; "This is the Tigris: there is no obstacle between it and China; everything that is overseas (lit. "in the sea") comes to us by it. And the provisions from al-Djazīra and Armenia and from what lies beyond them come to us [here]. And this is the Euphrates: everything from Damascus and al-Raḳḳa and from what lies beyond them comes to us by it" (iii, 272).

The first three ʿAbbāsid centuries thus witnessed the primacy of the Persian Gulf ports as the great stages on the route that linked the Islamic Near East and the Mediterranean with the Orient; it was at this time that Muslim ships may have sailed as far as China itself. Khānfū, usually identified as Canton, was the Far Eastern terminus of these Muslim mariners and merchants of Sīrāf, Ubulla, Baṣra and Baghdād, while Sīrāf may have been the regular port of call of their Chinese counterparts, if this is how we are to understand the *marākib al-ṣīniyya* of the Arab authors of the period. This remarkable direct connection between the ports of the Islamic Near East and China has not only been duly recorded by Muslim historians and geographers (J. Sauvaget, *Akhbār aṣ-Ṣīn*

wa l-Hind: Relation de la Chine et de l'Inde rédigée en 851, Paris 1948), but it has also been paraphrased in the bellelettristic vein of Sindbad's voyages in the *Alf layla wa-layla* cycle (a remarkable demonstration of both the feasibility and dangers of such voyages was carried out in 1980-1 by T. Severin; see his *The Sindbad voyage*, London and New York 1983, and *In the wake of Sindbad*, in *National Geographic Magazine*, vol. 162, no. 1 [July 1982], 2-40). However, a political and economic decline of ʿAbbāsid ʿIrāḳ that began in the 4th/10th century eventually led to a collapse of this role. By the 5th/11th century, Baghdād and Baṣra shrank to a pale reflection of their former selves, and Ubulla and Sīrāf ceased functioning altogether. These factors may have contributed to a partial re-orientation of the maritime route to the ports of southern Arabia and of the Red Sea, a change that led to a re-emergence of the Egyptian ports, especially Alexandria, as the main emporia of East-West trade.

The ports of ʿUmān and of the Persian Gulf did retain some of this traffic, however. Sīrāf was to some degree replaced by the island port of Kīsh (its Persian name; the Arabic name was Ḳays [*q.v.*]) and by Hurmuz. There developed an intense rivalry between Kīsh and Hurmuz; at first, however, the ruler of Kīsh placed emphasis on the piratical potentials of his location and of the large fleet he owned; the activities of this fleet, reported by al-Idrīsī (2nd climate, part 6, 156-7) contributed to a progressive deflection of the maritime routes from the Persian Gulf to Aden and the Red Sea (activities that found a latter-day analogue in the effect the Raʾs al-Khayma Arabs had on British shipping in the Persian Gulf in the 18th and early 19th centuries, before the "Pirate coast" was transformed into the "Trucial coast" [see AL-ḲAWĀSIM]). The rulers of Hurmuz eventually gained the upper hand, and their possessions intermittently straddled the sea so as to include also ports of ʿUmān and Baḥrayn. The international prominence of Hurmuz continued even after the arrival of Europeans in the Indian Ocean and the eagerness of Ṣafawid rulers to trade with them. As the Portuguese for a brief period in the 16th century, and others, especially the British, lastingly in the 17th, captured much of the Indian Ocean trade, they added to their mainstream routes along the Cape of Good Hope the route to the ports of the Near East; there, those of the Persian Gulf were favoured over those of southern Arabia and of the Red Sea. Hurmuz [*q.v.*] succeeded in the 17th century by Bandar ʿAbbās [*q.v.*], thus came to play a role similar to that of Sīrāf half-a-millennium earlier; Baṣra left its former location (marked today by the town of Zubayr) and moved eastward towards the Shaṭṭ, where it combined the functions of its ancestor and of the defunct Ubulla; and Baghdād again received and dispatched fleets of river craft and caravans. This renascence of the Persian Gulf ports contributed to an enhancement of their inland partners such as Aleppo and Tabrīz and, ultimately, of such ports as Iskenderun, Trebizond and Izmir.

3. *Alexandria and other ports of Egypt.* Alexandria's [see AL-ISKANDARIYYA] role as the greatest emporium of East-West trade coincided with the later Middle Ages, mainly the 5th-9th/11th-15th centuries, but it functioned as the principal Egyptian port ever since its its foundation by Alexander the Great in 332 BC. From among the factors that caused Alexandria's dominating position in the later Middle Ages, one may have been the above-mentioned decline of the Persian Gulf ports, and the other the phenomenal growth of the European economy with the concomitant expansion of Italian, French and Catalan shipping from the 5th/11th century onwards. The manner in which Alexandria received spices and other products of the Orient varied in the course of the centuries, but it retained certain constant features. One was the prevalent use of the Nile as part of the route: goods were unloaded at such Red Sea ports as ʿAydhāb or Ḳusayr, transported by caravans to the river ports of Aswān, Ḳūs or Ḳunā, and thence carried on barges to the Mediterranean coast; in addition, the ports at the northern end of the Red Sea (Ḳulzum and its successor Suez, Ṭūr, Ayla) were also used. The fact that the westernmost branch of the Nile did not extend to Alexandria never prevented it from overshadowing the ports at the estuaries—Rosetta, Damietta, Tinnīs. The reason for this was the vastness of Alexandria's two harbours, as well as other factors such as the canal that branched off at Fuwwa and connected the Nile with Alexandria; this canal, intermittently silting up and being dredged and repaired, may have been used as a waterway during the Nile flooding in the early centuries (Ibn Ḥawḳal, 140), but later, judging from the testimonies of European travellers, the standard mode of transportation between Alexandria and the Nile was the short overland march to the Rosetta estuary. Overland transportation on pack animals to points further south or to Cairo itself became exceptional: the cheapness of water transport (thus Nāṣir-i Khusraw, 53, where he states that one river barge carried a load equivalent to that of 200 mule-loads), combined with the difficulty of fording or crossing the numerous canals of the Delta, especially in the flood season, led to the almost exclusive use of the Alexandria-Rosetta route.

The harbours of Alexandria were a product, as in many other cases, of both natural and man-made features, but the former predominated. A narrow peninsula, protruding northward, had a tip that extended eastward and westward, thus creating two large and somewhat sheltered bays: these were the sites of the two harbours of Alexandria, the eastern and western (see for example Pīrī Reʾīs, *Kitāb-i baḥriyye*, 700-3, and map on 704-5). The western side of the eastern harbour was the main international port and the only one accessible to non-Muslim ships; the western harbour, also called Old Harbour, was reserved for Muslim ships. The famous lighthouse built in antiquity, that stood on the peninsula, still evoked the marvel of classical Arab geographers and gave rise to such legends as that of the magic mirror, but it was ruined by the time of Ibn Baṭṭūṭa's second visit in 1349 (i, 30). The Mamlūk sultan Ḳāʾit Bāy built a guard-tower on the ruins of this lighthouse in 877/1472-3, and the Ottoman sultans Selīm I and Süleymān the Magnificent further fortified it and equipped it with heavy cannon (Ewliyā Čelebi, *Seyāḥat-nāme*, x, 691).

At the height of Alexandria's prosperity, William of Tyre (1130-86) calls it "the mart of the two worlds" and states that "all the aromatics, jewels and other precious objects that Europe lacks are brought from the two Indias, from Saba, Arabia, the two Ethiopias, Persia and neighbouring countries, by sea and by the Nile to Alexandria..." (*Historia rerum in partibus transmarinis gestarum*, in *RHC*, i [1844], xix, 26,27). The sultan's customs house levied various types of taxes on ships, goods and passengers, and the inspection of both in- and out-bound traffic was thorough, without much distinction between Christians and Muslims, or merchants and pilgrims, judging by such testimonies as Ibn Djubayr's, who passed through this port in 579/1183 (*Riḥla*, 40-5). The revenue to the sultan's treasury must have been considerable, but the

scattered nature of the reports makes it difficult to form a consistent picture; thus in 703/1303 a Frankish ship paid 40,000 *dīnārs'* duty on its cargo; in the entire year of 721/1321, the revenue was 50,000 *dīnārs*; a governor in the 9th/15th century assessed Alexandria to be worth 1,000 *frinti* (*dīnārs*) a day [see AL-ISKANDARIYYA]. In any case, customs revenues were only one part of the asset to Egypt represented by Alexandria as a port; the main benefit rested in the role it played for trade and economic activity in general. Moreover, at least in the initial centuries of the boom characteristic of the later Middle Ages, the ships owned by the sultan as well as by other high officials on a private basis also participated in this trade. Traffic between Alexandria and the main ports of Christian Europe, however, appears to have been assured chiefly by Christian merchants and ships. Moreover, the principal trading partners such as Venice, Genoa, Marseilles or Barcelona established permanent commercial missions and facilities usually referred to as *fondacchi* (*funduḳs* [*q.v.*] in Arabic) in Alexandria as well as in some other Muslim ports. The goods passing through Alexandria were of various kinds, but the single most important article was spices from the Orient on the way to Europe; an always coveted type of imports from Europe was strategic materials such as timber, iron, pitch and weapons—all subject to frequent papal interdictions and exemptions. Importation of slaves, chiefly from the Pontic and Caucasus regions via Turkey, also figured prominently. Furthermore, a special and lasting type of traffic through the port of Alexandria was that of pilgrims, both Muslim and Christian. Muslim pilgrims from the Mag͟hrib often arrived by sea to Alexandria and thence proceeded on the Nile to such river ports as Ḳūs or Aswān, then overland to Ḳusayr or ʿAyd͟hāb in order to cross over to D̲j̲udda, the port of Mecca; others crossed lower Egypt to Ḳulzum, and from there they either continued overland or again embarked and sailed to D̲j̲ār or D̲j̲udda. Christian pilgrims, although they more commonly sailed to Jaffa or other ports closer to Jerusalem, also often passed through Alexandria: this applied especially to those who added a visit to Mount Sinai to their pilgrimage.

The discovery of the Cape route proved fatal to Alexandria's pre-eminence as the foremost port of East-West trade, but this happened only gradually; moreover, Alexandria did retain some importance in all respects, and only the opening of the Suez Canal in 1869 may be considered as the terminal date of this port's function as a hub of transit trade and travel. Thus in the 11th/17th century, Ewliyā Čelebi describes Alexandria as a large port frequented each year by some three to four hundred Frankish ships, and as a place where there reside consuls of several (lit. "seven") [Christian] kings (*Seyāḥat-nāme*, x, 678-9; Ewliyā's description of Alexandria, 668-707, is especially thorough and informative).

Cairo functioned in combination with Alexandria, Rosetta, Damietta and Tinnīs as a river port, not unlike Bag͟hdād in combination with Baṣra, Ubulla and Sīrāf. This function shifted in the Ottoman period to Cairo's suburb of Būlāḳ, whose role is vividly portrayed by such observers as Leo Africanus [*q.v.*] and Ewliyā. According to the former, one could sometimes see as many as one thousand barges in the harbour of Būlāḳ, and a certain number of the sultan's customs officials were stationed there (*Description de l'Afrique*, tr. A. Épaulard, Paris 1958, 508-9). Ewliyā Čelebi mentions it as a port whither converge goods "from the seven climates", which is annually visited by ten thousand ships of various kinds, and where there is the sultan's arsenal; moreover, the records and administration of the traffic passing through other Egyptian ports such as Damietta, Rosetta and Aswān were located in Būlāḳ. Ewliyā also states that there were in Būlāḳ 73 *k͟hāns* belonging to rich merchants who had partners in India, Yemen, Europe and Turkey (*Seyāḥat-nāme*, x, 291-4). Nevertheless, Būlāḳ did not really function as a full-fledged maritime port in the proper sense of the word; all the evidence suggests that most goods were transferred at the Rosetta or Damietta estuaries on to such river craft as *d̲j̲arīms* for further transportation.

Other busy ports of Egypt's Mediterranean coast were Rosetta [see RAS͟HĪD], Damietta [see DIMYĀṬ], and Tinnīs [*q.v.*]. Rosetta, long a military port, became open to foreign shipping only towards the end of the Mamlūk period (Heyd, ii, 428-9, see *Bibl.*; for the Ottoman period, see Ewliyā, *Seyāḥat-nāme*, x, 707-16). Damietta declined after the 7th/13th century, when Crusaders' attacks and Mamlūk countermeasures blocked its harbour to sea-going ships; nevertheless, the town, which moved further upstream, did continue to function as a port, even though goods had to be hauled from ships anchored at the estuary by means of small boats (for the Ottoman period, see *Seyāḥat-nāme*, x, 737-45). Tinnīs, situated on an island in Lake Manzala connected with the Damietta branch of the Nile, also functioned as a port; Nāṣir-i K͟husraw mentions as many as 1,000 ships mooring there (*Safar-nāma*, 50). Tinnīs, however, eventually disappeared because of repeated attacks by Christian warships and pirates.

A special case was that of al-Faramā (or al-Farmā), the ancient Pelusium, which still functioned as a port in the first Islamic centuries. Its location on the coast due north of al-Ḳulzum [*q.v.*] offered the shortest overland connection between the Mediterranean and Red Seas. Al-Faramā is singled out by Ibn K͟hurradād͟hbih (153-4) as the port used by the Rad͟hāniyya Jewish merchants, who arrived there from western Europe (Firand̲j̲a) with their goods and transported them across the distance of 25 *farsak͟hs* to al-Ḳulzum; there, they re-embarked and sailed to D̲j̲ār, the port of Medina, and D̲j̲udda, the port of Mecca; from these ports, they would then sail to India and China. Likewise on their return trips, they brought oriental goods to al-Ḳulzum, transported them to al-Faramā, and re-embarked for western Europe or Constantinople. Al-Faramā, however, ceased to function by the end of the 4th/10th century, in part due to the drying-up of the Pelusiac branch of the Nile.

4. *The ports of the Syro-Palestine coast.* The ports along this coast can be divided into three groups: those in the south that communicated mainly with Jerusalem, those in the middle that connected with Damascus, and those in the north that served mainly Aleppo. The principal ports of the southern group were G͟hazza [*q.v.*], Ascalon [ʿASḲALĀN] and Jaffa [see YĀFĀ]; of the middle group, Acre [see ʿAKKĀ], Tyre [see ṢŪR], Sidon [see ṢAYDĀ], Beirut [see BAYRŪT], and Tripoli; of the northern group, Lād͟hiḳiyya, Ṭarṭūs [*q.v.*], Antioch [see ANṬĀKIYA], Iskenderun [see ISKANDARŪN] and Payas. Coastal roads also linked these ports with each other and with Egypt and Anatolia at the two ends. It was here that Muslims initially and lastingly came into contact with the Mediterranean Sea, although this contact received a traumatic upheaval during the two centuries of Crusaders' principalities. It is difficult to single out any one of these ports as surpassing the others in importance, but certain general trends can be discerned. Jaffa stood out as the Jerusalem-

bound pilgrim's port. The role of Damascus as one of the major inland termini of that part of the Spice Route which proceeded from Aden or Djudda northward through Arabia instead of swerving, across the Red Sea, to Egyptian ports, enhanced the role of the ports of the middle groups such as Beirut, Tyre and Acre. In the Ottoman period, the northern group gained prominence; this was due to the growth of Aleppo as an entrepôt of long-distance trade resulting from the renascence of the Persian Gulf and Iran routes, as well as to the proximity of the route from the Ottoman capital to Aleppo and ʿIrāḳ.

The fate of the above-mentioned inner harbours of many of these ports displays an evolution characteristic of much of the Islamic Mediterranean. Those of the inner harbours which relied on man-made structures such as walls in the sea declined, because that technology, chiefly of Roman origin, gradually became forgotten; an example of this process is cited by al-Muḳaddasī in his description of Acre (162-4). He narrates how Aḥmad b. Ṭulūn (254-70/868-84) wished to have the breakwater wall of Acre strengthened, but was told that architects expert in such techniques no longer existed; eventually, one—the geographer's own grandfather—who still knew the art, was found. On the other hand, harbour fortifications flourished throughout the Islamic period: the ʿAbbāsid caliph al-Mutawakkil (232-47/847-61) had a whole series of Mediterranean harbours further fortified, in order to counter devastating raids by Byzantine fleets. The inner harbours continued to decline, however, and judging by Pīrī Reʾīs's *Kitāb-i baḥriyye*, by the 10th/16th century most were silted up or accessible only to small vessels.

5. *The ports of Ifrīḳiya and the Maghrib.* Both historical continuity and dramatic change due to partly external circumstances marked especially these ports. Continuity was dominant throughout the Middle Ages, when such ports as Bougie (Bidjāwa), Tunis, al-Mahdiyya, and Tripoli functioned much as their direct or indirect predecessors had done since antiquity, namely as commercial ports, naval bases and centres of pirate activities. Commercial links with the Islamic East and Christian Europe remained the dominant feature, despite the above-mentioned confrontational nature of the two sides of the Mediterranean. The change occurred in the 10th/16th century, when the transformation of Algiers, Tunis and Tripoli into corsair principalities, nominally subordinate to Istanbul as *eyālet*s but in fact independent [see ḲURṢĀN], reversed that order and made the confrontation the chief theme. The purpose was again economic, but the religious zeal of these initially Turkish maritime *ghāzī*s played a catalytic role in the formation of the three principalities.

In Umayyad Spain, both its economic prosperity and the need for a war fleet stimulated the development of busy ports, especially on the Mediterranean coast. Almeria (from Mariyyat Badjdjāna, or just al-Mariyya [*q.v.*]), the principal naval base and site of the caliph's arsenal, was also the busiest commercial port; its overseas connections included Alexandria and the ports of the Syro-Palestinian coast; ships sailing between it and Alexandria often did so directly without stopping (Goitein, *A Mediterranean society*, i, 302). From among the other ports, that of Denia [see DĀNIYA] deserves mentioning as the seat of the principality of Mudjāhid [*q.v.*], whose maritime *ghazwa* in the 5th/11th century presaged the formation of the Turkish principalities in North Africa half a millennium later. Finally, Cordova and Seville, both on the Guadalquivir, played some role as river ports. The gradual completion of the Reconquista eventually put an end to the functioning of all these harbours as Muslim ports, a situation not without effect on the configuration of Muslim shipping in the Mediterranean.

In conclusion, one general observation can be made in respect to the ports of the Islamic West. In comparison with those of the eastern Mediterranean, they played a secondary role. The reason may be sought in the fact that those of the East occupied a vital position on the hub of long-distance East-West trade, travel and, eventually, European expansion. The ports of the West, on the other hand, fulfilled only a local role, however important it often was; the trans-Saharan movement of gold and slaves through these ports never approached the magnitude of the Orient trade.

6. *The ports of Turkey and of the Black Sea.* In pre-Ottoman Anatolia, the ports of the south and north coasts had a significant share in transit trade that linked the Pontic regions of Russia, the Caucasus and Inner Asia with the Mediterranean and Europe. Mention should also be made of Tarsus [see ṬARSŪS], the principal naval base of the ʿAbbāsid caliphate in the Mediterranean during its first three centuries. That role, however, was extinct by the time much of Anatolia entered the *Dār al-Islām* through Saldjūḳid conquests. It was under this dynasty that Alanya and Antalya on the south coast rapidly developed and became connected by caravan routes with Samsun and Sinope on the north coast; the latter two in turn had as their main partners the ports of Sudaḳ, Kefe and Tana (Azaḳ in Turkish, present-day Azov) on the north side of the Black Sea. Lajazzo (Ayas in Turkish; the site, on the north-western coast of the bay of Iskenderun, is marked today by the settlement of Yumurtalık) and Trebizond, longer in Christian hands than the others, played a parallel role and also received a greater share of the Silk or Spice Routes traffic coming from Central Asia or from the Persian Gulf. Among the goods passing through the ports of the Black Sea, slaves from southern Russia and the Caucasus were the most valuable and constant commodity: this trade lasted well into the Ottoman period and flowed toward the Turkish and Egyptian capitals as well as toward other countries, including Italy.

The ports of western Anatolia such as Balat, Ephesus, Izmir or Foča played a relatively secondary role in pre-Ottoman times. The dramatic rise of Izmir (Izmīr [*q.v.* in Suppl.]) to a position of primacy in the Levant and possibly the entire eastern Mediterranean occurred only toward the end of the 10th/16th century. This prosperity, which peaked in the 11th/17th and 12th/18th centuries, was partly due to the above-mentioned renascence of the Persian Gulf route, for which Izmir became one of the Mediterranean outlets; another cause seems to have been the hitherto underestimated economic strength of 11th/17th century Anatolia itself. Izmir functioned as the terminus of a latter-day silk route, or silk-and-mohair route, for the silks from Iran and mohair from Anatolia formed a valuable portion of exports to Europe. Ewliyā Čelebi mentions large and frequent caravans that kept arriving from Iran, and ships from a whole gamut of European countries that called regularly—some 1,000 ships annually. The inner harbour had long silted up, but the large bay offered a comfortable anchorage. A European merchant colony became permanently established in Izmir to the point where "one would think one found oneself in Frengistan." The Franks had their own quarter along the harbour waterfront, and small boats handled the loading and unloading of goods, for large ships had to anchor some distance off

shore (*Seyāḥat-nāme*, ix, 96-7). From among the European merchants, consular representatives and visiting ships, those of England, France and Holland were the foremost: the supremacy of Italian and Catalan ships and merchants was by then a thing of the past. As for the Ottoman subjects, alongside Muslims, an active role was also played by Armenians, Jews and Greeks.

While Izmir was the principal international port of Ottoman Turkey, Istanbul [*q.v.*] as a port functioned mainly as the receiving end of a traffic designed to sustain the imperial capital. This alone sufficed to make its harbour, situated along both sides of the Golden Horn, a busy place. The northern side, whose main part in fact extended along the Bosphorus, served international shipping; the southern side with its many *iskeles* was reserved for Ottoman ships. Further west toward the end of the Golden Horn, on its northern side, was the imperial arsenal of Ḳāsim Pas̲h̲a (a description of these features can be found in Eremya Çelebi Kömürcüyan, *Istanbul tarihi*, Turkish tr. H. Andreasyan, Istanbul 1952, 15-19, 37-9).

7. *Ports of the Caspian Sea.* The ports of the land-locked Caspian [see BAḤR AL-K̲H̲AZAR] played a naturally restricted role, without the magnitude of maritime trade, naval warfare or piracy affecting other seas. Nevertheless, there was a lively local traffic since the early centuries of Islam (al-Masʿūdī, *Murūd̲j̲*, ii, 25 = § 463). Thus Abaskūn [*q.v.*] situated in the south-eastern corner of the Caspian (near the location of present-day Bandar S̲h̲āh, the northern terminus of the Trans-Iranian railway), functioned as an outlet (*furḍa*) for the towns and regions of Astarābād̲h̲ and Gurgān, with ships leaving from it for Khazaria and Bāb al-Abwāb (al-Iṣṭak̲h̲rī, 213-14). The prosperity of Abaskūn in the 3rd/9th and 4th/10th centuries made it the target of piratical raids by the still heathen Russians (or, more exactly, Rūs [*q.v.*]); two such raids, between 250-70/864-84 and in 297/909, are reported in Ibn Isfandiyār's *Taʾrīk̲h̲-i Ṭabaristān* (ed. A. Eghbal, 266; tr. E.G. Browne, 199; see also al-Masʿūdī, *Murūd̲j̲*, ii, 19-25 = §§ 458-61, and B. Dorn, *Caspia. Über die Einfälle der alten Russen in Tabaristan*, St. Petersburg, 1875 = *Académie Impériale des Sciences, Mémoires*, xxiii/1). Another Caspian port, raided in 301/913-4 by Rūs pirates, was Bākū [*q.v.*] (al-Masʿūdī, *Murūd̲j̲*, ii, 21 = § 460); Bākū was also one of the earliest oil-exporting ports, a role which it conserved throughout the subsequent centuries. Thus ʿAbd al-Ras̲h̲īd Ṣāliḥ al-Bākūwī (*fl.* 806/1402) reports how the inhabitants made seal-skin bags from seals (*kilāb al-māʾ*) which they hunted on a nearby island; they filled these bags with oil, and had them exported by ships to various other ports of the Caspian (*Kitāb Talk̲h̲īṣ al-āt̲h̲ār wa-ʿad̲j̲āʾib al-malik al-ḳahhār*, ed. and tr. Z.M. Buniyatov, Moscow 1971, Arabic text 122, Russian tr. 89). Finally, Derbend [*q.v.*], called in Classical Arabic texts Bāb al-Abwāb [*q.v.*], had a harbour similar to those of the Mediterranean with seaside walls and an entrance gate protected by two guard-towers and a chain (al-Iṣṭak̲h̲rī, 184-5; *Ḥudūd al-ʿālam*, tr. 145).

8. *Ports of the Islamic Orient.* Two groups of ports ruled or used by Muslims can be distinguished here: those of the Indian subcontinent, and those of Malaysia and Indonesia. From among the former, Daybul, Ṣūrat and Ḳāliḳūt can serve as characteristic examples. Daybul [*q.v.*] situated in the delta of the Indus not far from modern Karachi, was won for Islam by conquest in 92/711-12; the other ports received their Muslim populations chiefly through emigration and proselytisation that travelled along the sea-trade routes. Daybul combined the industry of trade and piracy both in the pre-Islamic and Islamic periods, and its merchants were an example of those Indians who reciprocated the enterprising spirit of the Arabs and Persians by sailing to the ports of Arabia, the Persian Gulf, and East Africa. Ṣūrat, located on the eastern side of the entry into the Gulf of Cambay [see K̲H̲AMBĀYAT], added to its commercial role that of a favourite gateway of Mecca-bound pilgrims. Ḳāliḳūt [*q.v.* in Suppl.] owed its eminence in part to a strategic position in the southern part of the Malabar coast, where it functioned not only as an Indian port but also as a relay post and exchange mart for trade with Indonesia and China. It rose to prominence in the later Middle Ages and surpassed Kūlam Malāy (Quilon) [see KŪLAM], a port still closer to the southern tip of India, which had a similar function in early ʿAbbāsid times (Sauvaget, *Ak̲h̲bār*, 8, 42-3). Ma Huan, the chronicler of Chinese maritime expeditions of the early 15th century, mentions Ḳāliḳūt as the usual goal of Chinese fleets arriving from the east, and as a point of departure on their further sailings to such ports as Aden, Ẓafār or Hurmuz (Ma Huan, *Ying-yai sheng-lan*, "*The overall survey of the ocean's shores*" *(1433)*, tr. Feng Ch'eng-chun, Cambridge 1970 (Hakluyt Society, Extra series, xlii, 151-71). Ibn Baṭṭūṭa sailed in April-May 1347 from Ḳāliḳūt to Ẓafār (iv, 310-11); and it was at Ḳāliḳūt that Vasco Da Gama, reportedly guided by the Arab pilot Ibn Mād̲j̲id [*q.v.*], arrived in 1498, after having crossed the Indian Ocean from the East African port of Malindi [*q.v.*].

The final group of important harbours of the Islamic world begins with Atjèh [*q.v.*] of Northern Sumatra and extends through the archipelago all the way to Sulawesi (Celebes). Their Islamisation had begun by the time Marco Polo and Ibn Baṭṭūṭa sailed through these waters in the 13th and 14th centuries, and was well-nigh complete when European penetration and colonisation started gaining momentum in the 16th and 17th centuries. In northern Sumatra, the ports of Pedir, Lamuri (Lambri), Pasei and Perlak were among the earliest exporters of spices and receptors of Islam. They were by the 16th century eclipsed by Atjèh, the chief port and capital (also known in the latter capacity as Kutaraja, a name that reveals the older pre-Islamic Indian influence) of a sultanate whose prosperity and might rested on spice—mainly pepper—exports and piracy. Atjèh lay at the northern tip of Sumatra; across the narrowing strait further south, the port of Malacca [*q.v.*] became the seat of a sultanate on Malay peninsula. Like the ports of Sumatra, Malacca was useful as a relay station along the strategic passage through the strait of Malaysia on the route to other Indonesian ports such as the pepper-exporting port of Bantam at the western tip of Java, and to China. In early ʿAbbāsid times, a role similar to that of Malacca had been played by Kalāh [*q.v.*] further north near the narrow neck of the peninsula (Sauvaget, *Ak̲h̲bār*, 8, 43).

Once converted, Indonesians and Malays became fervent Muslims, and such ports as Atjèh served as the principal gateways on their pilgrimage to Mecca, and in general as the points of communication with the centres of Islam further west. The rise of Atjèh in the 16th century coincided with two dramatic developments in the Indian ocean: the arrival of the Europeans, and the attempts of the Ottomans to stave off the consequences of that event. One quaint result of this clash was an embassy sent by the third sultan of Atjèh, ʿAlāʾ al-Dīn Riʿāyat S̲h̲āh al-Ḳahhār (1573-71) to Istanbul in 973/1563, requesting military aid from Süleymān the Magnificent. Eventually, a fleet of nineteen vessels left the Ottoman naval base at Suez,

but most remained in Yemen. Two ships did reach Atjèh, however, and delivered cannon and other ammunition as well as gunnery experts (Saffet, *Bir ʿOthmānli filosunun Sumatra seferi*, in *TOEM*, x [Oct. 1911], 604-14; xi [Dec. 1911], 678-83).

9. *Khānfū and Zaytūn.* These two ports, identified with Canton and Ch'üan-chou (the latter located at the level of Taiwan), never came within the *Dār al-Islām*, but their special role as the Oriental termini of Muslim sea-farers and traders should allow us to include them in this discussion. Ibn Khurradādhbih, 69, mentions Khānfū as the greatest *marḳā* (port of call) [of China]. Al-Masʿūdī (*Murūdj*, i, 302-3 = § 329) states that Khānfū lay on a river which was the destination of ships coming from Baṣra, Sīrāf, ʿUmān, India and other countries, and adds that there lived in Khānfū colonies of Muslims, Christians, Jews and Zoroastrians. One of al-Masʿūdī's sources was the above-mentioned *Akhbār al-Ṣīn wa 'l-Hind*, dated 236/851, which refers to Khānfū as a port of call of ships and a market place of Arabs and Chinese (ed. and tr. Sauvaget, *Akhbār*, 6-7). Moreover, the interior of T'ang China was open to Muslim merchants if provided with a passport issued by Chinese authorities; there was also a Muslim colony in the T'ang capital city of Chahgan, the eastern terminus of the transcontinental Silk Road. The simultaneous presence of Muslim and other Near Eastern traders in both Changan and Canton may then have resulted in some linkage between the overland Silk Road and the maritime Spice Route (Rita Rose di Meglio, *Il commercio arabo con la Cina della Ǧāhiliyya al X secolo*, in *AIUON*, n.s., xiv [1964], 523-52). Disturbances that accompanied the final decades of T'ang rule also proved fatal to the Muslim colony in Khānfū/Canton: the death-blow was dealt by a rebellion in 879 A.D., when the entire colony was reported destroyed or driven out; some merchants then adopted the above-mentioned Kalāh in Malaysia as their base of operations. The long-range effect of this upheaval, however, cannot have been absolute, for western visitors such as Marco Polo and Ibn Baṭṭūṭa speak of Yüan Zaytūn in terms not unlike those of the *Akhbār* and al-Masʿūdī about T'ang Khānfū: Ibn Baṭṭūṭa found there a thriving Arabo-Persian merchant colony, up to a point self-governing; he also states that Zaytūn was one of the largest, if not the largest, ports of the world (iv, 269).

Bibliography: For the pre-modern period, the main scope of this article, few specific studies of ports and harbours exist, and information must be culled from a variety of sources. Only examples of especially helpful or representative titles can be mentioned here. The Mediterranean: A. Schaube, *Handelsgeschichte der romanischen Völker des Mittelmeergebiets bis zum Ende der Kreuzzüge*, Munich-Berlin 1906, esp. 122-222; W. Heyd, *Histoire du commerce du Levant au moyen-âge*, Leipzig 1885-6; S.D. Goitein, *A Mediterranean society*, Berkeley 1970-84, 4 vols., esp. i, ii; S. Labib, *Handelsgeschichte Ägyptens im Spätmittelalter, 1171-1517*, Wiesbaden 1965; H.R. Idris, *La Berbérie orientale sous les Zirides, Xe-XIIe siècles*, Paris 1962; R. Brunschvig, *La Berbérie orientale sous les Ḥafṣides*, Paris 1940-7; E. Lévi-Provençal, *Histoire de l'Espagne musulmane*, Paris-Leiden 1950; Ch.-E. Dufourq, *L'Espagne catalane et le Maghrib aux XIIIe et XIVe siècles*, Paris 1966; F. Braudel, *La Méditerranée et le monde méditerranéen à l'époque de Philippe II*, Paris 1966; Cl. Cahen, *Ports et chantiers navals dans le monde méditerraneen musulman jusqu'aux Croisades*, in *La navigazione mediterranea nell'alto medioevo*, Centro Italiano di Studi sull'alto Medioevo, Settimane di Studio, xxv, 14-20 aprile 1977, Spoleto 1978, 299-319; idem, *Douanes et commerce dans les ports méditerranéens de l'Égypte médiévale d'après le Minhādj d'al-Makhzūmī*, in *JESHO*, vii (1964), 218-314; J. Aubin, *La ruine de Siraf et les routes du Golfe Persique aux XIe et XIIe siècles*, in *Cahiers de civilisation médiévale*, ii/3 (1959), 295-301; idem, *La survie de Shilau et la route du Khunj-o-fāl*, in *Iran*, vii (1969), 21-37; idem, *Le royaume d'Ormuz au début du XVIe siècle*, in *Mare Luso-Indicum*, ii (1972), 77-179. From among the primary sources, the standard geographers and historians such as Idrīsī, Yāḳūt and Maḳrīzī are indispensable; to these, the special category of portolans and portolan charts should be added; a fundamental study of the Italian ones is K. Kretschmer, *Die italienischen Portolane des Mittelalters*, Berlin 1909; of the Greek ones, A. Delatte, *Les portulans grecs*, Liège-Paris 1947; the Muslim side is represented by the unique case of Pīrī Reʾīs, *Kitāb-i baḥriyye*, facs. ed. Istanbul 1935; see also S. Soucek, *À propos du Livre d'Instructions Nautiques de Pīrī Reʾīs*, in *REI*, xli (1973) 241-55. From among the travel accounts, Ewliyā Čelebi, *Seyāḥat-nāme*, Istanbul 1314-1938, 10 vols., is invaluable for the Ottoman period. The Red Sea, Persian Gulf and Indian Ocean: Some of the above-mentioned studies, especially Heyd, Goitein and Labib; A. Kammerer, *La mer Rouge, l'Abyssinie et l'Arabie depuis l'antiquité*, Cairo 1929-50; G.F. Hourani, *Arab seafaring in the Indian Ocean in ancient and early Islamic times*, Princeton 1951; A. Sprenger, *Die Post- und Reiserouten des Orients*, Leipzig 1864, esp. 79-91; O. Löfgren, *Arabische Texte zur Kenttnis der Stadt Aden im Mittelalter*, Uppsala 1936-50, esp. i, 56-7; G. Orhonlu, *Osmanlı imparatorluğunun güney siyaseti: Habeş eyâleti*, Istanbul 1974; N. Steensgard, *The Asian trade revolution of the seventeenth century*, Chicago-London 1974; K.N. Chaudhuri, *Trade and civilisation in the Indian Ocean. An economic history from the rise of Islam to 1750*, Cambridge 1985. From among the primary sources, Ibn Mādjid and Sulaymān al-Mahrī, the Indian Ocean counterparts to Pīrī Reʾīs, deserve special mention; see also G. Ferrand, *Instructions nautiques et routiers arabes et portugais des XVe et XVIe siècles*, Paris 1921-3 and G.R. Tibbetts, *Arab navigation in the Indian Ocean before the coming of the Portuguese*, London 1971.

(S. Soucek)

MINĀʾĪ, a term used by modern authors to describe a type of ceramics with polychrome under- and over-glaze painting produced during the late 12th and early 13th centuries. Figural decoration which depicts stories from the Persian epic tradition is characteristic of some *mināʾī* wares.

When these objects first became known in the late 19th century they were described as "Rhages Polychrome Ware" because they were said to come from the ruins of mediaeval Rayy on the outskirts of modern Tehran, but this link was not substantiated by textual documentation or archaeological evidence. More recently, O. Watson has suggested that *mināʾī* vessels were produced in Kāshān [*q.v.*] by the group of potters who also made lustre-painted vessels and architectural revetments. Fragments of *mināʾī* vessels and tiles have been found in Turkey and Syria, but it is unclear where these objects were produced.

The designation of this polychrome painted ware as

mināʾī began only in the 1930s. A.U. Pope, writing in the *Survey of Persian art* (1939-40), describes *mināʾī* as "simply a name given currency by the Persian dealers." Other authors of this period such as K. Erdmann and R. Ettinghausen use the term in quotations marks or qualify it as "so-called Mināʾī faience." More recently, however, the term *mināʾī* has gained acceptance among both scholars and their public, and qualifications are seldom used.

The precise mediaeval name of this ware is uncertain. It may have been "seven-colour ware", a term used by Abu 'l-Ḳāsim al-Kās͟hānī, a member of the family of potters who are thought to have produced both *mināʾī* and lustre-painted ceramics.

Certain examples of this ware have been repeatedly published, and a substantial quantity of it is found in public and private collections; overall, however, it is poorly documented. Only a few signed pieces have been noted: two by "ʿAlī b. Yūsuf" and two by "Abū Zayd al-Kās͟hānī". Dated pieces are also rare, and curiously, four of the six published examples are dated to either Muḥarram 582/1186-7 or Muḥarram 583/1187-8. The authenticity of those dates was questioned already in 1939 by R. Ettinghausen, who noted that the dates were written over the glaze and should be subjected to technical examination before they were accepted as fact. Similar reservations were voiced by A. Lane. These caveats, however, have seemingly been largely ignored, for the objects continue to be cited in current publications and used as the foundation for a wider chronology.

Iranian authors of the 11th/14th centuries link the terms *mināʾī* and *mināʾ* to translucent or luminous substances such as the sky or wine vessels. Often, *mināʾī* is said to be blue. *Mināʾ* is also used as a technical term to describe a type of glass. The most detailed references are found in the *Tansūk͟h-nāma-yi Īlk͟hānī* by Naṣīr al-Dīn Ṭūsī, who describes *mināʾ* as a type of lead glass of which the best quality is made in Syria, Egypt and the Mag͟hrib. Green *mināʾ* was most prized and was used to imitate emeralds as well as to make vessels that were sometimes decorated with inlays in precious materials. This suggests that *mināʾ* was cast rather than blown and worked as if it were stone.

Later authors use the terms *mināʾ* and *mināʾī* to describe glass vessels that had been painted and gilded. During the 18th and 19th centuries vessels of this type appear to have reached Iran from India or Europe, although some were also made locally. It is probable that the description of emerald glass as *mināʾ* led to the designation of polychrome glazed ceramics as *mināʾī*.

MINANGKABAU or MENANGKABAU, the most numerous of the peoples of the island of Sumatra [*q.v.*] in the Indonesian Republic (1980 population estimate, 6 million). They inhabit the Padang highlands of west-central Sumatra, but there are also appreciable numbers of Minangkabau emigrants, including to Negro Sembilan in the Malay peninsula [*q.v.*]. Originally under Indonesian cultural and religious influence, as the centre of the Hindu-Malayan empire of Malayu, by the early 17th century much of their land had become Muslim through the influence of the Sultanate of Atjèh [*q.v.*] at the northern tip of the island. Although the Minangkabau are enthusiastic Muslims, they retain many of their former matrilineal practices in the reckoning of genealogies, marriage and inheritance, in flat contradiction to the *S͟harīʿa*. They are also skilled farmers, with terraced agriculture on the hill slopes, and notable woodcarvers, metalworkers and traders, in this last respect rivaling the Chinese. In the movement for Indonesian independence in the earlier half of this century, they played a significant rôle, and several of the Minangkabau filled important government positions in the post-1949 republican period.

MĪNĀR, MINARET [see MANĀRA].

MINBAR (A.), the raised structure or pulpit from which solemn announcements to the Muslim community were made and from which sermons were preached.

1. Early historical evolution and place in the Islamic cult.

In contrast to the *miḥrāb* [*q.v.*], the *minbar* was introduced in the time of the Prophet himself. The word, often pronounced *mimbar* (cf. Brockelmann, *Grundriss*, i, 161), comes from the root *n-b-r* "high"; it could be derived from the Arabic quite easily with the meaning "elevation, stand", but is more probably a loanword from the Ethiopic (Schwally, in *ZDMG*, lii [1898], 146-8; Nöldeke, *Neue Beiträge z. sem. Sprachw.*, Strassburg 1910, 49). Its case is therefore somewhat similar to that of *masd͟jid*. It means "seat, chair" (e.g. Wüstenfeld, *Chron. Mekka*, ii, 8; *Ag͟hānī*², xiv, 75) and is used, for example, for saddle (al-Ṭabarī, *Gloss.*) and of a litter (*Ag͟hānī*, xiii, 158; cf. Schwally). It is therefore identical with *mad͟jlis* (al-Buk͟hārī, *D͟jumʿa*, *bāb* 23), with *sarīr* (al-Mubarrad, *Kāmil*, 20; *Ag͟hānī*, iii, 3), *tak͟ht* or *kursī* (Ibn al-At͟hīr, *Usd al-g͟haba*, i, 214; cf. also Becker, *Kanzel*, 8). The use of the word for the pulpit is in keeping with its history.

When the *k͟haṭīb* [*q.v.*] spoke among the Arabs, he usually did so standing (cf. *Mufaḍḍaliyyāt*, ed. Lyall, xci²³; al-D͟jāḥiẓ, *Bayān*, Cairo 1332, i, 129, ii, 143) frequently beating the ground with bow and lance (*ibid.*, i, 198; Labīd, 7, 15, 9, 45); or he sat on his mount as did e.g. Ḳuss b. Sāʿida (*Bayān*, i, 25, 31, ii, 141). The Prophet did both of these things. In ʿArafa he sat on his camel during his *k͟huṭba* and on other occasions, when addressing the community during the early period, even as late as the day of the capture of Mecca, he stood (cf. Ḳurʾān, LXII, 11). The people sat on the ground around him (al-Buk͟hārī, *D͟jumʿa*, *bāb* 28; *ʿĪdayn*, *bāb* 6). In the mosque in Medina, he had a particular place, as is mentioned in the stories

of the introduction of the *minbar*. Sometimes, we are told, he stood beside a tree or a palm-tree (al-Bukhārī, *Manāḳib*, *bāb* 25; ed. Krehl, ii, 400); as a rule however, beside a palm-trunk (*djidhʿ*, so Ibn Saʿd, i/1, 9, 10, 11, 12) and on a few occasions beside one of the pillars (al-Bukharī, *Manāḳib*, *bāb* 25, ed. Krehl, ii, 401; al-Diyārbakrī, *Khamīs*, ii, 75). This is undoubtedly the original tradition: the Prophet stood beside one of the palm-tree trunks used as pillars in the mosque. For "beside" (usually *ḳāma ilā*; al-Bukhārī, *Buyūʿ*, *bāb* 32: *ʿinda*) "up against" (*ḳāma ʿalā*; already in al-Bukhārī, *Djumʿa*, *bāb* 26) is sometimes found later and for the column or trunk, we find a stump on which he sat.

Various passages record how the *minbar* was introduced, notably the following: Ibn Saʿd, i/1, 9-12; al-Bukhhārī, *Ṣalāt*, *bāb* 18, 64, 91; *Djumʿa*, *bāb* 26; *Buyūʿ*, *bāb* 32; *Hiba*, *bāb* 3; *Manāḳib*, *bāb* 25; Muslim, *Masādjid*, tr. 10; see also Wensinck, *Handbook*, s.v. *Pulpit*; *Usd al-ghāba*, i, 43 below, 214; Wüstenfeld, *Medina*, 62-3; Ibn Baṭṭūṭa, i, 275-6; the whole material is in al-Diyārbakrī, *Khamīs*, i, 129, ii, 75-6, and *Sīrat al-ḥalabī*, ii, 146-7. The details are variously given. The *minbar*, we are told, was built of *ṭarfā* wood or tamarisk from the woods near Medina; the builder was a Byzantine or a Copt and was called Bāḳūm or Bāḳūl, but the names Ibrāhīm (*Usd*, i, 43), Maymūn, Ṣabāḥ, Kulāb and Minā are also given. He was a carpenter, but a slave of the wife of one of the Anṣār or (al-Bukhārī, *Hiba*, *bāb* 3) of the Muhādjirūn. Others say he belonged to al-ʿAbbās. The suggestion is sometimes credited to the Prophet and sometimes to others. The palm-trunk is said to have whined like a camel or a child when the Prophet mounted his new seat, but was calmed by stroking and kind words from the Prophet. Most stories take it for granted that the *minbar* was primarily intended for the *khuṭba*; in some it is added that the object was to enable the large assembly to hear him (Ibn Saʿd, i/1, 10, 11). We are told also that the Prophet performed the *ṣalāt* on it and, during the *sudjūd*, he came down from it. He also took care that the people could see his *ṣalāt* and follow him (al-Bukhārī, *Ṣalāt*, *bāb* 18; *Djumʿa*, *bāb* 26). This last tradition however presupposes the later custom of standing upon the *minbar* (note that the same idea of the palm-stump occurs in *Djumʿa*, *bāb* 26).

In this connection, it is interesting to note a tradition in Ibn al-Athīr according to which the Companions asked the Prophet to take up a raised position, as many *wufūd* were coming (*Usd al-ghāba*, i, 43). Another tradition is in keeping with this, according to which the Prophet, when he was visited by a man named Tamīm, stood on a *kursī* and addressed him from it (*ibid.*, 214; cf. Lammens, *Moʿāwia*, 204, n. 5). Here we have a seat of honour on which the ruler sits. This is undoubtedly in keeping with the character of the *minbar*; while the raised seat was in general use among the northern Semites, the Arabs usually sat on the ground, often leaning against a saddle. The raised seat was the special mark of the ruler or, what is the same thing, of the judge. We are told that Rabīʿa b. Mukhāshin was the first to sit on a *minbar* or *sarīr* when acting as judge (*Aghānī*[2], iii, 3; al-Maḳrīzī, iv, 6-7). Al-Ḥadjdjādj, for example, when he addressed the people (hardly in the mosque) sat on a chair which belonged to him (*kursī lahu:* al-Ṭabarī, ii, 959) and when he tried and condemned his enemies, a *sarīr* was erected for him (*ibid.*, 1119); in the same way a *kursī* was placed for Yazīd b. al-Muhallab when he issued his orders for a battle (*ibid.*, ii, 1107; see also Becker, *Kanzel*, 8).

If tradition usually suggests that the *minbar* was introduced exclusively for the *khuṭba*, this seems to be a somewhat one-sided view. The *minbar* was primarily, as Becker was the first to point out, the throne of the mighty Prophet in his capacity as a ruler. In keeping with this is the tradition that it was introduced in the year 7, 8 or 9 (al-Ṭabarī, i, 1591; al-Diyārbakrī, *Khamīs*, ii, 75; *Usd al-ghāba*, i, 23). The Prophet used it for the publication of important announcements, for example, the prohibition of wine. That he should also make his public speeches to the community from the new seat was only natural. His *khuṭbas*, however, were not confined to the Friday worship, and he could still deliver a *khuṭba* without a *minbar*, e.g. at the festival on the *muṣallā* [*q.v.*], where Marwān was the first to put up a *minbar* (al-Bukhārī, *ʿĪdayn, bāb* 6), and beside the Kaʿba after the capture of Mecca (Ibn Hishām, 823).

The Prophet's *minbar* is often called *aʿwād* from its material (al-Bukhārī, *Ṣalāt, bāb* 64; *Djumʿa, bāb* 26). It consisted of two steps and a seat (*madjlis:* al-Diyārbakrī, *Khamīs*, ii, 75; al-Bukhārī, *Djumʿa*, *bāb* 23; *maḳʿad:* al-Ṭabarī, i, 1591). After the time of the Prophet, it was used in the same way by Abū Bakr, ʿUmar and ʿUthmān (see below). Its significance as a throne is seen from the fact that in the year 50, Muʿāwiya wanted to take it to Syria with him; he was not allowed to do so but he raised it by 6 steps. At a later date, ʿAbd al-Malik and al-Walīd are said to have wanted to take the Prophet's *minbar* to Damascus (al-Ṭabarī, ii, 92-3; *Khamīs*, ii, 75; Yaʿḳūbī, *Taʾrīkh*, ii, 283; Ibn al-Faḳīh, 23-4; Wüstenfeld, *Medina*, 63). In the time of the Prophet, it stood against the wall so that a sheep could just get past (al-Bukhārī, *Ṣalāt*, 91). In the time of al-Muḳaddasī, in the centre of the Mughaṭṭā there was pointed out the position of the old *minbar*, above which Muʿāwiya was said to have built his new one (82; cf. Ibn Ḥawḳal, 26, and al-Ḳazwīnī, ed. Wüstenfeld, ii, 71). According to some *ḥadīths*, it was over the *ḥawḍ* of the Prophet (al-Bukhārī, *Ṣalāt fī Makka*, *bab* 5; *Faḍāʾil al-Madīna*, *bāb* 5, 12 and *passim*). At a later date, new *minbars* were erected in the mosque (see Wüstenfeld, *Medina*, 64, 96).

That the Umayyads should have a *minbar* of their own was natural; they sat on it, just as their predecessors had done (cf. Goldziher, *Muh. Stud.*, ii, 42). Muʿāwiya took it with him on his journey to Mecca (*Chron. Mekka*, i, 333); he also had taken it to the festivals on the *muṣallā* (al-Yaʿḳūbī, *Taʾrīkh*, ii, 265), just as Marwān used to do in Medina (see above); it was therefore still portable and indispensable for the sovereign when he wished to make a public appearance as such. In Ibn Djubayr's time, the *minbar al-khuṭba* in Damascus was in the central *maḳṣūra* (*Riḥla*, 265). According to Ibn Khaldūn, Muʿāwiya was the first in Islam to use the throne (*sarīr*, *minbar*, *takht*, *kursī*) but he is clearly not referring to the *minbar* of the mosque (*Muḳaddima*, Cairo 1322, 205-6, *faṣl* 3, 37).

The *minbar* taken to Mecca by Muʿāwiya remained there till the time of al-Rashīd; when the latter visited Mecca on his Pilgrimage in the year 170/786-7 or 174/790-1 a *minbar manḳūsh* with nine steps was presented to him by the *amīr* of Egypt and the old one was put up in ʿArafa. At a later date, al-Wāthiḳ made *minbars* for Mecca, ʿArafa and Minā (*Chron. Mekka*, i, 333, iii, 114). The Meccan *minbar* was a portable one. It usually stood beside the *maḳām* but was put beside the Kaʿba during the *khuṭba* (Ibn Djubayr, 95, 97; cf. *Chron. Mekka*, iii, 429). According to al-Batanūnī, this custom was kept up until Sultan Sülaymān Ḳānūnī (926-74/1520-66) built a marble *minbar*, north of the *maḳām* (*al-Riḥla al-Ḥidjāziyya*, 100).

It seems at first to have been doubtful whether

manābir should be put up in the provinces or not. According to al-Ḳuḍāʿī, ʿAmr had a *minbar* made in al-Fusṭāṭ but ʿUmar ordered him to take it away: he was not to raise himself above the Muslims so that they would have to sit below his heels (al-Maḳrīzī, iv, 6-7; Ibn Tag͟hrībirdī, i, 76; al-Suyūṭī, *Ḥusn al-muḥāḍara*, i, 63, ii, 135). The idea obviously was that the throne belonged to the caliph alone. After ʿUmar's death, however, ʿAmr is said to have used a *minbar* (al-Maḳrīzī, iv, 8, 27). It stood there till Ḳurra b. S͟harīk [*q.v.*] rebuilt the mosque. During the rebuilding, it was put in the Ḳaysāriyya, which was used as a mosque; only when the mosque was completed in the year 92/711 did Ḳurra put up a new *minbar*. Tradition, however, is uncertain. The *minbar* removed by Ḳurra perhaps dated from the time of ʿAbd al-ʿAzīz b. Marwān, who had taken it from a church or had been presented with it by the Nubian king (al-Maḳrīzī, iv, 8; Ibn Tag͟hrībirdī, i, 78). Ḳurra's *minbar* remained till 379/989, when the Fāṭimid vizier Yaʿḳūb b. Killis replaced it by a gilded one. A large new *minbar* was placed in the mosque of ʿAmr in 405/1014-15 by al-Ḥākim (al-Maḳrīzī, iv, 8; Ibn Tag͟hrībirdī, i, 78-9).

We hear of no objections in other places to the *manābir* in the *amṣār*. In Madāʾin as early as the year 16/637, Saʿd b. Abī Waḳḳāṣ erected a *minbar* in the mosque improvised in the Īwān of Kisrā (al-Ṭabarī, i, 2451, 9). In Baṣra, Abū Mūsā put up a *minbar* in the middle of the mosque. This was, however, found inconvenient because the imām had to cross from the *minbar* to the *ḳibla* "over the necks" of the (seated) believers. Ziyād then placed the *minbar* against the south wall (Yāḳūt, i, 642). On the other hand, we are told that ʿAbd Allāh b. ʿAbbās (governor of Baṣra 36-40/656-60) was the first to mount the *minbar* in Baṣra (al-D̲j̲āḥiẓ, *Bayān*, i, 179). When Ziyād had to fly from Baṣra, he saved the *minbar* which he put up in his Masd̲j̲id al-Ḥuddān (al-Ṭabarī, i, 3414-15). The *minbar* was the symbol of the ruler, and the governor sat upon it as representative of the ruler. It therefore formed a feature of the Masd̲j̲id al-D̲j̲amāʿa, where the community was officially addressed. In the year 64/683-4, therefore, there were *minbars* in all the provinces. In this year, homage was paid to Marwān b. al-Ḥakam not only in the capital but in the other *manābir* in the Ḥid̲j̲āz, Miṣr, S͟haʾm, D̲j̲azīra, ʿIrāḳ, K͟hurāsān, and other *amṣār* (al-Masʿūdī, *Tanbīh*, 307). Special mention is made of the fact that Ṭabariyya had no *minbar*.

In the 1st century and beginning of the 2nd one, we find the *wālī* in the smaller towns delivering the *k͟huṭba* standing, with the staff only. But in 132/749-50 the governor ʿAbd al-Malik b. Marwān had *manābir* put up in the *ḳurā* of Egypt (al-Maḳrīzī, iv, 8, 17 ff.; Ibn Tag͟hrībirdī, i, 350-1). When the *k͟huṭba* became purely a religious exhortation and the ruler was no longer the *k͟haṭīb*, the *minbar* became the pulpit of the spiritual preacher, and every mosque in which the Friday service was celebrated was given a *minbar*. At the same time, i.e. after al-Ras͟hīd, the change was gradually completed and the preacher spoke, standing on the pulpit. *Ḥadīt͟h*s therefore came into existence, according to which the Prophet used to deliver two *k͟huṭbas* on Friday, standing "just as is done to-day" (al-Buk͟hārī, *D̲j̲umʿa*, *bāb*s 27, 30) and ʿUmar (*ibid.*, *bāb* 2).

The *minbar* was thus now quite analogous to the Christian pulpit. It is very probable that this latter also influenced its form. We have already noted above, regarding a *minbar* in the mosque of ʿAmr, that it was said to be of Christian origin. The same thing came to be said of the Prophet's *minbar* (Wüstenfeld, *Medina*, 63). Muʿāwiya made the Medina *minbar* larger, while the one brought by him to Mecca had only three steps and was of course portable. We again hear of portable *minbars* later, which did not exclude their being large (cf. above, on the *minbar* of Mecca). Thus the *manābir* in al-Mag͟hrib are said to have been portable. Ibn al-Ḥād̲j̲d̲j̲ regards this (the oldest) custom as *bidʿa* and therefore ascribes it to al-Ḥad̲j̲d̲j̲ād̲j̲ (*Madk͟hal*, ii, 47, 13 ff.). The oldest *minbars* were all of wood. There is, however, one *ḥadīt͟h* which says that the Prophet had a *kursī* of wood with iron legs made for the reception of Tamīm (*Usd*, i, 214, 8 from below; cf. Lammens, *Moʿāwia*, 273, n. 3); it is however uncertain what relation this had to the *minbar*. A *minbar* of iron was made as early as the Umayyad period (Ibn Tag͟hrībirdī, i, 78, 8: *al-minbar al-ḥadīd*, probably correct in spite of Becker, *Kanzel*, 10, n.; cf. 79, 4, and see below); and also of stone (Goldziher, *Muh. Stud.*, ii, 42, n. 5, with a reference to Ibn Ḥad̲j̲ar); later, they were also built of brick (Wüstenfeld, *Medina*, 64, 96). As a rule, the *minbar* stood against the *ḳibla* wall beside the *miḥrāb*. Al-Mahdī had tried to reduce the *manābir* to their original small size (al-Ṭabarī, iii, 486, 12; al-Maḳrīzī, iv, 12, 13 ff.), but he could not arrest the development. In the larger mosques several *manābir* were even built. Ibn al-Faḳīh, in about 300/912-13, already mentions five *minbars* in the mosque in Jerusalem (100, 8 f.). In the Sulṭān Ḥasan mosque in Cairo, four were planned and three erected, when a minaret fell down in 762/1361 and diverted attention to other work (al-Maḳrīzī, iv, 117, 18 f.).

The importance which the *minbar* already had in the time of the Prophet caused special reverence to be paid to it, and the sanctity of the mosque was concentrated round this and around the *miḥrāb*. The governor of Kūfa, K͟hālid b. ʿAbd Allāh al-Ḳasrī (105-20/723-38), received a letter of censure from the caliph because he had prayed for water on the *minbar* (*Kāmil*, 20, 15). A false oath taken on or beside the *minbar* of the Prophet absolutely led to hell (Ibn Saʿd, i/1, 10, 3 f., 12, 19 f.; Ibn Ḥanbal, *Musnad*, ii, 329; cf. J. Pedersen, *Der Eid bei den Semiten*, 144, 147). Legends grew up which represented the Prophet seeing into the future from the *minbar* (al-Buk͟hārī, *D̲j̲umʿa*, *bāb* 29) and being able to follow the battle of Muʾta [*q.v.*] from it (cf. al-Wāḳidī, tr. Wellhausen, 311; Ibn His͟hām, 796) and also telling how his prayers on the *minbar* were specially efficacious.

Just as the Kaʿba was covered (*kasā*), so was the same thing done to the *minbar*. ʿUt͟hmān is said to have been the first to cover the *minbar* of the Prophet with a *ḳaṭīfa* (*K͟hamīs*, ii, 75, 1 from below). Muʿāwiya did the same thing when he had to give up his attempt to abolish it (*ibid.*, 76, 4; al-Ṭabarī, ii, 92, 4). It was not quite the same thing when al-Ḥākim rediscovered the already-mentioned iron *minbar* and covered it with gilded leather because it was covered with dirt (read: *ḳad͟har*) i.e. rust (Ibn Tag͟hrībirdī, i, 79, 5 f.). Under the ʿAbbāsids, a new *kiswa* was sent every year for the *minbar* of the Prophet from Bag͟hdād; the sultans later did not renew it so frequently (Wüstenfeld, *Medina*, 64). We find other references to the covering of the *minbar* on special occasions (Ibn D̲j̲ubayr, 149, 16). Ibn al-Ḥād̲j̲d̲j̲ (*Madk͟hal*, ii, 74) demands that the *imām* should put a stop to the custom of putting carpets on the *minbar*.

(J. Pedersen)

2. Architectural features: the Arab, Persian and Turkish lands.

As noted in 1. above, the *minbar* was in early times used as a seat by the ruler or his governor, from which he addressed the Muslims at the Friday worship, consonant with the use of mosques in the Umayyad period as places of political assembly also (see MASDJID. I. E. 1, and J. Sauvaget, *La Mosquée Omeyyade de Médine*, Paris 1947, 134-5, 142-4). According to C.H. Becker, the change in the purpose of the *minbar* from the ruler's or governor's seat to the purely religious pulpit occurred towards the end of the Umayyad period (*Die Kanzel im Kultus des alten Islam*, in *Orientalische Studien Th. Nöldeke... gewidmet*, Giessen 1906, i, 344-7). Unfortunately, we do not have any examples or even descriptions of how *minbars* looked during the Umayyad period. Evidently it took some time before *minbars* were generally in use. In 132/749-50 provincial cities in Egypt were provided with *minbars* by order of Marwān II, and we may therefore presume that they became standard mosque furniture in other parts of the Islamic world as well.

Little is known of *minbars* during the ʿAbbāsid period. It is reported that the caliph al-Mahdī ordered Muḥammad b. Abī Djaʿfar al-Manṣūr in 161/777-8 to reduce the height of *minbars* to make them the same size as that of the Prophet (al-Maḳrīzī, *Khiṭaṭ*, Būlāḳ 1853, ii, 247). This incident would suggest that *minbars* at that time were high, a possibility borne out by the fact that the Great Mosque of Sāmarrā had, according to its *ḳibla* wall plan, a *minbar* which, on architectural evidence, was about 3.90 m high (J. Schacht, *An unknown type of Minbar and its historical significance*, in *Ars Orientalis*, ii [1957], 156). The only surviving *minbar* from the early period of Islam is in the Great Mosque of Ḳayrawān in Tunisia. Made of teak and measuring 3.31 m with eleven steps, it is a magnificent example of carved woodwork. It is said to have been brought from Baghdād by the Aghlabid *amīr* Abū Ibrāhīm Aḥmad (242-249/856-63), and was probably completed in 248/862-3 (K.A.C. Creswell, *Early Muslim architecture*, Oxford 1940, ii, 314, 317-19, pls. 89, 90). It is the earliest extant example to have the basic elements of a wooden *minbar*, that is, a platform with steps and a portal without a door at the entrance to the steps. The framework consists of upright and transverse strips of wood with rectangular and triangular panels fitted in by the tongue-and-groove technique. The framework is decorated with vine tendrils forming circular loops enclosing a vine leaf and bunch of grapes, a composition found in the tie beams of the Dome of the Rock in Jerusalem. Most of the panels on the *minbar* are geometric grilles, but on the eastern side there are ten very beautiful panels carved in arabesque. The naturalistic style of the design on these ten panels and, in particular, the pine cones encircled by vines, recall wooden panels found near Baghdād. In Creswell's view, the resemblance strongly suggests that the ten panels were carved there. E. Kühnel has pointed out that their ornamentation resembles that of the Umayyad palace at Mushattā [*q.v.*] (*Die Islamische Kunst*, in A. Springer, *Handbuch der Kunstgeschichte*, Leipzig 1929, vi, 385). E. Diez remarked on the dissimilarity of the style of the naturalistic panels to the more abstract style of the early ʿAbbāsid period typified in the stucco and wood decoration in Sāmarrā, and believed that some of the carved strips and panels may have belonged to an Umayyad *minbar* before being assembled in the present structure (*EI*[1], MINBAR, at iii, 500). The *minbar* has been subjected to damage and restoration and, particularly, it must have been restored after Ḳayrawān was sacked by the Fāṭimid caliph al-Mustanṣir in 441/1049-50 (H. Saladin, *La Mosquée de Sidi Okba à Kairouan*, Paris 1899, 8, 104). According to Creswell, in the repairs of 1907 the panels were replaced in a new order. The rectangular panels with geometric designs, which are of varying quality, are difficult to date, and whilst some are more recent, others appear to have been made at an early period (L. Golvin, *Essai sur l'architecture religieuse musulmane*, Paris 1970, 228).

In early Islamic times, some *minbars* were movable, which would at once indicate that they were made of very light material, probably wood. Judging from the form and size of the *ḳibla* wall in the Great Mosque of Sāmarrā, it must have had a movable *minbar* which was kept in a special room close to the *miḥrāb* (Schacht, *op. cit.*, 156). The *minbar* of the Kaʿba in Mecca was on wheels and was normally kept in the *maḳām Ibrāhīm* [*q.v.*], but was pushed out to stand beside the Kaʿba for the Friday sermon (Ibn Djubayr, *Riḥla*[2], ed. M.J. de Goeje, Leiden and London 1907, 95, 97). This was presumably the *minbar* donated by the ʿAbbāsid caliph al-Wāthiḳ (227-32/841-7) (Schacht, *op. cit.*, 157). The practice of moving *minbars* in and out of the assembly area has actually survived in certain parts of the Islamic world, mainly in North Africa. Few early ones remain, but the existence of a recess to the right of the *ḳibla* wall of some Friday Mosques proves that the original *minbars* of these mosques were movable. The series of movable *minbars* begins with that of the Great Mosque of Sfax built in 235/849, which has a recess for the *minbar* (see Schacht, *op. cit.*, 149 ff., for this and further examples).

Since the *minbar* was a symbol of authority, where the governor sat as representative of the ruling power, it was therefore an important feature of the Masdjid-i Djāmiʿ when the community gathered to be officially addressed. Al-Muḳaddasī refers to the *minbar* as an object of high regard in Muslim communities. A township, for instance, could only be called a city if it enjoyed the right to possess a *minbar* and held public assemblies. He frequently categorises towns according to whether they had a *minbar* or not. The significance of a *minbar* was such that in Iran townships fought hard for the right to have one. Several references from al-Muḳaddasī indicate that the number of *minbars* in a city was a sign of its prosperity (193, 261-2, 267, 273, 282, 306, 309).

No *minbar* survives from the early period in Iran, but Ibn Funduḳ mentions that he saw a *minbar* in the Ādīna Mosque in Sabzawār dated 266/879 (*Tārīkh-i Bayhaḳ*, ed. K.S.K. Ḥusaynī, Hyderabad 1968, 86). He also adds that the name of the ruler of Khurāsān, Aḥmad al-Khudjistānī, who held power there during the reign of the caliph al-Muʿtamid [see KHUDJISTĀN], was written on it. The earliest surviving *minbar* in Iran is in the Djāmiʿ Mosque of Shushtar and is dated Ṣafar 445/May-June 1053 (N. Meshkati, *A list of the historical sites and ancient monuments of Iran*, tr. H.A. Pessyan, Tehran 1974, 109). It is an early example of a *minbar* decorated with star- and polygon-shaped panels, filled with arabesque interlace pattern, fitted by the tongue-and-groove technique covering the sides, a type of decoration which became popular in Egypt, Syria, Turkey and other parts of the Islamic world from the 5th/11th century onwards. No other *minbar* with this type of decoration is known in Iran

from the Saldjūḳ period. In central Iran, five *minbars* survive from the period of Saldjūḳ rule. All of these reveal the same structure as that at Ḳayrawān, namely, a flight of steps with posts at their entrance leading up to the speaker's seat, which consists of a platform supported on four posts. The *minbars* are on a smaller scale than that of Ḳayrawān, but the sides, consisting of carved rectangular panels, are similar (for a detailed description and analysis of these Iranian *minbars*, see J. Golmohammadi, *Wooden religious buildings and carved woodwork in central Iran*, Ph.D. diss., Univ. of London 1988, unpubl.). One of the earliest of these five is the *minbar* in the Masdjid-i Djāmiᶜ in Abyāna, dated 466/1077. The second, dated 543/1148, is in the Imāmzāda Ismāᶜīl in Barz, and the third, dated 583/1187, is in the Masdjid-i Pāʾīn in Farīzhand. All these three *minbars* are in the Natanz region. The *minbar* in the Masdjid-i Djamiᶜ in Muḥammadiyya near Nāʾīn, and that called the Ṣāḥib-i Minbar in a building attached to the Ḥusayniyya in Farīzhand, have no dates, but they may be attributed to the 5th-6th/11th-12th centuries on account of the use of the bevelled technique of carving in the arabesque decoration, and in the case of the Ṣāḥib-i Minbar, the style of the Kūfic inscription. A notable and important feature of these five Iranian *minbars* is the application of a so-called "bevelled" style of carving. This particular decorative technique was identified by E. Herzfeld as found on the stucco decoration of Sāmarrā (*Die Ausgrabungen von Samarra*, i, Berlin 1923, 5-8, 10-14). It consists of patterns cut at a deep slant giving contrast of light and shade. The patterns, often repeated and separated by curving lines, were covered with dots, notches and slits and rows of beads or pearls were frequently used as a decorative border. While this style and technique was first used in Sāmarrā during the 3rd/9th century, it survived in Iran, as R. Ettinghausen has pointed out, in a somewhat modified form, losing its repetitive arrangements, during the 5th-6th/11th-12th centuries (*The "Beveled Style" in the post-Samarra period*, in *Archaeologica orientalia in memoriam Ernest Herzfeld*, New York 1952, 76-81). This style of carving was outmoded in Egypt by the late 5th/11th century, but we can still observe it in other parts of the Islamic world right up to the end of the 6th-12th century, although the bevelling tended to be considerably shallower.

The *minbar* of the Masdjid-i Djāmiᶜ in Abyāna is perhaps one of the most outstanding works of the bevelled style still surviving in Iran. Its panels are carved with deeply bevelled patterns, including abstract leaves with spiral tips, which can be traced back to the stucco decoration of Sāmarrā. Also noticeable on it is the use of the tongue-and-groove technique, which existed in the early days of Islam (see E. Pauty, *Les bois sculptés jusqu'à l'époque Ayyoubide*, in *Catalogue général du Musée Arabe du Caire*, 1931, pl. II, nos. 4627, 4630, and pl. IV, no. 4739).

Although the Barz *minbar* has bevelled panels, the decoration is mainly arabesque interlace, showing the influence of new decorative trends. This *minbar* is also notable for its balustrade, which is composed of a lattice grille made up of geometric patterns formed by small pieces of turned wood fixed to each other by the technique that is well-known in the *mashrabiyya* [*q.v.*] work of Egypt; this is the earliest known dated example of such work in Iran. The existence of these *minbars* is significant, since they pre-date the Mongol invasion; it was previously thought that all Saldjūḳ *minbars* were destroyed by the Mongols.

The bevelled style of carving can further be observed on the *minbar* in the Great Mosque of ᶜAmādiyya in ᶜIrāḳ, dated 548/1153 (Ettinghausen, *op. cit.*, 74, Pl. X). Here polygonal panels set in a plain frame are decorated with semi-palmettes with spiral tips within curving scrolls. In Turkey there is a *minbar* from Malatya, which is now preserved in the Ethnographic Museum in Ankara (G. Öney, *Anadolu Selçuklu mimarisinde süsleme ve el sanatlari*, Ankara 1978, 115). It has small polygonal pieces set in a plain framework carved in the bevelled style. The field of the panels is made up of deeply incised small scale arabesques with bevelled surfaces. It has been attributed to the 7th/13th century, but Ettinghausen has correctly pointed out that it must be earlier, namely dating from the 6th/12th century (*op. cit.*, 82). So far no other dated piece of woodwork carved with the bevelled style is known from the 7th/13th century; Ettinghausen's dating appears therefore justified.

The structure and decoration of the sides of *minbars* began to change towards the end of the 5th/11th century, when there appeared a new method of construction and design. This was to cover the sides with small pieces of wood in the shape of stars and polygons. The earliest known example of this type is the *minbar* of the Masdjid-i Djāmiᶜ in Shushtar already mentioned. The new composition appears in its fully developed form on the Fāṭimid *minbar* of the Shrine of al-Ḥusayn at Askelon, now preserved in the Museum of Hebron (L.H. Vincent and E.J.H. Mackay, *Le Haram el Khalil, sépulture des patriarches*, Paris 1923, 219-25, pls. XXV-XXVII). It is dated 484/1091-2. The entire surface of the sides is covered with elaborate geometrical patterns composed of small polygonal pieces of wood fitted into incised strapwork by the tongue and groove technique. The main elements of the pattern consist of hexagons, polygons and six-pointed stars. Each of the polygonal pieces is filled with interlaced arabesque designs. The carving, however, is no longer in the bevelled style, but executed in deep straight cuttings. Another interesting feature of this *minbar* is its balustrade grille composed as a *mashrabiyya*, making it a very early dated example of such work. The present canopy and door of the *minbar* are later, probably of the Mamlūk period.

During the Fāṭimid period in Egypt, the system of decoration was to continue appearing in two early *minbars*, that in St. Catherine's Monastery on Mt. Sinai dated 500/1106, and that in the Mosque of ᶜAmr in Ḳūs dated 550/1155 (C.J. Lamm, *Fatimid woodwork, its style and chronology*, in *Bull. de l'Inst. d'Égypte*, xviii [1935-6], 78). The latter example has a pavilion over the speaker's seat, and the decoration at the back of the seat recalls a *miḥrāb*. From the Fāṭimid period onwards, the *minbar* developed its standard form, having a domed canopy over the speaker's seat, a doorway and decorative elements consisting of stars and polygons made up of small carved pieces of wood. This form was to become standard in Syria and Turkey as well as Egypt. A good example of this type is the *minbar* of the Aḳṣā Mosque in Jerusalem, which was donated in 564/1168 by Nūr al-Dīn to Aleppo and later taken by Ṣalāḥ al-Dīn to Jerusalem (*ibid.*, 88).

A popular decorative feature of the 6th/12th century onwards, inlay work of ivory and mother of pearl, appears on this same *minbar* (M.S. Briggs, *Muhammadan architecture in Egypt and Palestine*, New York 1974, 216). Later on, Mamlūk *minbars* were noted for their elaborate inlay work, which included not only ivory and mother-of-pearls, but also ebony and bone. Such *minbars* are to be found in the mosques of Ibn Ṭūlūn and Ṣāliḥ Ṭalāʾīᶜ in Cairo (L. Hautecoeur and G. Wiet, *Les Mosquées du Caire*, Paris 1932, pls. 82, 85). Towards the end of the Mamlūk

period, we witness the decline of both carved and inlay decoration. The *minbar* from the Mosque of Ḳāʾit-Bay, now in the Victoria and Albert Museum in London, dated 872/1468-9, is a good example of these late Mamlūk works (V. and A., no. 1050-1869).

In Iran, star and polygon decoration was slow to become popular. Thus the *minbar* of the Masdjid-i Djāmiʿ in Nāʾīn dated 711/1311-12 has sides still constructed with rectangular panels rather than stars and polygons (M.B. Smith, *The wood minbar in the Masdjid-i Djāmiʿ, Nāʾīn*, in *Ars Islamica*, v[1938], 21-2, figs. 1-7). Part of its carved decoration consists of chains of lozenges or leaves, filled with comma-like volutes, which reflect a style that became popular in Iran during the 8th/14th century. It also has a lattice-work balustrade with a geometrical design made up of slats. This is an early example of this type of lattice-work in Iran, which was used for screens, windows, gateways and balcony balustrades. Another outstanding *minbar* from this post-Mongol period in Iran is that of the Masdjid-i Djāmiʿ of Sūryān in Fārs, now preserved in the Īrān-Bāstān Museum in Tehran (S.M.T. Muṣṭafawī, *Iḳlīm-i Pārs*, Tehran 1343 *sh*/1964, tr. R.N. Sharp, *The land of Pars*, Chippenham 1978, 5). According to its inscription, it was made in 771/1369. It is distinguished by the use on its sides of the star and polygon style, which was by that time applied in woodwork in Iran. Another feature of this *minbar* is the distinctly floral element of its carved decoration, which was later to become characteristic of the Tīmūrid period. The *minbar* of the Mosque of Gawhar Shād in the sanctuary of the Imām Riḍā in Mashhad made in 840-50/1436-46 is a fine Tīmūrid piece. It is distinguished by profuse ornamentation of star and polygon patterns with tendrils carved in relief in the Tīmūrid style (Diez, *op. cit.*, 500). This *minbar* is unusual in Iran in having a canopy, in this case surmounted by a crown of stalactites (*EI*[1], *Miḥrāb*, fig. 8, which shows the *minbar*).

Wooden *minbars* carved to a very high standard were also produced in Anatolia. Wood was plentiful there, so its use for mosque furniture is easily understandable. One of the earliest wooden *minbars* in Anatolia is in the Alaeddin Mosque, Konya, and is dated 550/1155 (J.H. Loytved, *Konia. Inschriften der Seldschukidischen Bauten*, Berlin 1907, 22-4). It is made of walnut wood, and apart from its intricately carved star and polygon decoration it has a balustrade grille with a Ḳurʾānic inscription on the rails and a cusped arch with panels over the entrance. It bears no particular resemblance, either in structure or decoration, to the Saldjūḳ *minbars* in Iran, and in fact is in the Syro-Egyptian form. *Minbars* of the Alaeddin type became increasingly popular in Anatolia during the 7th-8th/13th-14th centuries. A good example of these is the *minbar* of the Ulu Cami of Siirt, now in the Ethnographic Museum in Ankara, which is carved to a very high standard (E. Akurgal, *The art and architecture of Turkey*, Oxford 1980, 202). Similar *minbars* still kept in their original places are those of the Ulu Cami of Sivrihisar dated 670/1272, and that of the Eşrefoğlu Cami in Beyşehir dated 696-8/1297-9. The tongue-and-groove technique, which is called *kündekārī* in Turkish, was applied to a full extent in the decoration of these *minbars*. It is remarkable, however, that in Anatolia a kind of false *kündekārī* was also frequently used, most likely for the reason that it cut the cost. Large panels were carved in polygonal patterns and mounted on the skeleton structure of the *minbar*. Sometimes the geometric patterns were made separately and glued on to the background. Small strips of incised wood were nailed between them to give the appearance of strapwork and also to hide the joins in the panels. This method, however, does not prevent warping, and in time slits appeared between the panels. Examples of such false *kündekārī* technique can be seen on the *minbars* of the Alaeddin Mosque, Ankara (594/1197-8), the Ulu Cami, Divriği (626/1228-9), and the Ahi Elvan Mosque, Ankara 784/1382 (Akurgal, *op. cit.*, 202).

Although *minbars* were most commonly made of wood, they were also constructed of other materials, such as brick, ceramic and stone. Al-Muḳaddasī, 77, mentions one in ʿArafa (in the Ḥidjāz) which was made of bricks. There is also an undated brick *minbar* in the 4th/10th century Tārīkhāna Mosque in Dāmghān, though it appears to be much later than the building itself. (R. Hillenbrand, *The mosque in the medieval Islamic world*, in *Architecture in continuity. Building in the Islamic world today. The Aga Khan Award for Architecture*, ed. S. Cantacuzino, New York 1985, 37). In central Iran, there are five known examples of ceramic tiled *minbars* dating from the period *ca.* 1445-1525 A.D. (B. O'Kane, *The tiled Minbars of Iran*, in *Annales Islamologiques*, xxii [1986], 133-53, pls. XXXVI-XLIII). All are decorated with variations on a design of eight and twelve pointed stars, which include patterns of light blue stems with amber and white flowers, and floral arabesques of amber and light blue on a dark blue ground. Some have inscriptions giving the name of the donor, or of holy figures or religious texts. The finest is in the Masdjid-i Maydān in Kāshān and is decorated with mosaic faience of a standard far above average. One inscription on the left-hand side gives the name of the craftsman as Ḥaydar, the tile-cutter, and another inscription states the time of construction as being in the reign of Sultan Abū Saʿīd Gūrgān, which has led O'Kane to date the *minbar* to the year before Sultan Abū Saʿīd's death in 874/1469, when he was briefly ruler of the area. The *minbar* of the mosque of the *khānagāh* of Bundirābād is the largest of the five, and is dated by O'Kane to about the time of the repair works to the mosque itself, carried out in 848/1473. These tiled *minbars* belong to a period of growing use of tiles and mosaic faience in Iranian architecture. The taste for them did not last for long, probably because there was a need to retain mobility in certain circumstances. There are two late examples of tiled *minbars* from Khīwa, one in the summer mosque of the Old Arg, which is datable to the 1820s and the other in an unidentifiable building also probably 19th century. Both are low with four steps (O'Kane, *op. cit.*, 153).

There are a number of stone *minbars* in the Islamic world, such as those of the Shaykhū, Aḳsunḳur and Khāṭirī Mosques in Egypt. Perhaps the most famous is in the mosque of Sulṭān Ḥasan dated 757-64/-1356-63 (Hautecoeur and Wiet, *op. cit.*, 103, 300, pls. 119, 132). The Mosque of Barḳūḳ in the Cemetery of the Caliphs, dated 806-13/1403-10, has a fine stone *minbar* carved with intricate geometric patterns, the sides in particular having star and polygon designs similar to those on woodwork. It resembles the carved stone *minbar* in the Mosque of Shaykhū dated 750/1349 in having a door with a stalactite portal and canopy surmounted by an onion-shaped dome (*ibid.*, 261, 300, 314, 334, pls. 119, 157).

The Friday mosque of Harāt had a marble *minbar* of great beauty, which now no longer exists, carved for it at the end of the 9th/15th century by the stonemason Shams al-Dīn (*Khulāṣat al-akhbār*, part of Khwāndamīr's general history describing Harāt, ed. G. Iʿtimādī, Kābul 1345 *sh*/1966, 12). A.D.H. Bivar

has drawn attention to the stone *minbar* of the Muẓaffarid Aḥmad dated 789/1387-8 in Sīrdjān (see KITĀBĀT, pl. XXIII, 29).

The earliest stone *minbar* in Anatolia is in the Alaeddin Mosque in Niğde dated 620/1223. The *minbar* is simple with no decoration except arabesques carved on the stone balustrade (A. Gabriel, *Monuments turcs d'Anatolie, Kayseri-Niğde*, Paris 1931, i, 120, 122, pl. XXXVI). Marble and stone *minbars* were mainly popular in the Ottoman period. The Mosques of Bāyazīd and Meḥmed Pasha in Amasya, both dated 891/1486, have fine marble *minbars* of high-quality workmanship. The *minbar* of the latter is particularly notable for its rich floriated decoration (Gabriel, *op. cit.*, ii, 37-8, 43, pls. VI-2, VII-2). The most interesting *minbar* is in the Selimiye Mosque in Edirne dated 961/1574, and is superior in its size, beauty and the quality of its workmanship. It is carved from a single block of stone, and the side is dominated by an equilateral triangle containing a sun disc. The fretted border and balustrade are composed of traditional polygonal designs and the conical canopy decorated with ceramic tiles. The stone *minbar* in the Sokollu Mosque in Istanbul dated 980/1572 also has a tiled canopy, as well as a lattice balustrade in stone imitating those in woodwork (G. Goodwin, *A history of Ottoman architecture*, London 1971, 264-5, 274, pls. 253, 261; O. Aslanapa, *Turkish art and architecture*, London 1971, 223, 225, pls. 174, 178).

3. In India.

In the various building styles of India (as defined in HIND, vii) the typology of the *minbar* is very variable, from a crude construction of three simple stone steps to elaborately carved canopied structures of nine steps or more. Stone is always the preferred material, even in the brick-building region of Bengal; however, the absence of any structural *minbar* in many well-preserved old mosques may suggest that wooden *minbars* were also known, although no early examples have survived.

Dihlī sultanate. In none of the earliest mosques is there an original *minbar* (that in the Djamā^cat-Khāna at Nizamuddin, the oldest mosque still in worship, is a modern replacement; old photographs, however, show a simple *minbar* of three stone slabs). This pattern is maintained up to the Lodī period, to judge by a very few extant examples in Dihlī (e.g. mosque at Baṛā gumbad; mosque at the *bā'olī* known as Rādjon kī bā'īn); only in the special case of the *ʿīdgāh* attributed to Mullā Iḳbāl Khan is there a more elaborate structure, a tall stone platform level with the top of the *miḥrāb* arch whence the voice of the *khaṭīb* might reach the great concourse gathered for the *ʿīd* assembly. Outside Dihlī itself, the *minbar* of the Djāmiʿ mosque of Iriċ, 815/1412, is a massive stone structure of seven steps, the last extended to a square platform supported on pillars.

Among the regional styles, no early mosques remain in the Pandjāb.

Bengal shows excellent early examples of canopied *minbars*; the earliest, in carved basalt, in the Baṛī *masdjid* in Čhōṭā Panḍu'ā [see PANḌU'Ā, Čhōṭā] of the early 8th/14th century, has nine steps leading to a domed upper chamber, with arched openings on three sides and what appears to be a *miḥrāb* representation against the western wall of the prayer-chamber. This design was followed in the great Ādīna masdjid of Ḥaḍrat Panḍu'ā [see PANḌU'Ā] of 776/1374-5, where as Ravenshaw's photograph shows (J.H. Ravenshaw, *Gaur: its ruins and inscriptions*, London 1878) the *miḥrāb*-like decoration on the western wall is carved with the representation of a hanging lamp, and the outer surface carved with geometrical diaper patterns. Similar but plainer is the *minbar* of the nearby Ḳuṭb Shāhī (Ravenshaw's "Golden") mosque, 993/1585. Further instances of this type occur; but there are also many simple *minbars* of three simple stone slabs. One late aberrant *minbar*, in the mosque of Muḥammad b. Tipū Sulṭān, 1258/1842, consists of three polished stone steps occupying half of the central *miḥrāb*, space having been severely limited by the neo-Palladian design of this building.

In the few remaining buildings of the Djawnpur sultanate, in Djawnpur itself, in the Djāmiʿ mosque at Itāwā, and in the Aṛhā'ī kangūra mosque at Kāshī, Banāras, the *minbar* takes the form of a massive stone structure of nine steps up to a square stone platform, with no trace of there ever having been a canopy. The typological similarity to the Irič example mentioned above points to a geographical rather than a dynastic determinant of style.

The favourite style of *minbar* in the Gudjarāt sultanate is again the massive stone nine-stepped structure, although as Aḥmad Shāh's mosque, the earliest in Aḥmadābād (816/1414), shows, the upper platform was covered by a canopy; the canopy may be taken entirely from a Hindu temple *mandapa*, supported by pillaged pillars, although even when purpose-quarried stones are used they are often elaborately carved in accordance with the characteristic richness of the Gudjarāt style. The steps may further be enclosed by stone sides to form handrails, again with carved surfaces. In many mosques the canopies have been removed, probably when many fine stone buildings were plundered during the early years of Marāṭhā rule in the early 12th/18th century. A feature found in many Gudjarāt mosques is the presence of a low square platform in front of the lowest step of the *minbar*; its original purpose is not clear, but it is not uncommon now to see it covered with mats and used to seat young students when the mosque is in use as a Ḳur'ānic school.

In Mālwā the canopied *minbar* is again the preferred style, as exemplified in that of the early mosque of Malik Mughīth at Mānḍū, 835/1432, where the upper platform is surmounted by a square roof resting on pillars which appears to be temple spoil, with projecting eaves and a parapet surmounted by a row of shield-shaped merlons; to the west the wall takes the form of a *miḥrāb* of black polished basalt, with the characteristic Mālwā row of merlons in low relief. This is surpassed by the magnificient *minbar* of the Djāmiʿ mosque (completed 858/1454), perhaps the finest in the sub-continent: eleven steps lead to the upper platform, originally railed on north and south; the three open sides are of the same shape as the arches of the *miḥrābs*, slightly ogival; the canopy itself has its eaves supported by sinous brackets, of the same shape as those in the Djāmiʿ mosque of Dhār and of Hūshang's tomb in Mānḍū; above the row of merlons there is a marble dome of the characteristic Mālwā shape, i.e. stilted below the haunch by being raised on a cylindrical drum. Here, as in the Gudjarāt mosques, there is again a square low platform at the foot of the *minbar* steps. At Čanderī [*q.v.*] the *minbar* of the Djāmiʿ mosque is typologically similar, but without the sinuous brackets and more solidly built (now whitewashed); that of the great *ʿīdgāh* similar but plainer, and of only eight massive steps (the even number is unusual).

In the Deccan, however, the *minbar* is usually of

the plain pattern of three modest stone steps; so at the first Bahmanī mosque, the Djāmiᶜ mosque of Gulbarga (769/1367), and others in Bidar. In the massive ᶜīdgāh at Bīdjāpur [*q.v.*], certainly of Bahmanī date, the *minbar* has nine stone steps leading to an open platform; in the arched opening of the west wall behind it is a flight of smaller steps leading to the top of the wall. In the buildings at Bīdjāpur (and Gōgī) of the ᶜĀdil Shāhīs, the most ornate of the Deccan styles, the *minbar* remains of the simple pattern of three (occasionally five) stone steps, and the same is true of the Ḳuṭb Shāhī mosques of Ḥaydarābād.

Throughout the Mughal period, the *minbar* is of the stepped uncovered type. Sometimes, as at the Djāmiᶜ mosque in Fatḥpur Sīkrī, the massive red sandstone steps have small pierced screens at their sides; in the time of Shāhdjahān, when many modifications were also made to earlier buildings, the *minbar* is often a simple structure of three steps but built of polished, sometimes also inlaid, marble, and a few have a chair-like back slab which may carry a brief inscription. The Djāmiᶜ mosques of Dihlī (Shāhdjahānābād) and Āgrā each have a central platform, approached by steps, in the *ṣaḥn*, outside the prayer-chamber, which may fulfil the functional purpose of the *minbar* when there is a vast concourse of worshippers to be addressed, even though there is a *minbar* in its normal position within the prayer-chamber.

4. In East Africa.

Several different types of *minbar* are to be found on the East African coast. One type is apparently peculiar to it. In the Middle Ages and up to the 19th century the greatest number of Friday mosques had a stone *minbar* consisting of two steps and a seat. At Kisimkazi, Zanzibar, there is only one step and a seat, while at Kua, Juani Island, Mafia, and at Mgao Mwanya, on the Tanzanian mainland, there are three steps and a seat. In all these cases the lowest step is very shallow, and is known in Swahili as *kiapo*, or place for taking solemn oaths. The person taking the oath stands on the lowest step, and touches the *minbar*. A brief account of Swahili oaths is given by Mtoro bin Mwenyi Bakari of Bagamoyo, Tanzania, in C. Velten, *Desturi za Wasuaheli*, Göttingen 1903, 273-7, but without explanation of the ritual.

The later Friday mosque at Ungwana, Kenya, built *ca.* 1500-50, is alone in its period in having seven stone steps and a seat at the top, with masonry sides formerly surmounted by a wooden handrail. In recent times similar stone *minbar*s have been constructed in mosques in the Lamu archipelago.

Only two wooden *minbar*s are known. This does not arise from any distase for wood, but because it is vulnerable to the white ant, ubiquitous in eastern Africa. The wooden *minbar* in the Friday mosque at Lamu is dated by an inscription 917/1511, and that at Siu 930/1523, both of these being in Kenya. At Magogoni, a small village near Dar es Salaam, Tanzania, a portable *minbar* is used on feast days. It consists of a simple wooden upright chair constructed on a flat pedestal, the latter projecting to form a step in front, and the space between the legs being enclosed to form a cupboard. It is of recent and rough construction.

In a number of Friday mosques, however, the *minbar* takes the form of a recess, or of a raised platform within a recess built out behind the *ḳibla* wall. It may be reached by a staircase within its recess, or by a staircase from inside the *miḥrāb*. The *minbar* thus resembles a window on the right-hand side of the *miḥrāb*. It is sometimes provided with a balustrade for the preacher to lean on. Where the staircase leads out of the *miḥrāb*, it is sometimes connected with a room or office for the use of the *imām*, for whom often an external door is also provided. The dating of *minbars* of this type is uncertain, but local tradition, which is probably correct, assigns their construction to the end of the 19th and the beginning of the 20th century.

MINAEANS [see MAᶜĪN].

MINGLĪ GIRĀY KHAN [see MENGLĪ GIRĀY].

MINIATURE [see TAṢWĪR].

MINICOY, an isolated coral atoll, the southernmost of the Indian Lakshadvīp group [see LACCADIVES], situated in the south-eastern Arabian Sea, off the coast of Malabar [*q.v.*] in lat. 8°7′N, long. 73°19′E. The atoll comprises two islands—the main, inhabited island of Minicoy (known to its inhabitants as Maliku), and the much smaller, uninhabited islet of Vilingili, marked on British Admiralty maps as "Small-pox Island" (a reference to its former use by the islanders as a quarantine station)—as well as extensive coral reefs enclosing a broad lagoon. Maliku Island, an elongated crescent forming the southern and eastern rim of the atoll, is just over 6 miles/9.6 km long, but only half-a-mile/0.8 km across at its widest point; the total land area is about 1,120 acres/500 hectares, whilst according to the 1971 *Census of India*, the population totalled 5.342 persons (2,433 male and 2,909 female).

Little is known of the early history of Minicoy, which—in contrast to the more northerly, Malayalam-speaking, Dravidian-populated islands of the Lakshadvīp group—was settled by Indo-European, Divēhi-speaking Maldivian people, probably in the first centuries A.D., though whether these early settlers migrated directly from Malabar, or via Sri Lanka and the neighbouring Maldive Islands [*q.v.*] remains uncertain. It is clear, however, that until the mid-10th/16th century the people of Minicoy remained culturally and politically attached to the Maldives, sharing a common ethnic origin, language, script, and religion; thus archaeological evidence indicates the former presence of Hinduism and Bud-

dhism in the atoll, faiths which were fairly rapidly eclipsed by the introduction of Islam in the late 6th/12th century, probably some years after the conversion of the Maldivian Sultan Muḥammad al-ʿĀdil in 548/1153.

Minicoy's political link with the Maldives became increasingly tenuous from the 8th-9th/14th-15th centuries onwards when certain of the northern Maldivian atolls (including, most certainly, Minicoy, the most isolated area from Māle and closest to India of the various Maldivian atolls) came under the influence of the Malabar principality of Kaṇṇaṇūr [*q.v.*]. The process of Minicoy's detachment from the Maldives was completed by *ca.* 973/1565, at which time (according to the Maldivian *Taʾrīkh*, corroborated by Pyrard and Zayn al-Din) the atoll had passed under the rule of the Ālī Rādjā (or "Āzhi-Rādjā", Malayalam: "Sea King") of Kaṇṇaṇūr. For the next three-and-a-half centuries, Minicoy remained attached to the Arakkal rulers of Kaṇṇaṇūr. By the mid-19th century, however, Arakkal rule had become increasingly a legal fiction, with the British authorities sequestrating the atoll in 1861 for a period of five years, and again in 1875, on this occasion permanently. In 1908, together with the more southerly islands of the Laccadives group, Minicoy was formally ceded by the Bībī of Kaṇṇaṇūr to the British Indian Empire. British rule was maintained until Indian independence in 1947. Most recently, in 1956, the atoll was incorporated within the Indian Union Territory of Lakshadweep (Lakshadvīp).

The indigenous inhabitants of Minicoy (excluding only members of the expatriate mainland, predominantly Malayali, administration) are, like the inhabitants of the Maldive Islands, uniformly Sunnī Muslims of the Shāfiʿī *madhhab.* Religious observances and customs—including widespread belief in spirits and black and white magic, as well as the institution of *namād-ge* or prayer houses for women—are similar to those in the Maldives. Literacy is high (practically universal), and most islanders are conversant with Arabic script, as well as with their own Maldivian language (Divēhi, known on Minicoy as "Māhl") and Tāna script. As in traditional Maldivian society, the people of Minicoy are divided into four caste-like groups, or classes, viz. *Malikhan* (the highest group, predominantly landowners); *Mālimi* (the second highest group, expert sailors and navigators, cf. Ar. *muʿallim*); *Takkru* (the third group, less specialised fishermen); and finally *Rāveri* (the lowest group, specialising in tending coconut plantations). In isolated Minicoy, caste-like differentiations have persisted longer than in the Maldives; thus in Minicoy, the first two classes may intermarry, as may the last two, the child of such a marriage belonging to the class of whichever parent is higher. Similarly, the first two classes may eat together, as may the last two. Doubtless similar restrictions once existed in the Maldives, but these have long since disappeared.

The economy of the island rests on fishing and agriculture (predominantly coconut farming), whilst a substantial supplementary income is remitted to the island by sailors working for the Indian merchant navy; the men of Minicoy have long enjoyed a well-founded reputation for their seafaring expertise, and the widespread and long-standing practice of leaving the island to find such work has frequently led to the suggestion that Minicoy, bereft of many of its sons at work on the high seas, whilst the women traditionally till the land, might be identified with Marco Polo's "Female Island".

The people of Minicoy live in one large settlement spanning the centre of the island at its broadest point. This village, with its *Djāmiʿ Masdjid* (Ml. *Hukuri Miskit*) and a number of lesser mosques and *namād-ge*, is divided into nine wards (Ml. *atiri*), each under its own headman (Ml. *mūppan*), the whole island being traditionally administered by an *amīn*. Maliku Village is remarkable for its cleanliness and order, each *atiri* having its own mosque, bathing tank and cemetery. To the north of the village lies the Central and North *Paṇdāram* lands (formerly the property of the Arakkal Rādjās, but now common land) as well as a former leper colony. To the south and west lies the "Big South Paṇdāram" as well as, near the westernmost point of the island, Minicoy lighthouse (constructed in 1882-4), a major navigation point for shipping using the Eight Degree and Nine Degree Channels.

MINISTER, MINISTRY [see WAZĪR].

AL-**MINḲARĪ** [see NAṢR B. MUZĀḤIM].

MINṬAḲAT AL-**BURŪDJ**, also *minṭaḳat falak al-burūdj*, are all used in Arabic to designate both the zodiac and the ecliptic. Strictly speaking, the zodiac is a "belt", or "zone", of the sky extending up to 6° (more correctly, 7°) north and south of the ecliptic due to the inclination of the orbits of the planets from the latter, while the ecliptic is a great circle in the sky running through the middle of the zodiacal belt and representing the path of the sun (*ṭarīḳ/ṭarīḳat al-shams*) in her apparent annual revolution. The knowledge of both the zodiac and the ecliptic was received by the Arabic-Islamic culture, through translations of scientific writings, from classical antiquity.

The ambiguity in the term—it being used for the zodiacal belt as well as for the ecliptic circle—existed already in antiquity; for greater exactness, therefore, the ecliptic specifically was sometimes called "the circle running through the middle of the zodiac" (cf. *RE*, art. *Zodiakos*, ii; iii; v, 1), a formula which is also reflected in some Arabic texts (see, e.g., the Arabic translation of Ptolemy's *Planisphaerium*, ms. Istanbul, Aya Sofya 2671, fols. 81b, 82a, 83b, etc.: *al-dāʾira allatī tamurru bi-wasaṭ al-burūdj*; cf. also al-Khwārazmī, *Mafātīh*, 221, 6-7: *minṭaḳat al-burūdj hiya niṭāk al-burūdj wa-wasaṭ al-burūdj alladhī fīhi masīr al-shams*).

Other terms for the ecliptic, in Arabic astronomical writings, are also *falak al-burūdj* and *dāʾirat falak al-burūdj*. While in antiquity the zodiacal belt was indiscriminately called a "circle" (κύκλος), in the Islamic period *minṭaḳa* (lit. "belt") was also used for a [great] circle, such as the ecliptic and also the equator (cf. al-Bīrūnī, *Ḳānūn*, i, 54, 14). This use of *minṭaḳa* in the sense of "[great] circle" seems to derive from antiquity, perhaps through Syriac mediation (cf. Severus Sebokht, *ca.* 660 A.D.: *hudhrē awketh zonas*, using the Greek word ζώνη, *Le Traité sur les Constellations*, ed. F. Nau, *ROC*, xxvii [1929-30],

395,9 = Syriac ms. Paris B.N. 346, fol. 103a, 15 f.; see also the same author's *Traité sur l'astrolabe plan*, ed. and tr. F. Nau, in *JA* [1899], where the zodiac is often called "the zone of the zodiac", *zona d-zodiaḳon*, always using the Greek words, and ch. xxii, where the ecliptic and other circles are also called *zona*, ζώνη). Arabic *minṭaḳa* (in both senses, as "belt" and "circle"), of course, is derived from Greek ζώνη. A very peculiar explanation for the use of *minṭaḳa* (as "great circle") is given by al-Bīrūnī, *Ḳānūn*, i, 54, 14-15: it [sc. a great circle] is called *minṭaḳa* [lit. "belt, girdle"!] by comparison, because its location is in the middle [i.e. between two poles, just as a girdle is in the middle of a person, between head and feet].

Babylonia may with great probability be assumed to be the original home of the zodiacal circle. The period of its origin cannot be fixed with certainty: the first attempts at a grouping of the constellations on the path of the sun and the planets, however, date from before the period of Hammurabi and in any case into the third millennium B.C. Almost all the names familiar to us are already found in Sumerian inscriptions. The Bog̲h̲az-Köy list of about 1300 B.C. gives all the signs of the zodiac with the exception of Leo and Libra. The mulAPIN series (*ca.* 700 B.C.) shows a list of 17 or 18 "constellations in the path of the moon", among which all the twelve zodiacal constellations of later times were contained. The formation of the systematic zodiac (and ecliptic), subdivided into twelve equal sections of 30° length each, has followed some time later (van der Waerden; for the subsequent Greek reception of the zodiac, cf. *RE*, art. *Zodiakos*, and Scherer).

The only pictorial representation of the starry heavens of the early Muslim period, the fresco on the dome of Ḳuṣayr ʿAmra [see ARCHITECTURE], shows the ecliptic as a broad band, along which are arranged the twelve *burūd̲j̲*; it also shows the pole of the ecliptic and the 12 (ecliptical) degrees of longitude, as well as the equator and a series of parallel circles. The peculiarity of the arrangement of the heavens with considerable southern latitudes shown beyond the equator on the hemispherical inner surface of the dome results in the equator and ecliptic not being shown as the largest circles. The method of representing the separate constellations on the fresco, especially the *minṭaḳa*, is, broadly speaking, the same as that on the Atlas Farnese. (N.B. It should be noted that the fresco of Ḳuṣayr ʿAmra represents the heavens as seen on a celestial globe.) For more details, see Saxl and also Beer.

The twelve *burūd̲j̲*. For exact astronomical and astrological observations and calculations, the zodiac and the ecliptic are both divided into 12 equal sections of 30° length each, the so-called zodiacal signs (Greek δωδεκατηφόρια), each of which was named in antiquity after the constellation lying next to it. Thus besides the twelve zodiacal signs (each of equal length, and invariably fixed in their location with respect to the vernal equinox), we have the twelve zodiacal constellations which are of various dimensions and are subject to precession. Due to the effect of precession, the vernal equinox, from which the division of the twelve signs begins, moves westward on the ecliptic at a rate of 50,37" per year (modern value). Therefore, the constellations fall back eastward from the vernal equinox about one sign in 2,140 years. Thus the vernal equinox (i.e. the beginning of the sign of Aries), which in antiquity was situated between the constellations of Pisces and Aries, in our days falls between Aquarius and Pisces; that means that in our days the zodiacal constellations are eastward roughly by one sign from the signs carrying their names, as, e.g., the constellation of Aries which nowadays falls into the sign of Pisces.

In Arabic, the zodiacal constellations and the signs are both called by the same word *burūd̲j̲* (sing. *burd̲j̲*). This term was already known to the Arabs before their acquaintance with the scientific Greek astronomy. In the Ḳurʾān, the term occurs three times: XV, 16; XXV, 61; and LXXXV, title and v. 1. As a common noun, *burd̲j̲* [*q.v.*] means "a fortress, or a tower" and is assumed to derive from Greek πύργος (of the same meaning). A reminiscence of this is found in some Arabic philologists who explain the word (in astronomical context) in that sense, cf. Ḳuṭrub (d. after 210/825-6): *wa 'l-burd̲j̲ ayḍan al-ḳaṣr al-mustaṭīl* (a "lengthy fortress", perhaps with the intended meaning, lengthy in vertical direction, i.e. a tower; see his *K. al-Azmina*, 133,3); Ibn Ḳutayba (d. 276/889): *al-burūd̲j̲ al-ḥuṣūn wa 'l-ḳuṣūr* (*K. al-Anwāʾ*, 120,5); ʿAbd Allāh b. ʿĀṣim (d. 403/1013): *wa-aṣl al-burūd̲j̲ al-ḥuṣūn* (*K. al-Anwāʾ*, fol. 3a,-2). There are only a few instances in Greek where the *burūd̲j̲* are really called πύργοι, mostly in late mss. of the 14th and 15th centuries (cf. the places quoted in O. Neugebauer, *Ethiopic astronomy and computus*, Vienna 1979, 232 n. 4; D. Pingree (ed.), *The astronomical works of Gregory Chioniades*, i, Amsterdam 1985, 26, 27 and 399); the current term in classical Greek texts is τὸ ζῴδιον, apart from some other less frequent forms (cf. *RE*, art. *Zodiakos*, ii; v, 6; Scherer, 42-4). The exact reason and point of the borrowing of *burd̲j̲*, in the astronomical sense, from Greek remain, therefore, uncertain. An interesting suggestion was made by F. Hommel (in *ZDMG*, xlv [1891], 607 n. 2), that *burd̲j̲* = πύργος, in the astronomical-astrological sense, might be related to Babylonian *parakku* (= Sumerian *barag*), "a chapel, sanctuary", citing a passage "The Gods in the sky have settled down in their stations (*manzalti-shunû*) [cf. the Arabic *manāzil* !], their *parakkî* ... are visible," where the reference is obviously to the zodiacal constellations. Another, obviously speculative explanation of the term *al-burūd̲j̲* is given by al-Tīfās̲h̲ī (d. 651/1263; *Surūr*, 199, 14 = Ibn Manẓūr [d. 711/1311], *Nit̲h̲ār*, 174,3/2): the term *burd̲j̲* in the language of the Arabs is derived from *al-burūd̲j̲*, infinitive of the verb *barad̲j̲a*, meaning "to become visible, apparent", like the verb *ẓahara*). (The word *al-burūd̲j̲* is also used once in the more common sense of "tower" in Ḳurʾān, IV, 78: *fī burūd̲j̲in mus̲h̲ayyada.*)

The old Arabs, before their acquaintance with Greek astronomy, did not know the zodiac as a complete system. But, as it seems, some of the twelve zodiacal constellations had become known to them, most probably, through channels as yet unknown, from Mesopotamia. These few constellation names are occasionally used in poetry, and—what is of great interest—many of the lunar mansions [see AL-MANĀZIL] have been related to them (cf. the table given by al-Bīrūnī, *Āt̲h̲ār*, 349 f. = tr. 350. The table is not correct in some of the details). Later, when Greek astronomical and astrological texts were translated into Arabic, most of these constellations were assigned new names formed after their Greek models. Also, it became apparent that the astronomical location of several of the older Arabic constellations had shifted from those places in the sky which they occupied in Greek tradition. So it would seem that here we have a testimony of two branches of development in the transmission of the zodiacal constellations: a northern branch reaching from Mesopotamia to the Greeks (and hence into modern astronomy), and a southern branch reaching into the

Arabian peninsula (rather fragmentary, and obscured in the course of time).

After the introduction of Greek astronomy, the Arabic-Islamic culture adopted and continuously applied the Greek distribution of constellations and the fixed stars, and it came to know and use the zodiac and the ecliptic as a system of astronomical and astrological reference (cf. the ed. of the star catalogue from Ptolemy's *Almagest*, in the two surviving Arabic versions of al-Ḥadjdjādj b. Yūsuf b. Maṭar and of Isḥāḳ b. Ḥunayn, with amendments by Thābit b. Ḳurra, where the descriptions of the twelve zodiacal constellations and all their individual stars are given and which have served as the basic source for all the astronomers and astrologers of the Islamic period). Most of the Arabic philologists, in their *kutub al-anwā*ʾ [see ANWĀʾ; AL-MANĀZIL], give a description of the *burūdj*. But since all of them lived in the time after the introduction of Greek science, it came about that they usually give the complete list of twelve *burūdj* (which, as stated before, were not completely known to the old Arabs), thus mixing up foreign knowledge and indigenous Arabic traditions.

Now follows a list of the twelve *burūdj*:

1. Aries. *al-ḥamal* (lit. "the lamb"). The name seems to be of indigenous Arabic tradition, since the three lunar mansions nos. 1, 2 and 3 (*al-sharaṭān* or *al-naṭḥ*, *al-buṭayn* and *al-thurayyā* [the Pleiades]) are usually identified as the horns, the belly and the fat tail (*alya*) of the animal. Some Arabic authors have proposed, because of these "horns", that the constellation should be rather called *al-kabsh* ("the ram"), a name which, subsequently, was occasionally used instead of *al-ḥamal*. Note that the location of this Arabic *ḥamal* extends into the Greek Taurus (the Pleiades !). In the translations from the Greek, the same name *al-ḥamal* was retained for Greek ὁ Κριός.

2. Taurus. *al-thawr*. This name seems to be of scientific origin, translated from Greek ὁ Ταῦρος, since no indigenous asterism (from among the lunar mansions) has ever been related to it.

3. Gemini. In the indigenous Arabic tradition, the corresponding constellation is *al-djawzā*ʾ (of unknown meaning), frequently used in poetry and old texts. As a constellation, however, the old Arabic *al-djawzā*ʾ was located in the stellar figure called by the Greeks (and so on further in modern astronomy) Orion. The lunar mansion no. 5 (*al-haḳʿa*) is understood as the head of *al-djawzā*ʾ. The scientific translations from the Greek added the new name *al-tawʾamān* ("the twins"), after Greek οἵ Δίδυμοι. (For Orion, the translators introduced *al-djabbār*, "the Giant", perhaps adopting an older Syriac designation, *gabbārā*.) Subsequently, very often (and especially so in the mediaeval Latin translations from the Arabic) there arose confusion, since the Arabic-Islamic astrologers and astronomers continued to use al-*djawzā*ʾ in its two notions, as a name for Gemini (within the zodiacal constellations and signs) and for Orion, while otherwise the two could be distinguished as *al-tawʾamān* (Gemini) and *al-djabbār* (Orion). In all texts, therefore, special caution is required with regard to the name *al-djawzā*ʾ in order to distinguish whether the zodiacal sign is intended or the southern constellation of Orion, outside the zodiac.

4. Cancer. Arabic *al-saraṭān*. Like no. 4, it seems to be of scientific origin, translation from Greek ὁ Καρκίνος. No indigenous Arabic asterisms have been related to it.

5. Leo. *al-asad*. The name belongs to the indigenous Arabic tradition. Not less than eight (or even nine) lunar mansions (nos. 7 to 14, or 15) have been related to *al-asad* which, therefore, in modern research literature, became famous as "the huge Arabic Lion". It is to be noted that the indigenous Arabic Lion figure, in location, is again different from the Greek tradition in that it stretches from αβ Geminorum to α or even ιxλ Virginis. In the translations from the Greek, the traditional name *al-asad* was retained.

6. Virgo. Indigenous Arabic *al-sunbula* ("the ear of corn"). This "ear" seems to be of Mesopotamian origin, since this section of the zodiac was already called by a name of that meaning in the Babylonian texts. The name has migrated to the Greeks, where ὁ Στάχυς became the proper name of the star α Virginis while the constellation as such was developed into a maiden (Παρθένος) carrying the ear in her hand. With the Arabs, on the other hand, the knowledge of the stellar object named *al-sunbula* became obscured, and while, in consistency with the zodiacal series, it stands for Virgo, it was explained by some philologists as a name given by the common people (*al-ʿāmma*) to the asterism otherwise called *al-hulba* ("the hair", sc. on the tip of the Lion's tail) and located in what in modern astronomy is called Coma Berenices, i.e. considerably far away north of the ecliptic (cf. Kunitzsch, *Unters.*, nos. 117a/b and 275). This, therefore, is another remarkable case of dislocation. Later, in translating the Almagest, the constellation was termed *al-ʿadhrā*ʾ (from ἡ Παρθένος), while the proper name of the star α Virginis (ὁ Στάχυς) was translated as *al-sunbula* (but here, different from the indigenous Arabic *al-sunbula* !).

7. Libra. *al-mīzān*, translated from Greek ὁ Ζυγός. As constellation title, Ptolemy in the Almagest had retained an older designation, αἱ Χηλαί ("the claws", i.e. of Scorpius). Already in Babylonian texts this section of the zodiac was called *zibānītu* ("balance") and was equally understood as the "horns" of Scorpius. On the other hand, the 16th lunar mansion of the Arabs, *al-zubānā*, is understood as the claws of the scorpion. As it seems, there exists a relation between Babyl. *zibānītu* and Ar. *al-zubānā* (although the meaning, for the Arabs, has become obscured and they now understood what formerly meant "balance" as the "claws" of Scorpius). In translating Ptolemy's Χηλαί, both Arabic translators supplied the indigenous Arabic name *al-zubānā*, whereas the Ζυγός used elsewhere in the *Almagest*, and also in the latitude column in the star catalogue, was rendered into *al-mīzān*.

8. Scorpius. Here we have a case among the (zodiacal) constellations where a constellation is transmitted with the same name, and in the same location, continuously from the Babylonians both to the Greeks (and hence into modern astronomy) and to the old Arabs. Arabic *al-ʿaḳrab* was already known in pre-scientific times, and four lunar mansions (nos. 16 to 19; by one author also no. 15, as a fifth) have been related to Scorpius. It should be kept in mind that originally Libra, before made into an independent constellation of its own, was included, as the "claws", into the constellation of a major Scorpius. The translators from the Greek afterwards retained the older name *al-ʿaḳrab for* ὁ Σκορπίος.

9. Sagittarius. In old Arabic tradition, *al-ḳaws* ("the bow"). In indigenous Arabic stellar lore there existed an asterism called *al-ḳaws*, consisting of the six stars ξ^2,ο,π,δ,ρ,υ Sagittarii (otherwise also called *al-ḳilāda*, "the necklace", or *al-udḥiyy*, "the ostrich nest", cf. Kunitzsch, *Unters.* nos. 224, 229 and 307) which might be a remnant of the fuller constellation of the Archer. According to al-Ṣūfī, Abū Ḥanīfa al-Dīnawarī (d. *ca.* 282/895) assumed that the zodiacal

constellation received its (old Arabic) name *al-ḳaws* from this asterism. The translators later introduced *al-rāmī* ("the archer"), from Greek ὁ Τοξότης.

10. Capricornus. Arabic *al-djady* (lit. "the kid"). The Arabic philologists occasionally report that there are two kids in the sky (*al-djadyān*), one of which is in the zodiac, while the other one rotates (about the North Pole) together with (the asterism) *banāt naʿsh*, i.e. the seven stars of "Charles' Wain". (This second one is the star α Ursae Minoris, which in the time of the early Arabs was not yet the "Pole Star"; in contrast to the *djady* in the zodiac, this second one is often called *al-djudayy*, in the diminutive.) It is, however, not clear whether *al-djady* (in the zodiac) is really an old Arabic name. At least, no other asterisms and no lunar mansions have ever been related to it. The translators of the *Almagest* retained the name *al-djady*; only Isḥāḳ added a tentative paraphrase of the Greek Αἰγόκερως, as *dhū ḳarnay al-ʿanz* ("the one having a goat's horns"). (His transliteration of the Greek name, *aghūḳāris*, corrupted to *al-ḳawḳāris*, was re-transliterated in the mediaeval West into Latin as *alcaucarus* and is sometimes mentioned in modern books among the names of Capricornus as a pseudo-Arabic name, even degenerated into *Alcantarus*.)

11. Aquarius. In indigenous Arabic tradition, this was *al-dalw* ("the water bucket"), obtaining—in the series of the zodiacal constellations—the place of Aquarius, but as an asterism located in what Ptolemy (and hence modern astronomy) call Pegasus, more exactly in the big Pegasus-square formed by the four stars α Andromedae and αβγ Pegasi. The western two of these four stars form the 26th lunar mansion, *al-fargh al-muḳaddam* (or *al-awwal*), and the eastern two the 27th lunar mansion, *al-fargh al-muʾakhkhar* (or *al-thānī*); the two *fargh* ("outlets") are related to the zodiacal "bucket" (*dalw*). As it seems, of the former Babylonian figure of a man holding a vessel, the Arabs have only retained the vessel (cf. above, Virgo). But note again the displacement of the figure outside the zodiac, in the Arabic tradition! The Greeks, on the other hand, had retained the human figure together with the vessel (κάλπις, not mentioned in the star catalogue of the *Almagest*). As with Capricornus, the Arabic translators of the *Almagest* also here retained the older Arabic name, *al-dalw*. Only Isḥāḳ b. Ḥunayn added a tentative paraphrase of the Greek Ὑδροχόος ("Water pourer"), as *sākib al-māʾ* ("the pourer of the water"). (His transliteration of the Greek name, *idhrūkhʾūs*, misspelled as *ʾdhrwdhrws*, etc., was re-transliterated by the mediaeval Latin translator as *ydrudurus*, thus suggesting, in the first two syllables, a reminiscence of the Greek ὑδρο-.) Other recent Arabic forms, all subsequent to the Greek name, were *al-sāḳī*, *al-dālī*, and even *ḥāmil al-dalw* ("the carrier of the bucket", developed on the basis of the old Arabic name and the Greek conception of a man carrying a vessel).

12. Pisces. The indigenous Arabic tradition has only one fish, *al-ḥūt*, located north of the ecliptic in Andromeda. The 28th lunar mansion, *baṭn al-ḥūt* (β Andromedae), is regarded the belly of that Fish. This is another case of reminiscence of a zodiacal constellation with the old Arabs, and also another case of displacement of the respective figure to a place outside the zodiac. The translators of the *Almagest* retained the older name *al-ḥūt*; only Isḥāḳ b. Ḥunayn translated the Greek Ἰχθύες as *al-samakatān* ("the two fishes"). (His transliteration of the Greek name, *ikthuwās*, misspelled as *ʾkywʾn*, was re-transliterated into *echiguen* in mediaeval Europe and became one of the many rarer names of Pisces in modern astronomical works.)

For some of the *burūdj*, the authors of the *anwāʾ* books mention certain alternative names which, however, might be mostly purely poetical or else speculative philological variants of the reported basic names, as *al-layth* for *al-asad* (no. 5); *al-tays* ("the he-goat") for *al-djady* (no. 10); and *al-samaka* for *al-ḥūt* (no. 12). Of a more peculiar character is *al-ṣūra* ("the figure"; later commonly used for "constellation") for *al-ʿaḳrab* (no. 8). *al-rishaʾ* for *al-ḥūt* (no. 12) seems merely to be a confusion with one of the names of the 28th lunar mansion. A special case is *al-djawzāʾ* (no. 3) for which Ibn Sīda (d. 458/1066; *K. al-Mukhaṣṣaṣ*, ix, 12, 16—on the authority of Abū Ḥanīfa al-Dīnawarī) cites the alternative name *al-ṣūra* ("the figure"), while ʿAbd Allāh b. ʿĀṣim (*K. al-Anwāʾ*, fol. 3, 5) reports that the Arabs called *al-tawʾamān* [*sic*, as the basic name !] also *al-djawzāʾ* and *al-ṣūra* and *al-djabbār*. Both these statements are utterly mutilated; the fuller and correct wording is found in al-Tīfāshī (*Surūr*, 198, last two lines = Ibn Manẓūr, *Nithār*, 174, 6-7): ... *al-djawzāʾ wa-tusammīha ʾl-munadjdjimūn al-tawʾamayn fa-ammā ʾl-ṣūra fa-yusammūnahā al-djabbār wa ʾl-bashar wa-laysa humā ʿinda ʾl-ʿarab* ("... al-*djawzāʾ*, and the astronomers of Greek-based scientific profession call her 'the Twins'; however, the figure [i.e. the asterism, or constellation figure, obtained by *al-djawzāʾ* in the sky, i.e. Orion] they call *al-djabbār* [= Orion] and *al-bashar* ['the human figure'—not found elsewhere in the texts], but these two are not found among the Arabs").

In Persian, the common names of the zodiacal constellations are: 1 - *barra* ("lamb"); 2 - *gāw*; 3 - *du paykar*; 4 - *kharčang*; 5 - *shīr*; 6 - *khūsha* ("ear of corn"); 7 - *tarāzū*; 8 - *kazhdum*; 9 - *kamān* ("bow"); 10 - *buzghāla* ("kid"); 11 - *dūl* ("bucket"); and 12 - *māhī* ("fish", sing.).

It may be added that, through Latin translations of Arabic works on astronomy and astrology, the Arabic names of the twelve zodiacal constellations and signs also became known in mediaeval Europe. But these names did not gain the same popularity as the individual star names and never came into actual use in Europe.

Minṭaḳa in Astrology. The zodiacal figures no. 1, *al-Ḥamal*, no. 4, *al-Saraṭān*, no. 7, *al-Mīzān* and no. 10, *al-Djady* are known together as *burūdj munḳaliba*, Greek ζῴδια τροπικά; no. 2, *al-Thawr*, no. 5, *al-Asad*, no. 8, *al-ʿAḳrab* and no. 11, *al-Dalw* under *burūdj thābita*, ζῴδια στερεά; no. 3, *al-Djawzāʾ*, no. 6, *al-ʿAdhrāʾ*, no. 9, *al-Rāmī* and no. 12, *al-Samakatān* under *burūdj dhawāt al-djasadayn*, ζῴδια δίσωμα (i.e. "Signa bicorpora", "Double figures": Twins, Virgin and Ear of corn, Archer with Horse's body and the two Fishes).

Muthallathāt. By *al-muthallathāt* (sing. *al-muthallatha*) are meant in Arab astrology the Greek τρίγωνα, Lat. *trigona* or *triquetra*, which in the Middle Ages were usually translated by *triplicates*.

The twelve signs of the zodiac are here arranged in threes at the angles of four intersecting equilateral triangles of which one is allotted to each of the four elements. Each triangle is given two of the seven planets as its rulers (*rabb*, pl. *arbāb*, Greek οἰκοδεσπόται or τριγωνοκράτορες), one for the day and another for the night; a third is associated with the two others as "companion".

The arrangement is as follows:

1. *Muthallatha* - Element: Fire.

Zodiacal sign: *al-Ḥamal*, *al-Asad* and *al-Rāmī* (nos. 1, 5 and 9).

Ruler: by day *al-Shams* (Sun), by night *al-Mushtarī* (Jupiter).

Companion: *Zuḥal* (Saturn).

2. *Muthallatha* - Element: Earth.

Zodiacal sign: *al-Thawr*, *al-ʿAdhrāʾ* and *al-Djady* (no. 2, 6 and 10).
Ruler: by day *al-Zuhara* (Venus), by night *al-Ḳamar* (Moon).
Companion: *al-Mirrīkh* (Mars).
3. *Muthallatha* - Element: Air.
Zodiacal sign: *al-Djawzāʾ*, *al-Mīzān* and *al-Dalw* (nos. 3, 7 and 11).
Ruler: by day *Zuḥal* (Saturn), by night *ʿUṭārid* (Mercury).
Companion: *al-Mushtarī* (Jupiter).
4. *Muthallatha* - Element: Water.
Zodiacal sign: *al-Saraṭān*, *al-ʿAḳrab* and *al-Samakatān* (nos. 4, 8 and 12).
Ruler: by day *al-Zuhara* (Venus), by night *al-Mirrīkh* (Mars).
Companion: *al-Ḳamar* (Moon).

The distribution of the *Muthallathat* has been settled since the time of Ptolemy (*τετράβιβλος*).

Wudjūh or *Ṣuwar.* By dividing each *burdj* into three we get 36 decans each of 10°, which in Arabic are called *wudjūh* (sing. *wadjh*), *ṣuwar* (sing. *ṣūra*) or *darīdjān* (from the Indian *drekkāṇa*, a loanword from the Greek) or *dahadj* (Pers.), in Greek *δεκανοί* or *πρόσωπα*, in mediaeval Latin *facies*, more rarely *decani.* The astrological significance is the same as with the Greeks, who in their turn go back to Egyptian models. The decans are not mentioned in Ptolemy. *Al-Ṣuwar* means properly the *paranatellonta* of the Babylonian Teukros, the constellations which rise at the same time as the separate decans according to his list. Abū Maʿshar and other Arab authors took over the list of the *paranatellonta* from Teukros unaltered, but not the astrological interpretations associated with them.

Buyūt. The Greek *οἶκοι* or *τόποι*, Lat. *domicilia* or (mediaeval) *domus*, are called in Arabic *buyūt* (sing. *bayt*). The sun and moon are each ruler (*ṣāḥib*, *rabb*, Greek *οἰκοδεσπότης* [cf. above *muthallathāt*]) over one sign of the zodiac; each of the other five planets rules over two signs at the same time, according to the following scheme, also already laid down in the *τετράβιβλος*:

Planet	day-house	night-house
Sun	Leo	—
Moon	—	Cancer
Saturn	Capricornus	Aquarius
Jupiter	Sagittarius	Pisces
Mars	Scorpius	Aries
Venus	Libra	Taurus
Mercury	Virgo	Gemini

If a planet is in its day-house during the hours of day or in its night-house at night, it is credited with particularly powerful astrological influence.

Sharaf and *Hubūṭ*. By *sharaf* (pl. *ashrāf*) we understand the *ὕψωμα* of the Greeks, *sublimitas* of Pliny, *altitudo* of Firmicus Maternus, *exaltatio* in mediaeval Latin; *hubūṭ* is the Greek *ταπείνωσις*, *ταπείνωμα*, more rarely *κοίχωμα*, class. Lat. *deiectio*, med. Lat. *casus.*

A planet attains its maximum astrological influence in its *sharaf*; its influence is least in the *hubūṭ*, i.e. the point in the heavens diametrically opposite the *sharaf* on the circle of the ecliptic.

Planet	*Sharaf*	*Hubūṭ*
Sun	Aries 19°	Libra 19°
Moon	Taurus 3°	Scorpius 3°
Saturn	Libra 21° (20°)	Aries 21°
Jupiter	Cancer 15°	Capricornus 15°
Mars	Capricornus 28°	Cancer 28°
Venus	Pisces 27°	Virgo 27°
Mercury	Virgo 15°	Pisces 15°

The only inaccuracy in the list of exaltations, already fixed in ancient times, is giving 20° instead of 21° to Libra for Saturn, which however goes back to a very old error; it is also found in Pliny, Firmicus and the Hindu astronomer Varāha-Mihira.

Al-Balʿamī assumed that at the time of the creation of the world the planets were in their *ashrāf.*

Various Arab writers since Abū Maʿshar also ascribe exaltations and dejections to the nodes of the moon (*ʿaḳdān* or *ʿuḳdatān*, sc. *al-ḳamar*):

ascending node (*raʾs*) as *sharaf* Gemini 3°, and as *hubūṭ*, Sagittarius 3°; *vice versa* to the descending node (*dhanab*) as *sharaf* Sagittarius 3°; as *hubūṭ* Gemini 3°. This allocation is not known to the Greek astrologers.

Ḥudūd. Each of the five planets (excluding the sun and moon) possesses in each of the 12 *burūdj* a field of influence covering several degrees (Arab. *ḥadd*, pl. *ḥudūd*, Greek *ὅριον*, Lat. *fines*, med. Latin *terminus*) which has the same astrological significance as the planet itself and can represent it at any time in horoscopes. On the distribution of these fields of influence within the zodiacal circle, opinions differed widely and unanimity could never be attained. Ptolemy added one more to the Egyptian and Chaldaean divisions already in existence. (The various systems are fully expounded in the *τετράβιβλος*, i. 20, fol. 43: Boll has studied this question very fully in *Neues zur babylonischen Planetenordnung*, in *ZA*, xxxviii [1913], 340 ff.) The Arab astrologers used almost exclusively the Egyptian system, which makes the different fields of very unequal sizes. (For the classical astrological doctrines, cf. Bouché-Leclerq.)

Minṭaka in Astronomy. The *minṭaḳa* is, as in the Greek astronomy, the fundamental basis for all calculations. It is divided into 360° degrees (*djuzʾ*, pl. *adjzāʾ* or *daradja*, coll. *daradj*, pl. *daradjāt*), each degree into 60 minutes (*daḳīḳa*, pl. *daḳāʾiḳ*), each minute into 60 seconds (*thāniya*, pl. *thawānī*), each second into 60 thirds (*thālitha*, pl. *thawālith*), and so on.

The points of intersection of the ecliptic with the equator (*dāʾirat* or *falak muʿaddil al-nahār*) define the two equinoxes (*al-iʿtidālān*), the points of the greatest northerly and southerly declination the two solstices (*al-inḳilābān*). The position of a fixed star or planet with respect to the *minṭaḳa* is defined by giving its longitude (*ṭūl*, pl. *aṭwāl*, or in al-Battāni *al-djuzʾ alladhī fīhi al-kawkab*) and latitude (*ʿarḍ*, pl. *ʿurūḍ*). The longitudes are numbered from the vernal point (*al-nuḳta al-rabīʿiyya*). The axis erected perpendicular to the plane of the ecliptic meets the sphere of the fixed stars in the two poles of the ecliptic (*ḳuṭbā dāʾirat* [or *falak*] *al-burūdj*).

On Arab star-maps and star-globes, we frequently find a mixed ecliptical and equatorial system of coordinates used (cf. the remarks above on the fresco on the dome at Ḳuṣayr ʿAmra), which consists of ecliptical circles at longitude through the poles of the ecliptic and equatorial parallel circles.

Precession (in al-Battānī, *ḥarakat al-kawākib al-thābita*, in later authors more precisely *mubādarat nuḳṭat al-iʿtidāl*). Among the Arab astronomers, supporters were found for the theory of Ptolemy, who explained the precession as a continual revolution of the whole heavens around the pole of the ecliptic with a period of 36,000 years, as well as for that handed down by Theon of Alexandria (Thāwun al-Iskandarānī) from older sources, according to which the process of the precession consisted of an oscillation to and from around the "nodes of the path of the sun" (the so-called trepidation). The greatest amount of the precession according to this theory is 8° west or east of the nodes; the retrogression amounts to 1° in 80

years so that the whole phenomenon repeats itself after 2,560 years. The latter theory found particular approval in India and was further developed there. Th̲ābit b. Ḳurra gave an explanation for it which at the same time took into account the (more suspected than observed) diminution in the obliquity of the ecliptic and calculated the length of the period at 417½ years. (Recently, J. Ragep has shown that Th̲ābit cannot really have been involved in the transmission of the theory of trepidation.) Al-Battānī attacked and refuted this oscillation hypothesis of Theon and of the *Aṣḥāb al-ṭilsamāt* (ἀποτελεσματινοί); on a basis of new and comparative observations he found that the precession amounted to 1° in 66 years, which corresponds to a period of 23,760 years, which is roughly 10% too small. A more accurate rate of 1° in 70 years is given by several other Arabic-Islamic astronomers (cf. the survey in Nallino, *al-Battānī, Opus astronomicum*, i, 292 f.).

Obliquity (*Mayl falak al-burūdj̲*, very frequently *al-mayl kulluhu* or *al-kullī* in contrast to *al-mayl al-dj̲uzʾī*, "declination of the separate points in the *minṭaḳa*", cf. al-Ag̲h̲zāwī, 21). The problem of estimating the obliquity of the ecliptic was during the classical period a centre of interest for the Muslim astronomers. As a first attempt at an exact estimate in the Muslim period, Ibn Yūnus (ch. ix, p. 222, of the Leiden Codex or of the Paris Codex, no. 2475) mentions an observation of the period between 778 and 786 which gave the value $\varepsilon = 23°31'$. We have an unusually large number of observations of later dates. (For details, see Nallino's notes on al-Battānī's *Opus astronomicum*, i, 157 ff.).

Al-Battānī in his observations used a parallactic ruler (triquetrum, *ʿiḍāda ṭawīla*) as well as a finely-divided wall quadrant (*libna*). He ascertained with these instruments in al-Raḳḳa the smallest zenith distance of the sun at 12°26′, the greatest at 59°36′; this gave $\varepsilon = \frac{47°10'}{2} = 23°35'$. This value is at the basis of all al-Battānī's calculations and tables and has been adopted by many other Arab astronomers.

The question whether the amount of obliquity remains constant at all times or is subject to a secular diminution was answered in different ways by different students. As a matter of fact, the degree of accuracy of observation was not sufficient to settle this point and the old Hindu value of $\varepsilon = 24°$, on which these investigations were often based, was based not on observations but only on a statement of Euclid's according to which astrologers of his time used to estimate the obliquity as a fifteenth part of the circumference of the circle.

The following table gives a survey of the Arab values for the obliquity of the ecliptic (cf. Nallino, *al-Battānī, Opus astronomicum, loc. cit.*). The column "average obliquity" gives by Bessel's formula:
$\varepsilon = 23°28'\ 18''.0 - 0''.48\ 368.t - 0''.000\ 002\ 722\ 95.\ t^2$ (t = years after 1750) the true values calculated for the periods in question. The years given in brackets are only approximate, i.e. not given by the authors themselves.

Comparative table of the Arab values for the Obliquity of the Ecliptic

Observer	Place	Year	Obliquity observed	Average obliquity	Error
Eratosthenes	Alexandria	(230 B.C.)		23°43′45″	+ 7″35″
Hipparchus	Rhodes	(130 B.C.)	23°51′20″	42′57″	+ 8′23″
Ptolemy	Alexandria	(140 A.D.)		41′10″	+10′10″
Tabulae probatae (*al-Zīdj̲ al-mumtaḥan*)	Bag̲h̲ād	829	33′	35′41″	- 2′41″
Other observers under al-Maʾmūn	Damascus	832	33′52″	35′40″	- 1′48″
Banū Mūsā	Bag̲h̲dād	(860)	35′	35′26″	- 0′26″
al-Battānī	al-Raḳḳa	(880)	35′	35′17″	- 0′17″
Banū Amdj̲ūr	?	(918)	35′	35′0″	0′0″
ʿAbd al-Raḥmān al-Ṣūfī	Bag̲h̲dād ?	(965)	33′45″	34′35″	- 0′50″
Abu 'l-Wafāʾ	Bag̲h̲dād	987	35′	34′25″	+ 0′35″
Wīdj̲ān b. Rustam al-Kūhī	Bag̲h̲dād	988	51′1″	34′25″	+16′36″
Ibn Yūnus	Cairo	1001	34′52″	34′19″	+ 0′33″
al-Bīrūnī	G̲h̲aznī	(1019)	35′	34′10″	+ 0′50″
Alphonsine Tables	Toledo	(1250)	32′29″	32′19″	+ 0′10″
Ibn al-S̲h̲āṭir	Damascus	(1363)	31′	31′25″	- 0′25″
Ulug̲h̲ Beg	Samarḳand	(1437)	30′17″	30′49″	- 0′32″

(W. Hartner-[P. Kunitzsch])

MINŪČIHRĪ [see manūčihrī].

MINŪF, MINŪFĪ [see manūf, manūfī].

MINŪRḲA, Minorca, name of the easternmost of the Balearic islands; it lies about 40 km east-north-east of Majorca [see mayūrḳa]. Its area of 669 km² is dwarfed by that of the centrally located Majorca (3,640 km²), but it slightly surpasses that of Ibiza (572 km² [see yābisa]). Minorca's elongated latitudinal shape is marked by two excellent harbours, at its western and south-eastern extremities, Ciudadela and Mahón, both of Carthaginian date.

For the greater part of the four centuries or more of Islamic rule on the islands, Minorca was politically and culturally eclipsed by Majorca. Like the other islands, it benefited from some of the agricultural innovations such as irrigation and windmills characteristic of Muslim Spain. It also participated in Majorca's corsair activities and shared its fate when in 1116 a combined Pisan-Catalan punitive expedition attacked the two islands and freed a great number of Christian prisoners. On the other hand, its easternmost position may have contributed to growing contacts with Christian maritime powers such as Genoa and Pisa, as reflected in the commercial treaties of 1177, 1181, 1184 and 1188. The island's special place in Islamic history, however, is due to the virtual independence its rulers enjoyed under the suzerainty of the kings of Catalonia-Aragon between 1231 and 1287. This happened when James I annexed the rest of the archipelago, but concluded two consecutive treaties with Abū ʿUthmān b. Saʿīd b. al-Ḥakam by which the latter conserved autonomy in return for the presentation of an annual *djizya* and of a few other symbols of vassalage. Saʿīd b. al-Ḥakam, given in the sources such simple titles as *al-Raʾīs* "Chief" or *al-Mushrif*, a title that expressed one of his earlier functions as tax collector and that became his Spanish epithet as *Almojarife*, proved to be an able ruler (although often a harsh one, on religious grounds) and a cultivated man. Minorca attained under his half-a-century long rule (1231-82) the reputation of a prosperous island with a strong fleet, but it became especially renowned as a place where refined literary culture flourished and Islamic religious sciences were honoured; it also served as a refuge or point of transit for Muslims fleeing the Reconquista in Spain. Saʿīd b. al-Ḥakam, an accomplished poet himself, maintained a lively correspondence with men of letters and science in other Islamic centres, but above all with those of the Western Mediterranean: Tunis, Bougie, Murcia and Granada.

Islamic Minorca's autonomy collapsed soon after Saʿīd b. al-Ḥakam's death. From among the reasons proposed for this collapse, one would have been the weak personality of the ruler, al-Ḥakam b. Saʿīd, who lacked his father's statesmanship; another would have been the irritation of al-Ḥakam's suzerain, Alfonso III of Catalonia-Aragon, by the warning which the Minorcan vassal had sent to Collo when in 1282 a Catalan fleet called at Mahón on its way to raid that North African port. The basic reason, however, should be sought in the historical inevitability of this stage of the Reconquista: the Christian suzerain, for once freed of the usual commitments to wars in the Iberian peninsula, put an end to an anomalous situation. A large fleet left the Catalan port of Salo and, after spending Christmas of 1286 in Majorca, anchored near Mahón in January 1287. Alfonso himself, displaying a Crusader's paraphernalia and bravura, took part in the ensuing battles. The Muslims put up a brave resistance but eventually had to surrender. The outcome presaged the events of 1492 for Granada. The ruler, his family and retinue were allowed to leave for Muslim-held territory; they embarked in a Genoese ship that took them to Almeria. Eventually they moved to Ceuta, where al-Ḥakam buried the remains of his father, and whence he and his family sailed to Tunis. They all perished in a storm off the coast of Algiers. As for the rest of Minorcan Muslims, about one-third chose to emigrate as well.

In subsequent centuries, Minorca, like the rest of the Balearics, was both a participant and a victim in the see-saw contest of Christian and Muslim corsairs. Thus Pīrī Reʾīs (*fl. ca.* 1526) mentions frequent visits by Arab and Turkish (corsair) boats, and the presence of a great number of Arab and Turkish prisoners put to work on the salines of Ibiza. In 1535 Barbarossa [see khayr al-dīn] briefly seized Mahón, and Ciudadela was attacked during the 1558 expedition of the Ottoman fleet under Piyāle Pasha in the Western Mediterranean.

(S. Soucek)

MĪR, a Persian title abbreviated from the Arab *amīr* and approximating in meaning both to it and to the title *mīrzā* [*q.v.*]. (For the dropping of the initial *alif*, cf. Bū Sahl for Abū Sahl, etc.). Like *amīr* the title is applied to princes (Manūčihrī, ed. A. de Biberstein-

Kazimirsky, *Menoutchehri, poète persan du onzième siècle de notre ère*, Paris 1886, 96, speaks of Sultan Masʿūd of Ghazna, as "Mīr"), but it is also borne by poets and other men of letters (e.g. Mīr ʿAlī Shīr, Mīr Khwānd, Mīr Muḥsin; cf. the following arts.). In India and Pakistan, Sayyids sometimes call themselves by the title. As a common noun, it is used as an equivalent of *ṣāḥib*, e.g. *mīr pandj*, *mīr ākhūr*.

It occurs also in official titles in both the Dihlī Sultanate and in Mughal administration: *mīr ātish* "chief of artillery"; *mīr baḥr* "naval commander", "chief of river police"; *mīri ʿimārat* "controller of building operations"; *mīri sāmān* "chief of the commissariat"; etc. *Mīr-i farsh* is the term usually applied to stone weights—often of marble carved and inlaid with semi-precious stones—used to hold down a pall over a grave.

In Turkish there was derived from it the colloquial adjective *mīrī* [*q.v.*] ("belonging to the government"), which gave rise to *al-mīrī* ("the government") in the colloquial Arabic of ʿIrāḳ.

(R. Levy [-J. Burton-Page])

MĪR-ĀKHŪR (p.) In the Ottoman empire, the *mīr-ākhūr* or Master of the Stables was the official given charge of all aspects relating to the supply and maintenance of the Ottoman sultan's stables, the *iṣṭabl-i ʿāmire*. The wide-ranging services connected with the imperial stables were divided between two chief officials, the *küčük mīr-ākhūr* or Master of the Lesser Stable, and the *büyük mīr-ākhūr* or Master of the Great Stable, both of whom were high officers in the Palace Outer Service with the rank of Aghas of the Stirrup (*rikāb aghalarï*) (Gibb and Bowen, i, 82-3, 355). While all matters relating to the administration of the stables were referred to the Grand Master as senior officer, it seems that the *küčük mīr-ākhūr* was primarily charged with the care and maintenance of the sultan's privy stable or *khāṣṣ ākhūr* located in the second court of the Topkapï Palace opposite the kitchens. On the ground level of the privy stable a small number of exceptional show horses belonging to the sultan personally (25-30, according to Baudier, 21-2; 40-50 according to Blaise de Vigenère, 346) were kept, while the lower story housed the valuable silver bridles and other equestrian paraphernalia which formed the contents of a separate treasury called the *khāṣṣ ākhūr khazīnesi*. The *küčük mīr-ākhūr* was also responsible for the upkeep of the sultans' carriages. The Great Stable (*büyük ākhūr*) consisted of seventeen separate buildings adjacent to the outer wall of the Palace along the Marmara Sea coast (Baudier, 22), where some one thousand horses were kept, principally for the use of members of the sultan's household on festive occasions such as state processions (*alāy-i hümāyūn*), or at the reception of a foreign ambassador. Horses from the imperial stables were also distributed to members of the sultan's household for use during military campaigns. Each spring the horses belonging to the imperial stables in Istanbul were taken to the meadows of Kāghid-Khāne for pasturing, and the *mīr-ākhūr* himself resided there during the summer months (Ewliyā Čelebi, i, 480-2).

The *büyük mīr-ākhūr* was also responsible for pack animals and camels belonging to the state for use during military campaigns, and had to supervise the stable-related services both within and without the Palace. The staff within the Palace included principally the saddlers' guild (*sarrādjīn-i khāṣṣa*), who numbered 230 men (in addition, 120 men were assigned as saddlers for the draught animals *bārgīr sarrādjïlar*, *Kanūn-nāme*, Veliyyüdin, no. 1970, f. 107a), the camel-drivers (*shütürbānān*) responsible for the care of the animals during campaign, and the grooms (*sāʾisān*) and others who cared for the animals in the stables. While some observers estimated the numbers of Palace stable employees as between 10,000 and 12,000 (d'Aramon, 44; Blaise de Vigenère, 348), the following table based on official registers gives more precise information as to their actual numbers:

Date	No. of employees	Yearly wages in *aḳčas*
933/1527	2,830	5,133,000
975/1567	4,321	7,457,540
1018/1609	4,322	8,405,196
1038/1629	4,246	9,304,888

(Sources for table in order given: Barkan, in *Iktisat Fakültesi Mecmuasi*, xv [1953-4], 300; Barkan, in *IFM*, xix [1957-58], 305-6; ʿAyn-ʿAlī, *Risāle*, Istanbul 1280/1863-4, 99; Başbakanlık Arşivi, *Maliyeden müdevver*, no. 794.)

Outside the Palace, the *mīr-ākhūr* employed Bulgarian Christians called *voynuḳs* numbering about 900-1,000 (Blaise de Vigenère, 347), some of whom were given exemption from certain taxes in return for their services, and others of whom got *timar* benefices (ʿAlī Čawush, *Ḳānūn-nāme*, 155-6). Apart from the breeding and raising of horses on the stud farms (*harā*) and in the sultanic parks (*khāṣṣa ḳoru*), the *voynuḳs* also had to cut grass and hay in the sultan's meadows (*khāṣṣa čayïr*) for delivery to the *mīr-ākhūr*. In these tasks the *voynuḳs* were assisted by the keepers of the brood mares (*yund oghlanï*) and the keepers of the colts (*taydjï*) who were expected to raise, feed, shoe, and equip two colts for each *čiftlik* [*q.v.*] of land assigned to them (Başbakanlık Arşivi, *Maliyeden müdevver*, no. 740).

The *voynuḳ* organisation was designed primarily for the purpose of maintaining a good breeding stock for the imperial stables, but purchase and maintenance of the herd of pack animals including camels (*deve*), geldings (*bārgīr*) and mules (*ester*) and others, was also part of the purview of the *mīr-ākhūr*. Stables had to be built and forage provided over the winter months for all of the animals belonging to the state (*mīrī dawar*). Sometimes special collections were taken up under the name of the campaign provisions tax (*bedel-i nüzūl*) (for an example, see *Mühimme*, vol. 87 [1046/1636-7], 18, an order providing that each train of five camels (*ḳaṭar*) wintering in the environs of Zile should be supplied each day with one *kile* (25.656 kg) of barley and 50 *wuḳiyye* (64.14 kg) of straw), but the animals within the imperial stables in Istanbul or Edirne were provided for by a special fund allocated to the barley commissioner (*amīn-i djaw*). The amount of cash allocated in the year 1070/1660 for the forage of those animals in the imperial stables alone was 11,816,379 *aḳčas* (Ḥüseyn Hezārfen, *Talkhīṣ al-bayān*, figures published by Barkan, in *IFM*, xvii [1955-6]; 344-5). Apart from the cash allocation, an additional 302,692 *kile* (7,766 metric tons) of barley and 104,942.5 *ḳanṭar* (5,923 metric tons) of straw were provided in kind (*ibid.*, 344). For information on prices for both thoroughbreds and common work-horses, the *tereke defterleri* are a most useful source (for two representative examples, see Barkan, in *Belgeler*, iii, 136, listing sixteen individual animals of varying prices valued at a total of 37,290 *aḳčas*, and *ibid.*, 404, listing several prize horses, including one valued at 18,000 *aḳčas*). Most commonly the price for sound draught horses or pack animals was around 1,000-1,200 *aḳčas* (H. Inalcik, in V.J. Parry and M.E. Yapp (eds.), *War, technology and Society*, 198; C. White, *Three years in Constantinople*, iii, 286).

Horse breeding was a matter of prime concern to

the Ottomans. For some sultans, the collection of prize horses became almost an obsession, as was the case with Meḥemmed IV [*q.v.*] (reigned 1058-99/1648-87), who came to be known as *Awdjī* Meḥemmed or Meḥemmed the huntsman. Edward Brown, an English traveller who visited Meḥemmed's camp during an imperial residence at Larissa in the summer of 1669, remarked that having seen the stables of the great princes of Christendom in Paris, Naples, Dresden and Prague, he found that none of them could compare in their variety and brilliance to those of the sultan's court (Brown, *Travels*, 40). But apart from their value for sport, sound breeds were a military necessity. According to Marsigli (*Stato militare*, 41-2), the horses bred in Transylvania from Moldavian mares were prized for their stamina during long marches, and the Tatar horses, though somewhat smaller in stature, were equally indefatigable. Besides the Moldavian and Tatar horses, the sultan's stables were supplied with Turcoman breeds. Horse breeding and horse trading were established economic activities in central Anatolia from ancient times (F. Taeschner, ANADOLU, at i, 476). An Arab traveller of the 8th/14th century singled out the horses raised by the Turcoman tribes of Germiyān and Ḳasṭamonu for especial praise (al-ʿUmarī, cited by Sümer, *Oğuzlar*, 408). During the Ottoman period, the province of Ḳaramān was a particularly active centre for horse breeding. The herds were raised under the care of a group of Turcomans known as the *esb-keshān ṭāʾifesi*. In exchange for exemption from other taxes, the *esb-keshān* of Ḳaramān were expected to provide a number of horses each year (for an example, see Başbakanlık Arşivi, *Maliyeden müdevver*, no. 7528, 116, which records a revenue of 458,980 *aḳčas* deriving from the *esb-keshān muḳāṭaʿasī* for the year 1057/1649. At a rate of 300 *aḳčas* per head [*Kanūn-nāme*, in *TOEM*, Suppl. for 1329/1911, 63], this represents 1,530 horses). In addition, the stables of Bursa, Manisa and Edirne are mentioned as producing breeds of superior quality (Barozzi and Berchet, *Relazioni*, i/1, 100). The show horses and studs kept in the sultan's privy stable were mostly given to him as gifts from governors in the Arabian provinces or from state grandees. Camels came primarily from the Turcoman tribes, particularly those in the *sandjaḳs* of Yeñi-il in the province of Rūm-i Ḳadīm (Sivas) and of Ḥalab (Aleppo) in Syria (for an example, see Kātib Čelebi, *Fadhlaka-yi tawārīkh*, Istanbul 1269-70/1853-4 ii, 115).

(R. MURPHEY)

MĪR ʿALĪ SHĪR NAWĀʾĪ, Niẓām al-Dīn ʿAlī Shīr, later called Mīr ʿAlī Shīr or ʿAlī Shīr Beg, with the pen-name (*takhalluṣ*) of Nawāʾī (844-906/1441-1501), outstanding 9th/15th century Čaghatāy poet and important Central Asian cultural and political figure of the reign of the Tīmūrid *sulṭān* Ḥusayn Bāyḳarā (873-911/1469-1506 [*q.v.*]).

He was born in Harāt (Herat) on 17 Ramaḍān 844/9 February 1441, the scion of a cultured Turkic family of Uyghūr *bakhshīs*, hereditary chancellery scribes, who had long been in the service of the Tīmūrid family. ʿAlī Shīr's father, Ghiyāth al-Dīn Kīčkīna, also called Kīčkīna Bakhshī, was in the service of Abū Saʿīd, the grandson of Mīrānshāh, as well as of Abu 'l-Ḳāsim Bābur, Shāhrukh's grandson, and at one time was the governor (*ḥākim*) of Sabzawār. ʿAlī Shīr's maternal grandfather, Bū Saʿīd Čang, had been an *amīr* of Mīrza Bāyḳarā's, the son of ʿUmar Shaykh and grandfather of Ḥusayn Bāyḳarā. Moreover, the family of ʿAlī Shīr was intimately connected to that of ʿUmar Shaykh by ties of foster-brotherhood (*kūkältāshī*) and ʿAlī Shīr was himself the foster-brother of Ḥusayn Bāyḳarā. Although he never bore the title *kūkältāsh*, it was always appended to the name of his brother, Darwīsh ʿAlī. Because the families of ʿAlī Shīr and Ḥusayn Bāyḳarā were closely related and the two were almost the same age (Bāyḳarā being only two years older), they were educated together as children. The fact that ʿAlī Shīr received a good education is emphasised by Dawlatshāh and would have been in keeping with the value placed on a universal education by the highly literate Central Asian *bakhshgīs*.

As a result of the unstable political situation created by the death of Shāhrukh in 850/1447, ʿAlī Shīr's family was forced to flee Harāt until the restoration of order in the early 1450s enabled it to return to Khurāsān. The chronology of ʿAlī Shīr's life before he joined Ḥusayn Baykarā at the time of the latter's accession to power in Harāt in 873/1469 is not entirely clear. His first patron appears to have been Abu 'l-Ḳāsim Bābur, whose service he entered in Harat together with Ḥusayn Baykarā sometime before 860/1456. But, as Ḥusayn Bāyḳarā had earlier been in the service of Abū Saʿīd (with whom he soon fell out of favour, however, and remained on inimical terms), it is possible that ʿAlī Shīr, or at least his father, also accompanied Ḥusayn Bāyḳarā when he entered the service of this Tīmūrid prince in 858/1454.

ʿAlī Shīr and Ḥusayn Bāyḳarā both accompanied Abu 'l-Ḳāsim Bābur to Mashhad in 860/1456, but after the latter's death in 861/1457, they parted ways for twelve years. Ḥusayn Bāyḳarā then entered upon a period of *ḳazāklīḳ* during which he struggled to establish himself politically, while ʿAlī Shīr pursued his studies in Mashhad, Harāt and Samarḳand. Although the dates of Ālī Shīr's movements between these cities are not stated explicitly in the sources, it is clear that he studied in Samarḳand under Khʷādja Faḍl Allāh Abu 'l-Laythī, an expert in *fiḳh* and Arabic, for a period of two years. It is however not clear whether he came to Samarḳand solely for the purpose of studying or because he was banished from Harāt by Abū Saʿīd, whose service he entered, according to V.V. Bartol'd, sometime after 868/1464. Both Bartol'd and E.É. Bertel's held the view that he was banished, arguing that, in those days, no one left Harāt to study in Samarḳand, which had become a provincial town in comparison with the capital (for a refutation of this view, see É.R. Rustamov, *Stranitsī iz biografii Alishera Navoi* ("Pages from the biography of ʿAlī Shīr Nawāʾī"), in *Kratkie soobshčeniya Instituta narodov Azii*, Moscow, lxiii [1963], 80-6). It is likely that ʿAlī Shīr was in Samarḳand on two occasions—the first in 862-3/1458-9 to pursue his studies and the second around 871/1467 after he encountered political troubles at the court of Abū Saʿīd in Harāt. He also appears to have been in Mashhad twice during this period of his life. In Samarḳand he was aided by two mentors—Darwīsh Muḥammad Tarkhān, the brother-in-law of Abū Saʿīd, and Aḥmad Ḥādjdjī Beg, the powerful governor of the city, who was also a poet with the pen-name Wafāʾī.

After the death of Abū Saʿīd in 873/1468 and Ḥusayn Bāyḳarā's subsequent seizure of power in Harāt on 10 Ramaḍān 873/24 March 1469, ʿAlī Shīr left Samarḳand, where he had been in the retinue of Aḥmad Ḥādjdjī Beg, in order to enter Ḥusayn Bāyḳarā's service and, on Bayram 873/14 April 1469, presented him with his famous *ḳaṣīda* entitled *Hilāliyya*. He remained in the service of Ḥusayn Bāyḳarā, who ruled Khurāsān from Harāt uninterruptedly for almost forty years (with the exception of the brief interregnum of Shāhrukh's great-grandson, Muḥammad Yādgār, in 875/1470), until his death on 12 Djumādā 1906/3 January 1501. He was buried in Harāt.

Although he held several offices, such as that of keeper of the seal (*muhrdār*), to which he was appointed by Ḥusayn Bāyḳarā in 873/1469 and from which he soon resigned, ʿAlī Shīr tried as a rule to avoid political office. Since he was not a member of one of the paramount Čaghatāy clans that constituted the Tīmūrid military élite, he was not by birth an *amīr* or beg and he was aware of the precariousness of his position at court compared with that of the hereditary begs on whom Ḥusayn Bāyḳarā's power depended. He was, however, officially elevated to the rank of *amīr* of the *dīwān-i aʿlā* or *Türk dīwānī* (council concerned with matters pertaining to the Tīmūrids' Turkic subjects and matters of a military nature) by Ḥusayn Bāyḳarā in 876/1472. In connection with this appointment, he was granted precedence in affixing his seal over that of all other *amīrs* with the sole exception of Muẓaffar Barlās, one of Ḥusayn Bāyḳarā's companions from his *ḳazāklīḳ* days. In late 894/1488 he asked to be relieved of his position as governor (*ḥākim*) of Astarābād, to which he had been appointed the previous year (for a refutation of Bartol'd's idea that ʿAlī Shīr was banished here by Ḥusayn Bāyḳarā, see A.A. Semenov, *Vzaimootnosheniya Alishera Navoi i Sultan Khuseyn-Mirzī* ("Relations between ʿAlī Shīr Nawāʾī and Sulṭān Ḥusayn Bāyḳarā"), in *Issledovaniya po istorii kul'turī narodov vostoka. Sbornik v čest' akad. I.A. Orbeli*, Moscow-Leningrad 1960, 237-49). At the same time, he resigned from the office of *amīr* (*amr-i imārat*) or, as Bābur put it, gave up "military duties" altogether, that is, the duties associated with the title, although he continued to retain the title itself.

The strength of ʿAlī Shīr's position at the court of Ḥusayn Bāyḳarā derived from his personal service to him based on their relationship as foster-brothers, rather than from any official positions held by him. ʿAlī Shīr belonged to the inner circle of Ḥusayn Bāyḳarā's courtiers (*īčkīyān*) and, in his own words, stood closer to the throne than any of the great *amīrs*. The honorific title that was bestowed upon him by Ḥusayn Bāyḳarā and by which he is referred to in the contemporary sources was *muḳarrab-i ḥaḍrat-i sulṭānī* ("the sultan's intimate"). As a result of his unique position at court. ʿAlī Shīr was often entrusted with important matters of state, such as acting as intermediary in the frequent conflicts between Ḥusayn Bāyḳarā and his sons or governing Harāt in

the *sulṭān*'s absence. It ought to be noted that ʿAlī Shīr was never Ḥusayn Bāyḳarā's *wazīr* (an error perpetuated in the secondary literature) nor could he have possessed this title, since, in the dual administrative structure of the Tīmūrid government, it was reserved exclusively for officials of the *Sart dīwāni* which dealt with non-Turkic, that is, sedentary Iranian matters, such as finance, and its holders were as a rule non-Turks.

ʿAlī Shīr's primary historical importance lies in his literary activity. He is universally considered as the greatest representative of Čaghatāy Turkish literature which, thanks to him, reached its apogee in the second half of the 9th/15th century at the court of Ḥusayn Bāyḳarā in Harāt. He was already regarded by his contemporaries as the greatest poet ever to have written in the Turkish language. Indeed, his family background seemed to predispose him to the poetic art as two of his maternal uncles were poets with the pen-names Ḳabūlī and Gharībī, as was his cousin, Amīr Ḥaydar, who wrote under the name of Ṣabūḥī.

Despite the fact that Persian had traditionally been regarded as the literary language par excellence in Central Asia since the 4th/10th century, ʿAlī Shīr championed the cause of the Čaghatāy, or Eastern Turkic, literary language (usually referred to by contemporaries simply as *Türkī*) which represented a continuation of such Middle Turkic language as Ḳarākhānid (5th-7th/11th-13th centuries) and Khʷārazmian (8th/14th century). He argued that not only could it vie with Persian but that it was also superior to it as a language for poetry. Following the lead of earlier Čaghatāy poets of the Tīmūrid period, such as Luṭfī [*q.v.*], Sakkākī and Gadāʾī, ʿAlī Shīr forged Čaghatāy into a supple instrument of poetic expression and, in so doing, endowed it with its classical form.

He composed almost thirty works under the pen-name Nawāʾī, trying his hand at all the literary genres practised in his day. His chief models were, by his own admission, the Persian masters, Amīr Khusraw Dihlawī—probably the most admired and widely imitated poet in the late 9th/15th century—Niẓāmī, Ḥāfiẓ and Djāmī. His fame rests mainly on his poetical works which constitute the bulk of his literary output. The most important of these, written in Čaghatāy, are:

(i) *Khazāʾin al-maʿānī*, being the final edition of his four *dīwāns*, arranged by him shortly before his death and entitled respectively *Gharāʾib al-ṣighar* ("Curiosities of Childhood"), *Nawādir al-shabāb* ("Marvels of Youth"), *Badāʾiʿ al-wasaṭ* ("Wonders of Middle Age") and *Fawāʾid al-kibar* ("Advantages of Old Age"), corresponding to the four ages of his life, but in fact material in each is not restricted to any particular period. This collection contains mainly *ghazals*, but also some *tuyūghs*, the Eastern Turkic quatrain with homonymic end-rhyme.

(ii) *Khamsa*, or Quintet, modelled on the *Khamsas* of Niẓāmī, Amīr Khusraw and Djāmī, although often with a very different emphasis or interpretation and reflecting his personal ideals, such as his concern with justice. It comprises: (a) *Ḥayrat al-abrār* (completed 888/1483), a didactic *mathnawī* modelled on Niẓāmī's *Makhzan al-asrār*, Amīr Khusraw's *Maṭlaʿ al-anwār* and Djāmī's *Tuḥfat al-aḥrār*; (b) *Farhād u Shīrīn* (completed 889/1484), a romantic *mathnawī* modelled on Niẓāmī's *Khusraw u Shīrīn* and Amīr Khusraw's *Shīrīn u Khusraw*; (c) *Laylī u Madjnūn*, a romantic *mathnawī* modelled on Niẓāmī's and Amīr Khusraw's *mathnawīs* of the same name; (d) *Sabʿa-yi sayyār* (completed about 889/1483), a romantic *mathnawī* modelled on Niẓāmī's *Haft paykar* and Amir Khusraw's *Hasht bihisht*; and (e) *Sadd-i Iskandarī* (completed about 890/1485), a didactic *mathnawī* modelled on Niẓāmī's *Iskandar-nama* and Amīr Khusraw's *Āyina-yi Iskandarī*.

(iii) *Lisān al-ṭayr* (completed 904/1498-9), a mystical *mathnawī* based on ʿAṭṭār's *Manṭiḳ al-ṭayr* and written under the pen-name Fānī.

Among Nawāʾī's prose works in Čaghatāy may be mentioned:

(iv) *Madjālis al-nafāʾis* (completed 897/1491-2 but some manuscripts contain information up to 904/1498-9), the first *tadhkira*, or literary historical work, in Turkish and the first that dealt almost exclusively with contemporary poets.

(v) *Muḥākamat al-lughatayn* (completed 905/1499), a treatise comparing the relative merits of the Persian and Čaghatāy languages.

(vi) *Mīzān al-awzān* (completed after 898/1499), a treatise on the Arab-Persian prosodic system, but also containing information on some characteristically Turkic verse forms.

(vii) *Maḥbūb al-ḳulūb* (completed 906/1500-1), Nawāʾī's final work of a didactic nature written in rhymed prose with verses interspersed, and modelled on Saʿdī's *Gulistān* and Djāmī's *Bahāristān*.

(viii) *Khamsat al-mutaḥayyirīn* (composed after 898/1492), a prose work interspersed with verses and dedicated to Djāmī.

(ix) *Nasāʾim al-maḥabba* (completed 901/1495-6), a translation and expansion of Djāmī's collected biographies of Ṣūfī saints, entitled *Nafaḥāt al-uns*.

Nawāʾī also wrote several works in Persian: a *Dīwān* (completed 902/1496) in imitation mainly of Ḥāfiẓ, in which he used the pen-name Fānī; *Risāla-yi muʿammā* (completed some time before 898/1492), a treatise on the enigma; and a collection of model letters.

Other works in Čaghatāy of secondary significance are the biographies of two of Nawāʾī's close companions, *Ḥālāt-i Pahlawān Muḥammad*; two short histories, *Tārīkh-i mulūki ʿAdjam* and *Tārīkh-i anbiyāʾ wa ḥukamāʾ*; *Naẓm al-djawāhir*, a translation of aphorisms ascribed to ʿAlī, entitled *Nathr al-laʿālī*; a verse translation of Djāmī's work, *Čihil ḥadīth*; a collection of model letters; and a *Waḳfiyya* (completed 886/1481-2).

The impact of Nawāʾī's works on all Turkic peoples and languages cannot be overestimated. He exerted a profound influence not only on later Central Asian authors who wrote in Čaghatāy up until the beginning of the 20th century, but also on the development of Azeri (especially on the poetry of Fuḍūlī [*q.v.*] of Baghdād d. 963/1556), Turkmen (the 12th/18th century poet Makhdūm Ḳuli [*q.v.*]), Uyghur, Tatar and Ottoman Turkish literatures. Ottoman poets continued to write imitations of his poems in Čaghatāy until the 19th century (see E. Birnbaum, *The Ottomans and Chagatay literature*, in *CAJ*, xx/3 [1976], 157-90). Soviet scholarship, which has termed Čaghatāy "Old Uzbek", considers him the founder of literary Uzbek (A.K. Borovkov, *Alisher Navoi kak osnovopoložnik uzbekskogo literaturnogo yazïka* ("ʿAlī Shīr Nawāʾī as the founder of the literary Uzbek language"), in *Alisher Navoi. Sbornik statey*, ed. Borovkov, Moscow-Leningrad 1946, 92-174). Proof of the tremendous interest in the works of Nawāʾī among not only the Turkic but also the Iranian-speaking peoples are the many specialised dictionaries that were written on the basis of his works, such as Ṭāliʿ Īmānī's Čaghatāy-Persian dictionary, *Badāʾiʿ al-lughat*, composed during the reign of Ḥusayn Bāyḳarā (see Borovkov, "*Badāʾiʿ al-lugat*": *slovar Ṭāliʿ Īmānī geratskogo k sočineniyam*

Alishera Navoi ("Ṭāliʿ Īmānī of Harāt's dictionary to the works of ʿAlī Shīr Nawāʾī"), Moscow 1961), the anonymous Čaghatāy-Ottoman dictionary, *Abushka* (mid-16th century) and Mīrzā Mahdī Khān's Čaghatāy-Persian dictionary, *Sanglakh* (mid-18th century).

Apart from his linguistic and literary contributions, ʿAlī Shīr's historical significance also lies in his extensive patronage activities. The fact that, in the second half of the 9th/15th century, almost all literary, artistic and cultural life in the eastern Islamic lands was concentrated in Tīmūrid Harāt was due as much to his personal efforts as a pre-eminent patron as it was to his own artistic example and inspiration. With an interest not only in poetry, but also in music, calligraphy, painting and architecture, he oversaw the activities of virtually all artists and literati in Khurāsān, according to Muḥammad Ḥaydar. Among the many who benefited directly from his financial support were the historians, Mīrkhwānd and Khwāndamīr; the literary historian, Dawlatshāh; the poets, Djāmī, ʿAṣafī, Sayfī Bukhārī, Hātifī and Hilālī; the composers of *muʿammā* (a favourite genre of his), Ḥusayn Muʿammāʾī and Muḥammad Badakhshī; and the musicians Shaykhī Nāʾī and Ḥusayn ʿŪdī. His support of artists of the royal atelier (*kitābkhāna*), such as the painters, Bihzād, Shāh Muẓaffar, Ḳāsim ʿAlī and Ḥadjdjī Muḥammad (the latter tentatively identified by E. Esin as Siyāh Ḳalam), and the calligraphers, Sulṭān ʿAlī Mashhadī and Sulṭān Muḥammad Khandān, helped make the second half of the 9th/15th century the highpoint of miniature painting and book production in Central Asia and have earned for it the appellation "Tīmūrid Renaissance" in Western scholarship. Many of the finest illuminated manuscripts of the period are in fact of Nawāʾī's works, particularly of his *Khamsa* and *Dīwāns*. The tradition of producing richly decorated manuscripts of his works continued until the 19th century in Central Asia (see *Alisher Navoiy asarlariga ishlangan rasmlar XV-XIX asrlar* ("Miniature paintings illustrating the works of ʿAlī Shīr Nawāʾī, XV-XIX centuries") [text in Uzbek, Russian and English], comp. Kh. Sulaymon and F. Sulaymonova, Tashkent 1982).

ʿAlī Shīr's patronage activities included the donation and endowment of about 370 buildings, architectural ensembles and public works in Khurāsān, especially in and around Harāt. Among these was the huge Ikhlāṣiyya complex to the north of the city, which contained a mosque, *madrasa*, *khānḳāh*, hospital, bath and ʿAlī Shīr's principal residence. Khwāndamīr enumerates about 50 *ribāṭs* which he donated throughout Khurāsān, about 20 reservoirs (*ḥawḍ*) in Harāt, 15 bridges, nine public baths, and 14 mosques in Harāt and other cities, such as Isfizār, Sarakhs and Astarābād. In many cases, pious endowments which he made provided for the maintenance of scholars, students and the poor. He was also involved in restoration work and was responsible for the reconstruction of, among other monuments, the Friday mosque of Harāt which dated back to Ghūrid times (early 7th/13th century) (see L. Golombek, *The resilience of the Friday mosque: the case of Herat*, in *Muqarnas*, i [1983], 95-102).

ʿAlī Shīr's patronage activities were financed from personal sources of revenue derived from landholdings throughout Khurāsān (but particularly in the region north of Harāt) or connected with his appointment as *amīr*, such as the royal mint and royal workshops. Various estimates of his daily income indicate that he was one of the wealthiest men of his time.

Despite a certain idealisation of ʿAlī Shīr in the writings of his contemporaries (such as Khwāndamīr's *Makārim al-akhlāḳ* and Dawlatshāh's *Tadhkirat al-shuʿarāʾ*) as well as in the early secondary literature (e.g., F.A. Belin's *Notice biographique et littéraire sur Mir Ali-Chîr Névâii*, in *JA*, 5e série, xvii [1861], 175-256), which stress such positive aspects of his character as his integrity, refinement, charitable works, patronage, etc., it is possible from other sources to form a more rounded opinion of him. The single negative character trait which is mentioned by later authors such as Muḥammad Ḥaydar and Bābur is his hypersensitivity, which, coupled with the high moral and artistic standards which he set both for himself and for others, made him a demanding and difficult person. In describing his exclusive literary audiences, Wāṣifī offers a glimpse of this less attractive side of his character, which often manifested itself as impatience or even sarcasm (see A.N. Boldïrev, *Alisher Navoi v rasskazakh soveremennikov* ("ʿAlī Shīr Nawāʾī according to his contemporaries"), in *Alisher Navoi*, ed. Borovkov, 121-52).

In his personal life, ʿAlī Shīr maintained an ascetic lifestyle, never marrying or having concubines or children. Although initiated into the Naḳshbandiyya order by his spiritual master and lifelong friend, the great Persian poet and mystic, Djāmī, in 881/1476-7, his brand of mysticism was not of the "intoxicated", but rather of the more worldly variety practised by the order as a whole. Much has been made of his purported inclination toward Shīʿism, but there is no evidence that this went beyond reverence for the person of ʿAlī, a feature of Central Asian Islam in general.

The complex figure of ʿAlī Shīr sparked the popular imagination of many Turkic peoples. Turkmen folktales, for example, depict him as the clever *wazīr*, Mirali, who always comes to the defence of the poor before his extravagant and misguided sultan, while Uzbek legends revolve around the mysterious reasons for his celibacy. Many of his *ghazals* have become popular Uzbek folk songs and some of his works have been staged as dramatic plays by modern Uzbek playwrights.

Bibliography: The chief primary sources for the life of ʿAlī Shīr Nawāʾī are: Khwāndamīr, *Makārim al-akhlāḳ*, ed. T. Gandjeï, GMS (n.s.) xxvii, [Cambridge] 1979; idem, *Ḥabīb al-siyar*, Tehran 1333 sh. 1954, iv, 137 ff.; Dawlatshah, 494-509; ʿAbd Allāh Marwārīd, *Sharaf-nāma* (*Staatsschreiben der Timuridenzeit: Das Šaraf-nāmä des ʿAbdallāh Marwārīd in kritischer Auswertung*), ed. and tr. H.R. Roemer, Wiesbaden 1952, 27b-28a, 43b; Bābur, *The Bábar-náma*, ed. A.S. Beveridge, GMS, i, Leiden 1905, 170b-171b; Wāṣifī, *Badāyiʿ al-waḳāyiʿ*, ed. A.N. Boldïrev, Moscow 1961, i, 484-632; Muḥammad Ḥaydar, *Tārīkh-i rashīdī* (still unpublished, but the biographical section of Ḥusayn Bāyḳarā's reign, which was not included by E. Denison Ross in his English translation, is extracted in *Iḳtibās az Tārīkh-i rashīdī*, ed. M. Shafīʿ, in *Oriental College Magazine*, x/3 [1934], 155-7); Sām Mīrzā, *Tuḥfa-yi sāmī*, ed. W. Dastgirdī, Tehran 1314 sh./1936, 179-81; Fakhrī Harawī, *Laṭāʾif-nāma* (in *The Majalis-un-Nafaʾis*, "*Galaxy Poets*", *of Mir ʿAli Shir Navaʾi: Two 16th century Persian translations*, ed. A.A. Hekmat, Tehran 1223 sh./1945), 133-6. Manuscripts of Nawāʾī's works abound in libraries throughout the world, particularly in Istanbul, London, Paris, Leningrad and Tashkent. For references to descriptions of major collections, see J. Eckmann, *Die tschagataische Literatur*, in *PTF*, ii, Wiesbaden 1964, 352-3. In the Soviet Union alone there are over a

thousand manuscripts (based mainly on the count made by Kh. Sulaymon[ov]), the great majority of which are of the *Dīwāns* and *Khamsa*. For a description not mentioned by Eckmann, see *Alisher Navoiy asarlarining ŬzSSR fanlar akademiyasi sharkshunoslik-instituti tŭplamidagi ḳŭlëzmalari* ("Manuscripts of the works of ʿAlī Shīr Nawāʾī in the collection of the Institute of Oriental Studies of the Academy of Sciences of the Uzbek S.S.R."), comp. K.M. Munirov and A. Nasîrov, Tashkent 1970.

There are a great many published editions of Nawāʾī's works, and the secondary literature on him is voluminous, particularly in Soviet scholarship. The following bibliographical works may be consulted: A.A. Semenov, *Materialî k bibliografičeskomu ukazatelyu pečatnîkh proizvedeniy Alishera Navoi i literaturî o nem* ("Materials for a bibliography of the published works of ʿAlī Shīr Nawāʾī and the secondary literature on him"), Tashkent 1940; Eckmann, *op. cit.*, 352-7; E.D. Svidina, *Alisher Navoi. Biobibliografiya (1917-1966 gg.)*, Tashkent 1968; B.V. Lunin, *Istoriya, kul'tura i iskusstvo vremeni timuridov v sovetskoy literature* ("The history, culture and art of the Timurid period in Soviet secondary literature"), in *Obshčestvennîe nauki v Uzbekistane*, viii-ix (1969), 108-13. The most complete published edition of his works is Alisher Navoi, *Asarlar* (in Cyrillic characters), 15 vols., Tashkent 1963-8. For a complete Russian translation, see Alisher Navoi, *Sočineniya*, 10 vols., Tashkent 1968-70. The main secondary works (in addition to those mentioned in the text) are the monographs by V.V. Bartolʾd, *Mir Ali-Shir i političeskaya žizn'* ("Mīr ʿAlī Shīr and political life") in his *Sočineniya*, ii/2, Moscow 1964, 197-260 (originally publ. 1928; German tr. W. Hinz, *Herat unter Ḥusein Baiqara dem Timuriden*, Leipzig 1938; English tr. V. and T. Minorsky, *Four studies on the history of Central Asia*, iii, Leiden 1962, 1-72); E.É. Bertel's, *Izbrannîe trudî*, iv: *Navoi i Džami*, Moscow 1965, 13-206 (originally publ. 1948); Agâh Sırri Levend, *Ali Şir Nevai*, 4 vols., Ankara 1965-8 (contains transcriptions of some of his works in Latin characters). The most valuable collections of articles are: *Mir-Ali-Shir. Sbornik k. pyatsotletiyu so dnya roćdeniya* ("Collection of articles on the occasion of the 500th anniversary of his birth"), ed. V.V. Bartol'd, Leningrad 1928 (see in particular the article by Bertel's, *Nevai i ʿAttar*); "*Rodonačal'nik uzbekskoy literaturî. Sbornik statey ob Alishere Navoi* ("The Founder of Uzbek literature"), Tashkent 1940 [see the interesting article by M. Sal'e, "*Kniga blagorodnîkh kačestv*" *i ee avtor* ("The *Makārim al-akhlāḳ* and its author")]; *Alisher Navoi. Sbornik statey*, ed. A.K. Borovkov, Moscow-Leningrad 1946 [see the articles by Bertel's, *Navoi i Nizami*, 68-91; A. Yu. Yakubovskiy, *Čertî obshčestvennoy i kul'turnoy žizni épokhi Alishera Navoi* ("Features of the social and cultural life of the era of ʿAlī Shīr Nawāʾī"), 5-30, which contains information on building activity; and A. Belenitskiy, *Istoričeskaya topografiya Gerata XV v.* ("The historical topography of 15th century Herat"), 175-202, based on information from Khʷāndamīr's *Khulāṣat al-akhbār*]; and *Velikiy uzbekskiy poet. Sbornik statey* ("The great Uzbek poet") ed. M.T. Aybek, Tashkent 1948 (contains a critique of Belenitskiy's article mentioned above, by M.E. Masson, *K istoričeskoy topografii gerata XV veka*, 120-45).

For works of a more general nature, see A. Zeki Velidi Togan, *Ali Şir*, in *IA*, i, 349-57 (but note that all source references are to an unpublished collection of extracts made by Togan himself); Eckmann, *op. cit.*, 304-402; A. Bombaci, *Histoire de la littérature turque*, tr. I. Mélikoff, Paris 1968, 118-35. Most of the recent work has been done in the Uzbek S.S.R. Of note is *Adabiy meros* ("Literary heritage"), a publication (since 1968) of the Uzbek Academy of Sciences (articles in Uzbek with brief English summaries). For a recent article in English, see M.E. Subtelny, *ʿAlī Shīr Navāʾī, bakhshī and beg*, in *Eucharisterion. Essays presented to Omeljan Pritsak on his sixtieth birthday* [= *Harvard Ukrainian Studies*, iii-iv (1979-80)], pt. 2, 797-807. (M.E. Subtelny)

MĪR AMĀN [see amān, mīr].

MĪR BABAR ʿALĪ [see anīs].

MĪR DĀMĀD ASTARĀBĀDĪ [see al-dāmād].

MĪR DJAʿFAR [see djaʿfar, mīr].

MĪR DJUMLA, Muḥammad Saʿīd, prominent minister and military commander in 11th/17th century Muslim India, first in the service of the Ḳuṭb-Shāhī ruler of Golkonḍā ʿAbd Allāh b. Muḥammad [see ḳuṭb-shāhis] and then in that of the Mughals Shāh Djahān and Awrangzīb [*q.vv.*], died in 1073/1663.

Stemming originally from Persia, he was at the outset a diamond merchant and accumulated a vast private fortune in the Carnatic, the region around Madras, from these dealings and from Hindu temple treasures, having his own private army of 5,000 cavalrymen and using European help and expertise for his artillery. But after the defeat of the Ḳuṭb-Shāh at Golkonḍā in Rabīʿ II 1066/February 1656 at the hands of the prince Awrangzīb, viceroy of the Deccan, Mīr Djumla went over to the Mughals, who honoured him and gave him the title of Muʿaẓẓam Khān. He commanded the Mughal troops against the ʿĀdil-Shāhīs [*q.v.*] of Bidjāpur in Muḥarram 1067/November 1656, and then in Shawwāl 1070/June 1660 became governor of Bengal, campaigning against the *rādjās* of Kaččh Bihār (Cooch Behar) and Assam [*q.v.*] immediately on appointment and in the period Djumādā I-Radjab 1072/January-March 1662, the latter campaign culminating in the capture of the Āhom *rādjā* of Assam's capital of Garhgāon. But the rainy season and outbreaks of disease in his army compelled him to return to Bengal, and he himself died of dysentery in spring 1073/1663 at Khiḍrpur just before reaching Dacca, leaving behind him a reputation of having been the greatest general of his age.

(M. Hidayet Hosain [— C.E. Bosworth])

MĪR GHULĀM ḤASAN [see ḥasan, mīr ghulām].

MĪR ḲĀSIM ʿALĪ, Indo-Muslim commander and *Nawwāb* [*q.v.*] of Bengal 1760-4, died in 1777.

Mīr Ḳāsim's rise to power was an episode in the British East Indian Company's extension of power in eastern India in the latter decades of the 18th century. Since the *Nawwāb* of Bengal Mīr D̲j̲aʿfar [see D̲J̲AʿFAR, MĪR] was unable to fulfill financial obligations contracted to the Company, he was in October 1760 deposed in favour of his son-in-law Mīr Ḳāsim, who now became *Nawwāb* but had to cede the districts of Burdwan, Midnapur and Chittagong to the British. However, he now attempted to build up for himself an independent state in Upper Bengal and Bihār, abandoning Lower Bengal to the British, moving his capital to the less accessible Mungīr [*q.v.*] in Bihar and forming an army on European lines trained by an Armenian, Gurgīn (Gregorios) K̲h̲ān. Relations with Britain became strained over the question of private trading within India, for Europeans trading inland claimed exemption from duties, thus diminishing the *Nawwāb*'s revenues. War broke out in Bihār in July 1763. Mīr Ḳāsim's new army proved ineffective; Mungīr and Patna were captured; and Mīr Ḳāsim fled to Awadh (Oudh) [*q.v.*] and sought the alliance of the *Nawwāb-wazīr* of Awadh S̲h̲ud̲j̲āʿ al-Dawla and the Mug̲h̲al Emperor in Dihlī, S̲h̲āh ʿĀlam II. The allies were nevertheless defeated at Baksar (Buxar [*q.v.*]) on 23 October 1764 by Major Hector Munro, but Mīr Ḳāsim had already been stripped of his possessions and imprisoned by S̲h̲ud̲j̲āʿ al-Dawla. He now escaped, led a wandering life and died near Dihlī in 1777. Mīr D̲j̲aʿfar had been briefly restored in Bengal till his death in 1765, with British control there firmly established.

Bibliography: T.W. Haig (ed.), *The Cambridge history of India*, v, *British India 1497-1858*, Cambridge 1929, 167-174; R.C. Majumdar (ed.), *The history and culture of the Indian people. The Maratha supremacy*, Bombay 1977, 343-9; P.J. Marshall, *The new Cambridge history of India. II. 2. Bengal: the British bridgehead. Eastern India 1740-1828*, Cambridge 1987, 84-8. (C.E. BOSWORTH)

MĪR LAWḤĪ, SAYYID MUḤAMMAD B. MUḤAMMAD AL-ḤUSAYNĪ, referred to also by his nickname as "muṭahhar" and nom-de-plume as "Naḳībī", a noted S̲h̲īʿī religious scholar of Sabzwārī origin, but resident in Iṣfahān during the Ṣafawid period, *flor.* during the 11th/17th century. He has not received any attention from biographers (and Muḥammad ʿAlī Mudarris, who secured him an entry of a few lines in his *Rayḥānat al-adab fī tarād̲j̲im al-maʿrūfīn bi 'l-kunya aw al-laḳab*, vi, Tabrīz n.d., 235-6, seems to be an exception), because Mīr Lawḥī proved to be an outspoken critic of two overwhelmingly-recognised religious leaders of his time, Muḥammad Bāḳir Mad̲j̲lisī and his father Muḥammad Taḳī, known as Mad̲j̲lisī-yi Awwal [*q.v.*]. As a matter of fact, his name has been referred to mostly in association with his criticism of the Mad̲j̲lisīs; see, for instance, Ḥusayn Nūrī, *al-Fayḍ al-ḳudsī fī tard̲j̲amat al-ʿAllāma al-Mad̲j̲lisī*, Tehran 1887, 22 (attached to the first volume of the old edition of Muḥammad Bāḳir Mad̲j̲lisī's *Biḥār al-anwār*), though the same author also mentions him solely as one of the authors who wrote on the Twelfth Imām (idem, *Nad̲j̲m al-t̲h̲āḳib dar aḥwāl-i Imām-i g̲h̲āʾib*, Tehran n.d., 5).

The principal source of information on Mīr Lawḥī is his own polemical book written in 1081-3/1670-2 and entitled *Kifāyat al-muhtadī fī maʿrifat al-Mahdī*, from which a few facts about his life may be learnt. The book, for instance, indicates that Mīr Lawḥī was an advanced student of religious subjects under such well-known S̲h̲īʿī authorities as S̲h̲ayk̲h̲ Bahāʾ al-Dīn Muḥammad al-ʿĀmilī (d. *ca.* 1031/1621 [*q.v.*] and Mīr Muḥammad Bāḳir Dāmād (d. *ca.* 1041/1631) (*Kifāyat*, ms. no. 1121, Faculty of Theology, University of Mas̲h̲had, 65; this is an abridged copy of his book made in 1083/1672 by one of his friends, who also included in it a number of his own viewpoints and factual stories about Mad̲j̲lisī; for a complete version of Mīr Lawḥī's book consult that of the Mad̲j̲lis Library, Tehran, no. 833, introduced with some detail in Ḍiyāʾ al-Dīn Ḥadāʾiḳ Ibn Yūsuf S̲h̲īrāzī, *Fihrist-i kitābk̲h̲āna-yi mad̲j̲lis-i s̲h̲ūrā-yi millī*, edited and enlarged by Abdol Hossein Haeri, Tehran 1974, 54-9; our references here are only to the abridged copy.) The fact that Mīr Lawḥī was an advanced student in or before 1031/1621 suggests that he could not have been less than 20 years at age at that time and consequently his date of birth must have been *ca.* 1010/1601. The book also shows that Mīr Lawḥī's areas of intellectual interests were S̲h̲īʿī theology, the Imāmate, especially the questions relative to the Twelfth *Imām*, and the refutation of all forms of Ṣūfism. The other books he ascribed to himself, such as *Aʿlām al-muḥibbīn*, *Idrāʾ al-ʿāḳilīn wa-ik̲h̲zāʾ al-mad̲j̲ānīn*, *Zād al-ʿuḳbā fī manāḳib al-aʾimma wa 'l-awṣiyā*, and even his *Riyāḍ al-muʾminīn wa-hadāʾiḳ al-muttaḳīn*, which he wrote during his youth, were written on those subjects; the latter books, however, do not seem to have been available to the authors in the field.

Mīr Lawḥī was also interested in Islamic history and wrote a controversial book, in or sometime before 1043/1633, on the problem of Abū Muslim al-K̲h̲urāsānī's rising against the Umayyads. According to a note written by Muḥammad ʿAbd al-Ḥasīb al-Ḥusaynī in 1063/1654, Mīr Lawḥī argues in his book that Abū Muslim (d. 137/754) [*q.v.*] whose origin from K̲h̲urāsān, Marw, or Iṣfahān has not been determined, did actually win the caliphate for the tyrannical ʿAbbāsids, but was never a friend of the S̲h̲īʿi *Imāms*, and was murdered for his evil deeds by the then 'Abbāsid caliph, al-Manṣūr (d. 158/774), who was more wicked than himself. Some people did not tolerate Mīr Lawḥī's condemnation of Abū Muslim, and troubled him with all their effort and power (*bi-kull d̲j̲idd wa-ḳuwwa.*) A number of Mīr Lawḥī's contemporary *ʿulamāʾ*, however, defended his argumentation by writing numerous books and treatises on the subject, and one of them was the *Iẓhār al-ḥaḳḳ wa-miʿyār al-ṣidḳ* written in 1043/1633 by al-Sayyid Aḥmad al-ʿAlawī al-ʿĀmilī, the father of ʿAbd al-Ḥasīb (Muḥammad Muḥsin Āg̲h̲ā Buzurg Ṭihrānī, *al-D̲h̲arīʿa ilā taṣānīf al-S̲h̲īʿa*, iv, Tehran 1941, 150-1, where there can also be found a list of seventeen books written in support of Mīr Lawḥī's position on the problem.)

The reasons behind this confusion and controversy, which involved the common people as well as a number of religious authorities, seem to be found mainly in Mīr Lawḥī's ideological difference with the Ṣūfīs, whom Mad̲j̲lisī-yi Awwal stoutly supported. Mīr Lawḥī himself alludes to the story, saying that since Mad̲j̲lisī-yi Awwal used to praise "Abū Muslim Marwazī [sc. of Marw] and the sorcerer, the evil-doer [and the famous Ṣūfī Ḥusayn b. Manṣūr] al-Ḥallād̲j̲ (d. 309/922)", he said something against them, but "the ignorant people" became hostile against him and even planned to murder him (Muḥammad Taḳī Dānis̲h̲paz̲h̲ūh, *Fihrist-i kitābk̲h̲āna-yi ihdāʾī-yi Aḳā-yi Sayyid Muḥammad Mis̲h̲kʷāt bi kitābk̲h̲āna-yi dānis̲h̲gāh-i Tihrān*, iii/3, Tehran 1956, 1497.) Muṭahhar b. Muḥammad al-Miḳdādī, who refuted the Ṣūfīs in a treatise written in 1060/1650, thus elaborated on the matter: "Due to the hostility and mischievousness of the Ṣūfīs, the helpless Sayyid [Mīr Lawḥī], who prohibited the common people from loving Abū Muslim,

had no peace even for a moment, and the Ṣūfīs, both their élite and the common followers, hurt him a great deal" (cited in *al-Dharīʿa*, iv, 151.)

Owing to this unhappy experience, Mīr Lawḥī was reluctant to oppose the popular Madjlisīs, notwithstanding the fact that he had found Muḥammad Bāḳir Madjlisī's book on *radjʿa* (the returning, according to Shīʿī belief, of some dead persons to his world) quite harmful to the beliefs of the common believers, and that some people had also asked him to refute it. Since, however, Mīr Lawḥī saw a dream, after which he felt himself appointed (*maʾmūr*) to refute Madjlisī, he wrote his *Kifāyat al-muhtadī* (*Kifāyat*, 5-19), in which he not only refuted many of Madjlisī's interpretations of the *ḥadīth*, but also divulged a number of eye-witness facts about him and his father that have been rarely quoted by other authors. In defiance of the fact that the two Madjlisīs have been truly recognised as prominent *mudjtahids*, who greatly contributed to Shīʿī theology, culture and tradition, Mīr Lawḥī believed that they were gathering the ordinary and ignorant people (*ʿawāmm*) on Iṣfahān round themselves, and for this reason no one dared "to give them advice or to ascribe any wrongdoing to any of them" (*Kifāyat*, 1-2.)

Mīr Lawḥī directed his sharp criticism particularly against Madjlisī's interpretation of a *ḥadīth* in which Madjlisī wanted people to believe that the fifth *Imām* of the Shīʿa, Muḥammad al-Bāḳir (d. 114/732, [*q.v.*]), had foretold that the Ṣafawid monarchs would appear in the east to promote the true religion and that they would retain rulership until they would finally transfer their power to no-one but the Twelfth *Imām* (Muḥammad Bāḳir Madjlisī [*Tardjama-yi čahārdah ḥadīth*], ms. no. 69, Faculty of Theology, University of Mashhad, 4-6; this treatise, which is dedicated to the Ṣafawid monarch Shāh Sulaymān (d. 1106/1694), is also referred to as *Risāla fī 'l-radjʿa* and *Risālat al-radjʿa*, and was published under the title of *Ithbāt al-radjʿa* in Bombay in 1888; the printed copy of the book has not been available to this author; for more information on the contents of this treatise, with references to Mīr Lawḥī's accounts, see *Fihrist-i kitābkhāna-yi ihdāʾi-yi Āḳā Sayyid Muḥammad Mishkʷāt*, iii/3, 1203-12.). Mīr Lawḥī points out that in dealing with the *ḥadīth* in question, which has been classified as "rare and weak" (*shādhdh-i ḍaʿīf*), Madjlisī committed these blameworthy acts: (1) interpreting the *ḥadīth* according to his own wish and distorting its sense for gaining worldly interests (*barā-yi dunyā va djarr-i manfaʿat*); (2) mistranslating the text; (3) using defective grammar; (4) deceiving "the king of the Shīʿa" and the illiterate general public (*ʿawāmm*); and (5) making some geographical errors (*Kifāyat*, 21-5).

In his book, Mīr Lawḥī also criticises Madjlisī-yi Awwal on various matters. He refers, for instance, to this story that Madjlisī-yi Awwal has revealed (paraphrasing): "In the beginnings of my search for the truths of the Ḳurʾān, one night I had a short nap (*sina*), during which I saw the Prophet Muḥammad, in whose presence I felt that I should think on his perfection. After that, I began to think deeply about the meanings of the Ḳurʾān until I gained an incalculable extent of knowledge, of which I cannot describe even a little, though I spend all my life" (Muḥammad Taḳī Madjlisī, *Lawāmiʿ-i ṣāḥibḳirānī al-mushtahar bi-sharḥ al-faḳīh*, new ed. Tehran n.d., i, 100.) Mīr Lawḥī argues that in the Shīʿī belief, ordinary human beings can earn limited knowledge only through the teachings of other human beings. Madjlisī-yi Awwal's claim of having learnt "an incalculable extent of knowledge" through supernatural means, which is simply a piece of boasting (*lāf gazāf*) which he learnt from the well-known Ṣūfī Muḥyī al-Dīn Ibn al-ʿArabī (d. 638/1240), certainly contradicts Shīʿī belief and even places him higher than the first Shīʿī *Imām*, ʿAlī b. Abī Ṭālib (*Kifāyat*, 115-7.)

Mīr Lawḥī says that Madjlisī-yi Awwal's connections with Ṣūfism are indisputable, and adds that, as a Ṣūfī, he held the Ṣūfī types of gatherings in which songs were sung by singers such as Shāh Mīrzā Zarkash, that he used to ascribe great miracles to the Ṣūfīs, such as al-Ḥallādj and Bāyazīd al-Bisṭāmī (d. 261/874), from the pulpit, and that he in turn enjoyed the support of the followers of those Ṣūfīs and of the common people. Mīr Lawḥī even held a public debate with Madjlisī-yi Awwal in the latter's mosque; the proceedings of the debate have been reportedly recorded in a book (*Kifāyat*, 111-20.) On the basis of his eye-witness information, Mīr Lawḥī comes to the conclusion that Muḥammad Bāḳir Madjlisī's attempt to deny his father's ties with Ṣūfism is useless and wrong (on Madjlisī's defence of his father, see Muḥammad Bāḳir Nadjafī Yazdī, *Sharḥ-i kitāb-i iʿtiḳādāt-i Islām bi ḳalam-i ʿAllāma Madjlisī*, Tehran 1975, 393-4, and MADJLISĪ-YI AWWAL, MUḤAMMAD TAḲĪ.)

Some authors have reported that Mīr Lawḥī, out of hostility to Madjlisī, demolished the grave of the well-known religious authority Abū Nuʿaym Aḥmad b. ʿAbd Allāh Iṣfahānī (d. 430/1038), who is reportedly claimed by Madjlisī to have been his Shīʿī ancestor (Muḥammad Bāḳir al-Mūsawī al-Khʷānsārī, *Rawḍāt al-djannāt fī aḥwāl al-ʿulamāʾ wa 'l-sādat*, Tehran 1947, 75; anon., *Nāma-yi dānishwarān dar sharḥ-i ḥāl-i shishṣad tan az dānishmandān-i nāmī*, vii, Ḳum n.d., 6). This allegation is hard to believe, because it is quite improbable that Mīr Lawḥī could have taken such an action in Iṣfahān, either before the Afghān invasion in 1135/1722, when the Madjlisī family was enjoying great popularity, power and influence, or afterwards, since we would have to attribute to Mīr Lawḥī an age of over 120 years. Besides, he himself makes reference to some of Abū Nuʿaym's writings with relative respect (*Kifāyat*, 90-1.) It may be worth noting that authors such as Ibn Khallikān, despite Madjlisī's claim, make no mention of Abū Nuʿaym's Shīʿī religious convictions (*Wafayāt*, ed. Iḥsān ʿAbbās, Beirut 1968-72, i, 91-2.) More details on the question can be found in *Nāma-yi dānishwarān*, vii, 1-21.

At present, we have no detailed knowledge of Mīr Lawḥī's family and descendants. We know, however, that he had a son, Sayyid Muḥammad Hādī b. al-Lawḥī al-Mūsawī al-Ḥusaynī, who has left some writings in Persian under the titles of *Uṣūl al-ʿaḳāʾid* and *Arbaʿīn* (*al-Dharīʿa*, i, Nadjaf 1936, 431), and that he was the ancestor of the Sayyids of Durča such as the recently-deceased *mudjtahids*, Sayyid Muḥammad Bāḳir Durčaʾi (d. 1342/1923) and his brother Sayyid Mahdī Durčaʾi (d. 1364/1944) (ʿAbd al-Karīm Djazī, *Ridjāl-i Iṣfahān yā tadhkirat al-ḳubūr*, 1949, 67-8, 122.)

Bibliography: In addition to the works cited in the article, see *Bibl.* to MADJLISĪ, MUḤAMMAD BĀḲIR.

(ABDUL-HADI HAIRI)

MĪR-I MĪRĀN (P.) "supreme commander", a military and political term used in 18th century Ottoman Turkish administrative practice as being virtually synonymous with *beglerbegi* [*q.v.*] "provincial governor", and then increasingly used to denote the honorary rank of *beglerbegi*, although this last title was considered as somewhat superior to that of *mīr-i mīrān*. Holders of the rank of *mīr-i mīrān* enjoyed the designation of Pasha, and were entitled to be addressed as

Saʿādetlü Efendim Ḥaḍretleri. In the 19th century, it also became a civil service rank. Before the administrative reforms of 1259/1843, civil officials held military ranks, such as *ferīḳ* "divisional commander" and *mīr-i liwā* "brigadier". The award of military ranks for them now ceased, and the equivalent ranks of *mīr-i mīrān* and *emīr ül-umerā*ʾ were given to them.

(F.A.K. YASAMEE)

MĪR MUḤAMMAD MAʿṢŪM, known as NĀMĪ, historian of Sind in the Mug̲h̲al period. He was the son of a *s̲h̲ayk̲h̲ al-Islām* from the island in the Indus river in Sind of Bhakkar [see BAKKAR], born in the middle years of the 10th/16th century. After a stay in Gud̲j̲arāt, he entered the service of the Mug̲h̲al emperor Akbar [*q.v.*] in 1003-4/1595-6 and received a *manṣab* [*q.v.*] or land-grant of 250, being employed on a diplomatic mission to the court of the Ṣafavid S̲h̲ah ʿAbbās I of Persia. He returned to Bhakkar in 1015/1606-7 and died there soon afterwards.

His Persian *Taʾrīk̲h̲-i Sind*, often referred to as the *Taʾrīk̲h̲-i Maʿṣūmī*, deals with the Islamic history of his home province, and was edited by U.M. Daudpota, Poona 1938; see on it Storey, 651-3, 1324.

Bibliography: Given in the article. Extracts from the *Taʾrīk̲h̲-i Sind* were tr. in Elliot and Dowson, *History of India*, i, 215-52. (ED.)

MĪR MUḤAMMAD TAḲĪ (1125-1223/1713-1810), leading Urdu g̲h̲azal poet.

He was born in Akbarābād (Āgra), the son of a Ṣūfī *darwīsh* who impressed on him the importance of divine love and the unreliability of this world, ideas which he was later to stress in his poetry. Biographical details are difficult to date, but he must have been about 15 years old when, following his father's early death, he went to Dihlī to seek a livelihood. There he found a patron who, however, soon died, and he returned to Akbarābād. Little is known of his activities there, but it appears that he caused a family scandal by an affair with the wife of a relative. He returned to Dihlī *ca.* 1152/1739, and stayed with an uncle of his stepbrother, the well-known Urdu poet Khān Ārzū. He studied Arabic and Persian and the poetic art, and commenced a career as an Urdu poet. Despite the usettled situation in Dihlī and the poet's own pride and independence, he was supported by various patrons, and became well-known as both a poet and an eccentric. There was, however, some instability in his make-up; indeed, he had a severe mental breakdown, which was exacerbated, and perhaps partially caused, by his step-brother's intrigues against him with Ārzū, and the latter's insensitivity. But as Ṣiddīḳī points out (*op. cit.*. in *Bibl.*, 141), one of Mīr's uncles had died young of brain disease. The poet recovered, but the effect of this illness can be seen in his autobiography (*D̲h̲ikr-i-Mīr*), and in one of his *mat̲h̲nawīs*, *K̲h̲ʷāb k̲h̲ayāl-i-Mīr* (*Kulliyyāt*, 974 ff.). Ultimately, however, instability in Dihlī due to Afg̲h̲ān and Marāthā incursions led Mīr to quit the city, like other poets before and after him. This was in 1190/1776 or thereabouts, when he was welcomed by the Nawwāb Āṣaf al-Dawla and given a pension. Nevertheless, he was not happy there; perhaps his nature was such that he could never be happy anywhere for long. His pre-eminence in *g̲h̲azal* was recognised; but he was not influenced by the Lucknow style, nor is he generally believed to have influenced the Lucknow School, at any rate during his life-time. His leanings towards simplicity accorded ill with the Lucknow love of embellishment. He lived a further 30 or so years, but his last years were gloomy even by his own sorrowful standards, and he looked forward to death with equanimity.

Mīr's literary output is considerable. The core of his Urdu poetry, roughly two-thirds of it, consists of *g̲h̲azals* collected in six *dīwāns*, and these constitute his main contribution to Urdu poetry. Next in importance come his twelve erotic *mat̲h̲nawīs*. Many other *mat̲h̲nawīs* are devoted to satire and eulogy, and there are a few *ḳaṣīdas* [see MADĪḤ. 4. In Urdu]. To these should be added over 30 *mart̲h̲iyas*, some stanza poetry and other miscellaneous verse. In Persian, his *dīwān* has attracted little interest. But his *tad̲h̲kira* of Urdu poets, *Nikāt al-s̲h̲uʿarā*ʾ (1165/1752) is a pioneer work. Again in Persian, his autobiography *D̲h̲ikr-i-Mīr* (1169/1756) is important, not only as an account of his life before leaving Dihlī and a key to his personality, but also for the light it sheds on Dihlī life in those years.

Since his Dihlī years, Mīr has been widely acclaimed as a great—possibly the greatest—Urdu *g̲h̲azal* poet. As Brēlwī puts it (*Kulliyyāt*, Introd., 48), "he made *g̲h̲azal* what it is" (lit. "he made *g̲h̲azal g̲h̲azal*"). Even the poetry he wrote in other forms is largely *g̲h̲azal* in spirit. At the same time, excessive praise, due perhaps to oriental exaggeration, has not always been helpful. Even a reliable critic like Ṣiddīḳī (*op. cit.*, 140) begins a short account of him: "Mīr Taḳī Mīr is not merely the Emperor, but the God of poetry." Elsewhere, Brēlwī aptly describes an important facet of the *g̲h̲azals* when he says that "the secret of Mīr's renown and popularity is that he turned poetry into pain and pain into poetry." The pessimism in his *g̲h̲azals* might perhaps become boring, but for the fact that he invests it with a sort of universality, so that the reader or listener can identify himself with it. Mīr expects nothing of this life, which is deception and dream, with death just around the corner. Naturally, love and beauty are the main themes of the *g̲h̲azals*. The love is largely earthly, though there are Ṣūfī overtones; but to him love is not merely pleasure, but also a trial (*āzmāʾis̲h̲*) and an affliction (*balā*), since it ends in disappointment. Yet throughout his poetry are remarks clearly referring to the Ṣūfī concept of love, e.g.

How shall I say in truth what is love!
To the righteous people (*haḳḳ-s̲h̲inās*)
God is love.

At times his statement about love reminds one of Muḥammad Iḳbāl [*q.v.*].

Much has been written about Mīr's language and style, and the word *sādagī* ("simplicity") recurs. And indeed, there are many verses which are almost conversational in language. To him, meaning was all-important. His simplicity is most effective in short metres. Sadiq, a less than enthusiastic critic, describes his style (*op. cit.*, in *Bibl.*, 99) as "bare even to nakedness". But though Mīr avoids gaudy description, his diction is rich, with many Persian words. His similes and metaphors are telling, but, like other *ṣanāʿī-badāʿī*, they are employed as means rather than ends. The final section of his *tad̲h̲kira* should be read to appreciate his attitude to the use of foreign (i.e. Persian) vocabulary and idioms. He objected to them only where the grammar was foreign and not *rēk̲h̲ta* (= Urdu). Another feature of his *g̲h̲azals* is their musical effect. L.C. Randhir (*op. cit.* in *Bibl.*, 177-212) has written about music and *g̲h̲azal*; but the music in Mīr's poetry does not need singing or instrumental accompaniment—it is achieved by felicitous choice of metre and language. The harmonious use of consonants and vowels, *tad̲j̲nīs* and word repetition are

among the elements involved. But it must not be forgotten that Mīr writes about life from personal experience. As Brēlwī puts it (*op. cit.*, 250), his poetry is a perfect amalgam of life and art. As for his short erotic *mat̲h̲nawīs*, whilst not without narrative, they are far removed from the more familiar long heroic *mat̲h̲nawī* typified by *Siḥr al-bayān* [see ḤASAN, MĪR G̲H̲ULĀM]. But they are historically important.

High praise of Mīr as a poet has led to a reaction, more especially since Muḥammad Ḥusayn Āzād (*Āb-i-ḥayāt*, 203-31). In his lifetime, critics praised his 72 outstanding verses ("lancets"): but some more recent critics have maintained that "his high is very high, but his low is very low." Writing in 1964, Sadiq (*op. cit.*, 90) complains that there is nothing tragic or heroic about him, and that he is often "morbid, unhealthy and pathological". Even so, in 1973 Ahmed Ali (*op. cit.* in *Bibl.*, 53) could describe him as a great Romantic who reached heights not attained by Coleridge, Wordsworth, Shelley and Keats. However, in 1982, Randhir (*op. cit.*, 60), after describing him as "a poet with a tearful eye...always gloomy... a realist" concludes that "some of his critics have been too generous in praise."

Mīr's Persian *tad̲h̲kira* of Urdu poets, *Nikāt al-s̲h̲uʿarāʾ*, has been described as no less important than his *g̲h̲azal*s (ʿAbd Allāh, *S̲h̲uʿarāʾ-yi-Urdū*, 14). The *tad̲h̲kira* form [*q.v.*] may be described as a collection of specimen verses of a number of poets, with very brief biographical information and critical remarks. There was no standard arrangement: poets might be listed alphabetically, chronologically, by "schools", with or without dates. Mīr's *tad̲h̲kira* is the oldest extant for Urdu poets, and one of the earliest. It has been strongly attacked for its hostile assessment of poets, especially by Muḥammad Ḥusayn Āzād [*q.v.*] in his *Āb-i-ḥayāt*, which is itself essentially a large-scale *tad̲h̲kira*, written, however, in Urdu, whereas originally they were in Persian. Whilst Āzād's criticisms have some substance, they are exaggerated. He also makes a number of statements which are factually erroneous, unless he has had access to some unknown variant manuscript. A more important blemish is Mīr's extraordinary arrangement, which is a mixture of the chronological and alphabetical.

Bibliography: The most recent of several editions of Mīr's collected poetry is *Kulliyyāt-i-Mīr*, ed. ʿIbādat Brēlwī, Karachi-Lahore 1958, with a 100-page introduction. Some, however, prefer the edn. of ʿAbd al-Bārī Āsī, Lucknow 1941, which though less complete, is said to be more accurate. Sayyid ʿAbd Allāh, *Naḳd-i-Mīr*, Lahore 1964, is a full study of the poet in 14 essays. Brēlwī's *S̲h̲āʿirī awr s̲h̲āʿirī kī tanḳīd*, Karachi 1965, contains three essays on respectively the poet's *g̲h̲azal* (179-212), his thought (213-36) and his art (237-50). The longest and best account of the poet in English is in R. Russell and Khurshidul Islam, *Three Mughal poets: Mir, Sauda, Mir Hasan*, London 1969, 95-277. Farmān Fatаḥpūrī's *Daryāʾi-ʿis̲h̲ḳ awr baḥr al-maḥabbat kā taḳābulī mutālaʿa*, Lahore 1972, compares a *mat̲h̲nawī* by Mīr with a similar one by Muṣḥafī [*q.v.*] with the full text of each. The following are more general works with useful sections on Mīr: Ram Babu Saksena, *A history of Urdu literature*, Allahabad 1927, 70-80; Muhammad Sadiq, *A history of Urdu literature*, London etc., 1964, 94-101, generally hostile in tone; Ahmed Ali, *The golden tradition*, New York-London 1973, is a general account of Urdu poetry, with many poems in English translation (23-54, 134-76). L.C. Randhir, *Ghazal - the beauty eternal*, Delhi 1982, is also useful, though little is said about Mīr (60-3, 146). All poetical extracts are given in the Devanagari script, Roman Urdū, and English translation. See further Abu 'l-Layt̲h̲ Ṣiddīḳī, *Lakhnāʾū kā dabistān-i-s̲h̲āʿirī*, Lahore 1955, 140-9. Muḥammad Ḥusayn Āzād, *Āb-i-ḥayāt*,[9] Lahore 19917, 203-31 (N.B. the various editions, or more correctly reprints, seem to be identical in pagination); Ḳāsim (Ḥakīm Abu 'l-Ḳāsim Mīr Ḳudrat Allāh Ḳāsim) *Mad̲j̲mūʿa-yi-nag̲h̲z*, Lahore 1933, 229-54. Mīr's autobiography was published as *D̲h̲ikr-i-Mīr*, ed. ʿAbd al-Ḥaḳḳ, Awrangābād 1928. His *tad̲h̲kira*, *Nikāt al-s̲h̲uʿarāʾ*, ed. Muḥammad Ḥabīb al-Raḥmān K̲h̲ān S̲h̲irwānī, has been published with no date or place of publication. Finally, Sayyid ʿAbd Allāh, *S̲h̲uʿarāʾ-yi-Urdū kē tad̲h̲kirē awr tad̲h̲kira-nigārī kā fann*, Lahore 1952, is a general account of the *tad̲h̲kira* form, with references to Mīr at 14-35, 74-5.

MĪRĀB [see MĀʾ, Iran].

MIRACLE [see KARĀMA, MUʿD̲J̲IZA].

MIʿRĀD̲J̲ (A.), originally designates "a ladder", and then "an ascent", and in particular, the Prophet's ascension to Heaven.

1. In Islamic exegesis and in the popular and mystical tradition of the Arab world.

The Ḳurʾān (LXXXI, 19-25, LIII, 1-21) describes a vision in which a divine messenger appears to Muḥammad, and LIII, 12-18, treats of a second mission of a similar kind. In both cases, the Prophet sees a heavenly figure approach him from the distance, but there is no suggestion that he himself was carried away to Heaven. However, it is otherwise with the experience alluded to in XVII, 1, "Glory be to Him who transported His servant by night (*asrā bi-ʿabdihi laylan*) from the Masd̲j̲id al-Ḥarām to the Masd̲j̲id al-Aḳṣā which We have surrounded with blessing, in order to show him one of our signs." For this verse, tradition gives three interpretations:

(1) The oldest one, which disappears from the more recent commentaries, detects an allusion to Muḥammad's Ascension to Heaven. This is the more interesting, as these traditions (al-Buk̲h̲ārī, Cairo 1278, ii, 185, *Bāb kāna 'l-nabiyyu tanāmu ʿaynuhu wa-lā yanāmu ḳalbuhu*, no. 2; Muslim, Būlāḳ, 1290, i, 59; al-Ṭabarī, *Tafsīr*¹, xv, 3, cf. B. Schrieke, *Die Himmelreise Muhammad's*, in *Isl.*, vi [1915-16], 12, 14) retain also the original signification of the story of Ascension (A.A. Bevan, *Mohammed's Ascension to Heaven*, in *Beihefte zur Zeitschr. für die Alttestam. Wissensch.*, xxvii = *Studien ... Julius Wellhausen ... gewidmet*, Giessen 1914, 56; Schrieke, *op. cit.*). This explanation interprets the expression *al-masd̲j̲id al-aḳṣā*, "the further place of worship" in the sense of "Heaven" and, in fact, in the older tradition *isrāʾ* is often used as synonymous with *miʿrād̲j̲* (see *Isl.*, vi, 14). One would thus have, in this verse, witness to the nocturnal ascension of the Prophet to the heavenly spheres (Schrieke, *op. cit.*, 13 ff.; J. Horovitz, *Muhammeds Himmelfahrt*, in *Isl.*, ix [1919], 161 ff.), but a witness limited merely to an allusion to the adventure, without saying anything about the manner in which it developed.

(2) The second explanation, the only one given in all the more modern commentaries, interprets *al-masd̲j̲id al-aḳṣā* as "Jerusalem" and this for no very apparent reason. It seems to have been an Umayyad device intended to further the glorification of Jerusalem as against that of the holy territory (cf. Goldziher, *Muh. Stud.*, ii, 55-6; *Isl.*, vi, 13 ff.), then ruled by ʿAbd Allāh b. al-Zubayr. Al-Ṭabarī seems to

reject it. He does not mention it in his *History* and seems rather to adopt the first explanation (see *Isl.*, vi, 2, 5, 6, 12, 14; al-Ṭabarī, *Annales*, i, 1157 ff., a passage which appears to represent the historian's final verdict formed on full consideration of the evidence before him, cf. Bevan, *op. cit.*, 57).

Explanations 1 and 2 concur in interpreting *ʿabd* in XVII, 1, by Muḥammad, and this seems to be right (*Isl.*, vi, 13, n. 6). The *id̲j̲māʿ* admitted both interpretations and, when the Umayyad version had arisen, harmonised the two by assigning to *isrāʾ* the special sense of night journey to Jerusalem. The Ascension, having lost its original meaning, was altered in date, being made to fall at a later period, as appears, in fact, to have been done previously by Ibn Isḥāḳ in the oldest extant biography of Muḥammad (Bevan, *op. cit.*, 54).

The story of the night journey to Jerusalem runs as follows:

One night, as Muḥammad was sleeping in the neighbourhood of the Kaʿba at Mecca (or in the house of Umm Hāniʾ, *Isl.*, vi, 11) he was awakened by the angel Gabriel who conducted him to a winged animal called Burāḳ [*q.v.*], and with Muḥammad mounted on this animal they journeyed together to Jerusalem. On the way thither they encounter several good and several wicked powers (*Mis̲h̲kāt al-maṣābīḥ*, Dihlī 1268, 521-2; al-Bag̲h̲awī, *Maṣābīḥ al-sunna*, Cairo 1294, ii, 179, with a harmonising interpolation) and visit Hebron and Bethlehem (al-Nasāʾī, *Sunan*, Cairo 1312, i, 77-8; al-Nuwayri, ms. Warner 2a, p. 93, ll. 7-10). At Jerusalem, they meet Abraham, Moses and Jesus, of whom a description is given (e.g. al-Buk̲h̲ārī, Cairo 1278, ii, 147). The *ṣalāt* is performed, Muḥammad acting as *imām* and thereby taking precedence of all the other prophets there assembled. This meeting with the prophets at Jerusalem resembles and may well have been modelled on the transfiguration of Jesus on Mount Tabor (Matt. xviii, 1; Mark ix, 1; Luke ix, 28), cf. *Isl.*, vi, 15, and Goldziher, in *RHR*, xxxi, 308.

(3) The third interpretation of XVII, 1, is based on XVII, 62, where *ruʾyā* "vision" is explained as *isrāʾ*. This implies that the night journey was not a real journey but a vision. Standing at the *ḥid̲j̲r*, Muḥammad saw Jerusalem and described it to the unbelieving Ḳurays̲h̲ites (al-Buk̲h̲ārī, ii, 221, iii, 102; Muslim, i, 62; al-Ṭabarī, *Tafsīr*, xv, 5, l. 14 ff., etc.). The story is woven into a connected whole as follows: Muḥammad journeys by night to Jerusalem, returns and at Mecca describes his adventures; the Ḳurays̲h̲ disbelieve him and Muslims apostasise; Muḥammad seeks to defend the truth of his story, but he has forgotten the particulars; whereupon God causes him actually to behold Jerusalem (see *Isl.*, vi, 15-16).

In the more modern and longer narratives, the story is further amplified (see e.g. A. Müller, *Der Islam in Morgen- und Abendland*, i, 86). The Prophet is said to have held 70,000 conversations with God, although the whole journey proceeded so quickly that, when he returned, his bed was still warm and the water cup which he had overthrown with his foot at his hurried departure, was not yet empty. By Muslim theologians the question has been discussed, whether the *isrāʾ* happened while Muḥammad was asleep or awake and whether it was his spirit or his body which journeyed. The orthodox opinion is that the journey was performed by Muḥammad with his body and awake. Al-Ṭabarī in his commentary (xv, 13) very decidedly supports this meaning for the following reasons: (1) If the Prophet had not been carried away in a corporeal sense, the event would afford no proof of his divine mission and those who disbelieved the story could not be accused of infidelity. (2) It is stated in the Ḳurʾān that God caused His servant to journey, not that He caused His servant's spirit to journey. (3) If the Prophet had been carried away in spirit only, the services of Burāḳ would not have been required, since animals are used for carrying bodies not for carrying spirits (Bevan, *op. cit.*, 60; Schrieke, *op. cit.*, 13; al-Ṭabarī, al-Bayḍāwī, and al-Bag̲h̲awī, *Tafsīr*, *ad* XVII, 1). Mystics and philosophers often favour an allegorical interpretation (Goldziher, *Geschichte der Philosphie im Mittelalter*, in *Kultur der Gegenwart*, i/5, 319).

The question of the possibility of an ascent to Heaven is several times touched on in the Ḳurʾān. In XL, 38, Firʿawn gives Hāmān orders to build a palace so that he can reach the cords of Heaven and climb up to the god of Mūsā (cf. also XXVIII, 3). In LIII, 38, the calumniators are asked whether they had perchance a ladder (*sullam*) so that they could hear the heavenly voice, and in VI, 35, the consequences are considered which the signs brought by the Prophet with the help of a ladder to Heaven might have on his hearers. The old poets also talk of ascending to Heaven by a ladder, as a means of escaping something one wants to avoid (Zuhayr, *Muʿallaḳa*, 54; al-Aʿs̲h̲ā, no. XV, 32).

Ḥadīt̲h̲ gives further details of the Prophet's ascension. Here the ascension is usually associated with the nocturnal journey to Jerusalem, so that the ascent to Heaven takes place from this sanctuary. We also have accounts preserved which make the ascension start from Mecca and make no mention of the journey to Jerusalem. In one of these, the ascension takes place immediately after the "purification of the heart" (see al-Buk̲h̲ārī, *Ṣalāt*, *bāb* 1; *Ḥad̲j̲d̲j̲*, *bāb* 76; *Manāḳib*, *bāb* 42; Aḥmad b. Ḥanbal, *Musnad*, iv, 207, v, 143; al-Ṭabarī, *Annales*, i, 1157-8). In the last-mentioned passage we read: "When the Prophet had received his revelation and was sleeping at the Kaʿba, as the Ḳurays̲h̲ used to do, the angels Gabriel and Michael came to him and said: With regard to whom have we received the order? Whereupon they themselves answered: With regard to their lord. Thereupon they went away, but came back the next night, three of them. When they found him sleeping, they laid him on his back, opened his body, brought water from the Zamzam well and washed away all that they found within his body of doubt, idolatry, paganism and error. They then brought a golden vessel which was filled with wisdom and belief. Thereupon he was taken up to the lowest heaven." The other versions of the same story show many additions and variants; according to one, for example, Gabriel came to Muḥammad through the roof of his house which opened to receive him; according to another, it was Gabriel alone who appeared to him and there are many similar variants. All these versions, however, put Muḥammad's ascension at an early period and make it a kind of dedication of him as a Prophet, for which the purification of the heart had paved the way. Ethnographical parallels (Schrieke, *op. cit.*, 2-4) show other instances of a purification being preliminary to an ascension. Similar stories are found in pagan Arabia (Horowitz, in *Isl.*, ix, 171 ff.) and also in Christian legends (*op. cit.*, 170 ff.). Another story (Ibn Saʿd, i/1, 143) says that the ascension took place from Mecca although it does not associate it with "the purification of the heart" which it puts back to the childhood of the Prophet [see ḤALĪMA].

How did it come about, however, that this, obviously the earlier, tradition of Mecca as the starting point of the ascension, was ousted by the other

which made it take place from Jerusalem? The localisation of the Ḳurʾānic al-Masdjid al-Aḳṣā in Jerusalem is by some connected with the efforts of ʿAbd al-Malik to raise Jerusalem to a place of special esteem in the eyes of believers (Schrieke, *op. cit.*, 13; Horovitz, *op. cit.*, 165 ff.; idem, *The earliest biographies of the Prophet and their authors*, in *IC*, ii [1928], 35 ff.), and in any case it cannot be proved that this identification is older than the time of ʿAbd al-Malik. It might all the easier obtain currency as Jerusalem to the Christians was the starting point of Christ's ascension, and from the 4th century Jesus's footprint had been shown to pilgrims in the Basilica of the Ascension; and now, perhaps as early as the time of ʿAbd al-Malik, that of their Prophet was shown to Muslim pilgrims (Horovitz, *Muhammeds Himmelfahrt*, 167-8). The idea of the "heavenly Jerusalem" may have had some influence on the development of the *isrāʾ* legends; when Muḥammad meets Ibrāhīm, Mūsā and ʿĪsā in Jerusalem, the presence of these prophets in the earthly Jerusalem is not at once intelligible, but it loses any remarkable features if Bayt al-Maḳdis (Ibn Hishām, 267) from the first meant the "Heavenly Jerusalem" (Horovitz, *op. cit.*, 168, another explanation, see above). Perhaps also the phrase *alladhī bāraknā ḥawlahu* was taken to support the reference to Jerusalem; when these words occur elsewhere in the Ḳurʾān they refer to sites in the holy land (H. Lammens, *Les sanctuaires préislamites dans l'Arabie occidentale*, in *MFOB*, xi [1926], 72). While the stories quoted above only say that Gabriel took the Prophet up to the heights of Heaven, but are silent as to how, others add that a ladder (*miʿrādj*) was used for the ascent (see Ibn Hishām, 268; al-Ṭabarī, *Tafsīr*, xv, 10; Ibn Saʿd, i/1, 143); this ladder was of splendid appearance; it is the one to which the dying turn their eyes and with the help of which the souls of men ascend to Heaven. The ladder is probably identical with Jacob's ladder in Genesis, xxviii, 12; the Ethiopic Book of Jubilees, xxvii, 21, calls this *maʿāreg*, and sūra LXX, 3,4, calls God *Dhu 'l-Maʿāridj* "to whom the angels and the spirit ascend" (*taʿrudj*). According to XXXII, 4, the *amr* rises to God; according to LVII, 4, and XXXIV, 2, God knows "what descends from Heaven and what ascends to it", and in XLIII, 32, there is a reference to steps (*maʿāridj*) in the houses of men. The term was already known, and is presumably taken from Ethiopic (Horovitz, *op. cit.*, 174 ff.). Among the Mandaeans, also, the ladder (*sumbilta*) is the means of ascending to Heaven (*Ginza*, tr. M. Lidzbarski, 49, 208, 490), and there are parallels to the ladder of the dead in the mysteries of Mithras (see Tor Andrae, *Die Person Mohammeds*, 45; Wetter, *Phos*, 114, n. 2); the Manichaean *ʿamūd al-sabḥ* (*Fihrist*, 335, 10), by means of which the dead man is taken to the sphere of the moon is a more distant parallel (Bevan, *op. cit.*, 59).

Just as the *miʿrādj* is associated with the ascension, so al-Burāḳ is originally connected with the night journey to Jerusalem; it found its way, however, at an early date into the legend of the ascension (see al-Bukhārī, *Manāḳib*, *bāb* 42; Aḥmad b. Hanbal, *Musnad*, iv, 207; v, 387; al-Ṭabarī, *Tafsīr*, xv, 12).

At the gate of each of the seven heavens through which he wanders with the Prophet, Gabriel is asked for his own name and that of his companion (al-Bukhārī, *Ṣalāt*, *bāb* 1; al-Ṭabarī, *Tafsīr*, xv, 4; idem, *Annales*, i, 1157). After he gives these, he is next asked if Muḥammad has already been sent as a prophet (*a-wa-ḳad buʿitha ilayhi*, correction for the original *a-wa-ḳad buʿitha* found in al-Ṭabarī, *Annales*, i, 1158; see Snouck Hurgronje, in *Isl.*, vi, 5, n. 4); this also indicates that the ascension originally belonged to the period immediately after his call (Schrieke, *op. cit.*, 6). In each heaven they meet one of the earlier messengers of God, usually Adam in the first, Yaḥyā and ʿĪsā in the second, Yūsuf in the third, Idrīs in the fourth, Hārūn in the fifth, Mūsā in the sixth and Ibrāhīm in the seventh heaven; there are also variations and Adam appears as judge over the spirits of the dead (Andrae, 44-5; Schrieke, 17; Aḥmad b. Ḥanbal, *Musnad*, v, 143; cf. *Apoc. Mosis*, 37). Of the other messengers of God we are only told—in addition to being given a description of their personal appearance—that they greeted Muḥammad; Mūsā is an exception, who expressly says that Muḥammad is higher in the esteem of God than himself and that the number of his followers surpasses his own (al-Ṭabarī, *Tafsīr*, xv, 11). On another occasion, Muḥammad engages in a conversation with Mūsā after God had imposed upon him 50 *ṣalāts* a day as obligatory prayers for the faithful. On Mūsā's advice, Muḥammad asks several times for an alleviation, and each time God grants it; but when Mūsā says 5 *ṣalāts* are still too many, the Prophet refuses to ask for less (on *Genesis*, xviii, 23 ff., as the prototype of this episode; cf. Goldziher, *Muh. Studien*, i, 36; Schrieke, 19; Andrae, 82). According to some versions, Mūsā dwells in the seventh heaven and the conversation seems to be more natural there. To the ascension belong the visits to Paradise and to Hell. Paradise, according to others in the first; in some it is not mentioned at all. The statements about its rivers are contradictory (Schrieke, 19; cf. KAWTHAR), the *sidrat al-muntahā* is usually placed in the seventh heaven (Bevan, 59; Schrieke, 18). In one description, Hell is put below the first heaven (Ibn Hishām, 269; al-Ṭabarī, *Tafsīr*, iv, 10). According to another, the place of punishment of the damned is on the way between Heaven and earth, and Muḥammad sees it on his journey to the Bayt al-Maḳdis (al-Ṭabarī, xv, 101, also Aḥmad b. Ḥanbal, *Musnad*, i, 257; ii, 353; iii, 120, 182, 224, 231, 239). On the punishment in Hell, cf. Schrieke, 17; Andrae, 44; Horovitz, 173; Reitzenstein, *Das mandäische Buch der Grösse*, 81 ff.; Lidzbarski, *Johannisbuch*, 98 ff.; *Ginza*, 183.

That Muḥammad appeared before God's throne in the seventh heaven and that the conversation about the obligatory prayers took place there, is already recorded in the oldest stories (see above), but only rarely do they extend the conversation between God and the Prophet to other subjects (al-Ṭabarī, *Tafsīr*, xxvii, 26; *Musnad*, iv, 66, as a dream; Andrae, 70). But objection was raised to the assertion that Muḥammad on this occasion saw God face-to-face (Andrae, 71 ff.), and the question was also raised at an early date whether the ascension was a dream or a reality, whether only the soul of the Prophet was carried up or also his body (L. Caetani, *Annali*, Intr. § 320; Andrae, 72; Bevan, 60; Schrieke, 13, n. 1).

The *ḥadīth* contains, besides these, other details which Asín (*Escatologia*, Madrid 1919, 7-52; idem, *Dante y el Islam*, Madrid 1927, 25-71) discussed. In developing the story of the Prophet's ascension, Muslim writers have used models afforded them by the Jewish and Christian Apocalypses. A few features may also come from the Zoroastrians from the *Arda Viraf*; cf. the works already mentioned by Andrae, Bevan, Schrieke, Horovitz and W. Bousset, in *ARW*, iv, 136-69.

Later accounts (see section 2 below).

The ascension of the Prophet later served as a model for the description of the journey of the soul of the deceased to the throne of the divine judge (Asín, *Escatologia*, 59-60); for the Ṣūfīs, however, it is a sym-

bol of the rise of the soul from the bonds of sensuality to the heights of mystic knowledge. Ibn al-ʿArabī thus expounds it in his work *Kitāb al-Isrāʾ ilā maḳām al-asrā* (Asín, 61 ff.; Andrae, 81-2), and in his *Futūḥāt*, ii, 356-75, he makes a believer and a philosopher make the journey together but the philosopher only reaches the seventh heaven, while no secret remains hidden from the pious Muslim (Asín, 63 ff.). Abu 'l-ʿAlāʾ al-Maʿarrī's *Risālat al-Ghufrān* is a parody on the traditional accounts of the *miʿrādj* (Asín, 71 ff.). Asín in his two books quoted has dealt with the knowledge of Muslim legends of the ascension posssessed by the Christian Middle Ages and their influence on Dante. In a separate work (*La escatologia musulmana en la divina comedia*, Madrid 1924), he has collected and discussed the literature produced by his *Escatologia* down to 1923; on later works, see M. Rodinson, *Dante et l'Islam...*, in *RHR*, lxxxix (1951), 203-35.

According to Ibn Saʿd, id1, 147, the *isrāʾ* took place on 17 Rabīʿ I, the ascension on 17 Ramaḍān. For centuries, however, the night before 27 Radjab—a date also significant in the history of Mecca (see C. Snouck Hurgronje, *Mekka*, ii, 71)—has been regarded by the pious as the *Laylat al-Miʿrādj*, and the eve is, like the *Mawlid al-Nabī*, devoted to reading the legend of the feast (see al-ʿAbdarī, *Madkhal*, i, 143 ff.; G.A. Herklots, *Qanoon-e Islam*², 165; E.W. Lane, *Manners and customs*, London 1896, 474-6; Snouck Hurgronje, *The Achehnese*, i, 219; Asín, *Escatologia*, 97).

2. In Arabic literature.

In writing as well as in speech, the miraculous apocalyptic phenomenon has undergone a development which it is not always convenient to confine within the limits of theological analysis. The literature of the *miʿrādj* must be understood as meaning all the accounts by known or unknown authors devoted to Muḥammad's ascension.

Unlike the idea of the *isrāʾ*, recorded as being in a horizontal plane, the idea of the exaltation of a non-angelic being is not attested in the Ḳurʾān. Thus it was at a later date that the miracle came to be recounted. We are not in a position to establish the chronology of this process. Study of the portrayals of the nocturnal journey remains to be done. Analysis of *ḥadīths*, disentangled from theological refutation, could provide an interesting contribution to the study of the imaginary in Islam.

Some accounts of the *miʿrādj* are by known authors, but the most widely circulated, attributed to the *Imām* Ibn ʿAbbās, cousin of the Prophet, has often been regarded as apocryphal. It remains nevertheless a decisive text. Ibn ʿAbbās, at once a historical and a mythical personality, has indeed become "the interpreter of the community, the prototype of its expounder, since he is assigned to the origins of the group, at the moment of its foundation" (Cl. Gilliot, *Portrait "mythique" d'Ibn ʿAbbās*, in *Arabica*, xxxii [1985], 127-84).

This account must be viewed as "a text which combines an openness to the depictions of the imagination with a respect for the basic provisions of the Law" (J.E. Bencheikh, *Le voyage nocturne de Mahomet*, Paris 1988).

The other authors are scholars who took over the literature of the *Miʿrādj*, probably so as not to allow it to develop embarrassing efflorescences. The following list enables us to verify this:

— al-Ḳushayrī, Abu 'l-Ḳāsim ʿAbd al-Karīm, d. 465/1073 [*q.v.*], whose *Kitāb al-Miʿrādj* was published in 1964. He was actually an Ashʿarī Shāfiʿī theologian and author of the famous *Risāla*.

— al-Bakrī, Abu 'l-Ḥasan Aḥmad b. ʿAbd Allāh [*q.v.*], a highly controversial personality who appears to have lived in the last half of the 7th/13th century. It was allegedly forbidden to read his *Life of the Prophet*. The manuscript of his *Kitāb Ḳiṣṣat al-miʿrādj* offers a version very close to that of Ibn ʿAbbās.

— al-Ghayṭī, Muḥammad b. Aḥmad b. ʿAlī, d. 984/1576, Shāfiʿī traditionist, author of *al-Ibtihādj bi 'l-kalām ʿalā 'l-isrāʾ wa 'l-miʿrādj*, printed in 1970.

— al-Barzandjī, Shāfiʿī *muftī* of Medina and preacher, author of a *Ḳiṣṣat al-Miʿrādj*. His grandson, Djaʿfar b. Ismāʿīl, d. 1317/1899), jurisconsult and specialist in the *Sīra* of the Prophet, was also Shāfiʿī *muftī* in Medina; he is the author of *Tādj al-Ibtihādj ʿalā 'l-nūr al-wahhādj fi 'l-isrāʾ wa 'l-miʿrādj*, printed in Cairo in 1314 with the *Ḳiṣṣat al-miʿrādj* of his grandfather in the margin. Al-Barzandjī's version differs perceptibly from that of Ibn ʿAbbās both in its very mannered language and in the structure of the account. We are dealing here with a very dry, spare version, which is clearly that of a scholar anxious to contain imagination within acceptable bounds.

— We cannot supply dates for Muḥammad Ẓalām al-Bābilī al-Ḥalabī, author of *al-Sirādj al-wahhādj fī laylat al-isrāʾ wa-ḳiṣṣat al-miʿrādj*, printed at an unspecified date in Aleppo, which its author holds to be better than any version that had ever been made before. He states that, out of a concern to lighten the text, he omitted every *isnād*. He adds nevertheless that he composed it by relying on "works held in esteem and famous versions of the *miʿrādj*". According to all the evidence, it is in fact a late version which retains the essentials of Ibn ʿAbbās, enriching them with details. Furthermore, we can easily understand why the author neglects to supply his references: he is handling narratives which are, in a sense, public property. He expresses the imaginary vision of the group and stretches its credibility.

The literature of the *miʿrādj* develops into an amalgamation of three miraculous accounts concerning the Prophet:

(a) That of his purification by the angels, who open his chest and cleanse his heart of all sin. It was at a late date that this act was sometimes regarded as a kind of preparation for the ascension. The idealisation of his personality was carried to its limit. Only al-Barzandjī's version mentions the opening of his chest. The other authors confine themselves to an ablution.

(b) That of the nocturnal journey from Mecca to Jerusalem on al-Burāḳ [*q.v.*]. This account was subjected to a process of amplification before being attached to the *miʿrādj*, although different dates were cited for the two events. In some accounts, Muḥammad actually meets on his journey some of those being punished in Hell (cf. al-Ṭabarī's commentary on sūra XVII).

(c) Finally, that of the ascension properly so-called which includes the visit to the seven heavens, with a glimpse of Hell, the arrival at the Throne, the dialogue with God, the visit to Paradise and the return to Mecca.

A narrative organisation was progressively established according to four essential sequences: an initial miraculous union, an initiatory raising to Heaven, a

glorifying appearance before God and a return to mankind. Elucidating the series of sequences could be of help in the search for an underlying plan providing the background for the imagination of the text. It happens that some works of a varied nature depict the same subjects as the *miʿrādj* account; those depictions are concerned with the constitution of the heavens and the fringes of Hell, description of the Throne, the dwellings in Paradise and angelology.

These are to be found in three categories of works: (a) The *Ḳiṣaṣ al-anbiyāʾ* [*q.v.*] or legends of the prophets, the first of which are devoted to the origin of the universe.

(b) General histories, whose first chapters contain numerous elements of cosmology and cosmogony. A comparative study of the use that is made of certain themes by historians and *miʿrādj* accounts would be very significant.

(c) The resurrection literature, which brings together the texts devoted to the *ḳiyāma* [*q.v.*]. This literature of "news purveying" consists of edifying opuscula which make no precise reference to canonical texts and provide an account of what happens to the believer from the time of his death until his appearance before God. We find here descriptions of the angels, Paradise and Hell. Some descriptive and narrative elements, independent of one another in their origin, are joined together. The Prophet himself is included in this universal destiny and, awakened from the rest of death, "he mounts al-Burāḳ a second time to head for the Rock at Jerusalem and finally appear before the Lord" (Bencheikh, *op. cit.*).

The accounts of the *miʿrādj* and *ḳiyāma* are clearly related. The same working of the imagination, the same process for setting the portrayals, led to the production of the two texts.

One should mention here besides that the frontiers of writing have not prevented the migration of legends. The *Kitāb ʿAdjāʾib al-makhlūḳāt* of al-Ḳazwīnī [*q.v.*] devotes a long section to angelology; the story of Ḥāsib Karīm al-Dīn in the *Thousand and one nights* contains the cosmogonic account of Buluḳiyya possibly borrowed from al-Thaʿlabī's *Ḳiṣaṣ al-anbiyāʾ*. We are dealing here with what we should call preconstituted bodies of writings regarding Heaven, Hell, Paradise, the Throne and angels. Each of these bodies of writings has been given an independent setting following a long process of elaboration during which all kinds of pre-Islamic and Islamic themes have been gathered together. Only detailed analysis of this process will allow us to establish a reliable chronology for this literature.

One should note in addition that we cannot totally isolate the *miʿrādj* accounts from the great visionary texts of Ibn ʿArabī, Ibn Sīnā and al-Suhrawardī [*q.vv.*]. The remarkable *Kitāb al-Tawahhum*, if it is the work of a mystic, al-Muḥāsibī, preserves just as many of these themes as are connected with the literature with which we are concerned (French tr. Roman, Paris 1978).

But one must realise that the imaginary aspect of the *miʿrādj* is also nourished by the pronouncements of speech. The *ḳāṣṣ* [*q.v.*] or preacher is to be found at the heart of religious observance. "With him we leave learned discourse and mystical meditation to follow the dialogue between a desire and a function: the desire of the believer who needs to believe, the function of the one who gives him something to believe and undertakes to supply him with imaginative depictions in order to do this" (Bencheikh, *op. cit.*, Introd.).

The oral legend of the *miʿrādj* has not been collected. The narrative structure laid down in the texts considered to be canonical has taken over depictions of diverse origin. The texts have been given an iconography to respond to the need of their listeners for marvels. This need the theologians regard with suspicion. The inventors of fabulous tales were pursued and treated severely by Ibn Ḥanbal, Ibn al-Djawzī, al-Ghazālī and al-Suyūṭī. The establishment of collections of apocryphal *ḥadīths* for the denunciation of forgeries, if it is informative on the orthodoxy of their thought, is just as helpful in interpreting the ramblings of the imagination.

In fact, the same questions posed by the theologians on the subject of the *miʿrādj*, have determined the direction of the flow of the imagination. There has been lively argument concerning the idea which it was necessary to have of the ascension. We must also review the possible interpretations of this miraculous deed:

(a) The ascension took place in spirit; it is a question of a vision that occurred during the Prophet's sleep. In a sense it was Heaven that visited Muḥammad. It was an illumination, and the physical person was not concerned: the *miʿrādj* annuls the human condition and registers itself in an unhinging of the intellect. The soul, purified, traverses Heaven as far as God in a trajectory of which the traces remain only in the Prophetic witness. The outburst of faith on the part of the Believer will repeat the movement.

(b) The *isrāʾ* was really performed by Muḥammad while awake, but the ascension took place only in the spirit. This artificial distinction is useful: it bears witness to a process of linking the *isrāʾ*, at first independent, with the *miʿrādj* (cf. H. Birkeland, *The legend of the opening of Muhammad's breast*, Oslo 1955).

(c) The ascension was really effected, body and soul, by a Prophet who was in a full state of consciousness. This interpretation lays the foundations of the miracle, which becomes a theological argument.

In this way there becomes authenticated a willingness to attribute to the Prophet a dimension which goes beyond his historicity: progressively, the opening of the breast at the end of the purification, the *isrāʾ* and the *miʿrādj* constitute a unique account which offers the advantage of crossing important zones of the religious imagination.

This interpretation de-spiritualises the ascension, without removing its character of a supreme initation. Whilst refusing to see in it an internal impetus, a wandering of the spirit, it affords free range to imaginative portrayals. The account gives formal licence to imagine the unthinkable. Revelation triumphs out of ecstasy. The brilliant but solitary illumination of an individual is abandoned for the benefit of the communal initiation of a prophet. The latter is charged to inform his people of the answers that, in the course of his journey, he is entrusted to communicate.

From that time on, the difference can be seen between Ḳurʾānic utterance reduced to a mention and the speech of "literature" charged with illustrating the former. A modern application of this splitting of writings is attested; in Radjab 1387/October 1967 Egyptian State Television broadcast a film on the *isrāʾ* and *miʿrādj* under the responsibility of the al-Azhar authorities. The process of image production is allowed, but controlled.

The literature of the *miʿrādj* is then embodied in an act of adoration. For one who takes neither the path of thought nor that of spirituality, there remains the portrayal, at the risk of blasphemy. Behind Muḥammad, the only one authorised to travel to the forbid-

den space, imagination is set free. A whole community accompanies its prophet on his initiatory journey. Thus the act of faith is progressively established in an account destined to arouse visions. The image here is effective; it revives confidence and provokes fear. In this way the delights of Paradise materialise and the tortures of Hell are displayed to view at the cost, furthermore, of a decisive anticipation of theology, since God will only deliver His sentences on the Day of the Last Judgment.

Here appear the two essential functions of the *miᶜrādj* literature: it verifies in advance divine justice, and it responds to a deep-seated need for the marvellous. The image goes beyond efficacy in order to touch on the aesthetic. Happiness lies not only in the distant reward of virtue, it also finds its source in the spectacle offered. The text is adorned with illuminations: from al-Burāḳ to the Throne of God, from the seven heavens to the sojourn in Paradise, then to Hell; the marvellous spans the space that separates thought from desire.

But it asserts its humanity and does not profane the sacred. In addition, imaginative use is made of the real. The topography of the places uses language without any surprises: we climb to Heaven with a ladder, we skirt the walls, we pass through doors: here mountains, rivers, seas, gardens are lost to view. "The highest place is just a throne, a common attribute of sovereignty, men's destinies are written with a pen, an ordinary instrument for writing. Gold, silver, pearls, gems abound in our markets, darkness, smoke, ice have their place in our environment" (Bencheikh, *op. cit.*).

It was probably difficult to represent the unimaginable without profaning it. Only the obligation of reserve ensured the survival of the myth. The encounter with the Creator shows us how blasphemy was avoided; all the dialogue between God and Muḥammad is made up of the last verses of *Sūrat al-Baḳara*, put alternately into the mouths of the two interlocutors. Furthermore, this is not the only way of using verses or *ḥadīths* which are often solicited. The text then becomes a commentary full of their imagery and is legitimised. It is woven into an irrefutable writing and takes on the authenticity of a sacred iconography. For the listener, the *miᶜrādj* celebrates the prophetic mission and offers the account of an apocalypse populated with Ḳurʾānic resonances.

Called to appear before God, the Prophet receives along his way the homage due to the last of the Messengers. Islam relies on and celebrates at the same time its primacy. It lays hold of the future and reconquers time past; Muḥammad passes through the heavens accompanied by all the great witnesses of the universal faith.

The ritual of adoration is then written down in an outburst of beauty! The heavens are successively of smoke, copper, silver, corindum and pearl. The trajectory of the symbol accompanies the ascension journey; the beauty of the spectacle declares the proximity of God. Each year millions of Muslims devote themselves to the spectacle of their faith.

Finally, how can we forget that the *miᶜrādj* has entered into universal literature, thanks to the *Book of Mahomet's Ladder*. This translation in Latin of a text in Castilian, itself translated from Arabic, had indeed become famous, thanks to the furious polemic to which it has given rise; and indeed, Dante was actually able to be inspired by it for his *Divine Comedy*.

Bibliography: 1. *Miᶜrādj* authors: Bābilī, *al-Sirādj al-wahhādj fī laylat al-isrāʾ wa-ḳiṣṣat al-miᶜrādj*, ms. B.N. Paris, cf. G. Vajda, *Index général des manuscrits arabes musulmans de la B.N. de Paris*, no. 1931, fols. 70-91; Barzandjī, *al-Sirādj al-wahhādj*, Tunis n.d., Cairo 1973; Ghayṭī, *Ḳiṣṣat al-isrāʾ wa 'l-miᶜrādj*, Cairo 1970, abridged version in ms. in the B.N., Paris, see Vajda, *Index*, no. 1986; Ibn ᶜAbbās, *al-Isrāʾ wa 'l-miᶜrādj*, numerous editions n.d. Cairo, Tunis, Beirut, Sudan, etc.; *Miᶜrādj-nāma*, from the Uyghur ms. of the B.N. Paris, French tr. and annotation by A. Pavet de Courteille, Paris 1882, PENLOV, 2nd series, vol. vi; Ḳushayrī, *Kitāb al-Miᶜrādj*, ed. ᶜAlī Ḥasan ᶜAbd al-Ḳādir, Cairo 1964. Apocryphal collections of *ḥadīths*: Ibn al-Djawzī, *Kitāb al-Mawḍūᶜāt*, Cairo n.d., 3 vols.; Suyūṭī, *al-Laʾālī al-maṣnūᶜa fī 'l-aḥādīth al-mawḍūᶜa*³, Beirut 1981, 2 vols.

2. *Ḳiṣaṣ al-anbiyāʾ* authors. Djazāʾirī, *al-Nūr al-mubīn fī Ḳiṣaṣ al-anbiyāʾ wa 'l-mursalīn*, Beirut 1978; Ibn Kathīr, *ḳiṣaṣ al-anbiyāʾ*, ed. Aḥmad ᶜAṭāʾ, Beirut 1982; Ibn Wathīma, *Badʾ al-khalḳ wa-ḳiṣaṣ al-anbiyāʾ* (the 2nd part of this work was published in R.G. Khoury, *Les légendes prophétiques dans l'Islam depuis le Ier jusqu'au IIIe siècle de l'Hégire*, Wiesbaden 1978; Ibn Kathīr, *Ḳiṣaṣ al-anbiyāʾ*, ed. Aḥmad ᶜAṭāʾ, Leiden 1922-3, Eng. tr. W.M. Thackeston, Boston 1978; Thaᶜlabī, *Ḳiṣaṣ al-anbiyāʾ*, called *ᶜArāʾis al-madjālis*, Beirut n.d.; Manṣūr al-Yaman, *Sarāʾir wa-asrār al-nuṭaḳāʾ*, Beirut 1984.

3. Literature of the Resurrection and Judgement: Ghazālī, *al-Durra al-fākhira*, ed. M.M. Abu 'l-ᶜAlāʾ, following *Sirr al-ᶜālamīn*, Cairo n.d.; *La Perle Précieuse pour dévoiler la connaissance du monde à venir* of Ghazālī, introd., Arabic text and French tr. J. Gautier, Part i, Leipzig 1877; idem, *Iḥyāʾ ᶜulūm al-dīn*, Beirut n.d., iv, last book; Ibn Makhlūf, *al-ᶜUlūm al-fākhira fī 'l-naẓar fī umūr al-dār al-ākhira*, Cairo n.d.; Ibn Ḳayyim al-Djawziyya, *Ḥādī 'l-arwāḥ ilā bilād al-afrāḥ*, Cairo n.d.; idem, *Miftāḥ dār al-saᶜāda wa-manshūr wilāyat al-ᶜilm wa 'l-irāda*, Beirut and Alexandria n.d.; idem, *Zād al-maᶜād fī khayr hudā 'l-ibād*, Cairo n.d.; Ibn Radjab, *Aḥwāl al-ḳubūr*, Cairo n.d.; ᶜAbd al-Raḥīm b. Aḥmad al-Ḳāḍī, *Daḳāʾiḳ al-akhbār fī dhikr al-djanna wa 'l-nār*, Cairo 1955 and Tunis n.d. (with, in the margin, *Kitāb al-Durar al-ḥisān fī 'l-baᶜth wa-naᶜīm al-djanān* attributed to Suyūṭī without any further evidence, but possibly by the same author); Ḳurṭubī, *al-Tadhkira fī aḥwāl al-mawtā wa-umūr al-ākhira*, Cairo n.d.

4. Useful works for the study of the *miᶜrādj*: al-Ani, *The early representations of the Prophet Muhammad with special reference to the Miᶜrāj scenes*, Ph.D. thesis, Edinburgh University, 470 pp., 2 vols., unpublished, 1979; H. Birkeland, *The legend of the opening of Muhammad's breast*, Oslo 1955; V. Chauvin, *Bibliographie des ouvrages arabes ou relatifs aux Arabes*, Paris 1892-1913, xi, 206-8, with references to the works of Blochet, Perron, etc.; J. Chelhod, *Les structures du sacré chez les Arabes*, Paris 1965; Arkoun, Le Goff, Fahd and Rodinson, in *L'étrange et le merveilleux dan l'Islam médiéval*, colloquium held in March 1974, Paris 1978; M. Eliade, *Histoire des croyances et des idées religieuses*, iii, Paris 1983, bibl. 312-18, without mention of Arab authors; S. El-Saleh, *La vie future selon le Coran*, Paris 1971; T. Fahd, *La naissance du monde selon l'Islam*, in *La naissance du monde*, coll. Sources orientales, i, 1959, 237-79; M. Gaudefroy-Demombynes, *Mahomet*, 2nd revised ed., Paris 1969, 92-7; W. Irving, *Vie de Mahomet*, Fr. tr. from English by H. Georges, Paris 1865, ch. xii, 113-26; Fahd, *Anges, démons et djinns en Islam*, in *Génies, anges et démons*, coll. Sources orientales, Paris 1971, 155-214; J. MacDonald, *Islamic*

eschatology, in *Islamic Studies*, iii (1964), 285-308, 485-519, iv, 1965, 55-102, 137-79, v, 1966, 129-97, 331-83; M. Rodinson, *Mahomet*², Paris 1968; idem, *Bilan des études mohammadiennes*, in *Revue historique*, ccxxix (Jan.-March 1963), 169-220; J. Vernet, *La cultura hispano-arabe*, Barcelona 1978, Fr. tr. Paris 1985; A. Miquel, *La géographie humaine du monde musulman jusqu'au milieu du XI^e siècle*, Paris-The Hague 1973-80; v. On the *Book of the Ladder* and the *Divine Comedy*, see M. Asín Palacios, *La escatologia musulmana en la Divina Comedia*, Madrid 1919, 3rd ed., 1961, followed by *Historica y crítica de una polémica* which dates from 1924; G. Levi Della Vida, *Nuove luce sulle fonti islamiche della Divina Commedia*, in *And.*, xiv (1949), 377-407; E. Cerulli, *Il "libro della scala" e la questione delle fonti arabo-spagnole della Divina Commèdia*, Vatican City 1949; idem, *Nuove recerche sul "Libro della scala" e la conoscenza del l'Islam in occidente*, Vatican 1972; A. Meddeb, *Le palimpseste du bilingue Ibn ʿArabi et Dante*, in *Du bilinguisme*, Paris 1985, 125-44; J. Munoz Sendino, *La Escala de Mahoma*, Madrid 1949; a review of these works by M. Rodinson, *Dante et l'Islam d'après des travaux récents*, in *RHR*, cxxxix (Jan.-March 1951), 203-35, with discussion of the problems raised. The following appeared subsequently: ʿAbd al-Munʿim Djabr, *Riḥlat al-rūḥ bayna Ibn Sīnā wa-Dantī*, Cairo 1977; S. Faḍl, *Taʾthīr al-thaḳāfa al-islāmiyya fi 'l-kūmīdiya al-ilāhiyya li-Dantī*, Cairo 1980 (which contains a retranslation into Arabic made from Muñoz Sendino's Spanish abridgement, and the analysis of several works in Arabic dealing partially with the question); S. Pelosi, *Dante e la cultura islamica, analogie tra la "Commedia" e il "Libro della scala"*, Tripoli 1965; L. Portier, *La question des sources islamiques de la "Divine Comédie"*, in *Cahiers Algériens de Littérature comparée*, no. 1 (1966); idem, *Le thème du coq sauvage et son aboutissement à Leopardi*, in *ibid.*, no. 2 (1967), 102-20; P. Munderli, *Études sur le "Livre de l'Eschiele de Mahomet", prolégomènes à une nouvelle edition de la version française d'une traduction alphonsine*, Winterthur 1965. Interesting information appears in M.T. d'Alverny, *Les pérégrinations de l'âme dans l'autre monde d'après une anonyme de la fin du XII,e siècle*, an extract from *Archives d'Histoire doctrinale et littéraire du Moyen-âge*, xv-xvii (1940-2), 239-99, with the Latin text of a ms. in the B.N., Paris; the Arabic texts analysed are unfortunately not always given in the text, but in translations which are often very old.

(J.E. Bencheikh)

The Editors regret that they have failed to provide for a section on the *miʿrādj* in Persian literature. Whilst they anticipate that they will be able to repair this omission, they would refer the reader to the article by A.M. Piemontese, *Una versione persana della storia del "Miʿrāǧ"*, in *OM* lx/1-6 (1980), 225-43, which offers a translation of a passage of the Shīʿite commentary of sūra xvii by Abu 'l-Futūḥ al-Rāzī (ca. 480-525/1087-1131).

3. *Miʿrādj* literature in East and West Africa.

The celebration of the *miʿrādj* has here given rise to an extensive popular literature. Among the Shāfiʿī communities, from Egypt down to the East African coastlands, the most widely-used text is al-Barzandjī's *Ḳiṣṣat al-miʿrādj* or, in a later edition, *al-Isrāʾ wa 'l-miʿrādj*, available in Haji Mohamed's bookshop in Mombasa together with the same author's *Mawlid* [see MAWLID. 2. In East Africa].

In Swahili, there are two translations in prose and several versified elaborations; for the oldest known version in the *ukawafi* metre usually reserved for liturgical hymns, and which can still be sung, see Knappert, *Swahili Islamic poetry*, iii, Leiden 1971, 227-75; the same text but with long comments and notes, is given by idem, *Miiraji, the Swahili legend of Mohammed's Ascension*, in *Swahili, Jnal. of the Inst. for Swahili Research* (Dar es Salaam), xxxvi (1966), 105-56. A different poem, written before 1922, is given by idem, *Utenzi wa miiraji by Mohamed Jambeini*, in *Afrika und Uebersee*, xlviii (1966), 241-74, and another by Yusuf Ulenge (perhaps from an older oral text) is printed in *Swahili*, xxxviii (1968), with the title *Utenzi wa Miraji*.

A much longer poem, published by E. Dammann in his *Dichtungen in der Lamu Mundart des Suaheli*, Hamburg 1940, 1-72, was written down for Dammann by the poet Muhammad b. Abubakari Kijuma, who was probably also its author; see Muhammad b. Ibrahim Abou Egl, *Life and works of Muhammad Kijuma*, Ph.D. thesis, London Univ., 1984, unpubl.

In the mosques of East Africa, the *laylat al-miʿrādj* is celebrated after the night worship by singing these hymns, after which the *imām* explains its significance to the congregation.

In Hausaland (Northern Nigeria), poetic versions of the *miʿrādj* narrative were first discovered by M. Hiskett, see his *A history of Hausa Islamic verse*, London 1975, 48-62. Here the theme of the *miʿrādj* is part of the *muʿdjizāt* literature, poems written by scholars in praise of Muḥammad which can be sung or read. These are called *madahu*, from *madḥ* "praise". They are very popular and often recited during Ramaḍān when the people are in a receptive mood. A detailed description can be found in the thesis of Abdullahi Bayaro Yahya, *The Hausa verse category of Madahu, with special reference to theme, style and the background of Islamic sources and belief*, Univ. of Sokoto, Nigeria 1987, unpubl.; it includes Hausa texts and translations, and the place of the *miʿrādj* as one of the themes of *madahu* is comprehensively discussed.

In Ghana, the *miʿrādj* theme forms part of the *Mawlid* (as it does in East Africa) and is celebrated in the north of the country, in Kumasi and along the coast.

In the Gambia, the theme of the *miʿrādj* appears to have penetrated into the pre-Islamic Mandinka epic of Sunjata. In G. Innes' edition (*Sunjata*, London 1974, 156-7, l. 287), the diviner Siise, before answering the king's question, "goes into retreat" like a shaman, and states that "for forty days I saw the seven layers of the sky." This is clearly taken from the *miʿrādj*, in which Muḥammad himself claims the same; see Knappert, *Traditional Swahili poetry*, Leiden 1967, 152.

In Peul or Fulani [see FULBE], there is a long section on the *miʿrādj* in an important long poem edited by J. Haafkens in his *Chants musulmans en Peul*, Leiden 1983, 193-203. The long poem *Busarau* (from Arabic *bushārāʾ*, pl. of *bashīr*, "bringers of good tidings", *ibid.*, 144-335), was heard sung and recorded from manuscripts by Haafkens in northern Cameroon, where it is extremely popular.

Bibliography: Given in the article.

(J. Knappert)

4. *Miʿrādj* literature in Indonesia.

In West Java the celebration of the *miʿrādj* is still very popular; it takes place in the mosque, in the home or in the *langgar*, the little prayer-cabin near the house. On the eve of 27 Radjab, or in some places even on the preceding evening, people come together in families, or invite friends, usually the men and the women separately. The men do not smoke, since

smoke is disliked by the angels. The proceedings begin after the *ṣalāt al-maghrib* and are concluded by a *selataman*, a festive meal, around midnight, after the *ṣalāt al-ishā*ʾ. "Those who know stories" will tell them, about the life of Muḥammad and his night journey. Customarily, one who is qualified reads from *al-Zahr al-bāsim fī aṭwār Abi 'l-Ḳāsim*, by Sayyid ʿUthmān b. ʿAbd Allāh b. ʿAḳil b. Yaḥyā (Jakarta 1342/1924, pp. 80), in Malay. During the reading *gaharu* or aloes wood is burnt as incense. If someone is present who can read Arabic (normally only in the towns), he will be asked to read the *Ḥāshiyat al-imām al-ʿārif biʾllāh taʿālā Abi 'l-Barakāt Sayyidī Aḥmad al-Dardīr ʿalā Ḳiṣṣat al-Miʿrādj liʾl-ʿallāma al-hammām barakat al-anām Nadjm ad-Dīn al-Ghayṭī*, Cairo n.d., pp. 27. This work is known generally as *Dardīr*. A poetic rendering of the *miʿrādj* was written in Malay by Hadji Adam b. Hadji Kasman, the *Syair Mi'raj Nabi Muhammad*, Jakarta 1926. Another very popular Arabic booklet here is al-Barzandjī's *Ḳiṣṣat al-miʿrādj*.

In the mosque, the preacher will begin with prayers, then launch into a *naṣīḥa*, an admonishing sermon. He will explain the passages Ḳurʾān XVII, 1, and LIII, 9, in the light of the well-known commentaries. He may also quote the even better known *Mawlid* of al-Barzandjī, usually referred to as *Sharaf al-anām* (see MAWLID, and C. Snouck Hurgronje, *The Achehnese*, Leiden 1906, 209-14). In this *Mawlid* (as in most) there is a section on the *miʿrādj*, section XIV (see for a translation, J. Knappert, *Swahili Islamic poetry*, Leiden 1971, i, 57-8). The recital is terminated with the salutation to the Prophet, again from the *Mawlid* of al-Barzandjī; it begins: *Yā Nabī, salāmu ʿalayka*... (for a translation see Knappert, *op. cit.*, iii, 322, v. 31). All the worshippers present sing this passage with the preacher, while standing up, as the text prescribes, out of respect for Muḥammad. It is customary for the *imām* to commemorate the *miʿrādj* also in his *khuṭba* on the Friday before as well as the Friday after 27 Radjab. In some districts of West Java, gambling is strictly prohibited during the entire month.

At night the mosque may be illuminated, and even fireworks are set off by some; houses, too, keep a lamp burning all night. The celebration may last until the *ṣalāt al-ṣubḥ*; this is doubtless in memory of Muḥammad's return from the heavens before dawn (Knappert, *op. cit.*, iii, 271, v. 96). The religious teacher (in West Java, the Kiyai) will embellish the legend, weaving moral lessons into it for the edification of his flock. In the Periangan, he will speak in Sundanese, after the prayers in Arabic; there is a Sundanese poem describing the *miʿrādj* which can be sung that night. Some people fast during 27 Radjab, others fast for nine days, not consecutively but in sets of three at the beginning, middle and end of Radjab, which was already a holy month in ancient Arabia. Between the two World Wars, processions came into fashion, especially among the younger generation in Indonesia. Various Islamic groups have different opinions about the desirability of celebrating the *miʿrādj*. Modernists explain it totally symbolically as a spiritual development. Reformists want to abolish *miʿrādj* celebrations as a *bidʿa* which smacks of worshipping the Prophet rather than God alone. The conservatives however, cling to the *ʿādat* and take the *miʿrādj* literally, namely that Muḥammad saw God "with the eyes of his head" (al-Barzandjī).

(J. KNAPPERT)

5. The *Miʿrādj* in Islamic art.

In the spirit of the Second Commandment, strict Muslims have always frowned on the portrayal of humans and other living creatures in painting and sculpture, and this antipathy is naturally strongest when the depiction of the Prophet Muḥammad is in question. But this peculiarly Semitic prejudice was never fully shared by the Aryan Persians, and it is thus primarily in the miniature painting of Persia that we must look for representations of the *miʿrādj*. As Sir Thomas Arnold wrote, "It was a frequent practice of the poets... to include in the Preface... a lyrical outburst on the theme of Muḥammad's Ascension... No incident in the religious history of Islam is more commonly represented in Muslim art than this of the Ascension of the Prophet."

There were, indeed, a number of works, poetical and otherwise, devoted entirely to the *miʿrādj* and its attendant circumstances (see 2. above). These are represented in painting, firstly, by the fragments of a large 8th/14th century manuscript preserved in Topkapı album H. 2154, the miniatures being attributed to Aḥmad Mūsā, and secondly, by the celebrated Paris manuscript of 840/1436 (Suppl. turc 190) written at Herat in the Uighur language, and illustrated by one of the finest and most original sets of miniatures in the whole of Persian painting. But these are special cases, and we are more concerned here with *miʿrādj* miniatures occurring in manuscripts of the classical poets.

The earliest of these date from the opening years of the 9th/15th century. In the *Miscellany* of Iskandar Sulṭān (British Library Add. 27261, dated 813-14/1410-11, fol. 6a) the *miʿrādj* is represented with the Prophet, mounted on Burāḳ, surrounded by angels, and conducted by Gabriel, soaring above the Kaʿba enclosure at Mecca, and this scheme of representation is closely followed in a detached double-page miniature of much the same date in the Chester Beatty Library (Cat. 292. i, ii). In both these (as in the Paris manuscript of 1436) the Prophet is shown unveiled, but in the latter, as in many subsequent examples, the face has been partially obliterated and repainted. This same basic composition, i.e. with the Kaʿba below and the Prophet unveiled, is followed in "main line" Persian painting of the later Tīmūrid period, as in the Niẓāmī of 900/1494 in the British Library (Or. 6810, fol. 5b), and is continued in the Keir Collection miniature (Cat. III. 207) dated 910/1505, which is one of those added under Shāh Ismāʿīl to the Niẓāmī of Yaʿḳūb Beg Aḳ Ḳoyunlu (Topkapı, H. 762), and may well be an early work of Sulṭān Muḥammad. This latter miniature is among the most striking and original treatments of the subject, the ascent, accompanied by innumerable angels and observed by others through a circular "hole in Heaven", being enclosed in a rectangular frame with the Kaʿba enclosure below and little desert villages with palm trees occupying the margins.

The *miʿrādj* is of frequent occurrence in Shīrāz manuscripts of the Tīmūrid period (though, curiously enough, hardly ever found in the mass of manuscripts illustrated in the Commercial Turkman style), but in

these, as in the numerous Ṣafawid examples, the Kaʿba is omitted, only the Prophet, now veiled, and accompanying angels being shown. Perhaps the finest of all is in the great Niẓāmī of Shāh Ṭahmāsp (British Library Or. 2265, fol. 195a) which is almost certainly the work of Sulṭān Muḥammad, and probably represents his swan-song.

Exceptional portrayals are occasionally encountered. Thus in the Topkapı Niẓāmī of 844/1441 (H. 774), probably of western Indian origin, the Prophet is depicted as a golden disc inscribed with his name; and in the British Library copy of 1075/1665 (Add. 6613, fol. 3b) the ascent is made against a background of concentric circles with the symbols of the planets revolving round the sun.

In post-Ṣarawid painting, the theme becomes somewhat vulgarised; Burāḳ may sport a peacock's tail and a clumsy Ḳādjār crown, and the Prophet is sometimes reduced to a sort of shapeless bundle. But on a fine painted lacquer mirror-case of 1288/1871 in the Bern Historical Museum, Muḥammad Ismāʿīl depicts the scene in traditional manner, though on a miniature scale.

MĪRĀN MUḤAMMAD SHĀH I, of Khāndēsh [*q.v.*] in western India, was the eleventh prince of the Fārūḳī dynasty (regn. 926-43/1520-37). He belonged to the younger branch of that line, which had taken refuge in Gudjarāt, and his ancestors had lived in that kingdom and had married princesses of the Muẓaffarī family until Maḥmūd I of Gudjarāt [*q.v.*] had, on the extinction of the elder branch of the Fārūḳīs, placed ʿĀdil Khān III, Muḥammad's father, on the throne of Khāndēsh. Muḥammad, who was, through his mother, the great-grandson of Maḥmūd, and the grandson of his son, Muẓaffar II, succeeded his father in Khāndēsh in 926/1520, and in 933/1527 incautiously intervened in the cause of ʿAlāʾ al-Dīn ʿImād Shāh of Berār [*q.v.*] by aiding him against his enemy, Burhān Niẓām Shāh I of Aḥmadnagar [*q.v.* and niẓām-shāhīs]. He was defeated and driven back into Khāndēsh, but succeeded in persuading his uncle, Bahādur of Gudjarāt, to intervene, and with him invaded the kingdom of Aḥmadnagar. The campaign was only partially successful, but Muḥammad was indemnified by Burhān I for his losses. He accompanied his uncle in the campaign which ended, in 937/1531, in the capture of Māndū [*q.v.*] and the annexation of Mālwa to Gudjarāt, and on Bahādur's death in 944/1537, was summoned, in his mother's right, to the throne of Gudjarāt, but died on his way to Aḥmadābād.

MĪRĀNDJĪ [see miyān mīr, miyāndjī].

MĪRĀNSHĀH b. TĪMŪR (*ca.* 768-810/*ca.* 1367-1408), the third son of Tīmūr [*q.v.*] (Tamerlane), born of a concubine named Mengliček. Due to his marriage to two Činggisid princesses, he bore the title *güregen* ("royal son-in-law"). In 782/1380-1, he was appointed governor of Khurāsān, shortly before its full conquest. He shared power there with several of Tīmūr's senior commanders, and spent much of his time outside the province, accompanying Tīmūr to western Persia in 786-7/1384-5, to Khwārazm and the Ḳîpčaḳ steppe in 790/1388-9 and 792-3/1390-1, and on the "five-year campaign" to Persia in 794-8/1392-6, returning to Khurāsān only to put down local rebellions.

In 795/1393 Mīrānshāh became governor of Ādharbāydjān and western Persia. He did not immediately transfer his dependents, but first campaigned with Tīmūr in the Ḳîpčaḳ steppe in 797-8/1395-6. As governor, he executed the founder of the Ḥurūfī sect [see ḥurūfiyya], Faḍl Allāh Astarābādī, in 796/1394. The Ḥurūfī considered him an anti-Christ and referred to him as Mārānshāh ("snake king"). During Tīmūr's Indian campaign of 800-1/1398-9, Mīrānshāh remained in Ādharbāydjān, and according to the histories, fell from his horse and became temporarily insane; this was probably an attempt at independence. He distributed public money, besieged Baghdād, destroyed buildings in Tabrīz and Sulṭāniyya, and persecuted his wife and *amīrs*. In documents of this period he apparently omitted Tīmūr's name. Tīmūr removed Mīrānshāh from his position, kept him close to himself and meted out severe punishment to his retinue. In Shawwāl 806/April-May 1404, Tīmūr allowed Mīrānshāh to leave for Baghdād with his son Abā Bakr.

Mīrānshāh and his sons were active in the succession struggle after Tīmūr's death. His son Khalīl Sulṭān held Transoxania until 811/1409; Abā Bakr and Mīrānshāh disputed Ādharbāydjān with ʿUmar b. Mīrānshāh and the Ḳaraḳoyunlu Turkmen. Mīrānshāh died fighting with Ḳara Yūsuf Ḳaraḳoyunlu in 810/1408.

Sīdī Aḥmad b. Mīrānshāh married Ruḳiyya Sulṭān bt. Ḳara ʿUthmān Aḳḳoyunlu, and his descendants remained in Ādharbāydjān as the Mīrānshāhī clan, holding an important position within the Aḳḳoyunlu. Mīrānshāh's grandson Abū Saʿīd b. Sulṭān Muḥammad gained power over the northeastern Tīmūrid realm in 855/1451; Abū Saʿīd's grandson, Bābur b. ʿUmar Shaykh [*q.v.*], founded the Mughal dynasty in 932/1526.

MIRʾĀT (a.) "mirror", pl. *marāʾī*, the noun of instrument from *raʾā* "to see".

The mirrors used by the Muslims were generally of polished metal, and specimens of these can be seen in museum collections [see MAᶜDIN. 4. In Islamic art, (3)], but they do not seem to have been made the object of particular studies by historians of Islamic art. A long-lived tradition keeps up the remembrance of "burning mirrors" (*marāyā muḥriḳa* in al-Ḳalḳas͟handī, *Ṣubḥ*, xiv, 217) as legendary as the revolving mirror which was set up on the Muḳaṭṭam hills [*q.v.*] in order to allow an official to follow the movements of Pharaoh between Heliopolis and Memphis (see al-Idrīsī, *Opus geographicum*, 325, ll. 6 ff., and see MANŪF). The mirror placed on top of the Pharos of Alexandria was designed to give information about enemies approaching by sea (see al-Masᶜūdī, *Murūd͟j*, ii, 439 = §841, and cf. MANĀR).

Within Islam, mirrors posed problems which belonged not only to the science of optics properly speaking, but also to philosophy, to such an extent that they early attracted the attention of scholars, thinkers and even of simple observers of natural phenomena. One of the first authors to have tackled this question was, it seems, al-D͟jāḥiẓ (d. 255/868-9 [*q.v.*]), who, in his *K. al-Tarbīᶜ wa 'l-tadwīr*, ed. Pellat, §§ 167 ff., puts a series of questions to his correspondent about mirrors and reflecting surfaces; he asks him why running water does not retain images and why certain mirrors gave back a reversed image; he further questions him about the nature of these images and begs him to inform him whether it is a question here of accidents or substances, of real objects or those produced by imagination, and further, whether these images blot out the shape and colour of the surface which they occupy on the mirror. These topics have arisen in the author's mind partly through his adhesion to the Muᶜtazilī doctrine which holds that two bodies cannot occupy the same space (see e.g. A.N. Nader, *Le système philosophique des Muᶜtazila*, Beirut 1956, 166-7) and partly through his desire to place the person challenged who, being a S͟hīᶜī, is required to put forward a similar view. In addition, for the S͟hīᶜa, the comparison between the epiphanic (*maẓhariyya*) function and that "of a mirror where the image appears but does not have substance" (H. Corbin, *Histoire de la philosophie islamique*, Paris 1964, 94-5) seems to hold a certain importance (see the translation of the *Tarbīᶜ* in *Arabica*, xiv [1967], by M. Adad, 306 n. 2, who cites this last passage and another text by Corbin).

Al-D͟jaḥiẓ does not provide any answers to the questions which he poses and it would probably be difficult to find any precise information on them, but some indications can be found in later works, especially in the *ᶜAd͟jā'ib al-mak͟hlūḳāt* of al-Ḳazwīnī (d. 682/1283 [*q.v.*]), who gives the impression of echoing current conceptions whilst at the same time having in mind the problems set forth in the *Tarbīᶜ* (see ed. Wüstenfeld, Göttingen 1849, 95-7, ed. Cairo 1376/1956, 64-5). For this author, "what one sees in a mirror does not have any reality, for if this were the case, an observer who moves his position would see the object in question stay in the same place, whereas this is not in fact what happens ... It is thus established that what one sees in a mirror ... comes under the heading of an illusion (*k͟hayāl*); here the *k͟hayāl* consists in seeing the image of an object mixed up with that of another thing, deriving from it the illusion that one of them is penetrating into the other, whilst in reality, it is nothing of the sort; in reality, one of them is seen through the mediation of the other without being fixed in it." Al-Ḳazwīnī does not use the words *ᶜaraḍ* "accident" and *d͟jawhar* "substance", but he gives a clear reply to the questions put by al-D͟jāḥiẓ in this connection.

From the optical point of view, the mathematician and physicist Ibn al-Hayt͟ham (d. 430/1039 [*q.v.*]) devoted several works to the scientific problems posed by mirrors and, in a general manner, made some progress in the study of optics without, however, modifying the popular conceptions which were current at his time. Certainly, al-Ḳazwīnī explains exactly how a ray of light emanating from a luminous body falls on to a polished object, from which it is reflected and goes on to touch another object whose position, in relation to the reflecting surface, is the same as that of the luminous body, but from the opposite side; in these conditions, the angle of reflections is equal to that of incidence.

Likewise, the object and the observer who wishes to see it in a mirror must be symmetrically placed so that *the first is reached by a ray leaving the eye of the second.* The Muslims in effect adopted this conception which the mathematician and physicist Ibn al-Hayt͟ham (d. 430/1039 [*q.v.*]) had however refuted long before al-Ḳazwīnī's time. The latter nevertheless remarks that the ray in question is purely imaginary, whilst that emanating from a luminous object is in fact real, but the persistence of the idea of the ray of vision is probably due in part to the belief in the evil eye [see ᶜAYN].

Lecanomancy (see T. Fahd, *La divination arabe*, index, s.v.) was practised by diviners who, according to Ibn K͟haldūn (*Muḳaddima*, ed. Quatremère, i, 194, tr. de Slane, i, 221-2, tr. Rosenthal, i, 216-17), occupied an inferior rank, since they were forced to concentrate all their perceptions into one sense. They stare fixedly at a mirror until a screen appears on which are pictured the forms which they desire to see and which allow them to give indications about what they wish to know. In this condition, they do not see what is in reality depicted in the mirror, and the new manner of perception which originates in them operates "not by means of vision, but in the psyche".

Finally, one may note that the word *mir'āt* figures in a fairly considerable number of titles of works (from *Mir'āt al-ᶜad͟jā'ib* to *Mir'āt al-zamān*, amounting to more than a column in the index of book titles in Brockelmann), with a meaning fairly close to that of *speculum* in mediaeval European times. Similarly, the daily and the periodical press uses this term which, in 1947, formed part of at least seven titles (see Ch. Pellat, *Note sur les titres des périodiques arabes*, in *En Terre d'Islam*, 1947/2, 144).

Bibliography: Given in the article. The work by Diocles on burning mirrors, the Greek original of which is lost, has been preserved in Arabic translation (see Diocles, *On burning mirrors*, ed. with tr. and comm. by G.J. Toomer, 1976). (CH. PELLAT)

MĪRĀT͟H (A.), Inheritance (pl. *mawārīt͟h*); *wārit͟h* the heir, *mūrit͟h* the person leaving the estate. This branch of Islamic law is also called *ᶜilm al-farā'iḍ* "the science of the ordained quotas" (cf. sūra IV, II) after its most important and most difficult part.

1. In pre-modern times

i. In keeping with the patriarchal system prevailing among the Arabs, the estate of a deceased tribesman went *ab intestato* to the nearest male relative(s); the order of succession in which these relatives, the so-called *ᶜaṣaba* (corresponding to *agnati*), were called upon to inherit survives and is systematised in Muslim law. Minors—being incapable of bearing arms—were excluded from the succession, as were female relatives; widows also were not entitled to inherit, and originally presumably themselves formed a part of the

estate, a view which survived in the levirate marriage usual among the Arabs, to which sūra IV, 19, refers in forbidding it. There is no evidence of any preferential treatment of the first-born, which we find elsewhere in Semitic law. This, the original legal position, had by Muḥammad's time certainly altered somewhat in favour of women; in cases where the deceased left no male relatives, his daughters seem frequently to have obtained the estate; but woman had by no means equal treatment with man, as is clear from the Ḳurʾānic regulations. In addition to these principal heirs, the pre-Islamic Arabs had also secondary heirs who correspond to the later so-called quota-heirs (*dhawu 'l-farāʾiḍ*) and received a part of the estate, the bulk of which went to the *ʿaṣaba*. From sūras II, 180, and IV, 33, which confirm this arrangement, we can see that these included the parents, the "relatives"—apparently so far as they were not *ʿaṣaba*—and the so-called confederates (*ḥalīf*, plur. *ḥulafāʾ*); the settlement of the portions falling to them was done—at least in part—according to the last will of the testator. All this has its parallels in the development of a "mitigated agnatic succession" among other peoples.

ii. The Ḳurʾān modified this system considerably in details, the main point being the improvement in the treatment of women here as well as with regard to the laws of family life generally; at the same time, there is a clear endeavour to fix in legal form the practice which had varied considerably in heathen times. One provision which had been made under special circumstances was abandoned later on: immediately after the *hidjra*, it had been ordered that those who migrated with the Prophet (the *muhādjirūn*) and the believers in Medina (the *anṣār*) should regard themselves as brethren and therefore inherit from one another [see MUʾĀKHĀT], while all bonds of relationship between the *muhādjirūn* and their relatives left in Mecca, even if they were believers, were to be regarded as broken (sūra VIII, 72, with the limitation imposed in VIII, 75); but this was expressly revoked by XXXIII, 6. Tradition regards this fraternisation as a special case of confederacy (*ḥilf*). For the rest, the Ḳurʾān in the first Medina period confirmed the system of secondary heirs and the whole general practice in regard to inheritance (sūra II, 180, is probably to be dated before Ramaḍān of the year 2, and IV, 33, cannot be much later); that II, 180, expressly makes the fair treatment of the secondary heirs a duty, already reveals the direction which later ordinances were to take. Connected with this is the probably contemporary II, 240, which secures the wife, if she survives her husband, a legacy of maintenance for a year. Not much later, about the year 3, is IV, 19: "Ye who believe, it is not lawful for you to inherit women against their will"; this is not meant as a regular legal ordinance, but is part of the Ḳurʾānic endeavour to improve the position of women. Very soon after the battle of Uḥud, when numerous Muslims had fallen, we have—as a result of it—the final Ḳurʾānic ordinance of IV, 7-14: "To the men belongs a share of what their parents and kindred leave, and to the women belongs a share of what their parents and kindred leave—whether it be little or much—as a determined share. 8. If the next of kin (not entitled to inherit), the orphans and the poor are present at the division, give them some of it and speak kindly to them (verses 9-10 go on to deal with the treatment of orphans). 11. Allāh ordains for you, concerning your children, (as follows): for the male the like of the portion of two females; but if there are (only) females (and) more than two, two-thirds of the estate belongs to them and if there is (but) one (female) to her belongs the half. And the parents shall each have a sixth of the estate if (the deceased) has children, and if he has no children and (only) his parents inherit from him, his mother shall have a third. But if he has brothers, his mother shall have a sixth. (All this) after deducting a bequest he may have made or a debt. Ye know not whether your parents or your children be nearest to you in usefulness. (This is) an ordinance of Allāh, and Allāh is knowing and wise. 12. To you belongs the half of the estate of your wives, if they have no children; but if they have children, a fourth of their estate belongs to you—after deducting a bequest they may have made or a debt. To them belongs a fourth of your estate, if you have no children; but if you have children an eighth of your estate belongs to them—after deducting a bequest you may have made or a debt. If a man or a woman leaves an estate without having a direct heir (i.e. son or father), but has a brother or a sister, each shall have a sixth; but if there are more than that, they shall share a third after deducting a bequest he may have made or debt, without prejudice. (This is) an ordinance of Allāh, and Allāh is knowing and gracious" (vv. 13-14 contain promises and threats). As the settlement of the succession in indirect lines left questions undecided, IV, 176, supplemented the above: "They will ask thee for a decision. Say: Allāh gives you the following decision concerning the succession of those who have died without direct heirs: if a man dies and has no children, but has a sister, half of the estate belongs to her and he is her heir if she has no children; if there be two sisters, two-thirds of the estate belongs to them; but if there be both brothers and sisters, the male shall have like the portion of two females."

The object of these regulations is simply to supplement the law regarding the rights of the *ʿaṣaba*; they are not a reorganisation of the whole law. Each of the persons named is therefore only allotted a definite portion; the remainder, and this, as a rule the major portion, of the estate, falls as before to the *ʿaṣaba*. Female relatives thus generally receive half the share of male relatives of the same degree. The quotas here given abolished the testamentary settlement of the portions usual in the heathen period, which was still approved by II, 180; this is the historical starting point for the tradition—early interpreted in another sense—that a legacy in favour of the heirs is not valid. II, 240, is probably rightly regarded as abrogated by the settling of the widow's portion. There is a slight difficulty in interpretation only in IV, 12; but there can be no doubt that this passage refers to half-sisters on the mother's side, as indeed it has always been interpreted; the text of Ubayy even inserts an addition to this effect. The verse IV, 176, on the other hand refers to full sisters. In IV, II, "more than two" is to be interpreted, as the sense requires, as "two and more".

iii. The full details which tradition is able to give regarding the causes of the revelation of the regulations on the law of inheritance are not historical; on internal grounds, all we can say is that it took place soon after the battle of Uḥud. The numerous *ḥadīths* which simply repeat the Ḳurʾānic regulations may be neglected here. Tradition can only record very few actual divergences from the prescriptions of the Ḳurʾān; one of these is that a woman received back as her inheritance a slave whom she had presented to her mother and who represented the latter's whole estate. According to another story, the Prophet is said to have laid down that the wives of the *muhādjirūn* should inherit the house of their husbands. While nothing

can be quoted in favour of the first *ḥadīth*, the second, which does not seem to be intended as a foundation for any legal clause, may have a kernel of historical truth in it.

iv. The prescriptions of the Ḳurʾān are supplemented and developed in countless traditions, among which a comparatively large number relate not to decisions of the Prophet himself, but of his Companions; in reality they must not even be regarded as that, but only as anonymous evidence of the first developments of the Ḳurʾānic law of inheritance. At this stage of development, it is already firmly established that an unbeliever cannot inherit from a Muslim; the right of a Muslim to inherit from an unbeliever is finally also denied, although there is some opposition to this view. Excluded from the right of inheritance is also one who has killed the proprietor of the estate, at least if the slaying was deliberate (with *ʿamd*; cf. ḲATL). That a slave has no right of inheritance is taken for granted. Legal relationship is necessary for the right of inheritance; thus illegitimate children or those whose paternity has been disputed by *liʿān* [*q.v.*] have no legal claim on the estates of their father and his relations. The *mawlā* [*q.v.*] is annexed to the *ʿaṣaba*: the patron and the manumitted slave inherit from one another, and according to one view, the same right is even granted to the man before whom the person concerned has adopted Islam, who is also called *mawlā*. After the *mawlā* come—although some oppose this—the *dhawu 'l-arḥām*, i.e. persons related to the legator in the female line, whose representative is usually the *khāl* or maternal uncle. In case all these heirs should not exist, the fellow-tribesmen are named. With certain modifications which occur again in the later teaching, a son's daughters are treated like daughters, and grandparents like parents, but this regulation only won recognition after opposition and varying practice in details. There arises the problem of the share of the grandfather beside the brothers, which goes back to his varying position in the series of the *ʿaṣaba*; along with other views, we find quoted also the one that later prevailed, but it does not seem to be the earliest. The Ḳurʾān lays down that before dividing the estate the amount of any legacies and debts should be deducted; in early times—probably in literal interpretation of the Ḳurʾānic passages—the legacies were often given preference to debts; after some opposition, the opposite teaching prevailed. The *diya* [*q.v.*] to be paid for a slain man should be subject to the usual rules as part of his estate; but in early times, the wife was not allowed a share in the *diya* of her slain husband, which goes back to old Arab conceptions of the family; the other view ultimately prevailed. The eager interest taken in early Islam in the law of inheritance is reflected in *ḥadīth*; there are traditions in which the Prophet orders the law of inheritance to be taught and learned, calls it "the half of knowledge" on account of its difficulty, and expresses the fear that this subject, so difficult to remember, might disappear from the memory of his community.

v. The following are the principles of the law of inheritance in the fully-developed *fiḳh* according to the Shāfiʿī teaching.

a. The law of intestacy in general. There is no fusion between the property of the deceased and that of the heir; the creditors of the estate can therefore only assert their claims against the estate. In addition to obligations entered into by the deceased, the debts of the estate include the funeral expenses and the religious duties omitted by the deceased, so far as they consist of concrete things (e.g. neglected fasts [*ṣawm*]) or can be carried through at the expense of the estate by a deputy (e.g. the *ḥadjdj* omitted without good reason). After the debts any legacies have to be paid [see WAṢIYYA]; the remainder passes to the heirs. A necessary condition for inheriting is that the heir has survived the deceased; in doubtful cases, when persons who would inherit from one another have died without its being certain who died first, as a rule no inheritance passes between them. The heir must also have existed when the testator died; only in the case where a man leaves a pregnant widow or *umm al-walad*, is a child's share reserved for the unborn child. Excluded from succession are the following: one who has caused the death of the deceased, the *murtadd*, an unbeliever from the succession to a Muslim and vice-versa, the *ḥarbī* (the unbelieving member of a state with which the Muslim stands in no treaty relation) and the slave. The *ʿaṣaba* are the normal heirs; inheritance by others is only an exception; so the *ʿaṣaba* receive the whole estate after the deduction of the portions for the quota-heirs. If there are no *ʿaṣaba*, the remainder of the estate goes to the state treasury (*bayt al-māl* [*q.v.*]; a notable change from the view found in traditions), on the condition that it is administered according to law for the benefit of the Muslims; otherwise, the quota-heirs receive the remainder of the estate in proportion to their quotas by the so-called law of reversion (*radd*), with the exception of the widower or widow. Only if there are neither *ʿaṣaba* nor quota-heirs and the state treasury is not being administered in accordance with the law are the *dhawu 'l-arḥām*—i.e. persons related to the deceased in the female line as well as those female relatives who cannot be quota-heirs—called upon to inherit. If there are none of these relatives, any Muslim may take possession of the estate if he is capable and ready to administer it for the general good of Muslims.

b. Succession of the *ʿaṣaba*. The *ʿaṣaba* are called upon to inherit in the following order: 1. The male descendants of the deceased in the male line, a nearer excluding the more distant relatives from the succession. 2. The nearest male relative in the ascending male line with the provision that the father, but not the grandfather (and the remoter ascendant) of the deceased inherits before his brothers. 3. The nearest male relative in the male line among the descendants of the father: first the full brother, then the half-brother on the father's side, then the descendants of the full brother, then those of the half-brother on the father's side. 4. The nearest male relative in the male line among the descendants of the grandfather (as under 3), etc. 5. Lastly, the *mawlā*, i.e. the patron (or patroness), if the deceased was a freedman, and then his *ʿaṣaba*.—The brothers of the deceased inherit along with the grandfather as *ʿaṣaba* in equal shares, but if there are more than two brothers, the grandfather receives not less than one-third of what is to be divided between him and the brothers. If there are also quota-heirs, the grandfather is allowed in addition at least a sixth of the estate (which he would inherit as a quota-heir; cf. *c*, below). He can then choose the most favourable of the three arrangements.—Female *ʿaṣaba*. If the deceased left sons as well as daughters, they inherit jointly, the share of a son being twice as large as that of a daughter while the quota allotted to the daughters is dropped, as is intended by the spirit of the Ḳurʾānic law. The daughter who inherits along with a son is therefore also called *ʿaṣaba*. The daughter of a son of the legator is similarly treated, inheriting along with the son of a son; and likewise the full sister, who inherits along with a full brother; finally, also the

half-sister on the father's side, who inherits with a half-brother on the father's side.—If the full sister inherits along with a daughter of the deceased or of his son, they do not receive their quota, which in this case goes to the daughter or son's daughter, but the rest of the estate after deduction of all quotas that have to be paid.

c. Shares of the quota-heirs (*dhawu 'l-farā'iḍ*; cf. FARĀ'IḌ). It is true that in the Ḳur'ān only the daughters, parents, husband and wife, and brothers and sisters are allotted a quota, but the rules holding for the daughters have been extended to the daughters of the son and those for the parents to the grandparent; in addition, a distinction has been made among the sisters between the full sister, the half-sister on the father's side and the half-sister on the mother's side. The total number of quota-heirs has thus been raised to twelve: 1. The daughter is entitled to half the estate, two or more daughters get two-thirds, but if daughters inherit along with sons, they become *ʿaṣaba* (cf. *b*, above). 2. The daughter of a son is subject to the same rules as a daughter and takes her place in default of her; inheriting along with the son of a son, she becomes *ʿaṣaba*. As the son's daughter is related to the deceased through his son, she is excluded from participation when the son of a deceased inherits. A daughter, on the other hand, does not exclude directly a son's daughter from the succession; as however daughters and son's daughters together have only two-thirds of the estate as their quota, a son's daughter has only a sixth if there is one daughter, and nothing if there are two or more, unless she inherits in these cases along with a son's son as *ʿaṣaba*. 3. The father's quota is always a sixth of the estate; in addition, he is *ʿaṣaba* and receives also any residuum of the estate after deducting all quotas, unless there are male descendants of the deceased. 4. The paternal grandfather (in default of him, the remoter ascendant) also receives one-sixth of the estate as his quota, but is excluded by the father; he is also *ʿaṣaba* if there are no male descendants nor father of the deceased. But if, in this case, there are also brothers of the legator, he becomes *ʿaṣaba* along with them (on the share which falls to the grandfather in this case and in the case where there are also quota-heirs, cf. *b*, above). 5. The mother receives one-sixth of the estate if there are children, son's children or two or more brothers or sisters of the deceased; otherwise a third (in practice, the father in this case as a rule receives two-thirds, i.e. one-sixth as quota-heir and the rest as *ʿaṣaba*; in an exceptional case, cf. *d*, below). 6. The quota of the grandmother is always a sixth; from this, the mother's mother is excluded by the mother, and the father's mother by the father and mother; in default of grandmother, their place is taken by the remoter female ascendants of the deceased, so far as they are not related to him by a male descendant not entitled to inherit. 7. A full sister receives half, two or more such sisters receive together two-thirds of the estate; along with a full brother or the grandfather she becomes *ʿaṣaba* and receives the half of the brother's share; along with the daughter or son's daughter she becomes also *ʿaṣaba* (cf. *b*); sons, sons' sons and the father exclude her from succession. 8. The treatment of the half-sister on the father's side is similar to that of the full sister; along with a half-brother on the father's side or the grandfather, she becomes *ʿaṣaba*, and likewise with the daughter or son's daughter (cf. *b*); sons, sons' sons, father and full brothers exclude her from the succession. Full sisters exclude her only so far as daughters exclude son's daughters (cf. no. 2). 9 and 10. Each of the half-brothers on the mother's side receives a sixth, two or more together share a third among them; they are excluded from the succession by descendants and male ascendants. 11. The widower receives half of the estate, but only a quarter if there is a child or son's child; it is indifferent whether these are his own descendants or not. 12. The widow receives the half of what a widower would receive under the same circumstances; if the deceased leaves more than one widow, they share equally the quota allotted to the widow. During the *ʿidda* (period of waiting [*q.v.*]) after a revocable divorce or *ṭalāḳ* [*q.v.*], a man and woman are still regarded as man and wife for purposes of inheritance.

d. Exceptions from the general rules. Although the quota-heirs can never all inherit together and, in particular, most of the collateral relatives are excluded by those in the direct line, the number of qualified quota-heirs may sometimes be so large that the sum of their shares is larger than the whole estate; in this case, their shares are proportionately reduced (by *ʿawl*). Otherwise, the concurrence of a number of heirs necessitates no change from the main rules, except in a few particular cases which have special names; these are cases in which, if the main rules were strictly carried through, the inheritances would be in a proportion to one another which would be contrary to the spirit of the law. E.g. in the case of the so-called *gharībatān:* if someone dies leaving a husband or wife and both parents, the mother would receive in any case a third, the father's share however, which is usually two-thirds (cf. *c*, 5, above), would be here reduced by the quota either of the widow or of the widower; according to tradition, it was ʿUmar who decided in this case that father and mother should share, in the proportion of two to one, what remains after deducting the portion of the widow or widower. Another case, the so-called *musharraka*, is that in which a wife leaves her husband, her mother, two or more half-brothers on the mother's side and also one or more full brothers; as the quotas in this case make up the whole estate, nothing would be left for the full brothers as *ʿaṣaba* in this case, which is also said to have been decided by ʿUmar; the law lays down that the full brothers have the same rights as the half-brothers so that all inherit in equal shares the third originally set aside for the half-brothers.

vi. The most important points of difference among the *madhāhib* are the following. Unbelievers who belong to different religions cannot inherit from one another according to Mālik and Ibn Ḥanbal, but they can according to Abū Ḥanīfa and al-Shāfiʿī. There are contradicting views regarding inheritance from the *murtadd*. One who has deliberately (with *ʿamd*) and illegally killed the proprietor of the estate, is, by unanimous agreement, excluded from inheriting. Abū Ḥanīfa, al-Shāfiʿī and Ibn Ḥanbal, but not Malīk, also exclude one who has killed him without design (with *khaṭa'* [*q.v.*]. One who is partly a slave can, according to Abū Ḥanīfa, Mālik and al-Shāfiʿī, neither inherit nor be inherited from; according to Ibn Ḥanbal, Abū Yūsuf, al-Shaybānī and al-Muzanī, he does so in the proportion he is free. The so-called law of reversion to the quota-heirs if there are no *ʿaṣaba* (cf. v *a*, above), as well as the precedence of the *dhawu 'l-arḥām* and the treasury if there are no quota-heirs, is disputed among the *madhāhib*. The paternal grandmother is not excluded from the succession by the father, according to Ibn Ḥanbal only; in his view, in this case she inherits a sixth either alone or shared equally with the mother. There are delicate points of difference regarding the succession of the remote female ascendants. One who is entitled to receive a

quota from more than one side inherits, according to Mālik and al-S̲h̲āfiʿī, only on ground of "stronger" relationship, but according to Abū Ḥanīfa and Ibn Ḥanbal on ground of both respects; in the case of two cousins on the father's side, of which one is also the brother on the mother's side, the latter, it is unanimously agreed, receives a sixth and the remainder falls to the two as *ʿaṣaba* in equal portions, while Abū T̲h̲awr makes him inherit the whole. In the special case of the so-called *mus̲h̲arraka*, Mālik's view agrees with that of al-S̲h̲āfiʿī (cf. v *d*, above), according to Abū Ḥanīfa and his fellows, Ibn Ḥanbal and Dāwūd al-Ẓāhirī, the full brothers actually receive nothing.

vii. *a.* The law of inheritance with the Imāmīs (Twelver S̲h̲īʿīs) is based on the same principles as that of the Sunnīs, but in its final development shows a number of quite important features of its own, which for the greatest part are but the consequences of their dogmatic-political doctrines (ʿAlī and Fāṭima had to be the only heirs of the Prophet, excluding Ibn ʿAbbās), and partly already expressed in the traditions or result from the rejection of certain *ḥadīt̲h̲s* by the S̲h̲īʿa. Among the main divergences are the ignoring of the *ʿaṣaba* and the constitution of one group of "heirs by relationship", which is divided into three classes: 1. the ascendants in the first degree and the descendants; 2. the other ascendants in the first degree; 3. the maternal and paternal uncles and aunts. Each of these classes excludes the following ones from the succession, and within the two categories of the two first classes, the relative of the nearer degree excludes all others of a remoter degree of relationship, i.e. for example, the daughter excludes the son's son; within the third class, a distinction into degrees is made between the uncles and aunts of the deceased himself and their descendants, the uncles and aunts of his parents and their descendants, etc., and here also the member of a nearer degree excludes those of a remoter degree. An exception which finds its explanation only in the individual case of the heirs of the Prophet, is that the son of the father's full brother excludes one (but no more than one) half-brother (on the father's side) of the father, if there are no other uncles. Within the same degree, the full relatives (male or female) exclude all relatives on the father's (not the mother's) side, e.g. full sisters exclude half-brothers; the relatives on the mother's side are excluded by all other relatives of the same degree only from a share in the "reversion" of the estate. If relatives, whose relationships with the deceased are traced through different persons, inherit jointly, the proportion of their shares is settled by the (hypothetical) shares of the persons through whom they are related to the deceased; if, for example, paternal and maternal uncles inherit together, the former divide two-thirds of the estate (i.e. the father's hypothetical share), the latter a third (i.e. the mother's hypothetical share). This idea of "representation" reappears in one of the Sunnī theories on the succession of the *d̲h̲awu 'l-arḥām*. The rules applying to the brothers and sisters of the deceased are also applied to his father's brothers and sisters and so on, if the latter are called upon to inherit; if, for example, father's full brothers and sisters, and father's brothers and sisters on the mother's side exist together, the latter are not excluded by the former but receive a third which is divided equally among them (if there is only one, a sixth), and the former receive the remaining two-thirds (or five-sixths as the case may be), of which each uncle gets twice the share of an aunt; the process is similar when their children take the place of uncles and aunts. The grandfather (and if the case arises the remoter ascendants) always inherits equally with the brothers of the legator. Within homogeneous groups, the male inherits double as much as the female, so far as there are no special regulations to the contrary; for the rest, the male relative on the father's side is not especially privileged before the others, as among the Sunnīs. Besides these "heirs by relationship", there are "heirs for special reasons", i.e. husband and wife, and the patron (*mawlā*), namely 1. a patron who has freed the deceased from slavery; 2. a patron before whom the legator has become a Muslim, or who has pledged himself to pay the *diya* for him (this idea is also attested in the traditions and is to be found sporadically among the Sunnī authorities); 3. the *imām*, who here takes the place of the state treasury, and who, as the general patron of all Muslims, is entitled to inherit in the last resort.—In both main groups there are "simple" heirs, and such as have a claim to a Ḳurʾānic quota. If the estate does not suffice to satisfy all the quotas, the shares are correspondingly reduced to the paternal relatives only, never to the maternal. What is left over after satisfying the quotas is given to the simple "heirs by relationship" according to the above rules; if they do not exist, the quota-heirs, with the exception of the husband or wife, receive the residuum also; if there are no "heirs by relationship" at all, the patrons come in, in the order given.

These general rules are sufficient to cause the distribution of an estate often to look very different among the S̲h̲īʿīs from among the Sunnīs. There are in addition differences in detail, of which the most important are the following. The Muslim does inherit from the unbeliever; unbelievers of all sects inherit from one another. In determining the portion of the childless widow, the landed property of the deceased is not taken into account. If the sole existing heir is a slave, he is purchased at the expense of the estate (his owner cannot refuse to sell him), and thus becomes free and inherits what is left; if the parents of the deceased are slaves, they must in all cases be purchased at the expense of the estate, and according to some, the children also. The part-slave inherits to the degree in which he is free. One who has a claim to an inheritance from two sides inherits on both grounds. There are no legal relationships between an illegitimate child and his mother and her relatives, only between him and his descendants; if there are none, the estate goes to the *imām*. In the special case of the so-called *g̲h̲arībatān* (cf. above, v *d*), there is no divergence from the general principles.—On the whole, the S̲h̲īʿī law of inheritance diverges further from the old Arab pre-Islamic principles than the Sunnī doctrine in opposition to which it has been elaborated.

b. The law of inheritance of the S̲h̲īʿī Zaydīs resembles rather closely the system of the Sunnīs, which has influenced its origins.

c. The most important peculiarities of the law of inheritance among the K̲h̲āridjī Ibāḍīs are the following: the paternal grandfather inherits as quota-heir a sixth of the estate if there are descendants of the deceased; otherwise, he inherits as *ʿaṣaba*, thus excluding the brothers. The half-sister on the mother's side is assimilated to the half-sister on the father's side if neither this relative nor a full sister exists. The grandmother is only excluded by the mother. Female descendants, like husband or wife, have no share in the "reversion" of the estate. Manumission confers no rights of inheritance. If there

are no heirs at all, the estate is given away in charity. The special case of the so-called *musharraka* is settled as among the Shāfiʿīs (cf. v *d*, above).—The dependence of this system on the Sunnī one is apparent.

viii. The law of inheritance, as a branch of family law and as possessing a peculiarly religious character from its very full regulation in the Ḳurʾān, has always been one of the chapters of Muslim law most carefully observed in practice [see ʿĀDA and SHARĪʿA]. As in the long run it must lead inevitably to the splitting up of even the largest estates, various endeavours have been made to avoid this result, which was considered undesirable. A method, frequently adopted, was to constitute considerable portions of the estate as religious endowments [see WAḲF], the proceeds of which could be disposed of by the grantor as he pleased; but most endowments in course of time became much broken up or were completely alienated. Another way adopted, for instance in Indonesia, is, in keeping with the local *ʿāda*, to admit only a portion of the actual estate to division among the heirs; sometimes an estate is divided already during the lifetime of its possessor by gift or friendly arrangement, and not infrequently some member of the family, according to circumstances, simply takes over the estate and obligations of the deceased. In particular, landed property is often taken out of the control of Muslim law. Women are excluded from inheritance by customary law in many Muslim countries, as among the Berbers, in parts of India and in China. Different expedients (*ḥiyal* [*q.v.*]) which might serve to evade the Muslim rules of inheritance found their way into literature already at an early period.

2. In modern Islamic countries.

i. In recent years, dissatisfaction with the traditional law of inheritance has increased, the main criticism being lack of harmony between the legal norm, adapted to the patrilineal extended family, and changing social conditions; discrimination, as to rights in the estate, against women and cognates; and rigidity of the Sunnī system of inheritance, which does not allow one to freely dispose of one's estate after one's death. Recent reforms are mainly inspired by a desire to strengthen the rights of succession of heirs within the nuclear family.

The juristic basis of the reforms was provided by a wide gamut of methods, the most important of which were the "selection" device (*takhayyur* and its extension, *talfīḳ*) and "modernistic" interpretation (neo-*idjtihād*) of the textual sources [see MAḤKAMA, section 4.X].

Relevant legislation: *Sudan* - Judicial circulars of 1925, 1939, 1945; *Egypt* - Law of Inheritance, 1943; Law of Testamentary Dispositions, 1946; *Syria* - Law of Personal Status, 1953; *Iraq* - Law of Personal Status, 1959, amendments thereto, 1963, 1978; *Jordan* - Law of Personal Status, 1976; *Palestine and Israel* - Succession Ordinance, 1923; Women's Equal Rights Law, 1951; Succession Law, 1965; *Tunisia* - Law of Personal Status, 1956; supplement thereto, 1959; *Morocco* - Code of Personal Status, 1958; *Pakistan* - Muslim Family Laws Ordinance, 1961; *Somalia* - Family Law, 1975.

ii. The rights of the heirs within the nuclear family have been strengthened. India (after partition Pakistan), the Sudan (1925) and Jordan adopted the rule that the spouse relict should take the whole estate, by way of *radd* "return", in the absence of any other legal heir, while Egypt (1943) and Syria give the spouse relict priority also over relatives of the outer family. Tunisia adopted the doctrine of *radd* with important deviations: the spouse relict is entitled to participate in the residual estate along with other Ḳurʾānic heirs, provided no male agnate, daughter or agnatic granddaughter survives (but she is still not debarred from *radd* in the presence of a relative of the outer family). The same rule, with minor variations, was adopted in Jordan. In Israel (1965), the spouse relict has priority over all other heirs.

In ʿIrāḳ and Tunisia, a daughter excludes the deceased's collateral from the succession. In ʿIrāḳ (1963), this was the result of the application of the Shīʿī system of priorities to all ʿIrāḳīs. The Sunnīs, however, still apply their own principles of distribution within the Shīʿī order of priorities.

In both ʿIrāḳ (1978) and Tunisia (1959), if the deceased leaves no son, the daughter alone, when in competition with other Ḳurʾānic heirs, is entitled to

take the residue of the estate by *radd*. In their absence, she takes the whole estate. In Tunisia, she maintains this preferential right even in the presence of collaterals.

Jordan has adopted the rule that germane brothers participate in the uterine brothers' third of the estate if the estate is exhausted by the Ḳurʾānic heirs (the "case of the donkey").

The Sudan (1939, 1945), Egypt (1943) and Syria (with some variations) adopted a system which admits agnatic brothers and sisters to the succession along with the grandfather. ʿIrāḳ (1959) adopted a European system of succession under which any brother or sister of the deceased totally excluded the grandfather. This system was abolished in 1963.

iii. The most important reform in the position of the heirs of the outer family was introduced in ʿIrāḳ (1963) when the Shīʿī law of inheritance, which has a totally different order of priorities, was made applicable to all ʿIrāḳīs. Other important reforms have been effected through the device of "obligatory bequests" and the principle of representation succession (see section iv, below). Further minor reforms were introduced in Egypt (1943) and Syria following the adoption of the *per capita* doctrine.

iv. Unlike the traditional formalities, Egypt (1946), Syria, Tunisia (1956) and ʿIrāḳ (1959) made it obligatory to prove bequests by documentary evidence; the age of capacity for making a bequest has been raised in those countries and also in India and Pakistan; both Egypt and Syria permit bequests in favour of legatees not yet born at the time of the testator's death; they also adopt a more restrictive attitude as to stipulations which the testator may impose with regard to the conduct of a beneficiary.

One of the most significant reforms departing from the Sunnī philosophy of succession is the rule, so far adopted only by the Sudan (1945), Egypt (1946) and ʿIrāḳ, that a bequest in favour of a legal heir is no longer *ultra vires* provided it does not exceed the "bequeathable third". This rule fits in with the Shīʿī doctrine. Syria has merely permitted a testator validly to apportion particular items of his estate to his heirs within the value of their shares in the inheritance.

Tunisia (1956) adopted a very bold innovation (as regards Mālikī law) by permitting a person who leaves no heir to bequeath the whole of his estate notwithstanding the succession rights of the Treasury. ʿIrāḳ (1959), on the other hand, enacted that the state was the sole heir under such circumstances.

The absence of the principle of representation, which under traditional law resulted in the total exclusion of orphaned grandchildren from the estate by any surviving son of the grandparent, has been remedied. In Egypt (1946), Syria, Morocco, Tunisia (1959) and Jordan it has been circumvented by the device of the "obligatory bequest" to orphaned grandchildren of what their deceased parent would have inherited had he (in Egypt and Tunisia, he or she) survived, provided that it does not exceed the "bequeathable third". Pakistan has solved the problem by adopting a comprehensive system of representation.

v. In Egypt (1943), Syria and Tunisia (1956, with minor variations), but not in ʿIrāḳ (1963) as far as the Sunnīs are concerned, deliberate homicide is now a bar to inheritance and testamentary succession. In Pakistan, homicide constitutes an impediment to inheritance only if it amounts to a criminal offence.

Difference of religion has ceased to be a bar to succession in British India (1850) and, following this lead, in Tanganyika (1923, 1947) and Nyasaland (1929), but not in the Middle East. It has never been a bar to the validity of a bequest. Apostasy is no longer a capital offence, but it is still a bar to inheritance, except in India and Pakistan (1850).

In Egypt (1943), difference of domicile is no longer a bar to inheritance between non-Muslim—and in Syria also Muslim—relatives unless the law of the non-Muslim state bars foreigners from inheriting from its nationals. The principle of reciprocity, in cases of difference of religion and nationality, has been extended to testamentary succession in Egypt (1946), Syria, Tunisia (1956) and ʿIrāḳ (1959).

vi. Since the Sunnī will is subject to the *ultra vires* doctrine, the family *waḳf* has become the chief instrument for circumventing the law of inheritance: Ḳurʾānic heirs are almost totally excluded from the estate; entitlement is transmitted according to the principle of representation; preference is given to agnates over cognates; the female in every generation benefits but may not transmit her share in the entitlement to her descendants.

Under these circumstances, Egypt (1946) and Lebanon (1947) have introduced the "obligatory entitlement" of legal heirs, equal to their rights of inheritance, to any *waḳf* in excess of one-third of the estate, the purpose being to bring the *waḳf* into greater conformity with the law of testate and intestate succession. The family *waḳf* was reduced to two series of beneficiaries and finally abolished altogether in Egypt, Syria and Tunisia [see WAḲF].

vii. Though some of the changes in the law of intestate and testate succession are of considerable importance, the major achievement has been the mere fact of codification. Some countries have effected revolutionary reforms, to the extent of complete equality of men and women and of agnates and cognates. But this legislation is a complete departure from the *sharīʿa*. It was brought about by adopting comprehensive systems of succession of European origin. The Ottoman Law of Succession, 1913, of German origin, at first applicable only to *mīrī* property, was adopted in Palestine (1923), Israel (1951, with the inclusion of *mulk* and movables) and ʿIrāḳ (1959-63). The Israeli Law of Succession, 1965, is applicable only in the civil courts. The Somalian Family Law, 1975, in inspired by Marxist ideology.

(A. Layish)

MĪRATH (old Anglicised spelling Meerut), (i) a district in the modern province of Uttar Pradesh, India, immediately to the north-east of Dihlī, and entirely within the Djamnā-Ganges *dōʾāb*. Its principal towns are Mīrath city itself; Sardhānā (the chief residence of the Begam Samrū, widow of the adventurer Walter Reinhardt called "Sombre"; see SAMRŪ); Ghāzīābād; Bařnāwā; and Hāpur, an important grain market. (ii) Mīrath city (29°0'N., 77°43'E.), a town of considerable antiquity.

The city was the site of a pillar of Ashoka, one of the two taken by Fīrūz Shāh the Tughluḳid to Dihlī, and within the town are Buddhist remains dating from the 3rd century B.C.; but since these are not mentioned by the Chinese travellers Fa-hsien (4th century) and Hsüan-tsang (7th century), there had probably been an early decay of Buddhist influence. A strong fort was built here in the 11th century by the Hindū ruler of Baran (= Bulandshahr), originally surrounded by a moat and a wall with eight gates (other gates were added in Muslim times); this was the fort captured from the Ḍoř Rādjpūts by Ḳuṭb al-Dīn Aybak in 588/1192, using this and the fort of Baran from which to overthrow the Gahaḍawāla Rādjpūts and make his assault on Dihlī. Mīrath remained in Muslim control through the early sultanate of Dihlī (the names of several *iḳṭāʿdārs* are recorded by the chroniclers Minhādj, ʿIṣāmī, and Baranī); in 727/1326-7 the forces of the Mongol invader Tarmashīrīn were defeated at Mīrath; but by 802/1399 the city had been sacked and destroyed by Tīmūr.

There seems to have been some return to prosperity in Mughal times: the fort is mentioned in the *Āʾīn-i Akbarī*. Mīrath was briefly a copper mint under Akbar, and the Mughal emperors seem to have taken some interest in the buildings (repair of Djāmiʿ mosque by Humāyūn; a couple of *dargāhs*, of Abū Yār Muḥammad Khān (1039/1629) and Abū Muḥammad Khān (1099/1688); the *maḳbara* of Shāh Pīr of 1038/1628 erected by the order of Nūr Djahān, a red sandstone bulding with the characteristic wide four-centred Mughal arch (photograph in *Meerut gazetteer*, UP Govt., Lucknow 1963); the presence of a *karbalā*, *ca.* 1009/1600, and two *imāmbārās*, indicates that some Shīʿa settlement had taken place. In the early 12th/18th century, with the rise of the Sayyid brothers as kingmakers, there were many grants of land made in the Mīrath area, and there was some industry in the form of indigo-processing and in the manufacture of the fine lambswool *sānslā* blankets; but after the invasion of Nādir Shāh [*q.v.*], 1152/1739, the land fell into anarchy, and by the early years of the 19th century Mīrath was ruinous and depopulated. The considerable gain in British prestige after Lord Lake's success in the battle of Dihlī, 1803, led to the establishment of an extensive military cantonment at Mīrath (a tactical mistake, according to P. Spear, *Twilight of the Mughals*, OUP India 1973, 145, in that Dihlī itself was not strongly garrisoned and held), whereby the city regained its prosperity to the extent of securing a reputation as one of the best laid-out towns in Upper India. The events of 1857, when the mutiny of the Bengal army started in Mīrath, leading to the final loss of all power by the ruling Mughal house, do not concern us here. Many Muslims migrated to Pākistān after Partition in 1947, and the 1961 Census of India showed Mīrath with a Muslim population of only 20%, mostly Sunnī.

Monuments. Apart from those mentioned above, there are a few Muslim monuments, some of considerable antiquity, which have been but poorly described, and no photographs are available. The Djāmiʿ mosque, on the site of a former Buddhist temple, is said to have been erected in 410/1019 by Ḥasan Mahdī, a *wazīr* of Maḥmūd of Ghaznī; the *dargāh* of Makhdūm Shāh Wilāyat in the reign of Shihāb al-Dīn (= Muʿizz al-Dīn) Ghūrī; and the *maḳbara* of Sālār Masʿūd by Ḳuṭb al-Dīn Aybak at the end of the 6th/12th century (since he was killed in battle at Bahrayč in 425/1034, and has cenotaphs in other Indian towns, this *maḳbara* may refer rather to his cult as a folk-divinity; see PANDJ PĪR). The gazetteers mention some "scores of other temples and mosques, of no particular interest", but no-one seems to have looked at them to see: Mīrath, although only some 40 miles from Dihlī, seems to have been badly served by archaeologists. Other buildings within the district include the Begam Samrū's palace (Dilkusha Kōthī) of 1822, at Sardhānā; at Bařnāwā, on a (pre-Muslim) mound south of the town, are the *dargāhs* of Badr al-Dīn Shāh and Shāh ʿAlāʾ al-Dīn (undescribed) and the *maḳbara* of Pīr Sarwār, Persian inscr. dated 948 (= 1541-2).

Bibliography: There are sporadic references to Mīrath city and district in Minhādj-i Sirādj Djūzdjānī, *Ṭabaḳāt-i Nāṣirī*; ʿIṣāmī, *Futūḥ al-salāṭīn*; Ḍiyāʾ al-Dīn Baranī, *Taʾrīkh-i Fīrūz Shāhī*; Ibn Baṭṭūṭa; information on all aspects of the city and district in the *District gazetteer of the United Provinces*, Meerut vol., and the corresponding vol. of the Uttar Pradesh Government, 1963. Useful account of city and district under the latter Mughals in Percival Spear, *Twilight of the Mughals*, Cambridge 1951, repr. with new introd. OUP India 1973. Monuments: a few mentioned in A. Führer, *The monumental antiquities and inscriptions of the North-West provinces and Oudh* (= *ASI*, N.S. ii), 1891, s.v. Mīrath.

(J. Burton-Page)

AL-**MIRBAD**, the name of a celebrated public place in al-Baṣra [*q.v.*] which, although situated outside the metropolis of southern ʿIrāḳ, played an outstanding role in the economic life of that town as well as in the shaping of the specifically Arabic culture.

Etymologically, the term could be a noun of place anomalously formed from the root *r-b-d* which implies, amongst other things, the meaning of "to halt, make a stop" and could thus designate a spot where nomads encamp, and then, by extension, where camels and sheep are penned up. The various denotations of the word nevertheless cause a problem, since it is difficult to reduce them to a common element, even if the sense of "an open space where one puts out dates to dry" which it has at Medina (see Yāḳūt, iv, 484; *TA* and *LA* s.v.; al-Maḳdisī, *al-Badʾ wa 'l-taʾrīkh*, tr. Huart, iv, 80) suggests one, which could possibly be that of "a flat piece of ground of varying size". But it may nevertheless be a simple proper noun, more or less artificially attached to a well-known root.

At Baṣra, the Mirbad was a market outside the town which formed the oldest commercial centre of the town; it extended along the edge of the desert, to the west of the urban agglomeration, and was originally separated from it by stretches of waste, empty land at a distance of 3 or 4 km away. However, the rampart built in 155/771-2 by Abū Djaʿfar al-Manṣūr (al-Ṭabarī, iii, 473-4) left it outside the town, but since Baṣra developed westwards in the normal course of events, the open space was fairly rapidly filled up, and the extensive open area, whilst retaining

its original character, became transformed into a flourishing suburb, which was connected by a wide street, along which lay buildings and which was oriented from west to east, via the Bāb al-Bādiya, to the town's centre and the port along the river (al-Furḍa). Whilst the Mirbad formed a market where the Bedouins came to sell their camels and sheep and a halting-place for the caravans which raised up clouds of dust, it appears that merchandise was forwarded via this street, intensifying an economic activity which had very quickly made necessary the construction, on the fringes of the market, of shops and workshops (such as those of the tanners on the desert side; see al-Ṭabarī, i, 3120).

Since the first ᶜAbbāsid governors of Baṣra had no suitable residence at their disposal, Sulaymān b. ᶜAlī, who was governor 133-9/781-6, went and took up his residence in the Mirbad (al-Balā<u>dh</u>urī, *Futūḥ*, 349; Yāḳūt, i, 643-4), an act which inevitably came to modify the appearance and the functions of the area, since other dwellings were now built. It was <u>Dj</u>aᶜfar b. Sulaymān (governor *ca.* 176/792-3) who is said to have uttered this memorable saying: "ᶜIrāḳ is the heart (lit. "eye", *ᶜayn*) of the world, Baṣra is the heart of ᶜIrāḳ, the Mirbad is the heart of Baṣra, and my house is the heart of the Mirbad" (al-<u>Dj</u>āḥiẓ, *Buldān*, ed. Pellat 196, ed. Ṣ. al-ᶜAlī, 498, ed. Hārūn, *Rasāʾil*, iv, 139; Pellat, *Milieu*, 11 and refs. cited there). In the shadow of this dwelling, which must therefore have been in the southeastern part of the tract, the lizards' market (*sūḳ al-ḍibāb*) was held, which attracted the persons who loved these reptiles as delicacies (al-<u>Dj</u>āḥiẓ, *Ḥayawān*, vi, 78), whilst behind it lay the house of Abū ᶜAmr b. al-ᶜAlāʾ (al-<u>Dj</u>āḥiẓ, *Bayān*, i, 321).

This famous philologist (d. *ca.* 154/770 [*q.v.*]) was thus right on the spot for making linguistic enquiries from his informants, Bedouins who were either passing through or who had been recently sedentarised. It was in effect at this place that, during the very first centuries of Islam, a good part of the Arabic vocabulary was recorded, that the grammatical doctrines adopted by the Baṣran school were formulated and, in a more general fashion, that the "Arab humanities" were put together, since the poetical and historical traditions on which they were based were in major part gathered there. In this connection, al-<u>Dj</u>āḥiẓ, in a well-known passage of his *Bayān* (iv, 23), notes the diversity of the texts gathered from their informants (*ruwāt*) by those enquirers installed either at the Mirbad (the *Mirbadiyyūn*) or in the Friday mosque (the *Mas<u>dj</u>idiyyūn*), and stresses the variations of literary taste.

It was also there that, at an early date, poets whose talent posterity was subsequently to recognise, notably <u>Dj</u>arīr and al-Farazdaḳ (or also <u>Dh</u>ū 'l-Rumma; see Ibn <u>Kh</u>āḳān, *Ḳalāʾid*, Tunis 1386/1966, 32; idem, *Maṭmaḥ*, Beirut 1404/1983, 57), came to declaim their works and to engage in contests which delighted and informed a public of good judges. Al-<u>Dj</u>āḥiẓ, in his *Ḥayawān* (vi, 239), informs us that Abū Nuwās himself used to come early in the morning to the Mirbad with his writing-tablet in the hope of meeting there some Bedouin who could communicate to him some vocabulary and some verses, and he was probably not the only person to adopt this course. Each poet or orator who was well-known had a special reserved place around which a regular group of hearers formed an attentive circle, one which was always ready to show its approval or its criticisms. In the absence of an official educational system, the Mirbad thus formed a kind of public educational establishment where not only philologists and poets presided but also traditionists, *muḥaddi<u>th</u>ūn*, who thereby earned through their assiduous attendance the *nisba* of al-Mirbadī (see Yāḳūt, iv, 484-5, and al-Samᶜānī, *Ansāb*, ed. Hyderabad, xii, 180-1, who mention several with this name).

At all events, one can easily picture the instructive spectacle which was offered to Baṣrans of an enquiring and observant nature by "the motley crowd of Bedouins and city-dwellers who busied themselves with their affairs, gave judgements in poetic contests or slipped themselves into the circles which grew up around scholars. It was probably there also [that one] could be present at performances of snake charmers and mountebanks of all kinds" (Pellat, *Milieu*, 245). The chief of the ᶜAbd al-Ḳays, al-<u>Dj</u>ārūd b. Abī Sabra, summed up in his own way the advantages of the Mirbad in strongly advising people to go there, since, he said (*Bayān*, i, 345), "it gives one ideas, clarifies one's vision, provides items of information and brings together Rabīᶜa and Muḍar."

It is a fact that the Mirbad was rarely the theatre for fights between different tribes or factions of Baṣra, and the confrontations which are mentioned do not seem to have been bloody. In 64/683, after the killing of Masᶜūd b. ᶜAmr al-ᶜAtakī, who had been appointed governor over the town by ᶜUbayd Allāh b. Ziyād, the combattants were prepared to fight there, but the paying out of the blood-price prevented the situation from deteriorating (version of al-Mubarrad, in *Kāmil*, i, 121 ff.; cf. al-Ṭabarī, ii, 454; al-Balā<u>dh</u>urī, *Ansāb*, ivB, 98; *Naḳāʾiḍ <u>Dj</u>arīr wa 'l-Farazdaḳ*, 731). In 81 or 82/701-2, an episode in the struggle between al-Ḥa<u>djdj</u>ā<u>dj</u> and Ibn al-A<u>sh</u>ᶜa<u>th</u> [*q.vv.*] took place at the Mirbad, but of this, historical accounts have primarily preserved a speech of the rebel's (*Bayān*, ii, 155). Concerning the revolt of Ibrāhīm b. ᶜAbd Allāh (145/762 [*q.v.*], there is mentioned in al-<u>Dj</u>āḥiẓ's *K. al-Burṣān*, 100-1, a *yawm al-Mirbad*, otherwise unknown.

The decline of Baṣra, which began to be apparent from the beginning of the 3rd/9th century, does not seem gravely to have affected the Mirbad, where the various activities which had contributed to its fame still retained a certain vitality for a long time afterwards. Although this suburb was one of the points through which the Zan<u>dj</u> [*q.v.*] attacked Baṣra in 257/871 and the place where they committed incendiary acts and pillaging (see A. Popovic, *La révolte des esclaves en Iraq au III^e siècle*, Paris 1976, 99), the rebels' depredations did not stop it from continuing to play its former role, as is particularly illustrated by the example of the baker-poet al-<u>Kh</u>ubzaʾaruzzī (d. 327-938 [*q.v.*]), whose shop was the place where a group of admirers met. It is even possible that this state of affairs lasted for several centuries, since Yāḳūt (d. 626/1229) describes the Mirbads as forming in his time a kind of island in the midst of the desert, whilst the street which had formerly linked it with the town centre and the port was now, for the whole three miles of its length, nothing but a field of ruins.

Bibliography: In addition to works mentioned in the text, see Le Strange, *Lands*, 45; Ṣ.A. al-ᶜAlī, *al-Tanẓīmāt al-i<u>dj</u>timāᶜiyya wa 'l-iḳtiṣādiyya fi 'l-Baṣra*, Ba<u>gh</u>dād 1953, index; O. Scemama, *Le rôle du Mirbad de Bassora dans le conservatisme poétique jusqu'au début du III^e siècles*, in *IBLA*, xx (1957), 369-79; Ch. Pellat, *al-<u>Dj</u>āḥiẓ wa 'l-Mirbad*, to appear.

(Ch. Pellat)

al-**MIRBĀṬ** (a. "place of securing, tying up, i.e. anchorage), a port of the South Arabian coast in Ẓufār [*q.v.*] (Dhofar), lying in 17°00'N. and 54°41'E., some 40 miles/70 km east of the modern town of Salāla [*q.v.*] in the Sultanate of Oman. Yāḳūṭ,

Buldān, Beirut 1374-6/1955-7, v, 97, describes it as being five *farsakhs* from the town of Ẓufār (i.e. the modern al-Balīd) and as the only port of the coast of the region of Ẓufār; it had an independent *sulṭān*, and its hilly hinterland produced frankincense [see LUBĀN). In the early 19th century, its ruler was a corsair chief, Muḥammad b. ᶜAḳīl, and the ruins of a fort built by him in 1806 were mentioned by J.G. Lorimer as still visible (*Gazetteer of the Persian Gulf, 'Oman and Central Arabia*, Calcutta 1908-15, *IIB Geographical and statistical*, 1274-5). The population of the anchorage, well sheltered from the north-east monsoon, includes a high proportion of *sayyids*, and a notable feature of the place today is the shrine of Muḥammad b. ᶜAlī, *Ṣāḥib Mirbāṭ*, ancestor of the Bā ᶜAlawī [*q.v.*] Ḥusaynī *sayyids* of Ḥaḍramawt; see G. Oman, *The burial stelae of Muḥammad «Ṣāḥib Mirbāṭ»*, in *Studia turcologica memoriae Alexii Bombaci dicata*, Naples 1982, 397-401.

Bibliography: Given in the article.

(C.E. BOSWORTH)

MIRDĀS, BANŪ or **MIRDĀSIDS**, an Arab dynasty of Kilābī origin, founded by Ṣāliḥ b. Mirdās. The latter and some of his descendants were, on several occasions between 415/1024 and 473/1080, either tolerated or recognised as princes of Aleppo. In succession to the Ḥamdānids, they maintained a tradition of autonomy in northern Syria, thanks to the tacit protection of the Byzantine Empire, which they accepted in order to ward off pressure from the Būyids of Baghdād and the Fāṭimids of Egypt. However, they did not hesitate on various occasions to launch a frontal attack, in general victoriously, on the heavily-laden Byzantine army and notably on the nearby garrison of Antioch, under Christian domination until 477/1084. The Turkish seizure of the region after 463/1071 was harsher for the Muslim Arabs than it was for the Christians.

From the Umayyad period, among the Ḳays tribes of Syria, the Banū Kilāb occupied an original place, both on account of their military ability and their wish to participate in maintaining order and administering the regions in which they lived. In 215/830, it was a *mawlā* of Kilāb whom the caliph al-Ma'mūn designated as *ḳāḍī* of Aleppo. In 328/939, the Ikhshīd Muḥammad b. Ṭughdj chose Abu 'l-ᶜAbbās Aḥmad b. Saᶜīd al-Kilābī as governor of Aleppo. The Kilāb of Nadjd then flooded into northern Syria and took possession of the region of Maᶜarrat al-Nuᶜmān. In 333/944 the Ikhshīd appointed Aḥmad to Antioch and his brother Abu 'l-Fatḥ ᶜUthmān to Aleppo, provoking the jealousy of the other Kilāb chiefs who asked Sayf al-Dawla to come and install himself in Aleppo. ᶜUthmān greeted Sayf al-Dawla and, sitting by his side in his *ᶜammāriyya*, he presented him, village by village, with the country that he knew perfectly. The Kilāb fought alongside the ᶜUḳayl, Kalb and Numayr in the Ḥamdānid ranks against the Ikhshīd Ibn Ṭughdj in 335/946.

In association with other tribes belonging to Ḳays, ᶜĀmir b. Ṣaᶜṣaᶜa, ᶜUḳayl, Numayr, Ḳushayr, Kināna, ᶜAdjlān and Kaᶜb b. Rabīᶜa b. ᶜĀmir, in the 4th/10th century the Kilāb held the Syrian steppe lying between the loop of the Euphrates and the Aleppo-Ḳinnasrīn-Ḥamāt-Ḥimṣ highway, while tribes of Yemeni origin, such as the Kalb, held sway further south over the Raḥba-Tadmur-Ḥimṣ-Damascus route. The Arab tribes of Syria, who were experiencing considerable demographic growth and were hit by the rise in grain prices, were susceptible to Ḳarmaṭī propaganda denouncing the wealth of the urban Sunnī population and the luxury of the pilgrimage caravans. In northern Syria, the Arab tribes regularly invaded the cultivated lands around Maᶜarrat al-Nuᶜmān, Ḥamāt and Salamiyya in order to seize cereals and wood for fuel and to pasture their flocks. Despite these exactions, their integration in the region was easy, for they shared the Shīᶜī sympathies of the local population.

Sayf al-Dawla [*q.v.*] the Ḥamdānid prince of Aleppo, succeeded, thanks to his light cavalry, in containing these attacks and repulsing the Bedouin in the steppe; by destroying their encampments and filling up their wells, he forced most of the tribes to cross the Euphrates and seek refuge in the Djazīra. Kilāb seems to have been the only tribe authorised to stay in the Aleppo region. Sayf al-Dawla was then able to devote himself to the defence of the *djund* of Ḳinnasrīn and the western Djazīra against the Byzantine threat.

Sayf al-Dawla had just granted *amān* to the Kilāb when he died in 356/967. The Byzantines profited from his death to occupy Antioch in 358/969, and the Fāṭimids, who were installing themselves in Egypt, in 360/971 led a short-lived expedition into northern Syria. The power of Saᶜd al-Dawla, Sayf al-Dawla's son, was even contested by his *ghulāms*. However, the peripheral position of the principality of Aleppo, at a distance from the three principal power centres of the age, Baghdād, Cairo and Constantinople, allowed the dynasty to survive for a half-century after the disappearance of its founder. The Kilāb took part, in one camp or another, in various military operations oppositing the Ḥamdānid princes and their competitors. In the event of victory, they expected their ally to award them *iḳṭāᶜ*s [*q.v.*] for their personal use. Ibn al-Ḳalānisī mentions some Kilāb warriors in the army of Bakdjūr who, in 381/991, confronted Saᶜd al-Dawla's army near Aleppo. As for the prince of Aleppo, he was accompanied by a contingent of 500 élite soldiers of the ᶜAmr b. Kilāb. Before the emergence of the Mirdās family, the Kilāb Arabs in Syria already represented an organised military force, with powerful cavalry trained in mounted swordmanship and not fearing to confront a government army on the field of battle. While other tribes were happy to give themselves up to pillage with consequences as damaging for the Bedouin as for the sedentary population, the wish to gain access to the state revenues in return for participating in the activities of maintaining order characterised the political goal of the Kilāb until the end of the 5th/11th century.

The history of Ṣāliḥ b. Mirdās and his descendants is relatively well-known. The three principal sources are the Egyptian historian al-Musabbiḥī (d. 420/1029), whose chronicle has only come down to us for 414-15/1023-4; another historian who was also Egyptian, but Christian and resident in Antioch, Yaḥyā b. Saᶜīd, whose chronicle is preserved up to 425/1034; and finally the historian of Aleppo Kamāl al-Dīn Ibn al-ᶜAdīm, who, although he died in 660/1262 devotes numerous pages of his chronological history as well as those of his biographical dictionary of the city of Aleppo to the exploits of the Kilāb. Indeed, three of his ancestors had successively held the post of *ḳāḍī* of Aleppo for some fifty years in the 5th/11th century. Ibn al-ᶜAdīm was very sensitive to the legend which idealised several Mirdāsid princes. According to his accounts, they, following the example of Sayf al-Dawla, were *amīrs* in the noblest Arab tradition, strong and courageous, expert in the skills of *adab* as well as in those of war, using the finest blades, mounting the noblest horses and husbands of the most beautiful women in the East. Their mothers, admirable for devotion and political intelligence, were ready to confront the world and the great in order to

defend and to promote the political careers of their progeny.

All the Arab historians who have dealt with this age have mentioned the role of the Mirdāsids, who also appear in the accounts concerning Abu 'l-ʿAlāʾ al-Maʿarrī and the *dāʿī* al-Muʾayyid li-Dīn Allāh (see M. Saleh, *Abû l-ʿAlâʾ al-Maʿarrí, bibliographie critique*, in *BEO*, xxi [1969] and xxiii [1970], and Abu 'l-ʿAlāʾ al-Maʿarrī, *L'épître du pardon*, Fr. tr. V.-M. Monteil, Paris 1984; idem, *R. al-Ṣāhil wa 'l-shāhidj*, ed. Bint al-Shāṭiʾ, Cairo 1975. See also AL-MAʿARRĪ and other works of P. Smoor).

The historian of the Mirdāsids experiences some difficulties in identifying personalities. Indeed, a certain number of *isms* borne by the Kilāb, such as Thimāl, Muḳallad, Manīʿ and Waththāb, are from the Ḳaysī tradition and recur in the allied or neighbouring tribes of Numayr, Ḳushayr, ʿUḳayl, Asad and Kināna. When matrimonial alliances united these tribes, the younger sons often received the *ism* of the maternal grandfather or one of the mother's brothers. Similarly, the *laḳabs* which the Banū Mirdās received or which they gave themselves could be confusing, for they made frequent allusion to their perseverance and temper by the use of the names of animals of the steppe, persistent and tenacious, dogs, wolves and wolf cubs, lions and lion cubs. Finally, at a late date, the copyists of manuscripts confused their *nisba* (Kilābī) with that of their neighbours (Kalbī).

Ṣāliḥ b. Mirdās al-Kilābī appears in the texts as *amīr* of Raḥba in 399/1009. In that period, the Kilāb were in firm control of the steppe of northern Syria. Luʾluʾ, the old Ḥamdānid *ghulām* who had usurped power at Aleppo, died in the same year; his son Murtaḍā al-Dawla Manṣūr succeeded him and was recognised by the Fāṭimid Imām al-Ḥākim bi-amr Allāh. The Byzantine Emperor Basil II then allowed the master of Diyār Bakr, Mumahhid al-Dawla Aḥmad b. Marwān, to attempt to reinstall at Aleppo, with the help of the Kilāb, a Ḥamdānid in the person of Abu 'l-Haydjāʾ b. Saʿd al-Dawla. Fāṭimid diplomacy, supported by a military expedition which set out from Tripoli, caused the plan to miscarry by obtaining from the Kilāb a disguised act of treason. In 402/1011-12, the Fāṭimids attempted a Ḥamdānid restoration, in their turn, with the help of a grandson of Saʿd al-Dawla; an act of treachery by the Kilāb also brought about the failure of this operation. Having saved Manṣūr b. Luʾluʾ on two occasions by their inaction, the Kilāb demanded from him the grant of *iḳṭāʿ*s in fertile regions to pasture their sheep and war horses. To rid himself of them, the master of Aleppo resorted to a well-known trick and invited a thousand Arab warriors to a feast; as soon as they were giddy with good cheer and drink, they were either massacred or thrown into the dungeons. Ṣāliḥ b. Mirdās figured among the number of the prisoners, and was subjected to the roughest treatment by Murtaḍā al-Dawla Manṣūr, who seized from him his splendid sabre and forced him to repudiate to his advantage his wife Ṭarūd, the most beautiful woman of the age. But in 405/1014 Ṣāliḥ managed to escape by acrobatic means. Some days later, having recovered his sabre, he raised an army, hastily levied in Aleppo, bringing together professional *ghulāms*, roughs and Christian and Jewish citizens. The *dhimmīs* were massacred and the warriors, including Murtaḍā al-Dawla, were captured.

Tough negotiations took place between Ṣāliḥ b. Mirdās, whose brothers were captives in the citadel, and the representatives of the people of Aleppo, whose master was in the hands of the Kilāb. Manṣūr repudiated Ṭarūd, promised Ṣāliḥ the hand of his daughter and a very heavy ransom, and above all agreed to hand over to the Kilāb half of the fiscal revenues of the principality of Aleppo. After he was freed, he only partially kept his promises. The lands around Aleppo were therefore ravaged by the Arabs who had been deceived, while there were mutterings of revolt in the town. Fearing betrayal by Fatḥ al-Ḳalʿī, the governor of the citadel, Manṣūr fled to the nearby Byzantine territory, where in 406/1016 he received a fief and built a fortress.

Ṣāliḥ showed his good sense after his victory. He arranged to have join Manṣūr the wives and daughters whom he had forgotten in Aleppo in his hasty flight, only deflowering the one who had been promised to him. He obtained from the Byzantines, at first hostile towards him, the maintenance of the commercial traffic across the region that he controlled. He advised Fatḥ, the new master of Aleppo, to respect the promises made by Manṣūr to the Kilāb. However, despite his advice, negotiations were conducted with the Fāṭimids who, since the death of Ibn Killis, had coveted northern Syria. The envoys of al-Ḥākim [*q.v.*] persuaded Fatḥ to yield to them first the town and then the citadel. Ṣāliḥ b. Mirdās did not yet control an adequate military force to drive out the Egyptian army.

The new Fāṭimid governor ʿAzīz al-Dawla Fātik was given the citadel of Aleppo in 407/1017, and swiftly made himself an autonomous prince; as master of the city, he ceded control of the plain to the Kilāb. Enjoying good relations with the Byzantines, he thus maintained peace in the region. Such independence was unacceptable to the Fāṭimids, and, in 413/1022, the regent Sitt al-Mulk, sister of the *Imām* al-Ḥākim, who had vanished, had Fātik assassinated and put two Fāṭimid officials in charge of both the citadel and the town.

In order to counter this attempt at direct Fāṭimid administration, Ṣāliḥ b. Mirdās, who at that time controlled Raḥba, Raḳḳa, Bālis, Manbidj and Rafaniyya, found allies among the Kalb of central Syria and the Ṭayyiʾ of Transjordan, who were very hostile to the Fāṭimids. From 390/1000 onwards, violent movements in Western Asia and North Africa were stirring up not only Ḳaysī and Yemeni Arab tribes, but also nomadic groups of Berbers and even disbanded black military slaves, driven to despair by the rise in prices and the scarcity of grain. The nomads, threatened by famine, resorted to violence in order to gain access to the cultivated lands.

In the spring of 1024, the death of Sitt al-Mulk, while Egypt was entering a serious corn crisis, brutally interrupted a planned rapprochement with the Byzantines, who resumed an offensive action to the south of Antioch. In the months that followed, the majority of Fāṭimid officials of proven authority posted in Syria were replaced by barely competent newcomers. In the reign of al-Ḥākim, and then under the regency of Sitt al-Mulk, the Arab tribes of Syria had already contemplated an alliance to chase out the Fāṭimid army. The Byzantine Basil II, made aware of the plan, was opposed to it, an opposition which collapsed on the death of the Christian regent. During the summer of 415/1024, Ṣāliḥ b. Mirdās began hostilities in northern Syria and entered the town of Aleppo, which the former *ḳāʾid* of Murtaḍā al-Dawla, Sālim b. Mustafād, surrendered to him. He entrusted to him the continuation of the siege of the citadel and the administration of the city to his secretary Sulaymān b. Ṭawḳ; then he reached central Syria, besieged Baʿlabakk and joined up with his allies, the

Kalbī Sinān b. ʿUlayyān and the Ṭāʾī Ḥassān b. al-Djarrāḥ. He sent the first to attack Damascus and the second to attack Ramla. The *dīwāns* of Cairo did not lend much support to the Turkish general Anūshtigin al-Duzbarī, who had been entrusted with the defence of Palestine. Distrusting him, they negotiated behind his back with the Ṭayyiʾ who, at the same time, established secret alliances with the Banū Ḳurra of Libya so as to create a united front hostile to the Fāṭimids from Aleppo to Tripoli in North Africa.

Ramla was pillaged and burnt by Ibn al-Djarrāḥ, but then al-Duzbarī regained the military advantage in Palestine. Damascus, defended by its population and by the Fāṭimid army, repelled the Kalb. In the course of the year 415/1024-5, the population of Aleppo opened its gates to the Kilāb. The Fāṭimid garrison defended itself for some time in the citadel, taking advantage of the misgivings of the city's Muslims over the Byzantine sympathies of Ibn Mirdās. Underground mining led to the destruction of the well which supplied the citadel with water and, in Djumādā I 416/June 1025, the Kilāb finally gained access to it. Ṣāliḥ b. Mirdās was in central Syria at that time and only took possession of Aleppo three months later. He allowed the Fāṭimid *dāʿī* and governor of the town to go free, but had the military governor of the citadel executed and immured the old *ḳāḍī* alive. His action had allowed him to include Aleppo and Ḥimṣ in his domain of north Syria and to extend his rule in central Syria to Baʿlabakk, Ḥiṣn (Ibn) ʿAkkār and Ṣaydā.

Having brought to success the plan which had guided his forebears for a century, Ṣāliḥ b. Mirdās gave to his principality the attributes of a mediaeval Islamic state, a fiscal apparatus, a vizier described as *ṣāḥib al-sayf wa 'l-ḳalam* and a *ḳāḍī*. His concern for order and respectability, once victory was won, contrasted with the behaviour of Ibn al-Djarrāḥ, a cowardly and cruel ruffian. But al-Duzbarī, nominated Fāṭimid governor of Damascus and Syria in 419/1028, could not tolerate Mirdāsid control over the cities of central Syria while Ḥassān b. al-Djarrāḥ continued to ravage Palestine. The Ṭāʾī, having lost the aid of the Kalb since the death of Sinān b. ʿUlayyān, appealed to Ṣāliḥ to defend Arab autonomy in Syria. The battle of al-Uḳḥuwāna, on the eastern shore of Lake Tiberias in Rabīʿ II 420/May 1029, saw the total defeat of the tribes. The Banu 'l-Djarrāḥ took to flight, and Ṣāliḥ b. Mirdās and his younger son as well as his vizier, the Christian Tādrus b. al-Ḥasan, were killed. The body of Ṣāliḥ was nailed to the gate of the town of Ṣaydā where he had enjoyed residing.

Two very young sons of Ṣāliḥ, Shibl al-Dawla Naṣr and Muʿizz al-Dawla Thimāl, shared power in Aleppo, the first holding the city, the second the citadel. They abandoned central Syria, Ḥiṣn ʿAkkār, Baʿlabakk, Ḥimṣ and Rafaniyya and regrouped all their forces in the *djund* of Ḳinnasrīn and to the west of Diyār Muḍar. The Byzantine *catapanus* of Antioch, provoked by incidents which had brought the Christians and Muslims of Maʿarrat al-Nuʿmān into conflict in the time of Ṣāliḥ and by the construction of fortresses by Muslim families in the coastal zone without his agreement, wanted to profit from the inexperience of the two princes in order to impose a protectorate on them. Refusing all conciliation and without notifying the Emperor, he sent into battle an army which was wiped out by the Kilāb at Ḳaybar in Djumādā II 420/July 1029. The reconstitution of a force capable of defeating the Byzantines in a pitched battle, two months after a total defeat in Palestine, demonstrates the rare military ability of this tribe, the importance of its manpower and the great number of its mounts, even if the valour of this cavalry is explicable in part by the abundance in northern Syria of pasturage permitting the keeping of powerful war horses. The following year, on learning that the Emperor Romanus III was arriving with a powerful army to avenge his *catapanus*, the two brothers tried in vain to negotiate. Faced with the refusal of Romanus III to accept anything other than the surrender of Aleppo, they decided to fight again. A modest squadron of Arab cavalry inflicted in the heat of Shaʿbān 421/July 1030 near ʿAzāz a memorable defeat on the huge Byzantine coalition. The booty was considerable; their allies, the Numayr, seized 300 mules loaded with gold denarii.

In this period, Naṣr b. Ṣāliḥ seized the citadel during the absence of his brother and became the sole master of Aleppo. He chose a new vizier, who was popular although he was a Christian. The latter, with the help of his brother, presided over the urbanisation of the town's suburbs which were bursting out from the confines of its walls and had a mosque built there to facilitate the integration of the newly-settled population, who were very hostile to the non-Muslims. By relying on the old Aleppo citizens and using trickery and cold-blooded violence, Naṣr had quelled a dangerous revolt. Sālim b. Mustafād, *raʾīs* of the town and *muḳaddam al-aḥdāth* [see AḤDĀTH], from his house in the glassmakers' souk, was preaching hatred of the Byzantines and had stirred up the rabble; he was caught and put to death.

In Djumādā I 422/April-May 1031, in order to protect himself against a possible attack from his brother Thimāl, Naṣr concluded peace with the Byzantines. Yaḥyā's text describes in detail the symbolic gestures which demonstrated the rapprochement between the two parties as well as embodying the clauses of the treaty. Recognising the protection exercised by the Byzantines over his principality, Naṣr undertook to pay them 500,000 *dirhams* annually. The following year, together with the new *catapanus* of Antioch, the eunuch Niḳita, he mounted an expedition to exterminate the Ḥākimī Druzes who had become numerous in the Djabal Summāḳ. He did not stand in the way of Niḳita at all when the latter occupied or rased in a few months' time the fortifications built, without the approval of Romanus III, by some autonomous Muslim families on the slope of Djabal Baḥrāʾ to the east of Bāniyās and Latakya. He allowed the Ṭayyiʾ to pass in their mass emigration from southern Syria into Byzantine territory. Romanus III was wanting to use them to put pressure on al-Duzbarī and obtain from the Fāṭimids the renewal of the traditional decennial truce suspended since 415/1024. Naṣr b. Ṣāliḥ did not intercede either on behalf of his allies of Numayr, who had to cede to the Byzantines some places in the Djazīra. He behaved in every respect as a vassal of the Emperor.

Al-Duzbarī, disturbed by the presence of the Banu 'l-Djarrāḥ close to Antioch, was unable to accept the alignment of Naṣr b. Ṣāliḥ with Byzantium. He made several incursions into northern Syria, trying to rouse the Kilāb notables against Mirdāsid preponderance. Being increasingly repulsed, the Fāṭimid governor of Syria had spread in the region a call to *djihād*. Niḳita replied that he was ready to defend the Byzantine territory but also prepared to negotiate a new truce. Naṣr b. Ṣāliḥ was afraid of being sacrificed for an agreement between Constantinople and Cairo, and sent an envoy to the Byzantine capital, bearing a hair of John the Baptist, a venerable relic, henceforth preserved in the Palace of the Basileus. The Numayr of Djazīra,

badly situated for a new Byzantine campaign, Ibn Marwān, the master of Diyār Bakr ([see MARWĀNIDS], the Banu 'l-Djarrāḥ and the Kalb, also made for Constantinople in order to take part in the conference which was to decide the fate of the borders between the Muslim and Christian domains in northern Syria and Djazīra.

The negotiations lasted for nearly four years. Romanus III died in 425/1034 and Michael IV replaced him. The truce was not definitely concluded until 429/1038-9. Among the numerous points which were discussed, one concerned Naṣr b. Ṣāliḥ, who had straight away given allegiance to Romanus III and claimed a royal Byzantine dignity which would distinguish him from the mere tribal leaders. Romanus III seized this opportunity to have Aleppo included in a specific treaty, apart from the treaty which he was proposing to the Fāṭimids. Al-Ẓāhir refused to see Aleppo, a noble Islamic frontier post, figuring in the Byzantine domain (*ḥawz*). After the death of Romanus III, Michael IV was more conciliatory, and advised Naṣr b. Ṣāliḥ to recognise his allegiance to the Fāṭimids, but since Yaḥyā's text for this period is lacking, we do not know the details of the treaties.

The periphery of the Syrian steppe was held by dynasties who all, with the exception of the Marwānid Kurds [see MARWĀNIDS] of Diyār Bakr, were descendants of Ḳays tribes. The chiefs of Numayr spread out their castles over the territory of Ḥarrān and Edessa to the north-east of that of Kilāb; the region of Mawṣil, to the south-east of Marwānid Diyār Bakr, was administered by Ḳirwāsh b. Muḳallad, a prince of ʿUḳayl; further south, the Asad of Dubays b. ʿAlī b. Mazyad controlled the outlet into Mesopotamia of the Tigris and Euphrates, disputing their territory with the Khafādja who were regrouping, even further south, on the west bank of the Euphrates towards Kūfa. The degree to which each of these chieftainships reached the level of actual states was very problematical, and the Mirdāsids were among the most favourable towards traditional Islamic urban institutions. This choice of theirs contrasted with that of other tribes in southern Syria and Egypt, who were more given to pillage than to administration.

The head of the *dīwān* in Cairo, al-Djardjarāʾī [*q.v.*], distrusted al-Duzbarī and looked favourably on the action of Naṣr b. Mirdās. The latter made a gift to al-Ẓāhir of the booty gathered at the time of the battle of ʿAzāz, and was authorised to annex Ḥimṣ to his principality, and his *laḳab* was inflated. The governor of Ḥimṣ, Djaʿfar b. Kulayd al-Kutāmī, claimed the help of al-Duzbarī, who could not accept a destabilising encroachment of the Kilāb in a region traditionally Yemeni. He wrote to the Byzantines asking them for authorisation to relieve them of Naṣr, who had just married the daughter of Shabīb b. Waththāb, their enemy, the Numayrī prince of Ḥarrān. The alliance between the Mirdāsids and Numayr, added to a possible seizure of Ḥimṣ, would have given this Arab coalition control of all the lowland roads between ʿIrāḳ and the Mediterranean or Byzantine world. Without waiting for agreement to come from Cairo, al-Duzbarī and Ibn Kulayd set out for the north. At Tall Fās, near Laṭmīn, in Shaʿbān 429/May 1038, Naṣr b. Ṣāliḥ was killed and his brother Thimāl fled to Aleppo in the company of Shabīb b. Waththāb al-Numayrī.

Thimāl set off again with his brother's children, while Shabīb b. Waththāb took along his sister, Naṣr's widow. Muḳallad b. Kāmil b. Mirdās was holding the citadel. When al-Duzbarī entered the town of Aleppo in Ramaḍān 429/June 1038, he was well received by the population, who was still hostile to the alliance between the Mirdāsids and Byzantium. Muḳallad negotiated his own departure and was able to carry off an important part of the citadel's treasure. Al-Duzbarī attacked Thimāl's principality, capturing Bālis and Manbidj but failing before Raḥba.

In 431/1039-40, Shabīb b. Waththāb al-Numayrī died and was replaced by his brother Muṭāʿin. Their sister, the Numayrī princess al-Sayyida al-ʿAlawiyya, Naṣr's widow, received Rāfiḳa-Raḳḳa which she gave, with the middle Euphrates, to her new husband, her brother-in-law Thimāl b. Ṣāliḥ. Al-Duzbarī, still in his post at Damascus, then acquired Ḳalʿat Dawsar, the future Ḳalʿat Djaʿbar, in order to protect Aleppo against an attempt at a Mirdāsid restoration, and against the advice of Cairo began a rapprochement with the Marwānid ruler in Mayyāfāriḳīn.

The Byzantines broke the truce in 431 or 432/1039-41 and attacked northern Syria with some success, obtaining from Thimāl b. Ṣāliḥ and his cousin Muḳallad offers of tribute or even of the sale of the town of Raḳḳa. Al-Duzbarī tried to play a game of his own by relying on the Banū Djaʿfar section of the Kilāb, settled in the Mudīḳ of Apamea and hostile to the Banū Mirdās as well as to the Byzantines. The tension between Cairo and al-Duzbarī intensified. The vizier al-Djardjarāʾī had the military governor of Damascus and Fāṭimid Syria publicly condemned, whereupon the army of Syria abandoned its commander-in-chief. Accompanied by ten faithful *ghulāms*, al-Duzbarī took refuge in Aleppo. Al-Djardjarāʾī asked Thimāl b. Ṣāliḥ to go and attack him, but this proved useless, for al-Duzbarī, in despair, died at Aleppo in Djumādā I 433/January 1042. The following month, after one or two spells of indecision, the citizens of Aleppo opened their gates to Muḳallad and Thimāl. The siege of the citadel in which the Fāṭimid *ghulāms* had taken refuge lasted for six months.

Thimāl's seizure of Aleppo had immediately been recognised by the Empress Theodora, who awarded him the title of *magistros* and that of patrician for his wife, and admitted into the imperial hierarchy six of his brothers, cousins and nephews. The development of commercial exchanges actually led to fierce competition between Muslim and Christian merchants, notably at Aleppo, where the Christians were better protected by a Mirdāsid prince than by a Fāṭimid governor. In 436/1045, the year of the death of al-Djardjarāʾī, a diploma from al-Mustanṣir confirmed Thimāl's investiture in Aleppo; however, relations remained strained, notably because the four to six hundred thousand dinars of al-Duzbarī seized in the citadel had only been partially returned to Cairo. In 439/1047-48, the decennial truce was renewed by the Byzantines, who were confronting in Armenia and Trebizond the first Turcoman bands as well as an inciter to *djihād* near Raʾs al-ʿAyn.

Nāṣir al-Dawla Abū Muḥammad al-Ḥasan b. Ḥamdān, governor of Damascus, and Ibn Kulayd, governor of Ḥimṣ, attacked Aleppo in 440/1048. Thimāl, at the head of several thousand men, resisted the great Fāṭimid army which, having lost its equipment and mounts in one night following the flooding of the Ḳuwayḳ river, retreated to Damascus. Thimāl, worried about the outcome of events, negotiated successively with the Fāṭimid vizier Ṣadaḳa b. Yūsuf al-Falāḥī, an Aleppo Jew, and after the latter's execution, with another Jew, Abū Saʿd, official in charge of the private treasury, who was also executed. Once his cousin, Djaʿfar b. Kāmil b. Mirdās, had killed Ibn

Nos. 1-7 = order of succession of the Banū Mirdās, Kilābī princes of Aleppo.
The mother of Ṣāliḥ b. Mirdās was Rabāb al-Rawḳaliyya or al-Zawḳaliyya.
The mother of ᶜAṭiyya was the beautiful Ṭarūd.
The mother of Maḥmūd b. Naṣr was Manīᶜa al-Sayyida al-ᶜAlawiyya, princess of Numayr.
Naṣr b. Maḥmūd's mother was the daughter of al-Malik al-ᶜAzīz b. Djalāl al-Dawla the Buwayhid.
Manīᶜa b. Maḥmūd b. Naṣr married Muslim b. Ḳuraysh, an ᶜUḳaylid prince and successor to the Mirdāsids in Aleppo.

Kulayd at Ḳafar Ṭāb, a new military expedition on a grand scale was launched against Thimāl, involving 400,000 *dīnārs* and 30,000 men, and entrusted to the elderly eunuch Rifḳ. The Emperor Constantine IX, having proposed his mediation to the Fāṭimids in vain, sent two armies to keep a watch over northern Syria. Muḳallad b. Kāmil b. Mirdās destroyed the fortifications of Maᶜarrat al-Nuᶜmān and Ḥamāt, and the Mirdāsid troops assembled before Aleppo. The Fāṭimid army, in which there coexisted with great difficulty regular soldiers, either Berbers, blacks or Turks, together with Kalbī and Djarrāḥī Bedouins, was wiped out on the Djabal Djawshīn near Aleppo in Rabīᶜ I 442/August 1050 by the ever-effective cavalry of the Kilāb. Rifḳ, wounded, was taken prisoner and died with his mind unhinged three days later. Thimāl, embarrassed by the unexpected scale of his victory, sent to Cairo his young son and his tireless wife, al-Sayyida al-ᶜAlawiyya, whose political intelligence and pertinent remarks charmed the Fāṭimid *Imām* al-Mustanṣir [*q.v.*]; the latter recognised as being in fief to Thimāl Aleppo and all the lands which he effectively held.

From 442/1050 to 449/1057-8, Muᶜizz al-Dawla Thimāl administered his principality peacefully, with the help of his successive viziers, Abu 'l-Faḍl Ibrāhīm b. ᶜAbd al-Karīm al-Anbārī, then Fakhr al-Dawla Abū Naṣr Muḥammad b. Djahīr [see DJAHĪR, BANŪ], and finally Sadīd al-Dawla Hibat Allāh b. Muḥammad al-Raᶜbānī al-Raḥbī. The two last were experts in public finance who, before or after their stay in Aleppo, performed the same function for other rulers. Aleppo enjoyed at that time low prices and great prosperity; numerous houses built in this period were still in existence two centuries later. External relations were peaceful. A tribute was conveyed each year by Ibn al-Aysar to the Byzantine Emperor who, for his part, promoted the Mirdāsid notables in the imperial hierarchy. At the same time, relations with al-Mustanṣir, to whom the above Ibn al-Aysar regularly brought a gift (*al-ḳisṭ*), were good. Thimāl supported al-Basāsīrī [*q.v.*] at the beginning of his revolt against the ᶜAbbāsid caliphate and gave him the town of Raḥba.

However, from 449/1057-8 onwards, Thimāl had to face the jealousy of his Kilāb supporters, who reproached him for treating them less well than his Numayrī allies. In exasperation, he arranged with al-Mustanṣir to exchange Aleppo for Djubayl, Bayrūt and ᶜAkkā, far from Kilābī agitation, and a Fāṭimid governor was installed at Aleppo. In 451/1060 the defeat and death of al-Basāsīrī lessened Fāṭimid prestige in eastern Syria, and Asad al-Dawla ᶜAṭiyya b. Ṣāliḥ, Thimāl's brother, occupied Raḥba, capturing the treasure and weapons which had been stored there in preparation for an expedition against ᶜIrāḳ. The Kilāb entrusted to the young prince Maḥmūd b. Shibl al-Dawla Naṣr b. Ṣāliḥ b. Mirdās and his cousin Manīᶜ b. Muḳallad b. Kāmil b. Mirdās the task of regaining possession of Aleppo. After a first unsuccessful attempt, they received the support of the *aḥdāth* of the town as well as the notables, whereas the rich

ashrāf of the ᶜAlids remained once again the most faithful to the Fāṭimid power. In Djumādā II 452/July 1060, Aleppo opened its gates to the Kilāb. The Fāṭimid governor, entrenched in the citadel, asked for help from Cairo, who commanded the governor of Damascus, Nāṣir al-Dawla Abū ᶜAlī al-Ḥusayn b. Abī Muḥammad al-Ḥasan, to go to Aleppo, where he was however coldly received. In Radjab 452/August 1060, he confronted the Kilābī army and in his turn experienced defeat at al-Funaydiḳ. Abandoned by his Kalb, Ṭayyiʾ and Kilāb allies and overcome by thirst, he was taken prisoner together with the majority of the Fāṭimid commanders. The next day, ᶜAṭiyya b. Ṣāliḥ took possession of Aleppo, which two days later fell into the hands of Maḥmūd b. Naṣr b. Ṣāliḥ. Ten days later, the last Fāṭimid troops surrendered the citadel to him and left northern Syria for good.

Thimāl b. Ṣāliḥ was meanwhile staying in Cairo. Al-Mustanṣir informed him that since the town of Aleppo had eluded him, he was resuming possession of the coastal towns. Thimāl then decided to return to Aleppo. But his nephew Maḥmūd, relying on his Numayrī allies, refused to give up the city to him, sent the poet Ibn Sinān al-Khafādjī to ask for help from Byzantium, and freed Nāṣir al-Dawla and the other Fāṭimid prisoners in order to conciliate al-Mustanṣir. After some military operations in which Maḥmūd, supported by the *aḥdāth* of Aleppo, had the worst of it, the Kilābī *shaykhs* imposed an agreement: the uncle Thimāl received Aleppo whilst the nephew Maḥmūd had the right to compensation in cash and grain. In Rabīᶜ II 453/April 1061, Thimāl entered Aleppo once more, and was soon joined there by Maḥmūd and by the clan of the Numayr, thanks to the political genius of his wife al-Sayyida al-ᶜAlawiyya. ᶜAṭiyya, Thimāl's brother, the master of Raḥba, had proclaimed himself independent.

Thimāl died at the end of 454/1062 after leading several victorious operations against Byzantine encroachments, in the mountains and plateaux situated between Antioch and Aleppo. Contrary to all expectations, he had nominated his brother ᶜAṭiyya to succeed him in Aleppo. Maḥmūd b. Naṣr protested and obtained the support of the Kilābī notables. In Radjab 455/July 1063, uncle and nephew started fighting each other, with varied fortunes for each. The following year, a truce was established. ᶜAṭiyya was to keep Aleppo and the eastern part of the principality, from Raḥba to Ḳinnasrīn and ᶜAzāz. The western part was assigned to Maḥmūd. But ᶜAṭiyya did not accept this division, and took the dangerous decision to call upon a thousand Turcoman archers who were established in Diyār Bakr. Led by their chief, Ibn Khān or Ibn Khāḳān, they were the first Turks to enter Syria as free men. Maḥmūd was forced to conclude a new truce, and ᶜAṭiyya, who in the end would be embarassed by the presence of the Turcomans, had their camp pillaged by the *aḥdāth* of Aleppo. Some Turcomans were killed, others scattered but, out of vexation, Ibn Khān placed himself at the service of Maḥmūd. The latter, after a victory at Mardj Dābiḳ [*q.v.*] and a three-months' siege, was finally able, in Ramaḍān 457/August 1065, to enter into possession of Aleppo which he had conquered in 452/1060. The *de facto* division of the principality into an eastern domain situated on the Euphrates and assigned to ᶜAṭiyya, and a western domain, comprising Aleppo and the *djund* of Ḳinnasrīn as well as a large part of the *djund* of Ḥimṣ, and assigned to Maḥmūd b. Naṣr, was accepted by all.

The period of relative peace and autonomy which northern Syria and the Djazīra had enjoyed was now coming to an end. Indeed, the equilibrium between Baghdād, Constantinople and Cairo was upset. Cairo, struck by famine, could no longer intervene in northern Syria. Byzantium was devoting all its forces to resisting the deadly Turcoman infiltrations. On the other hand, the ᶜAbbāsid caliphate had recovered a formidable vigour thanks to Saldjūḳ protection. Sultan Alp Arslān [*q.v.*], who in 455/1063 had succeeded his uncle Ṭoghril Beg [*q.v.*], was ready to use the disorder created by the undisciplined Turcomans in order to intervene in northern Syria.

In 459-60/1067-68, the Turcomans ravaged all the Byzantine territory from the Orontes to the Euphrates, and 70,000 Christian captives were recorded as being sold in the Aleppo markets. In the same year, Maḥmūd b. Naṣr, with Ibn Khān and his men, reached Ḥamāt and Ḥimṣ to the south of his principality; it was believed that he was about to cross the steppe in order to attack, in Raḥba, his uncle ᶜAṭiyya, whom the Fāṭimids were inciting to intervene against him. The *ḳāḍī* Ibn ᶜAmmār, master of Tripoli, was able to reconcile the uncle and nephew and arrange for Cairo once more to recognise the partition of 457/1065. But when ᶜAṭiyya set out for Ḥimṣ or Damascus, a town to which he put forward a claim, the prince of Mawṣil, Muslim b. Ḳuraysh al-ᶜUḳaylī, took advantage of the opportunity to seize Raḥba where the Mirdāsid was unpopular. The Sunnī *khuṭba* in favour of the ᶜAbbāsids was re-established there.

The Byzantines could not tolerate the deadly raids led against them by the Turcomans from Mirdāsid territory. The town of Aleppo was profiting from the sales of booty and captives each time an expedition returned. In 461-2/1069-70, they occupied Manbidj, then launched several operations in order to weaken the Turcomans. Maḥmūd b. Naṣr began a riposte, then concluded a truce, pledging 40,000 *dīnār*s which Constantinople agreed to lend him against the security as a hostage of his son Naṣr. The Turcomans, constantly increasing in numbers, presented for him, in 462/1070, a more serious threat than Byzantium. In Aleppo, they became involved in fights with the citizens; in the plain, they pillaged the granaries and held the peasants to ransom. Maḥmūd b. Naṣr could not hope for help from the Fāṭimids. Only the Saldjūḳ sultan was able to restore order in northern Syria. But it was necessary to pay the price and abandon the Shīᶜī *adhān* and the *khuṭba* in favour of the Fāṭimid *Imām*. Maḥmūd b. Naṣr spoke realistically to the *shaykhs* of Aleppo; if he did not yield to the Saldjūḳs, he would be smashed by them. Unhappy, but convinced, the *shaykhs* came round to his point of view. In Shawwāl 462/July 1070, the Friday prayer in the great mosque of Aleppo displayed the new attachment of the town to Sunnism and the ᶜAbbāsids. There were some reactions of popular opposition; the mosque's mats disappeared, for they belonged to ᶜAlī and not ᶜUmar. The same year, Mecca and Medina rallied to the ᶜAbbāsids, while Yemen had abandoned Fāṭimid allegiance in 459/1066. In Cairo, the old loser of Aleppo, Nāṣir al-Dawla, the strong man of the military rebellion, had offered his services to the Saldjūḳ.

The Saldjūḳ sultan Alp Arslān asked Maḥmūd b. Naṣr to follow the example of the Ḳaysī and Kurdish princes of the Djazīra and steppe, and to come and tread on his carpets as a token of submission. As the Mirdāsid was wavering, Alp Arslān camped in the spring of 463/1071 with his formidable army in front of Aleppo on a hill known from that time as Tall al-Sulṭān. But, despite a torrent of arrows and the damage which his mangonels inflicted on the walls,

Alp Arslān could not stamp out the brave and resourceful resistance of the people of Aleppo. Negotiating with the other chiefs of Kilāb factions, the sultan publicly offered to let them name a replacement for Maḥmūd b. Naṣr. The latter, having more faith in the courage of the Aleppo citizens than in the loyalty of his fellow-tribesmen, left the town. Together with his mother al-Sayyida al-ʿAlawiyya, they trod on the sultan's carpet. The Numayrī princess, wife of two Kilābī princes and mother of a third, adopted in the face of the Sunnī Turk an attitude of vanquished pride, quite different from the respectful humility which she had displayed, twenty years earlier, before the Fāṭimid *Imām*. Alp Arslān, recovering his equanimity, confirmed Maḥmūd b. Naṣr in his territories and entrusted to him the task of chasing the Fāṭimids out of central Syria, the first stage before the destruction of the Ismaʿīlī caliphate. Then the sultan went to confront the Byzantine army which had penetrated into Armenia.

Maḥmūd b. Naṣr, at the head of an army composed of Kilāb and Turcomans, went therefore to Baʿlabakk and was about to besiege Damascus when he learnt that his uncle ʿAṭiyya had left the territory of Antioch, where he had found refuge, in order to attack Maʿarrat Maṣrīn to the south-west of Aleppo. Maḥmūd b. Naṣr returned to his principality and gathered some Turkish contingents to confront an imminent Byzantine attack, but the complete victory that Alp Arslān achieved at Malāzgird [*q.v.*] in Dhu 'l-Ḳaʿda 463/August 1071 marked the final close of the offensive that the Byzantines had been conducting in Syria for a century. ʿAṭiyya having died in Constantinople, Maḥmūd b. Naṣr in 465/1072-3 took Raḥba for the ʿUḳaylids. At the end of his reign, having become distrustful and mean, Maḥmūd b. Naṣr showed himself cruel to his entourage. He had both the son and brother of his vizier, the Christian Abū Bishr, who had always helped him in hard times, beheaded and forced the latter to carry these two heads tied together around his neck; then, on a false charge, he had him killed in his turn and thrown into the well of the citadel. He quarrelled with the Kinānī *amīr* Sadīd al-Mulk ʿAlī b. Muḳallad Ibn Munḳidh [see MUNḲIDH, BANŪ], who left Aleppo for Tripoli, still a Shīʿī centre, and was able to carve out for himself, to the detriment of the Kilāb, a lordship over the middle Orontes. Maḥmūd b. Naṣr died in 467 or 468/1075, leaving an inheritance valued at one-and-a-half million *dīnārs*. He had retaken from the Byzantines the castle of Sinn in Rabīʿ II 467/end of 1074. He had designated as his successor his youngest son Shabīb, but the eldest, Naṣr, a descendant of the Būyids through his mother, was recognised as prince of Aleppo. Naṣr b. Maḥmūd showed himself to be more peaceful and more generous than his father. His army, led by the Turcoman Aḥmad Shāh, retook Manbidj from the Byzantines in Ṣafar 468/September-October 1075. The same year, Atsïz b. Uvak al-Malik al-Muʿaẓẓam [*q.v.*], the Turkish master of Damascus, penetrated the Mirdāsid domain and pillaged the middle valley of the Orontes, installing his brother Djawālī or Čawlï in Rafaniyya. After a first attempt, which failed, Aḥmad Shāh managed to expel Djawālī to Damascus. On the day of the *Fiṭr* 468, Naṣr b. Maḥmūd, completely drunk, put Aḥmad Shāh in prison and attacked his Turkish troops who were stationed in the Ḥāḍir of Aleppo; a Turkish archer killed him with an arrow.

Sadīd al-Mulk Ibn Munḳidh, having returned from Tripoli, had Sābiḳ, Naṣr's brother, designated *amīr* of Aleppo. He was hoisted with a rope along the citadel wall, for he also was dead drunk. Aḥmad Shāh received, in addition to the *laḳab* of ʿIzz al-Mulk Abu 'l-Faḍāʾil, a purse of 1,000 *dīnārs* and the promise of a monthly allowance of 30 *dīnārs*. He pacified his fellow Turks. The Kilāb of the plain proclaimed as their *amīr* Waththāb, brother of Naṣr and Sābiḳ, and the fourth brother Shabīb gave him his support, as did their cousin Mubārak b. Shibl.

Aḥmad Shāh, at the head of 1,000 cavalry, accompanied by an allied Turkish contingent commanded by Muḥammad b. Dumlādj, easily dispersed the Kilāb coalition, 70,000 cavalry and infantry, assembled near Ḳinnasrīn. The Turks captured 100,000 camels and 400,000 sheep as well as a large number of Kilābī wives and concubines. Ten thousand military slaves of Kilāb were counted. Aḥmad Shāh returned to Aleppo with all the booty taken in the tents and all the prisoners. Sābiḳ gave the order to free the prisoners and brought to live with him his sister, wife of Mubārak b. Shibl, who was one of the captives.

In Dhu 'l-Ḥidjdja 469, Ibn Dumlādj took Aḥmad Shāh prisoner by surprise and sold him for 100,000 *dīnārs* and twenty horses back to Sābiḳ b. Maḥmūd. At the beginning of 470/summer of 1077, three leaders of the Kilāb rebellion, Waththāb b. Maḥmūd, Mubārak b. Shibl and Ḥāmid b. Zughayb, went to complain about Sābiḳ to Alp Arslān, who offered them fiefs in Syria, entrusting the whole of Syria in appanage to his brother Tādj al-Dawla Tutush. Accompanied by some Turkish leaders (Afshīn b. Bakdjī, Ṣandūḳ al-Turkī, Muḥammad b. Dumlādj, Ibn Ṭūṭū and Ibn Burayk), Tutush reached Diyār Bakr with the opposition Mirdāsids. During this time, Aḥmad Shāh, having been freed, had attacked Antioch, reduced to famine, then agreed to lift the siege in return for 5,000 *dīnārs*. Fearing Tutush who was approaching Aleppo, the Turks who dwelt with Aḥmad Shāh outside the walls in the Ḥāḍir went, with Sābiḳ's authorisation, to put their wives in safety in the Castle of the Bridge over the Orontes whch Ibn Munḳidh had restored; but they could not endure the change of climate and succumbed to sickness. In Dhu 'l-Ḳaʿda 471/May 1079, Sharaf al-Dawla Abu 'l-Makārim Muslim b. Kuraysh, *amīr* of the Banū ʿUḳayl of Mawṣil, came on the orders of Malik Shāh to join forces with Kilāb and with Tutush, who were besieging Aleppo. Aḥmad Shāh was killed in the fighting.

Muslim was maintaining secret connections with Sābiḳ, of whom he was fond, and blamed the Kilāb for having called in the Turks against their own prince. Although he obtained permission to withdraw from the siege, he discreetly arranged for his soldiers to sell to the people of Aleppo all that they needed in order to subsist. His departure was followed by that of most of the Kilāb. As the Turks committed atrocities, the last Kilāb who were still participating in the siege rallied to Sābiḳ. On learning that an *amīr* from Khurāsān, al-Turkmān al-Turkī, was coming to help Tādj al-Dawla in the siege, Sābiḳ handed on to his cousin Manṣūr b. Kāmil a poem in which he implored the Kilābī *amīr* Abū Zāʾida Muḥammad b. Zāʾida to save from the Turks the last Arab principality in Syria. More than a thousand cavalry and five hundred infantry from Numayr, Ḳushayr, Kilāb and ʿUḳayl assembled with the approval of Sharaf al-Dawla. They defeated al-Turkmān in the Wādī Buṭnān and pillaged the goods of a caravan of merchants who were accompanying him. Tādj al-Dawla Tutush, in a difficult position before Aleppo, withdrew to the Euphrates and Diyār Bakr in order to pass the winter.

In spring, he resumed the campaign, conquered Manbidj and attacked a certain number of castles belonging to the Kilāb, notably the fortified town of ʿAzāz. At the same time Abū Zāʾida was massacring any isolated groups of Turkish cavalry whom he took by surprise. It was a very hard war, paid for by the peasants and merchants. Finally, Tutush undertook a forced march on Aleppo to take it by surprise, but the Kilāb were victorious. Tutush then left northern Syria and set out for Damascus, which Atsïz surrendered to him, since he was in difficulties facing a Fāṭimid counter-offensive.

According to Ibn al-ʿAdīm, Tutush then entrusted the main part of his army to his general, the Turk Afshīn, who returned northwards, pillaging the villages around Baʿlabakk and attacking Rafaniyya. Some caravans of merchants, coming from or going to Tripoli, were there; Afshīn and his men massacred the merchants, raped the women, pillaged the merchandise, with the carnage lasting for ten days or more.

Afshīn was received by the lord of the Castle of the Bridge Abu 'l-Ḥasan Ibn Munḳidh, and promised to spare Kafar Ṭāb which belonged to the latter. Afshīn resumed his march and, thanks to mangonels which accompanied him, was able to capture by bombardment or assault all the fortified towns and all the defensive towers of the Djabal Summāḳ, as well as some villages lying to the east of Maʿarrat al-Nuʿmān. The populated areas were pillaged, sometimes burnt along with their inhabitants, the women and children who had escaped were raped or captured, and the men killed. But failing before Tall Mannas, Afshīn was satisfied with imposing on its inhabitants a tribute of 5,000 *dīnārs*.

Tutush, on being informed of what was happening, made for Kafar Ṭāb, but the army had left the region to go to ravage the Byzantine lands around Antioch. Tutush returned to Damascus, attempting to reassure the people on his way. When Afshīn and his men left for the east, the plain of northern Syria no longer had a single village intact. Famine was widespread. Wheat was selling for a *dīnār* for six *raṭls* and cases of cannibalism were recorded. The inhabitants were leaving to seek refuge in the Djazīra in the ʿUḳaylid lands.

In Ramaḍān 472/March 1080, Sharaf al-Mulk b. Ḳuraysh al-ʿUḳaylī, informed of the situation in northern Syria, judged the moment to be propitious for intervention. A letter from Sābiḳ b. Maḥmūd proposed giving up Aleppo to him. Accompanied by a convoy of provisions, he marched on Bālis and then on Aleppo, but Sābiḳ refused to open the gates of the town to him. Thanks to the help of the *aḥdāth*, and especially of the starving population, Muslim was able to enter without a fight at the end of the year 472/June 1080. Muslim found such a state of famine in Aleppo that he wanted to leave the town, but Ibn Munḳidh persuaded him to stay. Sābiḳ had taken refuge in the citadel, but his brothers Shabīb and Waththāb, entrenched in the palace, succeeded in winning back the favour of the citadel's garrison. Sābiḳ was handed over to his brothers and Shabīb became master of the citadel. Negotiations took place with Sharaf al-Mulk, with Ibn Munḳidh as intermediary. Muslim undertook to marry Manīʿa, daughter of Maḥmūd and sister of Sābiḳ, and to give important fiefs in the region of ʿAzāz to Shabīb and Waththāb and in that of Raḥba to Sābiḳ. The three brothers left the citadel, where there was no water, and thus the Mirdāsid state came to an end in 472/1080.

The three brothers continued to play a role as local lords in northern Syria, still changing sides as easily as ever, first helping Muslim b. Ḳuraysh, then allying themselves with his enemies. At the time of the Franks' arrival in Syria in 491/1098, Waththāb b. Maḥmūd was leading a contingent of Kilāb who tried to block their advance.

The Banū Mirdās offer an example of those Ḳaysī princes of the Syro-ʿIrāḳī steppe who succeeded in implanting within a sedentary territory an ordinary state structure which functioned for half-a-century in the manner of the quasi-autonomous provinces of the caliphate. The agricultural richness of the plateaux and valleys of northern Syria and the intensive trade between Mesopotamia and the Mediterranean via the Euphrates and Aleppo assured them of good revenues. They were helped in the management of the public finances by viziers, often Christians, and in meting out justice by Imāmī Shīʿī *ḳāḍīs*, chosen from great ʿAlid or simply Ḳaysī families. They were able, in case of necessity, to gather an army of quality, comprising Kilābī contingents of lightly-armoured cavalry but also *aḥdāth* of Aleppo, whose militias had acquired an institutional character and whose commander was one of the principal notables of the town. They conducted a skilful diplomacy of maintaining a balance between the declared ambitions of the Byzantines and Fāṭimids regarding northern Syria, depending for support alternately on one or the other when they were forced to meet an invasion with military resistance. This policy was more suitable for Aleppo than that of Sayf al-Dawla and his successors. The town experienced under the Kilābī princes some years of great prosperity, and on this point we cannot follow the contemporary historians who reduce their action to a Bedouinisation of the city and its region. This was, furthermore, a very productive period for Arabic poetry both at the court of Aleppo and in cities such as Maʿarrat al-Nuʿmān, where one must remember that Abu'l-ʿAlāʾ was only the most brilliant representative of a pleiade of men of letters.

But, later on, the weakness of the Fāṭimids, facing in Egypt a serious financial and grain crisis, the incapacity of the Byzantines to resist the Turcoman infiltrations, then the defeat of the Basileus by the Saldjūḳs, broke this skilful balance, and the Mirdāsids were forced to recruit Turcomans in their turn and to create for themselves an army of slaves and mercenaries. An analysis of the changes that took place in the tactics of swordmanship on horseback and in weapon technology would enable us to understand how the Mirdāsids were easily able to overcome heavy Byzantine armies and why they succumbed in their turn under the blows of small Turcoman contingents.

From then on, the power of the dynasty was shown to be fragile. Old causes of weakness were still present: jealousy of the Banū Mirdās among other Kilāb groups, even though each was given a domain around a stronghold; disputes between Mirdāsid princes; and intervention of their allies from Numayr, ʿUḳayl and Kināna in the affairs of Aleppo. To these was added the behaviour of the Turcomans, who ruined the countryside and trade. No longer being able to maintain order in the province, the Mirdāsids lost their legitimacy in the eyes of the inhabitants and had to yield their principality to the ʿUḳaylids. The new Turkish and Kurdish military dynasties were not slow to take over. However, the fact that until the Crusades, some Mirdāsid fiefs had survived in northern Syria shows how deeply rooted this dynasty was in a region where the Kilāb had been established for several centuries.

MIRDĀS B. UDAYYA, Khāridjī leader in Baṣra, killed in 61/680-1. He belonged to the Rabīʿa b. Hanẓala b. Mālik b. Zayd Manāt (called Rabīʿa al-Wusṭā, *Naḳāʾiḍ*, ed. Bevan, 185, 5 = 699, l. 11; *Mufaḍḍaliyyāt*, ed. Lyall, 123, l. 12, 772, l. 8), a branch of the tribe of Tamīm which supplied so many leaders to the Khāridjī movement. His father was called Ḥudayr b. ʿAmr b. ʿAbd b. Kaʿb and Udayya was his mother's or grandmother's name; she belonged to the tribe of Muḥārib b. Khaṣafa (Ibn Durayd, *Kitāb al-Ishtiḳāḳ*, ed. Wüstenfeld, 134; Ibn Ḳutayba, *Kitāb al-Maʿārif*, ed. Wüstenfeld, 209; al-Ṭabarī; Mubarrad; al-Balādhurī; cf. *Bibl.*). He is often called by his *kunya* Abū Bilāl.

His brother ʿUrwa b. Udayya had been one of the instigators of the Khāridjī movement of secession at the battle of Siffīn; he himself had taken part in the movement and had fought against ʿAlī at al-Nahrawān (38/658 [*q.v.*]); after this defeat he gave up all political activity although, like his brother, he remained faithful to his old opinions; but he declared himself against armed insurrection, political assassination (*istiʿrāḍ* [*q.v.*]) and the participation of women in the Khāridjī movement. These moderate views, which Mirdās retained till the end of the caliphate of Muʿāwiya and which caused the extremists to class him among the *ḳaʿada* (quietists) of the Khāridjīs, made it all the more remarkable when he came out openly and actively against the excesses of the governor of Baṣra, ʿUbayd Allāh b. Ziyād, in his repression of Khāridjism. A women named al-Baldjāʾ (see *Folia Orientalia*, xii [1979], 203-4) had been cruelly martyred by the governor. Mirdās's indignation was so aroused that he left Baṣra with 40 of his followers and went to al-Ahwāz on the Fārs frontier, where he held out for a long time without committing any of those acts of fanaticism usual among the Khāridjīs and confined himself to imposing a levy equal in value to the stipend (*ʿaṭāʾ*) which was legally due to him and his companions (60/680). ʿUbayd Allāh b. Ziyād sent against Mirdās the Kilābī chief Aslam b. Zurʿa at the head of 2,000 men. They met near a village called Āsak (or Mīdjās, according to a verse quoted by Yāḳūt, iv, 712-13) but the Khāridjīs, in spite of their greatly inferior numbers, defeated him. In the following year, a second expedition of 4,000 men under the Tamīmī ʿAbbād b. Akhdār was organised by Ibn Ziyād; he found the Khāridjīs encamped in front of Darābdjird. It was a Friday, and the two parties agreed to finish their prayers before fighting. But the government troops, breaking the oath they had sworn, fell upon the Khāridjīs while they were still praying and massacred them. Mirdās's head was cut off and taken to Ibn Ziyād.

This episode, insignificant in itself, provoked a tremendous reaction throughout ʿIrāḳ in view of the fame which the piety and moderation of Mirdās had brought him. His death was promptly avenged by ʿUbayda b. Hilāl, who was later to become one of the leaders of the Azraḳī rising, and it was in the name of Mirdās that Khāridjīs rebelled again on the death of Yazīd I (64/683). The heroism and death of Mirdās were sung by several poets, notably the famous ʿImrān b. Ḥiṭṭān [*q.v.*]; his memory was cherished for long in Khāridjī circles and especially in ʿUmān, the centre of the Ṣufriyya (al-Mubarrad, 533, l. 14 = *Aghānī*[1], xvi, 154). The latter, whose intransigeance is much less marked than that of the Azraḳīs, may rightly regard Mirdās as their predecessor (cf. Haarbrücker, *Asch-Scharastâni's Religionspartheien und Philosophen-Schulen*, ii, 406, from the *Kitāb al-Tabṣīr fī 'l-dīn* of Shahfūr b. Ṭāhir al-Isfarāʾīnī (Brockelmann, I[2], 484, S I, 669); on the other hand, the Muʿtazilīs held that Mirdās had only rebelled under compulsion (*munkiran*) and the Shīʿīs even denied that he was a true Khāridjī (al-Mubarrad, 560-1).

Mirdās's brother, ʿUrwa b. Udayya, does not seem to have taken part in the insurrection; but this did not save him from persecution by Ibn Ziyād, who had him arrested and executed shortly after the death of Mirdās; the version which puts his execution before the rising of Mirdās in 58/678 (al-Ṭabarī, ii, 185) is less probable.

Bibliography: The fullest and most complete account is that of Mubarrad, *al-Kāmil*, ed. Wright, 584-96, without indication of source; Balādhurī, *Ansāb al-ashrāf*, Istanbul ms. ʿĀshir Efendi, fols.

386a-387b, is very close to but not identical with Mubarrad's and quotes a large number of verses. He also omits the *isnād*. Ṭabarī, ii, 186-7, 390-1 relies on two sources, Wahb b. Djarīr and an anonymous one, of which the former does not seem very reliable and the latter follows Mubarrad and Balādhurī, but is much shorter; Yāḳūt, i, 61-2 (cf. also ii, 434, l. 1) seems to have used an independent source. Ibn al-Athīr, *Kāmil*, iii, 428-30, iv, 81-2, harmonises Ṭabarī and Balādhurī, and follows Mubarrad. Dīnawarī, *al-Akhbār al-ṭiwāl*, ed. Guirgass, 278-9, knows the episode, but wrongly attributes it to the Azraḳīs (*sic*) and does not even mention Mirdās. See also Wellhausen, *Die rel.-pol. Oppositionsparteien*, in *Abh. G. W. Gött.*, phil.-hist. Kl., N.S. v/2 (1901), 25-7.

(G. Levi Della Vida)

MĪRGHANIYYA or khatmiyya, the dervish order or *ṭarīḳa* founded by Muḥammad ʿUthmān al-Mīrghanī, more commonly called the *Khatmiyya* from its founder's claim that it is the seal (*khatm*) of all *ṭarīḳas*. The *nisba* of the founder does not appear in such works as al-Samʿānī's *K. al-Ansāb* or al-Suyūṭī's *Lubb al-albāb*, but may be derived from the place-name Marghan in Ghūr, for family traditions attest to a long residence in Central Asia. The prefixed *A-* is a Western form due to a supposed derivation from *al-amīr al-ghanī*.

Towards the end of the 18th century, the family, after a short residence in India, drifted back to Mecca, whose *shurafāʾ* recognised their claim to descent from the Prophet. Muḥammad ʿUthmān's grandfather, ʿAbd Allāh al-Mahdjūb (d. 1207/1792), was a well-known Ṣūfī, and Muḥammad ʿUthmān followed in his footsteps. He was initiated into the Ḳādiriyya, Shādhiliyya, Naḳshbandiyya, Djunaydiyya and the Mīrghaniyya of his grandfather, whence his later claims to have gathered up all the *ṭarīḳas* into his own. His *shaykh* was pre-eminently that remarkable man, Aḥmad b. Idrīs al-Fāsī (1173-1253/1760-1837 [see aḥmad b. idrīs]), to whose teaching and inspiration was due the reawakening of the *ṭarīḳas* at the beginning of the 19th century. Aḥmad sent him as his propagandist to Egypt and the Eastern Sudan (1817) just before the Turko-Egyptian occupation. He was acclaimed in Nubia and Dongola, but was not well received by the heads of the old orders in the Fundj kingdom. On his return to Mecca, he continued to serve Aḥmad, following him into exile at Ṣabyā in ʿAsīr until after his death, when he returned to Mecca. There followed a period of rivalry with Aḥmad's most famous pupil, Muḥammad b. ʿAlī al-Sanūsī (1792-1859 [*q.v.*]), and Ibrāhīm al-Rashīd (d. 1874), founder of the Rashīdiyya, each of the three claiming to be Aḥmad's successor and founding independent *ṭarīḳas*. Muḥammad ʿUthmān won the support of the *shurafāʾ* of Mecca and developed his own rule on different lines to that of his master. He belonged to the class of ecstatic mystics and was more influenced by the Naḳshbandiyya than by the orthodox doctrinal and reformist ideas of Aḥmad b. Idrīs. The formula naḳshdjam was adopted as mystic symbol of the various *silsilas*, "chains", concentrated into himself. He sent his sons into different countries, South Arabia, Egypt, Eastern Sudan and India, in each of which a nucleus of followers had been formed before his death (1268/1851) at al-Ṭāʾif, to which he had withdrawn in consequence of the hostility of the *ʿulamāʾ* of Mecca.

His eldest son, Muḥammad Sirr al-Khatm, succeeded him as *Shaykh al-Ṭarīḳa*, but his death shortly afterwards initiated a period of family rivalry and dissensions which was not brought to an end until the rise of the Mahdī [see al-mahdiyya]. Another son, al-Ḥasan (d. 1869), had settled at Kasala, where he founded the township of Khatmiyya which soon eclipsed all other centres as the seat of the order (on his authority among the eastern tribes, see Münzinger's account quoted in *Sudan Notes and Records* [1940], 47-50).

When Muḥammad Aḥmad proclaimed himself the Mahdī of the Sudan in 1881, the Mīrghaniyya, like other established *ṭarīḳas* which had vested interests in the maintenance of the Egyptian régime, strongly opposed his claims (see ʿUthmān Diḳna's letter to the Mahdī, in Wingate, *Mahdism and the Egyptian Sudan*, 1891, repr. London 1968, 529). Al-Ḥasan's son, Muḥammad ʿUthmān al-Ṣaghīr (d. 1886), excommunicated the Mahdī and headed the Banī ʿĀmir, Shukriyya and other eastern tribes in their resistance, until Kasala fell in 1885 to ʿUthmān Diḳna, who burnt the *zāwiya* and tomb of al-Ḥasan.

After the reoccupation in 1898, the new government sought the reconsolidation of Mīrghanī authority. They sent to Egypt for Muḥammad ʿUthmān's sons, Aḥmad and ʿAlī, and rebuilt the tomb of al-Ḥasan. Although the role of the Mīrghaniyya in aiding the Egyptians and English had alienated many, and they were opposed by the Mahdī's adherents, the leaders were able to regain their power and increase their following, owing to the influence which their hereditary *baraka* exercised upon the populace. Aḥmad's death in 1928 left ʿAlī as the undisputed head of the order, although other regional heads were technically equal in status.

When the Mīrghaniyya was at the height of its influence, the government's recognition of the Mahdī's son, ʿAbd al-Raḥmān, during the First World War, which was followed by the reconstitution of the Mahdiyya sect, inaugurated an era of rivalry between the two religious movements in which their political role came to assume predominance. The elections of November 1953 for a Sudan Parliament resulted in the victory of the National Unionist Party supported by the Mīrghaniyya over the *Umma* Party supported by the Mahdiyya.

Distribution. The main expansion of the order has been in the Eastern Sudan, where it is the predominant *ṭarīḳa*. It is strong among the merchant communities and educated classes throughout the whole country, whence its power in politics. Among the ordinary population, whilst groups will be found all over the country, it is strongest in the north (Donḳola and Ḥalfa Provinces), among the Djaʿliyyīn, and in the east and Eritrea, especially among the Badja tribes (ʿAbābda, Ḥalanḳa, Ammarʾar, Banī ʿĀmir and Ḥabāb). In Kordofān there is a branch order, the Ismāʿīliyya. It was propagated in Egypt by Abū Ḥurayba, an Egyptian pupil of the founder, under whose name the *ṭarīḳa* is sometimes known, and has *zāwiyas* in the chief towns. It has followers in Abyssinia (Addis Ababa and among the Guma), whilst in Arabia only small groups survive in the Ḥidjāz, ʿAsīr and Yemen.

M. ʿUthmān, *op. cit.*, S II, 810. *Al-Madjmūʿa al-Mīrghaniyya* (various eds.) includes the most important devotional works of these, *al-Rasāʾil al-Mīrghaniyya* (1939), a collection of 12 essays dealing with the rules of the order and methods of performing of the *dhikr*, the *Minḥat al-aṣḥāb* by Aḥmad b. ʿAbd al-Raḥmān al-Ruṭbī being especially

valuable. See also A. Le Chatelier, *Les confréries musulmanes du Hedjaz*, Paris 1887, 226-48; J.S. Trimingham, *Islam in the Sudan*, 1949, London 215-17, 231-5. (Ed.)

MĪRĪ (a.), a shortened form of *amīrī*, in Ottoman Turkish *emīrī*, literally, "pertaining to the commander or governor, the *amīr*". Although in early Islam this latter title [*q.v.*] used to denote the head of the Muslim community, it was downgraded over the ages, and during Ayyūbid and Mamlūk times was given to military officers, including low-ranking ones. Under the Ottomans, the term resumed its initial importance and was singled out to designate assets that belong of right to the highest Muslim authority, the Sultan. Throughout Ottoman history, it was used as a noun meaning "lands belonging to the government", "land tax" levied from them, as well as "the public treasury".

Muslim jurisprudence drew a distinction between privately-owned lands, *mulk* (either *ʿus̲h̲r* or *k̲h̲arād̲j̲* land, possessed by Muslims or by non-believers, respectively) and state property, *arḍ al-mamlaka*. In earlier years, the latter was designated by several names (e.g. *k̲h̲āṣṣ*), and it was only under the Ottomans that it assumed the name *mīrī*. Since the absolute ownership, the *raḳaba*, belonged to the *bayt al-māl* [*q.v.*], *mīrī* lands could only be leased by the peasants who enjoyed the rights of usufruct, the *taṣarruf*, and paid the land-tax in return. They could neither sell or grant nor endow these lands, although in later years ways were elaborated to circumvent these restrictions, e.g. the establishment of *waḳf g̲h̲ayr ṣaḥīḥ*.

Upon the conquest of a given area by the Ottomans its agricultural lands, the most promising source of income, were declared *mīrī*. This was explicitly stated in the *Ḳānūn-nāme* of the *wilāyet* (e.g. Wilāyet-i Mora, in Barkan, *Kanunlar*, 326), then recorded by the land registration (*taḥrīr*) committee in the relevant *daftar-i k̲h̲āḳānī* [*q.v.*]. As long as the peasants tilled the land and paid its taxes (e.g. the *čift resmi*, *ʿus̲h̲r*) no one could interfere with their holdings or with the right of their descendants to inherit them.

The taxes that accrued from these lands were assigned as salaries for the upkeep of the Ottoman army, either directly (the *tīmār* system) or through the *emānet* [see emīn] levying system that accrued to the treasury. As late as the 10th/16th century, the administration tried to overcome the deterioration that occurred in these systems. Vacant *tīmār*s as well as ordinary *mīrī* villages were in the various forms of *k̲h̲āṣṣ* [*q.v.*] leased out to *multazim* tax farmers. The taxation unit (*muḳāṭaʿa*) was farmed out, and in return the lease holder was expected to convey to the state treasury the annual *mīrī* tax (*māl-i mīrī*, *aṣl-i māl*, etc.) due. Two ways were resorted to in order to compensate the treasure for the depreciation in the actual value of the *mīrī*: the tax farmer had to pay an advance, *māl-i muʿad̲j̲d̲j̲ele*, upon his nomination, very often at a higher rate than the original tax returns. Secondly, there were other sums that were added over the years under various names (*fāʾiḍ*, *ḍamāʾim*, etc.), and gradually became part of the established tax. The *multazim* or the *muḳāṭaʿad̲j̲ī* were granted their lease for a limited period of one to three years, and although the *iltizām* system replaced the *emānet*, toward the end of the 11th/17th century it underwent certain modifications. The relatively short term of office of the tax farmers prevented any meaningful interest in the well-being of the peasants who cultivated the *mīrī* plots under their control. A third method was then introduced by the Treasury, the life-long lease or *mālikāne* [*q.v.*]. Here, too, the *multazim* undertook to pay the annual *mīrī* due and he retained the surplus amount which he had collected. He did not, however, have to apply for renewal, hence the *mīrī* became more reminiscent of *mulk*. During the 12th/18th century, although the notion of state absolute ownership over all *mīrī* lands prevailed, its actual control over the tenants and lease holders diminished as the empire declined.

During the *Tanẓīmāt* [*q.v.*] period, an overall attempt was made to redress this situation by way of re-establishing the state's authority over the *mīrī* holders. Many of the rights which they had gradually usurped were legitimised and codified, whereas future attempts to impair the status of the *mīrī* became contingent upon the specific consent of the central government. The construction of new buildings or the planting of trees on *mīrī* land, which might *ipso facto* grant full ownership rights, was forbidden (unless specifically authorised) by the land law of April 21, 1858 (articles 25, 31); official permission became imperative to enable the sale of *mīrī* plots, and so was the division of *mīrī* lands held in partnership or their mortgaging (articles 36, 17, 116, respectively). *Mīrī* lands left fallow for over three years would be confiscated by the state (articles 68-71).

The distinct and clear establishment of the differences between *mīrī* and *mulk* could not change the historical trend involving the transformation of the former into the latter. This tendency reached fruition in Egypt, where close links with the world economy brought about a rapid increase of *mulk* properties to almost one-third of the land by the end of the 19th century. At that point, the Egyptian *mīrī* (referred to as *k̲h̲arād̲j̲iyya*) was ultimately incorporated into the *mulk*. In the Fertile Crescent, this process was much slower; *mulk* lands hardly increased, and in a series of laws passed in 1913, and then in Syria and ʿIrāḳ in the early 1930s, ownership rights over *mīrī* were extended, although certain restrictions remained valid well into modern times. Thus in the middle of the 20th century, most lands of the Fertile Crescent (with the exception of Lebanon) were still *mīrī*. Moreover, although the 1858 law explicitly prohibited any collective ownership (*mus̲h̲āʿ* [*q.v.*]), this clause was also evaded. No general registration was carried out (in southern ʿIrāḳ, not even theoretically), and the villagers, fearing conscription and taxation, registered their land in the name of tribal heads or city notables. In practice, however, they continued to cultivate their land according to the traditional ways. Unlike Egypt, where a full land census was completed just after the turn of the century, a state of anarchy persisted in the Fertile Crescent in this field up until 1914. Land settlement and registration of titles progressed very slowly during the Mandatory period and in the independent succession states. Even when the status of *mīrī* was abolished (e.g. in Israel from 1 January 1970), it still remains valid in unsettled lands. Even the term "pure *mīrī*" (*mīrī ṣirf*), referred to by the registration commissions of the 19th century in the Fertile Crescent, has not disappeared. In contemporary ʿIrāḳ, where modern legislation introduced separate categories for *mīrī* turned almost fully to private ownership (*lazma*, *tapu*), *mīrī ṣirf* still exists for unsettled lands which are still within the realm of state formal ownership.

MIRKĀS or Mirḳās (a.), a kind of mutton sausage. There would probably be no reason to devote an article to this culinary speciality had it not enjoyed for some time in Europe, and especially in France, an unexpected success, being known as "merguez", after the arrival of a considerable number of Maghribī immigrants and above all, repatriates from the lands of North Africa, where the word and the thing itself were not widespread, it seems, until a relatively recent period. Thus there is a problem worthy of examination.

Sausages are not unknown in the East, where they are called by the Turkish name *sudjuḳ*, or the Latin *laḳāniḳ/maḳāniḳ/naḳāniḳ* which Dozy has already mentioned (*Suppl.*, s.vv.), tracing them back to *lucanica*, which shows a Roman influence, and remarking that Ibn al-Ḥashshāʾ's gloss on the *Manṣūrī* of al-Rāzī explains the first of these three words as the Maghribī *mirkās*. In the West also, E. Laoust notes (in *Mots et choses berbères*, 79 and n. 7) the existence, in Berber lands, of sausages, the word for which varies according to the local dialects. In any case, M. Beaussier, whose *Dictionnaire* dates from 1887, records, under the radical *r-k-z*, a word **mərkāza*, coll. **mərkāz*, but adds that it is Tunisian; Marcel Cohen, in *Le parler des Juifs d'Alger*, Paris 1912, 82, notes the same word with a *-g-*, as also David Cohen who, in his monograph on *Le parler des Juifs de Tunis*, Paris-The Hague 1964, 152-3, has *mərgāž* in a colourful text which provides information on the preparation of these sausages with mutton, fennel seeds, garlic and a paste made from red peppers. G.-S. Colin (in his ed., with E. Lévi-Provençal, of al-Saḳaṭī, 33-4) observes on the one hand that the writing of the word with *-k-* or *-ḳ-* in the ms. used shows the difficulty caused by the wish to render a *-g-* and, on the other hand, since it is obviously not a Bedouin word, that it is possible to regard *mirkās/mirḳās*, whose origin is unknown, as a Roman borrowing which has been preserved in Maghribī dialects under strong Spanish influence. It may furthermore be remarked that, under the radical *r-k-s*, Dozy had already noted that *mirkās*, pl. *marākis*, means "in the Maghrib, sausage, chitterlings, black pudding"; he refers in this connection to several sources, among which the *Vocabulista* of Pedro de Alcala translates (295) *merqûze* [pl.], *meŕquiç*, as *longanizo* (= sausage) and (315) *merqûz al-kanžîr* [pl.] *meŕquiç al-ḳanžîr*, as *morcilla* (= black pudding or chitterlings). This latter expression probably relates to a preparation in use among the Mozarabs and not among the Muslims, since Islam not only forbids the consumption of pork (*khinzīr* [*q.v.*]) but also of blood that has been shed [see dam in Suppl.]. In Muslim circles, **mirgāz* thus meant, as *mərgāz* does today, sausages prepared entirely with mutton. Moreover, the *Kitāb al-Ṭabīkh*, an anonymous work published in 1965 at Madrid by A. Huici Miranda, under a significant title *La cocina hispano-magrebi en la época almohade*, contains in the first lines of the ms. the recipe for the ordinary *mirkās*, which is considered very digestible. It is made from minced leg of mutton, kneaded with a little oil and with the addition of various spices and ingredients: pickle, pimento, dried coriander, nard and cinnamon. There is then added to it 3/4 of its weight in fat, which it is sufficient to cut into small pieces, without grinding or mincing, for they must be melted on the stove; everything is kneaded once more and put into skins from the intestines of mutton washed as a preliminary. The sausages are fried in a mild oil, then sprinkled with an oil and vinegar dressing or a more elaborate sauce. A little dried cheese and some eggs can also be added to the meat itself (*op. cit.*, 24). Other recipes were certainly in use.

These "merguez" were not only prepared in private homes; they were also sold outside, in the shopping streets and on stalls, as appears in works of *ḥisba* [*q.v.*], which especially enjoin the *muḥtasib* to watch the *ṭabbākhūn* (whom one hesitates to describe as "caterers") and ensure that they use fresh products and not (like so many sellers of merguez today) spoiled meat which is cheaper (Ibn ʿAbdūn, 45; Fr. tr., 124) and oblige them to work in public view (*fī mawḍiʿ ẓāhir*), using very smooth chopping boards so as to avoid splinters penetrating the sausage meat; during preparation, the *ṭabbākhūn* must drive away the flies with fans; some advice is also given them on the details of preparation, the proportions to observe and the ingredients to use (al-Saḳaṭī, Ar. text, 31, 36; Fr. tr. 165, 175-6, based on a corrected and extended text).

Literature does not appear to make frequent allusion to these "merguez", and H. Pérès has only found a few lines to cite (*La poésie andalouse, en arabe classique, au XIe siècle*, Paris 1953, 315-16), where the *mirkās* gives rise to a macabre comparison with the fingers of a crucified man.

Lévi-Provençal, Cairo 1955 (tr. *idem*, in *Séville musulmane*, Paris 1947); Saḳaṭī, *Kitāb fī ādāb al-ḥisba*, ed. G.-S. Colin and Lévi-Provençal, Paris 1931 (Span. tr. P. Chalmeta, in *al-And.*, xxxii/1-2 [1967], 125-62, 359-97, xxxiii/1-2 [1968], 143-95, 367-420).

(Ch. Pellat)

MĪRKHWĀND, Muḥammad b. Khwāndshāh b. Maḥmūd, (836-7 to 903/1433-4 to 1498), Tīmūrid historian under Sultan Ḥusayn Bayḳara in Harāt, author of the universal history *Rawḍat al-ṣafāʾ fī sīrat al-anbiyāʾ wa 'l mulūk wa 'l khulafāʾ*, written in Persian.

He was born in 836-7/1433-4 into a Bukhāran *sayyid* family. His father Burhān al-Dīn Khwāndshāh spent most of his career in Balkh, with a sojourn also in Harāt where he was connected with the eminent scholar and *Shaykh al-Islām*, Bahāʾ al-Dīn ʿUmar Djaghāraʾī. Mīrkhwānd received a comprehensive education and early became interested in history, but produced nothing until he won the patronage of Mīr ʿAlī Shīr Nawāʾī [*q.v.*], who gave him quarters at the Ikhlāṣiyya *khānaḳāh*, part of the complex which Nawāʾī began in 880/1475-6. Mīrkhwānd's brother, Sayyid Niẓām al-Dīn Sulṭān Aḥmad, served as *ṣadr* for Badīʿ al-Zamān b. Ḥusayn Bāyḳarā in Astarābād.

Mīrkhwānd had poor health, and part of his history was written on his sickbed. Near the end of his life, he withdrew from society to the Gāzargāh shrine, but due to a wasting illness he returned to Harāt city in Ramaḍān 902/May 1497, and died on 2 Dhu 'l-Ḳaʿda 903/22 June 1498 (sometimes erroneously given as 2 Radjab). He was buried in the cemetery of Bahāʾ al-Dīn ʿUmar.

The *Rawḍat al-ṣafā*ʾ is arranged in seven volumes, with an epilogue (*khātima*) on geography:

1. From the creation to Yazdagird
2. Muḥammad and the Rāshidūn caliphs
3. The twelve Imāms, the Umayyads and the ʿAbbāsids
4. Dynasties contemporary with the ʿAbbāsids
5. Čingiz Khān and his successors
6. Tīmūr and his successors to the death of Abū Saʿīd
7. Sultan Ḥusayn Bāyḳarā and his sons up to 1522-3
8. *Khātima.*

The seventh volume was written after Mīrkhwānd's death by his daughter's son Khwāndamīr [*q.v.*], who also completed the *khātima*, finished apparently after 907/1502. The history is based on a large number of Persian and Arabic works, some mentioned in the preface, others in the text. It enjoyed exceptional popularity throughout the Turco-Iranian regions, was used in many later historical compilations and translated several times into Turkish: into Ottoman in the 10th/16th and 12th/18th centuries, and into eastern literary Turkish in the 12th/18th and 13th/19th. It was widely used by European historians from the 17th century, and until the late 19th century remained a major source for the history of mediaeval Iran. The seventh volume, almost identical with the corresponding part of Khwāndamīr's *Ḥabīb al-siyar*, is still useful, as are some earlier sections based on works now lost, notably the Saldjūḳid *Malik-nāma* and the 8th/14th century *Tārīkh-i Sarbadārān*. Volume vi also contains occasional information from the author's own observation.

(A. Beveridge — [Beatrice Forbes Manz])

MĪRMĪRĀN [see mīr-i mīrān].

al-**MIRRĪKH**, the planet Mars. The etymology of the name is unknown. The sphere of Mars is the fifth sphere of the planets. It is bounded on the inner side by the sphere of the sun and on the outer side by the sphere of Jupiter, and its breadth is according to Ptolemy (xx, 376) 998 miles. Its period of revolution is estimated at 1 year, 10 months and 22 days. In about 17 years, after 9 revolutions, Mars comes back to the same spot in the heavens; it spends about 40 days in each sign of the zodiac and covers about 40 minutes each day. It is said to be one-and-a-half times the size of the earth.

Astrologers call Mars *al-Naḥs al-aṣghar*, "the minor misfortune." It is the planet, which next to Saturn, is credited with the most ominous omens and effects, war, revolutions, death, conflagrations, etc. The character of those born under Mars is in keeping with this.

MĪRTULA or Mārtula/Martula, Arabic forms of the name Mertola (Span. Mértola), a small town of southern Portugal, situated on the Guadiana (Wādī Ana) at 35 miles/55 km. from the mouth of that river. This place, the ancient Myrtilis of the Romans, enjoyed a certain importance during the period of Islamic domination. It depended administratively on Béja [see bādja] and, according to Yāḳūt and other geographers, was the best-defended stronghold of all the west of the Iberian peninsula. At the end of the 3rd/9th century, it was the headquarters of an independent chieftain, ʿAbd al-Malik b. Abi ʾl-Djawād who, in alliance with the lords of Badajoz [see baṭalyaws] and of Ocsonoba [see ukhshūnuba], stood out against the *amīr* ʿAbd Allāh of Cordova. At the beginning of the 5th/11th century, it constituted a petty principality (*ṭāʾifa*) which was annexed however to Seville in 436/1044. It was from Mertola in particular that one of the main revolts against the Almoravids, the *thawrat al-murīdīn*, spread forth; indeed, the *murīds* [*q.v.*] of Ibn Ḳasī [*q.v.*], commanded by a certain Ibn al-Ḳābila, seized the fortress on 12 Ṣafar 539/14 August 1144 and facilitated the arrival of the Almohads in that region. After various vicissitudes, the place was definitively reconquered by the Christians towards the end of that same century.

(E. Lévi-Provençal*)

MIRWAḤA (a.), "fan, vane".

1. General aspects. In the Muslim East, from the Middle Ages to the present day, fans of various sizes have been simply a means of resisting the heat. Good ventilation and, where possible, reduction of the temperature are vital for the improvement of living conditions in regions where intense heat prevails throughout the summer. The civilisations preceding that of the Muslims were aware of some reasonably effective solutions to this problem, and it seems that the Muslims continued to apply them, to perfect them and to supplement them with inventions of their own. These techniques include, besides small hand-held fans and larger ones operated by servants, the construction of windows and skylights which may be opened for ventilation, the elaboration of systems directing every breath of air towards the interior of the building and the skill necessary to construct veritable machines (or rather, installations) based on a process of humidification and ventilation and capable of freshening the air.

2. Pools, hydraulic wheels and gardens. It is possible to enjoy wind and fresh air without needing to resort to any particular machinery. During the

summer, it may be convenient to sleep, at night, on the roof or on a terrace (in the 4th/10th century: Mez, *Renaissance*, 360; later, Ibn Baṭṭūṭa, i, 30, relates that it is general practice to sleep "on the roof", but in their translation Defrémery and Sanguinetti add, in parentheses, that this should be understood as meaning "on the terrace"). During the day, it is possible to recline comfortably in a garden, near an artifical lake (*birka*, *fiskiyya* and *faskiyya*) or in places close to running water, near pools and fountains (*nāfūra*, *nawfara*, *fawwāra*, *fiskiyya* and *faskiyya*) and hydraulic wheels (*nāʿūra* = noria; the more commonly found form is *dawlab* = wheel for raising water), which freshens all the ambient air. Waterwheels were designed to raise the water (from one canal to the other, in the open air, or from a river to some kind of building); some wheels of this type were constructed in such a way that their upper part was located in the basement of the houses of the wealthy, built on the bank of a river, while the base of each wheel dipped in the water. Although the principal role of such a wheel was the provision of water, it also served as an instrument for freshening the air in the house and, as is shown by a miniature of the 7th/13th century (see below, Farès), people enjoyed sitting around it. Similarly, the entire garden could lend its freshness to the house or the palace when the architect took the trouble to incorporate the garden within the perimeter wall or when the architectural concept consisted of small pavilions spreading across a large garden. Another example would be a simple interior court converted into a vaulted space and incorporated into the house, often containing a small ornamental pool and a fountain. On water-wheels, pools in gardens and the architectural techniques which had as their sole purpose the bestowing of their benefits on the house, see al-Sarī al-Raffāʾ, *Dīwān*, new ed. 1981, i, 326, 362, 438-9, ii, 129, 278, 316, 822; Ibn Abī ʿAwn, *Tashbīhāt*, 254-5; al-Nawādjī, *Ḥalba*, 286-95; al-Ghuzūlī, *Maṭāliʿ*, i, 35-40, 41-5; al-Badrī al-Dimashḳi, *Nuzha*, *passim*; Lane, *Manners*, 10, 14 (in the Islamic Museum of Cairo there is a reconstruction of an ancient pool of the same type, supplemented by a water-jet); Le Lortet, *Syrie*, 575, 578; Lévi-Provençal, *Hist. Esp. Mus.*, 279-82; H. Pérès, *Poésie*, 150, 152, 202-5, J. Dickie, in *BSOAS*, xxxi, 240-1; A. Lézine, in *BEO*, xxiv, 11-2; A. Mazahéri, *Vie quotidienne*, 75, 82-4; al-Hānī, *Ṣuwar ʿabbāsiyya*, 51, 55, 61, 65 (!), and the miniature found in B. Farès, *Vision*, Plate ii (wheel "entering" a princely residence; there is no need to take seriously the interpretations of the author, refuted elsewhere by D.S. Rice, in *Burlington Mag.* [April 1953]); cf. Ettinghausen, *Peinture arabe*, 127; Titley, *Minatures from Persian manuscripts*, 545 (index) "Wheels", "Water-wheels"; idem, *Plants and gardens*, *passim*, especially 8-9.

3. Wind vents, *bādhhandj* and methods of humidification. In the court of the ʿAbbāsids, a technique was invented for the use of tightly stretched screens of coarse linen fabric [see KHAYSH] which were sprayed with water (al-Thaʿālabī, *Laṭāʾif*, ed. De Jong, 14-15, tr. Bosworth, 48; al-Djāḥiẓ, *Rasāʾil* ed. ʿA.-S. Hārūn, states that the Sāsānid kings were unaware of this technique; al-Sarī al-Raffāʾ, *op. cit.*, i, 272, 426, ii, 106, 205, describes a kind of cabin-pavilion (*bayt* and cf. below, the more complicated constructions) in *khaysh* (or in *kittān* = in linen); for other forms and sources, see KHAYSH). On the ventilation chimneys called *bādhhandj* or *bādgīr*, see BĀDGĪR in Suppl. For illustrations, see figs. 1-6.

4. Fans. In order to distinguish between small individual fans (see figs. 8-9) and the large fans operated by servants (see fig. 7), the sources call those of the former category "hand fan" (sometimes "palm fan") or specify the material from which it is made, i.e. palm-leaves, while the second category is called *mirwaḥat al-khaysh* (*khaysh* fan; see KHAYSH). The "hand fan" which is most often seen in miniatures is square in shape (fig. 9); since the miniaturists meticulously paint its interwoven surface, this form can be easily identified as the *mirwaḥat al-khūṣ* = palm-leaf fan, described in the texts. The round shape is less common in miniatures (furthermore, one of the Ottoman miniatures which depicts it belongs to a series devoted to women of diverse ethnics origins, and the lady in question is, in fact Spanish, see fig. 8), but the existence of round fans, made of leather, is attested by the written sources. As for the large fan operated by servants (fig. 7), certain authors, including al-Sharīshī and al-Ghuzūlī (see references given below), who talk of the *mirwaḥat al-khaysh* in ʿIrāḳ, are referring to a large linen cloth which is sprayed with water (sometimes perfumed) and which is attached to the ceiling with cords, which may be unfolded as they are pulled; the wet cloth, continuing to move automatically, freshens a small amount of air. It is quite possible that the miniatures which vouch for the presence of a servant who operates the large "fan" reflect the situation in wealthy homes more accurately than does al-Sharīshī (copied by other authors, see Mez, *loc. cit.*; al-Djāḥiẓ, tr. Pellat, *Le livre des avares*, 316-17; and KHAYSH); even the analogies in verse which these authors quote refer to a person or to the hand of a person. Similarly, it was not necessary to moisten this large fan; in some circles, or in a certain period, the combination of fan/*khaysh* consisted of two

separable elements: an apparatus of *khaysh*, which was moistened and which freshened the air in the room, and a large fan (not wet, apparently) which the servants (*farrāshūn*) operated to spread the fresh air throughout the house (al-Tanūkhī, *Faradj*, ed. al-Shāldjī, i, 390). N. Titley (see below) describes certain kinds of fans, represented in Persian miniatures, as being made of feathers. It seems that the distinction between fans and fly-whisks is unclear (this "confusion" existed even in ancient times; see Daremberg and Saglio, *Dictionnaire des antiquités*, under *flabellum* and *muscarium*; even al-Shaldjī, *loc. cit.*, makes no distinction in his commentary between *mirwaḥa* and *midhabba*; see also *Mi'at layla wa-layla*, ed. Ṭarshūna, 78: *al-madhānib wa 'l-mazāwiḥ* to be read *al-madhābib wa 'l-narāwīḥ marāwiḥ*). Thus the identification of feathers, in the sense of primary material, could refer to a wide range of fans/fly-whisks. Furthermore, fly-whisks (and possibly fans, at the same time, see figs. 10-14) could themselves, in turn, be mistaken for regal accoutrements (see especially, fig. 12, in which the objects in question are held in a heraldic manner, as it were, on either side of a prince), but the presence of a servant (or two), standing behind the prince or at his side, holding a fly-whisk, in order to throw into relief the royal appearance of the person, does not mean that the object cannot also serve a useful purpose (on fans and fly-whisks in the written sources [for iconographic sources, see below] see: Kushādjim, *Dīwān*, 8; al-Sarī al-Raffā', *op. cit.*, i, 426, ii, 290, 556; al-Shābushtī, *Diyārāt*, 185; al-Rāghib al-Iṣfahānī, *Muḥāḍarāt*, ii, 381; al-Ḥarīrī, *Maḳāmāt*, ed. de Sacy, 544; al-Warrāḳ al-Ḥaẓīrī, *Aḥādjī*, ms. Topkapı Sarayı, A. 2419, fol. 12a-b; al-Sharīshī, *Sharḥ Maḳāmāt al-Ḥarīrī*, ed. M. Ibrāhīm, v, 57-8; al-Nawādjī, *op. cit.*,176; al-Ghuzūlī, *op. cit.*, i, 64-5).

These methods of cooling and ventilation (such as the use of fans of various sizes and wetted fibres) are still in use, but with the introduction of modern air conditioning, they are gradually disappearing.

5. Iconography. Sources of the figs.: ms. Leningrad, Acad. des Sc., S. 23, pp. 27, 29, 30, 32, 44, 46, 49, 89, 90, 93, 95, 103, 318 (see also the handwritten remarks in D.S. Rice's bequest at the Mayer Institute); mss. Paris, B.N., Ar. 3929, fols. 120a, 157a, 173a, 179a; Ar.5847, fols. 42a, 148b, 152a; Ar. 6094, fols. 31a, 133b; mss. (J. Sadan)

MIRYAM [see MARYAM].

MĪRZĀ or Mirzā, a Persian title, from *Mīr-zāda* or *Amīr-zāda*, and originally meaning "born of a prince" (cf. *Malik-zāda* and *Sarhang-zāda*, which occur in Sa'dī, etc.).

1. In Persian usage. The title, in addition to bearing its original significance, was also given to noblemen and others of good birth, thus corresponding to the Turkish Āghā. Since the time of Nādir Shāh's conquest of India, it has been further applied to educated men outside of the class of *mullās* or *'ulamā'*. In modern times, but not formerly, the title is placed after the name of a prince, and before the name of other persons bearing it: e.g. *Ḥusayn Mīrzā* "Prince Husayn", whereas Mīrzā Ḥusayn is practically equivalent to "Mr. Ḥusayn". (R. Levy)

2. In Indian usage. The title Mīrzā is accorded by Indian historians, not before Mughal times, to (a) close kinsmen of the Mughal ruling house, such as the brothers of Bābur, Humāyūn and Akbar (later princes tend to have the title *sulṭān*); Gulbadan Bēgam, *Humāyūn-nāma*, ed. and tr. A.S. Beveridge, text 9, tr. 90, speaks of Bābur's order to address him as a *bādshāh* after the birth of Humāyūn rather than as "Mīrzā Bābur", for previously "all kings' sons were called *mīrzās*" (*hama bādshahzādhā'ī-rā mīrzā mīguftand*); (b) others in the Tīmūrid line, for example Ḥusayn Mīrzā = [Sultan] Ḥusayn Mīrzā b. Manṣūr b. Bāyḳarā [*q.v.*], of Khurasān; the turbulent group who opposed Akbar in Gudjarāt, and the Mīrzās of Badakhshān, both referred to in the article MĪRZĀS; (c) some descendants of the Ṣafawid house, e.g. Mīrzā Muḥammad Ḥusayn son of Bahrām son of Shāh Ismā'īl I of Persia, who joined Akbar at the cession of Ḳandahar 1003/1595; and his (abler) brother Rustam Mīrzā, who joined Akbar in 1001/1593, and held several appointments under Akbar, Djahāngīr and Shāhdjahān before his death in 1051/1641; (d) members of other royal houses: the title Mīrzā was held by the Arghūn house, the sultans of Sindh and their successors: Mīrzā Djānī Bēg was governor of Sindh under Akbar, his son Mīrzā Ghāzī Bēg under Akbar and Djahāngīr [see ARGHŪN; also SINDH; TARKHĀN; ṬHAṬṬHĀ]; (e) certain Mughal nobles, apparently merely as a mark of royal favour: the Khān-i Khānān, 'Abd al-Raḥīm [*q.v.*], son of Bayram Khān, was known first as Mīrzā 'Abd al-Raḥīm, and later entitled Mīrzā Khān; his four sons bore the title Mīrzā; Mīrzā Yūsuf Khan [see YŪSUF KHĀN], son of Mīr Aḥmad-i Raḍawī, who from 995/1587 was governor of Kashmīr; Akbar's foster-brother Mīrzā 'Azīz Kōka [*q.v.*], whose father was certainly not of noble birth, and his five sons; even favoured Hindūs bore the title: Mān Singh [*q.v.*] was familiarly referred to as Mīrzā Rādjā. A mosque inscription in Mungēr [*q.v.*] of 1074/1663-4 uses the rare feminine form *mīrzānī* in describing its foundress (Qeyamuddin Ahmad, *Corpus of Arabic and Persian inscriptions in Bihar*, Patna 1973, 269-70).

In modern times in India and Pakistan, the prefixed *Mīrzā* is particularly used by men of the Mughal division of Ashraf Muslims.

Bibliography: See those to the various MĪRZĀS.

(J. Burton-Page)

MĪRZĀ AḤMAD KHĀN, Indian Muslim noble and traveller to the West, the son of Nawwāb Mu'azzaz Khān (Nawwāb in 1769), descended from 'Abd Allāh Beg, the Mughal governor of Broach, a town in Gudjarāt [see BHAROČ], situated on the right bank of the Narbada river about 30 miles from its mouth.

Since the town of Broach was an important trading and manufacturing centre and the Nawwāb would not allow the English to establish a factory there, the governor of Bombay decided to seize it. Under the pretext that the Nawwāb had violated the treaty with the East India Company and insulted Morley, its representative, Broach was attacked and stormed on 18 November 1772, and the state was annexed. As the Nawwāb died soon afterwards, four of his sons decided to proceed to England and petition the Courth of Directors for the redress of the injustice done to their family. The governor of Bombay,

having come to know of this, ordered their movements to be watched and later detained them. In spite of this, after five months, they managed to escape and boarded a ship which took them to Masḳaṭ [*q.v.*] in ʿUmān. From there they went to Baṣra and, following the overland route via Baghdād, they arrived in Istanbul, where two of the brothers, Mīrzā Anwār ʿAlī Khān and Mīrzā Waḥīd al-Dīn Khān, decided to settle and gave up the idea of going to England. The other two, Mīrzā Nawāzish Khān, the eldest, and Mīrzā Aḥmad Khān, made up their minds to continue the journey. Accordingly, they left Istanbul for Marseilles. On arriving there, early in 1794, the town authorities provided them with a carriage which took them to Lyons. Here Mīrzā Nawāzish Khān fell ill and died after a prolonged illness. As by this time Mīrzā Aḥmad's money had run out, he appealed to the town authorities for help. He was given money for his journey to Paris and, since he did not know French, he was given a companion named François who could converse a little in Persian.

When Mīrzā Aḥmad arrived in Paris in May 1794, the town was in the full grip of revolutionary fervour; so Mīrzā Aḥmad appealed to the Committee of Public Safety for financial help and for news of his two brothers who were living in Istanbul, either at the *Khānḳāh* of Nuʿmān Beg or with Darwīsh ʿAbd Allāh Hindī. Since the Committee was anxious "to fulfil towards this foreigner the duty of hospitality", because the "French nation honours the unfortunate", it instructed the French ambassador in Istanbul to obtain information about Mīrzā Aḥmad's brothers and to convey to them news of their eldest brother's death. It also authorised the Minister of External Affairs to give Mīrzā Aḥmad 1,200 livres so that he might be able to continue his journey to England. Furthermore, the Committee ordered that François, who, out of goodness of heart, had accompanied Mīrzā Aḥmad to Paris, should be sent back to his home in Lyons at the expense of government.

Later, the Committee issued instructions to the Commissaire of External Affairs that, since the date of Mīrzā Aḥmad's departure was uncertain, his stay in Paris must be made agreeable, and since he did not know French, Ruffin, Government Interpreter of Oriental Languages, should be asked to keep him in his house at Versailles as a paying guest and teach him French, which he was so anxious to learn. This would make him useful to the Republic. Ruffin was greatly impressed by Mīrzā Aḥmad's intelligence, good education, frankness and honesty, and it was due to his suggestion that Mīrzā Aḥmad's allowance was fixed at 360 livres per month, excluding the expenses for board and lodging.

Mīrzā Aḥmad learnt French in three months, and in gratitude for what the Republic had done for him, he paid his homage to it by translating the *Declaration of the Rights of Man* into Persian. He then presented it to the Committee of Public Safety, which by order of Robespierre and Danton, sent it to be deposited in the Bibliothèque Nationale. It was felt that the learning and use of French language by a Muslim was a victory of French culture. This translation of the *Declaration of the Rights of Man* was the first to have been made in any Oriental language. Unfortunately, this document is not now traceable in the Oriental Section of the Bibliothèque Nationale.

Although the Revolutionary government of France was opposed to kings, princes and nobles, it adopted an extremely generous attitude towards Mīrzā Aḥmad. This was due partly to the ill-treatment he had received from their enemies and partly to the ideals of the French Revolution to help the underdog, the oppressed and the wronged.

Meanwhile, before Mīrzā Aḥmad was able to leave Paris, Mīrza Waḥīd al-Dīn Khān, one of his brothers whom he had left behind in Istanbul, arrived in London and claimed certain rights from the Company on behalf of himself and his brothers. All of his claims were not granted, but each brother was granted a stipend of Rs. 200.00 monthly.

After this, Mīrzā Aḥmad visited London and secured funds from the Company for carrying the body of his brother, who had died at Lyons, to India overland for burial beside his father's tomb. He was already suspected by the British authorities to be pro-French. The British Chargé d'Affaires in Istanbul was firmly convinced that he was not only pro-French in his sympathies but was actively working as an agent on behalf of France. When, therefore, he reached Baṣra, the English Resident was suspicious and persuaded him to embark on a ship for Bombay. On arrival at Bombay, Mīrzā Aḥmad was handed over to the police "as a spy inimical to the British interests, and in collusion with our enemies". In 1798 he petitioned the Company which ordered the Bombay government to "examine his allegations and report thereon". It is not known what happened to him afterwards. Probably he died in obscurity, unable to do anything to promote the cause of the French Revolution in India.

(MOHIBBUL HASAN)

MĪRZĀ ʿASKARĪ, Mughal prince, the third son (neglecting infant deaths), of the emperor Bābur [*q.v.*], full brother of Kāmrān Mīrzā [*q.v.*] and half-brother of the emperor Humāyūn [*q.v.*] and Hindāl Mīrzā [*q.v.*], born 922/1516 in camp, as his sobriquet indicates, died 965/1558.

He received his first military command at the age of 12, during Bābur's eastern campaigns beyond the Ganges. After Humāyūn's succession in 937/1530, Kāmrān was assigned Ḳandahār, but left ʿAskarī in command there when he moved to attack Humāyūn's possessions in Lāhawr; but a couple of years later we find ʿAskarī in Āgrā, whence he was sent against the Gudjarātī invaders under Tātar Khān Lōdī, and had some success against a weakened force at Mandrayl south-west of Āgrā. He accompanied Humāyūn on the conquest of Gudjarāt in 942/1535, and was appointed governor of Aḥmadābād; but after Humāyūn had left to quell disturbances in the recently-acquired Māndū, the Gudjarātī army regrouped and ʿAskarī abandoned his camp, hoping to capture the treasury at Čāmpānēr before making for Āgrā, where his advisers had suggested that he

declare his independence. The Mug͟hal governor of Čāmpānēr was, however, loyal to Humāyūn, withstood ʿAskarī's army, and advised Humāyūn of the state of affairs. Since rebellion had broken out in the eastern provinces, Humāyūn greeted ʿAskarī with a show of forgiveness, and they moved together towards Bengal; but they were outgeneralled by S͟hīr K͟hān (946/1539) and only with difficulty made their way back to Āgrā. Pursued by S͟hīr's army, the Mug͟hals were forced into exile, and Kāmrān, having shown his treachery to Humāyūn by entering into negotiations with S͟hīr K͟hān, resumed his governorship at Kābul accompanied by ʿAskarī. After Humāyūn's abortive Sind campaign with Mīrzā Hindāl, Kāmrān attacked Badak͟hs͟hān; the governor of Ḳandahār made the town over to Hindāl, whereupon Kāmrān took Ḳandahār and sent Hindāl prisoner to Kabūl, where he appointed ʿAskarī as governor. ʿAskarī restored the defences of Ḳandahār, and instigated the Balūč chiefs to attack Humāyūn. Kāmrān proclaimed himself emperor and struck coins in Kābul and Ḳandahār; when eventually he was captured (956/1549) at Kābul, ʿAskarī, who had sided with his full brother, was also taken, and after a period of confinement was sent to Mecca on pilgrimage in 958/1551, and died between there and Damascus in 965/1558. He was a weak creature, easily led (he was much in Kāmrān's shadow), of no great courage; Gulbadan Bēgam merely calls him "unjust" (*bī-inṣāf*).

Bibliography: Gulbadan Bēgam, *Humāyūn-nāma*, text and Eng. tr. A.S. Beveridge, London 1902, index; *Tūzuk-i Bāburī*, Eng. tr. Beveridge, London 1922, index; Mīrzā Ḥaydar Dug͟hlāt, *Taʾrīk͟h-i Ras͟hīdī*, *passim*; Badāʾūnī, *Muntak͟hab al-tawārīk͟h*, index; Niẓām al-Dīn Aḥmad, *Ṭabaḳāt-i Akbarī*, must be used with caution, as he is a partisan of ʿAskarī, his father having been ʿAskarī's *wazīr*; Aḥmad Yādgār, *Taʾrīk͟h-i Salāṭīn-i Afāg͟hina*, is derivative, almost entirely copied from *Ṭabaḳāt-i Akbarī*.

(J. Burton-Page)

MĪRZĀ ʿAZĪZ "KŌKA" (*ca.* 949-1033/*ca.* 1542-1624) (the sobriquet occurs also in the Turkī form *kokaltas͟h* or *kokaldas͟h*, "foster-brother"), the son of the Mug͟hal Emperor Akbar's wet-nurse D͟jīd͟jī Anaga, who rose to prominence in the Mug͟hal court, army and administration. His exact date of birth is not recorded, but it must have been within a month or two of Akbar's in 949/1542; his father was S͟hams al-Dīn Aḥmad G͟haznawī, who had been advanced to favour after saving Humāyūn's life in the river crossing at the battle of Kanawd͟j. When D͟jīd͟jī Anaga was entrusted with the infant Akbar, S͟hams al-Dīn received the title of Ātga K͟hān, and was thereafter prominent in the Mug͟hal court, eventually becoming chief minister. ʿAzīz would therefore have been brought up in the court with his play-fellow Akbar, and certainly became Akbar's favourite foster-brother.

Like many others of the "foster-father cohort" (*ātga k͟hayl*) ʿAzīz had held an assignment in the Pand͟jāb; when, after the murder of Ātga K͟hān, Akbar decided to disperse the *ātga k͟hayl* to distant assignments in 976/1568, ʿAzīz was the only courtier to retain one in the Pand͟jāb, at Dīpalpur. After Akbar's conquest of 980/1573, when Gud͟jarāt [*q.v.*] had become a Mug͟hal *ṣūba*, ʿAzīz was appointed its first *ṣūbadār*. His first viceregal period was distinguished by the cadastral survey and settlement of Gud͟jarāt under Ṭōdar Mall [*q.v.*], and by further disaffection of the Mīrzās [*q.v.*], firstly in Pāṭan, quelled by ʿAzīz with the Mālwā army, and then Khambāyat (Cambay); the Mīrzās finally besieged ʿAzīz in Aḥmadābād when Akbar himself arrived from Fatḥpur Sīkrī rapidly, by forced marches, and raised the siege. ʿAzīz was recalled to the Mug͟hal court after two years, to join a projected expedition to Badak͟hs͟hān; but when it was discovered that he had made no attempt to enforce Akbar's new regulation on branding the cavalry horses (*āʾīn-i dāg͟h*, in *Āʾīn-i Akbarī*, ch. 7), and remained antagonistic to it, he was deprived of his office and confined to his house at Āgrā. He was pardoned in 986/1578, and sent two years later, with an increased *manṣab* [*q.v.*] and the title of K͟hān-i Aʿẓam, to quell disturbances in Bihār and Bengal where local officials had inflamed resentment against Akbar on hearing of his vacillating attitude towards Islām. After he had restored order he returned to Āgrā in 989/1581; but his absence led to a recrudescence of rebellion in Bihār and he was forced to return.

In Gud͟jarāt the ex-sulṭan Muẓaffar III had raised an army (including disaffected Mug͟hals in protest at the branding regulation) and had occupied Aḥmadābād in 991/1583, and the suppression of this revolt was the first duty to fall to ʿAzīz on his second appointment as *ṣūbadār* of Gud͟jarāt in 998/1590; his brilliant success next year at the battle of Bhūčar Mōrī, near Dhrōl in Sōrafh, effectively ended the rebellion, and ʿAzīz went on to subjugate the chiefs of Kaččh, although Muẓaffar continued to evade ʿAzīz's troops until his final capture and suicide in 1001/1593 (full details in J. Burton-Page, *ʿAzīz and the sack of Dwārkā...*, in *BSOAS*, xx [1957], 145-57). By this time ʿAzīz had brought all of Sōrafh, formerly feudatory, under full Mug͟hal control. He was recalled to court; but by this time Akbar had promulgated his new "divine faith" [see DĪN-I ILĀHĪ], and rather than subscribe to it he made a pretence of marching on Dīw, where in fact he joined a pilgrim vessel for the *Ḥad͟jd͟j*, with a vast retinue including his six younger sons; but he was so fleeced in Mecca that he became lukewarm towards Islam, and rejoined Akbar in India in early 1003/1594. He accepted the Dīn-i Ilāhī, became governor of Bihār, and the next year was appointed *wakīl* of the empire. In 1008/1599 he was appointed to Gud͟jarāt for a third term of office; but he remained at Āgrā, governing the province through his two eldest sons Mīrzā S͟hams al-Dīn and Mīrzā S͟hādmān (and other sons held *d͟jāgīrs*, or were appointed to minor offices, elsewhere in Gud͟jarāt), and remained in office until Akbar's death in 1014/1605.

Salīm, Akbar's eldest son, succeeded to the throne as D͟jahāngīr, although some of the court nobles, including ʿAzīz and Mān Singh [*q.v.*], had been anxious to proclaim Salīm's son K͟husraw; the latter broke away from his confinement and went into open rebellion, but in spite of his popularity he was no match for the imperial forces, and was captured easily and blinded. ʿAzīz's disgrace was compounded by the production of a letter he had written some years before in severe condemnation of Akbar's religious innovations; he was deprived of all offices and imprisoned. However, in 1017/1609, he was restored to his rank and appointed in the *ṣūba* of Gud͟jarāt for a fourth term, with the proviso that he should govern through his eldest son S͟hams al-Dīn, who had received the title of D͟jahāngīr Ḳulī K͟hān; two years later he was sent to the Deccan campaigns, but the jealousy of Prince K͟hurram (later S͟hāhd͟jahān) resulted in his recall and imprisonment in Gwāliyar; again restored to his rank, he served again in Gud͟jarāt in a subordinate capacity, and died in Aḥmadābād in 1033/1624.

ʿAzīz is celebrated as a scholar and a wit, a poet, and a distinguished general, honest, fearless, but short-tempered and outspoken. He is remembered for the construction of a great water-tank, the Khān Sarōwar, at Pāṭan in Gudjarāt, and is buried within a great marble pavilion (Čawnsaṭh Khambe) inside the complex at the shrine of Niẓām al-Dīn Awliyāʾ at Dihlī [*q.v.*].

Bibliography: The fullest account of the life of ʿAzīz is in *Maʾāthir al-umarāʾ*, Bibl. Ind. ed., i; copious references in Abu ʾl-Faḍl, *Akbar-nāma*, and ʿAbd al-Ḳādir Badāʾūnī, *Muntakhab al-tawārīkh*, index. H. Beveridge, *ʿAziz Koka*, in *JRAS* (1921), 205-8, is a mere short character sketch. Background to ʿAzīz's viceregal periods in Gudjarāt is well covered in M.S. Commissariat, *History of Gujarat*, ii, Bombay, etc. 1957. See also *Bibl.* to AKBAR, and other references in the article.

MĪRZĀ RAFĪʿA, Muḥammad b. Ḥaydar, Ḥusaynī Ṭabāṭabāʾī Nāʾīnī (988-1083/1580-1673), Persian scholar of the time of the Ṣafawid Shāhs Sulaymān I and Ṣafī II (1077-1105/1666-92). He was versed in the Shīʿī religious jurisprudence, theology and literature as well as in the current philosophy of his time, and was regarded as the master of the philosophers and theologians of his time. He lived about 95 years and died in Iṣfahān on 3 Shawwāl 1083/22 January 1673, and was buried in the Takht-i Fūlād, the famous cemetery of the city.

He was a pupil of Mullā ʿAbd Allāh Shūshtarī (d. 10 Muḥarram 1020/25 March 1611), Shaykh Bahāʾ al-Dīn Muḥammad ʿĀmilī (953-1031/1546-1622) and Mīr Abu ʾl-Ḳāsim Findiriskī Astarābādī (d. 1049 or 1050/1639-40). Muḥammad Ḥurr ʿĀmilī (1033-1104/1624-93) and Muḥammad Bāḳir Madjlisī (1027-1110/1618-98) were among his famous pupils. Mīrzā Abu ʾl-Ḥasan Djilwa (1238-1314/1823-96), a philosopher of the Ḳādjār period, regarded himself as a descendant of Mīrzā Rafīʿā and as his follower.

Mīrzā Rafīʿā wrote both in Arabic and Persian. Among his works in Arabic, the following may be mentioned: (1) A commentary on Kulīnī's *Kāfī*, which he started writing but failed to complete. He seems to have been engaged in this work till 1069/1658-9. His theological and literary method can be seen in this commentary. (2) A treatise on the analogy of the essentialities, in which he criticises Mullā Ṣadrā Shīrāzī's ideas. (3) A commentary on Ṭūsī's *Sharḥ al-Ishārāt*. (4-5) Commentaries on the *Ḳawāʿid al-aḥkām* and *al-Mukhtalif*, both by ʿAllāma al-Ḥillī. (6) A commentary on Ibn al-Ḥādjib's *al-Mukhtaṣar fi ʾl-uṣūl*. (7) A commentary on *al-Ṣaḥīfa al-sadjdjādiyya*.

Apart from the above-mentioned works, he wrote three books in Persian: (1) A catechism in which he replied to the questions put forward by Sayyid Mahdī b. Sayyid Riḍā Ḥusaynī on jurisprudence. (2) The *Shadjara al-ilāhiyya* on Shīʿī theology written in 1047/1637-8 and dedicated to Shāh Sulaymān. It has an introduction, consisting of two chapters, and eight subjects (*maṭlab*) (published in *Djāwīdān Khirad*, ii/2 [1970], 38-61); a summary of the preceding named *Thamara-yi Shadjariyya al-ilāhiyya* was written in 1070/1659, consisting of an introduction, five subjects (*maḳṣad*) and a conclusion (published in *ʿĀmirī-nāma*, Tehran 1353/1974, 274-321). Mīrzā Ibrāhīm Adham (11th/17th century) has a eulogy in prose about Mīrzā Rafīʿā, the manuscript of which is in the Central Library of Tehran University (no. 3294/4).

Bibliography: Muḥammad b. ʿAlī Ardabīlī, *Djāmiʿ al-ruwāt*, Tehran 1956; Muḥammad Ḥusayn Khātūnābādī, *Manāḳib al-fuḍalāʾ fī riyāḍ al-ʿulamāʾ*, Tehran, Madjlis Library ms. 5501/6; Muḥammad Bāḳir Khʷānsārī, *Rawḍāt al-djannāt*, Tehran 1850, 360, 613; Muḥammad Ḥusayn Nūrī, *Mustadrak al-wasāʾil*, Tehran 1903; idem, *al-Fayḍ al-ḳudsī*, Tehran 1887; Āḳā Buzurg Tihrānī, *al-Dharīʿa ilā taṣānīf al-Shīʿa*, Tehran 1968, xvi, 404, 1974, xxii, 333; ʿAbd al-ʿAzīz Djawāhir al-Kalām, *Fihrist-i Kitābkhāna-yi Maʿārif (Millī)*, Tehran 1934, i; Ibn Yūsuf Shīrāzī, *Fihrist-i Kitābkhāna-yi Madrasa-yi Sipahsālar*, Tehran 1936, i; Walāʾī, *Fihrist-i Kitābkhāna-yi Āstān-i Ḳuds-i Raḍawī (Mashhad)*, Mashhad 1950, v, 109, 335, 414.

MĪRZĀ TAḲĪ KHĀN [see AMĪR KABĪR, in Suppl.].

MĪRZĀʾĪ, an appellation, somewhat contemptuous, given in India to a follower of Mīrzā Ghulām Aḥmad of Ḳādiyān; see AḤMADIYYA.

MĪRZĀPUR, a district and town in the Uttar Pradesh province, formerly the United Provinces, of the Indian Union, forming a district in the Benares division of that province, with an area of 5,238 sq. miles, and with a population (1971 census) of 731,403 for the district and 80,768 for the town. Some 7% of the population are Muslims, and have shown a tendency to increase in proportion to the Hindus, owing to their greater vitality, containing as they do a smaller proportion of the very poor. The district is however a stronghold of Hinduism, and Islam makes little progress by conversion. Nothing is known of the early history of the district. It was occupied by the Rādjputs in the 11th century A.D. and in the next century passed into the power of the Muslim rulers of Djawnpur [*q.v.*]. Down to the Mughal conquest, the district played an important part in the military history of India, as it contained the great stronghold of Čunār which guarded the gateway of the east.

At Rasūlpur near Ahraura is the tomb of a Muslim martyr called Sayyid Ashrāf ʿAlī which is a place of pilgrimage. Near the gateway of the fort of Bidjaigaṛh is shown the tomb of Sayyid Zayn al-ʿĀbidīn, the saint who miraculously took the stronghold for Shēr Shāh. The town of Čunār contains two mosques, at one of which are preserved garments said to have belonged to Ḥasan and Ḥusayn. The tomb of the Afghān saint Shāh Ḳāsim Sulaymānī (952-1015/1545-1606) with those of his family forms a group of buildings of architectural interest. His festival is celebrated on 17-21 Djumādā I of each year.

Mīrzāpur city (lat. 25°9′ N., long. 82°35′ E.) is the capital of the district of the same name; of its population, a sixth are Muslims. It is a Mughal foundation dating from late in the 11th/17th century: in the 12th/18th and early 19th centuries it attained great prosperity as a trading centre, being at the junction of important roads and at the highest point of the Ganges reached by the larger ships. During the Mutiny of 1857-8, it remained quiet under a garrison of loyal troops. In 1864 the opening of the East India Railway left the town isolated; after then it declined, as the railway then carried the trade with which it used to deal.

Among the mosques is one founded in the middle

of the 19th century by a Muslim lady named Ganga Bībī, who also left funds to build a *sarāy*. The town contains the celebrated Hindu shrine of Vindheśvarī, much visited by pilgrims and formerly held in special veneration by thugs.

Bibliography: D.L. Drake-Brockman, *District gazetteer of Mirzapur*, Allahabad 1911; *Imperial gazeteer of India*[2], xvii, 366-77. (J. ALLAN*)

MĪRZĀS, the name commonly given by Indian historians to a turbulent family of Tīmūrid descent, troublesome especially in the 10th/16th century, in the reign of the Mughal emperor Akbar, to whom they were mostly sixth cousins, as descendants of ʿUmar Shaykh Mīrzā, the second son of Tīmūr (Akbar was descended from Djalāl al-Dīn Mīrān Shāh, the third son of Tīmūr). Abu 'l-Faḍl and Badāuʾnī refer to them as *mīrzāyān*, and Ḥādjdjī al-Dābir as *awlād Mīrzā Muḥammad Tīmūr Sulṭān*. There may be confusion in the texts when one of them is spoken of in the singular, since any of the personages spoken of in MĪRZĀ above may also be commonly referred to as "the Mīrzā" (*mīrzāʾī*). The Mīrzās of Badakhshān are also considered here, but only with regard to their involvement in Indian affairs.

1. The Mīrzās of Gudjarāt.

The accompanying *stemma* makes their relationship clear; it might be added that Ibrāhīm Ḥusayn Mīrzā was married to Gulrukh Bēgam, daughter of Mīrzā Kamrān; and that Uways Mīrzā was married to the daughter of Sulṭān Ḥusayn Mīrzā, the ruler of Khurāsān.

The six sons of Muḥammad Sulṭān Mīrzā had all been provided with *iḳṭāʿ*s in the Sambhal and Aʿẓampur districts; but (probably presuming too much on their royal kinship, and profiting from Akbar's absence from the capital to repel the advance of Muḥammad Ḥākim from Kābul to Lāhawr) they spread outside their own *iḳṭāʿ*s and attempted to occupy crown (*khāliṣa*) lands. From these they were dispossessed by the Mughal general Munʿim Khān [*q.v.*], and fled first to Mālwā, in 974/1567 (whose governor was absent with Akbar in the north) and occupied some important towns and districts. They were pursued to Māndū, and thence fled to Gudjarāt early in 975/1567. Akbar punished their revolt by imprisoning their father Muḥammad Sulṭān Mīrzā at Bayānā, where he died within a short time. By the end of the year it was reported that these Mīrzās, with the two sons of Ulugh Mīrzā, had again invaded Mālwā and were besieging Udjdjayn. Reports of the disturbed conditions under the collapsing Gudjarāt sultanate caused their return to Gudjarāt, where they consolidated their hold over the next two years [see GUDJARĀT for a general description of the situation during the following years and for the conditions of the decline from which the Mīrzās sought to profit].

Here they assisted Činghiz Khān, most able of the Gudjarātī nobles, who at that time held Sūrat, Nan-

dōd and Čāmpānēr (while his brother-in-law, Rustam Khān, held Bharōč), in raising an army against Iʿtimād Khān (the local king-maker, regent for the minor puppet king Muẓaffar III), and were rewarded by *iḳṭāʿ*s around Bharōč; Iʿtimād Khān thereupon invited Akbar, then at Čitawr, to invade Gudjarāt. On the invasion of Gudjarāt by Muḥammad II of Khāndēsh, asserting his claim to the throne, Muḥammad's armies were defeated by the combined forces of Čingḥiz Khān and the Mīrzās; the latter were rewarded by the grant of further *iḳṭāʿ*s, but unfortunately, as had happened before, they encroached on their neighbours' estates, and earned an unenviable reputation for their cruelty in Bharōč, so that Čingḥiz Khān sent a force against them; they defeated it, but removed themselves temporarily into Khāndēsh, where they plundered Burhānpur before retiring into Mālwā. They were attacked here by forces under several Mughal generals, were besieged in Ranthambhōr, which they had occupied, and were pursued to the river Narmadā, where many of the Mīrzās' army died during the crossing. However, they soon returned to take over their Bharōč lands. Čingḥiz Khān, who was by now virtually in command of Aḥmadābād, was assassinated by a Ḥabshī [*q.v.*] faction in 975/1567; after his death all the country south of the river Mahī fell to the Mīrzās, who took over not only Bharōč but also Sūrat, Barōdā and Čāmpānēr.

After Akbar's conquest of Gudjarāt he decided in 980/1572 to expel the Mīrzās from southern Gudjarāt. At this time, Ibrāhīm Ḥusayn Mīrzā was established in Barōdā (dissensions having broken out between the Mīrzās in Bharōč), Muḥammad Ḥusayn Mīrzā in Sūrat and Shāh Mīrzā in Čampānēr. Akbar's troops defeated Ibrāhīm Ḥusayn Mīrzā, who fled towards Āgrā, though his wife Gulrukh Bēgam fled with her son Muẓaffar Ḥusayn Mīrzā to the Deccan. Akbar moved on to invest Sūrat, leaving Mīrzā ʿAzīz Kōka [*q.v.*] in charge of Aḥmadābād; when Muḥammad Ḥusayn Mīrzā and Shāh Mīrzā, having joined Shēr Khān Fulādī, a disaffected Gudjarātī noble, moved to besiege Pātan, 'Azīz attacked and defeated them, whereupon Muḥammad Ḥusayn Mīrzā fled to the Deccan. Meanwhile, Ibrāhīm Ḥusayn Mīrzā, with his younger brother Masʿūd Ḥusayn Mīrzā, at first tried unsuccessfully to take Nāgawr [*q.v.*] in Rādjāsthān, and then invaded the Pandjāb; the local governor defeated the Mīrzās' forces, capturing Masʿūd Ḥusayn Mīrzā. Ibrāhīm Ḥusayn Mīrzā fled south to Multān, and was soon afterwards wounded and captured by some Balūčī tribesmen; he was delivered into the hands of Mughal officials, and died of his wounds.

After Akbar's return to Āgrā, Muḥammad Ḥusayn Mīrzā left the Deccan, and joined the conspiracy with some of the old nobles, the rebel Ḥabshīs, and the Rādjā of Īdar [*q.v.*]. When they marched against Mīrzā ʿAzīz Kōka in Aḥmadābād, Akbar returned in his famous "forced march" of nine days, and routed the rebels in the battle of Aḥmadābād in 981/1573. Muḥammad Ḥusayn Mīrzā was captured in the battle and, while Akbar was pursuing the remainder of the rebel forces, the Mīrzā was executed by his custodians.

In 985/1577 the young Muẓaffar Ḥusayn Mīrzā invaded Gudjarāt from the Deccan, but was first defeated by Rādjā Tōdar Mall [*q.v.*]; escaping to Djunāgaṛh, he rallied his forces and again attacked Aḥmadābād, but withdrew and was shortly afterwards captured by Rādjā ʿAlī of Khāndēsh and handed over to Akbar. He was imprisoned for some 12 years, when Akbar released him, and appointed him in charge of Kanawdj; but he was unstable, and after two further terms of imprisonment he died a natural death some ten years later. This is the last account of Mīrzā disturbances in Gudjarāt, which thereafter remained largely peaceful under Mughal rule.

2. The Mīrzās of Badakhshān in India.

The earlier history of this small house has been treated above under BADAKHSHĀN, at Vol. I, p. 852b. Its members were never a thorn in the flesh of the early Mughals as were their kinsmen in Gudjarāt, and they are considered here only with regard to their relations with the Mughal power. A *stemma* indicates their relationship.

The sultans Abū Bakr Mīrzā and Maḥmūd Mīrzā, the sons of Abū Saʿīd Mīrzā, were dispossessed by an

usurper, who however submitted to the Mug̲h̲al Bābur [*q.v.*] in 910/1504-5. Bābur then appointed K̲h̲ān Mīrzā, son of Maḥmūd Mīrzā, as governor of Badak̲h̲s̲h̲ān; his son Sulaymān Mīrzā (b. 920/1514, d. Lahawr 997/1589) later also served as governor of Badak̲h̲s̲h̲ān, but he and his son Ibrāhīm Mīrzā had to surrender to Mīrzā Kamrān [*q.v.*]; he was, however, released on Bābur's orders, and reinstated. After some disagreement with Humāyūn [*q.v.*], he eventually held Badak̲h̲s̲h̲ān until 983/1575. In 967/1560 he had invaded Balk̲h̲, when Ibrāhīm Mīrzā was killed. In early 983/1575 he was driven out of Badak̲h̲s̲h̲ān by S̲h̲āhruk̲h̲ Mīrzā, son of Ibrāhīm Mīrzā, and went first to India and thence to Mecca, but later returned. With the fall of Badak̲h̲s̲h̲ān to the Özbegs under ʿAbd Allāh K̲h̲ān in 992/1584, Sulaymān Mīrzā and S̲h̲āhruk̲h̲ Mīrzā fled to India and joined Akbar's court. S̲h̲āhruk̲h̲ Mīrzā later became governor of Mālwā and distinguished himself in the Deccan campaigns before his death in 1016/1607. His son Badīʿ al-Zamān Mīrzā instigated a brief insurrection in Badak̲h̲s̲h̲ān early in the 11th/17th century, which was quickly suppressed.

BURTON-PAGE)

MISĀḤA, ʿILM AL-, the science of measurement, plane and solid geometry, is the name given by the Muslims to the science of comparing magnitudes and its methods. In the wider sense it covers the measurement of all things which can or need be measured, mainly lengths, areas, volumes, weights and numbers; in particular, however, the *ʿilm al-misāḥa* deals with geometry, with definitions of solids and geometrical figures as well as the laying down of rules for the calculation of lengths, areas and volumes of the different figures in elementary plane and solid geometry. The conception *misāḥa* therefore includes only a portion of what we call measurement in the wider sense, or practical or technical geometry (i.e. the measurement of things having length, breadth and volume); in particular, it excludes mensuration in the narrow sense, geodesy. The Arabs possessed special treatises dealing with the problems of geodesy. They therefore make the same distinction between theoretical and applied measurement, which had developed among the Greeks from the time of Aristotle and is most clearly expressed by Hero in his *Metrica* and *Dioptra*.

The definitions given by the Muslims themselves of the conception *misāḥa* are very varied. Some authors give a very wide one (e.g. al-ʿUmawī: "Measurement consists in ascertaining an unknown quantity by means of a known one. The result gives the amount of the unknown quantity in units of the quantity used for measuring"); most of them mean by it the measurement of length, area and volume. Al-S̲h̲ins̲h̲awrī makes a clear distinction between direct measurement, "the test of coincidence" (*taṭbīḳ*), and indirect measurement by calculating from certain formulae.

We find treatises on geometry throughout the whole period in which the Muslims acted as the transmitters of the ancient culture with which they had become acquainted, from the earliest beginnings of their literary activity at the beginning of the 9th century A.D. to the decline of Arab mathematics in about 1600. The purpose of such works was to give the future surveyor, architect or soldier the necessary equipment, the theoretical foundation for his profession. Three groups of these treatises can be distinguished according to their method of treatment:

(a) those which are quite like our modern collection of formulae, are made as brief as possible, give only the usual methods of calculation and contain no examples (e.g. that of Ibn al-Bannāʾ);

(b) those which contain examples, completely worked out, illustrating the process of calculation (e.g. that of al-Bag̲h̲dādī);

(c) those which only contain a series of fully worked out problems, and are a kind of book of exercises (e.g. that of Abū Bakr).

On the method of exposition in these works, it should be noted that we cannot of course speak of mathematical formulae in our sense of the word among the Arabs. They, especially the eastern Arabs, had no language of mathematical formulae; it was only late among the western Arabs, and probably only in the field of algebra, that a technical language was developed. The rules for measuring were always written out fully in words, sometimes even the figures occurring in the text.

The matter of the works on *misāḥa*, especially the larger ones, as a rule comprise introductory remarks, rules for calculating areas and volumes and the most important lengths found on them, and occasionally also practical exercises.

A. Introductory remarks. These are as a rule:

1. Definition of the term *misāḥa*.

2. Explanation, description and systematic classification of the geometrical figures to be discussed.

3. Definition and list of the most common units of measurement.

B. Rules for calculation.

I. Plane surfaces (and the lengths occurring on them).

1. Quadrilaterals (square, rectangle, rhomboid trapezium, trapezoid, quadrilateral with salient angle).

2. Triangles (equilateral, isosceles, scalene, right angled, acute-angled and obtuse-angled).

3. Polygons (regular, irregular, "drum-shaped figure" (*muṭabbal*), "hollow figure" (*mud̲j̲awwif*) "step-shaped figure" (*mudarrad̲j̲*).

"Drum-shaped" and "hollow" figures are formed by the combination of two congruent trapeziums in such a way that in the former the shorter, in the latter, the longer parallel sides coincide; a number of varieties are distinguished. The step-shaped figure is formed by placing together a number of rectangles of the same length but different breadth, in which the proportions of the breadths form an arithmetical progression.

4. Circle, segments of a circle (semi-circle, segment, sector, circumference) and related areas (horseshoe or crescent [*hilālī*], egg-shape, bean- or lentil-shaped, or oval figures).

The crescent is formed by the subtraction of two segments of circles of different radius with a common chord, egg-shape and bean-shape by the addition of two congruous segments which in the egg-shape are less, in the bean-shape greater than the semi-circle.

The area of the oval (ellipse) is given by Savasorda as $\frac{1}{4}(a+b)^2\pi$.

II. Solids (and the areas, especially superficies, and lengths that occur on them).

1. Prism (ordinary straight and oblique prism, square column, rectangular column, dice, triangular prism, obliquely cut prism, *corpus simile domui* in Abū Bakr as translated by Gerard of Cremona).

2. Cylinder.

3. Pyramids (straight and oblique pyramids, sections of pyramids).

4. Cones (straight and oblique cone, section of cone).

5. Sphere and section of a sphere, hemisphere, segment, sector and zone.

6. Regular and semi-regular bodies (the five Platonic and two Archimedean are treated at any length only in al-Kās͟hī).

7. Other bodies, sc. cylindrical vault (*azād͟j* and *ṭiḳān*; the only difference between them is the length), hollow dome (*ḳubba*), roof-shape (*corpus simile caburi* in Abū Bakr), wreaths and discus (hollow cylinder), and terrace-shaped figures.

C. Practical exercises.

These are, generally speaking, rare in works on *misāḥa*. We frequently find exercises in dividing fields modelled on Hero and Euclid. Savasorda has a number of exercises on fields on slopes, in hollows and on summits and on the calculation of the height of hills; al-Ḥanbalī has some on the measurement of inaccessible pieces of ground, the depth of wells and breadth of rivers. Of other problems, there may be mentioned, for example, the calculation of the number of pieces of stone or bricks required to build a house or a roof, and the ascertainment of the height of a wall.

It must not, however, be supposed that the subject-matter as above described is fully contained in any work on *misāḥa*. The individual works differ in subject matter according to the inclinations and abilities of their authors, just as our text-books of geometry do at the present day. We find works planned on a very comprehensive scale (by al-Ḥanbalī and al-Kās͟hī), alongside of very brief ones, often dealing only with portions of the subject (e.g. the anonymous Berlin ms. no. 5954, which contains only formulae for calculating plane surfaces), or even only a single problem (like the treatise by al-S͟hins͟hawrī). We therefore often find expositions which are only put into works on geometry in order to show the author's special knowledge or results of his research in a particular field.

Among remarkable examples of this kind are the insertion by D͟jams͟hīd al-Kās͟hī [*q.v.*] in a work on *misāḥa* of a treatment of regular and some semi-regular bodies (the calculations worked out by him in sexagesimal fractions to the fifths is so accurate that it only begins to differ from the correct figure in the tenth decimal place); the formulae for the area of a surface given by al-Umawī $F = \sqrt{a \quad b \quad c \quad d}$ for trapezoids with a right angle and his improvement of Hero's formulae for the segments of a circle; the formula for an arc given by al-Kark͟hī; the formula $d^2 = 1/9\,[n(n-1) + 6)a^2$ where d is the diameter of the circle around a regular polygon of n sides of length a given by the same author and al-Bag͟hdādī (the same formula is found in Nemorarius and Regiomontanus and attributed by the latter to the Hindus; it is, however, so far as we know, not found in any Hindu mathematical work yet published); and also the application of algebra to geometry by Abū Bakr and Ibn al-Bannāʾ. The former uses the algebraical solution for problems of areas in order to show the application of equations of the first and second degree to the six cases distinguished by al-K͟hʷārazmī [*q.v.*]; the latter uses combinatorial analysis to investigate the different possibilities of stating the problem.

The methods of calculating volume are the same as we find among the Greeks and Egyptians. When it is not a question of matter that has been taken over from them, in which case the formulae are directly adopted, the obtaining of results is purely inductive and empirical. Al-Kark͟hī, for example, gives for the volume of a sphere, in addition to the formulae $d^3\,(11/14)^2$, on the method of obtaining which he says nothing, also $d^3\,(28/45)$, which he gets by comparing the weight of a cube of wax with the weight of a sphere, which is made out of the cube of wax and whose diameter is equal to the edge of the cube. Al-Bag͟hdādī deals with a method of ascertaining the volume from the weight and specific gravity. Al-Kās͟hī knows the method of immersion of Archimedes mentioned by Hero. The direct method of measuring the length of areas by laying a thread along them is still recommended as the most reliable by al-Kark͟hī and Bahāʾ al-Dīn. It is evident that such methods must lead to approximative results, and formulae of approximation, the typical feature of practical geometry, continue to be used by the Arabs in measuring long after they obviously knew of their inaccuracy. Ibn Mammātī [*q.v.*] criticises the usual formulae for the area of a triangle $1/2\,(a + b)\,3/4\,c$ and $1/2\,(a + b)\,2/3\,c$, al-Bag͟hdādī the formulae for a quadrilateral $1/2\,(a + c)\,1/2\,(b + d)$ which comes from the Egyptians.

The reasons for the long survival of such rules are partly that the formulae gave in practice quite useful results and partly that the practical men who were concerned with measurement in the exercise of their trade wanted values easy to calculate rather than great mathematical accuracy, and took no note of slight errors, especially if they thereby avoided calculations with roots. For similar reasons and in keeping with the traditional practice, almost all works of *misāḥa* give no scientific geometrical proofs of the accuracy of the formulae they quote. Only the book of the Jew Abraham Savasorda, who may be reckoned among the western Arabs, gives logically worked-out proofs in any number; we occasionally find references to early mathematicians (especially Euclid) in Ibn al-Bannāʾ and Ibn al-Ḥanbalī. Probably inspection was quite sufficient (ʿAbd al-ʿAzīz, for example, draws plane figures in a network of squares each of one unit and counts the squares and their parts within this area), or a simple demonstration in some form or a calculation to prove the correctness of the procedure, which was frequently illustrated also by examples completely worked out.

A further peculiarity of Arabic authors was to give formulae which agree completely in substance in different algebraical forms. The Berlin ms. no. 5954 gives, for example, for the calculation of the section of the hypotenuse q in the right-angled triangle the following formulae: $q = 1/2\,[a + (c^2-b^2) : a] = 1/2\,[a + (c+b)(c-b) : a] = 1/2\,[a + (c+b) : \frac{a}{c-b}] = 1/2\,[a^2 + (c^2-b^2)] : a$. This differentiation was probably only intended to give as many forms as possible of the relations between the known and unknown magnitudes so as to afford the practical man a choice of different correct formulae, of which one might suit the special case better than another.

The sources of Arab geometry are to be sought among the Greeks and Hindus. The form and

substance of the rules are almost entirely Greek, especially in the older authors. Hero's "elaborations", in particular, which in turn go back to Egypt, seem to have been the model for Arab works on geometry. To Egypt may be traced the prefacing of a metrological section (found in many books on *misāḥa*), the problems on dividing fields, the formula for the trapezoid, the special name for the upper side of a quadrilateral (*ra's al-ʿarīḍ*). Hindu are the values for π in al-Kh̲wārazmī, the formula $\sqrt{a\ b\ c\ d}$, for the quadrilateral inscribed in a circle, the terms are, perpendicular from the summit of an arc and chord, the marking of lengths in Hindu figures, the use of algebra to solve geometrical problems (equations, method of double error, combinatorial analysis). The chief teachers were, however, the Greeks, whose achievements the Arabs generally speaking never surpassed; the requirements of practical mensuration gave them no new problems, and practical geometry remained down to quite modern times elementary, the majority of the problems of which had been finally settled long ago by the Greeks.

The services of the Arabs to geometry lie less in the extension of the field by ascertaining new, hitherto unknown facts (although in the *misāḥa* works we do find a series of new and novel rules) than in their enrichment of this science by new methods of calculation and teaching, and especially in their preserving the inheritance of the ancients and handing it down to the western world. Although Hero's geometry first became known in north-western Europe through Roman surveyors, it was mainly the Arab sources which gave new life to this subject which had become stagnant in its old form. Arabic original works were made accessible to the west in Latin translations. Leonardo of Pisa in his *Practica geometrica*, which remained a standard work for three centuries, depended closely on Savasorda, who most probably owed a great deal to Abū Bakr since there are striking similarities between the *Liber embadorum* and the *Liber mensurationis*; down to late in the 16th century, we continually come across writings on practical geometry which in form and content show to what originals they go back.

(H. Schirmer)

MISĀḤA (A.), the measurement of plane surfaces, also in modern usage, survey, the technique of surveying. In this article, measures of length and area will be considered, those of capacity, volume and weight having been dealt with under MAKĀYĪL WA-MAWĀZĪN. For the technique of surveying, see MISĀḤA, ʿILM AL-.

1. In the central Islamic lands. In pre-modern times, there were a bewildering array of measures for length and superficial area, often with the same name but differing locally in size and extent. As Lane despairingly noted, "Of the measures and weights used in Egypt I am not able to give an exact account; for, after diligent search, I have not succeeded in finding any two specimens of the same denomination perfectly agreeing with each other, and generally the difference has been very considerable" (*The manners and customs of the modern Egyptians*, Appx., "Egyptian weights and measures"). Measures of capacity and weight, being much more intensively used in everyday commercial transactions, tended to be more closely defined and regulated either by the governing authority or by the local market inspector or *muḥtasib* [see ḤISBA]; those of length and area were more the concern of the officials making cadastral surveys for taxation puposes [see ḲĀNŪN. ii. Cadaster] or else estimating the value of growing crops (*tak̲h̲mīn*), especially for the type of tax collection involving a share-out of the crop (*muḳāsama*) [see K̲H̲ARĀD̲J̲. I].

(a) The basic measures of length related, as in many other cultures, to various parts of the body and positions of the limbs. An *iṣbaʿ* [*q.v.*] "finger" was the breadth of the middle joint of the middle finger, conventionally 1/24 of the *d̲h̲irāʿ* [*q.v.*] or cubit, itself originally the length of the arm from the elbow to the tip of the middle finger. The *ḳabḍa* "fist's width" was the breadth of the four fingers of one hand put together. The *s̲h̲ibr* "span" was the span of the hand, from the thumb to the little finger. The *bāʿ* or *ḳāma* was the width of the two arms outstretched, i.e. a fathom, canonically equal to four *d̲h̲irāʿ*s. The *ḳaṣaba*

"pole, shaft" equalled a number of *dhirā*ᶜs varying between five and eight, but giving an average length of four m. In the Persian lands, the *gaz* was the equivalent of the Arabic *dhirā*ᶜ; in the 17th century, Chardin stated that the "royal" *gaz, gaz-i shāhī*, was "trois pieds moins un pouce", i.e. 94.745 cm., and it seems to have been on average 95 cm. In 1926, soon after Riḍā Shāh Pahlavī's accession to the throne, an attempt was made to equate the traditional Persian measures with the metric system, so that the *gaz* was fixed at 1 m; and after 1933, the metric system was introduced, the older measures nevertheless remaining in popular use.

(b) The basic measure of area in earlier Islamic times was the *djarīb*, which, as well as being a measure of capacity for grain, etc., equal to four *ḳafīzs* [see MAKĀYĪL WA-MAWĀZĪN], became a measure of surface area, originally the amount of agricultural land which could be sown with a *djarīb*'s measure of seed. The extent of the *djarīb* of area varied widely. Canonically, it was made up of 100 *ḳaṣabas*, hence approx. 1,600 m². In Fārs, this was known as the "small *djarīb*", the "large *djarīb*" being 5,837 m², but in later mediaeval times, the *djarīb* of the Persian lands was by the 11th/17th century reduced to 958 m². In modern Iran, since 1926, the *djarīb* has equalled one hectare, but in local usage, the *djarīb* can still represent an area ranging from 400 m² to approx. 1,450 m². This reflects in part farming practice, a *djarīb* of unirrigated land being larger in area than one of irrigated land, since the amount of seed sown over a given area of irrigated land is greater than that sown over unirrigated land.

In Egypt, the standard measure of land has been the *faddān* "yoke of oxen" (pl. *fadādīn*), defined by al-Ḳalḳashandī [*q.v.*] (9th/15th century) as equalling 400 square *ḳaṣabas*, i.e. 6,368 m². The official reckoning of this measure decreased from the equivalent of 1 1/10 English acres to less than one acre (1 acre = 0.4046 hectare). Since 1830, the *faddān* has corresponded to 4200.833 m² (1.038 English acres).

In the Turkish lands of the Ottoman Empire, and the Arab lands of ᶜIrāḳ, Syria and Palestine directly under Ottoman rule till 1918, the standard measure of area was the *dönüm* ("turn, turning"), Arabic *dūnam*, the area which originally was considered to equal one day's ploughing. In Turkey it equalled 939 m² (i.e. approx. 1,000 sq. yards), but the "new" (*yeñi*) *dönüm* was in the 19th century equated with the hectare; and in 1934 the metric system of weights and measures was officially adopted by the Turkish Republic. In Syria and Palestine in recent times, the *dūnam* is one of 1,000 m² = 0.247 acres, whilst in ᶜIrāḳ a larger one of 2,500 m² is used, despite the official adoption in ᶜIrāḳ of the metric system in 1931. In any case, in all these lands, the traditional measures have remained in daily use side-by-side with the newer metric ones.

(C.E. BOSWORTH)

2. Muslim India. (a) Measures of length. In traveller's accounts, distances are frequently stated in "days", *marḥala*: "Fulānshahr is two days' journey from Fulānānad." The practical convenience of this method should not be underestimated; it remains in use at the present day for travellers in the high hills who may expect to find a shelter, stabling, water and possibly even minimal provisions at a convenient end of a day's march, whose physical length may be very variable depending on the nature of the terrain to be crossed. The principle of the convenient day's march has of course been a determining factor in the siting of *sarā*ʾ*īs* along major-routes [see MANZIL, SARĀʾĪ, ṬARĪḲ; on the difficulties of interpretation, see especially S.H. Hodivala, *Studies in Indo-Muslim history*, i, Bombay 1939, comment on distances in al-Iṣṭakhrī *et alii*, 30 ff.). Other travellers, including al-Bīrūnī, describe distances in terms of the parasang or *farsakh* [*q.v.*], but since al-Bīrūnī uses the term to interpret information which he obviously received in terms of Hindū units of length, his figures are far from reliable (useful discussion in Hodivala, *op. cit.*, 42-5). He and others occasionally use the word *mīl*, the Arab mile, which later becomes a source of confusion, as it may be used as a synonym of *farsakh*; *mīl* rather than *mā*ʾ*il* persists in modern Indian languages for the English mile, possibly helped through Portuguese.

The Hindu unit of distance which misled al-Bīrūnī is the Skrt. *yodjana* "league", a distance of four *goruta* "cow-roar", the length at which a cow's lowing can be heard, or *krośa* "earshot". The *yodjana*, later *djodjan*, is rarely used by Muslim writers, but the *krośa*, later *kōs* (or the Persian cognate *karōh*), becomes the standard term for describing distance. This has been differently reckoned at different periods and in different regions and, like the *sēr* and the *man* [see MAKĀYIL WA-MAWĀZĪN], has almost everywhere a distinction between a larger and a smaller measure, the *pakkā kōs* and the *kaččā kōs*.

New imperial standards were introduced in the heyday of the Mughals with bewildering frequency, but the surviving records, and the references to foreign standards, allow a reasonably sure interpretation. These standards may be considered under the significant reigns.

1. Bābur (932-7/1526-30), in a mnemonic rhyme under the year 935/1528, establishes that the Indian league, *kurōh*, of 100 "ropes", *ṭanāb*, each of 40 paces, *ḳadam*, was thus of 4,000 paces, each being of one-and-a-half cubits, *ḳārī*; a cubit was of six hand-breadths, *tūtām*, each of four "hands", *ēlīg*, each of six barleycorns, *djaw*. He thus refers to Čaghatāy and Persian units, explaining that the *kurōh* is equivalent to a *mīl* (*Bābur-nāma*, fol. 351a-b). The "hand" is evidently a digit in fact.

A thorough inquiry into the value of both digit and hand-breadth was made by Col. J.A. Hodgson, Surveyor General of India, in 1843, measuring the hands of 76 men twice; the width at the knuckles (the root of the fingers) averaged 3.2287″ (8.20 cm), and that across the mid-joint 3.078″ (7.82 cm). These averages yielded finger widths of 0.8053″ (in reality, 0.8077″) (205 cm) and 0.769″ (1.95 cm) respectively (*op. cit.* in *Bibl.*, 46 ff.). The former is probably correct (see below, 4 and 5), though he took the latter. He cited experiments by Halhed in 1824, whereby a digit of six barleycorns arranged breadthways was found to be 0.7766″ (1.97 cm) (*ibid.*, 49-50).

Bābur's cubit, if we take the hand width at the knuckles, would be 19.37″ (49.20 cm), the pace 29.06″ (73.80 cm), the cable 96′10.3″ (29.52 m), and the league 3228×2′1.2″ (2,952 m).

2. Shēr Shāh (947-52/1540-45) and Humāyūn (937-47, 962-3/1530-40, 1555-6). Shēr Khān fixed the *kōs*, or league, at 60 *djarīb*, each of 60 *sikandarī gaz*; this *gaz* [*q.v.* in Suppl.], or cubit, had been introduced by

Sikandar Lōdī (894-923/1489-1517), being reckoned at 41½ *iskandarī/sikandarī* (sc. *tanka*). This was a round billon coin struck in great numbers (Sikandar Lōdī struck in billon only), which continued in circulation well into Mughal times; its average diameter was 0.7″ (1.78 cm); a half-*tanka* of 0.55″ (1.40 cm) was also known, with quarter and eighth *tankas* known in small numbers. (H.N. Wright, *Coinage and metrology of the sultans of Dehlī*, Delhi 1936, 250-4, 260-1). Humāyūn is reported to have added half an *iskandarī* (half the diameter of an *iskandarī*, or the diameter of a half-*tanka*?) to the length of the *gaz*, bringing the number to 42. Thus Humāyūn's cubit would be of 29.4″ (74.67 cm). However, the remark in the *Āʾīn-i Akbarī*, iii, 296, that this length was equivalent to 32 *angusht*, "fingers'-breadth") would lead to an impossibly large *angusht* of 0.92″ (2.34 cm); if, however, the diameter of the *half-tanka* (0.55″) be taken, the *angusht* would be of only 0.72″, too small (and in any case the half-*tanka* could not have been referred to as an *iskandarī*). This unsatisfactory explanation must be attributed to an error on Abu 'l-Faḍl's part.

3. Akbar (963-1014/1556-1605). At his accession, three parallel systems were in use throughout Hindūstān. In each the cubit, *gaz*, was of 24 digits, *tassūdj*, but the latter were designated long, medium, or short (*darāz, miyāna, kutāh*) according to whether they equalled 8, 7, or 6 barleycorns placed breadthways. The first was used in surveying land, the second in building, and the third for furniture and soft goods (*Āʾīn*, iii, 294). They were thus related in principle to the *dhirāʿ al-sharʿiyya* of 24 digits, which is occasionally referred to in India. The *iskandarī gaz* was retained for agriculture and building, and an *akbar-shāhī gaz* of 46 *angusht* was used for cloth (*Āʾīn*, iii, 296; cf. i, 170-1). In the 19th year of the Divine Era (1575), Akbar had a new standard pole, *djarīb*, made up of canes joined by iron rings. to obviate the moisture movement which made the hemp cable unreliable. On 22 Rabīʿ II 996/21 March 1588 he introduced his new standard *gaz*, to be known as the *gaz-i ilāhī*, of 41 digits, to replace all others; this appears to have been 32.82″ (83.36 cm), about the same as 41 of Hodgson's larger digits. He then re-established the land measure, the *tanāb*, at 60 of these new *gaz*; the squared area was known as a *bīgha* (*Āʾīn*, iii, 296). Subsequently, however, the *kurōh* is defined as of 100 *tanāb* each of 50 *ilāhī gaz*; the resulting 5,000 *ilāhī gaz* could also be measured with 400 poles, *bāns*, each of 12½ *gaz*: it seems that a further revision had taken place (*Āʾīn*, iii, 597).

4. Djahāngīr (1014-37/1605-27) in turn revised the scale, making the *ilāhī gaz* of 40 digits, and the *gaz-i sharʿī* of 24; he used the terms *gaz* and *dirʿa* (*sic*) interchangeably. In his memoirs he states that the *kurōh* used in his reign was the same as that of Akbar, and that like it, it was of 5,000 *dirʿa* (*Tūzuk-i Djahāngīrī*, 298, cf. 234). The *gaz* itself must therefore have remained unchanged. His purpose in altering the number of digits is clear in his practice of giving small measurements in quarters, *pā* or *pāw*, and eighths, *nīm-pāw* of a cubit: he had simply found the 41 digits indivisible. Measurements given for buildings at Fatḥpūr Sikrī, when compared with their present dimensions, suggest values for the *gaz* of between 30″ (76.2 cm) and 32″ (81.3 cm)—the lower values, being taken from longer measurements, are subject to greater error. Experiments in measuring the intervals between the *kōs mīnārs*, as reported by Elliot (*op. cit.* in *Bibl.*, 194-6), gave an average of 4,558ˣ (4,167.83 m) along the road, which at 5,000 *gaz* to the *kōs* yields a *gaz* of 32.818″ (83.35 cm). A *gaz* was also divided into 16 *girih* (*Tūzuk*, 175).

5. Shāh Djahān (1037-68/1628-57). Under the year 1046/1636-7, ʿAbd al-Ḥamīd Lāhawrī states that all measurements are given in a *dhirāʿ-i pādshāhī* of 40 *angusht* (*Bādshāh-nāma*, i/2, 237). Muḥammad Ṭāhir confirms that the *kurūh-i pādshāhī* is of 200 *djarīb*, the *djarīb* of 25 *dirāʿ* (*sic*), and these each of 40 *angusht*. (*Mulakhkhaṣ*, fol. 107a). Thus it appears either that the value of the *djarīb* had been halved or that it was no longer synonymous with the *tanāb*. As Ṭāhir refers later to the *djarībī kōs*, it seems the latter is probable. This explains why the rods in Akbar's reign were of 12 1/2 *gaz*, as half a *djarīb*: it seems that the *tanāb* continued to be associated with the old multiple of 60. An English letter from Āgra dated 24 April 1647 explains that the Āgra cubit had been shortened by 2.5%, or 1/3 *girih*, to conform with the Lāhawr cubit, by royal decree. The Lāhawr unit must be the *dhirāʿ-i pādshāhī*, and the Āgra cubit must be Akbar's *ilāhī gaz*: the difference represents a reduction from 41 to 40 digits (Moreland, *op. cit.*, 102). A second letter of 6 January 1648 refers to an Āgra cubit, presumably the reformed unit, as 32″ (81.28 cm) long (Foster, 1646-50, 122, 190). In this case the old Agra cubit would be 32.82″/83.36 cm). Tavernier printed a scale (*op. cit.*, ii/2, 236) which shows that the Sūrat cubit was 27.30″ (69.34 cm), thus tending to corroborate Fryer's 28″ (71.12 cm); another English letter of 12 November 1645, before the reform, equates 10.5 Āgra *girih* with 19 Sūrat *tassūdj*, so that from Tavernier's scale the Āgra cubit can be calculated as 32.99″ (83.79 cm), not far from the values established above (Foster, 1642-45, 299-300). Hodgson, with the measurement across the knuckles, had arrived at an *ilāhī gaz* of 33.018″ (83.86 cm); his measurements at the Tādj Maḥall and other buildings of this reign in Āgra, when referred to figures in the *Shāh-Djahānnāma* of Muḥammad Ṣāliḥ, suggested a *djirāʿ-i pādshāhī* of 31.79″ (80.75 cm) (Hodgson, 50-3: he was mistaken in thinking this cubit to be of 42 digits). These royal works were apparently measured in the new unit, regardless of the conservatism of the merchants in the same city. Shāh Djahān's reform can only be explained as an attempt to combine the advantage of a division into 40 units with Akbar's, rather than Djahāngīr's, digit. This may have been because the latter had proved larger than most fingers!

As well as the variations of the *kōs* to the smaller units within the Mughal heartland, provincial standards also varied. The *kōs* in use in Mālwā was of 90 *tanābs* of 60 *gaz*, according to the *Āʾīn-i Akbarī*; in Yule and Burnell, *Hobson-Jobson*, London 1886, with Crooke's additions of 1902, the estimated *kōs* in the Bengal Presidency was "about 2 miles, much less as you approach the N.W."; in the upper [Ganges-Djamnā] Dōʾāb 1 1/4 miles, in Bundelkhand "nearly 3m or ... even 4″, in Madras 2 1/4, and a *sulṭānī kōs* in Mysore "about 4 miles". The terms *tanāb* and *djarīb* seem to have become interchangeable, although obviously variable in terms of the *gaz*, variable itself. The determination of the Mughal "imperial" *gaz* became a matter of concern to the British when their own revenue surveys were begun in the first quarter of the 19th century; results were so discrepant that an arbitrary value of 33 inches (= 83.82 cm) was assigned.

It should be noted that the term *dhirāʿ* [*q.v.*] "cubit" is occasionally used, with no great precision, by Indian Muslim authors, either for the *gaz* or for the *hāth*, lit. "hand", the distance between the elbow and top of the middle finger, sometimes used as a cloth measure (Buchanan's *Eastern India*, quoted in *Hobson-Jobson*, s.v. *Haut*); but the common cloth measure was the *gaz* in the form of an iron rod marked into

quarters. This implement was certainly still in use in Lucknow in 1955.

(b) Measure of an area. The units of area measurement for land were mostly the *bīghā* and its twentieth part the *bīswā*. The *bīghā* again varied considerably by region, with the usual distinction of *kaččā* and *pakkā* (some examples in Jarrett's footnote to the term *ṭanāb* in his tr. of *Āʾīn-i Akbarī*, ii, 61). Again Akbar's regulations of the 31st regnal year provide a point of reference: he fixed the *bīghā* as a square *djarīb*, i.e. 60 × 60 *Ilāhī gaz*, directing that for measurement purposes the old hempen *ṭanāb*, lit. "tent-rope" of sixty *gaz* be replaced by a *djarīb* of bamboo rods joined by iron rings—the former having lent itself too easily to fraud by being left out to collect the dew and therefore shrinking from 60 *gaz* to as little as 56; this could cause a mismeasurement of up to thirteen *bīghā* in a hundred (one *madad-i maʿāsh farmān* of 989/1581, doc. 1 in B.N. Goswamy and J.S. Grewal, *The Mughals and the Jogis of Jakhbar*, Simla 1967, equates 200 *bīghā*-by-the-hemp-rope with 170 *bīghā*-by-the-bamboo, a difference of 15%). This standardised "imperial" *bīghā* of 3,600 *ilāhī gaz* was therefore (at the rate of the *gaz* as calculated above) 0.5427 acres = 0.2196 ha. (in the British revenue surveys, taking the *gaz* as 33 inches, the *bīghā* was fixed at 5/8 acre = 0.253 ha.). The *bīswā* was thus of 131.33 sq. yds. = 109.8 sq. m.; a smaller measure, the *bīswānsā*, one-twentieth of the *bīswā*, is also mentioned by Abu 'l-Faḍl, who states that anything under the *bīswānsā* was ignored for revenue purposes. Three smaller divisions by twenties are mentioned, which would seem to be of no practical account. Local units are occasionally encountered in *farmāns*, such as the Pandjāb *kanāl*, a quarter of a *bīghā*, or *ghumāʾō*, generally 8 *kanāls* in the Pandjāb but as little as one-fifth of a *bīghā* elsewhere in north India, and in the extreme east and north-east, the *hāl/hār* of some 7 to 8 *bīghā*.

(J. Burton-Page and P.A. Andrews)

3. Finally, one should note that the word *misāḥa* is also used as a technical term of the financial department to denote not only surveying as such, but also the land-tax [see KHARĀDJ] calculated, probably on the Byzantine model according to the surface area of the cultivated lands, or else, perhaps on the Sāsānid model, according to the surface area adjusted in regard to the nature of the soil, methods of irrigation and, in general, yield.

(Ed.)

MISALLA (a., pl. *masāll*), lit. "large needle", obelisk. The mediaeval Arab authors speak with awe of the wondrous two obelisks of ʿAyn Shams [*q.v.*], Heliopolis, the old Egyptian Ōn. Al-Maḳrīzī (*Khiṭaṭ*, ed. G. Wiet, vol. iv, ch. lxvi, § 1, p. 89) gives the biblical name Raʿamsās, and Abū Djaʿfar al-Idrīsī (*Anwār ʿulwī al-adjrām fi 'l-kashf ʿan asrār al-ahrām*, ed. U. Haarmann, Beirut 1990, 80, l. 5) the variant Raʿamsīs, for the ancient city which is occasionally (Ibn Duḳmāḳ, *Intiṣār*, v, 43 ult.) identified with the village al-Maṭariyya. The two obelisks had formed part of the vast sun temple (*haykal al-shams*) already in ruins when the Arab conquerors arrived in Egypt. Different lexical terms are used to introduce the obelisks: the early Muslim geographers Ibn Khurradādhbih (161, ll. 5-9) and Ibn Rusta (80, ll. 9-13) speak of "columns" (*usṭuwānatān*ⁱ). Numerous later authors (Abū ʿUbayd al-Bakrī, al-Ḳuḍāʿī, Abū Djaʿfar al-Idrīsī, Yāḳūt, Ibn Saʿīd al-Maghribī, al-Maḳrīzī, Ibn Duḳmāḳ and Abū Ḥāmid al-Ḳudsī) simply denote them as "pillars" (*aʿmida*, *ʿamūdān*ⁱ), whereas al-Muḳaddasī (210; cf. A. Miquel, *L'Égypte vue par un géographe arabe: al-Muqaddasī*, in *AI*, xi [1972], 134), the Iranian traveller Nāṣir-i Khusraw, in his description of his visit to the *bāgh-i Firʿawn* in ʿAyn al-Shams [!] (*Safar-nāma*, ed. Ch. Schefer, Paris 1881, 49, 142 f.), and Abū Ḥāmid al-Andalusī (*Tuḥfat al-albāb*, ed. G. Ferrand, in *JA*, [July-September 1925], 73-4) use the term minaret/beacon (*manār*, *manārān*ⁱ). The popular designation, however, was, as we learn from Yāḳūt (*Buldān*, ed. Beirut, iv, 179a), *masāll/misallatā Firʿawn*.

When ʿAbd al-Laṭīf al-Baghdādī visited Heliopolis at the end of the 6th/12th century, one of the two mighty obelisks had already collapsed: "It was broken in two pieces by the fall, owing to its excessive weight. The copper which had covered the top had been taken away" (cf. the Arabic text of *al-Ifāda wa 'l-iʿtibār*, as well as an English tr., in K.H. Zand and J.A. and I.E. Videan, *The Eastern Key*, London 1965, 126-9; for the French and German renderings of this famous description of the obelisks, which passed into later Arab compendia such as Shāfiʿ b. ʿAlī's *K. ʿAdjāʾib al-buldān* (see *Khiṭaṭ*, § 15, 95-6), see Silvestre de Sacy, *Relation de l'Égypte par Abd-allatif médecin arabe de Bagdad*, Paris 1810, 181, and Else Reitemeyer, *Beschreibung Ägyptens im Mittelalter aus den geographischen Werken der Araber*, Leipzig 1903, 102-3). The exact date when this obelisk fell down is unclear. Abū Ḥāmid al-Andalusī, who visited Egypt around 512/1118, also mentions only one obelisk, of which de Sacy (*op. cit.*, 228), however, thought that it was this one which collapsed at a later time, i.e. between 1118

and ʿAbd al-Laṭīf's visit around 1195. Certainly, the historian Muḥammad b. Ibrāhīm al-Djazarī (d. 739/1338 [*q.v.*]) is not correct when dating this event as late as 6 Ramaḍān 656/6 September 1258 (see the interesting quotation from his unpublished chronicle *Ḥawādith al-zamān*, in *Khiṭaṭ*, § 16, pp. 96-7; the report of this year in the Gotha autograph of *Ḥawādith al-zamān* is fragmentary, cf. U. Haarmann, *Quellenstudien zur frühen Mamlukenzeit*, Freiburg 1969-70, 44). Perhaps de Sacy was correct (*op. cit.*, 229) in his conjecture that the right year should be 556/1161, and that some scribal error could be responsible for this false chronology to be found also in later authors such as al-Nuwayrī (*Nihāya*, i, 394, l. 7).

The two obelisks of Heliopolis were unanimously counted among the outstanding *ʿadjāʾib* of Egypt. Abū Ḥāmid al-Ḳudsī (= Ps. Ibn Ẓahīra) names them as the key monuments of Heliopolis, the second item in his list of a total of twenty Egyptian miracles (*al-Faḍāʾil al-bāhira fī maḥāsin Miṣr wa 'l-Ḳāhira*, ed. M. al-Saḳḳā and K. al-Muhandis, Cairo 1969, 150; the text is taken from Yāḳūt, *loc. cit.*, who again quotes al-Ḥasan b. Ibrāhīm al-Miṣrī). Their fame is founded not only on their awesome dimensions and weight, but also on the perfect craftsmanship on an exceptionally difficult material (granite), and the multitude of hieroglyphic inscriptions, including the relief of someone on a riding beast (cf. al-Ḳuḍāʿī in *Khiṭaṭ*, § 20, p. 97, see also Yāḳūt, *loc. cit.*; in Ibn Saʿīd, *al-Mughrib, al-Nudjūm al-zāhira fī ḥulā ḥaḍrat al-Ḳāhira*, ed. Ḥusayn Naṣṣār, Cairo 1970, in a special book on Heliopolis—the *K. Ladhdhat al-lams fī ḥulā kūrat ʿAyn Shams*, quoted also by Ibn Duḳmāḳ, *Intiṣār*, v, 44, l. 1—we read wrongly of this statue as standing between the two obelisks!, cf. 375, l. 2). Particular fascination was caused by the precious copper caps of the two needles, for which various Arabic terms ((1) *ḳalansuwwa* "hood", see ʿAbd al-Laṭīf and Shāfiʿ b. ʿAlī; (2) *ṣawmaʿa* "[monk's] cell", see al-Ḳuḍāʿī and Yāḳūt and their respective followers al-Ḳalḳashandī, *Ṣubḥ*, iii, 325, l. 4; al-Maḳrīzī, Khiṭaṭ, § 20, p. 97; Ibn Saʿīd, *al-Nudjūm al-zāhira*, 375; Abū Ḥāmid al-Ḳudsī, *Faḍāʾil*, 150; and (3) *ṭawḳ* "collar", see Ibn Khurradādhbih, Ibn Rusta and Abū ʿUbayd al-Bakrī) are used. ʿAbd al-Laṭīf speaks with the exactitude of the scientist about the effect which verdigris had on the copper of this cap. Several authors, among them also Nāṣir-i Khusraw, who visited Heliopolis in the time of the Fāṭimid caliph al-Mustanṣir [*q.v.*] in the mid-5th/11th century, mention the moisture from condensation that could be observed flowing constantly, in all seasons, from beneath the copper top of the obelisk and causing moss and other vegetation to grow miraculously high above the soil on the barren granite of the monument (cf. esp. Abū Ḥāmid al-Andalusī's *Tuḥfa*, as well as the French and German translations of his remarks by Ferrand in *Les monuments de l'Égypte au XII siècle d'après Abū Ḥāmid al-Andalusī*, in *Mélanges Maspero*, iii, Cairo 1935-40 [= *MIFAO*, lxviii], 61, and G. Jacob, *Studien in arabischen Geographen*, iii, Berlin 1892, 86-7). Al-Ḳuḍāʿī, as well as Yāḳūt, Ibn Saʿīd al-Maghribī, and al-Ḳalḳashandī, speak of a connection between the annual rise of the Nile and the flow of moisture from the obelisk. The value of the copper found both on top of, and inside, the fallen obelisk was enormous; al-Djazarī, and following him both al-Maḳrīzī and Abū Ḥāmid al-Ḳudsī (*Faḍāʾil*, 151, ll. 2-3), mention a figure of 10,000 *dīnārs*.

Since the living tradition of Pharaonic Egypt had forever ceased in Islamic times, the function of the obelisks—as well as the identity of those who erected them—was free for an intrinsically Islamic or a fantastic interpretation. Ibn Khurradādhbih names the legendary Iranian king Hūshang as their builder (161; see also *Khiṭaṭ*, § 26, p. 99, ll. 5-9). In the apocryphal Hermetic history of al-Waṣīfī/Ibn Waṣīf Shāh, *Akhbār al-zamān*, the "two pillars" of Heliopolis are the work of the postdiluvian Pharaoh M-n-ḳāwus (ed. ʿA. al-Ṣāwī, ⁴Beirut 1980, 200, ll. 11-13; see also *Khiṭaṭ*, § 11, p. 93), who is said to have inscribed the date of their erection into the stone. Ibn Saʿīd al-Maghribī (*op. cit.*, 376, ll. 3-5) mentions the Amalekite al-Rayyān b. al-Walīd b. Dūmaʿ/Dūmagh, Joseph's Pharaoh, as their builder. Al-Muḳaddasī (211), one of our earliest witnesses in Islamic times, surmises, on the basis of a book on talismans, that the obelisks served an apotropaic function against the crocodiles, still a menace at the time of their construction.

The less conspicuous obelisks on Egyptian soil are also mentioned here and there in the mediaeval Islamic sources. In the context of the two obelisks of Heliopolis, ʿAbd al-Laṭīf al-Baghdādī (and those following him) mention the two needles of Cleopatra in Alexandria (now on the Embankment of the River Thames in London and in Central Park, New York) as being considerably bigger than the numerous small obelisks in ʿAyn Shams yet as being well inferior in size to the two big ones. That these two Alexandrian obelisks had originally also stood in Heliopolis, and had been transferred to the Ptolemaic capital only in Roman times, was evidently unknown to the mediaeval Islamic authors.

There is also a brief reference to the unfinished obelisk in the quarry of Aswān. In the anonymous Berlin manuscript 8503 (Petermann, i, 684, no. 12, fol. 13a, written after 814/1411), the author states that he himself found in the "mountain of Assuan" this pillar, all designed and carved (*wa-ḳad hundisa wa-nuḳira*), yet not yet separated from the rock; what its destination was to be remained unknown, he adds.

A few monuments are mentioned in direct connection with the obelisks of ʿAyn Shams, such as the large statue of Isis in Fusṭāṭ, called either the "lady" (*al-sayyida*) (see al-Harawī, *al-Ishārāt ilā maʿrifat al-ziyārāt*, ed. J. Sourdel-Thomine, Damascus 1953, 40, ll. 14-15) or the laundry-woman of Pharaoh's kin (*al-ghassāla li-āl-Firʿawn*) (al-Muḳaddasī, 211), or the idol of firm white limestone, allegedly depriving him who saw it of his office, which was therefore destroyed by Aḥmad b. Ṭūlūn in 258/871-2 (Ibn al-Dāya, *al-Sīra al-Ṭūlūniyya*, quoted by al-Makrīzī in his *Khiṭaṭ*, § 23, p. 98).

Bibliography: Besides the works mentioned in the text, see the titles given by J. Maspéro and G. Wiet, *Matériaux pour servir à la géographie de l'Égypte*, Cairo 1919, 131-2; Wiet in his ed. of Maḳrīzī's *Khiṭat*, iv, ch. 66, § 15, p. 96, n. 2; idem, *L'Égypte de Murtadi fils du Gaphiphe. Introduction, traduction, et notes*, Paris 1953, 97 (les merveilles d'Alexandrie).

(U. Haarmann)

MISʿAR B. MUHALHIL [see abū dulaf].

MIṢBĀḤ [see sirādj].

MISBAḤA [see subḥa].

MISHMISH (a., more rarely *mushmush*, in the Maghrib *mishmāsh*), a masc. sing. noun with a collective meaning (singulative *mishmisha*), the apricot-tree and its fruit (*Prunus armeniaca*), of the Rosaceae family, and corresponding to Persian *zardālū*, *zardālūk* and Turkish *kayısı*.

It was for long considered as indigenous to Armenia (whence its scientific name), but in fact has been cultivated in China for about two millennia before our era and reached the Mediterranean region of the West

in the historical ages of Athens and Rome via India, Persia, Iraq and Turkey. In Greece, Italy, North Africa and Spain it was soon acclimatised under the name of "Armenian apple" (ἀρμενιακὸν μῆλον, *armeniacum malum*) and "golden apple" (χρυσομῆλον, *chrysomelum*), this last appellation being given also to the quince (*safardjal*). Nevertheless, in Greece it was more commonly called by the adjective "early" (πραικόκιον, *praecox*), since it is one of the first of the juicy fruits (*fākiha*, pl. *fawākih*) to ripen in the spring; and it was from this Greco-Latin denomination that Arabic derived *barkūk* which, according to region, is also applied to the plum (*idjdjās*, *ʿayn al-bakar*). This loan-word *al-barkūk* yields in Kabyle *aberkok*, in Mozarabic *albericoque* and in Catalan *abercoc*, whence Old Fr. *aubercot* (12th century) and then modern Fr. abricot, Eng. apricot, Ger. Aprikose.

As early as the high Middle Ages, the Islamic lands which cultivated the apricot distinguished two categories of this fruit: on one hand, the varieties the kernel of whose stone was sweet and edible (*mishmish lawzī*) and on the other, those where it was bitter (*mishmish kilābī*). In the first category, by far the most sought-after and best-named variety was that called *kamar al-dīn* ("moon of religion") and *kaysī*, which had large juicy fruits perfectly suited for drying. In the 8th/14th century, the famous traveller Ibn Baṭṭūṭa [*q.v.*] on several occasions vaunts their excellence. He first tasted them at Ḥamāt in Syria (the *ḥamawī* variety), then at Iṣfahān and finally, in Anatolia where they are singled out as a speciality of the towns of Konya (*Kūniya*), Antalia (*Anṭāliya*) and Kastamonu (*Kasṭamūniya*). After drying, these fruits were exported to Syria and, above all, to Egypt (*Riḥla*, i, 142, ii, 44, 259, 281, 336, tr. Gibb, i, 91, ii, 295, 418, 430, 459). As foodstuffs, these dried apricots offered several advantages since, as well as keeping well, they also produced, after maceration in water (*nakūʿ*) overnight, a refreshing and sweet-smelling drink and a tasty side-dish. It would be impossible to enumerate the many dainties (*ḥalwiyyāt*), including pastries, confections of sugar, sweets and syrups, in whose composition apricots were used. In connection with dishes of cooked meat, Arabic works on the culinary art mention two recipes for stews involving apricots (*mushmushiyya*; see M. Rodinson, *Recherches sur les documents arabes relatifs à la cuisine*, in *REI* [1949], 131-8). Finally, in the pharmacopeia, the sweet or bitter kernel of the stone of the apricot yielded an "oil" (*duhn lubb nawā al-mishmish*) beneficial for the treatment of haemorrhoids, anal tumours and dysentery (see Ibn al-Bayṭār-Leclerc, *Traité des simples*, Paris 1877-83, ii, 929). In the Middle East at the present day, among the numerous varieties of apricots obtained by grafting, one sees always in the markets the *ḥamawī* and the *mishmish lawzī*, whose name has become by abbreviations *mishlawz*. Also to be found, according to region, are the *basūsī*, the *sindiyānī*, the *baladī* and the *ʿadjamī*, all with a sweet kernel (see E. Ghaleb, *al-Mawsūʿa fī ʿulūm al-ṭabīʿa*, Beirut 1965, s.v. *mishmish*).

In Syria, the name of *mushmush barrī* is given to the arbutus (*Arbutus unedo*) regarded as a kind of wild apricot because of the reddish tinge of its fruits; and, in botany, modern Arabic calls *mishmish Amīrīkā* the Mammea or Santo Domingo apricot (*Mammea americana*) and *mishmish al-Yābān* "apricot of Japan" the Kaki (*Diospyros kaki*).

Bibliography: Given in article. (F. VIRÉ)

MISK (A.), musk, the gland secretion of the male musk deer (*Moschus moschiferus* L., *Cervidae*), discharged from the musk pouch (*Moschus in vesicis*), the prepucial bag-like formation near the navel of small deer resembling roes or gazelles. According to a tradition, "musk is the best and strongest smelling perfume" (Wensinck, *Concordance*, vi, 224a, 10-1; idem, *Handbook*, 184b). In antiquity, musk was not known. In Byzantium, it turns up in the 6th century (Cosmas Indicopleustes).

Al-Masʿūdī (*Murūdj*, ed. and tr. Pellat, §§ 391, 392, 393, 407, 434, 902), also quoted by Ibn al-Bayṭār (see *Bibl.*) after Ibn Wāfid, reports on the homeland and extraction of this highly appreciated perfume. According to him, the "musk gazelle" (*ghazāl*, *ẓaby*) lives in a region belonging partly to Tibet, partly to China. For two reasons, the Tibetan musk is of higher quality than the Chinese one: firstly because the gazelles in Tibet graze the fragrant spikenard (*sunbul*, not lavender, Pellat § 391), whereas in China, other herbs; secondly, because the Tibetans leave the musk pouch as it is, while the Chinese take the secretion out of the pouches and add blood, or tamper with it in another way. Besides, the Chinese musk loses part of its quality because of humidity and climatic changes on the long sea journey from China to Near East. In Tibet, the musk gazelles are caught in nets, or killed with arrows. In size, colour and form of the horns, the animals resemble the Arabic gazelle. If the pouch is cut off before the secretion is ripe, the latter gives off an unpleasant smell which, after some time, under the influence of the air, takes on the real musk scent. The best musk is obtained when the secretion ripens completely inside the pouch. In this case, the animal senses a strong itching, from which it frees itself by grating against stones until the pouch bursts open and the contents come out. The Tibetans then go to look for the discharged secretion which has dried up in the air, put it in the musk pouch and take it to their princes. This high-quality musk is reserved for princes, who give it to each other as a present.

Others authors essentially affirm al-Masʿūdī's report, adding further data about the lands of origin. As such, India is mentioned, above all the kingdom of Mūdja (perhaps Arakan, the coastal region of Western Burma), and also Further India, Ceylon and Java. From Central Asia, the musk came into the Islamic lands by the great caravan routes, and from East and South Asia by way of the sea, through the ports of Dārīn (al-Baḥrayn) and Aden. Even in faraway Spain, musk was the most important perfume (al-Masʿūdī, *Murūdj*, § 407).

The most detailed report on musk is given by al-Nuwayrī (see *Bibl.*). His main source is the *Kitāb al-ʿArūs* of al-Tamīmī, but he also quotes al-Yaʿkūbī, Muḥammad b. ʿAbbās al-Miskī, al-Ḥusayn b. Yazīd al-Sīrāfī and Yūḥannā b. Māsawayh, who give more accurate data about the places of origin, the transportation and the entrepôts, as well as about the various qualities of the musk. Musk was very often tampered with, as may be seen from the substitutes quoted by al-Kindī (or one of his pupils) in his *Kitāb fī Kīmiyāʾ al-ʿiṭr wa 'l-taṣʿīdāt* and the list thereof composed by the editor K. Garbers (*Abhandlungen für die Kunde des Morgenlandes*, xxx, Leipzig 1948, 272-4).

Musk also played an important role in medicine. According to Arab physicians, musk intensifies and stimulates the senses, and dispels trouble and affliction. This is in line with the fact that musk, destined by nature to attract the female animal, with human beings has the effect of an aphrodisiac (H. Schindler and H. Frank, *Tiere in Pharmazie und Medizin*, Stuttgart 1961, 288-92). It further strengthens the brains and eyes, is good for heart palpitation, is an antidote against venomous stings, against the deadly alkaloid

of aconite and against ergot (*kurūn al-sunbul*), *secale cornutum*).

MISKAWAYH, philosopher and historian who wrote in Arabic, born in Rayy around 320/932. His full name was Abū ^cAlī Aḥmad b. Muḥammad b. Ya^cḳūb, which seems to refute Yāḳūt, who describes him as "Mazdaean converted to Islam", whereas it was probably one of his ancestors who was converted. Miskawayh (Miskōye/Mushkōye), and not Ibn Miskawayh as he is commonly designated, performed the tasks of secretary and librarian under the viziers al-Muhallabī (340-52/950-63) [*q.v.*], Abu 'l-Faḍl (353-60/951-70) and Abu 'l-Fatḥ (360-6/970-6) [see IBN AL-^cAMĪD] and finally under the Būyid ^cAḍud al-Dawla (d. 372/983 [*q.v.*]); he also frequented not only the Arabo-Persian aristocracy of the age, but also the most remarkable representatives of Islamic culture such as al-Tawḥīdī, al-^cĀmirī, Ibn Sa^cdān, al-Ṣāḥib Ibn ^cAbbād, Abū Sulaymān al-Manṭiḳī, Badī^c al-Zamān, Abū Bakr al-Khwārazmī and many others; he studied in particular the work of al-Ṭabarī [*q.v.*] under the direction of Ibn Kāmil, who was a pupil of the famous historian, which perhaps explains his interests in universal history. If we are to believe Yāḳūt, he died on 9 Ṣafar 421/16 February 1030, aged then a hundred. (Ed.)

As both philosopher and historian, he is, in fact, one of the very rare intellectuals in the Arabic language who is known to have practised the two disciplines with competence and with a resolve to embark on the most complex ethico-political reflection. This is why it would be arbitrary today to separate, on the pretext of specialisation, what the author combined and practised in a single intellectual endeavour.

It is true, however, that the philosophical work is more abundant and better elaborated than the *Tadjārib al-umam* (partial ed. L. Caetani, Leiden 1909-17, 3 vols.; with the continuation of Abū Shudjā^c al-Rūdhrāwarī, ed.-tr. H.F. Amedroz and D.S. Margoliouth, *The experiences of nations*, 7 vols., in their series *The eclipse of the Abbasid Caliphate*, Oxford-London 1920-1), a universal history from the Flood to the year 369/980, whose originality only appears in the last part dealing with the Būyids.

As a philosopher, Miskawayh is distinguished by the central importance he attached to ethics. In his *Treatise on ethics* (*Tahdhīb al-akhlāḳ wa-taṭhīr al-a^crāḳ*, ed. C. Zurayḳ, Beirut 1967, Fr. tr. M. Arkoun, 2nd ed. Damascus 1988), he pleaded with conviction for the organising of philosophical education around and beginning with ethics. In fact, this work compels recognition in Arabic literature as the most didactic, the fullest and most open to the Greek, Iranian, Arab, Muslim traditions, which Miskawayh knew perfectly, as is confirmed by his anthology *al-Ḥikma al-khālida* "The eternal wisdom" (ed. ^cA. Badawī, Cairo 1952) or *Djawīdhān khirad* [*q.v.* in Suppl.], Al-Ghazālī was largely inspired by it in his *Mīzān al-^camal* and Naṣīr al-Dīn al-Ṭūsī (d. 672/1274) summarised it in Persian in his *Akhlaḳ-i Naṣīrī*, as did al-Dawwānī or al-Dawānī (d. 908/1502 [*q.v.*]) in his *Akhlaḳ-i Djalālī*. Nearer our own time, Muḥammad ^cAbduh used the *Tahdhīb* in his teaching. We will also remark that no equivalent treatise was composed in Arabic until our own age. This is explained by the abandonment of the philosophical perspective in Arabic thought after Ibn Rushd (the *Ishrāḳī* line followed by the Shī^cī thinkers did not respect the classical philosophical attitude as much as the *falāsifa* did).

In order the better to appreciate the contribution and originality of Miskawayh, we must set his activity within the particularly brilliant intellectual generation who worked in Būyid Persia and ^cIrāḳ from 350 to about 430/961-1039. We know the lifelike and interesting portrait that al-Tawḥīdī has left us of this generation; Būyid princes, viziers and intellectuals of all schools and all conditions were participating in the liveliness of a cultural and intellectual life which in many of its aspects contributed to the humanism of the Renaissance in the West (see J.L. Kraemer, *Humanism in the renaissance of Islam. The cultural revival during the Buyid age*, Leiden 1986). The salient fact is the emergence of a philosophical *adab*; one reads a large number of works composed directly in Arabic in addition to the major texts translated from Greek and Syriac. The reader is less delayed by philosophical and technical analyses; the abstract themes of metaphysics are less deeply explored, but by contrast, there is a larger number of didactic, popularly accessible accounts on the practical problems of the search for supreme happiness, the administration of the city, domestic economy, the education of children, the struggle against sadness, spiritual medicine and preparation for death. In an exchange of questions (*al-Hawāmil*) and answers (al-*Shawāmil*), Miskawayh and al-Tawḥīdī demonstrate the diversity and extent of the horizons of knowledge, always cultivated in a philosophical setting. Recourse to an autonomous reason, the mistress of categories, concepts and methods for establishing the profound realities (*ḥaḳā'iḳ al-umūr*), contrasts with religious reason, subject to revealed evidence, in the religious sciences. The "humanists" extol autonomous reason for going beyond blind passions and partisan struggles which split the numerous confessional groups. Miskawayh led the struggle with the constancy and serenity of the sage. His privileged position in the rich library of Abu

'l-Faḍl Ibn al-ʿAmīd allowed him to extend his information and look at the society of his time lucidly, and less indignantly, than al-Tawḥīdī.

In a consistently very didactic style, he is equally interested in three main metaphysical questions in a more modest work than the *Tahdhīb*, his *al-Fawz al-aṣghar*, ed. Ṣāliḥ ʿUdayma, Fr. tr. R. Arnaldez, Tunis 1987, demonstrating the existence of God; the soul and its states; and the prophets. In some still briefer epistles, he dealt with the intellect and the soul (ed. Arkoun, in *BEO*, Damascus 1961-2), the intellect and the intelligible (ed. Arkoun, in *Arabica*, 1964/1), and justice (ed. M.S. Khan, Leiden 1964).

The global vision held by Miskawayh is that of the *Nicomachean ethics* linked with the Psychology of Plato, the ideas of Galen on the relationship between psychology and physiology, and of Bryson on domestic economy and the education of children. Psychosomatic considerations, cosmology, the theory of climates and alchemy all supply an arsenal of arguments whose articulation leads to this unity (*al-waḥda*) which inspired all the sages nourished on Greek science, Persian *adab* and monotheistic religious sensibility.

The pictures of virtues and vices that he gives in his *Tahdhīb al-akhlāḳ* brings together in a systematic form the four cardinal virtues (wisdom, temperance, courage and justice) defined as the just means (*wasaṭ*) between two extremes representing the vices (*radhāʾil*). He also invents a technical lexicon of ethics in which the definitions of the virtues and vices known in the Arab tradition come to be joined with those, more philosophically elaborated, of the *Nicomachean ethics*. Justice (*ʿadāla, ʿadl*) and love and friendship (*maḥabba*) are the subject of particularly elaborate chapters. The idea governing all the analyses is that the reasoning faculty (*ʿaḳl*) should achieve the maintenance of equilibrium (*iʿtidāl*) between the irascible (*ḳuwwa ghaḍabiyya*) and lustful (*shahawāniyya*) faculties so as to ensure man's certain advance towards supreme happiness (*al-saʿāda al-ḳuṣwā*) the object of the wise man's quest. This advance is at one and the same time commanded by philosophical knowledge and the ethical conduct that illuminates it.

One is always agreeably struck by the serenity of Miskawayh's tone, by a very clear, very accessible and at the same time very rigorous style. When he describes the social and economic consequences of Būyid policy, or when he reports an abstract philosophical theory, he always succeeds in avoiding the use of technicalities which discourage the reader and the pedantry which obscures the subject. He also combines philosophical seriousness, scientific competence and concern with didactic communication, to the point that all these writings recall those of the best modern Arab prose writers. It may be objected that he loses in profundity and acuteness what he gains in explanatory, and even persuasive, effectiveness; but one should not lose sight of the fact that the socio-political functions of philosophical *adab* are as necessary and fruitful as the deeper, but less accessible, research of the great names of *falsafa*. It is through philosophical *adab* that religious reason was able to assimilate certain contributions of philosophical knowledge without provoking the rejection constantly repeated by the jurist-theologians who were champions of "orthodoxy". From this point of view, Miskawayh and the intellectuals of his generation remain of current importance in Arabic and Islamic thought; faced with the militants of religious orthodoxy who are more numerous than ever, the philosophical attitude and knowledge, as in the 4th/10th century in Baghdād, Rayy and Iṣfahān, would allow one to pass by dogmatic conflicts whose religious vocabulary conceals principally political stakes. (M. Arkoun)

MISKĪN (a.), pl. *masākīn*, *miskīnūn*, "poor, destitute". The word is an ancient Semitic one. In Akkadian, *muškēnu/maškēnu* apparently in the first place designated a social class between the full citizens and the slaves, and thence acquired the sense of "poor, destitute" (see E.A. Speiser, *The muškēnum*, in *Orientalia*, N.S. xxvii [1958], 19-28; *Chicago Akkadian dictionary, Letter M*, Part ii, 272-6; Von Soden, *Akkadisches Wörterbuch*, ii, 8641; idem, *Muškenum und die Mawālī des frühen Islam*, in *ZA*, N.F. xxii [1964], 133-41). In the latter sense, it appears in Aramaic as *meskīnā* and in OT Hebrew as *miskēn*. In Epigraphic South Arabian, we find *ms²kmy-m* only in Qatabanian, in a funerary inscription, apparently here denoting an inferior class not to be buried in the same tomb as the tomb's more aristocratic owner (see J. Walker, *A South Arabian inscription in the Baroda State Museum*, in *Le Muséon*, lix [1946], 159-62, and G. Ryckman's *Note additionnelle*, 162-3).

As also with the Ethiopic form *meskān*, the word must have passed into Classical Arabic from the Aramaic, according to Fraenckel (cf. Jeffery, *The foreign vocabulary of the Qurʾān*, 264-5; A. Hebbo, *Die fremdwörter in der arabischen Propheten-biographie des Ibn Hischām (gest. 218/834)*, Frankfort 1984, 340-3). Here, on analogy with the intensive adjective *mifʿīl* form, *miskīn* is usually of common gender (cf. Wright, *Grammar*, 186), but the feminine *miskīna* is found with the sound pl. *miskīnāt*. In the Arabic of recent times, it has the connotation of "wretched, miserable", see e.g. Spiro, 567, and Hinds and Badawi, 823, for Egyptian colloquial, and Barthélemy, 350, for Syrian, passing into Italian as *meschino* and into French as *mesquin* "mean, shabby, stingy".

In the Ḳurʾān, it is very frequent, with the abstract *maskana* "poverty, indigence", appearing in II, 58, III, 108, and is often found in lists of the classes whose support was a duty for the Muslims. As in sūra IX, 60, it is found alongside of *fuḳarāʾ*, commentators and jurists have felt that some distinction must be made between the two. They usually explain *miskīn* as

needy, but not absolutely without possessions like the *fuḳarā*ʾ, and refer to sūra XVIII, 78, where there is a reference to poor people who possess a ship among them. How uncertain this is, is however evident from the fact that the Mālikīs in opposition to the Shāfiʿīs take the other view and regard the *miskīnūn* as the most needy; cf. also the quotations from *ḥadīth* in Madjd al-Dīn Ibn al-Athīr, *al-Nihāya fī gharīb al-ḥadīth wa ʾl-athar*, Cairo 1383/1963, ii, 385-6, and the definitions collected in Lane, *Lexicon*, i, 1395. The *miskīn*[an] *dhā matraba* of XC, 16, does not help us.

From the meaning "poor" gradually developed that of "base, miserable", also in the moral sense, cf. e.g. Ibn Saʿd, iii/1, 6 ult. where Abū Sufyān's wife Hind is called *al-Miskīna*. On the other hand, the word can mean "humble" as in the words attributed to Muḥammad: "Let me live as a *miskīn* and die as a *miskīn* and include me among the *miskīnūn*."

In modern South Arabia, e.g. in Ḥaḍramawt [*q.v.* in Suppl.], the term *miskīn* denotes the top layer of the population subject to the tribesmen, comprising the petty traders and artisans, constituting the layer above the *ḍuʿafā*ʾ (sing. *ḍaʿīf*), who are not physically weak but are non-arms bearing, comprising builders, potters and field workers. Here, then, *miskīn* seems not to convey the idea of "poor, wretched", but to be connected with the root *s-k-n* "to settle" (in modern South Arabian, *sākin* = "camp, village", cf. Landberg, *Glossaire daṯînois*, iii, 1958). See R.B. Serjeant, *South Arabian poetry. I. Prose and poetry from Ḥaḍramawt*, London 1951, 27 ff., 47; idem, *South Arabia*, in C.A.O. van Nieuwenhuijze, ed., *Commoners, climbers and notables*, Leiden 1977, 230 ff.; idem, *Studies on Arabian history and civilisation*, London 1981, IX. It is further interesting that the term *miskēn* turns up again in ʿIrāḳī Kurdistan, where in e.g. the Kirkūk and Bulaymāniyya regions it denotes villagers who do not claim tribal origin, a class of lowly social status and often oppressed by tribal neighbours; see C.J. Edmonds, *Kurds, Turks and Arabs*, London 1957, 12, 14.

Bibliography: Given in the article, and see also, for *ḥadīth* citations, Wensinck, *Concordance*, vi, 225-7. (F. BUHL [- C.E. BOSWORTH])

MISKĪN AL-DĀRIMĪ, the sobriquet and *nisba* of a poet from Tamīm of ʿIrāḳ, whose real name was Rabīʿa b. ʿĀmir b. Unayf b. Shurayḥ ... b. Dārim (see his genealogy in Ibn al-Kalbī-Caskel, *Djamhara*, Tab. 60, and Register, ii, 409) and who lived in the 1st/7th century (Yāḳūt, *Udabā*ʾ, xi, 132, fixes the date of his death in 89/708).

The biographical notices which concern him tell us that he was very dark, handsome, courageous, and eloquent, but they give little information about his family and his offspring (he is said to have had a son called ʿUtba or ʿUḳba but Ibn Ḳutayba, *Shiʿr*, Cairo ed. i, 530, states that he left behind no progeny, nor does Ibn al-Kalbī ascribe any to him). They continue mainly with some items of information about the origin of his sobriquet, on his clashes with al-Farazdaḳ [*q.v.*] and on his relations with the Umayyads. The surviving remains of his poetic output amount to some 300 verses, amongst which one may note a certain number which are attributed to several poets.

His name is said to have been due to certain verses (e.g. rhyme *-ik*, metre *ramal*) in which he describes himself as destitute (*miskīn* [*q.v.*]) but draws out of his misery and his personal virtues — of which the principal was probably his self-respect and pride — glory, and at the same time vaunts the nobility of his family, which seems to have had a fairly exalted place in his tribe. An exchange of invective with al-Farazdaḳ appears to have begun — or to have intensified — at the death of Ziyād b. Abīhi (53/673 [*q.v.*]). Since the governor of ʿIrāḳ had displayed a certain amount of generosity towards Miskīn and, in particular, had allowed him to utilise, for his herds, one of the protected extents of pasturage (*ḥimā* [*q.v.*]), the poet wrote an elegy at his death which immediately aroused al-Farazdaḳ; the latter nevertheless was afraid lest his adversary should ally with Djarīr [*q.v.*], so that the two enemies very soon made peace with each other.

Miskīn was on good terms with the Umayyad representatives in ʿIrāḳ, and made his way, according to his biographers, to Muʿāwiya in order to seek a pension from him, but met with a refusal and composed a poem (rhyme *-āhī*, metre *ṭawīl*) in which there appears a verse (the *shāhid* 167 of al-Baghdādī in the *Khizāna*) beginning with a phrase (*akhāka akhāka*) which the grammarians explain but criticise. The caliph, who relied for support on the Yemenis, tended to favour them at the expense of the North Arabs [see ḲAYS ʿAYLĀN] in order to detach them from the partisans of both ʿAlī b. Abī Ṭālib and of Ibn al-Zubayr; but, in the face of the arrogance of the Yemenis, decided to recruit a detachment of Ḳaysīs and at the same time to allot a stipend to Miskīn, who was to receive it even though he continued to live in ʿIrāḳ. Muʿāwiya used the poet in order to float a "trial balloon" at the point when he had the idea of designating his son Yazīd as heir presumptive (although it would strongly appear that Yazīd himself was behind this manoeuvre). Miskīn accordingly recited before the ruler, who then promised to "reflect on the question", a poem in which he was able to say, without provoking a reaction from those persons present, "When the throne of the West shall become vacant, it is Yāzid who will become Commander of the Faithful." This piece of verse (rhyme *-ī/ūdū*, metre *ṭawīl*) was sufficiently famous to be set to music. The poet was likewise on good terms with another Umayyad, Bishr b. Marwān [*q.v.*], who appreciated his poetry.

The poetic work of Miskīn al-Darimī does not seem to have been collected together in the mediaeval period. Hāshim al-Ṭaʿʿān is said to have collected together the remaining verses in a *Dīwān* published in Baghdād, but the author of this article has not seen this; he has however been able to consult a *Dīwān* of 55 fragments gathered together by ʿAbd Allāh al-Djubūrī and Khalīl I. al-ʿAṭiyya and printed at Baghdād in 1389/1970. These surviving fragments reveal in Miskīn a poet of the classical type endowed with sufficient talent to arouse disquiet in al-Farazdaḳ; they show him as generous, proud and inclined, like so many others, to personal glorification, but somewhat moralising (a verse in the rhyme *-ar* and the *mutaḳārib* metre, given in the *Dīwān*, no. 36, and also in *Aghānī*, xx, 170, is said to be the best ever composed on the topic of jealousy). A poem in which several of the ancient poets are passed in review and their places of birth and burial indicated, with the aim of mourning their passing (rhyme *aʿū*, metre *ṭawīl*; *Dīwān*, no. 41; al-Baghdādī, *Khizāna*, Būlāḳ, ii, 116-17 = Cairo, iv, 74-6), develops a fairly frequent theme [see MARTHIYA]), but is probably not written by him.

Bibliography: The main biographies are in *Aghānī*, ed. Beirut, xx, 167-78; Murtaḍā, *Amālī*, 1907 ed., 119-35; Ibn ʿAsākir, *Taʾrīkh Dimashk*, v, 300-3; Yāḳūt, *Irshād*, iv, 200-4 = *Udabā*ʾ, xi, 126-32; Baghdādī, *Khizāna*, Būlāḳ, i, 465-70, ii, 116-17 = Cairo, iii, 57-75, iv, 74-6. The editors of the

Dīwān have gone through a large number of works; one may note Djāḥiẓ, *Bayān*, index; idem, *Ḥayawān*, index; idem, *Burṣān*, index; Buḥturī, *Ḥamasā*, index; *Naḳāʾiḍ Djarīr wa ʾl-Farazdaḳ*, ed. Bevan, index; Ibn Ḳutayba, *Shiʿr*, 347-8 = Cairo, i, 529-30; Masʿūdī, *Murūdj*, ed. Pellat, index s.v. Rabīʿa; Ibn Sallām, *Ṭabaḳāt*, 259, 261; Dj. Zaydān, *Taʾrīkh al-ādāb*, i, 448; Ziriklī, *Aʿlām*, i, 318; *ZDMG*, liv (1900), 448 ff.; see also Marzūḳ b. Tunbāk, *al-Tasāmuḥ fī ʾl-ghayra fī shiʿr Miskin al-Dārimī*, in *al-Dāra*, xiii/3 (1408/1987, 69-97.) (CH. PELLAT)

MIṢR, Egypt

A. The eponym of Egypt
B. The early Islamic settlements developing out of the armed camps and the metropolises of the conquered provinces
C. The land of Egypt: the name in early Islamic times
  1. Miṣr as the capital of Egypt: the name in early Islamic times
  2. The historical development of the capital of Egypt
    i. The first three centuries. [see AL-FUSṬĀṬ]
    ii. The Nile banks, the island of Rawḍa and the adjacent settlement of Djīza (Gīza)
    iii. The Fāṭimid city, Miṣr al-Ḳāhira, and the development of Cairo till the end of the 18th century
    iv. The Citadel and post-Fāṭimid Cairo
    v. Monuments. [see AL-ḲĀHIRA]
    vi. The city from 1798 till the present day. [see Suppl.]
D. History of the Islamic province and modern state of Egypt
  1. The Byzantine background, the Arab conquest and the Umayyad period 602-750
  2. From the ʿAbbāsids to the Fāṭimids 750-969
  3. The Fāṭimid period 969-1171
  4. The Ayyūbid period 1171-1250
  5. The Mamlūk period 1250-1517
  6. The Ottoman period 1517-1798
  7. The early modern period 1798-1882
  8. The British Protectorate and the end of the monarchy 1882-1952. [see Suppl.]
  9. Republican Egypt 1952-1990. [see Suppl.]

A. As a proper noun in Arabic, diptote in inflexion and masculine in gender, Miṣr denotes the eponym of Egypt, the ancestor of the Berbers and the Copts. In accordance with the Biblical genealogy (Genesis x. 1 ff.), Miṣr is called the son of Ḥām, the son of Nūḥ. The biblical origin of the pedigree appears clearly in the form Miṣrāʾim or Miṣrām (cf. Hebrew *Miṣraim*) which is found side by side with Miṣr.

In some genealogies, between Ḥām and Miṣr there is inserted Bayṣar, a name of which the origin is unknown to me.

There exists, however, also quite a different genealogy, according to which Miṣrām is a son of Tablīl, one of the early heroes (*djabābira*), who ruled Egypt after the Deluge.

B. As an Arabic common noun, triptote and masculine in gender, pl. *amṣār, miṣr* denotes, in earliest Islam, the settlements developing out of the armed encampments established by the Arabs in the conquered provinces outside Arabia and then, subsequently, the capital towns or metropolises of the conquered provinces (e.g. in the tradition of Abū Dāwūd, *Djihād*, *bāb* 28, "The *amṣār* will be conquered at your hands"; but furthermore, in *ḥadīth*, any town may be called a *miṣr*, e.g. in al-Bukhārī, *Dhabāʾiḥ*, *bāb* 2, *Aḍāḥī*, *bāb* 15, *ʿĪdayn*, *bāb* 25, and in al-Tirmidhī, *Nikāḥ*, *bāb* 32, etc.). The word is of ancient Semitic origin; in Akkadian, the noun *miṣru* denotes "frontier, frontier marker, territory", whence *maṣṣartu* "watch, guard, guard-house, defence" verb *muṣṣuru* "to fix a border" (W. van Soden, *Akkadisches Handwörterbuch*, ii, 619-21, 659; *Chicago Assyrian dictionary, letter M*, Pt. I, 333-44, Pt. II, 113-15, 245); in Jewish Aramaic, *miṣr, meṣrānā* denote a house or field as an exactly delineated and demarcated territory (J. Levy, *Chaldäisches Wörterbuch*; idem, *Neuhebräisches-talmudisches Wörterbuch*, s.v.).

The classical dictionaries (e.g. *LA*, vii, 23-4) give the meaning of *miṣr* as a frontier outpost and border (*ḥadd*) and as something which separates two regions, like Baṣra and Raḳḳa; the classical Arabic geographers (e.g. Ibn al-Faḳīh and al-Muḳaddasī) stress its more developed usage as a large urban centre where a ruler or governor resides and which has located there the administrative organs, treasury, etc., of its province. Al-Muḳaddasī (47, tr. A. Miquel, *La meilleure répartition...*, Damascus 1963, 122, § 92) has the metaphor of a hierarchy of administrative units, in descending order, with the *miṣr* as the *malik* or king, followed by the *ḳaṣaba* as the *ḥādjib* or chamberlain, the *madīna* as the *djund* or army, etc., but notes also the definition of the jurists that a *miṣr* is any populous urban centre where an *amīr* or governor resides and where the Ḳurʾānic penalties (*ḥudūd*) are applied (cf. Ch. Pellat, *Le milieu baṣrien et la formation de Ǧāḥiẓ*, Paris 1953, 2-3 n. 5).

Thus the term *miṣr* was first used for the encampments of the Arab *muḳātila* or warriors in places like Baṣra and Kūfa (often called *al-miṣrān*, the two encampments par excellence, e.g. in al-Bukhārī, *Ḥadjdj*, *bāb* 13; Yāḳūt, *Buldān*, iv, 454) when these temporary bases, from which the conquests were extended into e.g. Persia and Armenia, were placed on a more permanent basis by being divided into quarters for different tribal groups (the process of *tamṣīr* or *takhṭīṭ* [see KHIṬṬA]); for examples of this, see AL-BAṢRA and AL-KŪFA. The same process took place at e.g. Fusṭāṭ in Egypt (see below, section C. 2) and doubtless at al-Ḳayrawān [*q.v.*] in Ifrīḳiya. Then within a century or two it became a more general term for the larger urban centres of the Islamic lands, as used e.g. by al-Djāḥiẓ in the title of his *Kitāb al-Amṣār wa-ʿadjāʾib al-buldān* (ed. Pellat, in *Machriq* [1966], 169-205) [see AL-DJĀḤIẒ], until al-Muḳaddasī can give a list of the *amṣār*, on the authority of al-Djāḥiẓ, as comprising ten, sc. Baghdād, Kūfa, Baṣra, Miṣr (= Fusṭāṭ), Rayy, Naysābūr, Marw, Balkh and Samarḳand (the tenth one having been apparently omitted by al-Djāḥiẓ or by a copyist) (33, tr. Miquel, 76, § 61).

Bibliography: In addition to references given in the text, see Miquel, *La géographie humaine du monde musulman jusqu'au milieu du 11e siècle*, i, Paris-The Hague 1967, 48-9, 67, 324. (C.E. BOSWORTH)

C. As a proper noun in Arabic, diptote but feminine in gender, Miṣr further denotes the land of Egypt and its capital city.

1. Miṣr as the capital of Egypt: the name in early Islamic times. At present, and since its foundation over 1,000 years ago, the city of Cairo (al-

Ḳāhira) has been known thus, in full, Miṣr al-Ḳāhira. Miṣr occurs, however, already as the name of the city or the cities situated south-west of later Cairo, when the name had been transferred to this city, the name Miṣr al-ḳadīma (Old Miṣr) clung to the old settlement, situated between the mosque of ʿAmr and the right bank of the Nile (cf. Butler, *Babylon of Egypt*, 16).

In the period between the Arab conquest and the foundation of Cairo, the name Miṣr was regularly applied to the settlement just mentioned (Ibn Khurradādhbih, 247, 251; Ibn Rusta, 115 ff.; al-Bukhārī, *Farḍ al-khums*, *bāb*, 13; Abū Dāwūd, *Ṭahāra*, *bāb* 74). We are, however, not able to decide which of its parts (Babylon, Fusṭāṭ or the Ṭūlūnid capital) is especially denoted by it. It may be supposed that the combination of Fusṭāṭ Miṣr "Fusṭāṭ in Egypt" (cf. e.g. al-Masʿūdī, *Tanbīh*, 358; al-Maḳrīzī, *Khiṭaṭ*, i, 285, opposes Fusṭāṭ Miṣr to *arḍ Miṣr*) forms the link between the application of the name Miṣr to the country and to the capital. After the conquest of Egypt by the Muslims there were two settlements only on the right bank of the Nile where it divides, viz. Babylon and Fusṭāṭ. The papyri never mention Miṣr as the name of either of these settlements. Yet in the latter part of the 7th century A.D., the application of the name Miṣr to one or to the other or to both must have begun, as is attested by John of Nikiu, who at least once uses Mesr as the name of a city, where he speaks of "The gates of Mesr" (25). In other passages, Mesr appears as the name of the country (201, 209).

The statement that the name Miṣr as the name of a town arose after the Muslim conquest only, is in opposition to Butler, who maintains that at least since the age of Diocletian there existed on the right bank of the Nile, to the south of the later Babylon, a city called Miṣr (cf. Butler, *Babylon of Egypt*, 15; idem, *The Arab conquest of Egypt*, 221 note). Caetani (*Annali*, A.H. 19, § 47) has already pointed to the fact that the traditions concerning the Arab conquest of Egypt do not give the slightest credit to the existence of a city bearing the name of Miṣr. Butler's reference to the Synaxary proves nothing, as this work was composed many centuries after the conquest. Finally, it may be noted that the Coptic name of Babylon was Keme.

2. The historical development of the capital of Egypt.

i. The first three centuries. See for this AL-FUSṬĀṬ.

ii. The Nile banks, the island of Rawḍa and the adjacent settlement of Djīza (Gīza).

The task of clearing up the historical topography of Cairo and the neighbourhood is very much complicated by the fact that the Nile has several times changed its bed since the conquest. At that time, its waters washed the Ḳaṣr al-Shamʿ and the Mosque of ʿAmr, but only a few decades later it had retreated so far back that there was sufficient land left dry between the castle and the new bank to be worth utilising. ʿAbd al-ʿAzīz b. Marwān erected buildings here. The struggle with the Nile went on through the whole mediaeval period in the history of Cairo. Any methods of controlling the river were at this time quite unknown to the Muslims, and their amateurish efforts in this direction had at most but a very temporary success. The Nile then flowed much further east than at the present day and must also have taken a considerable turn to the east in the north of Fusṭāṭ so that great areas of the modern Cairo were then portions of the river-bed. The name al-Kabsh (*Ḳalʿat al-Kabsh*) is given to that quarter of the town near the Ṭūlūnid Mosque. This Kabsh lay immediately to the west of the Djabal Yashkur and was a favourite resort since it lay on the Nile. At the present day, it is more than ¾ mile distant from the river; and this is a good deal in the plan of a town. The many dried-up pools (*birka*) within the modern city also remind one of the gradual shifting to the west of the Nile. First of all, islands arose in the river-bed, then the water-courses which separated them from the banks were cut off from the mainbed; these were only filled with water at periods of flood, then they became *birka*s, till they finally dried up altogether. The areas gained from the river were first of all used as gardens, then finally built on, till now only the ancient name reminds one of the change they have undergone. It is in this way that the whole area between the modern bed of the Nile and the ancient settlements has arisen within the Islamic period. It is evident that this constant process of change does not facilitate the identification of localities.

At the period of the conquest, there was only one island in the Nile in this neighbourhood, called Djazīrat Miṣr or simply al-Djazīra. This island is in its nucleus identical with the modern island of Rawḍa. With Babylon [see BĀBALYŪN] it formed a single strong fortress and guarded the passage of the Nile. We have no definite information as to whether the Djazīra was already connected with Djīza also by a bridge in the time of the conquest or only with Babylon. In the time of the caliph al-Maʾmūn (198-218/813-33) —this is the earliest date known— there was a bridge over the whole Nile which was even then known as "the Old" and replaced by a new one. This old bridge must therefore —as is *a priori* probable— date back to the beginnings of Arab rule. In all the centuries following, this bridge crossed the whole Nile. It was a bridge of boats. According to some statements, the Djazīra was at first practically in the centre of the river. The arm which separated it from Babylon soon became silted up, however. In the year 336/947 the Nile had retreated so far that the inhabitants of Fusṭāṭ had to get their water from the Djīza arm of the Nile. It was at this period under Kāfūr al-Ikhshīdī [*q.v.*] that the deepening of the eastern arm of the Nile was carried out, to be repeated several times in the 7th/13th century under the Ayyūbids. In 600/1203, it was possible to walk dryshod to the Nilometer (*Miḳyās* [*q.v.*]) on the Djazīra. In 628/1230, the energy of al-Malik al-Kāmil brought about a permanent improvement, though al-Malik al-Ṣāliḥ also annually took advantage of the period of low water to deepen the arm of the Nile which gradually became a canal. Why did they wish to preserve this particular channel? The reason is to be found in the military importance of the Djazīra. At the conquest, the Arabs found a castle here; the Byzantines, who were shut in by the Arabs, were able to escape over the Djazīra. After the fall of Babylon, we hear nothing further of the island fortress. In the year 54/683, the naval arsenal (*al-ṣināʿa*), a dock for warships, was laid down here. This arsenal is mentioned in the papyri of the 1st century A.H.; it was also a kind of naval base. Ibn Ṭūlūn was the first to make the island a regular fortress again, when he thought his power was threatened (263/876); but the Nile was more powerful than the will of Ibn Ṭūlūn,

and his fortress in the Nile gradually fell into the waters; the remainder was destroyed by Muḥammad b. Ṭughdj Ikhshīd in 323/934; two years later, this prince removed the arsenal also to Fusṭāṭ and the Djazīra became a royal country residence. The island appears to have become larger in course of time and more people came to settle on it. Under the Fāṭimids, it was a flourishing town and one talked of the trio of towns, Cairo, Fusṭāṭ and Djazīra. Al-Afḍal, the son of the Fāṭimid general Badr al-Djamālī [*q.v.*] built a pleasure palace with large gardens in the north of the island and called it Rawḍa. This name was gradually extended to the whole island which has retained it to the present day. Later, under the Ayyūbids, the island became a *wakf*. This *wakf* land was rented by al-Malik al-Ṣāliḥ, who built the third great Nile fortress on it. This new fortress was called *Kalʿat al-Rawḍa* or *Kalʿat al-Mikyās*. Al-Malik al Ṣāliḥ evicted all the inhabitants of the island and razed a church and 33 mosques to the ground. In their place, he built 60 towers and made the island the bulwark of his power; this was the reason of his regular dredging operations to deepen the canal separating the island from the mainland. There, surrounded by the Nile (*Baḥr*), he dwelled with his Mamlūks who became known as Baḥrī Mamlūks from their citadel [see AL-BAḤRIYYA and MAMLŪKS]: but even this stronghold in the Nile did not ensure his safety. After the fall of the Ayyūbids, the Mamlūk Aybak destroyed the fortress; Baybars rebuilt it, but later Mamlūks like Kalāwūn and his son Muḥammad used it as a quarry for their buildings in Fusṭāṭ. In the 9th/15th century the proud citadel of the Nile had fallen to pieces and another dynasty was building on its ruins. Rawḍa never again took a prominent part in history.

At the present day the most remarkable sight in Rawḍa is the Nilometer (*Mikyās* [*q.v.*]) which dates from the time of the Umayyad caliph Sulaymān b. ʿAbd al-Malik.

At the present day, Rawḍa is much built upon and only in the north, adjacent to Cairo University Hospital, do any gardens remain. Nothing came of the French expedition's plan of laying out a European quarter here. Before the regulating of the Nile this would have been a dangerous undertaking, for mediaeval writers tell us of occasional inundations of the island, when the Nile was exceptionally high. The idea, which was good in itself, was put into practice in a still better situation farther north on the Djazīrat Būlāk, the modern residential area of Zamālik.

From the historical point of view, Rawḍa is inseparably connected with Djīza (Gīza), with which it formed a defence of the passage up the Nile at the time of the conquest, and during the Middle Ages. Djīza was certainly not a foundation of the Arabs, but portions of the conquering army planted their *khiṭaṭ* there as did their companions in Fusṭāṭ. On account of its exposed situation to attack from the other side of the river, the caliph ʿUmar ordered Djīza to be fortified. The defences were completed by ʿAmr b. al-ʿĀṣ in the year 22/643. It was probably only a case of restoring or extending Byzantine fortifications. The *khiṭaṭ* of the tribes were partly outside the fortress, which was probably merely a stronghold at the entrance to the bridge. The strongest tribes settled here were the Ḥimyar and Hamdān; in the *masdjid* of the latter the Friday service was held; it was only under the Ikhshīdids that a Friday Mosque was built in Djīza in 350/961. Its military importance naturally went parallel with that of Rawḍa and the bridge over the Nile. This bridge collapsed in Ottoman times and was only rebuilt by the French. It was afterwards removed, and in 1907 the ʿAbbās Bridge was built, connecting the western edge of Rawḍa island with the west bank of the Nile at Djīza. In 1958 the new Djāmiʿa Bridge connected northern Rawḍa and the University on the west bank. Djīza is, of course, the site of one of the most imposing groups of pyramids, containing notably those of Cheops and Chefren, in Arabic *al-ahrām* [see HARAM], and of the Sphinx, in Arabic Abu 'l-Hawl [*q.v.*]. The main road from Djīza to the foot of the Great Pyramid of Cheops and the Mena House Hotel was built for the Empress Eugénie of France when she came to open the Suez Canal in 1869.

Djīza already had in the 19th century the Orman Gardens and the Djīza Palace built by the Khedive Ismāʿīl. By the early 20th century the Gardens came to house in part a zoo, and in 1925 the University of Cairo, originally Fuʾād al-Awwal University, established its campus there. In recent decades, extensive residential areas have grown up to the north of Djīza on the west bank at Dukkī and al-ʿAdjūza. Djīza has been the chef-lieu of a province of the same name or *mudīriyya* since the 19th century, comprising the west-bank districts of Imbāba, Djīza itself and al-ʿAyyāṭ and the east-bank one of al-Ṣaff, with the governorate covering in 1965 1,009.5 km². Djīza itself had in 1929 a population of 26,773, a figure now vastly swollen with the recent suburban spread of metropolitan Cairo and the influx of incomers from the countryside (see Muḥammad Ramzī, *al-Kāmūs al-djughrāfī li 'l-bilād al-miṣriyya*, Cairo 1953-68, ii/3, 8-10)

iii. The Fāṭimid City, Miṣr al-Kāhira, and the development of Cairo till the end of the 18th century.

The modern Cairo was originally only a military centre, like al-ʿAskar and al-Kaṭāʾī, north of the great capital of Miṣr al-Fusṭāṭ. When the Fāṭimids in al-Kayrawān saw the precarious position of Egypt under the later Ikhshīds, they felt the time had come to put into operation their long cherished wish to occupy the Nile valley. On 11 Shaʿbān 358/1 July 969, their general Djawhar [*q.v.*] overcame the feeble resistance which the weak government was able to offer him at Djīza, and entered Fusṭāṭ on the day following. He pitched his camp north of the city and for seven days his troops poured in through the city. When on 18 Shaʿbān/9 July the whole army had collected around him, he gave orders for a new city to be planned. Such an important undertaking could not be carried out in those days without first consulting the astrologers as to what would be the propitious hour to begin. The historians tell us that a suitable area had been marked off and all the more distant parts of it connected with a bell-pull, so that the given moment at a sign from the astrologers work might begin everywhere at the same distant. The bell-rope was, however, pulled before the auspicious moment by a raven and the building began at a moment when the unlucky planet Mars, the Kāhir al-Falak, governed the heavens. This calamity could not be undone, so they sought to deprive the evil omen of its malignance by giving the new town the name of Manṣūriyya. As a matter of fact, Cairo does appear to have borne this name till the caliph al-Muʿizz himself came to Egypt and from his own interpretation of the horoscope saw a favourable omen in the rising of the planet Mars. The new foundation thus received the name al-Kāhira al-Muʿizziyya (*Khiṭaṭ*, i, 377).

The process of expansion of the old city of the Fāṭimids can be reconstructed even at the present day without difficulty on a plan. The best is the French plan of the year 1798 in the *Description de l'Égypte*,

because it was prepared before Cairo had been modernised; see also the various maps and plans in Abu-Lughod, *op. cit.* in *Bibl.*. In the centre between the northern boundary of Fusṭāṭ and Heliopolis (ʿAyn Shams), there lay at this time the little village of Munyat al-Aṣbagh, where the caravans for Syria used to assemble. Munyat al-Aṣbagh lay on the Khalīdj, a canal which traversed the whole length of the plain, leaving the Nile to the north of Fusṭāṭ, passing the ancient Heliopolis and finally entering the sea at the modern Suez. This canal was probably originally a silted-up branch of the Nile, which had been excavated for use as a canal even in ancient times. After the Arab conquest, it was again cleaned out by ʿAmr b. al-ʿĀṣ to make a navigable waterway between Fusṭāṭ and the Holy Cities in order to supply the latter with corn. It then received the name of Khalīdj Amīr al-Muʾminīn. This Khalīdj was closed in 69/688 to cut off the corn supply of the anti-caliph ʿAbd Allāh b. al-Zubayr in Medina and finally abandoned as a waterway to the Red Sea in 145/762 in the reign of al-Manṣūr. It was still to remain for a thousand years the water supply of the plain north of Fusṭāṭ and formed the water-road, so famed in song, on the west side and at a later period in the centre of Cairo. After the reign of the Fāṭimid caliph al-Ḥākim, who did much for it, it bore the name of Khalīdj al-Ḥākimī; at a still later period it was called by a host of names of different stretches of it, which are given on the French map of 1798. Instead of flowing to the sea, in the latter centuries of its existence it ended in the Birkat al-Djubb in the north of Cairo and in its neighbourhood. It is only quite recently (the end of the 19th century) that it has vanished from the plan of Cairo. Its course is still clearly recognisable; it corresponds to the broad road followed at the present day by the electric tram from the Mosque of Sayyida Zaynab, or rather from a farther point in the south of Cairo to the northern suburb of ʿAbbāsiyya (Shāriʿ Ḥalwān).

The Fāṭimid city lay immediately south of Munyat al-Aṣbagh between this canal and the Mukaṭṭam hill. Its northern and southern limits are still defined by the Bāb al-Futūḥ and the Bāb Zuwayla. The town founded by Djawhar was rather smaller in compass than the Cairo of the later Fāṭimid period. At first, the open space in the south, where the Muʾayyad Mosque now stands, and the Mosque of the Ḥākim in the north were both outside the walls. In the west, the Khalīdj for centuries formed the natural boundary, as did the heights in the east. The main part of the Fāṭimid city was defined by a series of streets running north and south parallel to the Khalīdj, connecting the two gates just mentioned with one another and dividing the city into two large sections not quite equal in size. This series of streets is also clearly defined at the present day, though it must have been broader originally. It is still known by different names in the various sections, of which the best known is Shāriʿ al-Naḥḥāsīn. This is crossed at right angles by al-Sikka al-Djadīda, the continuation of the Muskī. Its name "New" Street proves what must be particularly emphasised to avoid misconceptions, viz. that the Fāṭimid city had no such main street running from east to west. It only arose in the 19th century.

If Fusṭāṭ had been divided into *khiṭaṭ*, Cairo was divided into *ḥāras* or quarters, which is really only another name for the same thing, exept that Cairo was intended to be a city from the beginning, while Fusṭāṭ grew out of the chance arrangement of a camp. The altered conditions of the period are shown in the fact that the quarters were no longer allotted to different Arab tribes but to quite different peoples and races. In the north and south lay the quarters of the Greeks (*Rūm*), to whom Djawhar himself possibly belonged. His settling his countrymen near the main gate of the city was probably intentional. Berbers, Kurds, Turks, Armenians, etc. were allotted other portions of the town. Some late-comers were settled in the Ḥārat al-Bāṭiliyya outside the first walls of the city between it and al-Mukaṭṭam. Lastly, the negroes, called briefly *al-ʿAbīd*, who formed a rather undisciplined body, were settled north of the Bāb al-Futūḥ beside a great ditch which Djawhar had dug to defend the city against attacks from Syria. This part of the town came to be called *Khandaḳ al-ʿAbīd* from the ditch and those who dwelled near it.

The splendid places of the caliphs formed the central portion of the town. We must be careful to distinguish between a large eastern palace (*al-Ḳaṣr al-Kabīr al-Sharḳī*) and a smaller western one (*al-Ḳaṣr al-Ṣaghīr al-Gharbī*). Their sites had previously been occupied, to the west of the main series of streets, by the large gardens of Kāfūr, to the east by a Coptic monastery (*Dayr al-ʿIẓām*) and a small fortress (*Ḳuṣayr al-Shawk*), which were used for the building of the palaces. The East Palace was the first to be built immediately after the foundation of the city. On 23 Ramaḍān 362/28 June 993, the caliph al-Muʿizz was able to enter it in state. It was a splendid building with nine doors, of which three opened on the west part of the main street. This part was 1,264 feet in length and the palace covered an area of 116,844 square yards; it lay 30 yards back from the present street, from which one may gather how much broader the latter must have been. On the other side of the street lay the Garden of Kāfūr, which stretched to the Khalīdj. In it al-ʿAzīz (365-86/975-96) built the smaller western Palace also called *al-ʿAzīzī* after him—the exact year is unknown—and its two wings stretched up to the street enclosing a broad square into which the street here expanded. As this series of streets passed between the two palaces in the centre of the town here, it was called *Raḥbat bayn al-Ḳaṣrayn*, a name which survived the palaces themselves for centuries and was still in use at the time of the French expedition. The whole street was also known more briefly as *Ḳaṣabat al-Ḳāhira*. The two palaces began to fall into ruins in the Ayyūbid period. The history of this part of the town, and of the great palace in particular, of which some fragments still survive built into other houses, has been most carefully dealt with by Ravaisse in the *Mémoires de la Mission Archéologique Française au Caire*, i, iii.

As Cairo was from the beginning a military and at first not a commercial city at all, even Djawhar must have taken care to fortify it with walls. These walls were afterwards extended in the reign of the caliph al-Mustanṣir by the commander-in-chief Badr al-Djamālī [*q.v.*] and the gates built in the form in which they have survived to the present day. That Badr built all the walls, was disputed—perhaps wrongly—by Casanova. Mention is made in later times of a third building of walls in the reign of Ṣalāḥ al-Dīn. Djawhar's walls were of brick; no trace of them has survived. Even al-Maḳrīzī knew only of a few unimportant fragments, and says that the last remaining portions of them were destroyed in 803/1400. In spite of al-Maḳrīzī's admiring statements (i, 377), Djawhar's wall cannot have survived for any great length of time, for as early a traveller as Nāṣir-i Khusraw (ed. Schefer, 131) describes Cairo as unfortified. Badr's defences, which were begun in 480/1087, consisted of a brick wall with strong gateways of stone, the portions of the walls adjacent to

them being of stone also. Max van Berchem (*Notes d'archéologie arabe. 1. Monuments et inscriptions fatimites*, in *JA*, ser. 8, vol. xvii [1891], 443 ff.) exhaustively studied these walls and gates and called particular attention to the fact that the great gates, which still command admiration at the present day, the Bāb al-Futūḥ, Bāb al-Naṣr and Bāb Zuwayla, were built by architects from Edessa and differ in a rather marked degree from the later fortifications of Ṣalāḥ al-Dīn, which appear to be influenced by the Frankish style of the Crusading period. We also owe to van Berchem an accurate delineation of those portions of the walls which still survive at the present day and which date from the Fāṭimid period. The picture we have of the two walls of the Fāṭimid period is as follows. In the west, the town was bounded by the Khalīdj which ran below the walls for 1300 yards and served as a moat. It is a debatable point whether we may conclude from the street name Bayn al-Sūrayn, which is still in use, that two walls existed here one behind the other. Djawhar's walls were certainly a fair distance from the canal, the space being large enough to allow of pleasure palaces being built on it. There were three (according to Casanova, only two) gates here, from south to north, the Bāb al-Saʿāda, Bāb al-Farādj and the Bāb al-Ḳanṭara. At the latter, near the north-western stretch of the walls, there was, as the name shows, a bridge over the canal. This connected the town with the suburb and harbour of al-Maks, on the Nile, the ancient Umm Dunayn. On al-Maks, cf. *Papyri Schott Reinhardt*, i, 53 ff.; the name appears in the Graeco-Arabic papyri of the 1st/7th century; even before the foundation of Cairo, therefore, this was the harbour at which the customs were collected. Al-Maks must have comprised the modern Ezbekiyye and the area adjoining it on the north. The northern side of the town must naturally have been the most strongly fortified. Djawhar had a ditch dug here along the wall. The two gates, Bāb al-Futūḥ and Bāb al-Naṣr, built by him, lay more within the town than the modern gates of the same name which only date from Badr's time. The Mosque of al-Ḥākim was originally built outside the walls and was first included within the fortified area by Badr. There seem, however, to be reasons for believing that al-Ḥākim was the first to advance the line of fortifications here as well as in the south and to build new gates (al-Ḳalḳashandī, tr. Wüstenfeld, 70; Salmon (see *Bibl.*), 50). The wall had two gates on the east, the Bāb al-Ḳarrāṭīn (afterwards al-Maḥrūḳ) and the Bāb al-Barḳiyya. In this locality, Badr's fortification also included the quarters which had arisen after the erection of Djawhar's wall. Finally, Badr moved the Zuwayla gate somewhat farther to the south. There were originally two gates. The town as extended by Badr was still anything but large. It may have been about $^2/_3$ of a square mile in area.

The intellectual and religious life of Cairo was concentrated in the great Mosque, the Djāmiʿ al-Azhar, in which the first act of worship was held on 7 Ramaḍān 361/30 October 971. On the history and importance of this mosque, see AL-AZHAR. The erection of the above-mentioned mosque outside the northern gates had already been begun in the reign of al-ʿAzīz and was completed by his successor, after whom it was called the Mosque of al-Ḥākim. The building operations lasted from 393/1002 to 403/1012. After an earthquake, it was entirely restored by Baybars II in 703/1303, who added the minarets. It was used by the French as a fortress and at the present day is in ruins. Of the other religious buildings of the Fāṭimids, only two deserve particular mention: the Mosque of Aḳmar, with its charming stone façade, so important in the history of art (Franz Pasha, *Kairo*, 29). It was finished in 519/1125, but it was only under the Mamlūks that it received the right of the *khuṭba* [*q.v.*] being delivered there in 801/1398. The second of these monuments is the older Djuyūshī Mosque, built quite outside of Cairo on the summit of al-Muḳaṭṭam [*q.v.*], which was built in 478/1085 by Badr al-Djamālī (van Berchem, *CIA, Egypte*, no. 32; idem, *Mémoires de l'Institut Égyptien*, ii). On other buildings and inscriptions of the Fāṭimids, cf. the works of van Berchem just quoted. It is impossible to detail here all their buildings, etc. mentioned in literature; see further on these AL-ḲĀHIRA. Monuments. Most of them did not survive the dynasty or survived it for a brief period only.

During the Fāṭimid period, Cairo was not yet the economic centre for all Egypt which it was to become under the Ayyūbids and Mamlūks. This role was first held, as we have seen, by Fusṭāṭ. On the other hand, Cairo was pre-eminently the seat of a splendid court with all its military pageantry. Ibn Ṭuwayr and others have given us vivid pictures, preserved in al-Ḳalḳashandī and others, of the ceremonial processions and festivals, the magazines, treasuries and stables, the banners and insignia, the members of the royal household, the various classes of officers of state and court officials with all their punctilious ceremonial [see MAWĀKIB. 1. Under the ʿAbbāsids and Fāṭimids, and also 6. In the Mamlūk Sultanate, in Suppl.]. Eye-witnesses, like Nāṣir-i Khusraw, confirm these accounts. It must have been a glorious period for Cairo, but was soon followed in al-Mustanṣir's time by a desolate epoch of anarchy when the economic foundations of its prosperity were destroyed by famine and unrest. A better era dawned on Cairo with the accession to power of Badr al-Djamālī. Cairo now began slowly to gain over Fusṭāṭ in economic importance, a process which gradually became more definite in succeeding centuries.

iv. The Citadel and post-Fāṭimid Cairo. Quite a new epoch in the history of Cairo, as in that of Egypt as a whole, dawns with the accession of Ṣalāḥ al-Dīn [*q.v.*] (Saladin) in 564/1169 and the advent of the Ayyūbids [*q.v.*] (see on these historical events in Egypt, below, section D). The history of the growth of the city only can be briefly discussed here. Ṣalāḥ al-Dīn twice played a part in this development by erecting large buildings. P. Casanova has thoroughly dealt with this process in his *Histoire et description de la Citadelle du Caire* (*Mém. de la Miss. Arch. Franç. au Caire*, vi), though his conclusions cannot perhaps be regarded as final on all points. The material is too imperfect. At any rate he is probably right in saying that Ṣalāḥ al-Dīn in the first instance in 565/1170 only restored and improved the fortifications erected by Djawhar and Badr. It was only after his return from Syria, when he was at the height of his power, that Ṣalāḥ al-Dīn conceived the colossal plan of enclosing the whole complex of buildings forming the two towns of Fusṭāṭ and Cairo within one strong line of fortifications (572/1179). This new foundation was to be commanded by a fortress (*ḳalʿa*) after the fashion of the strongholds of the Crusaders. This fortress is the modern Citadel or, to be more accurate, its northern part. In the northwest, Cairo was to be protected by this strong fortress and in the south-west, by Fusṭāṭ. The east wall of Cairo was to be advanced farther east to al-Muḳaṭṭam and the entrance for inroads from Syria was to be definitely closed. A new wall ran along the hills from the new tower in the north-east, the Burdj al-Ẓafar, of which traces still exist. It then took

a turn westward towards the old city wall, the fortifications of which were to be extended farther south to the citadel. The north wall of Cairo was to be advanced westwards up to the Nile and to run along it to near the Ḳaṣr al-S̲h̲amᶜ, which was the extreme southern point of the whole system. A wall was to run thence in the east of Fusṭāṭ directly to the citadel. The citadel itself was to be the residence of the sovereign. Ṣalāḥ al-Dīn's trusted eunuch Ḳarāḳūs̲h̲ [*q.v.*] was entrusted with the task of carrying out this gigantic undertaking; he had previously carried out building operations for Ṣalāḥ al-Dīn. The huge undertaking was never completed nor did Ṣalāḥ al-Dīn avail himself of the citadel, but when in Cairo, as a rule he lived in the old vizier's palace of the Fāṭimid city. The most important part was the completion of the north wall, which was actually built eastwards as far as the Burd̲j̲ al-Ẓafar and westwards as far as al-Maks on the Nile. The portion connecting the eastern wall of the Fāṭimid city with the citadel was not completed. The names of several gates in the great wall which was to run from the citadel to the south of Fusṭāṭ, have been handed down, but it can hardly be assumed that they were ever built. The wall along the Nile was never begun at all; but it was probably the least urgently required.

These buildings had considerable influence in two directions. After the north wall had been advanced up to the Nile, the broad stretch of land between the K̲h̲alīd̲j̲ and the Nile was secure from invasion and the way was paved for an extension of the city in this direction. The K̲h̲alīd̲j̲ thus gradually came to be in the centre of this extended city. Through the removal of the forces of defence and later of the court itself to the Citadel, Cairo began to develop in the south also and the union with the northern suburbs of Fusṭāṭ [see AL-FUSṬĀṬ] thus came about. This process was not however completed till the Mamlūk period (al-Maḳrīzī, *K̲h̲iṭaṭ*, i, 378 ff.).

The Citadel was first appropriated for the use to which it was originally intended as the residence for the sovereign by Ṣalāḥ al-Dīn's nephew al-Malik al-Kāmil, who was also the first to build a palatial residence here. He entered the new palace in 604/1207. From this time onwards, with the exception of the reign of al-Malik al-Ṣāliḥ, whom we have already become aquainted with as the builder of the fortress and royal residence of Rawḍa in the Nile, the citadel remained the abode of all the princes and pas̲h̲as who ruled Egypt till the K̲h̲edives went to live in various palaces which they had built for themselves in the plain again. It is difficult, however, to draw a picture of the gradual transformation of the Citadel, as the most radical changes were made in the Mamlūk period. The present walls still show that we must divide the whole area into two sections, the original north or north-east citadel, the Ḳalᶜat al-D̲j̲abal proper of the Ayyūbid period, which was and is still separated from al-Muḳaṭṭam by a deep ditch, and, in the south extending towards the town, the Citadel of the palaces where the Mamlūks built a complicated entanglement of palaces, audience-chambers, stables and mosques. We must therefore distinguish between the Citadel proper and the royal town which adjoined the Citadel. Of Ṣalāḥ al-Dīn's buildings, which lasted seven years, there remains today only a portion of the wall and the so-called Joseph's Well (*Bīr Yūsuf*); the latter is a deep shaft from which Ḳarāḳūs̲h̲, the architect of the fortress, obtained water. The machinery for raising the water was driven by oxen. A pathway hewn out of the rock leads down to the bottom of the well. The name Yūsuf is not of course the praenomen of Ṣalāḥ al-Dīn but commemorates the Joseph of the Bible, legends of whom are attached to other portions of the Citadel also. Great alterations were made in the citadel by Baybars and his successors and their buildings again were completely altered by al-Malik al-Nāṣir Muḥammad b. Ḳalāwūn, many of whose buildings have still survived, as for example the mosque wrongly called after Ḳalāwūn (erected in 718/1318) and remains of his palace in black and white, hence called al-Ḳaṣr al-Ablaḳ (built 713-14/1313-14). The same prince also laid down great aqueducts to bring the water of the Nile to the Citadel, as the wells were not sufficient to supply the increasing numbers of military personnel quartered there. At a later period Ḳāʾit Bey took an interest in the Citadel again and Ḳānṣawh al-G̲h̲awrī [*q.v.*] also laid out a garden here. The Ottoman Pas̲h̲as built a good deal here also, but they allowed more to fall into ruins. Muḥammad ᶜAlī [*q.v.*] was the first to take an energetic interest in the Citadel again; he repaired some of the ancient palaces and built the so-called Alabaster Mosque, the D̲j̲āmiᶜ Muḥammad ᶜAlī, in the Turkish cupola style, the minarets of which give the present citadel its characteristic outlines. It was begun in 1829 and finished in 1857 by Saᶜīd Pas̲h̲a. The restoration of the walls also dates back to Muḥammad ᶜAlī.

It was not only in the Citadel but in the city lying at their feet also that the Mamlūks erected numerous fine buildings. The Cairo created by them was practically the Cairo that existed when the French expedition arrived there. A vivid picture of the home of the Mamlūks in the period of their splendour may be obtained from the plan of 1798. A series of splendid monuments stood here partly built on the ruins of Fāṭimid buildings. We will only mention a few that still exist: on the site of the ᶜAzīzī palace stood Ḳalāwūn's hospital, the *Madrasa* and tomb of his son Muḥammad al-Nāṣir and Barḳūḳ's *Madrasa*. There were also numerous Mamlūk buildings on the site of the great East Palace, including the K̲h̲ān al-K̲h̲alīlī, well-known at the present day. Of other large buildings at this period, there may also be mentioned the Mosque of Ẓāhir, built by Baybars I, of which the massive walls still survive at the entrance to the ᶜAbbāsiyya, the Mosque of Sulṭān Ḥasan at the foot of the citadel (cf. Herz Bey, *La Mosquée du Sultan Hassan au Caire*, Cairo 1895), of great importance in the history of art, the Muʾayyad Mosque at the Bāb Zuwayla, only completed after the death of its founder, and Ḳāʾit Bey's *Madrasa*; we cannot detail the numerous tombs outside the town proper nor the many other smaller buildings. What a lamentable contrast to this period of activity in architecture is afforded by what was done in the Turkish period (since 923/1517) in the city of the Mamlūks; only a few *Ḳonaks* or residences for Pas̲h̲as were built, a few *Sabīls* or fountains and one or two smaller mosques and *tekkes*. The configuration of the town did not, however, change so much between 1500 and 1800 as in any earlier period of the same length. In spite of the ravages of their soldiers, the city must have flourished and increased under the warrior princes of the Mamlūk period. It must have been a busy and splendid city. But the grave damage done by the Mamlūk system could only be repaired by strong rulers. The Ottoman Pas̲h̲as were not fit for the task and so Cairo slowly declined till Muḥammad ᶜAlī and his successors created a new Cairo which gradually became Europeanised.

Bibliography: The main primary sources are Maḳrīzī, *al-K̲h̲iṭaṭ*; Ibn Duḳmāḳ, *Kitāb al-Intiṣār*;

and ʿAlī Mubārak, *al-Khiṭaṭ al-djadīda*. There are occasional mentions of the city in most of the Arab geographers and travellers and in the travel narrative of the Persian Nāṣir-i Khusraw. Many European travellers and visitors have given accounts of the city: see on these P.-H. Dopp, *Le Caire vu par les voyageurs occidentaux du Moyen Age*, in *Bull. de la Soc. Royale de Géographie d'Égypte*, xxiii (1949-50), 117-49. D. HISTORY OF THE ISLAMIC PROVINCE AND MODERN STATE OF EGYPT.

1. The Byzantine background, the Arab conquest and the Umayyad period 602-750.

(a) Byzantine Egypt. Byzantine Egypt continued for a long time the Graeco-Roman traditional patterns in culture and administration, but by the time of the Arab conquest some important changes had taken place which had drastically altered its social structure. A great number of Byzantine institutions survived in Arab Egypt for about one century.

Hellenism, paganism and Christianity. During the Byzantine period, Greek was the language of administration in which most of the official documents were written, and was moreover a living language used, side-by-side with Coptic, as a language of the upper Egyptian class, as manifested by the peculiar alterations in the Greek language of the Egyptian papyri. On the other hand, as in older times, a large number of Egyptians did not know Greek (J.R. Rea, *The Oxyrhynchus papyri*, li, London 1984, 41).

Greek literary texts were used at schools, and a few Egyptian poets wrote Greek verses in florid style, manifesting an extensive though pedantic knowledge of Greek poetry and metre (M. Hamdi, Ἡ ἑλληνορρωμαϊκὴ παιδεία ἐν Αἰγύπτῳ ἀπό τοῦ Α' ἕως τοῦ Δ' μ.Χ. αἰῶνος κατὰ τοὺς παπύρους, Athens 1972; H. Livrea, ed. and tr. *Blemmyomachia* [P. Berol. 5003], Rome 1978). But it is noteworthy that one of the best Byzantine historians of the 4th-5th century, Olymiodorus, who wrote in a humble and precise style, was Egyptian (V. Christides, *The image of the Sudanese in the Byzantine sources*, in *Byzantinoslavica*, xliii [1982], 8-97).

Hellenism in Egypt was closely connected with paganism which, in spite of the triumph of Christianity, continued to survive, especially in Upper Egypt, until the Arab conquest. In Upper Egypt the Egyptian monks were in constant struggle with the pagan Sudanese tribes of the Beja-Blemmyes, the last standard-bearers of the Greek cult, who had encroached deeply into the land of southern Egypt (Christides, *Ethnic movements in southern Egypt and northern Sudan: Blemmyes-Beja in Late Antique and Early Arab Egypt until 707 A.D.*, in *Listy Filologicke*, ciii/3 [1980], 135 ff.; and see BEDJA).

The church in Egypt was constantly involved in religious controversies, and the problem of the relationship between the divine and human nature in Christ, which shook the Byzantine Empire at large, was stubbornly discussed in Egypt and divided the Church there, especially after the Council of Chalcedon (451) which condemned the Monophysites. While the Byzantine Emperors supported the Orthodox party in Egypt, the Melkites, it is an exaggeration to say that "what the Egyptians [i.e. Monophysites] wanted was to oppose Constantinople" (H.I. Bell, *Egypt*, Oxford 1941, 131). The Monophysites were divided themselves into numerous sects, and many Egyptians did not actually blame the Byzantine state for the persecution of the Monophysites but attributed it to the evil nature of the religious leaders appointed by the Byzantines (F. Winkelmann, *Ägypten und Byzanz vor der arabischen Eroberung*, in *Byzantinoslavica*, xl [1979], 161-81).

On the eve of the Arab conquest, the Monophysites of Egypt suffered a heavy blow when the Byzantines removed the Monophysite Archbishop of Alexandria, Benjamin, and enthroned in his place the Orthodox Cyrus. The removal of Benjamin had grave consequences, not only because he was the head of the Monophysites, but because he moreover belonged to a wealthy family of landed magnates. The wealthy landlords were closely connected with the Egyptian Church, which was mainly supported by their donations (Ewa Wipszycka, *Les ressources et les activités économiques des églises en Égypte du VIe au VIIIe siècle*, Brussels 1972, 84 ff.). Thus the Byzantine position was weakened with Benjamin's removal and the consequent dissatisfaction in Egypt.

A feature of the economic and social development of Egypt in the 6th century was the growth of large private estates on a scale greater than previously (see E.R. Hardy, *The large estates of Byzantine Egypt*, New York 1931; M. Gelzer, *Studien zur byzantinischen Verwaltung Aegyptens*, Leipziger historischen Abhandlungen, xiii, Leipzig 1909), to the point that certain scholars have termed Byzantine Egyptian society of the time feudal, and have compared the landowners, with their hordes of retainers, *bucellarii*, with Western feudal barons (see e.g. H. MacLennan, *Oxyrhynchus, an economic and social study*, Amsterdam 1968, 63 ff.; I.F. Fikhman, *On the structure of the Egyptian large estate in the sixth century*, in *Procs. of the XIIth Internat. Congress of Papyrology*, Toronto 1970, 129-32); this view has however been combatted, e.g. by B. Bachrach, *Was there feudalism in Byzantine Egypt?*, in *Jnal. Amer. Research Center in Egypt*, iv (1967), 163-6, and J. Gascou, *L'institution des bucellaires*, in *BIFAO*, lxxvi (1976), 143-56, who consider this society to be at most only semi-feudal. A feature which in fact separated it from western feudal societies of the Dark Ages was the presence in Egypt of a bourgeoisie, an active commercial class, engaged in shipping activities in both the Mediterranean and the Red Sea; the importance of these maritime activities can be seen e.g. in Byzantine hagiographical works (see H. Magoulias, *The Lives of the Saints as sources of data for the history of commerce in the*

Byzantine Empire in the VIth and VIIth cent., in Κληρονομία, iii [1971], 303-30; M.J. Hollerich, *The Alexandrian bishops and the grain trade: ecclesiastical commerce in late Roman Egypt*, in *JESHO*, xxv [1982], 187-207; and also MILĀḤA. i. In the pre-Islamic and early mediaeval periods.

At the turn of the 7th century Egypt suffered from many evils, especially at the time of the "tyrant" emperor Phocas (602-10). In the strife between Phocas and his successor Heraclius, it became the battleground of the two rivals (Z. Borkowski, *Alexandrie II. Inscriptions des factions à Alexandrie*, Warsaw 1981, 23 ff.). Anarchy prevailed, and Egypt's shattered monetary system reached its lowest ebb (P. Grierson, *The Consular coinage of Heraclius and the revolt against Phocas of 608-610*, in *NC* [1950], 71-93). In this period of anarchy, the activities of the circus factions, known as "Greens" and "Blues", which were not mere sporting clubs, exercised a detrimental element on the administrative structure and social life of Byzantine Egypt, in particular in Alexandria. Heraclius's victory was followed by a period of pacification and consolidation in Egypt which was again interrupted by the Persian conquest of Egypt (619-29 or 630), about which little is known (E.K. Chrysos, *The date of Papyrus SB 4483 and the Persian occupation of Egypt*, in *Dodone*, iv [1975], 343-48; L.S.B. MacCoul, *Coptic Egypt during the Persian occupation*, in *Studi Classici e Orientali*, xxxvi [1986], 307-13).

The Emperor Heraclius (d. 641) took great pains to restore order in Egypt, but it was still in disarray when the Arabs attacked it. Yet in spite of their dissatisfaction with the Byzantine administration, the Egyptians did not form a monolithic anti-Byzantine block as has been often suggested. Winkelmann, *op. cit.*, has correctly pointed out that there were different layers in the structure of the Egyptian society and that the attitude of each of them varied towards the Byzantine government. Moreover, it should be emphasised that there was no clear separation between Coptic and Greek ethnic elements in Egypt on the eve of the Arab invasion, as wrongly suggested by some scholars (see e.g. the simplistic view expressed by S. Vryonis, *Byzantine circus factions and Islamic Futuwwa organizations*, in *BZ* [1965], 39 n. 49; and for the earlier period, A. Lazarou, *Présence hellénique en Égypte romaine*, in *Graeco-Arabica*, iii [1984], 51-76).

(b) Islamic Egypt.

The Conquest of Egypt.

The study of the conquest of Egypt by the Arabs bristles with many problems because of the confused and controversial accounts of the various sources. There is no comprehensive work to deal with this topic *in toto*, and A.J. Butler's *The Arab conquest of Egypt and the latest thirty years in the Roman dominion*, Oxford 1902, ²Oxford 1978 ed. by P.M. Fraser, contains valuable material, but certain parts of it have become obsolete (see the review by R.S. Bagnall in *Classical Jnal.*, lxxv [1979], 247-8).

The Byzantine sources, mainly Theophanes and Nicephorus, are vague and fragmentary. The Arabic sources are also fragmentary with many contradictory accounts. The most trustworthy Arab author is Ibn ʿAbd al-Ḥakam (d. 257/871 [*q.v.*]), while *The history of the Patriarchs of the Coptic Church* (10th century) includes certain valuable material of an earlier chronicle written by Abba George at the end of the 8th century. The chronicle of the contemporary Egyptian author, John, Bishop of Nikiu, has been preserved only in a partial Ethiopian version and its valuable material has been distorted. Most of the Arabic accounts and the relevant passages of Nikiu's chronicle have been collected and presented in English by D.R. Hill in his *The termination of hostilities in the early Arab conquests*, London 1971.

From the labyrinth of the conflicting descriptions of the Arab conquest of Egypt, we can discern with a certain clarity the following outline. The expedition against Egypt was undertaken by the Arab general ʿAmr b. al-ʿĀṣ [*q.v.*]. Many Arabic sources describe ʿAmr's expedition against Egypt as a spontaneous action with the reluctant approval of the caliph ʿUmar. M. Ibrahim has correctly pointed out that ʿAmr decided to undertake the Egyptian campaign because he had traded in Egypt during pre-Islamic times and was familiar with its importance as an international trade centre (*The social and economic background of the Umayyad Caliphate: the role of Muʿāwiya Ibn Abī Sufyān*, diss., UCLA 1981, unpubl., 192 ff.). While this statement is valid, Ibrahim's assertion that ʿAmr acted as an agent of the merchant class of Mecca (*op. cit.*, 198) is farfetched.

ʿAmr b. al-ʿĀṣ reached the frontier town of Egypt, al-ʿArīsh [*q.v.*], on 10 Dhu 'l-Ḥidjdja 18/12 December 639 (Ibn ʿAbd al-Ḥakam, *Futūḥ Miṣr wa 'l-Maghrib*, ed. C.C. Torrey, New Haven 1922, repr. Baghdād n.d.). ʿAmr's army was composed of about 4,000 men, mainly horsemen, and carried no siege machines. From al-ʿArīsh he headed towards the important port of Pelusium (Faramāʾ), which fell to the Arabs after a one-month siege. ʿAmr's army, following thereafter the traditional invasion route, headed towards Bilbays, ancient Φέλβης and modern El-Ḳanṭara, the key town on the way to Miṣr, which fell into Arab hands after another month of siege [see BILBAYS].

The events that followed are somewhat confusing and there are many conflicting reports on the further march of the Arab army (cf. S. Lane-Poole, *A history of Egypt in the Middle Ages*, London 1901, 2 ff., and especially Hill, *op. cit.*, 34 ff.). It seems that ʿAmr b. al-ʿĀṣ arrested his march when he arrived near the strong fortress of Babylon, at the edge of the town Miṣr, old Memphis, at the head of the Delta of the Nile, and appealed to the caliph for reinforcements. About 4,000 men under al-Zubayr arrived in June 640 and joined ʿAmr's army. In Heliopolis, later called ʿAyn Shams, a battle took place between the Arabs and the Byzantines in July 640, in which the Byzantines suffered a crushing defeat. The fall of Miṣr followed, and afterwards the Arabs stubbornly besieged the strong fortress of Babylon. Its defenders resisted bravely, but the death of the Emperor Heraclius inflicted a heavy blow on their morale and

on 21 Rabīʿ II 20/9 April 641, they abandoned the fortress and sailed to Alexandria via the river Nile.

It seems that Fayyūm was raided after the fall of Babylon and before the conquest of Miṣr (John of Nikiu's *Chronicle*, Eng. tr. R.H. Charles, London 1916, 178 ff.). We do not know the exact date when ʿAmr's army conquered Fayyūm, proceeded towards Bahnasā in middle Egypt, and subdued the entire southern part of Egypt (the Ṣaʿīd). Most probably, the conquest of middle and southern Egypt started immediately after the conquest of Babylon and was accomplished at the time the Arabs were engaged in their last endeavour, i.e. the siege of Alexandria (*ca.* 641).

According to John of Nikiu (*Chronicle*, 181), following the capture of Miṣr by the Arabs, the governor of Arcadia, Dometianus, escaped secretly from his capital Fayyūm and went to Nikiu; Fayyūm became an easy prey to the Arabs, who slaughtered its defenders. Dometianus was later forced to abandon Nikiu, which was then captured. The conquest of the other towns in middle and southern Egypt, i.e. Bahnasā, Ahnas and the others, is only briefly described in al-Balādhurī and John of Nikiu (Hill, *op. cit.*, 43 ff.).

There is, nevertheless, an epic romance written by an unknown author, the *Futūḥ al-Bahnasā*, which in spite of certain legendary elements offers us valuable information. Its author mentions as his main sources al-Wāḳidī, al-Ṭabarī and Ibn Khallikān, and his work contains material which has not been preserved in other sources (the text has not yet been published: French tr. by M.E. Galtier, *Foutouh al-Bahnasā*, in *Mémoires de l'Institut Français d'Archéologie Orientale*, xxii, Cairo 1900). The Byzantine resistance in Bahnasā, as described in detail in the *Futūḥ al-Bahnasā*, mirrors the general manner in which the warfare between Byzantines and Arabs took place as well as the attitude of the local Coptic population (see J. Jarry, *La conquête du Fayoum par les Musulmans d'après le Futūḥ al-Bahnasā*, in *Annales Islamologiques*, ix [1970], 9-20; Christides, *Sudanese at the time of the Arab conquest of Egypt*, in *BZ*, lxxv [1982], 10 ff.). The Copts often assisted the Byzantines vigorously, but sometimes sided with the Arabs. In addition, the *Futūḥ al-Bahnasā* reveals that a certain number of the Sudanese tribes, the Beja-Blemmyes and Nubians, rushed from Nubia to the assistance of the Byzantines (Galtier, 60 ff.). In order to check the continuous harassment by the Sudanese, who even after the conquest of the Ṣaʿīd continued their raids, ʿAmr b. al-ʿĀṣ sent his half-brother Nāfiʿ b. ʿAbd al-Ḳays al-Fihrī against them in a punitive expedition (641) (Ibn ʿAbd al-Ḥakam, 169-70, 174). But the restless Sudanese were only stopped by ʿAmr's successor ʿAbd Allāh b. Saʿd b. Abī Sarḥ [*q.v.*], who concluded with them the famous treaty known as the *baḳt* in 652 [see BAḲT].

While ʿAmr was besieging Babylon, he started negotiations with the patriarch and governor of Egypt Cyrus in order to conclude a treaty, but Cyrus was recalled to Constantinople and reprimanded by the Emperor Heraclius for these negotiations. After the failure of these last, ʿAmr continued his march and the Byzantines, following a last engagement in Kayrun, withdrew within the strong walls of Alexandria. The capture of the heavily-fortified Alexandria by the Arabs without any actual resistance by the Byzantines was due to the morale of the latter, which had reached its lowest ebb after so many defeats, and to the internal disputes of the Byzantine authorities. Theodore, the Augustal prefect, was absent and Dometianus, who replaced him, was more interested in fighting against Menas, the Prefect of Lower Egypt, than resisting the Arabs. Furthermore, constant riots of the opportunist parties of the Greens and Blues in Alexandria, whose main interest was the disturbance of the existing order, created a chaotic situation in this city.

Cyrus, the Melkite patriarch who had returned to Egypt, invested this time with full authority by the Byzantines to negotiate, went to Babylon to conclude a peace treaty with ʿAmr. ʿAmr received him in a friendly way and a final treaty on the surrender of Egypt was signed (see E. Amélineau, *Vie Copte de Samuel de Ḳalamūn*, in *JA*, ser. 8, vol. xii [1888], 367; Theophanes, *Chronicon*, ed. C. de Boor, 338).

The Melkite patriarch and governor of Egypt Cyrus often appears in the Arabic sources under the name of al-Muḳawḳis [*q.v.* for a detailed discussion of the problems concerning him and his role].

Before ʿAmr made the final treaty with the representatives of Egypt, he concluded some minor treaties as occasion arose in the various stages of his conquest. The most important local treaty was concluded when ʿAmr sacked the fortress of Babylon; an agreement was reached between him and the Byzantine garrison, according to which the Byzantines left unhurt, leaving behind their military supplies. All the minor treaties eventually merged into a final settlement. The Muslim jurists disagree whether Egypt was taken by force (*ʿanwatan*) or by treaty (*ṣulḥan*), an important difference since in the former case Egypt would have been considered as spoils of war and its inhabitants would have been deprived of the right of protection (*dhimma*). Ibn ʿAbd al-Ḥakam's brief statement illuminates the problem clearly: "some of Egypt was conquered by *ʿahd* and some was *ʿanwa*. ʿUmar made it all *dhimma* and that has lasted to this day" (for all relevant traditions, see Hill. *op. cit.*, 34 ff.).

Behind the theoretical dispute of the Arab jurists concerning the conquest of Egypt *ʿanwatan* or *ṣulḥan* lay the practical problem of how to legitimise any Muslim demands for increasing taxes without violating Islamic law. If Egypt was captured *in toto* *ʿanwatan*, then the whole country would be considered *fayʾ* [*q.v.*], i.e. conquered land distributed to the fighting soldiers.

The original text of the final treaty of Egypt has not been preserved. Al-Ṭabarī has reproduced a comprehensive account, while John of Nikiu, Ibn ʿAbd al-Ḥakam and the other Arab authors supplement it. Al-Ṭabarī calls it the treaty of ʿAyn Shams. Cyrus concluded the final treaty with ʿAmr in Babylon and therefore it is incorrect to call it the "Treaty of Alexandria" (J. Gascou, *Miscellanea. De Byzance à l'Islam, les impôts en Égypte après la conquête arabe*, in *JESHO*, xxvi [1983], 98-9).

The treaty was concluded between the Byzantines (*Rūm*) and the Arabs. The Byzantines were the first party representing the Byzantine emperor, the only legal party recognised by the Arabs. It is therefore absurd, as correctly pointed out by Butler, to say that "this is a treaty with the Copts not with the Romans... The people of Miṣr not the Roman army of occupation, still less the emperor Heraclius were the contracting parties on the other side..." (Lane Poole, 241 ff.; cf. Butler, *The Treaty of Miṣr in Ṭabarī*, Oxford 1913, 24 ff.).

As has been said in the previous section, by the 7th century a mixed race of Hellenes-Egyptians had developed in the towns and frontiers of Egypt, where there was no distinction between Hellenised Egyptians and Egyptianised Greeks. Thus the first term of the agreement, which was actually a pledge of security

for the defeated (*amān*) and not an agreement between equal parties, specified that ʿAmr granted his security to all inhabitants of Egypt.

Under the term *al-Miṣr* "people of Egypt", all inhabitants of Egypt are included regardless of origin and religious beliefs. No special reference to Jews is made in the treaty, as preserved by al-Ṭabarī, but two ethnic groups are mentioned in a peculiar way which required special attention. First the *Nūb(a)*, a word which applies to two Sudanese groups which were in constant relations with southern Egypt, i.e. the Nubians as well as the Beja-Blemmyes. The seventh section of the final treaty mentions explicitly that the Nubians have the same rights as the rest of the ethnic groups of Egypt. In contrast, the first section mentions that the Nūb shall not be allowed to dwell along with the Egyptians. The apparent contradiction can be understood if we take into consideration that the seventh section refers to those Nubians who had already settled in Egypt and lived with the natives peacefully, while the first one refers to Nubians of Nubia outside Egypt, whose movements towards Egypt were restricted (Christides, *Ethnic movements in southern Egypt and northern Sudan: Blemmyes-Beja in Late Antique and Early Arab Egypt until 707 A.D.*, 129-43).

As for the term *Rūm* of the seventh section in al-Ṭabarī's extract of the treaty, it does not refer to the Graeco-Egyptian town dwellers, but to the Byzantines who were fresh settlers, army officers, many of barbarian origin, who chose to remain in Egypt after their retirement, or other Byzantine officials who were sent from Constantinople (for these soldiers, see Gascou, *Militaires étrangers en Égypte Byzantine*, in *BIFAO*, lxxv [1975], 206).

Of the other terms, the most important is the one which refers to the poll-tax paid by those bound to the treaty. Ibn ʿAbd al-Ḥakam and others report that this poll-tax amounted to two *dīnārs* per male adult, and John of Nikiu states that the safety of the Jews of Egypt was also secured.

In 645 the Byzantines, taking advantage of the uncertainty after the murder of ʿUmar (644), about which they were well-informed (Theophanes, ed. de Boor, 343) sent an expedition under Manuel against the Muslims of Egypt. This was a blunder by the Emperor Constans II, who was later responsible for the defeat of the Byzantine fleet in the naval battle of Dhāt al-Ṣawārī (*q.v.* in Suppl., and see Christides, *The naval engagement of Dhāt aṣ-Ṣawārī A.H. 34/A.D. 655-656. A classical example of naval warfare incompetence*, in Βυζαντινά, xiii [1985], 1331-45). The Byzantines landed in Alexandria easily, since the Muslims had no fleet, killed the garrison and conquered some town in the Delta. However, they were utterly routed by ʿAmr and a second evacuation took place; see the various Arab traditions in Hill, 39 ff.. Manuel's reconquest of Alexandria forced the Muslim conquerors to proceed rapidly to the recruitment of Egyptian sailors and use of Egyptian ships. In fact, these participated in the second full-scale expedition of the Muslims against Libya in *ca.* 645, five years before the first Muslim raid against Cyprus (Severus, in *PO*, i, 497 ff.).

Causes of the fall of Egypt.

Certain general conditions, which facilitated the sweeping conquests of the Arabs over the whole Middle East, can also be discerned in the Arab conquest of Egypt; but the latter presents its own peculiarities. A salient characteristic which we meet in the first Arab conquests is the assistance of the nomad Arabs of the conquered lands to the Muslim invaders. This factor has acquired particular importance after recent studies which have convincingly shown that the Byzantines did not establish in Egypt and the other areas of the Eastern frontier a rigid chain of fortifications, but rather, fortified positions in which the nomads held a key position and freedom of movement (M. Sharon, *The military reforms of Abū Muslim, their background and consequences*, in *Studies in Islamic history and civilization*, ed. Sharon, Leiden 1986, 108; Ph. Mayerson, *The Saracens and the Limes*, in *BASOR*, cclxii [1986], 35-47).

The Byzantine hagiographical sources mention repeated raids by Arab nomads against the monasteries of Sinai, but they also report that there were certain Arab tribes allied with the monks. These Bedouin Arabs had settled in various places of Sinai, probably already from the first century A.D. (Cl. Bailey, *Bedouin place-names in Sinai: towards understanding a desert map*, in *Palestine Exploration Fund Qtly.*, xvi [1984], 42-57, and idem, *Dating the arrival of the Bedouin tribes in Sinai and the Negev*, in *JESHO*, xxviii [1985], 20-49). For the Arab tribes which protected the Byzantines in Sinai at the time of Justinian, there is new information derived from the Arabic manuscripts of St. Catherine (*ibid.*, 33; al-Ṭabarī, Cairo 1326, iii, 107).

In general, although our information is fragmentary, the overall impression is that the nomad Arabs did not play as prominent a role in the Arab conquest of Egypt as they did in Syria. Al-Ṭabarī confirms the information of the Byzantine hagiographical works that the Bedouin tribes of Sinai assisted the Byzantines against the invading Arab army, but on the other hand, al-Ḳalḳashandī reports the speedy alliance of other Arab tribes with ʿAmr (*Nihāyat al-ʿarab*, Cairo 1958, 193). Of course, we must also take into consideration that the inefficient payment of the allied Arab tribes of Egypt, as in other areas of the eastern frontier, by the Byzantines on the eve of the Arab conquest may have been a detrimental factor in the Byzantine defence of Egypt (W.E. Kaegi, *Heraklios and the Arabs*, in *The Greek Orthodox Theological Review*, xxvii [1982], 116 ff.).

The Byzantines' exhaustion because of their continuous struggle with Persia in the Near East was particularly apparent in Egypt, which was occupied by the Persians just a few years before the Arab conquest. It is true that the Egyptians' dissatisfaction with oppressive Byzantine religious policies against the Monophysites cannot be denied, but this factor has been grossly exaggerated by many scholars who have not taken into consideration the multitude of the rival heresies within the Monophysite movement and the lack of any concerted resistance by all Egyptian Monophysites against the central Orthodox authority. In contrast, little attention has been paid to some Christian leaders, who, whether converted to Islam or not, offered actual assistance to the Arabs, motivated in the first place by personal ambitions. A typical case is Sanutius, appointed by ʿAmr as governor of the province of Rīf (Delta), who vigorously helped ʿAmr in his expedition against Libya.

Heavy taxation and corrupt administration were worse in Egypt than in any other of the eastern parts of the Byzantine Empire; but above all, it was the disunity which prevailed in the Egyptian administration after Justinian's reforms and the rivalry between the multitude of authorities that created a chaotic situation there.

In contrast, under the leadership of ʿAmr b. al-ʿĀṣ, the invading Arab forces demonstrated coordination and unity. ʿAmr often consulted with the caliph and kept his army informed before any important decisions were made, as he did before the capitulation of

Alexandria. He cautiously counterbalanced the superiority in numbers and equipment of the Byzantine army by applying skilful military tactics. The Byzantines had constructed many well-fortified fortresses in Egypt, of which the most conspicuous was that of Babylon. ʿAmr, who did not possess any siege equipment, besieged Babylon patiently for a long time, cutting its supply lines and engaging the Byzantines in a continuous war of attrition.

Most of his army was composed of cavalry, which moved at ease across the terrain of the Egyptian deserts and oases. There were no definite, prepared, long-term plans, but the Arab army moved with great flexibility as the occasion arose. The existence of nomads and sedentary people among the ranks of ʿAmr's army, the former expert in hit-and-run attacks, and the latter more skilful and patient in the siege of towns, offered the Arabs a great advantage (Hill, *The role of the camel and the horse in the early Arab conquests*, in *War, technology and society in the Middle East*, ed. V.J. Parry and M.E. Yapp, London 1975, 39).

We have also to take into consideration that the Arab conquest of Egypt was facilitated by the favourable situation for the Arabs which was created in Constantinople at the most critical moments of their invasion. After the death of Heraclius and of his son Heraclius Junior Constantine, Heraclonas reigned, along with his mother Martina. The policy of Heraclonas and Martina towards the Arabs, in contrast to Heraclius's aggressive strategy, was that of pacification and surrender. They reinstated Cyrus and sent him back with full power to conclude a treaty of surrender with the Arabs (Dionysia Misiou, *The will of Heraclios I and the crisis of 641*, Thessaloniki 1985, 232 [in Greek]).

Administrative, fiscal and social changes during early Muslim rule until ʿAbd al-Malik.

From the conquest until the turn of the 8th century A.D., there were no abrupt and conspicuous changes in the lower levels of the administration. Simultaneously, a dual system of administration was imposed, one for the Muslims and another for the Christians, and an extreme centralisation replaced the loose Byzantine administrative system. The meticulous control of every facet of the administrative and fiscal machinery during this period strongly resembled the Ptolemaic one (see H. Cadell, *Problèmes relatifs au sel*, in *Atti dell' XI Congresso Internazionale di Papirologia*, Milan 1966, 284). But while in Ptolemaic times Egypt was an independent entity and no local resources were wasted, the Arabs continued the Byzantine policy of shipment of corn and tribute outside the country, now from Fusṭāṭ via Suez to Djudda and Medina instead of via the former route Alexandria-Constantinople.

At the top of the new administrative machinery there was now the governor of Egypt, who held the title of *wālī* (σύμβουλος, usually called πανεύφημος σύμβουλος) and was directly responsible to the caliph; he also held absolute judicial authority. The Arabs continued in Egypt, as well as in their other provinces, the Byzantine tradition of combining administrative and judicial power in the same hands (E. Tyan, *Histoire de l'organisation judiciaire en pays d'Islam*², Leiden 1960; Aik. Christophilopoulou, Τὰ βυζαντινὰ δικαστήρια κατὰ τοὺς αἰῶνες I-IA, in Διπτυχα ix [1986], 164).

At the turn of the 7th century A.D., Egypt was subdivided into two geographical units, a division which continued for centuries. The first (Upper Egypt) included the old Byzantine provinces of Arcadia and Thebais and the latter Augustamnica and Egypt proper. It is noteworthy, nevertheless, that the old Byzantine division of southern Egypt into two provinces bearing the name of Thebais and a third called Arcadia reappeared in later times, i.e. the Upper Ṣaʿīd from Aswān to Akhmīm, the second Ṣaʿīd from Akhmīm to Bahnasā and the Lower Ṣaʿīd from Bahnasā to Fusṭāṭ (see Remondon, *Papyrus grecs d'Apollônos Anô*, Paris-Cairo 1953, 21). The governors of these provinces bore the title of *amīr* in Arabic, rendered as ἀμίρ, ἀμιρᾶς or δούξ in Greek (see J. Maspero-G.Wiet, *Matériaux pour servir à la géographie de l'Égypte*, in *MIFAO*, xxxvi [1919], 227 ff.; H.I. Bell, *The administration of Egypt under the Umayyad Khalifs*, in *BZ*, xxviii [1929], 278-86; K. Sayyida, *Miṣr fī ʿaṣr al-wulāt*, Cairo n.d.; ʿAbd al-Munʿim Mukhtār, *On the survival of the Byzantine administration in Egypt during the first century of the Arab rule*, in *Acta Orientalia Academiae Scientiarum Hungaricae*, xxvii [1973], 309-19. There is a certain confusion in this article in the use of titles as, for example, the identification of τοπάρχης and πάγαρχος, who were different administrators, etc.).

ʿAbd Allāh b. Saʿd b. Abī Sarḥ, who succeeded the first governor ʿAmr *ca.* 25/645-6, was responsible for the organisation of the office of finances (*dīwān al-kharādj*) in Islamic Egypt. The taxation system which was immediately applied after the conquest is not well documented, while for the following period there are still many unanswered questions (the main work is still D.C. Dennett's *Conversion and the poll tax in early Islam*, Cambridge, Mass. 1959; useful are A. Grohmann's studies, *Probleme der arabischen Papyrusforschung. II*, in *ArO*, v [1933], 273-83, and *Zum Steuerwesen Arabischen Aegyptens*, in *Actes du V*ᵉ *congrès international de papyrologie*, Brussels 1938, 123-34; Bell, *op. cit.*; see also L. Casson, *Tax collection problems in early Arab Egypt*, in *TAPA*, lxix [1938], 274-91; ʿAbd al-ʿAzīz al-Dūrī, *Landlord and peasant in early Islam*, in *Isl.*, lvi [1979], 97-105; of particular importance are Kosei Morimoto's studies *Land tenure in Egypt during the early Islamic period*, in *Orient*, xi [1975], 109-53, and idem, *The fiscal administration of Egypt in the early Islamic period*, Tokyo 1981, in spite of their bibliographical gaps. See a thorough but occasionally severe review by Gascou, *Miscellanea*, 97-109; G. Frantz-Murphy, *Land tenure and social transformation in early Islamic Egypt*, in *Land tenure and social transformation in the Middle East*, ed. Tarif Khalidi, Beirut 1984, 131-9, and the arts. FAYʾ, GHANĪMA and ḌARĪBA; brief but useful remarks are also found in F. Donner, *The formation of the Islamic state*, in *JAOS*, cvi [1986], 283-95).

According to the so-called treaty of ʿAmr, the inhabitants of Egypt were supposed to pay a poll-tax of two *dīnārs* (not including women, children, slaves and beggars); but naturally, this left open the problem of a practical and fair distribution of the tax burden. Meanwhile, most of the Arab conquerors were given no land for cultivation but resided in the *amṣār* (garrison towns), mainly in Fusṭāṭ and Alexandria. Cash stipends, *ʿaṭāʾ* [*q.v.*], were regularly paid to them and their families (see Caetani, *Annali*, iv, 368-417; A.S. Tritton, *Notes on the Muslim system of pensions*, in *BSOAS*, xvi [1954], 1702; G.-R. Puin, *Der Dīwān von ʿUmar ibn al-Ḫaṭṭāb. Ein Beitrag zur frühislamischen Verwaltungsgeschichte*, 1970).

Morimoto states that there were only a few early cases of land granted to Muslims, who acquired substantial land estates only after the 1st/7th century (*Land tenure in Egypt*, 112). While there is no doubt that the conditions which prevailed in Egypt after the 1st century accelerated the acquisition of land for the Muslims, the question that has remained unanswered is, who obtained the land abandoned by those who left

Egypt after its conquest and how much of the unclaimed land (*mawāt*) was taken by the community and/or the warriors (*muḳātila*)? The inhabitants were also obliged to offer supplies and hospitality to the conquerors. The *PEPF* 555, written in the first decade of the Arab conquest, reveals the beginning of the obligatory three-day hospitality offered to Muslim travellers by the local people.

From the Aphrodito and Edfu papyri we learn that less than half-a-century after the conquest of Egypt, an elaborate system of taxation was established. According to this, at first a specially selected group of prominent citizens of every *kūra*, the smallest financial district, was selected to prepare the cadaster (κατάγραφου), with a list of the taxpayers and the tax to be imposed on them. This register was sent to the treasury in Fusṭāṭ (the *bayt al-māl* [*q.v.*]). Afterwards, the governors sent demand notes (ἐντάγου) defining the amount of money taxes and *embole* (tax in kind to be paid) [see DJIZYA and KHARĀDJ]. In addition to these main taxes, a variety of other ones were also imposed (Donner, *Formation*, 287, n. 18). As in Byzantine times, the special grain tax known as ἐμβολή was regularly applied to the farmers. Part of the ἐμβολή was the ρουζικὸ (*rizḳ*) which was given not only in grain but also in various other kinds (oil, textiles, hides for the ships, etc.) (*PEPF* 557, Pap. Rem 94; see A. Grohmann's remarks in *Aperçu de papyrologie arabe*, in *Études de Papyrologie*, i [1932], 44, 59).

The Egyptians were again asked to offer forced labour services (ἀγγαρία) for the construction and repairing of bridges, canals and other public works; and an additional obligation was now their participation in the κοῦρσα, naval expeditions against the Byzantines.

The frantic efforts by the Arab authorities in Umayyad Egypt to construct ships and to equip them properly with sailors and marines are vividly described in the papyri. The *amīrs* constantly sent the local authorities threatening letters, demanding simple workers (ἐργάται or ἀγγαρευταί) and specialised technicians (τεχνῖται or καλαφάται) (cf. Pap. Lond. 1334; Pap. Apoll. Anô, 29, 5-6). The sailors (ναῦται) were recruited from each pagarchy or district in accordance with a well-defined quota system; the pagarchies undertook, moreover, the maintenance (δαπάνη) of the sailors and supplied them with farina (ἄλευρον), bread (ψωμίον) or wheat (σίτον) and other staple provisions. They also provided all the equipment of the ships (ἀρμαμέντον) (Gascou, *Papyrus grecs inédits d'Appolônos Anô*, in *Hommages à Serge Sauneron*, ii, Institut Français d'Archéologie Orientale du Caire, 1979, 27).

These raids against Byzantium (κοῦρσα) took place following a stereotyped pattern. Orders were sent by the *amīr* to each pagarch to recruit Christian sailors and send them to the meeting points (ἐξπελλεύειν = *expellere*), while the Muslim marines were separately dispatched from their garrisons in Fusṭāṭ and Alexandria. The marines (μάχοι) formed two classes: the *muhādjirūn* (μωαγαρίται), who were Muslims of Arab origin, and the newly-converted *mawālī* (μαυλεῖς). An Arabic papyrus informs us that even the quality of bread prepared for the marines (*muḳātila*) was better than that of the sailors (*nawātiyya*) Yūsuf Rāgib, *Lettres nouvelles de Qurra b. Šarīk*, in *JNES* [1981], 173 ff.). Egyptian workers and technicians were also recruited by the Arabs and sent out of the country to participate in the construction of mosques; for example, the P. Lond. 1403 informs us about a recruitment of such labour force, which was sent to Jerusalem for the construction of its mosque.

The early Islamic taxation system secured the continuation of the Coptic communities in the countryside and the preservation of the status of certain leading families, as is attested from the papyri of Aphrodito and Edfu. The nobility in the village communities, possessing the power of assessment of the taxes and holding important positions, including the post of pagarchus in the administration, exercised great power over the Christian population. Simultaneously, the Egyptian artisans who formed powerful guilds in Byzantine times did not disappear. In Pap. Rem. 75, dated by the editor to *ca.* 703, we meet a long list of professionals in Apollonopolis who belong to the guilds of sailors, fishermen, builders, pot makers, etc. Among them there is also a reference (l. 12) to the guild of the salaried farmers (μισθίων γεωργῶν) who worked under contracts. Such salaried farmers and salaried pot makers worked in the great estate of the pagarch Pappas in Apollonopolis (Pap. Rem. 98). Pappas was not the only wealthy landlord, and references to other great estates appear in Apollonopolis (see e.g. Pap. Rem. 78). Of course, these great estates were smaller than those of the Byzantine times, but the landlords still possessed their own bakeries, a number of camels, horses and numerous personnel (Pap. Rem. 98, l. 5: μάγκιψι εἰς τὸ οἶκον, l. 36: ἀλόγων; l. 33: καμήλων). Therefore, Dennett's statement (*Conversion*, 90) that in early Islamic Egypt "private ownership of land does not seem to have existed" is incorrect.

The artisans who worked in early Islamic Egypt were eagerly protected by the still powerful nobility of the preserved οἶκοι (great estates of the nobility). In the Byzantine period, the artisans were free to choose to work either for their sake in their workshops or under contract with the proprietors of the great estates and few were slaves (see F. Fikhman, *op. cit.*, where the author, based on the Greek papyri, deals extensively and in depth, with the problem of the Byzantine guilds of Egypt, and the excellent review article by E. Wipszycka, *Jnal. of Juristic Papyrology*, xvi-xvii [1971], 217-36). In early Islamic Egypt, their activities were restricted because of the lack of manpower, λειψανδρία (Pap. Rem. 26, l. 4).

In this period, conversion to Islam took place on a very limited scale. Since the new converts to Islam were not automatically relieved of the land tax, there were few incentives for the Egyptians to abandon their religion and traditions. It is only after ʿUmar II's policies, as demonstrated in his famous edict of 100/718, in which he encouraged fiscal relief for the newly-converted Egyptians, that such incentives were introduced.

For the Muslims in Egypt, the most important office after that of the governor of Egypt was that of the police commander. From the time of ʿAmr, a police force, *shurṭa* [*q.v.*], was established in Egypt to protect the governor and keep the order in towns (Tyan, *op. cit.*). This police force was actually part of the military; its chief, the *ṣāḥib al-shurṭa*, was appointed by the governor until late Umayyad times, but his authority was in fact better established than that of the governor, for whom he acted as deputy when the latter was absent or ill. While theoretically he was under the jurisdiction of the governor, since he was selected from the local aristocracy, the *wudjūh*, he had grass-roots local support which could withstand the whim of all governors. They usually held office longer than the governors and were succeeded by members of their own families, creating powerful dynasties (H. Kennedy, *Central government and provincial elites*, in *BSOAS*, xliv [1981], 35 ff.). While the

authority of the *ṣāḥib al-shurṭa* was restricted in Fusṭāṭ and the Arab settlements, the enforcement of order in Coptic provincial communities was left in the hands of the local administrators who, under the authority of the pagarch, could arrest and imprison the culprits (Pap. Rem. 63-69). The duties of the *bucellarii* as a sort of gendarmerie still continued in the Arab period but were greatly curtailed. While in the Byzantine period the *bucellarii* often undertook the important task of collecting taxes (see Pap. Oxy. 2480, l. 29, 35, dating from 565 A.D., πρὸς ἐξάνυσιν τῶν δημοσίων), such duties were now performed by the *muhādjirūn* Arabs (μωαγαρίται) and the *bucellarii* were reduced to doing minor tasks.

The Arab administration had another powerful official who acted as a watchdog, the *ṣāḥib al-barīd* or chief of posts and intelligence [see BARĪD], at whose disposal were the treasury officials (*ʿummāl al-amīr*) who secured the public safety of the individuals (*APEL*, vii, nos. 174-5; Donner, *op. cit.*, 286).

Justice for the Muslims was in the hands of the office of the *ḳāḍī al-ḳuḍāt* (Chief Judge), and the *ḳāḍīs* [*q.v.*] acquired great power. As for the Christians, the chief judicial power was in the hands of the bishops, who in the early Umayyad period had retained at least partly some of their old civil administrative functions. According to the Justinian legislation (*C.J.I*, 55, 8) the bishops of the town participated in the supervision of sureties and in a number of other administrative functions. In the Pap. Oxy. XVI 1848 (6th-7th century) there is mention of a bishop advising on behalf of a tax payer. In Pap. Apoll. 46 (703-15 A.D.), a bishop appears participating in a committee of sureties. In the same papyrus there is the mention of ὁσπίδια, i.e. houses for the poor and/or sick, which continued to be under the supervision of bishops and the church in the Egyptian towns. Justice was also administered in the Christian communities of Egypt by the pagarch (πάγαρχος) (M.A. Cheira, *Le pagarque au Ier siècle P.H. d'après les papyrus d'Aphrodito*, in *King Farouk Univ., Bull. of Fac. of Arts*, i [1943], 105-18). In Byzantine Egypt after the 5th century A.D., there appears the administrative unit known as the pagarchia, a subdivision of the nome which included rural areas, i.e. districts financially administrated by pagarchs; these became the *kuwar* (sing. *kūra*) in Arabic. In addition to the pagarch there was another administrative high official, the toparch (τοπάρχης) who often replaced him.

While some of the Greek titles of officials found in the papyri of early Islamic Egypt show that certain Byzantine administrative officers continued to function, one should note that the same Byzantine titles frequently denote different functions in the Arab period, something which is often forgotten by scholars who simply accept the Arab adoption of an almost uninterrupted Byzantine administration.

The most conspicuous example of the use of a Greek title for an official whose function was greatly diminished in early Islamic Egypt was that of the βουκελλάριος. In the late Byzantine times, the βουκελλάριοι of Egypt were a sort of gendarmerie spread over various parts of the country, ready to repel any attacks by the Saracens or the Blemmyes, and simultaneously enforcing law and order in the countryside. Their latter function was often at the disposal of the great landlords, although they remained under the jurisdiction of the public administration. In the early Arab period, the term βουκελλάριος was restricted to a number of money carriers or messengers (Pap. Rem. 30.1) and nothing remained of their lofty Byzantine status (see Gascou, *L'institution des bucellaires*, 144 ff.) Thus Bell's theory (*The administration of Egypt under the Umayyad Khalifs*, 280) that the *bucellarii* under the Arab period were simply an adaption of the Byzantine *bucellarii* cannot be accepted. A number of other armed or unarmed messengers carrying old Byzantine titles also appear in many other papyri. It should be noticed that in early Islamic Egypt, above all the various *servi armati* stood a new genre, that of the μωαγαρίται (*muhādjirūn*), while that of Σαραχηνοὶ and βερεδάριοι (from Ar. *barīd*) was also added.

The most impressive innovation at this time was the creation of a new office, that of the "commissioner" of the fugitives, ἐπικείμενος τῶν φυγάδων. In contrast to the ponderous administration of the late Byzantine times, this official, cutting through the hierarchy, nullified the power of the pagarchs—who were liable to capital punishment for neglect of their duties towards the fugitives—and being responsible only to the governor, the *amīr*, checked the proper application of his orders concerning the arrest and return of the fugitives to their homeland. Thus in Inv. nos. 1332, 1333, it is stated that the governor Ḳurra b. Sharīk [*q.v.*] sent from Fusṭāṭ six guards to Basil, the pagarch of Aphroditopolis, in order to search for fugitives, overriding the latter's authority.

There are numerous references to the fugitives (Greek φυγάδες, Arabic *djāliya*) in the Greek, Arabic and Coptic papyri of early Arab Egypt. The great number of all these fugitives puzzled Bell, who attributed their flight to the perennial dissatisfaction of the Egyptian peasants over their exploitation (*The administration of Egypt*, 284). Nevertheless, neither his explanations nor the statement of the biassed Coptic author, Severus b. al-Muḳaffaʿ, in the life of patriarch Alexander II (*PO*, v, 64), that men began to flee from place to place because of the harsh rule of Ḳurra b. Sharīk, sheds light on the actual reasons for the general phenomenon of the flights in various parts of Egypt (for references to the fugitives in the Greek and Arabic papyri, see Cadell, *op. cit.*, 118, n. 1; for the problem of the fugitives, see also N. Abbott, *The Ḳurrah papyri*, 67, 97; and on Ḳurra b. Sharīk, the art. s.v.). Bell and other authors associated the phenomenon of the great increase in flights at this time to the allure which Fusṭāṭ, the new capital of Egypt, exercised upon the peasants; but in reality, the opposite happened, and the novelty in early Islamic Egypt is the mass flight of town dwellers back to their villages, abandoning Fusṭāṭ.

The new capital Fusṭāṭ [*q.v.*] was chosen by the Arabs because of its geographical location, which was more convenient to them than that of the famous city of Alexandria: it stood in a key position between Upper and Lower Egypt and on a convenient route linked with the Red Sea. According to John of Nikiu, the ancient canal connecting Babylon with the Red Sea at al-Ḳulzum [*q.v.*] (near modern Suez), which had been silted up, was cleared out by the Muslims and reopened (*Chronicle*, 195). Thus the corn and tribute previously sent to Constantinople via Alexandria could be shipped by the Muslims through the Red Sea to Djudda and then to Mecca. Of course, such use of the canal must have been limited in scope and impractical, because of the labour involved in keeping it navigable; instead, the traditional camel route continued to be used. Fusṭāṭ, established outside the walls of the fortress of Babylon in the early years of the Arab conquest of Egypt, remained mainly a military camp where the Arab clans were grouped in well-defined tribal quarters. The *khiṭṭat ahl al-rāya* was located at the centre and the other tribes of the Arabs

developed around it, while a separate quarter outside, *khiṭṭat ahl al-ẓāhir*, was reserved for those who had no kinsmen (A.R. Guest, *The foundation of Fustat and the Khittahs of that town*, in *JRAS* [1907], 49-83; S.J. Staffa, *Conquest and fusion, the social evolution of Cairo A.D. 642-1850*, Leiden 1977, 18).

It can be understood that this new capital, where ʿAmr's mosque was erected and where the religion of Islam and Arab tribalism were so conspicuous, was unlikely to lure any great number of Copts in early Islamic Egypt, thus risking their freedom and abandoning their traditional villages.

The problem of fugitives reveals a serious pattern of socio-economic change, as is pointed out by Morimoto (*The fiscal administration*, 120 ff.), and it does not have simply a legal and fiscal aspect, as asserted by Gascou (*Miscellanea*, 106 ff.). A careful study of the papyri reveals that there were two categories of fugitives caused by two different reasons. In the first category, the peasants' flight was due to dissatisfaction with their poverty created by over-taxation, a typical reaction of the Egyptian fellahin from the Pharaonic period, and continuing in the Hellenistic and later periods (see A.E. Samuel, *The money economy and the Ptolemaic peasantry*, in *Bull. of the American Soc. of Papyrologists*, xxxi [1984], 196). In the second category, we notice the flight of unskilled labourers from Fusṭāṭ or other towns back to their villages, a unique event in the previous history of Egypt. It is for them that the most severe punishments were reserved, and any neglect of the proper authorities—including the pagarch—to catch fugitive labourers could even draw capital punishment upon them.

An Arabic papyrus from Aphroditopolis, dating from *ca.* 710 A.D. (P. Sorbonne INV, 2343), written in obscure style, describes some trade dealings of a fugitive with the pagarch Basil and the governor Ḳurra (Rāgib, *Lettres nouvelles de Qurra b. Šarīk*, 178 ff.). The mild treatment of this fugitive (*djāliya*) by the authorities is explained by the fact that he was not a labourer. By contrast, in Pap. Remond. 9, which describes the flight of skilled workers from the shipyards of Fusṭāṭ back to their villages, the pagarch is threatened with death if he fails to arrest the fugitives. This constant recruitment of unskilled and skilled labourers, who were asked to serve in the shipyards with their own tools and were considered as state servants (Pap. Remond. 52, ἐργατῶν δημοσίν ἐν Βαβυλῶν[ι]) deprived the villages of their most valuable and skilled manpower. In addition to the constant state demands for labourers, another unspecified number of builders was recruited from the villages and these were sent abroad to help the construction of mosques in other places of the Arab caliphate. This was not a novelty in Egypt, since in the *Life* of St. John of Alexandria (ed. Gelzer, 37), it stated that the Patriarch of Alexandria had sent one thousand Egyptian workers for the rebuilding of the church in Jerusalem; but now the demand for workers in the newly-established caliphate exceeded by far the previous requisitions (for the chronic problem of shortage of skilled manpower in late Roman and Byzantine Egypt, see *Greek papyri in the collection of New York University*, ed. N. Lewis, i, 1967, no. 25).

The drain of manpower from the villages did not only create serious economic problems in the Egyptian provinces but also caused social upheavals. The resettlement of Christian labourers from their village communities to Fusṭāṭ and the other towns, to a largely Muslim environment, created great dissatisfaction and forced them to abandon *en masse* the towns and return to the provinces. In order to deal with this serious problem, the state not only created the office of the commissioner of the fugitives, as noted above, but also ordered the issue of passports for all Egyptians who travelled (*PEPF*, 601-3). The problem of the fugitives is also related to the taxation of the monks. The financial burdens of the Coptic church until the mid-Umayyad period were somewhat heavier than in the previous Byzantine period. From Severus's *History of the Patriarchs of the Egyptian Church*, which covers the period from Benjamin I (622-61) to that of Michael IV (1092-1102), as well as from a number of Greek papyri, we learn that tax-exempt monasteries outnumbered by far those which paid taxes (Morimoto, *Land tenure in Egypt during the early Islamic period*, 121). Certainly, at the beginning of Arab rule, the monks were exempt from the poll-tax which was imposed on them later, after a great number of peasants had fled to them in order to avoid the burden of taxes.

The later period up to 750 A.D.

It seems that it was at the time of ʿAbd al-Malik that the monks, who hitherto paid no poll-tax, were obliged to pay this tax regularly. Meanwhile, the governor of Fusṭāṭ, ʿAbd al-ʾAzīz, applied stricter financial controls in the countryside (Eutychius, *Annales*, ed. Cheikho *et al.*, 41; Dennett, 81). At the same period, another change was completed; the Christian designs and inscriptions on coins were replaced with purely epigraphic designs and Ḳurʾānic inscriptions. Actually, there was a transitional period preceded by minor alterations in the Byzantine coins, but it was in ʿAbd al-Malik's time that the great reform was completed. See P. Grierson, *The monetary reforms of ʿAbd al-Malik*, in *JESHO*, iii [1960], 241-24; N.M. Lowick, *Early Arab figure types*, in *The Numismatic Circular*, lxxviii/3 [1970]; R.J. Hebert, *The early coinage of Bilād ash-Shām*, in *Procs. of the 4th International Congress of Bilād al-Shām, Amman 1985*, Amman 1987, 133-54.

ʿAbd al-Malik's first important changes were followed by some sweeping further ones which cannot be easily traced. Christians could no longer become higher officials, the language of the administration was changed from Greek to Arabic, and Muslims replaced the Christian notables who assessed the taxes (J. Gascou-K.A. Worp, *Problèmes de documentation apollonopolite*, in *Zeitschr. für Papyrologie*, xlix [1982], 83-95; Frantz-Murphy, *op. cit.*, 131 ff.). One of the most sweeping changes which took place at the end of Umayyad Egypt, in order to increase the revenue of Egypt by any means, was the new status acquired by the director of finances (*ʿāmil*), who became responsible directly to the caliph in Damascus. For this purpose, a trusted and efficient person, ʿUbayd Allāh b. al-Ḥabḥāb, was appointed in this position (*ca.* 106/724) by the caliph Hishām (for a brilliant presentation of his personality and activities, see Abbott, *A new papyrus and a review of the administration of ʿUbaid Allāh b. al-Ḥabḥāb*, in *Arabic and Islamic studies in honor of Hamilton A.R. Gibb*, ed. G. Makdisi, Leiden 1965, 21-35, who somewhat underplays the bad consequences of his policies in Egypt caused by his financial system). ʿUbayd Allāh immediately ordered a new land survey, followed by an abrupt increase of taxation. According to the Patriarch Severus, the new measures of ʿUbayd Allāh doubled the revenue in Egypt (*PO*, v, 86). The tax rise caused immediately the first Coptic revolt in 107/725-26 (al-Kindī, *Wulāt Miṣr*, ed. Guest, 73; al-Maḳrīzī, *Khiṭaṭ*, ed. Cairo, i, 79, ii, 492). ʿUbayd Allāh in 109/727-8 took another drastic action which greatly contributed to the

arabisation and islamisation of Egypt, i.e. he settled 3,000 Arabs from the tribe of Ḳays near Bilbays in the Eastern Delta and transferred their Arab-Muslim registration from the *dīwān* of Syria to that of Egypt.

By the end of the Umayyad period, Fusṭāṭ changed from a military town into a prosperous active city. While initially the peasant Copts strove to abandon Fusṭāṭ and return to their villages, the growth of the city now attracted many adventurous Christian merchants, artisans and newly-converted Egyptians (*mawālī*). In 114/732 ʿUbayd Allāh at another stroke brought 5,000 Arabs, again from the Ḳays group, and settled them in the Ḥawf, to the northeast of Fusṭāṭ, a turbulent area, to outbalance the power of the Copts who lived there (al-Kindī, 76).

In spite of the rapid arabisation of Egypt in the last quarter of the Umayyad period in Egypt, it should be noted that the Coptic language continued to be used by a number of Egyptians as late as the 3rd-5th/9th-11th centuries. Thus in some Arabic contracts of the period, most of which come from Fayyūm, it is stated that certain Egyptians, Christians and/or recent converts to Islam, did not know even oral Arabic and the contracts were read and explained to them in the "foreign language", i.e. Egyptian (Frantz-Murphy, *A comparison of the Arabic and earlier Egyptian contract formularies. Part I. The Arabic contracts from Egypt (3rd/9th-5th/11th centuries)*, in *JNES*, xl [1981], 212, 223).

The last important trend begun in late Umayyad Egypt and completed in the early ʿAbbāsid period was the replacement of the Egyptian notables who had the task of collecting taxes, by persons appointed by the government; this was a heavy blow to the leading rôle of the Copts in their rural communities, and enhanced islamisation in these areas (Frantz-Murphy, *op. cit.*, 133).

(V. Christides)

2. From the ʿAbbāsids to the Fāṭimids 750-969.

Miṣr at the time of the ʿAbbāsid take-over in 132/750 was a country in which Islam and Arab culture were still confined to the ruling élite, the vast majority of the population still being Coptic Christians. Fusṭāṭ was the capital and centre of the Arab population, with the mosque of ʿAmr being the main place of worship. The leaders of Arab society were the group known as the *wuḏjūh*, the élite. They were mostly descended from families who had settled in Egypt after the original Muslim conquest and they occupied a privileged position, forming the local, inefficient militia which constituted the only standing military force in the country, and being paid *ʿaṭāʾ* [*q.v.*] accordingly. The *ṣāḥib al-shurṭa* [see shurṭa] was usually chosen from their ranks. There also seems to have been an urban Muslim population at Alexandria who may have formed their own military force. In addition there were Arab tribes, notably in the Ḥawf deserts to the east and west of the Nile Delta.

The history of Miṣr in this period can be divided into a number of distinct phases. The first, which lasted until the death of Hārūn al-Rashīd, in 193/809, was essentially a continuation of the Umayyad pattern, with governors sent from Baghdād rather than Damascus, and there seems to have been little change in the population or political structure and no settlement of ʿAbbāsid supporters from the East. The political history of the period was marked by frequent changes of governor and sporadic rebellions. Of the governors, only Yazīd b. Ḥātim al-Muhallabī (142-52/759-69) [see muhallabids] remained in office for more than a few years and none were able to attain any independent status; in the twelve years 170 to 182 (787-99) there were sixteen changes of governor. Continuity was provided by the *aṣḥāb al-shurṭa*, who were effectively deputy governors.

The most significant events were the attempted ʿAlid rebellion of 145/763, which was frustrated by the governor Yazīd b. Ḥātim in its early stages, and the more wide-ranging revolt of 168/785 against the governorate of Muṣʿab, whose evil reputation as governor of the Djazīra is well known from the *Chronicle* of the Pseudo-Dionysus of Tall-Mahré. This revolt united the discontented Arabs of the Ḥawf behind Diḥya b. Muṣʿab, a descendant of the Umayyad ʿAbd al-ʿAzīz b. Marwān. The trouble became a crisis when the *djund* of Fusṭāṭ refused to support Muṣʿab and he was killed by the rebels. It was left to his *ṣāḥib al-shurṭa* ʿAmr al-Maʿāfirī to restore order. This period also saw continuing uprisings of Coptic peasants, protesting against fiscal actions.

In the late 2nd/8th century, however, this system came under increasing pressure from Baghdād, anxious to extract ever-increasing sums of money from the province. This resulted in a variety of measures such as appointing special financial investigators like ʿUmar b. Mihrān in 176/792 and the summoning of the governor to Baghdād to present the accounts in person, as happened in 183/799 and 185/801, but inevitably much of the taxation was never recovered and after the fall of the Barmakids in 186/803 these attempts at fiscal discipline seem to have been relaxed.

As elsewhere in the Muslim world, the civil war which followed the death of Hārūn al-Rashīd in 193/809 marked the end of the early Islamic polity. The collapse of central government led to a battle for power within the Muslim community and laid the country open to outside adventurers. Shortly before Hārūn's death, a detachment of Khurāsānī troops under al-Sarī b. al-Ḥakam arrived in the country. They seized power in Fusṭāṭ in 200/815, destroying the local militia under the control of the *wuḏjūh*, but they were opposed in the north of the country by a local leader, ʿAbd al-ʿAzīz al-Djarawī. To complicate matters further, Alexandria was taken over by refugees from al-Andalus who had been driven out by the Umayyad *amīr* al-Ḥakam [*q.v.*]. It was not until 211/826 that ʿAbd Allāh b. Ṭāhir [*q.v.*] finally returned the country to ʿAbbāsid rule: the Andalusīs were expelled and went to settle in Crete [see iḳrīṭish] and compromises were made with the other leaders, al-Sarī's son ʿUbayd Allāh being settled in Sāmarrā with a large cash payment.

The civil war profoundly affected Muslim Egypt. The power of the local *wuḏjūh* was destroyed, the process being completed when Arabs were dropped from the *dīwān* and so ceased to receive the *ʿaṭāʾ*. Power lay with a succession of military figures, all outsiders, and their military escorts. These men, some of Turkish or Armenian origin, served as deputies for important figures at the court in Sāmarrā, lacking in prestige and enjoying only short periods in office. The long-

term result was that Egypt no longer had a native Muslim élite and this wealthy country was in future ruled by groups from outside, either Turks from ʿIrāḳ and further east, or Berbers from the west.

It is probable that the governors who followed ʿAbd Allāh b. Ṭāhir ensured that Egypt became firmly incorporated into the highly centralised middle ʿAbbāsid state. With no local militia to demand a share, revenue could be despatched straight to the capital. The financial administrators, like the hated and ruthless Ibn al-Mudabbir [*q.v.*], became key figures in local politics. This fiscal centralisation carried within it the seeds of its own decline, and in Egypt as elsewhere the problem of the government in Sāmarrā gave ambitious governors the chance to keep the revenues for themselves and to use them to build up their own military power. It was in this way that Aḥmad b. Ṭūlūn, originally deputy governor for his uncle, who remained in Sāmarrā, assumed authority.

The rule of Aḥmad b. Ṭūlūn (254-70/868-84 [*q.v.*]) was in the main a period of peace and prosperity, if only because revenues which had previously been paid to the caliphs were now retained in the country. Ibn Ṭūlūn recruited a new army, mostly comprised of Greeks and black slaves with which to maintain his power. In order to house them he constructed a new suburb to the north of the old city of Fusṭāṭ, called al-Ḳaṭāʾiʿ, with its own congregational mosque, known to this day as the mosque of Ibn Ṭūlūn, and governor's palace.

His rule saw the beginning of Egyptian involvement in Syrian affairs. There were a number of reasons for this continuous preoccupation, among them the need to ensure alternative food supplies in case of a failure of the Nile, when popular discontent could prove dangerous, and also the problem of security, since Egypt could be invaded from Palestine if that were to be in hostile hands. There was also the attraction of the Byzantine frontier, especially for Ibn Ṭūlūn who took over responsibility for defence from the feeble ʿAbbāsid caliphs, thereby giving his régime both prestige and legitimacy. This preoccupation with Syria was to be one of the major issues in Egyptian history as long as the country remained independent under its own rulers. There were two possible policies. One was the advanced policy espoused by Ibn Ṭūlūn which held that the frontiers of Egypt lay at the Taurus and the Euphrates and that Aleppo, Antioch and all northern Syria should be under Egyptian control. The alternative was the more modest policy of the Ikhshīdids in the next century, whose ambitions were restricted to ruling Palestine and Damascus and to remaining on friendly terms with the rulers of northern Syria. Both Fāṭimids and Mamlūks were to pursue one or other of these policies.

Neither Ibn Ṭūlūn and his son Khumārawayh nor the Ikhshīdids attempted to break away from the ʿAbbāsid caliphate. They retained political and financial independence, but allowed a constitutional dependence which gave their rule legitimacy. Both Ibn Ṭūlūn in 269/882 and Muḥammad b. Ṭughdj [*q.v.*] in 333/944 tried, without success, to persuade the ʿAbbāsid caliphs of the day to come and establish themselves in Fusṭāṭ.

Ṭūlūnid power ended with the occupation of the country by an ʿAbbāsid army in 292/905, and the country was to remain a province of the caliphate until 323/935. This spell of ʿAbbāsid rule was not particularly effective. Despite sporadic attempts, it seems that very little revenue was forwarded to Baghdād. This period saw the beginning of two new developments. The first was the Fāṭimid seizure of power in 297/909, which meant that Egypt became a frontier province. The Aghlabids had ruled Ifrīḳiya as independent sovereigns before, but they had no pretensions to expand their influence to the East. The Fāṭimids claimed to be the rightful rulers of the whole Muslim world and made no secret of their determination to take Egypt as the next stage of their progress. In 301-2/913-15 and 307-9/919-21 there were serious Fāṭimid attacks, which entailed the sending of forces from ʿIrāḳ to support the local governor. Although the threat was repelled, it meant that Egypt was more of a liability than asset to the caliphate, and the ʿAbbāsids were prepared to allow it to pass into the hands of anyone who could keep the Fāṭimids out (see further on these attacks, FĀṬIMIDS).

The second important development was increasing immigration from ʿIrāḳ. The 4th/10th century saw a prolonged economic and political crisis in ʿIrāḳ and many felt that the calmer conditions of Egypt offered more opportunities. Among these were professional bureaucrats, like the Mādharāʾī family [see AL-MĀDHARĀʾĪ]. The collapsing ʿAbbāsid administration had little use for their skills, but these were much appreciated in Egypt. The migration of these people was gradual but steady, and it led to the emergence of a Muslim civilian élite in Egypt for the first time. The administration became thoroughly arabised, although Coptic Christians continued to play an important rôle. It is probable that the arrival of these people was an important factor in the increased pace of conversion to Islam at this period (see on this process, AL-ḲIBṬ). Although there had been textile manufacture in early Islamic Egypt, notably the production of *ṭirāz* [*q.v.*] for the government, immigrants from ʿIrāḳ at this time may have been responsible for the growth of the industry in the 4th/10th century.

Other immigrants included many Jews. It does not seem that early Islamic Egypt had a Jewish community of any great importance, but this changed with the immigration of many Babylonian Jews, like the family of the future *wazīr* Yaʿḳūb b. Killis [see IBN KILLIS] to the country and it was at this time that the flourishing Jewish community which we find described in the Geniza documents developed.

In 323/935 power in Egypt passed into the hands of another military man of eastern Iranian origin, Muḥammad b. Ṭughdj, later given the honorific title of al-Ikhshīd [*q.v.*], after the rulers of his ancestral home at Farghānā. In many ways, Ikhshīdid rule resembled the Ṭūlūnid one but it was less ambitious. None of the rulers built anything of note nor do they seem to have added new quarters to the capital city. Under the rule of the black eunuch Kāfūr [*q.v.*], who achieved effective power after Ibn Ṭughdj's death in 334/946 and remained as ruler, first in the name of Ibn Ṭughdj's son Unūdjūr and later in his own right until his death in 357/968, the Egyptian court became something of a culture centre with his patronage of the poet al-Mutanabbī [*q.v.*] and others.

On the eve of the Fāṭimid conquest, Muslim Egypt was still far from achieving its potential as a great power. Ikhshīdid rule was conservative, more concerned with securing what it held and keen to maintain good relations with potential rivals like the Ḥamdānids [*q.v.*] in northern Syria if possible. The dynasty had no distinctive ideology and no significant body of supporters. Compared with Egypt at the time of the ʿAbbāsid revolution, the proportion of Muslims in the population had certainly increased but they were still not a majority in the country. The early Muslim élite had disappeared and a new one was only slowly forming and the economy was developing. All

the potential was there for Egypt to take its rightful place among the Muslim powers.

Bibliography: The main source for the early part of this period is Kindī, *Kitāb al-Wulāt* (to 334/946) and its companion, *Kitāb al-Ḳuḍāt* (to 246/861) both ed. R. Guest, Leiden-London 1912. For the later period, see *al-Mug̲h̲rib fī ḥulā 'l-Mag̲h̲rib* of the Andalusī Ibn Saʿīd [*q.v.*] (the Egyptian sections ed. Zaky M. Hassan, Cairo 1953), whose work incorporates earlier, now lost chronicles. See also Ibn Tag̲h̲rībirdī, *Nud̲j̲ūm*, Cairo, ii-iii; C.H. Becker, *Beitrage zur Geschichte Ägyptens*; G. 3. The Fāṭimid period 969-1171.

The political and economic situation in Egypt following the death of Kāfūr was so chaotic that the leading citizens of al-Fusṭāṭ took the decision to recognise as their sovereign the Fāṭimid caliph of North Africa, despite his Ismāʿīlī persuasion. Encountering no resistance, the army of the Fāṭimid general D̲j̲awhar [*q.v.*] occupied the Nile Delta in the spring of 358/969; in S̲h̲aʿbān 358/July 969, al-Fusṭāṭ capitulated, in return for a guarantee of security (*amān*) which stipulated the reform of the monetary system, the restoration of public safety—in particular, protection of the pilgrimage routes—the resumption of Holy War against the infidels and toleration of the Sunnī cult (al-Maḳrīzī, *Ittiʿāẓ*, i, 103-6).

To the north-east of al-Fusṭāṭ, D̲j̲awhar founded a garrison town which, after the example of the Fāṭimid residence near al-Ḳayrawān, was called al-Manṣūriyya; it was only in Ramaḍān 362/June 973, when the caliph al-Muʿizz li-dīn Allāh [*q.v.*] had just established it as his headquarters that it was re-named *al-Ḳāhira* [*q.v.*], "the Victorious". In its capacity as "a place of exile" (*dār al-hid̲j̲ra*) of the Prophet's legitimate successor, the town of Cairo was the exclusive property of the Fāṭimid caliph, of his court, his administration and his army; the new al-Azhar mosque founded by D̲j̲awhar was the centre of Ismāʿīlism, while the town of al-Fusṭāṭ, with the old mosque of ʿAmr, remained the citadel of Sunnī orthodoxy.

The majority of the rural population of Egypt was still Christian and Coptic-speaking, Christian clerks (*kuttāb*) occupied the majority of administrative posts; Christian and Jewish officials made a career in the central administration, especially during the reign of the caliph al-ʿAzīz bi'llāh (365-86/975-96 [*q.v.*]). An attempt by the caliph al-Ḥākim bi-amr Allāh (386-411/996-1021 [*q.v.*]) to purge the ranks of the civil service and replace the Christian *kuttāb* with Muslims was doomed to failure.

Throughout his reign, the caliph al-Ḥākim was at pains to put into effect the discriminatory regulations attibuted by Islamic tradition to the caliph ʿUmar I, according to which non-Muslims were required to wear distinctive clothing and signs (belts, black turbans, small crosses, etc.) [see G̲h̲IYĀR]. These measures, the significance of which has been considerably exaggerated by Christian and Sunnī authors, seem to have been effected only in a very liberal manner, judging by the numerous renewals of edicts relating to the subject. Between 398 and 410/1009-19, al-Ḥākim ordered the pillaging and destruction of a number of churches, monasteries and synagogues, evidently with the object of paying his troops (Yaḥyā al-Anṭākī, ed. Cheikho, 204, l. 9 ff., and 231, l. 13) and of restoring mosques which had fallen into ruins (al-Musabbiḥī, quoted by al-Maḳrīzī, *Ittiʿāẓ*, ii, 96, ll. 11 ff.; idem, *K̲h̲iṭaṭ*, ii, 295, ll. 16-20). But this policy was abandoned by al-Ḥākim himself and, under his successors, the Christians regained their former influence (cf. H. Halm, *Der Treuhänder Gottes. Die Edikte des Kalifen al-Ḥākim*, in *Isl.*, lxiii [1986], 11-72).

The Sunnīs were not inconvenienced by the Ismāʿīlī régime, even though the guarantees of the *amān* of D̲j̲awhar were not all observed. In particular, the obligatory introduction of the specifically S̲h̲īʿī formula of the call to prayer [see AD̲H̲ĀN] with the supplementary phrase "Let us go to the best of works" (*ḥayya ʿalā k̲h̲ayr al-ʿamal*), the prohibition of prayers traditionally offered during the nights of Ramaḍān (*tarāwīḥ*), and the Ismāʿīlī method of determining the end of the fast of Ramaḍān by calculation (*ʿadad*) and not by observation (*ruʾya*) of the moon, provoked constant tension between Ismāʿīlīs and Sunnīs. Al-Ḥākim temporarily pursued a policy of reconciliation between the Islamic persuasions, guaranteeing to the Sunnīs, by two edicts of toleration (397/1006 and 399/1009), unrestricted practice of their cultic rituals in accordance with the *amān* of D̲j̲awhar (Idrīs, *ʿUyūn*, vi, 293; Yaḥyā al-Anṭākī, ed. Cheikho, 195; al-Maḳrīzī, *Ittiʿāẓ*, ii, 78).

The Fāṭimids never attempted the forcible imposition of the Ismāʿīlī faith on their subjects, but they preached it systematically in all the provinces of the empire. Alongside every judge (*ḳāḍī*) responsible for the exoteric (*ẓāhir*) sense of the *s̲h̲arīʿa*, there was a missionary (*dāʿī*) who initiated novices in the secrets of the esoteric (*bāṭin*) sense reserved for Ismāʿīlīs alone; the "sessions of wisdom" (*mad̲j̲ālis al-ḥikma*, see MAD̲J̲LIS, ii) were accessible to everyone. However, the success of Ismāʿīlī propaganda seems to have been quite ephemeral; after the fall of the Fāṭimid dynasty, Ismāʿīlism rapidly disappeared.

The claim of the Fāṭimid caliph to universal sovereignty was soon confronted with the reality of the international political situation. Fāṭimid power proved too weak to overthrow the ʿAbbāsid caliphate of Bag̲h̲dād, as it was likewise incapable of maintaining long-term control of North Africa and Sicily. Nevertheless, under the caliphs al-ʿAzīz, al-Ḥākim, al-Ẓāhir (411-27/1021-36) and al-Mustanṣir (427-87/1036-94 [*q.vv.*]) Egypt played the role of a major Mediterranean power which competed successfully with the Byzantine empire on land and at sea, in southern Italy as well as in northern Syria. The Fāṭimids resisted repeated attempts on the part of the Byzantines to recover control of Syria (from 354/965 onward); in 429/1038 a thirty-year treaty was concluded and this was renewed in 440/1048. Although North Africa succeeded, from 443/1051 onward, in withdrawing from Fāṭimid authority in favour of the Zīrids [*q.v.*], Egypt maintained control of the Red Sea. The Holy Cities were under the domination of the dynasty since its inception, being dependent on deliveries of Egyptian corn. Just as in the period of the Eastern Roman Empire the land of the Nile had fed Constantinople, it now fed Mecca and Medina. Furthermore, there were in Upper Egypt major religious endowments (*awḳāf*) in favour of religious institutions of the Holy Cities, and the caliph of Cairo had supplanted his counterpart in Bag̲h̲dād as protector of the Holy Places and as the one responsible for the rites of pilgrimage.

From 439/1047 onward, the Fāṭimids also

dominated the Yemen in support of a dynasty of Ismāʿīlī missionaries, the Ṣulayḥids [*q.v.*], in such a way that they controlled all trade between the Indian Ocean and the Mediterranean via the Red Sea. Egypt thus became the pivot of international commerce. After land-tax (*kharādj*), the revenues derived from customs fees levied on spices and luxury articles emanating from India and the Far East constituted the most important element of the budget of the Fāṭimid state. In addition, Egypt controlled the supply of Sudanese gold and exported raw materials which were in great demand in Europe, such as alum, and products of high quality, for example woolen fabrics (Upper Egypt) and linen (Dimyāṭ, Tinnīs), brocades and items of precious glassware which were subsequently to be found in great quantity in the museums and church-owned treasures of Europe. An eye-witness of the prosperity of Egypt is the Persian Ismāʿīlī missionary (*dāʿī*) Nāṣir-i Khusraw [*q.v.*], who visited Cairo in 439/1047 and has left us a description of the town at the height of its splendour (*Safar-nāma*, ed. Ch. Schefer, Paris 1881, repr. 1970, tr. W.M. Thackston Jr., *Naser-e Khosraw's Book of Travels*, New York 1986).

The dominant position of Egypt in international commerce led to an influx of European traders. As early as 828 the Venetians had bought (or rather stolen) the relics of Saint Mark held in Alexandria. In 386/996, merchants from Amalfi (*al-Malāfiṭa*) maintained a trading-post in the Cairo arsenal (Yaḥyā al-Antākī, ed. Cheikho, 178), and their hospital and their church in Jerusalem are attested from about 1061 onward. From the beginning of the 6th/12th century, the Genoese were present in Alexandria: the *fondaco* of the Pisans in Alexandria is mentioned for the first time in the period of the caliph al-Ẓāfir (544-49/1149-54); in 537/1143, the caliph al-Ḥāfiẓ [*q.v.*] concluded a commercial treaty with the Norman king of Sicily, Roger II.

The precarious stability of the economy of Egypt and the vulnerability of its prosperity was revealed, however, when, from 444/1052 onward and again from 457/1065 onward, the flooding of the Nile failed repeatedly to reach adequate proportions, causing shortages and famine, following which the country was ravaged by epidemics. The ever-growing demands of the armies had exhausted the treasury reserves; poorly paid soldiers roamed the land as highway robbers; in 464/1072, the caliph al-Mustanṣir was besieged by rioters in his abandoned and looted palace in Cairo. The Fāṭimid dynasty was saved by the general Badr al-Djamālī [*q.v.*], a Christian Armenian who was summoned by the caliph from St. John of Acre to Cairo in the winter of 466/1073-4 and entrusted with the re-establishment of order in the land. It was Badr who ensured the security of the capital with the construction in 480/1087 of the new stone fortifications with the three great gates (which still survive) of Bāb Zuwayla to the south and Bāb al-Naṣr and Bāb al-Futūḥ to the north. For almost half a century, from 466 to 515/1074-1121, Badr al-Djamālī (d. 487/1094) and his son and successor al-Afḍal [*q.v.*] governed Egypt with virtually unlimited power, combining the functions of supreme head of the civil administration (*wazīr*) and of commander-in-chief of the armies (*amīr al-djuyūsh*). The two military dictators attracted a large number of Armenian Christians, accompanied by their clergy, who augmented the influence of the Armenian church to the detriment of the Coptic church; new military units composed of Armenians were mobilised. A whole series of reforms relating to the treasury, the monetary system and the administration brought a final phase of stability to the Fāṭimid régime, whose religious aura had long since been extinguished, and gave Egypt a new period of internal peace and economic prosperity. With Badr in control, the revenues of land-tax (*kharādj*) increased from 2,800,000 *dīnārs* in 463/1070-1 to 3,100,000 in 478/1085-6 (al-Makhzūmī, *Minhādj*, quoted by al-Maḳrīzī, *Khiṭaṭ*, ed. Wiet, ii, 68) and, under the government of his son al-Afḍal, they even reached a total of 5,000,000 *dīnārs* (Ibn Muyassar, quoted by al-Maḳrīzī, *loc. cit.*). In all probability, it was the period of Badr al-Djamālī which saw the re-organisation of the provinces of Egypt, a division which has largely subsisted into the modern age. The former districts (*kuwar*, sing. *kūra*), corresponding to the pagarchies of the Byzantine period which, according to al-Ḳuḍāʿī, were 89 in number under the Fāṭimids (al-Maḳrīzī, *Khiṭaṭ*, ed. Wiet, i, 309-11; Maspéro-Wiet, *Matériaux*, 175 f.) were replaced by 23 provinces (*aʿmāl*, sing. *ʿamal*) of much greater size, 9 in Upper Egypt and 14 in the Delta (Abū Ṣāliḥ, ed. and tr. Evetts, *The churches and monasteries of Egypt*, Oxford 1895, 17-19, Arabic text 10-12; Maspéro-Wiet, *Matériaux*, 187 f.; *Tübinger Atlas des vorderen Orients*, map B vii 13 "Ägypten unter den Fatimiden"). According to al-Musabbiḥī (d. 420/1029), quoted by al-Maḳrīzī (*Khiṭaṭ*, ed. Wiet, ii, 309), the villages of Upper Egypt numbered 2,395, and those of the Delta 1,439.

The Saldjūḳid invasion of Syria, from 462/1069-70 onward, and the establishment of Crusader principalities along the Syrian coast and in Palestine (1098/99) deprived Egypt of its Syrian provinces and its natural defensive bulwark. In 526/1132, a religious schism caused the defection of the Ṣulayḥids in the Yemen; from 462/1070 onward (and finally in 473/1081) Mecca was subjected to the control of the Saldjūḳids and recognised the sovereignty of the ʿAbbāsid caliph. The Fāṭimid state was thus confined to the natural frontiers of Egypt and experienced a rapid diminution of its power. Following the assassination of the dictator al-Afḍal on the orders of the caliph al-Āmir (515/1121 [*q.v.*]), the land was rent by internal disorders; ministers, governors and generals competed for power, and at the same time Egypt was the object of the ambitions of its Christian and Muslim neighbours. The Byzantine emperor Manuel negotiated with the Christian king of Jerusalem an agreement allowing for the joint occupation of Egypt, a project which was not however realised; on three occasions, Amalric, King of Jerusalem, intervened in Egypt with a Crusader army to prevent the seizure of the country by the *amīr* of Aleppo Nūr al-Dīn [*q.v.*] (1162, 1164, 1167); during this period, Egypt was nothing more than a Frankish protectorate. But when the King appeared in Egypt for the fourth time, with the object of occupying the land definitively, the Syrians gained the upper hand; in 564/1169 the general Shīrkūh entered Cairo at the head of a Syrian army and appointed himself vizier of the Fāṭimid caliph. After his sudden death, which took place on 22 Djumādā II 564/23 March 1169, his nephew Ṣalāḥ al-Dīn Yūsuf b. Ayyūb [*q.v.*] succeeded him as vizier; it was he who, on 7 Muḥarram 567/10 September 1171, deposed the last Fāṭimid caliph al-ʿĀḍid [*q.v.*], who was then nine years old, and proclaimed the *khuṭba* in the name of the ʿAbbāsid caliph al-Mustaḍīʾ. The Ismāʿīlī call to prayer was abolished, the *madjālis al-ḥikma* suspended, and Sunnism restored throughout the land.

Among the sources of information relating to Egypt in the Fāṭimid period, the most important are the chronicles of the court. Although none of these have

survived in other than fragmentary form, substantial quotations from the works of Ibn Zūlāḳ (d. 387/997), al-Musabbiḥī (d. 420/1029), Ibn Muhad̲h̲d̲h̲ab, al-Rūd̲h̲abārī (born 363/973-4) and al-Baṭāʾiḥī (d. 588/1192) have been preserved in the works of later historians, in particular, in al-Maḳrīzī. The contribution of Christian writers is important: the Arabic chronicle of the Melkite John of Antioch (Yaḥyā al-Anṭākī, d. 458/1065) and the history of the Coptic patriarchs attributed to Sāwīrus (Severus) b. al-Muḳaffaʿ (4th/10th century) and his continuator Michael of Tinnīs (up to 437/1046). The Fāṭimid official al-Ḳuḍāʿī (d. 454/1062) was the first to describe the national geography of Egypt; his *K̲h̲iṭaṭ* were the model and the principal source of material for the work of the same title by al-Maḳrīzī. The manual of administration genre is represented for the first time by the *Kitāb al-Minhād̲j̲ fī ʿilm al-k̲h̲arād̲j̲* of al-Mak̲h̲zūmī (d. 585/1189); although surviving only in fragmentary form, the *Minhād̲j̲* is an invaluable source of information concerning the administration, agriculture and fiscal system of Egypt in the 6th/12th century.

4. The Ayyūbid period 1171-1250.

Under the reign of Ṣalāḥ al-Dīn (Saladin), Damascus was the first capital of the Ayyūbid empire. The Fāṭimid palatine city of Cairo was abandoned, and when the sultan visited Cairo, he resided in the citadel constructed after 579/1183-4. After the death of Ṣalāḥ al-Dīn (589/1193), Egypt was governed by a branch of the Ayyūbid family. The different Ayyūbid principalities in Mesopotamia, Syria and Egypt remained only by virtue of family ties, and the Ayyūbid empire constituted a kind of "dynastic confederation" (Gottschalk) or "semi-feudal family federation" (Cahen, *Ayyūbides*).

The most radical innovation effected by Ṣalāḥ al-Dīn was the introduction of the system of the *iḳṭāʿ* [*q.v.*] or military fief employed in Syria since the Sald̲j̲ūḳ period. In 572/1176, the sultan ordered a new *rōk* (a term probably of demotic origin: *ruk̲h̲* "redistribution of land"), a kind of cadastral revision, of which the object was to measure the surface area of all the lands in Egypt, to assess their value in terms of *k̲h̲arād̲j̲* and to distribute them to officers and soldiers as *iḳṭāʿ*s, as a substitute for salaries. The system of *ḳabāla* of the Fāṭimid period was totally abolished: the civilian tax farmer (*muḳabbil*), paying to the treasury a proportion of the *k̲h̲arād̲j̲* levied on his concession, was replaced by the military *muḳṭaʿ*, who retained the entire *k̲h̲arād̲j̲* of his *iḳṭāʿ*, as compensation for his military service and for the equipment that he provided. The *rōk* of Ṣalāḥ al-Dīn was put into effect in 577/1181 (Halm, *Ägypten* i, 14 ff.); according to the accounts (*Mutad̲j̲addidāt*) of his vizier, al-Ḳāḍī al-Fāḍil [*q.v.*], the value in *k̲h̲arād̲j̲* of land ceded as *iḳṭāʿ* in that year amounted to 3,670,500 *dīnārs* (al-Maḳrīzī, *K̲h̲iṭaṭ*, ed. Wiet, ii, 17 ed. Būlāḳ i, 82).

The division of the provinces of Egypt established by the Fāṭimids was retained by the Ayyūbids; the manual of administration of Ibn Mammātī provides a complete list of the provinces and villages of the country (*Ḳawānīn*, 84-200). In 585/1189 al-Ḳāḍī al-Fāḍil drew up a list of the respective fiscal yield of the provinces of Egypt, the total amounting to 4,653,019 *dīnārs* (al-Maḳrīzī, *K̲h̲iṭaṭ*, ed. Wiet, ii, 17-19, ed. Būlāḳ, i, 87; Halm, *Ägypten* i, 33). Since the revenues of *k̲h̲arād̲j̲* were now removed from the direct control of the treasury, the central power was obliged to reserve a proportion of the territories of *iḳṭāʿ* which was regarded as crown property (*al-k̲h̲āṣṣ al-malikī*). Al-Ḳāḍī al-Fāḍil listed the revenues of these lands in the two last years of the reign of Ṣalāḥ al-Dīn (587-9/1191-3); they amounted to 354,450 and 354,444 *dīnārs* respectively (al-Maḳrīzī, *K̲h̲iṭaṭ*, ed. Wiet, ii, 19 f.).

The army of cavalry mobilised by Ṣalāḥ al-Dīn was composed of free mercenaries who were, for the most part, of Kurdish origin like the sultan himself. The Sultan al-Malik al-Ṣāliḥ began purchasing young Turkish slaves who were quartered in barracks on the island of Rawḍa to undergo military training and to serve as élite troops. These were the military slaves (*mamālīk*, sing *mamlūk*, "property") who, in 650/1252, put an end to the dynasty of the Ayyūbid sultans [see MAMLŪKS and 5. below].

Like the Fāṭimids, the Ayyūbids controlled commerce between the Indian Ocean and the Mediterranean. However, the presence of the Crusaders in Palestine and Transjordan threatened the naval routes of the Red Sea as well as the routes of pilgrimage. This led to the prosperity of the anchorage of ʿAyd̲h̲āb [*q.v.*] on the coast of the Red Sea (opposite D̲j̲udda), which was linked to Egypt by a track crossing the desert and ending, in the Nile Valley, first at Aswān and later at Ḳūṣ. In 578/1183, the Andalusian pilgrim Ibn D̲j̲ubayr used this much-frequented route and left a detailed description (*Riḥla*, ed. Wright, 66-9, tr. Gaudefroy-Demombynes, 75-8).

Commercial relations between Egypt and the West increased still further in the Ayyūbid period. Ṣalāḥ al-Dīn conceded to the Venetian Doge Sebastiano Zani (1172-8) the right to open a *fondaco* in Alexandria; in 1177, he concluded a commercial treaty with the republic of Genoa which was henceforward represented in Alexandria by a consul; and in 1207, al-Malik al-ʿĀdil negotiated a treaty with the city of Pisa. But in 615-18/1218-21 the three Italian republics

supported the Crusade of Damietta which had the object of conquering Egypt and imposing direct control on trade between the Red Sea and the Mediterranean; the failure of the enterprise put an end to these projects.

One of the most important sources of the period, the *Mutadjaddidāt* ("News") of al-Ḳāḍī al-Fāḍil (d. 596/1200), survives only in the form of quotations in the *Khiṭaṭ* of al-Maḳrīzī (which are thus our principal source). Besides the above-mentioned account by Ibn Djubayr, there exists a description of Egypt written by the Baghdādī doctor ʿAbd al-Laṭīf (*ca.* 1200). The manual of administration genre is represented by the *Ḳawānīn al-dawāwīn* of the official of Coptic origin Ibn Mammātī (d. 606/1209) who dedicated his book to the Sultan al-Malik al-ʿAzīz (589-96/1193-8). The *Taʾrīkh al-Fayyūm* of al-Nābulusī gives us a complete list of the villages of this province with a detailed account of their crops and the duties levied on them in 641/1243-4.

5. The Mamlūk period 1250-1517.

Ingeniously, the 9th/15th century Egyptian jurist and historian Abū Ḥāmid al-Ḳudsī (d. 888/1483) summarises the status of Egypt within the contemporary world as it had evolved in the by then two centuries of Mamlūk rule: Egypt is the "heartland" (*bayḍa*) of Islam and the legitimate "Seat of the imāmate" (*al-Faḍāʾil al-bāhira fī maḥāsin Miṣr wa 'l-Ḳāhira*, Cairo 1969, 80, 185). In this brief and rather casual statement the author implicitly summarises three important developments in the history of the country that are all to be connected with the establishment of Mamlūk sway in the mid-7th/13th century.

(1) Egypt rose to become, at the expense of Syria, the unsatisfied hegemonial power in the Near East. The gradual shift of gravity from Syria to Egypt, discernible already in the changing territorial designs of the Crusaders from Jerusalem to Damietta, culminated in the marginalisation of Syria in the aftermath of the Mongol invasion to the Middle East in 656-8/1258-60. Northern Syria became the fortified fringe of the Cairo-based new polity. The remaining Ayyūbid domains were either subjugated or assimilated to Mamlūk rule. The Syrian Desert now became a border almost in the modern sense of the word, separating most effectively the world that had hitherto been closely connected: Irāḳ and the Levant. In Arabia, Egypt resumed, in the two-and-a-half centuries of Mamlūk rule, its traditional protectorate over the Holy Cities. After century-long immobility an active expansionist Egyptian policy was resumed both to the west, against the Bedouins of Barḳa, and especially to the south, into Nubia.

(2) Egypt established itself, much more than Syria with more diverse cultural élites, as the bulwark of orthodox cultural and religious conservatism. The acute consciousness of having been spared the catastrophe of Mongol pagan domination that was reflected in numerous popular sayings and tales, nurtured the conviction that it was Egypt's hallowed rule and obligation to preserve the bases of Sunnī public order as well as the traditional religious culture in its Arab garb. Anti-sectarian sentiment and moral rigorism, visible in a rich anti-*bidaʿ* literature, stood in sharp contrast to the continuing exuberant frolic, levity and pageantry of popular culture of both rural and urban Egypt. A keen sense of history, and of historical responsibility, manifested itself, during the Mamlūk era, in an unprecedented plethora of chronicles and other works of history. This spirit was essentially defensive: the system so benignly saved from destruction by the unbelievers was to be maintained and buttressed, not to be reformed or even questioned. The challenges and creative impulses which Mongol and post-Mongol turmoil brought to the artistic, literary and scholarly worlds of Eastern (Iranian, Central Asian, Anatolian) Islam never affected or infecundated the land of Egypt.

The Mamlūk period saw the transfer of the defunct caliphate from the ruins of Baghdād to Cairo. This "shadow-caliphate" was to assume a double nature. It represented the retrograde orientation of the Mamlūk state and society, an Arab-Islamic Byzantium, as has most felicitously been said. At the same time, it served to legitimise the novel and most unorthodox ruling system of the Mamlūks. If the Saldjūḳs and Ayyūbids had had, in the first phases of their domination, their problems in justifying their accession to power, this problem was nevertheless far more pressing for the Mamlūks, who came as nobodies from the Eurasian steppes via the slave markets of Syria, Cairo and Alexandria into the highest echelons of government. They did not obtain this political ascendency as members of a homogeneous nomadic clan or confederation led by valiant or even charismatic leaders, as had been the case with Ṭoghrïl Beg or Ṣalāḥ al-Dīn al-Ayyūbī [*q.vv.*]. They came rather to the Middle East as individuals with the social stigma of slavedom and a pagan birth.

After the Mamlūks had established their domination, they put forward these tokens of their original social inferiority as signs of military nobility; their pagan Turkish names were preserved as symbols of their élite status and also as a means to demonstrate the social apartheid between themselves and the autochtonous Arab-speaking Egyptian populace. For the surrounding world, however, at least in the critical first half-century of Mamlūk rule between 1250 and 1300, there remained a glaring deficit of conventional, i.e. Islamic, legitimisation for government. The careful imitation of the court rituals and offices of the preceding Ayyūbid (and Saldjūḳ) dynasties, the adoption of the regnal (*Malik*) titles by the Mamlūk sultans, and the demonstrative take-over of the tradi-

tional *nobile officium* of warden of the Holy Sites in the Ḥidjāz, were designed to reduce this deficit of standing among fellow Muslim rulers. The re-instalment of a fugitive ʿAbbāsid scion as caliph under the tutelage and increasingly arbitrary disposition of the Mamlūk sultan was even more effective. By this action, legitimacy was acquired by the Mamlūk sultan and at the same time demonstrated to be of little relevance in the categories of effective power. The most important means, though, towards gaining and securing recognition against all the prejudice and feelings of superiority among the established Islamic dynasties of the time was the stupendous Mamlūk success on the battlefield. Bravely and, as contemporary authors noted with awe and admiration, unselfishly these alien barbarians stood up to protect the defenseless *raʿiyya* of Egypt and Syria against the pagan foe. Even later authors such as Ibn Khaldūn (d. 808/1406 [*q.v.*]) invoke the unique blend of "nomadic virtues and the firm resolve of true Muslim believers" among the Mamlūks. They spared the Egyptians the tragic fate which fellow-Muslims in so many other countries had suffered under the Mongol yoke. The capacity of the Mamlūks for extinguishing the last traces of the Frankish-Christian presence in Syria and Palestine was another significant source of respect. This achievement enhanced their claim to be full heirs to their Zangid and Ayyūbid predecessors who had rekindled the spirit of *djihād* against the Crusading invaders to the region.

Old as the system of Mamlūks, military slaves, was in Islam [see GHULĀM; MAMLŪK], it rose to respectable quantitative significance under the last Egyptian Ayyūbid al-Malik al-Ṣāliḥ Ayyūb. He recruited Ḳïpčaḳ [*q.v.*] slaves from the lands to the north and east of the Black Sea in large numbers, garrisoned them on the well-protected island of al-Rawḍa in the Nile, where he had erected his new palace fortress, and thus created for himself a loyal body of troops—loyal to him personally and not to the Ayyūbid dynasty at large that was divided into rival factions ever since Ṣalāḥ al-Dīn's death.

In 648/1250 the Mamlūks, in an unexpected and certainly also largely unpremeditated development, found themselves holders of supreme political responsibility in Egypt. One event had precipitated this process. It was the hardy Mamlūk praetorians of al-Malik al-Ṣāliḥ who annihilated the advance guard of St. Louis, led by Robert of Artois, in the narrow streets of al-Manṣūra in spring 648/1250, thus turning the initial success of the Christian invaders into defeat. This first striking Mamlūk military triumph happened right in the critical interval between the death of al-Ṣāliḥ, kept secret from friend and foe alike, and the desperately awaited arrival on the battlefield in the Nile Delta of his son and prospective political heir al-Malik al-Muʿaẓẓam Tūrānshāh from the remote Ayyūbid province of Ḥiṣn Kayfā on the Tigris. There ensued Tūrānshāh's victory over the weakened Christian army, the capturing of the French king and, on 2 May 1250, the decisive incident leading to the establishment of Mamlūk rule over Egypt: Sultan Tūrānshāh, who had brought with him his own entourage from Ḥiṣn Kayfā to the Nile, systematically estranged the Mamlūk grandees of his late father who had just demonstrated their superb martial aptitude. Pre-empting a similar fate to themselves, a few leading Mamlūk officers decided to kill the Ayyūbid ruler under the eyes of the Frankish enemy.

From this moment on, the Mamlūks were no longer solely servants to a Muslim ruler with an undisputed juridical standing, but rather they usurped the sovereignty in their own right. The recruiting modalities of the new ruling caste were to remain the same: Mamlūk sultans and *amīrs* imported, trained, and affranchised (*mamlūk*) military slaves as had been the case under al-Malik al-Ṣāliḥ. From Mamlūk ranks alone, sultans and the key military and also administrative personnel were supposed to be chosen. Tensions were inevitable (and proved concomitant to Mamlūk history at least to the early 9th/15th century) between, first, the dynastic tradition inherited from the Ayyūbids and copied by successful Mamlūk sultans, and second, the intrinsically Mamlūk principles of the ever-renewed selection of the most able candidates for high and highest offices from genuine Mamlūks, i.e. first generation aliens who had been born pagan, then been brought to Egypt, trained in the chivalrous arts, Islamised, and finally released into the exclusivity of a Mamlūk career.

Mamlūk sway in its earliest phase immediately after the killing of Tūrānshāh was more than precarious. No-one proved prepared, nor was really willing, to take over the reins of government. As an interim ruler, homage as sultan was paid to al-Ṣāliḥ's energetic and pragmatic widow Shadjar al-Durr [*q.v.*]. Under the pressure of the Syrian Ayyūbids who felt summoned to liberate Egypt—their own domain, as they were prone to see it—from the hands of these slaves, and of a woman into the bargain, Shadjar al-Durr formally gave way to her *atābak* and new husband, Aybak al-Turkmānī, one of al-Ṣāliḥ's leading Mamlūk generals. Most historians of late mediaeval Egypt regard Aybak as the first Mamlūk sultan of the country. With him the *dawla turkiyya* is claimed to have begun. Yet Mamlūk control remained extremely fragile. Only by stating that Egypt was the proper domain of the ʿAbbāsid caliph al-Mustaʿṣim bi'llāh could Aybak bring his own army to pay fealty to him. Soon Aybak, at least *pro forma*, was even forced to step aside and to give way to an Ayyūbid figurehead as sultan. Thus the continuing general demand, both inside and outside of Egypt, for a fully legitimised government after the sudden disappearance of the house of Ayyūb from the country, was satisfied.

The first decade of Mamlūk rule over Egypt is a story of inter-factional strife and of unrelenting, if in the long run futile, attempts on the part of al-Malik al-Nāṣir Yūsuf II of Aleppo (and by now also of Damascus) to conquer Egypt. The leader of the mighty Baḥriyya regiment, al-Fāris Aḳṭāy, whose men had contracted an ominous reputation as a brutal marauding gang of soldiers assailing the population of Cairo, was killed, at Aybak's instigation, by the Khwārazm Mamlūk Ḳuṭuz. Aḳṭāy's comrades were either caught or they managed to flee the country, among them Baybars al-Bunduḳdārī, the famous future al-Malik al-Ẓāhir and real founder of the Mamlūk polity [see BAYBARS I]. Changing sides and protectors (Damascus, Karak) several times, Baybars and his men proved a wily, courageous and unscrupulous free-lance contingent, reminiscent of the equally irregular Khwārazmian and Kurdish contingents filling the chronicles of the period with their actions. Baybars' support was feared and coveted at the same time by the diverse Ayyūbid rulers of Syria.

The Mongol advance to ʿIrāḳ and the Fertile Crescent, the fall of Baghdād and of the ʿAbbāsid caliphate, and the imminent destruction of Syria, however, facilitated the closing of ranks between the rival Mamlūk groups. Ḳuṭuz [*q.v.*], the energetic and uncompromising new Mamlūk sultan in Cairo, accepted Baybars and his companions with their legendary repute of military prowess back into the

Egyptian Mamlūk army. The Mongol envoys, demanding Ḳuṭuz's surrender, were executed. In the famous battle of ʿAyn D̲j̲ālūt (25 Ramaḍān 658/3 September 1260 [*q.v.*]) in Palestine, the united Mamlūk army, led by Ḳuṭuz and Baybars, won the day against the Mongols, commanded by Hülägü's general Ketbog̲h̲a Noyon. As a result, Damascus was liberated where already a Mongol viceroy had been installed. The Mongol invasion of Egypt was once and for all averted.

Yet more than the Mamlūk exploits in the streets of al-Manṣūra, ten years earlier, the victory of ʿAyn D̲j̲ālūt became the symbol of Mamlūk strength, resilience, and sacrificial spirit. Even a monument was erected on the site of the successful battle to commemorate this historic event. Even though this victory meant only a first respite for the new lords of Egypt and Syria—many more Mongol attacks on Syria were to follow until 713/1313—the psychological effect of this triumph was enormous. The familiarity of the Mamlūks' cavalry with the fighting techniques of the Mongols certainly had influenced the outcome of this first Mamlūk-Mongol showdown. Contemporary chroniclers such as the Syrian Abū S̲h̲āma clearly saw the connection: "It is verily remarkable that the Tatars were broken and destroyed by their own kinsmen, the Turks" (*al-D̲h̲ayl ʿalā 'l-rawḍatayn*, [2]Beirut 1974, 208). Mamlūk-Mongol relations were, for this very reason, bound to be contradictory on the emotional level. The Mongol arch-enemy was at the same time a model. The Mongol military success was to be a constant source of inspiration for the early Mamlūks. Mongol habits and even institutions (courtly ceremonial; application of the *yāsa* for inter-Mamlūk litigation in lieu of the *s̲h̲arīʿa*) were emulated. In the Egyptian perspective, this split attitude is lucidly reflected. A historian like Ibn Aybak al-Dawādārī (died after 736/1336), in his volume on the Ayyūbids and on Čing̲h̲iz K̲h̲ān, reports thrilling legends on the ethonogenesis of the Mongols and of the Turks, stories that had found their way from East and Central Asia through northwestern Persia to Egypt. Yet at the same time, in the context of these traditions, he makes a point of stressing, both symbolically and in the narrative itself, that the grand scheme of the Mongol conqueror for universal rule found its limits in the west: Egypt and the Mag̲h̲rib were destined not to succumb to the otherwise indomitable Mongol conquering armies.

Ḳuṭuz could not harvest the fruits of his secular victory. Baybars, who saw in him last but not least the murderer of Aḳṭāy, the former chief of his own regiment, arranged—in collusion with a few other malcontents, among them Ḳuṭuz's sword-bearer—the assassination of the sultan, perhaps, again, in order to avoid similar action against himself. The exact circumstances of this dastardly deed cannot easily be reconstructed. The victorious Baybars did everything to obliterate its traces, including—in a very literal sense—even the grave of Ḳuṭuz. Baybars was now given homage as the new sultan, although initially, as it seems, only in partnership with the mighty *amīr* al-Fāris Aḳṭāy al-Mustaʿrib, who had paved the way for Baybars to receive the *bayʿa* of the assembled *amīrs*. For the most part, they were deeply estranged by the brutal killing of the hero of ʿAyn D̲j̲ālūt and most resentful towards the murderer. In this context, the argument proferred by the 8th/14th century historian S̲h̲āfiʿ b. ʿAlī is interesting. It says that in the absence of a son of Ḳuṭuz, Baybars was to succeed in the throne by virtue of his (allegedly) being the regicide, because this was "the tradition of the Turks (*ʿādat al-Turk*)" (*Ḥusn al-manāḳib al-sirriyya al-muntazaʿa min al-sīra al-Ẓāhiriyya*, al-Riyāḍ 1976, 32, 155). Also, on the occasion of the murder of Sultan al-As̲h̲raf K̲h̲alīl in 693/1293 this principle is alluded by contemporary observers.

It was during Baybars' sultanate from 658/1260 to 676/1277 that the Mamlūk polity began to assert itself. The institutional foundations of the new centralised state were laid. The insecure frontiers to the north-east were gradually strengthened. The Frankish-Christian dominions in the Syrian and Palestinian coastland shrank under the relentless military as well as diplomatic pressure of the sultan. The internal opposition to Baybars, both by Mamlūk rivals (who fill the chronicles on the occasion of their detention, release from jail, or execution) and the Ayyūbid princes in Syria, had to be reconciled with the new order or to be suppressed by force. Whereas al-Malik al-Mug̲h̲īt̲h̲ of Karak, Baybars' former host, was deprived of his realm and life by cunning and treachery, much to the wrath of contemporary witnesses, the Ayyūbids of Ḥimṣ died out and their principality fell to the Mamlūks. Ḥamāt remained a special case. Ever since the inception of the Ayyūbid confederacy, the rulers of Ḥamāt had sided with their mighty cousins on the Nile, often against the interests of their immediate neighbours in Damascus or Aleppo. This loyalty to Egypt was also conferred upon the Mamlūks. At ʿAyn D̲j̲ālūt and in the numerous later encounters between Mamlūks and Mongols, the contingent of Ḥamāt played an important and consistently loyal role. The razzias into the land of Lesser Armenia (*bilād Sīs* in the Arabic sources) in the second half of the 7th/13th century were largely the responsibility of the Ayyūbids of Ḥamāt, who contrived to secure their semi-independence well into the 8th/14th century. One of the last Ayyūbids of Ḥamāt was the famed historian and geographer Abu 'l-Fidāʾ (d. 732/1331 [*q.v.*]); he even bore the prestigious title of sultan as proof of the standing and respect which the Egyptian sultan paid to his house. Shortly after Abu 'l-Fidāʾ's death, Ḥamāt lost its independence and became a province under the control of a Mamlūk governor.

The installation of an ʿAbbāsid refugee as caliph in Cairo in 659/1261 has already been mentioned (on this subject, see now the comprehensive article by P.M. Holt, *Some observations on the ʿAbbāsid caliphate of Cairo*, in *BSOAS*, xlvii [1984], 501-7). The first "shadow" caliph with the throne name of al-Mustanṣir proved insufficiently susceptible to Baybars' hegemonial claims. After a rule of only a few weeks he was despatched, together with some other princes whose kingdoms had been conquered by the Mongols, to ʿIrāḳ in order to recover the lands of his ancestors. He perished in an encounter with a Mongol army even before he could reach Bag̲h̲dād. When a second ʿAbbāsid claimant turned up and was installed as the caliph al-Ḥākim bi-amr Allāh, Baybars made sure that his own superior status as sultan was not imperilled. Until the end of the Mamlūk sultanate in 923/1517, al-Ḥākim's descendants were to reign as figureheads at the discretion of the Mamlūk ruler. Their public functions were strictly ceremonial, their political power nil. The caliph had hardly more prestige than the four supreme *ḳāḍīs* of the orthodox *mad̲h̲āhib*, as contemporary critics remarked. He accompanied the sultan during his campaigns as pawn and legitimator alike. From 700/1300 onwards the caliphs publicly legitimated the newly-elected sultan by their presence and by a diploma of investiture. They stood on slippery ground. They could easily be

dragged into inter-Mamlūk controversies about the apt candidate for the vacant sultanate. As symbols of the Islamic *umma* they also proved indispensable allies to the sultan in his dealings with foreign powers. The continuing prestige of their lofty office enhanced also the repute of their Egyptian hosts and protectors. Muslim rulers in India, South Arabia and Upper Mesopotamia solicited their own official investiture by the caliphs, as if one still wrote in the year 1220 when the ʿAbbāsids had managed to re-assert their political independence in ʿIrāḳ. Also, in Baybars' strategic alliance with the Khān Berke [*q.v.*] of the Golden Horde against the Īl-Khāns of Persia in 661/1263, the recently-installed caliph al-Ḥākim played a crucial role.

Whereas in the early phase of Mamlūk history, the sultan continued to perform the *bayʿa* [*q.v.*] to the caliph as head of the Muslim community, this established ritual of pre-Mamlūk times was abandoned by the mid-8th/14th century. From now on it was the caliph who paid homage to the Mamlūk sovereign. Political theorists of the period such as Ibn Djamāʿa (d. 733/1333 [*q.v.*]) (but also jurists beyond the Egyptian and Syrian borders) accepted the absorption of the functions and prerogatives of the caliph by the sultanate as a necessary given fact, for it was the sultan who had proven himself the sole and effective vanguard and defender of the *umma* against its deadly enemies.

In 815/1412 a shadow caliph, al-Mustaʿīn, was even to assume the sultanate. The political context of this episode of a few months was exceptional. Barḳūḳ's son and successor, al-Malik al-Nāṣir Faradj, had been deposed. The succession of the caliph to the office of sultan (according to the rules of the Mamlūk polity, a non-Mamlūk, "non-Turk", was barred from this office!) may have appeared as an acceptable makeshift solution in an otherwise deadlocked situation: al-Mustaʿīn was not entangled in the deep factional strife and ethnic rivalries (Turks/Ḳïpčaḳs *vs.* Circassians/Abkhāz) among the Mamlūk oligarchs of these days in the early 9th/15th century. Once, however, the strong man—in this case al-Muʾayyad Shaykh (815-24/1412-21 [*q.v.*])—had secured his leadership among the grandees, the sultan al-Mustaʿīn was instantaneously removed. He even lost ignominiously the office of caliph; it was granted to his brother. By this time, the dividing lines between sultanate and caliphate had long since been blurred in favour of the sultanate. When the Ottomans conquered Cairo in 923/1517, they took with them the last ʿAbbāsid caliph to Istanbul, where his traces were lost. The merger of the functions of *imām*-caliph and sultan both in political practice and theory that can be observed in Mamlūk times may well be seen as a model for the formation of the idea (and ideal) of the Ottoman sultan-caliph as it emerges at the latest by the 18th century.

The main stage of Mamlūk policy in the second half of the 7th/13th century was Syria. Egypt remained in the quiet shadow of the violent events that characterised the history of the Middle East between the Mongols' arrival in the region and the final pacification of Syria after the extinction of the last Crusaders in the Levant and the conclusion of a first treaty between Mamlūks and Mongols in 723/1323. Syria was downgraded to serve as Egypt's *glacis* and dependent territory.

This tranquility, as well as the shrinking menace from the outside, made it possible for the first Mamlūk rulers to consolidate their régime in Egypt. Reminding us of Hārūn al-Rashīd, Baybars is also credited with *incognito* nocturnal walks through the streets of his capital when the world believed him to be campaigning in Syria; it was his aim to remain judicially informed about malcontent groups and their concerns and to check the efficacy of his political measures. The frontiers of Egypt were gradually pushed west and south. When the unfortunate Crusader king Louis IX sailed to Tunis in 668-9/1270 and the local Ḥafṣid ruler asked for help from the Mamlūks, initial preparations were made to establish support lines for an Egyptian army marching westward. In the Nubian kingdom [see NŪBA], interdynastic troubles gave Baybars a chance to intervene and to subjugate the lands at the second cataract of the Nile to vassal status. From now on, one reads in the chronicles of the time the proud formula of the Mamlūk realm as stretching from the Euphrates (the common border with the Īl-Khānate) to Dunḳula (Dongola).

To forestall any repetition of the twice-successful Frankish invasion of Egypt from the north by the sea and the river Nile, the harbour of Damietta was blocked and the control over the *thughūr* at the Mediterranean coast, notably the important trading centre of Alexandria, increased. The Mamlūk capital was adorned with the spoils of the successful campaigns in the east: the wood and marble of the citadel of Yāfā (captured by the Mamlūks in 666/1268) was used in Baybars' own splendid mosque in the quarter of al-Ḥusayniyya. And after ʿAkkā, the seat of the Kingdom of Jerusalem, had finally been captured by the Mamlūks under al-Ashraf Khalīl, the son of Baybars' *de facto* successor al-Manṣūr Ḳalāwūn, in 690/1291, the ornate Gothic portal of the cathedral of the city was carried as a trophy to the heart of Cairo, where it was integrated into the *madrasa* of Khalīl's successors al-ʿĀdil Kitbughā and al-Nāṣir Muḥammad b, Ḳalāwūn.

After Baybars' death in 676/1277, his successful policy was continued without any significant rupture. Sultan Ḳalāwūn (678-89/1279-90) [*q.v.*] especially—who thwarted the hopes of Baybars' sons to inherit the sultanate—helped to consolidate the Mamlūk political and military system. During his energetic rule important changes took place. He was the last Ṣāliḥī ruler, i.e. the last sultan to have served the Ayyūbids. His successors only knew the Mamlūk ruling system as a self-perpetuating vehicle. On the other hand, he was the first to import Circassian Mamlūks; they soon—even before the brief sultanate of the Circassian Baybars II Djāshnikīr [*q.v.*] in 708-9/1309-10—claimed their share of the key positions in army and state.

Ḳalāwūn and his son al-Ashraf Khalīl (689-93/1290-3) took the last fortresses of the crusaders, Tripoli and ʿAkkā. Also, on the frontiers facing the shrinking kingdom of Cicilian Armenia and facing the Īl-Khānid empire on the Euphrates, further advances were made. In the army and in the administration the Mamlūk element was vigorously and systematically strengthened to the detriment of the traditional élites. The *ḥalḳa* [*q.v.*], e.g., a non-Mamlūk socio-military unit that had constituted the most respected part of Ṣalāḥ al-Dīn al-Ayyūbī's army, began to lose its privileges and gradually deteriorated. It was composed of numerous subgroups, such as the offspring of Mamlūk officers (*awlād al-nās*), of free Turcoman and Mongol immigrants (*wāfidiyya*), of Bedouin chieftains of the deserts along the Nile delta and in Syria (whose loyalty and logistic support was vital for the communications within the empire), of eunuchs and even of Ayyūbid princes and meritorious civilians for whom

the lucrative membership in the *ḥalḳa* was little more than a sinecure. Under Ḳalāwūn, offices that had been traditionally held by civilians (like the vizierate) were for the first time (sometimes tentatively, sometimes definitively) entrusted to officers. The *mukalwat*, the bearer of the *kal(l)awta*, the typical Mamlūk headgear, took over the functions of the *mutaʿammim* "turban bearer", the civil (or religious) official, as contemporary observers metonymically described this momentous change. Otherwise, Ḳalāwūn took his duties as an Islamic ruler very seriously. His reign saw the persecution of Christians, but also the erection of his famous hospital, *al-bīmāristān al-manṣūrī*, on the ruins of one of the Fāṭimid palaces right in the centre of Cairo.

Like Baybars and so many of his successors in the sultanate also, Ḳalāwūn had to face a rebellion of the strong man of Damascus upon his accession to power. Yet whereas in early Mamlūk history such insubordination of the Syrian governor was also designed to achieve the restitution of Syria as a separate polity, this was decidedly different in later years. The unity of the Mamlūk state was no longer questioned. In the 8th/14th and 9th/15th centuries successful Syrian insurgents coveted the sultanate of Cairo for themselves. Al-Muʾayyad S̲h̲ayk̲h̲ is the most famous example. It was only under the Ottoman successors to the Mamlūks that Syria re-emerged as a separate territorial unit.

The decade following the assassination of al-As̲h̲raf K̲h̲alīl by the ambitious (and cultured) *amīr* Baydarā in the hunting grounds of D̲j̲īza in winter 693/1293 ushered in a period of unrest and peril for the young Mamlūk state. The conversion of the Īl-K̲h̲ān G̲h̲āzān K̲h̲ān [*q.v.*] to Islam (694/1295) increased rather than reduced the pressure by the Mongols on the Mamlūk frontier. New justifications for an assault on the old enemy, now consistent with the *s̲h̲arīʿa*, were sought and found. In 699/1299-1300 Syria was invaded and Damascus taken by G̲h̲āzān's forces. The defection of the Mamlūk governor of Damascus to the Mongols had paved their way to this triumph. Yet the Mongol hold on Syria proved untenable. After several battles stretching into the year 702/1303, they finally gave up their intentions.

Also, inside the Mamlūk domains there was sedition and unrest in this critical period, much of it of a socio-religious nature. After Baybars, upon his accession in 658/1260, had faced urban riots in Cairo by people of inferior social status (peddlars, pages and negroes) who had shouted the name of ʿAlī, the scene now moved to Upper Egypt. In 697/1297-8 a Fāṭimid-Ismāʿīlī contender rebelled, for a last time, in Edfu against the government in Cairo. He had the backing of the unruly Bedouins of the region, who were enjoying more and more freedom of action as a consequence of the gradual "méditerranéisation" (J.-Cl. Garcin) of Egypt, i.e. the abandonment of the old trade route Ḳūṣ-ʿAyd̲h̲āb, the demise of the river port of al-Fusṭāṭ, and the ensuing provincialisation of central and southern Egypt. At the same period, around the turn of the 8th/14th century, radical S̲h̲īʿis defied Mamlūk authority in Mount Lebanon. Only in 699-70/1271 had the last Syrian fortresses of the once indomitable Assassins been taken by Baybars.

Against such heretics, the Mamlūk religious policies were clear and unequivocal. Both the Mamlūk governing caste, and the religious leaders whom the Mamlūk authorities tried to canvass as civil and native spokesmen for their own designs, declared the battle against the *rawāfiḍ* the prime duty of all those responsible in the state—*umarāʾ* and *ʿulamāʾ*—once the external menace exercised by Christian and Mongol infidels had been contained. The historian al-Maḳrīzī (d. 845/1442 [*q.v.*]) proudly declares that in his own days all vestiges of the S̲h̲īʿa had been effaced from the Egyptian lands. The public execution of the Imāmī theologian Ibn Makkī al-ʿĀmilī, the "first martyr" of the Twelver S̲h̲īʿa, in Damascus in 786/1384 at Sultan Barḳūḳ's order, attests to this uncompromising attitude. Nevertheless, the antisectarian Mamlūk policy was not free from contradictions. The pugnacious and upright Ḥanbalī scholar Ibn Taymiyya (d. 728/1328 [*q.v.*]), e.g., was at the same time appreciated as a popular tribune against the temptations of heresy and persecuted because of his diatribes against the corrupt and timid religious establishment in Egypt and Syria. Ibn Taymiyya's attacks were in considerable measure directed against the ubiquitous illicit popular religious practices and the pervasive Ṣūfī spirit to which the Mamlūk rulers of the country proved also susceptible. He contemptuously degraded the mystics as "but a class of lazy people whose lives were spent in idleness but rewarded with generous monthly salaries from *waḳfs*" (Leonor Fernandes, *The evolution of a Ṣūfī institution in Mamlūk Egypt: the Khānqāh*, Berlin 1988, 98). The veneration of holy men (*muʿtaḳadūn*) as well as the lavish support granted to the nascent Ṣūfī *k̲h̲ānaḳāhs* were characteristic of the nonconformist approach the Mamlūks tended to take for themselves towards religion, especially in the first years of Mamlūk history. Vestiges of the shamanistic tradition in which they had grown up as children before their arrival in Egypt, and perhaps also their personal uprootedness in a remote and foreign country, may well have prompted their attachment to strong religious personalities, particularly if these came from the "old country", i.e. the Turkish-speaking lands to the north. Baybars' scandalously uncritical loyalty to the criminal *s̲h̲ayk̲h̲* K̲h̲aḍir al-Mihrānī has puzzled contemporary witnesses and modern historians alike.

The period of crisis after the premature death of al-As̲h̲raf K̲h̲alīl also saw the temporary institutionalisation of the dynastic principle of succession to the sultanate. Al-As̲h̲raf K̲h̲alīl was followed on the throne by his young brother al-Malik al-Nāṣir Muḥammad, born in 684/1285. After the bleak and brief sultanates of al-ʿĀdil Kitbug̲h̲ā (during his rule a dramatic famine struck Egypt with all the concomitant hardship and popular discontent) and al-Manṣūr Lād̲j̲īn [*q.v.*] (he was killed because he had imprudently provoked the apprehensions of some of the key magnates of the state), al-Malik al-Nāṣir was reinstated (698/1299). Once more he had to abdicate (in 708/1309 to give way to the cultured sultan Baybars II al-D̲j̲ās̲h̲enkīr) before he could finally establish himself as autocrat during his long third reign (709-41/1310-41). In the office of sultan at least, one continued to tolerate an exception to the Mamlūk principle of the perpetual renewal and rejuvenation of the élite from the outside. The non-Mamlūk, pre-Mamlūk, element of the dynastic charisma still prevailed.

At this juncture, one should mention that never again would a "non-Mamlūk" sultan claim general recognition within the Mamlūk ruling caste with so little opposition as was the case with al-Malik al-Nāṣir Muḥammad. He carefully presented himself as a scion of genuine Ḳipčaḳ background. He had been raised together with the élite corps of his father. As if to compensate for his "illegitimate" standing within the Mamlūk military aristocracy, he imported more Mamlūks for himself than any other sultan before or

after him. All the necessary facilities and means were provided for his royal Mamlūks (*mamālīk sulṭāniyya*) in order to guarantee the excellence of their training.

The third sultanate of al-Malik al-Nāṣir Muḥammad appears as the apogee of Mamlūk history altogether. The twenty years' crisis of the state between 693/1293 and 713/1313 (the year of the last Īl-Khānid attack on Mamlūk Syria) had been successfully mastered. The Mamlūk borders were secured. In 723/1323, with the help of the long-distance merchant Madjd al-Dīn al-Sallāmī, a treaty was concluded between the Mamlūks and the Īl-Khān Abū Saʿīd [*q.v.*]. Both sides had come to realise (the Mamlūks as early as 675/1277 when Baybars launched his costly and, in the long run, futile invasion into Anatolia) that no permanent territorial gains from their neighbour were feasible. Al-Malik al-Nāṣir, instead, systematically extended Egyptian influence into Arabia. Not only the Sharīfs of Medina and of Mecca but also the Rasūlid lords of Yaman were forced to accept Mamlūk suzerainty. Mamlūk detachments were stationed in strategic locations in the peninsula. Three times al-Malik al-Nāṣir personally performed the pilgrimage to the Ḥidjāz, thus demonstrating the stability of his régime. It was during his rule that the office of plenipotentiary deputy sultan was abolished, another indication of his absolute power.

In Egypt itself, al-Malik al-Nāṣir's policies of increasing the position of the active Mamlūk élite and also of securing for himself an adequate share in the riches of the country were equally successful. In the so-called *al-rawk al-nāṣirī* of 715-16/1315-16 he achieved what his predecessor Lādjīn had tried in vain to do. The *ḥalḳa* soldiers and officers lost most of their feudal land in this new cadastral scheme. It was transformed into *iḳṭāʿ*s for the royal Mamlūks or reverted to the royal fisc, whose share in the aggregate agricultural yield of Egypt rose from one-sixth to five-twelfths. The feudal lands granted to the new beneficiaries were, however, consistently divided up into comparatively small lots (not more than a few neighbouring villages at most; often condominia with more than one other *muḳṭaʿ*) and distributed all over Egypt in order to prevent the formation of a rural aristocracy and of a territorial basis for political opponents. Thus the governor (*wālī*) of the Delta province of al-Daḳahliyya had his official *iḳṭāʿ*s in Bahnasā in Middle Egypt and in Ushmūnayn even further south. The province of Manfalūṭ and most of the environment of Cairo were under direct control of the sultan.

There was much anger among all those groups that had been displaced or at least harmed by al-Malik al-Nāṣir's large-scale redistribution of land. In order to divert this wrath, violent anti-Christian campaigns were kindled. Copts [see AL-ḲIBṬ] had always played a key role in the central bureaucracy and could thus be shrewdly presented as responsible for whatever distress had happened in this situation. With the applause of the frustrated Muslim majority, the discriminating sumptuary regulations were enforced against Christians, Jews and Samaritans in these years. It was during this period of economic suffocation and general persecution that a large percentage of the Coptic families, who for centuries had remained faithful to their religious belief, finally succumbed and adopted Islam. The disappearance of Coptic as a spoken language also falls within this period. First or second-generation Coptic converts to Islam who, thanks to their professional experience in the administration of the arable and irrigated lands had always been favourite candidates for the superintendence of the army bureau (where the *iḳṭāʿ*s were registered and reassigned) or of the royal fisc, now two of the most powerful, responsible and vulnerable positions in the state, could easily find themselves victims too to this spirit of religious intolerance. When the financial expectations of the mighty beneficiaries could not be met, for whatever reasons, the sultan could present them as the facile culprits who—owing to their suspect religious background—could not count on any corporate help. Some of them were brutally sacrificed to the mob in these years.

With the new affluence in the privy budget of the sultan and with the diminishing expenditure for military campaigns, more funds could be invested into the amelioration of the economic infrastructure of Egypt. Large sums were spent for the repair of irrigation works. New canals were dug both in the Delta and in Cairo where *al-khalīdj al-nāṣirī* created a waterway to Siryāḳūs, the site of al-Malik al-Nāṣir's new *khānaḳāh*, and opened new lands for cultivation. The agricultural production of Egypt, the internal and external trade, both with Syria and with abroad, and also the population, grew rapidly during this period. In retrospect, it was to turn into the golden years of Mamlūk history. The *libido aedificandi*, the exorbitant building activities of al-Malik al-Nāṣir mainly, yet not exclusively, in Cairo, have left impressive traces of this era. To secure the supply of the citadel with water, new aqueducts were built. On the Cairo citadel, his majestic new mosque with tiles from Persian workshops and more than a hundred columns, all of a different provenance, attests to his imperial designs. A contemporary eulogist went so far as to hail him as another Ṣalāḥ al-Dīn, as the future conqueror of Baghdād, chosen to redeem the injustice wrought upon Islam by the vile Mongol foe. Certainly, one must not interpret this encomium as a reflexion of the sober political judgement of the sultan himself, who in these very years was probably relieved to conclude the peace treaty with Persia. It rather mirrors the esteem which he had contrived to attract in Egypt thanks to his personal achievement and the propitious conditions surrounding him. Towards the end of his rule, this blissful image began to wane. When, full of distrust, he put his mighty, most successful and most popular Syrian governor Tankiz under surveillance, then detained and finally killed him, contemporaries were shocked. They keenly sensed that an exceptionally prosperous and happy chapter of the history of Egypt was coming to a swift end.

In rapid sequence now, eight sons, two grandsons, and two great-grandsons of al-Malik al-Nāṣir Muḥammad followed on the throne (from 741/1341 to 784/1382 or 792/1392 respectively). Many of them were under age and never ruled effectively. For the most part they were mere toys in the hands of powerful generals like Ḳawsūn, Arghūn al-ʿAlāʾī, Ṣarghitmish, Yalbughā or Minṭāsh, although endowed with opulent allodial and feudal holdings, especially in the vicinity of the capital and in the far south. 14.5% of the tax yield of the province of Ḳūṣ, 12% of Ushmūnayn, 39% of *ḍawāḥī al-Ḳāhira*, 22% of Ḳalyūb and as much as 10% of the huge province of al-Gharbiyya, were the personal fiefs of the sons and brothers of the ruling sultan alone, according to data from the year 777/1376. Popular opinion still held the progeny of al-Malik al-Nāṣir in high esteem, as we can learn from Khalīl b. Aybak al-Ṣafadī, the invaluable—although hardly exploited—main source for this period (cf. *al-*

Wāfī bi 'l-wafayāt, xvi, ed. W. al-Ḳāḍī, Wiesbaden-Beirut 1402/1982, 440).

Only al-Malik al-Nāṣir Ḥasan (who ruled twice, the first time during the horrible first visitation of the plague to Egypt in 747-50/1347-49) seems to have shared the capacities and instincts of his father. His political philosophy was, however, pronouncedly different. Ḥasan disdained the Mamlūk ambience and perhaps, the whole Mamlūk system. He solemnly renounced his Turkish name Ḳumārī (to be found often in the bibliographical dictionaries of the time as a Mamlūk name) and raised consistently non-Mamlūk groups, especially *awlād al-nās* and eunuchs, to high and highest posts in the state. Also, women were among the chief beneficiaries of his policies. As has recently been remarked, it was not by chance that during his reign no rebel appeared in Syria. The key positions in the realm were in non-Mamlūk hands. Yet sultan Ḥasan thus jeopardised the whole Mamlūk system. It should be seen in this context that Yalbug͟hā al-ʿUmarī, one of Ḥasan's favourites, killed his own master, breaking a hitherto carefully-protected taboo. Under Yalbug͟hā's effective rule (his regency lasted until 768/1366, when sultan al-As͟hraf S͟haʿbān, with the support of discontented Mamlūks, took a vigorous hand in politics himself) the (re-) Mamlūkisation of state and military was to make rapid progress. Ḥasan is best known for the magnificent *madrasa* beneath the Cairo citadel, one of the most lavish monuments of Mamluk architecture. It contained separate *īwāns* for the four orthodox *mad͟hāhib*. Even though, ever since the Ayyūbid era, nominally equal status was granted to all four schools, it was the Ḥanafī *mad͟hhab* of the Turks (this term means "white military slaves" in the broadest sense in the Mamlūk period, i.e. it encompasses also Circassians) that received privileged support by the Mamlūk patrons of pious and scholarly endowments. With this policy of favouritism towards their Ḥanafī brethren, the Mamlūk sultans and *amīrs* tried to build up a counterpoise to the influential and self-assured local S͟hāfiʿī *ʿulamāʾ* with their widespread and inveterate anti-Mamlūk bias. In this respect also, Ḥasan seems to have had his own ideas. Correspondingly, the Arab authors of the time liked him; he seemed to combine the necessary political craftsmanship with an understanding for the needs and sensitivities of the Egyptian populace. Ḥasan had even studied theology and *tafsīr*; he had had a chance to do so when he was kept in prison by his adversaries for some time.

The second half of the 8th/14th century remained a comparatively peaceful period for Egypt and for the Mamlūk state as a whole in their relations with foreign powers. The increasing turmoil in the Īl-K͟hānate and its successor states further reduced the pressure on the Mamlūk borders. In 776/1374 the kingdom of Cicilian Armenia fell to the Mamlūks. Its last king, Leon V, was taken to Cairo where he was kept in honourable captivity until Barḳūḳ's accession in 784/1382, when he was released to Europe. A few years earlier, however, in 767/1365, a dramatic incident happened that for a moment seemed to imperil the achievements of the first Mamlūk sultans in their campaigns against the Christians of the Levant. King Peter I of Lusignan, the ruler of Cyprus and titular king of Jerusalem, sacked Alexandria with his fleet. Chaos ensued in the city, thousands of prisoners were taken, and many inhabitants perished. The Mamlūk authorities, both Yalbug͟hā and his governor Ibn ʿArrām, had proved totally unprepared for such an attack. Even though the Cypriots withdrew after only a week "like thieves in the night", as the disturbed witnesses bitterly remarked, this invasion profoundly shocked the contemporaries. For, once more, the preordained course of history, the inevitable triumph of Islam over Christianity, seemed upset. Abu 'l-Ḳāsim al-Nuwayrī al-Iskandarānī (d. after 775/1374), in his voluminous treatise compiled around this event, is guided by the urge to make understandable to himself and to his avid readers how such a catastrophe could have happened. Cyprus was to pay a high price for this short-lived victory. Ever since this humiliating experience the Mamlūks had schemed for revenge; Sultan Barsbay, in 829/1426, eventually invaded the island, took King Janus captive home to Cairo, and made Cyprus a vassal to the Mamlūks.

A far greater threat to the external and internal stability of the Mamlūk domains was, once more, to come from the east with the advent of the Central Asian conqueror Tīmūr [*q.v.*] to Syria in the autumn of 803/1400. Tīmūr took Aleppo, Ḥamā and even Damascus without any major resistance. Fear and hatred against the *aʿād͟jim* spread in Cairo in the aftermath of this defeat (Ibn Tag͟hrībirdī, *Nud͟jūm*, xii, 253). The great historian Ibn K͟haldūn, who served the Mamlūks in Cairo as Mālikī supreme *ḳāḍī* and coined the famous dictum of the blessing which Mamlūk servitude meant for the Islamic community, met Tīmūr in his camp outside Damascus yet could do little more than plead for clemency. The *ʿulamāʾ* of the city had already paid fealty to Tīmūr. That Tīmūr did not compound his victory by marching further to Egypt but rather withdrew from Syria to fight and defeat the Ottomans in Central Anatolia, was not because of the merit of the Mamlūks. This benign turn of events notwithstanding, the results of Tīmūr's invasion into the Mamlūk territories were far-reaching and disastrous. Syria was, once more, devastated. Syrian artisans were deported to Tīmūr's capital Samarḳand. The necessity to raise and pay fresh contingents of troops further undermined the already frail economic foundations of the whole state. Syria, and as a corollary Egypt also, never fully recovered from Tīmūr's onslaught. It proved a significant first step towards the final collapse of the Mamlūk kingdom.

Besides other factors, notably the hospitality granted to Tīmūr's arch-enemy Aḥmad b. Uways, the D͟jalāyirid ruler of Bag͟hdād, in Cairo, it was the evident weakness and discord of the Mamlūk leadership that had invited Tīmūr to attack Syria. In 784/1382 Barḳūḳ [*q.v.*], the Circassian *atābak al-ʿasākir* of the Ḳalāwūnid child sultan al-Malik al-Ṣāliḥ Ḥād͟jd͟jī, had wrested the sultanate from his nominal lord. To be sure, heavy opposition from Ḳalāwūnid loyalists and the defection of the Syrian governors forced Barḳūḳ to abscond soon after his coup and to allow Ḥād͟jd͟jī to return to the throne, this time with the new and programmatic regnal title *al-Malik al-Manṣūr*, "the one God has led to victory". Yet in 792/1390 al-Malik al-Ẓāhir Barḳūḳ had finally asserted himself. The powerful coalition of his adversaries was brutally broken up; some of the most horrible incidents of torturing and execution in Mamlūk history, a period so rich in such sinister occurrences, happened during this fierce civil war on both sides. Ḥād͟jd͟jī was deposed again, this time for good. He was to live until the year 814/1412 in respectful though humble confinement on the Cairo citadel, not unlike the ʿAbbāsid shadow caliph.

Barḳūḳ's achievement was considerable. He had faced and defeated the largest and best equipped coalition of Mamlūk rebels ever. Upon this experience he decided to build for himself a powerful household of his own Mamlūks, on whose loyalty he could

absolutely rely. It was from this Ẓāhiriyya household that all future sultans were recruited, either directly or indirectly as *mamlūks* or Ẓāhiriyya *mamlūks*, or, in the last decades of Mamlūk history, as *mamlūks* of *mamlūks* of Barḳūḳ. In a specifically Mamlūk metaphorical sense, Barḳūḳ can so be defined as the founding "father" of the Circassian sultanate.

The contemporaries realised that a momentous change took place with Barḳūḳ's seizure of power. The chronicles of the time—and modern historians in their suit—customarily draw a distinct line between the first, the Ḳîpčaḳ Turkish, and the second, the Circassian, era of Mamlūk history. The reasons for this strict bifurcation can only be guessed. The racial provenance of the new sultans and their pronounced Circassian (Abkhāz), anti-Ḳîpčaḳ *djinsiyya* must have been of importance (although at least two of them were not Circassians but rather Albanian or Greek), as well as the gradual abandonment of the dynastic principle of succession to the sultanate. Barḳūḳ himself (like his Ḳîpčaḳ predecessors and almost all the future Circassian sultans) had, quite understandably, tried to reserve the prestigious office of sultan for his own family. Yet under his rule this claim was evidently no longer accepted as a natural gift. He himself may have prompted this development. When his first son died prematurely, funds set aside for him were transferred to the coffers of the newly-founded *dīwān al-mufrad*, an additional source of revenue for the badly needed royal *mamlūks* (797/1395). To be true, Barḳūḳ could extract the *bayʿa* of the Mamlūk grandees for his second son, the youthful and impetuous al-Malik al-Nāṣir Faradj, yet unmistakably the automaticness of such a succession was becoming increasingly questionable. There is also economic evidence for these subtle changes. During Barḳūḳ's rule the so-called *sīdīs*, i.e. the male relatives of the sultan, who did not serve a productive function in the state, forfeited their *iḳṭāʿ*s in Egypt.

When Barḳūḳ died in 801/1399, Tīmūr must have been fully aware of the crisis and the ubiquitous tensions within the Mamlūk military aristocracy. He used the propitious moment to attack Syria when the young Faradj (801-8/1399-1405, 808-15/1405-12 [*q.v.*]) was trying to find firm ground in his new role as sovereign.

Faradj was unquestionably one of the most interesting personalities on the throne of Cairo in the Mamlūk period. He did his best to lead and to defend the country under the most adverse circumstances. Under the impact of the Syrian disaster he was ready to look for unconventional solutions to the most pressing problems of the state. He even awarded the highest military rank of *amīr miʾa* to a civilian, his exceptionally capable and resourceful secretary Ibrāhīm b. Ghurāb. This man had largely borne the burden of reconstructing the empire and its economic foundations after Tīmūr had left behind him Syria in waste. Yet Faradj, to whom we owe three religious buildings (one, the white mosque on the citadel, is no longer extant), was not a very prudent politician. He was rash in his decisions and supplied his adversaries with facile arguments. His inconsiderate moves, e.g. in confiscating the endowments of one of his mighty enemies, Djamāl al-Dīn al-Ustādār (and even to delete the founder's name from the inscription slab in order to put his own in its stead), served to undermine his status among the *ʿulamāʾ* upon whom he might otherwise have relied. He became, indeed, as al-Maḳrīzī writes so poignantly, the "most tragic (*ashʾam*) king of Egypt". In one of his numerous campaigns against rebellious Syrian grandees, Faradj fell into the hands of his enemies. In the presence of the cowardly caliph and various *ʿulamāʾ*, Faradj was tried and mercilessly sentenced to death, even though he had surrendered on terms.

As has already been briefly discussed, the new sultan was to be the caliph al-Mustaʿīn, at least, until al-Muʾayyad Shaykh [*q.v.*], one of Faradj's Syrian foes, was generally acclaimed as the new sovereign. After al-Mustaʿīn was deposed by Shaykh, he stayed detained in the Cairo citadel for many months before he had to accompany the minor sons of the poor sultan Faradj to the infamous state dungeons in Alexandria, a place of no return for so many prisoners before and after him.

Faradj was, it should be repeated here, the last son of a sultan to rule effectively and for more than just a few months. From 815/1412 onwards the dynastic succession was no longer truly accepted. Thus at last even the sultanate had to accommodate to the Mamlūk system of recruiting only outsiders, newcomers, to the disadvantage of those born in the country. After 815/1412, until the downfall of the Mamlūk empire, the sons of deceased sultans were allowed to mount the throne only temporarily until a strong man had been found among the various contenders. Actors and spectators alike seem to have known and accepted these new rules of the game. Therefore, when in the very final phase of Mamlūk history, Muḥammad b. Ḳāyitbāy (901-4/1496-8), for whom his father had vacated the throne, tried to assert and buttress his position, he not only failed politically and militarily; this was to be expected. More to the point, contemporary judges, both inside and outside Egypt, regarded his attempt as outright illegal, as contravening the Egyptian political tradition, according to which, as a Christian observer said, ever since the days of Joseph immigrant slaves, and not natives of the country, were supposed to wield power.

Al-Muʾayyad Shaykh's political designs were well calculated. Having broken up the allied Syrian opposition (from whose ranks he himself had attained the sultanate), he extended the Mamlūk sphere of influence far north into central Anatolia. His ambitious military and administrative reforms, designed to imbue the Mamlūk system with new strength, never achieved fruition. He was also a very religious man, devoid of culture though he was. On the spot where he had languished in jail, i.e. directly in the neighbourhood of the Bāb Zuwayla, he had his impressive *khānaḳāh* erected. This building was to become a focus for Turkish literary activities well beyond the Mamlūk period. Shaykh himself sought the company of dervishes, preferably from the regions to the north of Syria. His capable successor Ṭaṭar did not however live long enough to justify the high-flying expectations he had aroused among his contemporaries. The panegyric vitae of Shaykh and Ṭaṭar written by the bilingual (Arabic and Turkish) historian, traditionist and jurist Badr al-Dīn al-ʿAynī (from ʿAyntāb) (d. 855/1451 [*q.v.*]) not only tell us much about Circassian genealogy (and about the popular cabbalistic play with letters and figures, current in these genres of writing) but also about the dire need of legitimacy which Mamlūk sultans seem to have felt in these years after the fall of the houses of Ḳalāwūn and Barḳūḳ. Another scholar of great repute who flourished in this very period should be mentioned here, Abu 'l-Maḥāsin b. Taghrībirdī (d. 874/1470 [*q.v.*]). His father, a seasoned Mamlūk *amīr*, had served sultan Faradj during his short reign, both as governor and as father-in-law. The son personifies the limits and opportunities of the Mamlūk second

generation. He owned considerable property in Egypt (his endowment deed is preserved) and was at the same time a crafty and ingenious interpreter of Mamlūk lore and Turkish language to the Egyptian audience of his time. He wrote a special treatise on the phonological and orthographic problems which the Arabs had with Turkish names. He rejected violently al-Maḳrīzī's unjust and "racist" attacks against the appointment of a non-native, non-Arab (*ʿadjamī*) *shaykh* to the office of private secretary in Egypt (*Nudjūm*, xiv, 265-6; see L. Fernandes, *Mamluk politics and education*, in *Annales Isl.*, xxiii [1987], 95). His numerous enemies in the local academic institutions used his Turkish background in order to denigrate him and to question his scholarly acumen. Two of the richest historical sources of the time, especially on Mamlūk affairs, go back to Ibn Taghrībirdī.

With al-Ashraf Barsbāy's reign (825-41/1422-38 [*q.v.*]) the "Indian summer of the Mamlūk sultanate" (P.M. Holt) is associated. Major achievements in foreign relations are connected with this ruler. Cyprus was reduced to tributary status. The attempts of a leading *amīr*, Djānī Beg, to dislodge the sultan with the help of allies from among the Turcoman confederations in the Djazīra and Eastern Anatolia were frustrated even before the rebel re-entered Mamlūk territory. Furthermore, the shrewd scheme of the Tīmūrid ruler Shāh Rukh [*q.v.*] to gain at first only symbolic, and then tangible political influence in the Ḥidjāz by sending a *kiswa* to Mecca to cover the Kaʿba, was rejected by Barsbāy. He had the Ḥanafī chief judge of Egypt confirm the prerogative of the Mamlūk sultan in supplying this precious textile. The Egyptian control of Western Arabia, re-established by al-Malik al-Nāṣir Muḥammad a century earlier, was further strengthened when the harbour (*bandar*) of Djudda [*q.v.*]—instead of ʿAdan—was made the main emporium for the ships bringing the precious goods of India and the Far East to Egypt. Barsbāy occupied Djudda and put it under direct Mamlūk control. A garrison and a chief accountant were stationed there to safeguard the control and proper fiscal exploitation of the profitable Red Sea trade.

Ever since the Fāṭimid era the "rich trades" (Immanuel Wallerstein) with the East, directed through the Red Sea and Cairo, had been a central source of wealth for the Egyptian authorities. During the *pax mongolica* of one century, this trade route had temporarily fallen into neglect, to the benefit of the ancient silk-route through Transoxania and Iran. With the gradual disintegration of the Īl-Khānate during the 8th/14th century, however, the maritime route through the Indian Ocean had regained its old importance. Since the Ayyūbid period, the so-called Kārimī merchants [*q.v.*] of Egypt controlled this lucrative international trade from their commercial headquarters in Cairo and in the great ports of the Red Sea. This changed under Barsbāy's rule. In order to increase the depleted finances of the state, he removed his merchant advisers from the court and brought the spice trade under state monopoly. By this short-sighted move he forced the European customers in Alexandria to buy the precious commodities of the East at the prices (and with the quantitive limitations) decreed by the sultan and his bureaucracy. Complaints came not only from western quarters but also from the rulers of Persia. As early as 825/1423, Barsbāy had brought the Egyptian sugar industry under state control. The results of this policy were deleterious. With the Kārimī merchants also, their entrepreneurism and vigilance in the highly vulnerable, long-distance trade disappeared. After a brief increase in state revenue, demand fell, with a consequential negative impact on the Egyptian budget, which was already overburdened with high state expenditure on luxury goods (e.g. costly East European furs for Mamlūk robes) and, most importantly, slaves to replenish the Mamlūk ranks that were depleted by the plague and by constant and internecine warfare.

The decades following Barsbāy's death saw the brief sultanates of two old gentlemen, Djaḳmaḳ and Īnāl (841-65/1438-61), the last generation of Barḳūḳ's own Mamlūks. In these years, the Mamlūks gradually slipped into the defensive in their dealings with Anatolia and the borderlands to the northeast. The Ottomans, whose triumphal conquest of Constantinople in 857/1453 was duly celebrated also in Cairo during Īnāl's sultanate, began to annex the buffer principalities (the Dulghadirs, Ramaḍānids and Ḳaramānids) which the Mamlūks regarded as their proper sphere of influence. From the mid-9th/15th century onwards, Mamlūk-Ottoman relations were strained. In a first Ottoman-Mamluk war (during sultan Ḳāʾitbāy's long rule, 872-901/1468-96 [*q.v.*]), in which the Ottoman ruler Bāyezīd did not commit all his forces, neither side was victorious. Relations improved again. Only two years before the collapse of the Mamlūk state upon the Ottoman invasion of Syria, the Ottomans sent navigation personnel to support the Mamlūks in their endeavours to contain the dangerous Portuguese expansion in the Indian Ocean and into the Red Sea. Even Mecca and Medina were threatened at this critical moment.

In their dealings with the other neighbours to the north and east also, the Mamlūks were by no means the clear masters of the situation. The campaign of the *dawādār* Yashbak al-Ẓāhirī (incidentally a much-praised patron of Arabic and Turkish letters whose private library was hailed by contemporary authors, cf. al-Sakhāwī, *al-Ḍawʾ al-lāmiʿ*, x, 274, and is at least partially preserved at present in Istanbul) against the White Horde (Aḳ-Ḳoyunlu) in 885/1480 was a disaster. Yashbak was caught and executed in al-Ruhā (Edessa) at the command of Yaʿḳūb Aḳ-Ḳoyunlu like a common criminal. Also, the success of Yaʿḳūb's father, Uzun Ḥasan, "Ḥasan al-Ṭawīl", in having his name recognised in Medina, if only for a very brief interval, in 877/1473 was symptomatic of the gradual loss of control which the Mamlūks had so long been able to exercise on this front.

There was a direct connection between the decreasing prestige of the Mamlūk state in the concert of regional powers and the gradual, yet in the end, alarming deterioration of the Mamlūk military organisation, prowess and ethos. Hallowed rules of recruitment and promotion had been allowed to pass into oblivion. No longer were Mamlūks imported as malleable youngsters, ready to follow their master's commands without second thoughts and imbued with a deep sense of solidarity with their immediate comrades. Now, middle-aged Mamlūks were canvassed who often brought with them professional skills, e.g. in carpentry. They were no longer able and ready, either culturally and linguistically, to adapt themselves easily to the Egyptian environment. They could no longer be moulded into a homogeneous military household in which no member would have dared betraying his fellow-Mamlūk (*khushdāsh*) or their common master (*ustādh*). In the final years of Mamlūk history this philosophy had lost its overall validity. The grandees of sultan Ḳāʾitbāy's household schemed against each other without evident restraint. Four of them succeeded each other on the throne in brief

sequence between 904/1498 and 906/1501. Mamlūk factionalism and the deplorable economic foundations of the Mamlūk ruling class aggravated each other in a rapidly turning vicious circle. The principles of military training that had been held in esteem during the 7th/13th and 8th/14th centuries—continuous exercise, advancement in rank only on the basis of proven merits, no sale of benefices reserved for Mamlūks to non-Mamlūks—had been allowed to lapse during the 9th/15th century, whilst the hippodromes [see MAYDĀN) lay in ruins. More significantly, the Mamlūk military system proved immune against the blatantly necessary technological modernisation. The use of gunpowder remained categorically limited to siege warfare during the 9th/15th century, at a time when the Ottoman Janissaries (who were to rout the Mamlūk army in 922/1516) acquired multifarious expertise with muskets and arquebuses. Handguns were regarded as incompatible with the lofty Mamlūk chivalrous spirit demanding the direct contest and confrontation with the enemy. When, in the last years of Mamlūk independence (for the first time under sultan Muḥammad b. Ḳāʾitbāy), the first tests were made with field artillery, non-Mamlūk troops (blacks and *awlād al-nās*, the commanders of the *ḥalḳa*) were charged with this despised new weaponry. For the Mamlūk knight, used to fighting on horseback with the cross-bow, like in the glorious old days of ʿAyn D̲j̲ālūt, such service was beneath his dignity [see BĀRŪD. iii. The Mamlūks]. In naval warfare the Mamlūks had likewise not kept themselves abreast with new developments. As has already been mentioned, they depended on Ottoman logistic assistance when the Portuguese began to threaten the Indian trade routes and even the holy sites of Islam in Arabia [see BAḤRIYYA. II].

Although Egypt continued to be guarded by its *cordon sanitaire* in Syria from any major threat from the east, now problems became acute inside the country. In 876/1472 nomadic tribesmen from the eastern rim of the delta boldly entered the northern suburbs of Cairo and looted the shops. Upper Egypt, remote from the capital and correspondingly vulnerable, was in a chronic state of turmoil. The office of the *dawādār* [*q.v.*], lit. "holder of the inkwell" (in principle designed to supervise diplomatic and foreign relations) degenerated, so it appears, into the military governorship of the Ṣaʿīd. Bedouin revolts became a regular feature. Before campaigning against the Aḳ-Ḳoyunlu, the above-mentioned Yas̲h̲bak, Ḳāʾitbāy's chief *dawādār*, had won a dubious reputation by his brutal punitive actions against the unruly Hawwāra Bedouins, who ever since the late 8th/14th century were the true masters of the Egyptian south. The growing importance of the security of Upper Egypt, the granary of the country, and, concomitantly, of the office of the *dawādār*, is best documented by the fact that the last Mamlūk ruler, Ṭūmānbāy, rose from this position to the sultanate, an unprecedented career.

The economic situation of the whole of Egypt had detoriated dramatically during the 9th/15th century, indeed ever since the first arrival of the Black Death in the country in the middle of the 8th/14th century. The demographic effects were disastrous. Whole regions, especially in the Nile delta, were depopulated. In cities like Alexandria and Maḥalla, the population dropped to a fraction of its former size. The crop yield of Egypt shrank from nine to less than two million *dīnārs* in the course of the 9th/15th century. Twelve more waves of the bubonic plague were to afflict Egypt before 1500. In the obituaries listed in the numerous historical works of the period, for the most part arranged by years (*ḥawādit̲h̲ wa-wafayāt*), countless military, religious, and scholarly luminaries are recorded as victims of the plague. The Mamlūks, as a social and ethnic group, seem to have been hit with particular severity by the plague. Why this was the case has been the subject of heated debates. Were they especially vulnerable because they, who came from the cold steppes and mountainous regions of the north, lacked the physical stamina and resilience of native Egyptians against such infections? Or was it rather the hermetic living quarters that promoted the rapid spread of such a highly contagious disease? Certainly, from the early 9th/15th century onwards, the rigid residential requirements for Mamlūks were loosened. Many officers moved to the city, married Egyptian women and allowed their children to grow up as natives with all the accompanying career options. Yet one should also realise that owing to the privileged status of the Mamlūks, who literally possessed the country, they could afford a satisfactory diet, still the best panacea against malnutrition and the ensuing illnesses.

The plague was pernicious also for the economic survival of the Mamlūk caste. The reasons are patent. The personal wealth of the Mamlūks rested on the *iḳṭāʿ* system, the allotment of one or several tax districts (*d̲j̲iha*) (often spread all over Egypt) with a fixed tax yield (*ʿibra*), commensurate to the military or administrative duties of the beneficiary. In the *dīwān al-d̲j̲ays̲h̲*, the army bureau, headed by a civilian, often a Copt or recent convert (see above), with the indispensable expertise in the agricultural geography of Egypt, these allotments were recorded, collected, re-issued and exchanged. From his assignment, the Mamlūk beneficiary had to cover his personal expenses as well as all the expenditures in connection with the army unit under his command, i.e. weapons, horses, fodder, equipment and personal gratuities. Even in the bleak days of Mamlūk decline, the army bureau seems to have continued working efficiently and rigorously. Upon the death, demotion, or promotion of a *muḳṭaʿ*, his assignment reverted to the central bureaucracy. It could not be passed on to the heirs of the holder, natural and consistent as the efforts of Mamlūk beneficiaries were to circumvent this iron law. Pious endowments were, owing to this impasse, increasingly discovered as a device to compensate for this drawback. The money invested into *waḳf* could now at least partially be stipulated to be made available to the well-paid *nāẓir*, the supervisor, of the endowment. Moreover, this office was, in most cases, reserved for the Mamlūk founder, his progeny and his freedmen, although this was a legally dubious procedure.

With the wholesale collapse of Egyptian agriculture, the basis of Mamlūk personal material welfare was thus eroded. Land was abandoned. Large parts of the delta, notably the provinces of al-Buḥayra to the south of Alexandria, of al-S̲h̲arḳiyya (on the south-eastern edge of the delta around the vital communication lines from Cairo to Syria) and al-G̲h̲arbiyya (the central delta), let alone the Ṣaʿīd, returned to tribal control. One can follow this process of gradual (re-)Bedouinisation of major parts of Egypt in this period when one compares the data in the different cadastral surveys that were made of the country in the years 777/1376, *ca.* 800/1397 and 885/1480. The entries in the *d̲j̲arīda iḳṭāʿiyya* for these three dates are more or less completely preserved in the works of Ibn Duḳmāḳ (d. 809/1407) and Ibn al-D̲j̲īʿān (d. 885/1480). In these lists usually, albeit not con-

sistently, the legal status of the land (state land; royal land or *k͟hāṣṣ*; allodial land or *milk*; *iḳṭāʿ* land; *waḳf*) as well as the individual and group identity of the holders (unspecified *muḳṭaʿ*s; royal *mamlūks*; eunuchs; *sīdīs* and other members of the sultan's families, such as daughters, sisters and widows; caliphs; civilians; Bedouin chiefs) are indicated.

A Mamlūk officer whose tax district lay waste and no longer produced the grain whose sale was necessary for his own upkeep was bound to look for alternative sources of income. Urban commerce, a sphere that had hitherto not suffered all that much from Mamlūk infringements, indeed suggested itself as such an outlet. For trade and urban manufacturing flourished despite, or even because of, the general malaise. As has been mentioned before, the lucrative spice trade returned to Egypt as early as 745/1345. As A.L. Udovitch has plausibly suggested, the first generation of urban plague survivors benefitted from an enormous inheritance effect. Their business expanded rather than shrank in the decades after 750/1350 and thus provoked outright state intervention. All economic drawbacks notwithstanding, demand for luxury goods on the markets of Cairo not only did not decrease but instead grew considerably. Besides Russian furs needed for ceremonial Mamlūk costume (mentioned above), spices (by no means all re-exported to Europe) should be singled out as such precious commodities. It was all-too-inviting for the impoverished Mamlūks, whose rural fiefs no longer allowed for the customary sumptuous life style (visible primarily in the number of personal *mamlūks*), to begin filling their pockets with the arbitrary exploitation of the commercially active urban élite. The notoriously rapacious Mamlūk who populates the chronicles of Circassian history (and served to rationalise the more deeply seated racial and cultural prejudices of the native Egyptian *ʿulamāʾ* against the barbarian military) must be seen against this background.

Not only the Mamlūks but also the civil population of the major Egyptian centres suffered from this breakdown of the rural economy. It is true that prices for wheat and barley remained more or less the same. The decrease in production was matched by a decrease in demand. Yet all the labour attached to food production, i.e. the services of millers, bakers, boatmen, etc., became significantly more expensive. And of course all the stipends and salaries provided for in the pious endowments for pupils, students, professors, Ṣūfīs, architects, physicians, food-purveyors and janitors alike, were impaired by the shrinking of the economic resources of urban *awḳāf*. During the whole of the 9th/15th century, the administrators of these endowments were gravely at odds how to balance these losses of agricultural revenue and how to establish negative lists of priority of the services (as laid down in the *waḳfiyya*) that could be curtailed or even sacrificed. The great polymath al-Suyūṭī (d. 911/1505 [*q.v.*]), himself overseer of the Baybarsiyya *madrasa*, got entangled in these everyday problems so far aloof from the world of theological, juridical and grammatical speculation for which he is famed.

This growing economic tightness in the institutions of higher learning was aggravated by a consistently high number of scholars in Cairo, the shining capital city of orthodox Islam during all the Mamlūk period, with the ensuing qualitative (though not quantitative!) decline in learned output. In the second half of the 9th/15th century we still have 130 colleges in Cairo alone, with some 3,000 students, compared to 6,000 in the previous century. And since the endowments with their fiscal immunity still fared comparatively well in juxtaposition with the state finances that no longer sufficed to pay for the campaigns inside, and beyond, the borders of Egypt, the sultans and their aides did not hesitate to infringe upon the (in principle) inviolable stipulations of *awḳāf* and confiscated part of their annual income to fill the gaps of the treasury. Even pious sultans like Ḳāʾitbāy (who did not desist from taking a pronounced personal stand in the scholarly religious controversies of the time) did not hesitate to break the *waḳf* laws. In public opinion they had lost their stringency long before. The sale of *awḳāf* and especially the exchange of mediocre for valuable *mawḳūf* (urban property and agricultural lands) had long ago become an established practice. The private documents of the last eighty years of Mamlūk history that have recently been made available, at least cursorily, by Muḥammad Muḥammad Amīn make clear that by this time endowments were anything but unalienable. They changed owners and legal qualifications at rapid speed, if the pressure upon the venal judiciary was only strong enough.

To contemporary authors, a rather contradictory image of rulers emerged in these critical last years of Mamlūk history. On the one hand, there were arbitrary confiscations and brutal exactions (one need only name the forced purchases, *ṭarḥ* or *rimāya*, imposed upon the civilians) by the sultans and their generals, who desperately tried to keep the system in abeyance. On the other hand, there was a last efflorescence of religious culture at and around the Mamlūk court. Many sultans impressed the populace, including the otherwise very haughty and critical scholarly observers, with their personal piety and devotion. The Egyptian "national" saint Aḥmad al-Badawī [*q.v.*] of Ṭanṭā was the object also of Mamlūk veneration. Religious sessions were held in the citadel, in the cemeteries among the tombs and convents of late rulers, and in the halls of Mamlūk grandees such as Yas͟hbak al-Ẓāhirī, who wrote Turkish poems and an Arabic treatise on the descent of the Prophet Muḥammad. Numerous prized translations from Persian and Arabic into Old Anatolian Turkish were produced with the encouragement of Mamlūk dignitaries. With one exception, the curious author Abū Ḥāmid al-Ḳudsī, mentioned at the beginning, these achievements were not, or at least not readily, recorded by the Arab contemporaries, for whom the Turks, with their political and military superiority, were difficult enough to tolerate. They were not supposed to be versatile in the Arabs' own domains, i.e. the arts, writing and scholarship. The sultans Ḳāʾitbāy (872-901/1468-96), Muḥammad b. Ḳāʾitbāy (901-4/1496-9), and Ḳānṣawh al-G͟hawrī (906-22/1501-16 [*q.v.*]) have left us Turkish *dīwāns* of their own. At Ḳānṣawh's *madjālis* on the citadel, religious and juridical texts were discussed by an impressive circle of learned men, some of them from regions far away. The sultan himself was polyglot, demonstrating the cosmopolitan atmosphere in Mamlūk quarters that contrasts favourably with the parochial and self-sufficient narrowness of the local Egyptian academe.

The relationship between the Mamlūk military aristocracy and the local population in all its different layers, both in the cities and in the countryside, had always been contradictory. The Mamlūks were the lords of the country and their autocratic powers were more or less unrestricted. They controlled the Egyptian economy through the *iḳṭāʿ* system, or, the further we advance in history, increasingly through the fun-

nelling of public funds into *awḳāf* of which they could, as has been said, dispose at liberty. Not without good reason, religious critics rebuked the liberality with which Mamlūk magnates spent their allegedly personal funds for endowments. These *awḳāf* were, it was said, to perpetuate the name of the *wāḳif* and otherwise to serve the needs of the sons and grandsons, to whom otherwise no privileges could be bequeathed; thus this sanctimonious behaviour was vituperatively brought into relief.

As founders and administrators of *awḳāf*, the Mamlūks also exercised great influence upon the civilian élites. It was within their prerogatives to dismiss professors or *shaykhs* who displeased them. In the *khānaḳāh* [*q.v.*], the Ṣūfī convent (an institution going back to Ṣalāḥ al-Dīn al-Ayyūbī's days and actively promoted especially by Baybars II Djāshenkīr and al-Malik al-Nāṣir Muḥammad b. Ḳalāwūn), the Mamlūks found a vehicle to exercise at least some influence upon the religious classes. On the one hand, they staffed these Ṣūfī establishments with men in their confidence—preferably, as has been mentioned, of Ḥanafī *madhhab* and often of foreign background (the *khawāniḳ* were interesting centres for the study of Persian and Turkish in Mamlūk Egypt). On the other hand, by stipulating a strictly orthodox curriculum and by gradually merging the functions of the *khānaḳāh* with those of the *madrasa* and Friday mosque, they secured the grudging approval of their potentially sharpest critics, the Shāfiʿī legists of autochtonous Egyptian origin. The celebrated al-Suyūṭī was one of the few who adamantly resisted any such temptations by the Mamlūk court. His prestige was so high that the sultan could not afford to punish him for his obstinate refusal to pay even minimal honours to the ruler.

The question to which degree, if at all, Mamlūk autocracy was intrinsically limited, has been discussed in recent research, but the time for a conclusive answer has not yet come. Certainly, the Mamlūks who were transplanted from an alien world into the tightly-knit web of Egyptian society, could not simply rule in splendid isolation in the Cairo citadel aloof from the *misera plebs*. The irritation with which the Egyptian *ʿulamāʾ* registered Mamlūk inroads into their own domains; the numerous bonds established between the military and the judiciary by marriage and patronage; the Mamlūk and civilian joint ownership of land and urban property to be gained from the documents; and last but not least the interesting mediating role played by Mamlūk offspring, who were not supposed to inherit the functions and privileges of their fathers and were thus enticed into looking for opportunities in the civil sphere—all these phenomena (that still require careful and copious future research) attest to a heterogeneous, but by no means totally segregated or polarised society. Certain groups within the civilian élite were, as Carl. F. Petry has shown, even very closely tied to the Mamlūks. One can single out the foreigners whom the sultans (and grandees) had brought with them from Syria to Egypt. And there were, as has been mentioned, neo-Muslims of Christian background whose loyalty appeared dubious to the Egyptian Muslims and Christians alike and who were therefore bound to tie all their fortunes to their Mamlūk lords. Furthermore, the merchant class had (at least until Barsbāy established his state monopolies) free access to the rulers. Successful long-distance merchants such as Madjd al-Dīn al-Sallāmī, the father of the Mongol-Mamlūk rapprochement, and the numerous representatives of the merchant community of Isʿird or Siirt in northern Syria, were helpful diplomatic envoys and agents. Much to the annoyance of conservative Mamlūks, funds supposed to be spent for military purposes sometimes found their way into the pockets of civilians whose support was important for the ruler. We already mentioned Ibrāhīm b. Ghurāb, a civilian bureaucrat, whose services to sultan Faradj were honoured with the highest military rank.

We know lamentably little of the lower classes of the Egyptian population, fascinating as this topic is to the social historian. During the incessant Mamlūk uprisings and factional wars in the latter day of the sultanate, we hear again and again of the lumpenproletariat siding with one Mamlūk protector (and patron) or the other. In such critical situations, these *zuʿr* and *ḥarāfīsh* [see ḤARFŪSH] were enlisted as vehicles to spread fright and threats. The main victims of these odd alliances were the small craftsmen, traders and shopkeepers whose property was destroyed or robbed, and who had to fear for their lives.

Yet when the final downfall of the Mamlūk sultanate came, the same people soon seem to have sensed that this régime had not been just a gang of marauders and oppressors. "Rather the tyranny of the Turks than the self-righteousness of the Arabs" (*djawr al-Turk wa-lā ʿadl al-ʿArab*) seems to have been a current slogan in the streets of Cairo as early as the late 9th/15th century, as we read in one of the works by Abū Ḥāmid al-Ḳudsī (d. 888/1483). One had to acknowledge the services which the Mamlūks had rendered to Egypt and to Islam. It is not altogether meaningful and promising to ask, as has been done in the recent past, whether it was the Mamlūk foreign and praetorian régime that was instrumental in barring Egypt from the miraculous developments that brought Western Europe, in the following centuries, the blessings of capitalism, enlightenment, industrialisation and modern thought. Keeping in mind the almost insurmountable ethnic and bureaucratic tensions in this policy, it is not cogent to deny Mamlūk Egypt the character of an organic state.

The end of Mamlūk power and splendour, so vividly depicted also in European travel narratives, consular reports and paintings, was quick and, despite all signs of internal weakness and increasing external vulnerability, unexpected. The mounting pressure on the part of the Ottomans after the accession of the bellicose sultan Selīm I Yavuz (918/1512), the imprudent Mamlūk vacillations in their relationship with the Ottomans' arch-enemy, the heretic Shāh Ismāʿīl Ṣafawī of Persia, and the picture of complete discord presented to the outside, induced Selīm to invade Syria in 922/1516. Largely thanks to the high treason and defection of the Mamlūk governor of Aleppo, Khāʾir Bey, but also the superior fighting power of the Ottoman army with their muskets, the Mamlūks with all their outmoded knightly ethos were utterly defeated. Sultan Ḳānṣawh al-Ghawrī, eighty years old, died of an apoplectic stroke during the battle. His royal standard and other spoils of this crucial battle of Mardj Dābiḳ [*q.v.*] today adorn the War Museum in the Topkapı palace in Istanbul. Incited, invited, and almost driven by the ambitious Mamlūk traitors headed by Khāʾir Bey, Selīm followed the defeated Mamlūk army into Egypt. Here Ṭūmān Bāy had been elected new sultan in the hour of affliction. But his troops had no chance either. They lost twice to the Ottomans, at al-Raydāniyya before the gates of Cairo, and then finally close to Djīza, i.e. at a site where so many battles were fought that became decisive for the history of Egypt. Ṭūmān Bāy was cap-

tured and mercilessly hanged on the Bāb Zuwayla by the Ottoman invader, to the intense despair of the population of Cairo. Reports of the mid- and late-10th/16th century still echo the sadness with which this tragic end of the Mamlūk kingdom was registered by the people of Egypt. A splendid chapter in the history of the country had come to an end. The unique Mamlūk system with its chivalrous ethos and its peculiar morale, that combined the utmost brutality in its internal controversies and its sacrificial spirit for Muslim and Egyptian interests; a flourishing cultural, scholarly, and religious life; the impressive architectural heritage that continues to characterise mediaeval Cairo to our days; the conservative tranquillity of life, at least in the good days of Mamlūk history—all these and many more reminiscences may have contributed to keep this outlandish régime in a far from solely negative memory. Many institutions of Mamlūk Egypt, including the principle of recruiting Caucasian, white slaves, were to survive the Ottoman conquest. It was only in those ensuing decades that the term Mamlūk received its exclusively bleak connotations that are prevalent into our own time.

Bibliography: The vast primary and secondary literature on Mamlūk Egypt until 1967 has been brought together in I.M. Lapidus, *Muslim cities in the later Middle Ages*, Cambridge, Mass. 1967, 217-42 (a total of 573 entries, many of which deal with Syria). An important supplement to this list is contained in the new edition of this work, Cambridge, England 1984, 192-7. One may also consult the appendix on sources and studies in U. Haarmann, ed., *Geschichte der arabischen Welt*, Munich 1987, ch. "Der arabische Osten im Mittelalter" (U. Haarmann), 640-7.

Monographic descriptions of the history of Mamlūk Egypt of recent vintage are P.M. Holt: *The age of the Crusades. The Near East from the eleventh century to 1517*, London 1986 (see esp. the bibliographical essay on the primary sources at 207-16) and R. Irwin, *The Middle East in the Middle Ages. The early Mamluk sultanate 1250-1382*, London 1986 (a second volume on the Circassian régime is announced). (U. Haarmann)

6. The Ottoman period 1517-1798.

On 29 Dhu 'l-Ḥidjdja 922/23 January 1517 the Ottoman army under Selīm I annihilated the last Mamlūk field force at al-Raydāniyya outside Cairo. Al-Ashraf Ṭūmān Bāy, the fugitive Mamlūk sultan, was betrayed to the Ottomans and hanged at the Zuwayla Gate of his former capital 22 Rabīʿ I 923/14 April 1517. To the Ottomans, a potentially dangerous rival power had been eliminated, and the extensive territories of Syria and Egypt had been annexed. To some Mamlūks, however, Selīm had been a useful ally in their inveterate factional politics. The Ottoman victory at Mardj Dābiḳ [*q.v.*] had at least been facilitated by the defection of the Mamlūk governor of Aleppo, Khāʾir Bey, who, after the occupation of Syria, had urged Selīm to advance on Cairo and overthrow Ṭūmān Bāy. Probably Selīm would have left Ṭūmān Bāy as a vassal ruler, but the Mamlūk sultan's own partisans rendered such an accommodation impossible. The outcome of the conquest was not the destruction of the Mamlūks and their institutions but a developing symbiosis of Mamlūk and Ottoman elements, which evolved into a curious and anomalous policy within the Ottoman imperial system.

The triumph of Khāʾir Bey's faction was consummated when he was left as viceroy, bearing the old Mamlūk title of *malik al-umarāʾ* and residing like the former sultans in the Citadel of Cairo. Under him, the proscription of the Mamlūks soon ended; they, as well as the bureaucrats of the old régime, returned to comfort, dignity and office. Selīm had however left an Ottoman presence in the form of garrison troops: the two infantry formations of the Janissaries (*Mustaḥfiẓān*) and the *ʿAzebān*, and the two cavalry corps of *Gönülliyān* and *Tüfengdjiyān*. To these were added by 1524 two other cavalry corps: the *Čerākise* (recruited from Circassian Mamlūks) and the *Čawushān*, and in 1554 a third, the *Müteferriḳa*, the viceroy's bodyguard. Khāʾir Bey's successors were Ottomans from Istanbul. One of them, Ibrāhīm Pasha (931/1525) was also the grand *wezīr*, and was responsible for the promulgation of the *ḳānūn-nāme* [*q.v.*], which regulated the administrative system of Ottoman Egypt. The Mamlūk territorial divisions remained as subprovinces under governors designated, as in the past, *kāshifs*, who were also perhaps usually of Mamlūk origin. Upper Egypt was dominated, as it had been under the last Mamlūk sultans, by a clan of Hawwāra [*q.v.*], the Banū ʿUmar, who ruled the region until 1015/1606-7. An Ottoman reform, at first of great significance, was the ending of the Mamlūk system of assignments of revenue (sing. *iḳṭāʿ*) as remuneration. A new cadastral survey was made in 933/1526-7. The intention was, it seems, to substitute a salaried military and civil establishment for the *muḳtaʿ*s of the old régime.

These steps towards the ottomanisation of Egypt followed a time of troubles. Shortly after Khāʾir Bey's death (928/1522), a revolt broke out, headed by two survivors of the old régime, Djānim and Ināl, who now held office as *kāshifs*. Their rebellion was suppressed by Ottoman troops under the Ottoman viceroy. In 930/1524 a more serious challenge was offered by a later viceroy, Aḥmad Pasha (*al-Khāʾin*, "the Traitor"), who although not himself a Mamlūk, recruited a private army mainly from Mamlūks and usurped the sultanate of Egypt. Expelled from Cairo by a loyalist counter-group, he was shortly afterwards captured and executed.

The ensuing period of about 60 years was uneventful. Egypt was administered according to the *ḳānūn-nāme* by a succession of viceroys in consultation with the council of notables, the *Dīwān*, which met four times weekly. Nevertheless, developments during this time were to produce the troubled history of Egypt in the next 200 years. An important factor was a shift in the financial system, as tax-farmers (sing. *multazim*) increasingly took over the rural and urban sources of revenue. These *iltizām*s passed into the hands of the Ottoman and Mamlūk grandees, and formed the financial basis of their power. The landed *iltizām*s, like the *iḳṭāʿ*s of the old régime, were technically sources of revenue, but in practice (if never in law) they gave rise to a species of rural (but not feudal) lordship controlling the agrarian administration of the villages.

Meanwhile, Egyptian society, formally divided into an Ottoman-Mamlūk ruling group and a mass of subjects (*reʿāyā*), was becoming increasingly complex and, in the towns at least, curiously homogeneous. The Ottoman garrison corps (sing. *ōdjāḳ*), permanently stationed in Egypt, soon ceased to be aliens. Intermarriage with Egyptian women (although repeatedly and ineffectually forbidden), and the abandonment of *devshirme* recruitment, opened the corps to men of Ottoman-Egyptian descent, the *Mīsirliyya*. The occasional arrival of fresh detachments of Ottoman troops does not seem to have provoked the polarisation and conflict which occurred between the local (*yerliyya*) and imperial Janissaries in Damascus. Moreover, the

distinction between the Ottoman military and Egyptian civilians broke down. Probably from about the middle of the 10th/16th century, merchants and artisans of Cairo enrolled increasingly, particularly in the Janissaries and *ʿAzebān*. Their military service was only nominally required; their financial contributions bought them the protection (*ḥimāya*) of their corps in a society where the formal structure of Ottoman government was breaking down. Reciprocally, "military" members of the corps participated in the commercial life of Cairo, and again the later 10th/16th century appears to have seen the increase of this movement.

This beylicate in Egypt presents some unusual features. Although personal or institutional continuity cannot be traced, it seems likely that the *sand̲j̲ak beyis* of Egypt were the ottomanised successors of the high *amīrs* of the Mamlūk sultanate. No longer maintained by *iḳṭāʿ*s, they were originally salaried officers, although later they drew their great wealth from *iltizāms*. They stood apart from the command-structure of the garrison corps. In the 10th/16th century they were not all Mamlūks, and service in Egypt might be only an episode in their careers. In the following two centuries the beylicate became almost exclusively the preserve of Circassian Mamlūks, members of powerful military households, notably the (D̲h̲u 'l-) Faḳāriyya, Ḳāsimiyya and Ḳāzdug̲h̲liyya [*q.vv.*, also MAMLŪKS. (i)(f), (ii)(b)]. By this time, the whole of their careers from the command of expeditionary forces as *serdārs*, normally passed in Egypt, where they became governors of the sub-provinces, and acquired a prescriptive right to the great and profitable offices of *defterdār*, *amīr al-ḥād̲j̲d̲j̲* and interim viceroy (*ḳāʾim maḳām*). The neo-Mamlūk households included hereditary and *mamlūk* members, as well as free-born armed retainers (sing. *sarrād̲j̲*). The original demarcation between the military corps and the beylicate broke down as corps officers founded *mamlūk* households (notably the Ḳāzdug̲h̲liyya), while Mamlūk chiefs enrolled their free-born retainers in the corps. In the 12th/18th century the links of patronage and clientage were far more important than the formal structure of Ottoman-Egyptian administration.

In that formal structure, the weakest element was the Ottoman viceroy at its head. Holding office briefly and precariously, usually a stranger to the province which he governed, the viceroy endeavoured to secure the transmission of the annual tribute (*irsāliyye* [*q.v.*]) to the sultan's treasury, and to acquire a personal fortune sufficient to defray his own expenses in obtaining the post. Both his public and his private interests therefore ran counter to those of the *multazims*, who were concerned to secure as large a share as possible of the revenues they farmed. The end of the 60 peaceful years of Ottoman administration came in 994/1586, when a military revolt was provoked by an inquiry into a deficiency of the *irsāliyye*. The viceroy, formerly an Ottoman treasury official, was brought down from the Citadel and deposed by the troops. This was the first of a series of revolts, which culminated in the killing of a viceroy by rebels in 1013/1605. Although severe repressive measures were taken between 1016/1607 and 1020/1611, they did not result in any permanent restoration of the viceroys' authority. Henceforward with rare exceptions, they gained what influence they could by playing off rival grandees against one another. During the 12th/18th century they became virtually prisoners in the Citadel, pompously received by the grandees, and sometimes ignominiously deposed by them.

In the middle decades of the 11th/17th century, the dominant figures in Egyptian politics were the beys. In 1040/1631 they removed a viceroy who had procured the murder of one of their number, invested a bey as *ḳāʾim maḳām*, and reported the matter to the sultan's government, which confirmed their action, thereby setting an important precedent for the next century. The beylicate was at this time divided between the households of the Faḳāriyya and the Ḳāsimiyya, between whom there may have been some degree of ethnic rivalry, the former being Circassians and the latter apparently in part Bosniak. The head of the Faḳāriyya, Riḍwān Bey, was *amīr al-ḥād̲j̲d̲j̲* almost continuously from 1041/1631 to 1066/1656. A curious genealogical work of these years suggests that he regarded himself as the lineal and lawful successor of Barḳūḳ and Barsbāy. If, however, he nourished plans for a revival of the Mamlūk sultanate, he died with them unrealised. Thereafter, the fortunes of the Faḳāriyya quickly declined. The turning-point was an episode known as "the Conflict of the Beys" (*wāḳiʿat al-ṣanād̲j̲iḳ*) in 1071/1660. The incident which set off the crisis was significant in itself. It began as no more than a rural affray between the peasants of two *multazims*, but one of them was a Janissary officer and the other was supported by the rival *ʿAzebān*. The backing given by the Faḳāriyya to the Janissary *multazim* involved them in resistance to the viceroy, who was inevitably brought into alliance with Aḥmad Bey the Bosniak, the chief of the Ḳāsimiyya. The Faḳāriyya were proscribed and almost annihilated. This episode was an early manifestation of a polarisation which ran through the Egyptian society of the period: the Mamlūk Faḳāriyya and Ḳāsimiyya households were linked (not always in a stable coalition) with the rival Janissary and *ʿAzebān* corps, and there was a further link with a more ancient popular schism, originally of Arab tribal origin, between two groups designated Saʿd and Ḥarām.

The Ḳāsimiyya had broken the Faḳārī ascendancy but their triumph was brief. The next viceroy procured Aḥmad Bey's assassination, and the beys, while retaining their hold on the great offices and fulfilling their military functions, ceased to challenge the viceregal authority and relapsed for some decades into political obscurity. During these years the power of the Janissaries was at its height, but the corps, like the beylicate, was a faction-ridden body, as the events of 1087/1676-94 were to show. In these years a turbulent junior officer (*bās̲h̲ ōdā bās̲h̲ī*), Küčük Meḥmed, repeatedly made himself the most powerful man in the corps. At the end of his career he assumed the role of a popular tribune. In 1103/1692, after a successful coup, he compelled the commanding officers of the seven corps to abolish the protection dues (*ḥimāyāt*) levied on the tradespeople of Cairo; and in 1106/1694, when the city was threatened by dearth and famine after the failure of the Nile flood, he intervened vigorously to hold down the price of the grain. This measure offended not only the dealers but also their patrons among the Janissary officers. At this point, Küčük Meḥmed was murdered, grain-prices rose immediately, and Cairo experienced a dreadful famine. The instigator of the murder was almost certainly a high officer of the Janissaries, Muṣṭafā Kʸahyā al-Ḳāzdug̲h̲lī.

The coup of 1103/1692 has further political significance in that it marks the revival of the political activity of the Faḳāriyya. In the 32 years since the Conflict of the Beys, the household had been refounded and at this time it held most of the great offices. The Faḳārī chief Ibrāhīm Bey was seeking to

gain control of the Janissaries in collusion with Küčük Meḥmed. The attempt collapsed with Küčük Meḥmed's death, but ironically his opponent Muṣṭafā al-Ḳāzdughlī had also been an associate of Ibrāhīm Bey in the coup and was the founder of a Mamlūk household allied to the Faḳāriyya.

The next major political crisis, the Great Insurrection (*al-fitna al-kubrā*) of 1123/1711, also began with a Janissary boss, the *bāsh ōdā bāshī* Afrandj Aḥmad. His activities set the Janissaries against the other six corps, headed by the *ʿAzebān*, who were supported by the Ḳāsimiyya, while the Faḳāriyya were on this occasion divided. At the end of the episode the Ḳāsimiyya were completely victorious. Afrandj Aḥmad had been put to death, and the site of political power had moved to the Mamlūk households. While the old constitutional structure remained, with the viceroy at its head and his *Dīwān* as his council of state, the *de facto* supremacy (*riʾāsa*) was held by the head of the dominant household. When, as always after 1168/1754, the holder of the *riʾāsa* was a bey, he came to be called *shaykh al-balad*. An assembly of the grandees (*djamʿiyya*) appears to have superseded the *Dīwān* as the effective consultative body. Meanwhile Upper Egypt, the granary of Cairo, reverted to tribal rule, the various chiefs being allied to the Faḳāriyya or the Ḳāsimiyya. From about 1153/1740-1 onwards, the paramountcy was held by Shaykh Humām b. Yūsuf, who came from a section of Hawwāra.

The ascendancy of the Ḳāsimiyya ended in 1142/1730. Their chief opponents were now the Ḳāzdughliyya, headed by Ibrāhīm Kʸahyā, a corps officer like the founder, and the last to play a major political role. Although henceforward until the coming of Bonaparte the Ḳāzdughliyya virtually monopolised the *mashyakhat al-balad* and the great offices, they in turn split into rival households. The ultimate victor in a power-struggle after the death of Ibrāhīm Kʸahyā (1168/1754) was ʿAlī Bey [*q.v.*], who ruled Egypt autocratically as *shaykh al-balad*, broke the power of Humām in 1183/1769, and as the sultan's delegate intervened to install a Hāshimite protégé as *amīr* of Mecca in 1184/1770-1. The expeditionary force was commanded by his favourite *mamlūk*, Muḥammad Abu 'l-Dhahab [*q.v.*], who was then sent to invade Syria as the ally of Shaykh Ẓāhir al-ʿUmar, the Arab ruler of Galilee. After taking Damascus, however, he returned to Egypt, and drove ʿAlī Bey into exile in Syria (1186/1772). ʿAlī attempted to regain power, but was intercepted and died of his wounds (1187/1773).

Like Riḍwān Bey in the previous century, ʿAlī Bey had given indications of an ambition to restore an independent Mamlūk sultanate over Egypt and its dependencies. Abu 'l-Dhahab made no such challenge to Ottoman overlordship, and was on campaign against Shaykh Ẓāhir when he died in 1189/1775. The ensuing decade was a miserable period for Egypt. There was a recurrent power-struggle, in which Ismāʿīl Bey, a survivor of Ibrāhīm Kʸahyā's household, was pitted against two of Abu 'l-Dhahab's *mamlūks*, Ibrāhīm Bey and Murād Bey, who together formed a reluctant and unstable duumvirate. Extortion, oppression and anarchy meanwhile reigned in the countryside, while the administration, such as it was, defaulted on the payment of tribute to Istanbul.

This last consideration in particular prompted the sultan's government to make a determined effort to break the power of the Mamlūk beys and to bring Egypt again under effective Ottoman control. An expeditionary force under Djezāʾirli Ghāzī Ḥasan Pasha [*q.v.*] arrived at Alexandria in Shawwāl 1200/August 1786. Proclamations in Arabic promised the reduction of taxes and the restoration of the *ḳānūn-nāme*. The Ottoman forces occupied Cairo and Lower Egypt, but Murād and Ibrāhīm held out in Upper Egypt. The situation was thus at deadlock when Ḥasan Pasha was recalled in Dhu 'l-Ḥidjdja 1201/October 1787, as war with Russia was imminent. The makeshift settlement on his departure left Ismāʿīl Bey as *shaykh al-balad* in Cairo with a small Ottoman supporting force, and Ibrāhīm and Murād nominally confined to the territory they held in Upper Egypt. When Ismāʿīl died of plague on 16 Shaʿbān 1205/20 April 1791, they came back to Cairo and restored their duumvirate. They retained power until another expeditionary force, composed this time of French troops under General Bonaparte, occupied Egypt in 1213/1798.

The high politics of Egypt during this period of nearly 300 years thus consisted largely of a prolonged struggle for power and the control of the revenues, in which the main contenders were the Ottoman viceroy, the Janissaries and *ʿAzebān* corps, and the beys. At the same time, there was a parallel but more obscure movement of low politics: popular movements of one kind or another, stimulated by the recurrent natural cycle of low Nile, dearth and epidemic, and aggravated by the unconscionable exactions of the grandees and their agents. An early phase of this is probably to be found in the revolts in the late 10th-early 11th/late 16th-early 17th centuries, which although ostensibly military rebellions seem to have been produced largely by the rural cavalry corps who lacked the privileges and corporate strength of the Janissaries and *ʿAzebān* in Cairo. A second phase may be observed about a hundred years later, when between 1089/1678 and 1149/1736 repeated episodes of dearth aggravated by monetary crises resulted in a series of popular risings in the capital. The years of oppression and anarchy following the death of Abu 'l-Dhahab in 1189/1775 form a third such phase. Here again the populace of Cairo were the agents of revolt, but associated with them, and giving legitimacy to their actions, were the *ʿulamāʾ*. Al-Azhar became as it were the citadel of resistance to oppression, anticipating the part it was to play during the French occupation.

Bibliography: (1) Published source-materials: (a) Oriental: The Ottoman conquest and the following years to 928/1522 are covered by the final annals of Ibn Iyās, *Badāʾiʿ al-zuhūr fī waḳāʾiʿ al-duhūr*, ed. Mohamed Mostafa, v, Cairo-Wiesbaden 1380/1961; tr. G. Wiet, *Journal d'un bourgeois du Caire*, ii, Paris 1960. Ibn Zunbul, *Taʾrīkh ghazawat al-sulṭān Salīm Khān maʿa al-sulṭān al-Ghawrī*, lith. n.p. 1278/1861, should be regarded as a prose epic rather than factual historiography. Al-Isḥāḳī, *Akhbār al-uwal fī man taṣarrafa fī Miṣr min arbāb al-duwal*, Cairo 1311/1894, concludes with a thin account of the conquest and the viceroys to 1032/1633. Detailed accounts of the revolts of Muḥammad Bey al-Faḳārī (1069/1658) and the great revolt of the Faḳāriyya in 1071/1660 are given by Ibrāhīm b. Abī Bakr al-Ṣawāliḥī/Ṣāliḥī, *Tarādjim al-ṣawāʿiḳ fī wāḳiʿat al-ṣanādjiḳ*, ed. ʿAbd al-Raḥīm ʿAbd al-Raḥmān ʿAbd al-Raḥīm, Cairo 1986. The chronicle of Aḥmad Shalabī/Čelebi b. ʿAbd al-Ghānī, *Awdaḥ al-ishārāt fī man tawallā Miṣr al-Ḳāhira min al-wuzarāʾ wa 'l-bāshāt*, ed. ʿAbd al-Raḥīm, Cairo 1978, covers the viceroys from Khāʾir Bey to 1150/1737. The major source for the period from 1100/1688-9 is the first two volumes of al-Djabartī, *ʿAdjāʾib al-āthār fī 'l-tarādjim wa 'l-akhbār*, Būlāḳ

1297/1880. The French translation by Chefik Mansour *et alii*, *Merveilles biographiques et historiques ou chronique du Cheikh Abd-El-Rahman El-Djabarti*, Cairo 1888-96, is unreliable. Two contemporary reports on Ottoman Egypt have been published by S.J. Shaw: *Ottoman Egypt in the eighteenth century*, Cambridge, Mass. 1962, gives the Turkish text and a translation of Djezzār Aḥmed Pasha's report; for problems of dating, cf. review by Uriel Heyd in *BSOAS*, xxvi (1963), 187-8. *Ottoman Egypt in the age of the French Revolution*, Cambridge, Mass. 1964, is a heavily annotated translation of an Arabic report by Ḥuseyn Efendī, an Egyptian treasury official, to the French administration in 1216/1801. An Arabic text of the report was published by Shafīḳ Ghurbāl as *Miṣr ʿinda mafraḳ al-ṭuruḳ*, in *Madjallat Kulliyyat al-Adab* [Cairo], iv (1936), 1-71. Important Arabic and Turkish chronicles, as well as abundant archival materials, remain unpublished; cf. surveys by P.M. Holt, *Ottoman Egypt (1517-1798): an account of Arabic historical sources*, and S.J. Shaw, *Turkish materials for Egyptian history*, both in Holt (ed.), *Political and social change in modern Egypt*, London 1968, 3-12, 28-51. (b) Western: Chief among these are the writings of European travellers and residents in Ottoman Egypt. As many of these were French, a useful guide is provided by J.M. Carré, *Voyageurs et écrivains français en Égypte (1517-1869)*, 2 vols., Cairo 1932. Examples of such materials are: F. Lestringant, *Voyages en Égypte des années 1549-1552: Jean Chesneau-André Thevet*, Cairo 1984; J.M. Vansleb, *Nouvelle relation ... d'un voyage fait en Égypte en 1672 et 1673*, Paris 1677; C.F. Volney, *Voyage en Égypte et en Syrie*, ed. J. Gaulmier, Paris 1959. At the end of the period is the uniquely important work by Bonaparte's savants, *Description de l'Égypte, État moderne*, Paris 1809-22.

(2) Secondary works: A compendious account of the political history of Ottoman Egypt is given in Holt, *Egypt, the Funj and Darfur*, in *Cambridge history of Africa*[4], Cambridge 1975; for his specialised articles, see Pearson, *Index Islamicus* and *Supplements*. Financial and administrative history are handled in detail, mainly from archival materials, by S.J. Shaw, *The financial and administrative organization and development of Ottoman Egypt, 1517-1798*, Princeton 1958. His article, *Landholding and land-tax revenues in Ottoman Egypt*, in Holt (ed.), *Political and social change*, 91-103, is a useful outline. Of outstanding importance as a deeply researched study of the social and economic history of Ottoman Egypt is A. Raymond, *Artisans et commerçants au Caire au XVIIIe siècle*, 2 vols., Damascus 1974; its range is considerably wider than the title suggests. An important article by Raymond, *Quartiers et mouvements populaires au Caire au XVIIIe siècle*, is in Holt (ed.) *Political and social change*, 104-16. Both original sources and modern writing on Upper Egypt are very deficient. A useful summary of the region's history in the Ottoman period occurs in J.Cl. Garcin, *Un centre musulman de la Haute-Égypte médiévale: Qūṣ*, Cairo 1976, ch. IX. Garcin has also published a document of the period, *Emirs Hawwāras et beys de Girga au XVIe et XVIIe siècles*, in *Annales Islamologiques*, xii (1974), 245-55. (P.M. Holt)

7. The early modern period 1798-1882.

(*a*) *The French occupation, 1798-1801.*

In the night of 1-2 July 1798, a French expeditionary corps under the command of General Napoléon Bonaparte disembarked west of Alexandria, with the aim of threatening the British position in India by occupying Egypt. The Mamlūk army under Murād Bey was defeated (Battle of the Pyramids, 21 July) and Mamlūk rule was ended. The French established a new administration, while seeking to win the cooperation of the Egyptians through a system of *dīwāns* of notables in Cairo and the provinces. Yet the population of Cairo revolted for a first time on 21 October 1798, and there were occasional risings all over the country.

French rule in Egypt was never consolidated. After a campaign into Syria had achieved no decisive result, Bonaparte returned to France on 23 August 1799, leaving the command, successively, to generals Jean-Baptiste Kléber (assassinated on 14 June 1800) and ʿAbd Allāh Menou, a convert to Islam. While from now on the ultimate aim of the French had become to bring their troops safely back to France, they did not give way easily to efforts of the Ottoman Empire, assisted by Mamlūk groups and by Great Britain, at recapturing Egypt. An offensive of Turkish and Mamlūk forces was defeated in the Battle of Heliopolis (al-Maṭariyya) on 20 March 1800, and the consequent second revolt in Cairo was suppressed. In 1801 British landing forces intervened. Now a honourable capitulation was achieved; the French withdrew from the Cairo area in July, and from Alexandria on 2 September 1801.

The three years of French occupation brought Egypt considerable hardship and disruption. The occupiers raised high taxes and interfered with many traditional concepts and institutions. But they introduced new ones in their place. With the troops, an impressive team of French scholars from various disciplines had come, who founded on 23 August 1798 the *Institut d'Égypte* for the purpose of "le progrès et la propagation des lumières". They prepared an encyclopaedic survey of the country which they found, the admirable *Description de l'Égypte*, and prompted innovations in many fields. Some of them may have had no immediate effect on the Egyptian public, but others—e.g., medical work—were certainly noticed. To sum up, it may be stated that the French expedition did not set in motion all modern developments in Egypt, as has sometimes been claimed, but that it brought the country in direct contact with European culture and drew it into the power-play of European politics.

(*b*) *The Ottoman interlude; Muḥammad ʿAlī (1805-48)*

After the withdrawal of the French, the Ottoman Empire on the one hand and several Mamlūk factions on the other tried to re-establish their rule, while Britain sought to maintain influence by playing off these groups against each other. An additional intervening group were the *ʿulamāʾ* of Cairo, who during the French occupation had developed increased self-confidence as leaders of the populace. They found an ally in the person of Muḥammad ʿAlī [*q.v.*], an ambitious officer from Macedonia who had come to Egypt with the Ottoman forces in 1801 and taken command of their Albanian contingent in 1803. An agreement between Muḥammad ʿAlī and the *ʿulamāʾ*, led by al-Sayyid ʿUmar Makram, the *naḳīb al-ashrāf*, served as a basis for a rising against the Ottoman *wālī*, Khurshīd Aḥmad Pasha. On 13 May 1805 the *ʿulamāʾ* declared Khurshīd deposed; Makram and ʿAbd Allāh al-Sharḳāwī, the *shaykh al-Azhar* who under the French had presided over the *dīwān*, invested Muḥammad ʿAlī with viceregal powers. The event is important for Egyptian historical consciousness; while some scholars regard it as lying in the tradition of the *ʿulamāʾ*, who were supposed to intervene against unjust rulers and used to safeguard the interests of the Muslim community by supporting the strongest contender for

power, national-minded Egyptians tend to value it as an act of popular sovereignty at the beginning of the modern Egyptian state. In fact, it cannot be denied that by concluding an agreement with the *ʿulamāʾ*, Muḥammad ʿAlī accepted some sort of constitutional limits to his power.

After the Porte had recognised Muḥammad ʿAlī Pas̲h̲a as *wālī*, he was obliged to share power with the *ʿulamāʾ* for some time, but the banishment of ʿUmar Makram in 1809 marked the end of their political influence. Meanwhile, the British, then at war with the Ottoman Empire, had once more landed troops in March 1807, but in September had been forced to withdraw. Muḥammad ʿAlī succeeded also in breaking the power which the Mamlūks had regained in the provinces, and finally destroyed this military caste by massacring several hundreds of them in the citadel of Cairo on 1 March 1811. From now on he was the undisputed master of Egypt.

For the outside world, Muḥammad ʿAlī's rule was notable mainly for a number of military campaigns, which he undertook at first on behalf of his sovereign, the Ottoman Sultan, but gradually more and more for the purpose of enlarging and strengthening his own domain.

Immediately after getting rid of the Mamlūks, Muḥammad ʿAlī in 1811 opened a campaign against the Wahhābī movement [see WAHHĀBIYYA], which since the beginning of the century had developed into a permanent menace of the Ottoman provinces surrounding Arabia. After many ups and downs, the Saʿūdī capital, al-Dirʿiyya [*q.v.*], was conquered in 1818, and Egyptian control over the Arabian Peninsula was maintained in varying degrees till the early forties.

After securing the oasis of Sīwa in February 1820, Muḥammad ʿAlī began expansion in the Sudan by occupying Dongola, Berber, Sennar and Kordofan in 1820-1; in 1840 al-Tāka, extending towards the Red Sea, was included, and the ports of Suakin and Massawa were leased from the Ottoman Sultan in 1846. The Sudanese possessions were organised under a governor-general (*ḥukmdār*) in *mudīriyyas* in conformity with the Egyptian administrative system.

When the Greek War of Independence began in 1821, the Sultan called once more for the help of his Egyptian henchman. Egyptian troops put down rebellions in Crete and Cyprus in 1822-3, and in February 1825 landed on the Morea [*q.v.*], which they occupied almost completely till the end of the year. In 1826 they took part in the capture of Missolonghi north of the Gulf of Corinth. After British, French and Russian squadrons destroyed the Turkish-Egyptian fleet in the Battle of Navarino on 20 October 1827, Muḥammad ʿAlī decided to terminate his participation in the war. On 6 August 1828 he concluded an agreement with Britain on the withdrawal of the Egyptian forces from the Morea. Crete remained under Egyptian administration till 1840.

The withdrawal from the Greek War marked the beginning of a new phase in which Muḥammad ʿAlī's ambitions turned openly against the Ottoman Empire. For a long time, he had regarded Syria as a desirable accretion to his domain. Using a quarrel with the *wālī* of Ṣaydā as a pretext, he started against him in late October 1831 a campaign which soon induced the Sultan to send his own troops into the fray. After a difficult siege, the Egyptians, under the command of Muḥammad ʿAlī's son Ibrāhīm [*q.v.*], captured ʿAkkāʾ on 27 May 1832 and then took Damascus on 16 June. A victory at Baylān on 30 July opened for them the way across the Amanus mountains to Adana and into Anatolia. At Konya, on 21 December, they won a decisive victory over the Turkish army, taking its commander, the Grand Vezir Res̲h̲īd Meḥmed, prisoner. On 2 February 1833 Ibrāhīm's forces reached Kütahiyya, about 200 km only from Istanbul. Now the European powers intervened in order to save the Empire. Early in May a settlement was achieved, obliging the Egyptians to withdraw from central Anatolia, but giving Muḥammad ʿAlī the *eyālets* of Saydā, Ṭarābulus, Damascus and Aleppo; Ibrāhīm was appointed *muḥaṣṣil* of the *eyālet* of Adana.

During the nine years of their presence in Syria, the Egyptians initiated important modern developments in the fields of politics and economics, but of course the occupation also brought interference and hardships, which caused various rebellions of the population. In 1839 an Ottoman army marched against the Egyptians, yet it was once more defeated in the battle of Nizip (Nuṣaybīn), west of the upper Euphrates, on 24 June. As at the same time, a change of the Sultan's throne (death of Maḥmūd II on 30 June and accession of ʿAbd al-Mad̲j̲īd) and the desertion of the entire Ottoman fleet to Muḥammad ʿAlī increased the threat to the Empire even more, the European powers intervened again in order to prevent the Porte from making too great concessions; only France took the side of Egypt. When Muḥammad ʿAlī refused the conditions offered to him by the London Convention of 15 July 1840, British and Turkish troops landed near Bayrūt on 11 September. Their advance and a rising of the Maronites of Lebanon forced Muḥammad ʿAlī to sign an armistice convention with the British on 27 November. In February 1841, the last Eyptian troops left Syria.

With his Syrian policy, Muḥammad ʿAlī had obviously pursued wider-reaching plans; there had been indications that he thought of substituting an Arab empire for the Ottoman one, or at least of taking over the role of the Sultan's guardian and tutor. After the European powers had stopped him at Kütahiyya he had considered proclaiming his independence. Now he was forced to give up such ambitions. In a final settlement with the Sultan which Muḥammad ʿAlī accepted on 10 June 1841, he had to abandon all his territorial acquisitions except the Sudanese provinces, and to agree to a limitation of his armed forces and the regular payment of tribute to the Porte (set, however, not as a percentage of Egypt's revenues but as a fixed amount). On the other hand he secured the viceregency of Egypt not only for himself but also for his male descendents according to seniority, i.e. the oldest member of the family would be the successor, just like in the Ottoman dynasty. It was also important that the European powers, by assenting to this settlement, guaranteed it. Muḥammad ʿAlī had submitted to the sovereignty of the Sultan, yet had won concessions which prepared Egypt to become a state in its own right.

Muḥammad ʿAlī gained the means for realising his ambitions by a purposeful policy directed towards monopolisation and modernisation. Soon after becoming *wālī*, he abolished the *iltizām* system and confiscated the *rizaḳ aḥbāsiyya* (agricultural *waḳf* estates), thus assuming control of all agricultural land (when from 1829 onwards, he began creating a landed aristocracy by granting uncultivated land to members of his family and to his favourites, they remained initially under his influence, even if these measures prepared the introduction of a system of private property later on). In this way, he could decide in detail what Egyptian agriculture produced. At the same

time, he monopolised the entire trade. As the industries which he created remained state enterprises, it can be said that he controlled the economic life of the country completely. In conjunction with a rigorous tax policy, monopolisation was laid out to finance the foreign enterprises of the ruler, but also to give him a strong centralised power.

All this implied the creation of a modern state apparatus. A new administration was established. The central government was organised on the principle of official deliberation, with the various departments entrusted to *dīwāns*; from 1829 onwards a larger consultative assembly was convened, comprising provincial notables as well as representatives of the *ʿulamāʾ* and, later on, of the merchants. The state organ to which most attention was devoted was, of course, the army; it was no longer recruited from the Mamlūk caste or from mercenaries but raised from the country by conscription. In addition, a navy was built up.

As the bureaucracy and the armed forced needed, above all, qualified people, great efforts had to be made in the fields of training and education. Since 1809 young men had been sent to Europe for studying the military sciences, navigation, shipbuilding, engineering, printing, etc.; the range of subjects was gradually widened, and from 1826 the students went mainly to France. Simultaneously, schools were founded in Egypt (e.g., a land surveyors' school 1816; various officers' schools from 1821; a school of medicine 1827; a school of agriculture and administration 1829; a school of midwifery 1832, being the first girls' school; a polytechnic 1834; a school for languages and translation 1835). Soon the government became aware of the necessity to prepare the students for the technical instruction dispensed by these institutes; so a preparatory school (*madrasa tadjhīziyya*) was opened in 1825, and primary schools (*makātib mubtadiyān*) followed in 1833.

These modernising efforts naturally extended to the economy. In the agricultural sector, new cash-crops (most importantly, long-staple cotton) and new techniques were introduced; irrigation was improved. In the industrial sector, Muḥammad ʿAlī pursued a systematic policy of founding modern factories. At first the production of weapons and ships had priority, but in the 1820s so many textile mills were established that a more general import substitution must have been the aim. In the labour force, foreigners played a considerable role; yet more and more Egyptians were recruited and trained for the factories. Even if the results were far from satisfying, the experiment was remarkable.

The failure of Muḥammad ʿAlī's attempt at empire-building forced him to abandon many of his modernisation plans and to curtail the others. In the economic field, the Anglo-Turkish commercial convention of 1838, and the treaties with other European powers following it, contributed to the decline when the stipulations banning all monopolies and setting a low tariff for imports were applied to Egypt in the 1840s.

Muḥammad ʿAlī's ambitious policies, involving harsh taxation, conscription and other government interference, were painful for the Egyptian people, but they served a grand design for establishing in the East, at an early time, a modern state capable of winning and maintaining political and economic independence. In the end, the attempt was wrecked by European intervention. Yet Muḥammad ʿAlī left the country free of debt and had also avoided granting concessions to foreigners. In addition, many developments pointing towards a modern Egypt had been set in motion. Although Muḥammad ʿAlī, himself a foreigner to the country, relied to a large extent upon military and civilian functionaries from other parts of the Ottoman Empire and upon European advisers, he could not do without the Egyptians. Thus his rule caused or accelerated deep socio-economic and cultural changes. In particular, a new middle class began to rise, trained for service in the modern state by modern schools, dispensing secular education where so far Islamic education had dominated. The necessity of expressing the new knowledge imported from the West in the vernacular set off a revival of the Arabic language and literature [see ʿARABIYYA. ii. 4. Modern written Arabic, and NAHḌA].

When old age made Muḥammad ʿAlī incapable of ruling, his son Ibrāhīm took over the government in April 1848; he was confirmed as *wālī* by a *firmān* of the Sultan on 2 September. But Ibrāhīm died before his father, on 10 November 1848, and a grandson of Muḥammad ʿAlī, ʿAbbās Ḥilmī I, became viceregent. Muḥammad ʿAlī died on 2 August 1849; see further on him, MUḤAMMAD ʿALĪ.

(*c*) *ʿAbbās I (1848-54), Saʿīd (1854-63) and Ismāʿīl (1863-79)*.

After an interval of a few years, the policy of modernisation was resumed by Muḥammad ʿAlī's successors. Now, however, it took place under different conditions. Egypt opened itself to overwhelming foreign influences which were no longer firmly channelled by its government. As a result, the country was led to apparent prosperity but then to financial ruin, dependence and, in the end, foreign occupation.

The interval consisted of the reign of ʿAbbās Ḥilmī I, commonly just called ʿAbbās [*q.v.*], who, widely reputed to be hostile to modernisation, in fact continued the course of retrenchment to which his grandfather had turned after 1841. ʿAbbās was murdered in obscure circumstances on 13 July 1854. The two viceregents succeeding him, Muḥammad ʿAlī's son Muḥammad Saʿīd [*q.v.*], who died on 18 January 1863, and Ibrāhīm's son Ismāʿīl [*q.v.*], were responsible for the opening of Egypt to foreign penetration.

It is undeniable that they brought Egypt considerable material advancement. Their large programs of public works improved the infrastructure. As his only major project in this field, ʿAbbās already began the construction of the Alexandria-Cairo railway, the first in Africa and the Near East (contract with the British engineer Robert Stephenson, 1851). When Ismāʿīl was deposed in 1879 he left a rail network of 1,881 km, covering the Delta and reaching Suez as well as Asyūṭ. Numerous bridges were constructed. The harbours of Alexandria and Suez were extended and modernised. The cities of Cairo and Alexandria profited from generous programs of sanitation, embellishment and extension. Irrigation canals were excavated or improved on an immense scale.

The project which received most attention was the Suez Canal. Shortly after his accession, Saʿīd granted the concession for the building of this waterway connecting the Mediterranean with the Red Sea and the Indian Ocean to the French diplomat Ferdinand de Lesseps on 30 November 1854. Great difficulties of financing and diplomacy hampered its realisation, but construction work started on 25 April 1859, the Porte at last gave its assent in 1866, and on 17 November 1869 the opening of the canal for navigation was celebrated in the presence of an illustrious crowd of international guests.

The focus of economic development lay in agriculture. Beside the great landowners from the viceregal family and the upper stratum, a new class of provincial notables acquired larger estates, after a law enacted by Saʿīd in 1858 had introduced full private property for one category of land and rights close to this status for another. Having established direct relations with the merchants and through them with the international market, these landowners strongly expanded the production of cotton, which was in great demand because of the decline of supply from America during the Civil War. So there was a period of prosperity, even if poor peasants and agricultural labourers did not benefit much. When, however, the cotton boom came to an end in 1866, profits fell and debts grew in the farm sector as a whole. At the same time, this sector had to carry the main burden of the taxes which the government strove to raise continuously. A revival of industrial activities did not go far. State factories, mainly working for the armed forces, suffered under the increasing shortage of funds. Private enterprises remained mostly limited to processing agricultural products (cotton ginning, oil extraction etc.); a considerable number of sugar mills was established on Ismāʿīl's own estates.

In education, also, a new effort was started. A primary school law of 1868 set the aim of integrating the traditional Koran schools, the *katātīb*, into the system of modern state schools. In 1871, the *Dār al-ʿulūm* was founded for the purpose of preparing students of al-Azhar University to teach in the modern schools. In 1873 and 1874 the first regular girls' schoools were opened. The growing number of people who had to some degree received a modern education began to form a stratum from which new intellectual movements could rise.

As far as the government was concerned, economic growth never brought in enough revenue to cover expenditure. The solution was borrowing. Of course, it had always been done, but until ʿAbbās it had not reached important proportions. Then Saʿīd incurred such large obligations that he was forced vastly to increase the floating debt. In 1860 he obtained his first foreign loan on a personal basis, and two years later the first public loan. Ismāʿīl continued in the same way. European capitalists were always ready to lend, but, taking advantage of the privileges granted to foreigners by the capitulations [see IMTIYĀZĀT] and the political influence of their governments, they provided money only under conditions extremely unfavourable to Egypt, which had not only to pay high interest but also to concede even higher deductions from the nominal value of the loans. At the end of Ismāʿīl's reign, the total funded and floating debt came close to £ 100 million. Furthermore, many national assets had passed into foreign ownership; e.g., in 1875 Ismāʿīl had sold his Suez Canal Company shares to the British government. In addition to financial and economic dependence, the result was political interference by the European powers.

The successors of Muḥammad ʿAlī were always eager to preserve and, if possible, to increase the degree of independence with Egypt had reached within the Ottoman Empire. They fulfilled their military obligations toward the Sultan by sending troops when asked (Crimean War 1853-6; suppression of risings in ʿAsīr 1864-65 and Crete 1866; Balkan War 1876-77) and sought to influence the Porte by official and unofficial payments. Ismāʿīl achieved the most noticeable concessions. By a *firmān* of 27 May 1866, the succession of the Egyptian viceregents was changed from the principle of seniority to that of primogeniture. A *firmān* of 8 June 1867 granted Ismāʿīl the title K͟hedive (*k͟hidīw* [*q.v.*]), newly-created in order to distinguish the viceregent of Egypt formally from the *wālīs* of ordinary provinces; at the same time, he was authorised to issue regulations for the internal affairs of Egypt and to conclude agreements with foreign agents, below the level of international treaties, on matters concerning customs, foreigners' police, transit and mails. Finally, a *firmān* of 8 June 1873 recapitulated and supplemented all the rights which Egypt had obtained, including agreements with foreign states on all matters of commerce as well as the contracting of foreign loans; in addition, the number of the armed forces would no longer be limited. Egypt had come close to formal independence from its old sovereign.

Ismāʿīl was also aware of the legal handicaps which the capitulations put on Egypt's dealings with foreigners, and started an important effort to overcome them. Meeting the refusal of Europeans to submit to local jurisdiction and their insistence to have their cases heard before their consular courts, Muḥammad ʿAlī had founded special commercial courts in Alexandria and Cairo consisting of Egyptian and foreign judges. Ismāʿīl took up this idea and, benefiting from the newly-won right of negotiation with foreign governments, in 1867 proposed a judicial reform according to which all cases involving foreigners would be judged by such mixed courts. After difficult negotiations with the capitulatory powers, and after special civil, penal, commercial and procedural codes, founded mainly on French law, had been promulgated in 1875, the Mixed Courts (*al-maḥākim al-muk͟htaliṭa*) were established in the following year, with the serious restriction that the powers deprived them of almost all criminal jurisdiction [see also MAḤKAMA. 4. i. Egypt].

Yet another policy, intended to emphasise Egypt's development as an independent and modern state, was directed toward representation of the people and at least formal restrictions on the absolute power of the ruler. On 25 November 1866 Ismāʿīl inaugurated the Consultative Chamber of Delegates (*Mad͟jlis s͟hūrā al-nuwwāb*), based upon laws issued on 22 October. Its 75 members were elected by the village *s͟hayk͟hs*; it met once a year. On 28 August 1878 the Khedive declared: "Je veux dorénavant gouverner avec et par mon conseil des ministres," establishing the principle of ministerial responsibility; he did so, however, under the pressure of the European powers keen on using the council of ministers for strengthening their control of Egypt [see also MAD͟JLIS AL-S͟HŪRĀ].

For, in the meantime, Egypt's growing difficulties in meeting its financial obligations had raised fears among the European creditors of a complete insolvency, and they urged their governments to intervene. On 2 May 1876 Ismāʿīl was forced to establish a *Caisse de la Dette publique*, comprising a French, a British, an Italian and an Austrian commissioner, to receive those revenues assigned directly for interest and debt repayment. As this did not seem sufficient, on 18 November 1876 the "dual control" was created, through which a Briton and a Frenchman as controllers-general assumed supervision of government revenue and expenditure as a whole. From now on, an increasing number of Europeans were employed in all branches of the administration. An even higher level of foreign involvement was reached when a Briton became minister of finance and a Frenchman minister of public works in the government formed in August-September 1878 under the principle of ministerial responsibility.

In these years, a public opinion had begun to stir, expressing itself in a number of independent newspapers which appeared since 1876 and in discussion circles like that formed around Djamāl al-Dīn al-Afghānī [*q.v.*], who had settled in Cairo in 1871, encouraged by the Egyptian government. At last the Khedive chose to mobilise influential groups of the local society, Turco-Circassians as well as Egyptians, as his allies against foreign control. Early in April 1879, more than three hundred civil officials, army officers, *ʿulamāʾ*, urban and rural notables signed a statement of national demands (*al-lāʾiḥa al-waṭaniyya*). On 7 April Ismāʿīl dismissed the ministry comprising the European ministers and the next day had a national government formed. Feverish diplomatic activity between the European capitals and Istanbul followed. In the end, the Sultan deposed Ismāʿīl on 26 June 1879, appointing his son Muḥammad Tawfīḳ [*q.v.*] as his successor.

(*d*) *The early part of Tawfīḳ's reign* (*1879-82*) *and the ʿUrābī movement.*

Under the new Khedive, the dual control over Egypt's finances was re-established, even if foreigners did not become government ministers again. A final settlement between the country and its creditors was drawn up in the law of liquidation of 17 July 1880, which set the total consolidated debt at £ 98,378,000 and earmarked more than half of all state revenues for interest and repayment. While thus achieving collaboration with the European powers, and while domestic opposition was suppressed, the government made a serious effort at reforms, particularly after Muṣṭafā Riyāḍ Pasha had become prime minister on 21 September 1879. Although obliged to keep state revenues high, Riyāḍ gave orders to collect taxes from the farmers by reasonable methods, without jeopardising anybody's existence; on the other hand he put the screw on the big landowners and reduced their tax privileges. The use of the *kurbādj* or knout by tax-collectors was forbidden and the corvée (*sukhra*) for other than public purposes abolished. But these reform policies were not given time to bear fruit.

Elements of a true national movement were now assembling, consisting of three distinct groups: merchants and rural notables of native stock who, although many of them had been elected to the *Madjlis shūrā al-nuwwāb*, still felt excluded from real power by the old, mainly Turco-Circassian, élite attached to the ruling dynasty; the native officers, who had been admitted to the army in large numbers since Saʿīd's time, yet were prevented from rising to the higher ranks by Turco-Circassian superiors; and intellectuals, mostly those affected by modern education, including technocrats as well as pious Muslims turning towards religious reform, but also conservative *ʿulamāʾ*.

The first to come to the fore were the military. Already on 18 February 1879 a riot of officers discharged for budgetary reasons had played a role in Ismāʿīl's action against foreign control. In January 1881 discontent among the Egyptian officers arose again, as the Turco-Circassian minister of war had retired many of them while sparing those of his own ilk. When the officers asked for the dismissal of the minister, he tried to courtmartial them, thus setting off a general mutiny on 1 February. Tawfīḳ was indeed forced to exchange the minister for one acceptable to the Egyptians, Maḥmūd Sāmī Pasha al-Bārūdī [*q.v.*]. The officers' movement, whose leadership was taken over by colonel (*mīr-alāy*) Aḥmad ʿUrābī Bey, then gained strength by forming an alliance with the rural notables led by Muḥammad Sulṭān Pasha. On 9 September a military demonstration in front of the Khedive's palace in Cairo obtained the dismissal of Riyāḍ Pasha, the formation of a new government under Muḥammad Sharīf Pasha and the election of a new chamber, whose president became Muḥammad Sulṭān. While there was agreement on the need to improve the constitutional system, the chamber clashed with the government over the details. It forced the Khedive to appoint a new ministry on 4 February 1882 under al-Bārūdī, with ʿUrābī as minister of war. Three days later, Tawfīḳ enacted the new basic law for the chamber, now called *Madjlis al-nuwwāb* only; although leaving large powers to the Khedive and the government, it established a certain constitutional control over them by the elected delegates, including the participation of the latter in the budgetary process.

Britain and France, who had been following the rise of the national movement in Egypt with misgivings, on 8 January 1882 had begun a policy of open intervention by proclaiming, in identical notes presented to the Khedive, that they intended to support him and maintain the existing system of financial control. On 15 May they announced the imminent arrival of a combined naval squadron in Alexandria, and on 25 May they demanded the resignation of al-Bārūdī's ministry and ʿUrābī's banishment from Egypt. The ministry resigned indeed, but Tawfīḳ was forced to reinstate ʿUrābī as minister of war. On 11 June there was an outbreak of popular violence in Alexandria in which about forty Europeans were killed, in spite of the presence of the Anglo-French squadron. Meanwhile, international diplomacy and Egypt's Ottoman suzerain had been brought into the drama; but a conference of the powers, opened at Istanbul on 23 June, achieved nothing, and Sultan ʿAbd al-Ḥamīd II [*q.v.*], who would of course have liked to use the chance for reinforcing his influence in Egypt, could only send emissaries there. In the end, the decisive intervention fell upon Britain which, although with great reluctance on the part of the Gladstone government, wanted to prevent France from winning preponderance on the Nile. So it acted on its own by having its ships bombard Alexandria on 11-12 July, on the pretext of keeping the Egyptians from further fortifying the harbour.

This brought about the final break between the Khedive and ʿUrābī, who had remained minister of war when a successor government had been formed after al-Bārūdī's resignation. When Tawfīḳ now sought the protection of British troops in his palace in Alexandria, ʿUrābī proclaimed himself responsible for the defence of the country, demanding that henceforth only his orders shoulf be followed. In Cairo an "emergency council" (*al-madjlis al-ʿurfī*) was established to serve as a provisional government. Consisting of officers and officials, among them some Copts, it made a remarkable effort to mobilise the resources of the country for fighting, but also to maintain order and to protect the European residents.

Up to its end, the ʿUrābī movement enjoyed the moral support of the large majority of the Egyptians, to whom it explained itself in terms of a *djihād* against the domination of infidels. On the other hand, most of the notables who had been its allies abandoned it, as they thought it unreasonable to fight against the Khedive and the British at the same time; and even part of its intellectual supporters withdrew. *Al-Madjlis al-ʿurfī* never succeeded in controlling the whole of the country. Yet British military might was needed to bring the movement down. In August a British

expeditionary corps occupied the Suez Canal and on 13 September 1882 beat the Egyptian army at al-Tall al-Kabīr. *Al-Madjlis al-ʿurfī* capitulated to the Khedive, and ʿUrābī rendered his sword to the British. The leaders and many participants of the movement were tried by military courts; ʿUrābī was sentenced to death, but on British urging the sentence was commuted to exile for life (in 1901 he was allowed to return to Egypt).

The ʿUrābī movement had not aimed at a political or a social revolution. Although refusing obedience to the Khedive, it had never made concrete plans to depose him, and it had always asserted its loyalty to the Ottoman Sultan. As to structural changes in Egyptian society, it had never gone beyond promising more social justice and diminishing the role of the Turco-Circassian aristocracy. Yet it represented a serious endeavour of some important Egyptian groups to decide on their own how Egypt's problems should be solved, and in the *Madjlis al-nuwwāb* it had created an institution for achieving this purpose. Even if the struggle for independence had failed, the foundations of a national consciousness had been laid on which future generations could build.

GENEALOGICAL TABLE OF THE DYNASTY FOUNDED BY MUḤAMMAD ʿALĪ

1. Muḥammad ʿAlī (ruled 1805-48)
   - 2. Ibrāhīm (ruled 1848)
     - 5. Ismāʿīl (ruled 1863-79)
       - 6. Muḥammad Tawfīḳ (ruled 1879-92)
         - 7. ʿAbbās Ḥilmī II (ruled 1892-1914)
       - 8. Ḥusayn Kāmil (ruled 1914-17)
       - 9. Aḥmad Fuʾād Ier (ruled 1917-36)
         - 10. Fārūḳ (ruled 1936-52)
           - 11. Aḥmad Fuʾād II (nominal rule 1952-3)
   - Aḥmad Ṭūsūn
     - 3. ʿAbbās Ḥilmī I (ruled 1848-54)
   - 4. Muḥammad Saʿīd (ruled 1854-63)

MIṢRĀʿ [see ʿArūḍ].

MISRĀTA or misrāta, also Mesrāta, important Berber tribe belonging to the branch of the Hawwāra [*q.v.*] of the Barānis (Brānès) group.

According to Ibn Khaldūn, to whom most of the information concerning this people is owed, the Misrāta derived their origin from a certain Meld, who was the son of Awrīgh, son of Barānis and the brother of the Hawwāra. According to Ibn Ḥazm, and also according to the Berber genealogist Sābiḳ b. Sulaymān, both quoted by Ibn Khaldūn, the Misrāta and other families descended from Meld, including the Saṭaṭ, the Warfal and the Wasīl, had a common grandsire in Lahān, and for this reason they were collectively designated by the name Lahāna. These Lahāna are believed to be identical to the ancient *Laganiki* or *Lasaniki*, a Lybian tribe mentioned by Ptolemy which inhabited the axis Ptolemais (Tolmeta)—Cyrene in Cyrenaica (called Barḳa [*q.v.*] by the ancient Arab authors). The French historian J. Desanges locates this small tribe, whose true name should be read Lasaniki, between 35 and 40 km to the west of Cyrene. It is probably in the same region, or in the mediaeval province of Barḳa in general, that Ibn Khaldūn locates the tribe of the Banū Djaʿfar which claimed to be of Arab origin, but which was descended, if the genealogists of this tribe quoted by Ibn Khaldūn are to believed, "from the family of Misrāta, a branch of the Berber tribe of Hawwāra". The tribe of the Banū Djaʿfar, according to Ibn Khaldūn, was still occupying in the 8th/14th century its ancient sites near (the town of) Barḳa, currently al-Mardj. Apparently it is here that the earliest homeland of the family of Misrāta should be sought, as also that of the ancient *Lasaniki*. Later, but evidently still before the Arab conquest of North Africa, this tribe moved further west, occupying the most eastern sector of the coastal zone of the future *arḍ Hawwāra* in central Tripolitania. Muḥammad al-ʿAbdarī, a traveller and native of Valencia in Spain, who made his pilgrimage to Mecca in 688/1289, on leaving the territory of the Berber tribe of the Ḥāha, near Mogador in Morocco, where his family resided, passed through the *balad* of Misrāta situated in the coastal region of central Tripolitania. According to this traveller, this was an oasis, poor and thinly inhabited. Al-ʿAbdarī's account does not accord with that of Abu 'l-Fidāʾ (d. 731/1331) who provides a totally different description of the *ḳuṣūr Misrāta*, written on the basis of the geographical work of Ibn Saʿīd al-Maghribī (d. 685/1286) a contemporary of al-ʿAbdarī. Abu 'l-Fidāʾ states, speaking of the *ḳuṣūr Misrāta*, that "the land is planted with olives and palms. The inhabitants export horses to Alexandria. Pilgrims on their way (from the Maghrib) to Mecca are treated by them (i.e. by the inhabitants of the *ḳuṣūr Misrāta*) with the utmost courtesy."

In the period of Ibn Khaldūn, who wrote at about the turn of the 8th/14th and 9th/15th centuries, the condition of the canton of Misrāta became still more prosperous. The naming of the town of Misrāta (currently Misurata), borrowed from the name of the tribe, gradually supplanted the usage of Suwayḳat Ibn Mathkūd which had designated, at least from the 6th/12th to the 8th/14th century, the most western conurbation of the oasis of Misrāta. The tribe of Misrāta of Tripolitania, still very numerous in the period of Ibn Khaldūn, was active in commerce. Misrāta merchants visited the Bilād al-Djarīd and the Sudan. A distance of 16 days' march separated Suwayḳat Ibn Mathkūd (or the town of Misrāta) from Zāwilat Ibn Khaṭṭāb in the Fezzan (currently Zouila), which gave access to most parts of the Sudan.

The economic situation of the land of Misrāta remained the same or even improved further towards the beginning of the 10th/16th century, the period of the descriptions of North Africa supplied by Leo Africanus. According to this traveller and writer, Mesrate (i.e. Misrāta) was a canton on the Mediterranean coast which contained numerous castles and villages, some on the plain, the others in the mountains. The inhabitants were, on the evidence of Leo, very wealthy because they paid no tribute and because they were active in commerce. They handled the goods which arrived in their country by Venetian galleys and transported them to Numidia, in other words into the interior of North Africa, where they were exchanged for slaves and other goods coming from Ethiopia and the Sudan. These varied goods, including slaves, were exported to Turkey.

A certain proportion of the tribe of the Misrāta took part in the migrations of its sister tribe the Hawwāra, of which various segments made their way, through Ifrīḳiya, towards what are now Algeria and Morocco. A group of Misrāta which accompanied these segments settled in the central Maghrib, on the mountain of Djabal Hawwāra which dominates the town of Baṭḥāʾ. According to A. Épaulard, the town of Baṭḥāʾ (whose precise location is unknown) was probably situated on the left bank of the Mina, in the region of the present-day town of Relizane, on the main route from Tlemcen to Algiers. Today, only a few ruins remain. Leo Africanus states that in his time, that is about the beginning of the 10th/16th century, al-Baṭḥāʾ was "a large town, very civilised and very populous... built recently by the Africans (Berbers)". According to Épaulard again, it was probably built at the beginning of the 8th/14th century. Later, it was destroyed and, in Leo's time, only the foundations remained.

It may be added that a diminutive group of Misrāta, probably natives of the oasis of Misrāta, arrived at an uncertain period, possibly at the time of the conquest of Sicily by the *ḳāḍī* Asad b. Furāt in 218/826 or shortly afterwards, in the region of the town of Catania, where there were observed (during the period 468-519/1075-1125) peasants belonging to the diocese of this town and descended from the tribe of Misrātah (Misrāta).

MIṢRĪ EFENDI [see NIYĀZĪ].

MIṢṢĪṢ, MIṢṢĪṢA [see MAṢṢĪṢA].

MISURATA [see MISRĀTA].

MISWĀK (A.), a term denoting the toothbrush as well as the tooth-pick. The more usual word is *siwāk* (plural *suwuk*) which denotes also the act of cleansing the teeth. Neither of the two terms occurs in the Ḳurʾān. In *Ḥadīth*, *miswāk* is not used, *siwāk*, on the other hand, frequently. In order to understand its use, it is necessary to know that the instrument consists of a piece of smooth wood, the end of which is incised so as to make it similar to a brush to some extent. The piece of wood used as a tooth-pick must have been smaller and thinner, as appears e.g. from the tradition in which it is related that Muḥammad one day received a visitor and kept the tooth-pick "at the end of his tongue".

Concerning Zayd b. Khālid, it is related that he used to sit in the mosque keeping the tooth-pick behind his ear, "just as a writer will keep his pen" (Abū Dāwūd, *Ṭahāra*, *bāb* 25; al-Tirmidhī, *Ṭahāra*, *bāb* 18). When Muḥammad was in his last hours, there entered a man with a piece of wood fit for a *siwāk*; ʿĀʾisha took and chewed it, so as to make it smooth (al-Bukhārī, *Maghāzī*, *bāb* 83).

In general, *Ḥadīth* emphasises the value attached by Muḥammad to the *siwāk*. When he entered his house, his first movement was towards it (Muslim, *Ṭahāra*, trad. 43; Abū Dāwūd, *Ṭahāra*, *bāb* 27). His servant ʿAbd Allāh b. Masʿūd received the epithet of *ṣāḥib al-siwāk* because he used to take care of Muḥammad's *siwāk* (al-Bukhārī, *Faḍāʾil al-Ṣaḥāba*, *bāb* 20). When Muḥammad woke at night, he cleansed his mouth by means of the *siwāk* before he washed himself and performed the worship (al-Bukhārī, *Adhān*, *bāb* 8; *Wuḍūʾ*, *bāb* 73; *Tahadjdjud*, *bāb* 9; Abū Dāwūd, *Ṭahāra*, *bāb* 30; Muslim, *Ṭahāra*, trads. 46, 47). When fasting, Muḥammad also made use of the *siwāk* (Aḥmad b. Ḥanbal, iii, 445, 446).

The *miswāk* is chiefly used before the *wuḍūʾ* as a preparation before the *ṣalāt*. It is said that this was the practice of Muḥammad (Muslim, *Ṭahāra*, trad. 48), who attached so great a value to it that he would have declared it obligatory before every *ṣalāt* were it not that he feared thereby to overburden his community (al-Bukhārī, *Adhān*, *bāb* 8; Muslim, *Ṭahāra*, trad. 42; Abū Dāwūd, *Ṭahāra*, *bāb* 25; al-Tirmidhī, *Ṭahāra*, *bāb* 18). In one tradition it is said, as a matter of fact, that the obligatory use of the *siwāk* before every *ṣalāt* was introduced by Muḥammad as a compensation for the abolition of the obligatory *wuḍūʾ* before every *ṣalāt* (Abū Dāwūd, *Ṭahāra*, *bāb* 25). In another tradition (al-Nasāʾī, *Djumʿa*, *bāb* 66) the use of the *siwāk* is called obligatory before the Friday worship.

The appreciation of the *miswāk* which appears from all these traditions culminates in the fact that it belongs to the customs of the "natural religion" (*fiṭra*: Abū Dāwūd, *Ṭahāra*, *bāb* 29) or to the ordinances of the Apostles (al-Tirmidhī, *Nikāḥ*, *bāb* 1).

Nevertheless, *Fiḳh* does not declare the use of the *miswāk* obligatory in any case. There is general agreement on this point. According to some traditions, however, the Ẓāhirīs did declare the use of the *miswāk* obligatory before the *ṣalāt*, but these traditions are not generally accepted. According to *Fiḳh*, the use of the *miswāk* is recommended at all times, especially in five cases: in connection with the *ṣalāt*, under all circumstances; in connection with the *wuḍūʾ*, with the recitation of the Ḳurʾān; after sleep; and as often as the mouth has lost its freshness, e.g. after long silence.

According to the school of al-Shāfiʿī, the use of the *miswāk* is blamable (*makrūh*) between noon and sunset at the time of fasting, for the foetid smell (*khalūf*) of the faster's breath is beloved by Allāh (cf. al-Nasāʾī, *Ṭahāra*, *bāb* 6).

It is recommended to use a *miswāk* of *arāk* wood of medium hardness, neither too dry nor too moist; to cleanse the palate as well as all sides of the teeth, beginning from the right side of the mouth, moving the *miswāk* upwards and downwards in order not to hurt the sockets of the teeth.

MĪTHĀḲ (A., the noun of instrument from *wathiḳa* "to trust, have confidence in", or *wathuḳa* "to be firm", in usage the equivalent of the *maṣdar mīmī* or noun of place and time *mawthiḳ*), covenant, agreement, used 25 times in the Ḳurʾān and often linked with its synonym *ʿahd* [*q.v.*].

In a few places, it refers to political compacts (IV, 92/90, 94/92, VIII, 73/72, and cf. the use of *ʿāhada* in VIII, 58/56), and once to the compact between husband and wife (IV, 25/21), but the majority of usages relate to compacts between God and various members of His human creation, the unilateral imposition of a covenant by God upon Man. Thus we have the *mīthāḳ* with the prophets (III, 75/81, XXXIII, 7; cf. VII, 131/134-5); the *mīthāḳ* with Muḥammad himself when he was at Medina (II, 78/84); the *mīthāḳ* with the People of the Book (III, 184/187), once specifically with the Christians (V, 17/14), but most frequently in reference to God's covenant with the Children of Israel at Sinai, subsequently broken by them (II, 25/24, 60/67, 77/83, 87/93, IV, 153-4/154-5, V, 10/7, 15-16/12-13, 74/70). The source of the concept of covenant, and the imagery associated with it, is clearly Biblical, going back to the Pentateuchal *bᵉrīt* (see J. Wansbrough, *Quranic studies. Sources and methods of scriptural interpretation*, London 1977, 8-12). Noteworthy, however, are references to God's *mīthāḳ* or *ʿahd* with the believers (XIII, 20,25,LVII, 8) and the *mīthāḳ* of the Book (VII, 168/169), which link up with the idea which grew as part of the Islamic Creation story of a primordial compact: that God, according to predestinarian interpretations found e.g. in al-Ashʿarī [*q.v.*], separated the future elect from the damned before Man was actually created. Likewise, in a Shīʿī work which apparently stems from the early 4th/10th century and may be from the hand of the historian al-Masʿūdī [*q.v.*], and which aims at proving ʿAlī's role as the *waṣiyy* and the repository of the Prophet's thoughts, the *K. Ithbāt al-waṣiyya li 'l-Imām ʿAlī b. Abī Ṭālib*, we have retailed the story that, in the act of creation, God took a lump of clay, from which were formed the Prophet, the *Ahl al-Bayt* [*q.v.*], etc., and then passed them through the flame unharmed; after this, God concluded with them a *mīthāḳ* involving *tawḥīd*, *risāla*, *imāma*, etc., and then He went on to create Adam (cited by Ch. Pellat, in *Le Shīʿisme imâmite, colloque de Strasbourg (6-9 mai 1968)*, Paris 1970, 78-9).

Muslim lore, building on Ḳurʾān, VII, 171/172, also applied the idea of a covenant (*mīthāḳ*, *ʿahd*), a

pledge (*amāna*) and a promise (*waʿd*) between God and Man to subsequent events, the covenant of Adam and of Adam's progeny [see ĀDAM]; see al-Kisāʾī, *Ḳiṣaṣ al-anbiyāʾ*, ed. I. Eisenberg, Leiden 1922-3, 33-5, tr. in A. Jeffery, *A reader on Islam*, The Hague 1962, 187-8. These concepts were frequently to figure in later Ṣūfī literature; cf. L. Massignon, *Essai sur les origines du lexique technique de la mystique musulmane*[2], Paris 1954, 194, and G. Böwering, *The mystical vision of existence in classical Islam. The Qur'ānic hermeneutics of the Ṣūfī Sahl at-Tustarī (d. 283/896)*, Berlin 1980, 154-6. The Muʿtazila, however, regarded the *mīthāḳ* of pre-eternity as being only a symbolic (*madjāzī*) representation of what actually happened; cf. L. Gardet and M.M. Anawati, *Introduction à la théologie musulmane*, Paris 1948, 218 n. 4, 397.

In modern Arabic political and diplomatic parlance, *mīthāḳ* denotes a treaty, pact or agreement. Finally, one might note that the cognate form *mawthiḳ* is used in the Ḳurʾān, XII, 66, 80, for the assurance from God taken by Jacob upon his sons for their safely bringing back Joseph.

MĪTHĀḲ-I MILLĪ (T.), the "National Pact", a proclamation voted by the last Ottoman Parliament which met in Istanbul in January 1920. Essentially, the National Pact proclaimed the territorial integrity of the remaining non-Arab heartlands of the Ottoman Empire. It was passed at a time when, after defeat in the First World War, the Ottoman Empire was threatened by the dismemberment of Anatolia and Rumelia which was provided for in the abortive Treaty of Sèvres (10 August 1920). Under the terms of that treaty, Greece was to receive a large portion of Thrace and the Dodecanese Islands, whilst there was a distinct possibility that Izmir and its environs would eventually become Greek. Armenia was recognised as an independent state and the Kurds were granted autonomy with the right to choose independence within a year. As early as 1918, alarmed by the threat of dismemberment, societies for the defence of rights were formed in Thrace, Istanbul, Izmir and Manisa, and also in the east of Anatolia.

A meeting of the Society for the Defence of the Rights of Eastern Anatolia which was arranged for July 1919 in Erzurum was used by Muṣṭafā Kemāl (Atatürk [*q.v.*]) to mobilise support from military and local personages for action against the Allies, whose partial occupation of Anatolia was made more obnoxious by the landing of Greek troops in Izmir on 14 May 1919. The Erzurum Regional Congress preceded the National Congress, which was planned to be held in Sivas in September and was announced in a document known as the Amasya Proclamation (21 June 1919), the first call for a national assertion of independence. Although originally called together for regional purposes, the Erzurum Congress soon addressed itself to the national situation. The Congress resolved to maintain the unity of the country, to set up a national government to do so, to rely on the national will, to prevent the Christian population from enjoying privileges which would compromise the political rights and upset social equilibrium, not to accept a mandate, and to bring about the immediate convening of a national assembly. These principles were broadened into a Declaration which, with very few changes made by the National Congress at Sivas, formed a broad basis for the independence proclaimed in the National Pact in 1920. The Sivas Congress (4-12 September 1919) gave the Erzurum Declaration a more national tone by stressing the independence of all Ottoman territories within the borders established by the armistice agreement of 1918, and did not restrict itself to expressing that specific concern about the six eastern provinces, where the Armenian threat in particular was felt, which was evident in the Erzurum Declaration. The Sivas Declaration is also rather stronger in its refusal of privileges to Christians in a way which would alter political control and upset social harmony, and specifically speaks of determination to resist a Greek state in the vicinity of Izmir. In the Sivas Declaration, reference is made to the sentiments of respect and fraternity of all Muslims within the armistice boundary of 30 October 1918—sentiments which could be seen to make concern for Kurdish autonomy unnecessary.

In October 1919 a change of government in Istanbul allowed negotiations to take place in Amasya between Muṣṭafā Kemāl and the Navy Minister, Ṣāliḥ Pasha. At this meeting, which resulted in what has become known as the second Amasya Declaration, there was agreement on the Erzurum and Sivas Declarations. Paricular reference was made to the need to make no new concessions to non-Muslims that would undermine national sovereignty; to cede no provinces to the Allies that were inhabited by Ottoman Muslims; and to call together a freely-elected parliament outside Istanbul, and thus outside Allied influence. The decisions at Amasya were not ratified by the Istanbul government and the parliament met in Istanbul in January 1920, though without the participation of Muṣṭafā Kemāl, who foresaw that he would be in danger. The National Pact was voted on 28 January.

Article 1 of the National Pact went beyond the Sivas Declaration by stipulating that all the territories occupied by an Ottoman Muslim majority formed an indivisible whole whether or not, it is implied, those Muslims lived within or outside the lines of the Armistice Agreement. The Sivas Declaration had only demanded recognition of the indivisibility of territory on the Ottoman Muslim side of the armistice line. Although it seems that this wording reflected pressures to include Syria within the national boundaries, it was recognised in the National Pact that those portions of the Ottoman Empire with a majority Arab population *and* under Allied occupation after 30 October 1918 were to decide their fate by free vote. The Arabs had not been mentioned in the Sivas Declaration.

Article 2 allowed the three *sandjaḳs* (subprovinces) of Kars, Ardahan and Batum, which were adjacent to the Soviet Union, to decide their own future by free vote. (A free vote had already been taken in 1918, under the terms of the Treaty of Brest-Litovsk when the inhabitants had decided to join the Ottoman Empire.) Article 3 required the legal status of Western Thrace to be decided by the free vote of the inhabitants. Article 4 required the security of Istanbul and implied free passage for commerce through the Dardanelles and the Bosphorus. Article 54 ambiguously, but shrewdly, guaranteed the rights of minorities "as defined in the treaties concluded between the Entente Powers and their enemies", implying that the new state would be in good company in denying autonomy to minorities. This article expressed, though in much more general terms, the attitudes towards minorities evident in the Erzurum and Sivas Declarations. But at no point in the

Erzurum and Sivas Declarations, nor in the National Pact, is there any reference to Turks, only to Ottoman Muslims. Although the National Pact clearly did not include areas where there were Arab majorities within its scope, it was not overtly a declaration of *Turkish* independence, however much it came to be regarded as such later. Article 6 declared that no restriction was accepted on political, financial and judicial development—an all-embracing article which does not directly derive from the Erzurum and Sivas Declarations. In short, the National Pact expresses the resolutions of the two congresses in much more general terms, making no specific mention of Christian minorities. It also addresses itself to new problems, sc. those of Western Thrace, Istanbul and the Straits. It was clearly a document for international attention. Ignored at Sèvres, it became nevertheless the basis of the settlement in the Treaty of Lausanne, signed on 24 July 1923.

MITHḲĀL [see dīnār].

MIᶜWADH [see ḥamāʾil].

MIYĀN MĪR, MIYĀDJĪ, Bālā Pīr, popular names of the Indian Ṣūfī saint Mīr Muḥammad or Shaykh Muḥammad Mīr, son of Ḳāḍī Ḳalandar. He was born most probably in 957/1550 at Sīwistān (Sehwan) in Sind. His father died when he was 7 years old, and he received Ḳādiriyya instruction from his mother until the age of 12. He then became a *murīd* and *khalīfa* of Shaykh Khiḍr in the mountains of Sīwistān (said to have died in 994/1586). Miyān Mīr is also said to have maintained an Uwaysī [see uways] contact with the spirit of ᶜAbd al-Ḳādir Djīlānī. At the age of 25, Miyān Mīr came to Lahore, where he enjoyed a reputation for austerities and spiritual powers, including *kashf* and foreknowledge, healing and resuscitation, converse with beasts and trees and nocturnal transport to the cave on Mount Ḥirāʾ [*q.v.*] near Mecca. He received attention from the emperors Djahāngīr and Shāh Djahān [*q.vv.*], and the eldest son of the latter, Muḥammad Dārā Shukūh [*q.v.*] became his discipline and composed a *tadhkira* which is our main source regarding Miyān Mīr. Mullā Shāh Badakhshī, also a subject of this prince's attention, was a principal *khalīfa*. Miyān Mīr was also resorted to by Mughal soldiers and other Central Asian immigrants for healing or the resolution of difficulties. He died at the age of 87 Muslim years, of which more than 60 had been passed in Lahore, on 7 Rabīᶜ I 1045/21 August 1635. Nawwāb Wazīr Khān erected Miyān Mīr's fine tomb and its precinct, which stand in the suburb of Lahore (formerly the cantonment) which bears his name.

Bibliography: Sultan Muḥammad Dārā Shukūh, *Sakīnat al-awliyāʾ* (Storey, no. 1321(2), 998), passim; idem, *Safīnat al-awliyāʾ*, Lucknow 1872, 70-3; Ghulām Sarwar, *Khazīnat al-aṣfiyāʾ*, [Lucknow] 1272/1855-6, i, 154-9; I. Ḳuddūsī, *Tadhkira-yi ṣūfiyā-yi Pandjāb*, Karachi 1962, 563-87. (S. Digby)

MIYĀNA, in the early Islamic souces more usually Miyānidj, a town of Persia situated on the Ḳizil-Üzen [*q.v.*] affluent of the Safīd-Rūd which drains southeastern Ādharbāydjān [*q.v.*]. The modern town lies in lat. 37°20′ N. and long. 47°45′ E. at an altitude of 1,100 m./3,514 ft.

Being at the confluence of several rivers on the section of the Ḳizil-Üzen known in mediaeval Islamic times as the "river of Miyānidj" (cf. Ḥamd Allāh Mustawfī, *Nuzha*, 224, tr. 216), Miyāna (literally, "middle place", cf. Yāḳūt, *Buldān*, ed. Beirut, v, 240) was in mediaeval times an important place on the route connecting Tabrīz with northern Persia and that connecting Marāgha with Ardabīl. It is mentioned in the accounts of the Arab conquest of Ādharbāydjān under Ḥudhayfa b. al-Yamān al-ᶜAbsī (al-Balādhurī, *Futūḥ*, 326), but the settlement of Arabs there does not appear to have taken place till early ᶜAbbāsid times, when al-Manṣūr's governor Yazīd b. Ḥātim al-Muhallabī established there members of the South Arabian tribe of Hamdān (al-Balādhurī, *Futūḥ*, 331; Ibn al-Faḳīh. 285). The Arab geographers of the 4th/10th century describe Miyāna as a moderate-sized but prosperous and fertile place, producing cereals and fruit (al-Muḳaddasī, 378; Ibn Ḥawḳal[2], 333, 353. tr. Kramers and Wiet, 329, 346; cf. also *Ḥudūd al-ᶜālam*, 142, § 35.2; Yāḳūt, *loc. cit.*). A considerable number of *ᶜulamāʾ* traced their origin to it (al-Samᶜānī, *Ansāb*, ed. Hyderabad, xiii, 514-16, s.v. *al-Mayānadjī*). Although no coins ever seem to have been minted there, the place retained some importance into Mongol times, and a battle between the Īl-Khānid Abū Saᶜīd and his rebellious *amīrs* was fought near it in 719/1319 (*Cambridge history of Iran*, v, 409); but in Mustawfī's time it was only a village, together with its dependencies yielding an annual revenue of 25,800 *dīnārs* (*Nuzha*, 86, tr. 88).

At the present time, Miyāna, with a population of 28,447 by the 1970s, is the chef-lieu of a *shahrastān* of the same name, which comprises 290 villages and a population of 173,998, in the province of East Ādharbāydjān. It is a station on the railway line from Tehran to the Russian frontier at Djulfa, opened to Miyāna in 1942. It is described as getting its water from the river and from four *ḳanāts* and as possessing in its Friday mosque the tomb of a grandson of the Imām Djaᶜfar al-Ṣādiḳ called Ismāᶜīl (Razmārā, *Farhang-i djughrāfiyā-yi Īrān*, iv, 515-16).

Bibliography (in addition to references given in the text): Barbier de Meynard, *Dict. géogr., hist. et litt. de la Perse*, Paris 1861, 554-5; Schwarz, *Iran*, 1023-6; Le Strange, *Lands*, 170; Naval Intelligence Division, *Admiralty handbooks. Persia*, London 1945, index. (C.E. Bosworth)

MIᶜZAF, Miᶜzafa (a., pl. *maᶜāzif*), a term denoting today any string or wind instrument or even, more restrictedly, a piano, but one which was

employed in mediaeval Islamic times to instruments with "open strings" (*awtār muṭlaḳa*). Al-Djawharī (d. before 400/1010 [*q.v.*]) and al-Ṣaghānī (d. 659/1261 [*q.v.*]) define them as being "musical instruments which you beat upon like the *ʿūd* (lute), the *ṭunbūr* (pandore) and suchlike", meaning by this that *maʿāzif* were played with the fingers or a plectrum in the same way as the *ʿūd* and *ṭunbūr* were. The *Tādj al-ʿarūs* includes the tambourine among the *maʿāzif*, but it is an erroneous deduction from the saying of ʿUmar, *marra bi-ʿazfi duffin* ("he passed by the sounding of the *duff*"), which has misled many writers (cf. Sachs, *Reallexikon der Musikinstrumente*, s.v.). Al-Khwarazmī in his *Mafātīḥ al-ʿulūm*, 237 (4th/10th century), states that the *miʿzafa* was "a stringed instrument belonging to the people of ʿIrāḳ" whilst al-Muṭarrizī (6th/12th century) says that the *miʿzaf* was "made by the people of Yaman", a provenance which Ibn Khurradādhbih (d. before 300/912) also gives the instrument (al-Masʿūdī, *Murūdj*, viii, 93 = § 3219). A more precise classification is allowed by al-Shalāḥī who includes the *miʿzaf* among barbitons (*barābiṭ*) and lyres (*layrān*), which agrees with our oldest authority, al-Layth b. al-Muẓaffar (2nd/8th century), who says that both *miʿzaf* and *miʿzafa* were terms given to "an instrument of many strings", whilst al-Fārābī (d. 339/950) specifically denominates *maʿāzif* as instruments of "open strings" (Kosegarten, *Lib. cant.*, 77, 110). In the *Kitāb al-Aghānī*, the *miʿzafa* is rarely placed in the hands of the minstrels, probably because it was of inartistic merit. One performer on the instrument, Muḥammad b. al-Ḥārith b. Baskhīr (3rd/9th century), was asked sarcastically if it were a rat-trap (*Aghānī*[2], x, 153).

Tradition avers that *maʿāzif* were "invented" by Ḍilāl (*sic*) the daughter of Lamak [*q.v.*] (al-Masʿūdī, viii, 89 = § 3213, where has been read Ṣillā, the name of Lamak's wife). Since there was a *ḥadīth* condemning *maʿāzif* as signs of the end of the world (al-Tirmidhī, ii, 33) it is quite likely that the *fuḳahāʾ* thought it consistent with policy to make Ḍilāl or Ḍalāl ("error, destruction") the originator of these *malāhī* or "forbidden pleasures". On the other hand, we read that "David the Prophet had a *miʿzafa* on which he used to play when he recited the psalms" (*ʿIḳd al-farīd*, iii, 189), which was an echo of the Jewish tradition that he was an adept on the *kinnōr* (I Samuel, xvi, 16,23). The name may be a survival from the days of belief in sympathetic magic. The voice of the *djinn* was termed *ʿazf*, and the spiritual world could be conjured by the sounds of the *miʿzaf*. In Islamic times, musicians claimed that their music was inspired by the *djinn*. The Greek μάγαδις was an instrument of the same class as the *miʿzaf*. It was of Lydian origin and the name is suspiciously like the Semitic one.

Lyre and cithara. Although we see these instruments in the hands of the ancient Semites on the monuments, they do not appear to have had acceptance among the musicians of Islamic times except with the *fallāḥīn*, unless the seven-stringed *wanadj* (= *zanadj*) of Khurāsān was such an instrument (al-Masʿūdī, viii, 90 = § 3214). Both words are of Greek origin and they appear in Arabic as *lūr* and *ḳīṭāra* generally. In Palestine and Egypt to-day, a primitive type of lyre is known under the name of *ṭunbūra barbariyya* or *ḳīṭāra (kissara) barbariyya*. Villoteau (*Descr. de l'Egypte, état moderne*, i, 918) and Saint Saëns (Lavignac, *Encycl. de la musique*, i, 528) have shown that much of the ancient Greek method of lyre-playing still obtains in the modern Egyptian *ḳīṭāra* playing. It is worthy of notice that the Arabic word for striking the *ḳīṭāra* strings is *ḥarraka*, and this is practically identical with the Greek κρέκω.

Harp. Whilst we possess an actual example of a Sumerian harp with the sound-chest below the strings, this type does not seem to have had any vogue with the Arabs or Persians in artistic music, and is only found among the peasantry. In Palestine and Upper Egypt to-day it is called the *ṭunbūra sūdānī* and *nanga*. The harp with the sound-chest above the strings has been a far more important instrument with the Semites and is to be found in the Assyrian sculptures (cf. Assyr. *sanaḳu* and Ethiopic *sanḳo*). Ewliyāʾ Čelebī says that this instrument, which the Persians called the *čang*, was "invented" by Pythagoras to solace Solomon (*Travels*, i/2, 227), and even al-Shalāḥī says that it was of Byzantine (*Rūmī*) origin (fol. 15). Yet Ibn Khurradādhbih and al-Djawharī show that it was peculiar to the Persians and, indeed, the type may be found on the Sāsānid sculptures (Ker Porter, *Travels*, ii, 175). The Arabs called it the *djank* or *ṣandj* (cf. al-Djawālīḳī, ed. Sachau, 97). It may be that the *djank* and *ṣandj* were different types of harp, the Persian and Arabian. There were certainly two types, the straight sound-chest and the crooked. In the *Mafātīḥ al-ʿulūm*, the Byzantine *salbāḳ* (σαμβύκη) and *lūr* (λύρα) are likened to the *djank* and *ṣandj* respectively. Among the Arabs, the *djank* is mentioned as early as al-Aʿshā (Maymūn, d. *ca.* 8/629). Al-Fārābī devotes a section in his *Kitāb al-Mūsīḳī* to *maʿāzif*, *djunūk* or *ṣunūdj*, and other instruments "in which there is made to every note, according to its state, a solitary string", and he shows them strung with both fifteen (diatonic) and twenty-five (chromatic) strings (Kosegarten, *loc. cit.*). Both Ibn Sīnā (d. 428/1037 [*q.v.*]) and Ibn Zayla (d. 440/1048) deal with the *ṣandj*, whilst in the *Kanz al-Tuḥaf* (8th/ 14th century) and the works of Ibn Ghaybī (d. 839/1435) the *čang* is fully described. The oblique sound-chest was 109 cm. long, and the handle (*dasta*) 81 cm. long. From the sound-chest to the horizontal bar below, twenty-four or twenty-five strings of goat's hair were stretched, being fastened to metal pegs (*malāwī*). Some players even used thirty-five strings so as to embrace the scale of the Systematists. The face of the sound-chest was of skin, but the remainder of the framework was of vine or plum tree wood. The handle was placed under the left arm (cf. the pictures in the mss.) and the fingers of both hands were used in performance, plectra (*zakhamāt*) being fastened to the finger tips. Nowadays, the harp has fallen into complete desuetude among the Arabs and Turks. Even among the Persians it has become rare, and in its modern form it was little different from the occidental instrument (Advielle, *La musique chez les Persans*, 13), whilst the instrument shown by Kaempfer (16th century) under this name was a zither. In 1638 Ewliyāʾ Čelebī found only twelve players of the *čang* in Istanbul because, he said, it was a difficult instrument to play (*Travels*, i/2, 234). At this time, the Turkish *čang* had forty strings, and a very large instrument of the 16th (not 17th) century is given by Engel (*Mus. instrs. in the South Kensington Museum*, 59).

Although the "humped back" of the *čang* or *djank* became a favourite theme for poets, and it was certainly the best known type, yet an instrument with a "straight back" was also to be found. A more pronounced "hump" existed in a type mentioned by Ibn Ghaybī and called, probably on account of this feature, the *agrī*. It was strung similarly to the *čang* but had a wooden instead of a skin face on the sound-chest, and its tuning-pegs were also of wood.

A Byzantine harp called the *salbāḳ* (erroneously written *salyāḳ*, *shalyāḳ* [cf. SHALYĀḲ in *EI*[1], which clashes with the opinion of the present writer], or *salbān* in most dictionaries and manuscripts) was also known to the Arabs. It was actually a survival of the

old Greek σαμβύκη, and is described in the *Mafātīḥ al-ʿulūm*, 236, as "an instrument of the Greeks (*Yūnāniyyūn*) and Byzantium (*Rūm*) resembling the *djank*). According to Ibn Khurradādhbih, it had twenty-four strings (al-Masʿūdī, viii, 91 = § 3216; cf. Farmer, *Byzantine musical instruments in the ninth century*, 4 ff.). Ibn Sīnā classes it with the *ṣandj* among the instruments with "open strings" stretched across a space.

Psaltery. In describing those instruments with "open strings" stretched across a surface, both Ibn Sīnā and Ibn Zayla mention a particular type named the *ʿanḳāʾ*. Whilst the name suggests a "long-necked" instrument, the details given of strings of different lengths but identically situated bridges (*ḥamilāt*), compel one to recognise in it a trapezoidal psaltery, one species of which was known later as the *ḳānūn*. The word *ʿanḳāʾ* also stood for "phoenix" and we know that the Greeks of old had an instrument called the φοίνιξ. This may account for both the instrument and the name among the Arabs. It is not mentioned, however, after the 11th century.

The *ḳānūn* [*q.v.*], the present-day psaltery of the Arabs and Turks, is said by Ibn Ghaybī to have been invented by Plato, although the instrument as known in the 4th/10th century is attributed to al-Fārābī (Ibn Khallikān, *Biog. dict.*, iii, 309). The word itself is derived from the Greek χανόυν. Although the instrument is delineated in the various mss. of the Syriac lexicon of Bar Bahlūl (4th/10th century) *sub kithara*, yet the name *ḳānūn* is not given. It is mentioned in the *Thousand and one nights* (ed. Macnaghten, 49th and 149th nights), and in one place is designated the *ḳānūn miṣrī* ("Egyptian psaltery"). In Spain it was particularly favoured, and al-Shaḳundī (d. 628/1231) includes it among the Andalusian instruments manufactured at Seville (al-Makkarī, *Analectes*), ii, 142,4). In the Persian *Kanz al-tuḥaf* and in Ibn Ghaybī it is described in detail. The shallow, flat, trapezoidal sound-chest, 9 cm. deep, was made of vine or plum tree wood. The lengths of the bass and treble sides were 81 and 40.5 cm. respectively, whilst the oblique side was 74.25 cm. It was mounted with sixty-four strings (seventy-two? thus in Ibn Ghaybī), arranged trichordally. Although the *ḳānūn* has fallen into disuse in Persia, it is still a great favourite in the Maghrib, Egypt, Syria and Turkey, where it is to be found strung trichordally with from fifty-one to seventy-five strings.

A rectangular type of psaltery of greater compass was the *nuzha*. It was invented by Ṣafī al-Dīn ʿAbd al-Muʾmin (d. 693/1294) and a design is sometimes to be found in his *Kitāb al-Adwār* (see Farmer, *Arabic musical mss. in the Bodleian Library*, frontispiece). Its features are also fully discussed in the *Kanz al-tuḥaf* and by Ibn Ghaybī. Its dimensions were 74.25 × 54 cm., whilst the depth of the sound-chest was 27 cm.; 108 strings were mounted in the instrument.

Dulcimer. Ibn Sīnā and Ibn Zayla describe an instrument with "open strings" played on with beating rods (*maṭāriḳ*) which is called the *ṣandj ṣīnī* ("Chinese *ṣandj*"). This is clearly the dulcimer, later to be generally known as the *sinṭīr* and *sanṭūr* (also written *ṣanṭūr*, *sinṭīr* and *ṣanṭīr*), a word derived immediately from the Aramaic, but probably traceable to the Greek ψαλτήριον. Indeed, it is invariably found in the hands of Jews and Greeks. It is of similar structure to the *ḳānūn*, but with two of its sides oblique instead of one. The strings, which are mounted dichordally in Egypt, are of metal and are beaten with sticks (*maḍārib*) instead of plectra as in the *ḳānūn*. We find it mentioned by Ibn Khaldūn (d. 808/1406) and al-Haythamī (d. 970/1563), but its popularity was but fitful among the Arabs. In the 18th century it is doubtfully acknowledged by Russell (i, 152) and Niehbur (*tumpanon*). In Egypt, both Villoteau and Lane show that it was only to be found in the hands of Jews, Greeks and other foreign residents, whilst native writers like Mushāḳa and Darwīsh Muḥammad make no mention of it. To-day it is practically unknown in Syria and Egypt. In the Maghrib it is unnoticed by Höst, Christianowitsch and Salvador-Daniel, and although it is dealt with by Delphin and Guin, it is scarcely known to-day. In Persia, however, it obtained greater recognition. In the 17th century it is mentioned by Chardin but not by Kaempfer, whilst Advielle in the 19th century gives both a design and a description. In Turkey, whilst the word is registered in the 17th century by Meninski, it is not mentioned by Ḥadjdjī Khalīfa, nor described by Ewliyāʾ Čelebī, in their lists of Turkish musical instruments. In the next century, however, it is recognised by Toderini, and to-day the *sanṭūr* is one of the most esteemed instruments in the country, where it may be seen in two forms: the *sanṭūr turkī* and the *sanṭūr fransiz*. The former, exclusively used by the Jews, has 160 strings, grouped in fives, giving thirty-two notes, a two octave chromatic scale. The latter, which is confined to the Turks, was introduced from the West about the middle of the last century by a certain Ḥilmī Bey. It is mounted with 105 strings, also grouped in fives, which are placed on the sound-chest in the Occidental way.

(H.G. FARMER)

MIẒALLA (A.), lit. "an instrument or apparatus for providing shade, *ẓill*," apparently synonymous with the *shamsa*, *shamsiyya*, lit. "an instrument or apparatus for providing shelter from the sun", probably therefore referring to the sunshade or parasol born on ceremonial occasions and processions [see MAWĀKIB] over early Islamic rulers.

1. In the ʿAbbāsid and Fāṭimid caliphates.

The historical sources provide a few references on practice in the ʿAbbāsid caliphate. Thus the official Muḥammad b. ʿAbd al-Malik al-Zayyāt [see IBN AL-ZAYYĀT] was responsible in al-Muʿtaṣim's time for the manufacture of *inter alia* the *m.sh.m.s* (? *mushammas*, *mishmas*) (al-Ṭabarī, iii, 1183). During al-Mustaʿīn's reign, control of the caliphal *shamsa* was disputed by the Turkish generals, and at one point it was held by al-Yīnūḳ al-Farghānī (al-Ṭabarī, iii, 1553). The troops accompanying al-Muḳtadir in 294/906-7 and protecting the Pilgrimage caravan against the Car-

mathians of Zakarawayh had a *shamsa* which had been set with jewels by al-Muʿtaḍid (al-Ṭabarī, iii, 2274; ʿArīb, 16). In 320/932 al-Muḳtadir marched on his fatal expedition against Muʾnis al-Muẓaffar [*q.v.*] wearing a *tākhtadj* coat, a black turban and with his head shaded by a *shamsa* (ʿArīb, 167).

Whether this *shamsa*, etc., really was a parasol is thus not entirely clear from the contexts, but whatever it was exactly, it passed also to the Fāṭimids, and one of those caliphs' Ṣaḳlabī soldiers had the duty of functioning as *ṣāḥib al-miẓalla*; see A. Mez, *Die Renaissance des Islâms*, 131, Eng. tr. 133; I. Hrbek, *Die Slawen im Dienst der Fāṭimiden*, in *ArO*, xxi (1953), 572.

2. In the Mamlūk sultanate. In Mamlūk sources this appears as *djitr*, *shitr*, from Pers. *čitr*, denoting the parasol as one of the insignia of royalty (cf. the canopy borne over the monarch at the English coronation). Although of widespread use by oriental rulers, including the Saldjūḳids (cf. E. Quatremère, *Histoire des Mongols de la Perse*, Paris 1836, 206, n. 57), al-Ḳalḳashandī states that in the Mamlūk sultanate it was a survival from the Fāṭimid caliphate. According to this statement (*Ṣubḥ*, iv, 7, 8, 46, based on al-ʿUmarī, *Masālik al-abṣār*, ed. Aymān Fuʾād Sayyid, Cairo 1985, 32-3), it was made of yellow silk with gold brocade, and the staff was surmounted by a silver-gilt bird, whence its usual name in this period of *al-ḳubba wa 'l-ṭayr*. In processions at the two *ʿīds*, it was carried by an *amīr* of the highest rank, who rode beside the sultan, and was remunerated with a robe of honour. In several respects the Mamlūk *miẓalla* differed from its Fāṭimid prototype as described by al-Ḳalḳashandī (*Ṣubḥ*, iii, 469). The latter appears to have lacked the bird, to have varied in colour according to the caliph's robes, and to have been carried in processions generally.

3. In the Islamic West. Here it would seem that a certain imprecision, hence variability, existed in the meaning of two words derived from the same root and designating "shades". Properly speaking, the *maẓall* is a canopy and also the general's tent, insignia of command, rallying point and headquarters on campaign. In this sense, it is a synonym of *ḳubba*. The *miẓalla/maẓalla*, however, is a parasol. Lévi-Provençal let himself be caught in this confusion between *maẓall* and *miẓalla* (*Hist. Esp. Mus.*, iii, 14, 111). We may note that the *Vocabulista* had *maẓall/galerus*, *capel de sol*, and P. de Alcalá, *medel*, *medelit/ramada*, *sombra de ramos*.

Technically speaking, as against *maẓall*, a portable but firm construction—at least for the daytime and whose sudden removal provoked many a rout—and quite spacious (the commander withdrew there, slept there and met his officers in council there), the *miẓalla*/parasol constitutes a movable piece of equipment whose ultimate purpose is to accompany a particular person during his diurnal travels in order to protect him from the sun. The use of the parasol constituted one of the special privileges of the sovereign, at least under the Fāṭimids [*q.v.*; see also Ibn Hamado, *Hist. des rois Obaidides*, 14-15/27-8; al-Maḳrīzī, *Khiṭaṭ*, i, 448, 451, 455, 456, 477: al-Ḳalḳashandī, *Ṣubḥ*, iii, 473]. It has still to be demonstrated that the Umayyads made use of it in the East. As for al-Andalus, the only indisputable mentions are references to fixed canopies, supported by several posts, that one drives into the ground and arranges to pitch them [cf. MAWĀKIB]. The use of the parasol did not constitute one of the external insignia of the caliph's power. Ibn Khaldūn never mentions it in his enumeration of the "sovereign's attributes". Nor is it to be found in the descriptions of processions as being part of the etiquette displayed [see MARĀSIM]. In this sense, it is striking to record that no reference to a normal use of this parasol during the Umayyad caliphate appears to have come down to us. The poets speak of the *ḳubba* [*q.v.*], real or metaphorical, the chronicles of the *ḳubba* and *maẓall*, but never of the *miẓalla*. It seems, however, that the sporadic (and non-"official") use of this apparatus was not totally unknown. On the contrary, it would be difficult to understand the emphasis with which al-Rāzī stresses the fact that, during the capture of Calatayud, in 325/937, "the caliph al-Nāṣir rode from one point of the town to another, until dusk, without protecting himself from the sun (*ghayr muẓalla*)" (*Muḳtabas*, v, 269).

The use of the parasol by the Almoravid, Almohad, Marīnid and Naṣrid rulers is not attested either by the chronicles or the geographers' accounts. When Ibn al-Khaṭīb (*Khaṭrat al-ṭayf*, 44) described a *miẓalla*, in 755/1354, it was not actually a sunshade but a fixed canopy. In fact, he tells us that it was supported by poles of plane tree wood, *ʿalā ʿumūd al-sādj* (which is quite different from a parasol which only has one stem). This canopy had been erected by the Genoese merchants (*tudjdjār al-Rūm*) of Almeria. The fact that Ibn al-Khaṭīb lingers on it would tend to prove that it was an exceptional object, whose use was unknown in Granada and which constituted an import. One may add that Leo Africanus does not mention the use of the parasol in Fez, Tlemcen or Tunis. Thus it would seem that its use in the Maghrib may not be earlier than the Saʿdids. The first known mention is that of the *Nuzhat al-hādī*, 116, "When the Sultan al-Manṣūr rode with his royal retinue, the sunshade was carried by the officer whose rank was closest to that of the caid Ebruiz.... When the sultan went on foot to the *masdjid*.... the sunshade was carried by Ebruiz himself."

(P. Chalmeta)

4. In the Persian, Indian and Turkish lands. Although in the Arabic cultural context *miẓalla* denotes both a parasol considered as one of the insignia of rank and also a large tent, in the Iranian cultural sphere this term is usually replaced by Pers. *čatr*, also in Urdu in the form *čhatar* (Skr. *čhattra*). The use of a parasol held over the sovereign long antedates Islam not only in the Middle East, as noted by Laylard (*Nineveh*, ii, 327) but also in China; a parasol hub and a hooked bronze ferrule found in the Hsiung-nu burials at Noin Ula (see Rudenko, *Kul'tura*, fig. 42) are probably of Han manufacture. Concomitant use in religious contexts is already attested on a coin of Caracalla (*r.* A.D.211-17), where two parasols flank a *baetyl* at the temple of Jupiter Sol at Emesa (Ḥimṣ) in Syria; both royal and devotional use are shown in the art of Gandhara, Ajanta, Sanchi, Amaravati and Dunhuang (the Buddhist use extends to Thailand and Burma), in either an umbrella shape, or a more mushroom-like form with downward-curving edges, often elaborated with fringes and pendants. A heavy stone umbrella forms the crowning member of the Djayn and Buddhist *stupas*. This dual significance is resumed in the Muslim Persian concept of the *sāya-yi Ẓill Allāh*, "shade of the Shadow of God".

The existence of the *čatr* among the Sāmānids in the 4th/10th century is attested by Manūčihrī [*q.v.*] without further detail (de Biberstein-Kazimirski, *Menoutchehri, poète persan*, 13, tr. 166). Bayhaḳī, *Taʾrīkh-i Masʿūdī*, 639) refers under the year 431/1039-40 to black *čatr*s and a black standard with short shafts, all in cases of black silk: the Ghaznavids had used this colour since the reign of Maḥmūd, though their founder Sevük-Tigin had a red parasol, *čatr-i laʿl*. The close association of *čatr* and standard in colour was to remain typical of following dynasties; in this case black may have been adopted from ʿAbbāsids, though it is noteworthy that Firdawsī attributes it to the Tūrānians—possibly an anachronism. By the time of Ibrāhīm b. Masʿūd (acceded 459/1059) the *čatr* was surmounted by the jewelled figure of a falcon. The office of its bearer, *čatr-dār*, was among the highest that a *ghulām* could attain, with the standard bearer, the master of the wardrobe, and the armour-bearer (*ibid.*, 410; Fakhr-i Mudabbir, *Ādāb al-mulūk*, fol. 15b, tr. Shafi, 200). Correspondingly the capture of a parasol is deemed by Fakhr-i Mudabbir to be worthy of special reward (*op. cit.*, fol. 126b ff.).

For the Ḳarakhānids, Maḥmud al-Kāshgharī (wrote 466/1072-3) (*Dīwān lughat al-Turk*, facs. edn., fol. 106) cites both the horsetail *tūgh* and a curved parasol as set up on the battlefield as the emblems of war, *ʿalāmāt al-ḥarb*: the parasol (A. *ḳubba*) is defined as of silk, made for the kings of the Turks to protect them from summer heat or rain and snow; the Khāḳāni term given, *čowač* (also denoting "crown" in Khʷārazm Turkic), was still current in the time of Rabghūzī (wrote 710/1310), referring symbolically to the vault of heaven (*Ḳiṣaṣ al-anbiyāʾ*, cited Radloff, *Versuch*, iv, 59). A black silk *čowač* is the single emblem of rank attributed to the chief minister, *yughrush* (Kāshgharī, 462), with the same practical purpose; it seems that orange, *āl*, may have been reserved for the sovereign and his family (cf. *ibid.*, 53). These *čowač* could be folded (*ibid.*, 470). Illustrations of parasols used by the roughly contemporary Khitan, both open and folded, survive in the Wen-chi scrolls (*op. cit.* scenes 2, 14-8): that of the *khān* is red, like a shallow, ribbed umbrella about 1 m across, with a double-edge flounce and a reinforcement round the gilt finial, the shaft being about 3.0 m high, carried by a bearer walking beside his horse. It appears only during journeys. These traditions appear to have been continued by the Saldjūḳs: thus Ṭoghrïl first entered Nīshāpūr under a red parasol, while that of Kāwurd, governor of Kirmān, carried the figure of a bow and arrow, and that of Sandjar was black. The Saldjūḳs of Rūm, once under the hegemony of the Īlkhāns, are likely to have employed their black parasols, also used by the Khʷārazm Shāhs, though Ghiyāth al-Dīn Kaykhusraw II changed the colour to blue to indicate his opposition to the ʿAbbāsid caliphate. Rashīd al-Dīn refers specifically to the *sarāparda* [*q.v.*] and *čatr* as the *ālat-i salṭanat* in the reign of Berkyārūḳ (487-98/1094-1104) (*Djāmiʿ al-tawārīkh*, ed. Ateş, *Selçuklar tarihi*, 65). Such *čatr*s, like the standards, were placed as a mark of respect on the tomb of a deceased ruler, and the possession of a *čatr* was tantamount to the possession of the throne, as when Baybars marched on Anatolia (676/1277). Both the Ayyūbids and the Mamlūks used yellow for their *čatr* and standards, as heirs to the Fāṭimids. According to the Chinese *Meng-ta pei-lu* (*ca.* 1221), Čingiz Khān used only a red and yellow parasol besides his nine-tailed standard (tr. Olbricht and Pinks, 72). An early 8th/14th century illustration (Staatsbibl., Berlin, Diez'sche Klebebände A, fol. 71, s. 50) shows an Īl-Khānid prince riding below a red parasol held on an angled staff by the mounted bearer. Though the top is cut by the picture frame, the *čatr* appears to have a shallow concave slope; it is cut in gores, which continue into the plain vertical flounce.

Under the Tīmūrids, the *čatr* seems to have been known in Čaghatay as *shögür*, a term which spread to Ḳalmaḳ Mongolian as *shükr*. A painting in the *Ẓafar-nāma* of *ca.* 1434 (Freer Gallery, Washington, no. 4/18) shows Tīmūr entering Samarḳand under a parasol of dark red brocade semé with small gold motifs, formed in a shallow concave curve from the central hub, *ca.* 1 m in diameter, with an edge flounce 20 cm deep and thus similar to the Īl-Khānid version. An example in the Gulbenkian Anthology of Iskandar Sulṭān (177) of 813/1410-11 is the same shape, scarlet with gold arabesques, but the spirally gilded pole is set at an angle to the parasol itself, as though adjustable (see Gray, *Persian painting*, 74,97); in both cases the bearer is mounted as well as the monarch, and this remains the pattern in bookpainting. Gonçalez de Clavijo records that in 807/1404 Sarāy-Mulk Khātūn, Tīmūr's first wife, made her court entry shaded by a white silk parasol "like the dome of a round tent", and made to stay open by a round wooden hoop (? *arco*) raised on a lance-like shaft (*Historia*, fol. 62a). Following the contemporary emphasis on their practical function, the *čatr*s shown in Türkmen and Ṣafawid paintings are depicted almost exclusively in outdoor scenes of battle, hunting, games or royal encounters and travel. The Ṣafawid type resembles the Tīmūrid in being conical, with the shaft set at a variable angle, probably as an adjustment to its use from horseback, but the cone is steeper, at *ca.* 40°, and is of the characteristic arabesque brocade with a red flounce, and sometimes a macramé fringe; a gilded bird may be set on top (see the *Khamsa* of Niẓāmī of 946/1539, BL ms. Or. 2265, fol. 18a, or the Houghton *Shāh-nāma* of Firdawsī, fol. 182b).

India. The use of parasols under the Dihlī Mamlūks is remarkable for the number of colours referred to, each apparently associated with a particular rank or individual. Thus Iltutmish rewarded his victorious son Maḥmūd with a red parasol, *čatr-i laʿl*, in 623/1226, and his younger brother Rukn al-Dīn with a green one, *čatr-i sabz*, on his appointment to the fief of Badāʾūn. In 658/1260 the throne at the Ḳaṣr-i Sabz at Dihlī was flanked by a red parasol and a black one, both set with costly jewels. Malik Yüz Beg, when claiming royal status, assumed three, sc. red, black, and white (Djūzdjānī, *Ṭabaḳāt*, text 181, 318, 263). The white was used by Balbān (ʿIṣāmī, *Futūḥ*, 150-3), framed with willow. Amīr Khusraw writes of black, red, white, green and tamarisk *čatr*s at Nawrūz in Dihlī in 686/1287, and extolls their qualities (*Ḳirān*, 57-9). For the Khaldjīs, too, the royal parasol was black, *čatr-i siyāh-i sulṭānī* (idem, *Khazāʾin*, 65) or white, to be raised at dawn (*ibid.*, 66), whereas the Rāʾī of Deogīr was given a blue one, *saḳf-rang* (*ibid.*, 72); yet Baranī calls the red one presented by ʿAlāʾ al-Dīn to his son Khiḍr Khān on his appointment to Čitōṛ in 703/1303 *čatr-i bādshāhī* (*ibid.*, 68, cf. Baranī, *Taʾrīkh*, 367). It appears that the *čatr* directly represented the ruler or his deputy, according to its colour, whereas the awning, *sāyabān*, was the symbol of royal authority even when the ruler was not present. "The mighty sovereign at the centre of the blackness of his parasol is like the 'vision of man', for the eye of God is over him," *bādshāh ba-niyā ki miyān-i siyāh-i čatr bi 'l-ʿayn-i insān ʿayn ast: ʿayn allāh ʿalayhi* (Khusraw, *Khazāʾin*, 64). The black parasol remained the principal one under the Tughluḳ dynasty,

though Ibn Baṭṭūṭa records that in 734-42/1333-42 Muḥammad b. Tughluḳ [*q.v.*] had no less than sixteen *čatr* (spelled *shaṭr*), some gilded, and some set with jewels (*Riḥla*, iii, 415), and al-ʿUmarī reports seven as carried over the sultan's head as he rode to war, of which two were set with gems (*Masālik*, 19, l. 20). Shams-i Sirādj ʿAfīf, *Taʾrīkh-i Fīrūzshāhī*, Bibl. Ind., Calcutta 1890, 107-8, lists the black umbrella among the 21 royal prerogatives maintained by Fīrūz Shāh. The conferring of a *čatr* as a non-hereditary privilege was characteristic of the reward through status rather than monetary benefit practised under the Sultanate.

Reference to the earlier Mughal book paintings such as the *Bābur-nāma* of *ca.* 999/1590 (BL ms. Or. 3714, fols. 52a, 94b, 273b, 274a, 306a) show the *čatr* used, as before, to shade the ruler in the field; the form, like that of the Ṣafawids, is conical, with a deep flounce, a gilt pear-and-ball finial, and an angled shaft borne by a horseman. In some cases the surface is of blue flowered brocade, and in others red (e.g. fol. 274a); the rim is emphasised, with either a gilt border, or an intended, coronet-like golden trim, sometimes with a row of pearls. The *Āʾīn-i Akbarī* lists the *čatr* second after the throne among the insignia of royalty (*āʾīn* 19), specifying "it is adorned with the most precious jewels, and there may not be less than seven (*čatr* or jewels?)." Another type is shown with a convex dome supported by a system of curved stays from the shaft (*Bābur-nāma* fol. 94b). Nevertheless, *čatrs* do not appear prominently until the reign of Djahāngīr, when a pair of the conical type is set either side of the throne in a carefully composed court scene below a three-tiered tent (Leningrad *Muraḳḳaʿ*, no. e 14, fol. 22); thereafter, they are used regularly in similarly symmetrical tented settings by Shāh Djahān for court appearances, where golden parasols have the gently convex profile still to be seen at Rādjpūt palace museums (cf. the ex-Vever coll. court scene of 1037/1627-8, Freer S86.0406). Later, a *čatr* is shown surmounting the peacock throne (court scene at Āgrā, 1048/1638, by ʿĀbid, *Binney coll.*, 58). Contemporary court literature confirms this use, the parasols being set on a dais below the audience tent, *aspak*, used at festivals: they were jewelled, and hung with pendants, strings and fringes of pearls (cf. Muḥammad Ṣāliḥ Kambū, *ʿAmal-i ṣāliḥ*, i, 282-3, and Muḥammad Wārith, *Pādshāh-nāma*, fols. 406b-407a). They do not, however, appear in tentless palace settings (see the Windsor *Shāh Djahān-nāma*, *passim.*). In *ca.* 1070/1660 Awrangzīb was depicted with a single golden *čatr*, fringed with pearls and set with squared rubies and emeralds, but one of the older Tīmūrid shape (Welch, *Imperial Mughal painting*, 57).

The Ottomans seem to have used the parasol neither at court nor in the field, except for a version too large, at 3 m across, to be carried, set up to shade the royal tent on state occasions (see *Süleymān-nāme*, fols. 297a, 346a, 441a, cf. 550a, for Ṣafawid equivalent).

(P.A. Andrews)

5. In Indo-Muslim architecture. An architec-

tural form of the *miẓalla* is known in India as *čhatrī*, diminutive of the Skt. *čhattra*, sc. small, canopied structures placed at the junctions of the *chemin de ronde* of a fortification, or as decorative elements at roof level on mosque, tomb or other building, or as simple cover of an inhumation less imposing than a tomb proper [see MAḲBARA. 5]. In certain architectural styles (e.g. Bengal, Mālwā) a *čhatrī* may cover a *minbar* [*q.v.*] or, as in the Red Fort in Dihlī, a baldachino intended as the ruler's seat.

The earliest uses seem to be in fortification, where a *čhatrī* at the angles of a wall-walk affords protection from the elements for the guard; heavy domed rooms, with almost solid sides, often as the upper part of a *burdj* [*q.v.*]. The best existing example is in the corner towers of the fortified Khirkī mosque in Dihlī (Yamamoto *et alii, Architectural remains of the Delhi Sultanate period*, pl. M.7); by the time of the fortified Ḳadam-i Sharīf [see DIHLĪ. Monuments], the *čhatrī* has assumed its characteristic form of a domed canopy supported on four strong pillars, with heavy protecting eaves (Yamamoto, pl. 0.8); thereafter it continues as a regular feature, on four, six or even eight supports, on buildings of the Dihlī sultanate, whence it spreads to most of the provincial styles [see HIND. vii]. Among the earliest royal tombs at Dihlī are the *čhatrīs* over the graves of Rukn al-Dīn Fīrūz Shāh and Muʿizz al-Dīn Bahrām Shāh at Malikpur outside the complex known as Sulṭān Ghārī (S.A.A. Naqvi, *Sultan Ghari, Delhi*, in *Ancient India*, iii [1947], pl.). There are sporadic uses of the *čhatrī* in the "Sayyid" and Lōdī periods as a sort of lantern crowning the dome of a tomb, e.g. in the "Pōtī" of the "Dādī-Pōtī" complex near Ḥawḍ Khāṣṣ, the tomb of Mubārak Shāh in Mubārakpur, and (according to old illustrations) in the tomb of Shēr Shāh in Sahsarām [*q.v.*] (H.H. Cole, *Preservation of national monuments. Report for...1882-3*, Calcutta 1883, two pls.; also in J. Ferguson, *History of Indian and eastern architecture*, London 1876, ill. 288; this was later replaced, by a British engineer, with an incongruous heavy stone *kalaśa*-and-*amalaka* finial). In Lōdī times the pillars supporting the dome become much thinner (e.g. in the Djahāz Maḥall at Mihrawlī, south of Dihlī; Yamamoto *et alii*, pl. O. 22), and this tendency persists into the Mughal period. *Čhatrīs* are used with great freedom on all roofs, and with the reintroduction of the minaret [see MANĀRA] under the Mughals, invariably form its topmost storey, or crown corner turrets as in the tomb of Iʿtimād al-Dawla in Āgrā, or the tomb of Mīrzā Muḳīm Abu'l Manṣūr Khān (Ṣafdar Djang) in Dihlī. In Akbar's tomb at Sikandra, outside Āgrā, is first seen the expedient of uniting two *čhatrīs*, at the corners of the building, under one common projecting eaves-pent, leading to the common Mughal practice of a string of conjoined *čhatrīs* as a feature above doorways, etc.: a row of seven above the Lahawrī gate of Dihlī fort, thirteen surmounting the central arch of the Buland Darwāza in Fatḥpur Sīkrī, eleven over both front and rear elevations of the ornamental gateway to the Tādj Maḥall, nine over the central arch on each face of the tomb of "Ṣafdar Djang", which is directly modelled on the Tādj gateway, etc. The cupola over the baldachino (*nashīman-i ẓill-i Ilāhī*) in the Dīwān-i ʿAmm in the Red Fort of Dihlī is unusual in having a "Bengali" roof with curved cornices, an innovation made popular in Shāh Djahān's reign.

Bibliography: In addition to references in the article, see T. Yamamoto, M. Ara and T. Tsukinowa, *Delhi: architectural remains of the Delhi sultanate period*, i, Tokyo 1967, for a complete photographic corpus of sultanate buildings in the Dihlī region; good illustrations for Fatḥpur Sīkrī in S.A.A. Rizvi and V.J.A. Flynn, *Fatḥpur-Sīkrī*, Bombay 1975, or in the *Marg* special Fatḥpur Sīkrī volume, Bombay 1987; the Tādj Maḥall is best illustrated in M. Bussagli, *Il Taj mahall* (*Forma e colore* series), Florence 1965, and now in W. Begley and Z.A. Desai, *The Tāj Maḥall: the illumined tomb*, Seattle-London 1989. But adequate illustrations abound in all works of Indian architecture, for which see *Bibl.* to HIND. vi. (J. BURTON-PAGE)

AL-MĪZĀN (A.) balance, is the *nomen instrumenti* from *wazana* "to weigh", which means to weigh in the ordinary sense and also to test the level of something, like the Latin *librare*. Here we shall discuss:

1. The various instruments used for weighing in the ordinary sense; brief notes are added on the ascertainment of specific gravities.
2. Levelling instruments.
3. Aspects of the balance in Indian Muslim art.

1. BALANCES.

The steelyard (*al-ḳarasṭūn* [*q.v.*]) has already been dealt with, and the general principles of the balance are also discussed in that article.—The usual balance with two arms of equal length had the same shape among the Muslims as in ancient times and at all periods in the West; this we know from extant specimens and illustrations in various works, notably in al-Khāzinī, in a manuscript of al-Ḳazwīnī with reference to the constellation Libra (fig. 1), in a manuscript of al-Ḥarīrī, in the *ʿĀʾīn-i ʿAkbarī* of Abu 'l-Faḍl (fig. 2). In the beautiful manuscript from which Ch. Schefer published the *Safar-nāma* of Naṣīr-i Khusraw, on p. 88, in the illustration of the Masdjid al-Aḳṣā, there is a balance labelled *terazu* (*Sefer Nameh, Relation du voyage de Nassiri Khosrau*, ed. Ch. Schefer, *Publications de l'École des Langues Orientales Vivantes* ii/1,
Fig. 1

Paris 1881). The common balance is called *mīzān*, but in the Ḳurʾān we also find *ḳisṭās*, which, according to al-Thaʿlabī, is a loanword (in fact, from Greek or Aramaic, see A. Jeffery, *The foreign vocabulary of the Qurʾān*, Baroda 1938, 238-9). Other names are *shāhīn*, which does not only mean the beam and tongue of the balance and is contrasted by the Ikhwān al-Ṣafāʾ to the *ḳabbān* (steelyard), also *taris* from the Persian *tarāzū*, then *miḥmal* for scales for gold and *ḳubba* for beam and tongue. *Mindjam* means the tongs and also the beam. According to J. Ruska, *ḥabbāba* seems to be used for scales (for gold). On the expressions connected with *ḳarasṭūn*, see that article. Al-Muḳaddasī, 141, mentions Ḥarrān as a place where balances were made; in this town, many very skilful mechanics were
Fig. 2

engaged in making astronomical instruments. The accuracy of the balances made in Ḥarrān was proverbial.

The Arabs devoted special attention to the construction of balances used to identify metals and jewels for their specific gravity, to distinguish false from genuine and pure and to ascertain the composition of alloys of two metals by the use of the principle of Archimedes. They called these balances *mīzān al-mā*ʾ, "water" (hydrostatic) balances. Of makers of these, al-Khāzinī (*flor.* early 6th/12th century [*q.v.*]) mentions Sanad (Sind) b. ʿAlī (*ca.* 250/864), Muḥammad b. Zakariyyāʾ al-Rāzī (320/932-3), Ibn al-ʿAmīd (359/969-70), Yuḥannā b. Yūsuf (perhaps al-Ḳāṣṣ, d. *ca.* 370/980-1), Ibn Sīnā (428/1037), Aḥmad al-Faḍl al-Massāḥ (the "measurer, also mentioned by al-Bīrūnī without the "Massāḥ") and Abū Ḥafṣ ʿUmar al-Khayyāmī (as the celebrated mathematician is never called Abū Ḥafṣ, it is doubtful whether he is the individual mentioned by al-Khāzinī). The balances made by these names are still fairly simple as only two, or at most three, scales were used in them. A contemporary of al-Khāzinī, namely Abū Ḥākim al-Muẓaffar b. Ismāʿīl al-Asfizārī (d. before 515/1121), added two more scales; these and other improvements made the scales much more convenient to use. Of him, al-Bayhaḳī says (E. Wiedemann, *Beitr.*, xx. *Einige Biographien nach al-Baihaḳī*, in *SPMSE*, xlii [1910], 17): "He constructed the balance of Archimedes with which one ascertains forgeries. The treasurer of the Great Sultan feared that his frauds would thus be discovered. He therefore broke the balance and destroyed its parts. Al-Muẓaffar died of grief as a result." Al-Khāzinī then took up al-Muẓaffar's work and made the balance a most accurate means of measuring; he called it the univer-
Fig. 3
Fig. 4

sal balance, *al-mīzān al-d̲j̲āmiʿ*. But, no doubt in memory of his predecessor, he called his book *Kitāb Mīzān al-ḥikma*. For special purposes such as the examination of gold and silver and their alloys, many contrivances were made with balances and the movable scales and running weights on the beams, for example in the physical (*ṭabīʿī*) balance of Muḥammad b. Zakariyyāʾ al-Rāzī (fig. 3); it goes back to Greek models, e.g. of Archimedes (fig. 4; cf. al-K̲h̲āzinī, *op. cit.*).

Here we shall describe somewhat more fully the "balance of wisdom" of al-K̲h̲āzinī. (H. Bauerreis, *Zur Geschichte des spez. Gewichtes im Altertum und Mittelalter*, diss., Erlangen 1913, has reconstructed the "balance of wisdom" as nearly as possible following the data of the original. Reproductions are in Erlangen and the German Museum in Munich. The illustration is taken from a photograph. In the original right and left are reversed.)

Al-K̲h̲āzinī gives the beam *A* of the balance (fig. 5) a thickness of 6 cm. and a length of 2 m. In the centre it is strengthened by an additional piece *C*, obviously intended to avoid any bending at this point. A crosspiece *B* (*ʿariḍa*) is let in here. Corresponding to it is a similar cross-piece *F* on the lower part of the tongs, in which moves the tongue *D*, itself about 50 cm. long. The upper cross-piece *E* is hung by rings to a rod which is fastened somewhere. Pegs or small holes are placed at exactly opposite places of the crosspieces *B* and *F* to which threads are tied or drawn through. The friction at an axis is thus avoided, which, in view of the great weight of the beam, is quite considerable. The knob visible below the beam under its centre is used to secure the tongue to the beam or to take it out in order to adjust it evenly. The tongue has for this purpose a peg at the foot which goes through a hole in the beam. Al-K̲h̲āzinī also observes that one could also take shorter beams, but then all the other dimensions must be proportionately smaller. The beam is divided not on one side only, as in the illustration, but on both. The scales are hung on very delicate rings of steel (*g̲h̲urāb* "ravens"), the points of which fit into little niches on the upper surface of the beam.

Five scales are used in ascertaining specific gravities, i.e. in investigating alloys and examining precious stones. Of these, the scale *H* (fig. 5^{a}) is called the cone-shaped or *al-ḥākim*, "the judge", as it is used to distinguish false from true. It goes into the water, and in order to meet less resistance in sinking, is cone-shaped and pointed below. The scale *J* is called the winged (*mud̲j̲annaḥ*, figs. 5^{b} and 5^{c}, side and top view). It has indented sides so that it can be brought very close to the adjoining scales. It is also called the movable (*munaḳḳal*). There is also a movable running weight *K* (*al-rummāna al-sayyāra*) which serves, if necessary, to adjust the weight of the lighter beam; it is therefore also called the *rummāna* of the adjustment (*al-taʿdīl*). The other scales are used to hold weights.
Fig. 5.

Al-Khāzinī attained an extraordinary degree of accuracy with his balance. This was the result of the length of the beam, the peculiar method of suspension, the fact that the centre of gravity and axis of oscillation were very close to each other, and of the obviously very accurate construction of the whole. Al-Khāzinī himself says that when the instrument was weighing 1,000 *mithḳāls*, it could show a difference of 1 *ḥabba* = 1/68 *mithḳāl*, i.e. about 75 cg. in 4.5 kg. We thus have accuracy to 1/60,000.

Al-Khāzinī used his scales for the most varied purposes. Firstly, for ordinary weighing, then for all purposes connected with the taking of specific gravities, distinguishing of genuine (*ṣamīm*) and false metals, examining the composition of alloys, changing of *dirhams* to *dīnārs* and countless other business transactions. In all these processes, the scales are moved about until equilibrium is obtained and the desired magnitudes in many cases can at once be read on the divisions on the beam.
Fig. 5a.
Fig. 5b.
Fig. 5c.

False balances. That as early as the time of Muḥammad balances showing false weights were used for fraudulent purposes is shown by various passages in the Ḳurʾān (Sūra XXVI, 182; VII, 13; XVII, 37). We read, for example, "Weigh with the just (or upright, *mustaḳīm*) balance." Al-Djawbarī (*flor.* 1st half of the 7th/13th century; Wiedemann, *Beiträge*, iv. *Über Wagen bei den Arabern*, in *SPMSE*, xxxvii [1905], 388 and Suppl. art. AL-DJAWBARĪ) describes two such arrangements. In the one, the beam of the balance consisted of a hollow reed closed at the ends, in which there was some quicksilver; by a slight inclination of the beam, this could be made to flow as desired to the side of the weights or of the articles and thus make the one or other appear heavier. A balance like that was used in Cairo in the time of E.W. Lane by a dishonest market inspector (*muḥtasib*). In the second pair of scales, the tongue was of iron and the merchant had a ring with a magnetic stone. By bringing the ring close to it the balance went down to the right or left.

The balance or the principles applying to it were used for many purposes besides weighing. Contrivances turning on an axis in which sometimes one and sometimes the other side becomes lighter or heavier, especially by the admission or release of water, were used to produce automatic movements; they are often called *mīzān* (cf. e.g. the writings of the Banū Mūsā and of al-Djazarī; e.g. in F. Hauser, *Über das Kitāb al-Ḥiyal. Das Werk über die sinnreichen Anordnungen der Banū Mūsā*, Abh. 2, *Gesch. der Naturwissenschaft und Med.*, Heft ii [1922]; E. Wiedemann and F. Hauser, *Über die Uhren im Bereich der islamischen Kultur*, in *Nova Acta der Kais. Leop. Carol. Akademie*, c [1915], no. 5, and other passages). In the hour balance used to measure time, a container filled with sand or water is hung at one end of a lever poised with arms of equal length and has a hole in the bottom. The equilibrium disturbed by the gradual loss of sand or water is compensated for by weights which move along the other arm. From their weight and position one can calculate the time that has passed (Wiedemann, *Beiträge*, xxxvii, *Über die Stundenwage*, in *SPMSE*, xlvi [1914], 27; a full description is given by F. Hauser in E. von Basserman-Jordan, *Die Geschichte der Zeitmessung und der Uhren*).

Most artisans also describe as "scales" *al-misṭara*, i.e. ruler, *al-barkaz*, compass, *al-ḳūniyā*, setsquare and level, as they serve to show lapses from the straight etc. *Miḳyāl*, ell, *shāhīn* and *ḳubbān* are "scales" with which one measures whether things are correct or excessive measure in business transactions (*Rasāʾil Ikhwān al-Ṣafāʾ*, Bombay 1305, i/2, 128). For a few further meanings of *al-mīzān*, see Dozy, *Supplément*, s.v. *wazana*.

In mathematics , the balance is used to eludicate certain mathematical processes. The steelyard is used to illustrate the inversed relation; the weights are in inverse proportion to the length of the arms (cf. e.g. Th. Ibel, *Die Wage im Altertum und Mittelalter*, in *Programm Forchheim* [1905-6], 93; *Rasāʾil Ikhwān al-Ṣafāʾ*, i/2, 10, and other places). Al-Bīrūnī uses the balance to explain the procedure in solving equations (*al-djabr wa 'l-muḳābala*) (*Kitāb al-Tafhīm*, ms. Berlin, 5665, fol. 9b). The method of the double error is also called the "process with the use of the beam".

One knows whether a number is divisible by nine by casting out the nines: to do this one adds up the figures in a number and takes away nines from the total until 9 or another number is left; the number left is called *mīzān*. The word *mīzān* also means testing the correctness of any calculation (cf. Bahāʾ al-Dīn al-ʿĀmilī, *Khulāṣāt al-ḥisāb*, ed. G.H.F. Nesselmann, Berlin 1843).

In magic squares, the sum of the largest and smallest figures is called *al-mīzān*; it is half the total of the vertical row, horizontal row or of the diagonals (G. Bergsträsser, *Zu den magischen Quadraten*, in *Isl.*, xiii [1922], 223).

Alchemy is often called *ʿilm al-mīzān*, the science of the scales, or of accurate measurement, as in the preparation of the elixir, etc., the choice of the right proportion of the ingredients is an important matter.

Among other uses of the word *mīzān*, it may be mentioned that a tree on a boundary near Bāniyās at the source of the Jordan was called "tree of the balance" (*mīzān*). We may also note that on the day of judgement a balance with a very long beam will be erected (on it, cf. e.g. M. Wolff, *Muhammadanische Eschatologie*, Leipzig 1872, text, 81, tr. 148, and al-Ghazālī, *al-Durra al-fākhira fī kashf ʿulūm al-ākhira*, ed. L. Gautier, Leipzig 1878, text, 67, tr. 79).

Specific gravity. We have already mentioned that the "balance of wisdom" and other scales were used to test the purity of metals, etc. and to ascertain the composition of alloys; we shall now briefly discuss the work of the Arabs on this subject. Two magnitudes have to be considered. The weights of equal volumes are compared, which corresponds to an investigation of the specific gravities. (It is to be noted that expressions like specific gravity and specific volume, which refer to the unit of weight and the unit of volume, are not found among the Arabs. Al-Bīrūnī, for example, gives the amount of water displaced by 100 *mithḳāls* of various substances corresponding to their volume, and the weights of the metals which

have the same volume as 100 *mithkāls* of gold, and in the case of other substances the same volume as 100 *mithkāls* of blue *yākūt*.) Al-Bīrūnī, for example, takes hemispheres of the different metals or rods of equal size and compares their weights, or the volumes of equal weights are compared by finding those of any weights and then comparing the specific volumes (i.e. the volumes of the unit of weight). For these measurements, one either used methods based on the principle of Archimedes, according to which a body loses in a liquid as much weight as the volume of the fluid displaced by it, or one measures the fluid displaced by the body itself. For this purpose al-Bīrūnī constructed a cone-shaped vessel (*al-āla al-makhrūṭiyya*) (fig. 6). This vessel is filled with water until it begins to run out by a pipe at the side; then a definite mass, as large as possible, of the substance (weight P_1) is weighed, as is the scale P_2 that is placed under the outlet pipe. The substance is then put in the vessel and the pan with the water displaced weighed (P_3), so that from P_3-P_2 we get the volume of water corresponding to the mass P_1, which is then calculated by al-Bīrūnī for a weight of 100 *mithkāls*. As almost always, in ascertaining the specific gravity, the Arabs rely on the ancients, particularly on the work of Menelaus "on the artifice by which one ascertains the quantity of each of a number of mixed bodies", *fī ḥīla allatī yuʿrafu bi-hā miḳdar kull wāḥid min ʿidda adjsām mukhtaliṭa* (from the Escorial ms.) and *maʿrifat kammiyyat tamayyuz al-adjrām al-mukhtaliṭa* (according to Ibn al-Ḳifṭī, 321). In al-Bīrūnī's word, Archimedes himself is mentioned
Fig. 6

and a certain Manāṭiyūs (according to Nöldeke, probably Μαντίας). The Muslims, however, did not slavishly take over the statements of the ancients. Al-Bīrūnī, *ibid.*, for example emphasises that one can ascertain the composition of an alloy of two components but not one of three, as Menelaus says. Among the Muslims it was certainly al-Bīrūnī who did most in this field, in his work "on the relations which exist between metals and jewels in volume" (*Maḳāla fī 'l-nisab allatī bayn al-filizzāt wa 'l-djawāhir fi 'l-ḥadjm*, cf. also al-Bīrūnī, *Chronology*, text, p. xxxxiv), which still exists, and also in another work, which only survives in fragments quoted by al-Khāzinī. Al-Bīrūnī was induced to compose the first-named by the difficulties encountered by goldsmiths in ascertaining the quantities of metals necessary to copy a given article. As predecessors, he mentions
Fig. 7

Sanad b. ʿAlī, Yuḥanna b. Yūsuf and Aḥmad al-Faḍl al-Bukhārī. So far as we know he was followed and his results were used by Abū Ḥafṣ ʿUmar al-Khayyāmī (see above), al-Isfizārī (see above), al-Khāzinī (see above), Fakhr al-Dīn Muḥammad b. ʿUmar al-Rāzī (d. 606/1210, Suter, no. 328), and Abu 'l-Faḍl ʿAllāmī, Eliyā Misrākhī, a work ascribed to Plato which was composed in the time of Bāyazīd by a slave of a son of Sinān, a Turkish work by al-Ghaffarī, and a Persian one by Muḥammad b. Manṣūr (on these works, as on mineralogical literature in general, see Wiedemann, *Beitr.*, xxx, *Zur Mineralogie des Islam*, in *SPMSE*, xliv [1912], 205). We must also mention the study by Abū Manṣūr al-Nayrīzī, who is not to be confused with the commentator on Euclid, and the work on the measurement of bodies which are compounded of other substances, in order to ascertain the unknown amounts of the separate constituents: *Minbar fī misāḥat al-adjsām al-mukhtaliṭa li 'stikhrādj miḳdār madjhūlihā* by Samūʾīl b. Yaḥyā b. ʿAbbās al-Maghribī al-Andalusī (d. 570/1174-5 at Maghāra; see Ibn al-Ḳifṭī, 209; Suter, no, 302).

The statements on specific gravities refer to: A. Metals: gold, mercury, bronze (*ṣifr*), copper, brass (*shibh*), iron, tin (*raṣāṣ*), lead (*usruf* and *usrub*). B. Precious stones: blue *yāḳūt*, red *yāḳūt*, ruby, emerald, lapis lazuli, pearl, coral, cornelian, onyx and rock crystal. C. Other substances: Pharaonic glass, clay from Siminyān, pure salt, salt earth (*sabakh*), sandarch, enamel (*mīnā*), amber, pitch, wax, ivory, bakkam wood and willow wood.

The weights of equal volumes of liquids and the volumes of equal weights of liquid are sometimes found directly, sometimes ascertained with the araeometer of Pappus. The former magnitude plays an important part in the liquids used in everyday life like oil and wine. The second was of more scientific interest. It is especially interesting that the Arabs found that hot water and hot urine had a larger

volume than equal weights cold. They also knew that ice had a larger volume than the same weight of water.

The facts ascertained with the araeometer of Pappus for fluids refer to cold fresh water, hot water, ice (which does not properly belong to this connection), sea water, vinegar, wine, sesame oil, olive oil, cow's milk, hen's egg, blood of a healthy man, warm and cold urine.

Fig. 7 shows the araeometer reconstructed by H. Bauerreiss from al-Khāzinī. *X* is a massive cone used to make the instrument heavy. There are inscriptions corresponding to the Roman numerals. For details, the reader may be referred to H. Bauerreiss's article. The principle that floating bodies of the same weight sink in water to the same depth finds application in a juristic trick cited in the *Kitāb al-Ḥiyal fi 'l-fiḳh* of Abū Ḥātim al-Ḳazwīnī. The weight of a camel is ascertained by putting it in a boat and noting how deep the boat sinks. The camel is then replaced by iron weights until the boat sinks to the same level (cf. J. Schacht, in G. Bergsträsser, *Beitr. zur semitischen Philologie und Linguistik*).

In medical works and treatises on weights and measures, figures are given for the weights of equal volumes of wine, oil and honey (cf. Bauerreiss, *op. cit.*).

So far as it is a question of particular bodies, the values as ascertained by the Arabs agree very well with those obtained by modern science and even surpass in accuracy those obtained by it up till the beginning of the last century.

Bibliography: Given in AL-ḲARASṬŪN.

2. LEVELLING (*wazana*, to weigh, corresponding to Latin *librare*).

The Arabs certainly adopted a large number of methods of levelling and testing levels from other peoples, either the Byzantines or the Persians. The statements in Ibn Waḥshiyya [*q.v.*] (see below) about the making of canals, etc., agree with those of Vitruvius, who in turn drew on Greek sources. The Arabs learned partly from Greek works; for example, we are told that according to Philemon (according to M. Steinschneider, Philo), the incline in canals must be at least 5 : 1,000; but they also utilised data gained from the practical experience of landowners, canal builders, etc. Whether the Arabs were acquainted with the standard works of Hero on this subject, the *Metrica* and the "On the Dioptra" (Hero, *Opera omnia*, ed. H. Schöne, iii, Leipzig 1903), is not known, for no corresponding title is found in the biographical or bibliographical works. But the writing mentioned in the *Fihrist* "On the use of the astrolabe" may have dealt with geodetic problems. Many problems in the Arabic sources are very similar to those dealt with in the work "On the Dioptra"; only the Arabs use the astrolabe or quadrant instead of the dioptra. Whether one or other of the methods described below was discovered independently by the Arabs, and by whom, cannot be established from the authors on the subject, who were mainly practical men. They are described in the most different places.

In levelling, one is faced with two problems: firstly to make a surface exactly perpendicular, and secondly to ascertain the point on the same level as a given one, or to ascertain the difference in height between two points.

1. A surface is made level and horizontal in the following way:

A ruler with a straight edge is moved over the surface and one sees whether it touches it everywhere so perfectly that no light penetrates between ruler and surface; in this case the surface is perfectly smooth (al-Shīrāzī, see below). That the ruler itself is straight is ascertained by seeing whether a thread stretched along it and fastened to it at one end can be lifted the same height from the ruler along its whole length. Whether three rulers are straight is tested by putting them side by side and exchanging their sides (Ibn Yūnus, in K. Schoy, see below).

To examine whether a surface was perfectly horizontal, the following tests were adopted:

Water is poured over the surface and it is observed whether this flows equally in all directions; this is one of the most usual methods. The same plan is given by Proclus in his *Hypotyposis* (ed. K. Manitius, Leipzig 1909, 50, 51). According to him, one pushes supports under a level surface on all sides till it shows no slope anywhere; this is the case when water poured on it remains standing without running to one side.

2. An object which can roll is placed on one side; if it does not roll off but only oscillates, the surface is horizontal (al-Shīrāzī, see below).

3. Water is poured onto a plate or dish (*djafna*, fig. 8) with an edge which is parallel to the surface and of
Fig. 8

the same height all the way round, and it is observed whether the water comes exactly up to the edges on all sides (Ibn Luyūn, see below). An exactly straight ruler is laid on the plate and one looks over this.

Ibn Sīnā (ms. Leiden, no. 1061), in order to test whether the upper surface of the base of a theodolite is horizontal, makes a cavity in it with exactly perpendicular walls, pours water in and proceeds as in the case of the plate. To test whether a large ring is absolutely smooth, al-ʿUrḍī used a process which he called *al-afādayn*. This is not a ready-made instrument, but an apparatus to be put together from case to case. The ring to be tested is first of all placed exactly horizontal with the ground by means of the level (fig. 9). Inside the ring on its concave side, a circular gutter of potter's clay is built. Its outer edge comes up to the level of the surface of the ring while its inner edge is a little higher. The gutter is filled with water and some light ashes are scattered on it. If the water flows over
Fig. 9

In the original the rod is at *e*, the rope at *a*, at *b c* is the *murdjiḳāl*, a triangle of wood, at *d* thread, at *f* *thaḳkāla*, weight.

the ring the depressions in the ring are filled with it, while the ashes remain on the raised parts of it. The inequalities in the surface of the ring are thus brought out (fig. 10). Al-ᶜUrḍī emphasises that the test must be made in absolute calm.
Fig. 10

Al-ᶜUrḍī also used the same method in order to see whether the outlets for water in a distribution system at Damascus were all of the same level. In the centre of the reservoir he put a gutter like this and deepened or raised the bottoms of the channels running out of it until the water from the gutter spread equally over the channels which revealed any inequalities (fig. 11). Cf. H.J. Seemann, in *SPMSE*, lx, 1928), 49, 81 and J. Frank, in *Zeitschr. f. Instrumentkunde*, xlviii [1929].
Fig. 11

4. A plumb-line (*s͟hāḳūl, buld, balad* [from βόλις], *t͟haḳḳāla*) is dropped from the apex (fig. 12) of an isosceles triangle, made for example of wood, with its perpendicular marked; a piece is sometimes left open in the centre of the under side for the weight of the plumb-line. If the plumb-line coincides with the perpendicular, the surface is horizontal (the figures go back to al-S͟hīrāzī and al-K͟halk͟hālī). Such drawings have led to the erroneous idea that Muslim students were already acquainted with the pendulum (cf. E. Wiedemann, in *Verhandl. d. d. phys. Ges.* [1919], 663; the apparatus is called *al-fādin* [e.g. in al-S͟hīrāzī and al-ᶜUrḍī, see below], Dozy, *op. cit.*, also *al-ḳādin*).

In the architect's balance (fig. 13), according to Ibn Luyūn or al-Ṭig͟hnārī (see below), a quadrangular piece of wood is placed on the beam *a a* to be examined; in the middle of it, a perpendicular line *b a* is drawn before which a plumb-line is hung; according to the original figure, it seems to be two parallel lines between which the plumb-line hangs.
Fig. 12

Al-Marrākus͟hī (*flor.* later 7th/13th century [*q.v.*]) has described a more perfect form (fig. 14). In the figure *a b*, *a c* and *d e* are rods, and *a b* = *a c* and *a d e* is an equilateral triangle; *d e* is pierced in the centre. A plumb-line is hung from *a* through the hole. If the surface on which *b* and *c* are put is horizontal, the thread of the plumb-line goes through the centre of the hole.
Fig. 13

Whether the levels and other instruments are themselves correct, whether for example the plumb-line from the apex to the base is perpendicular, is tested in this way. After the plumb-line comes to rest in one position of the level, the latter is put in various positions on some horizontal surface, particularly in one
Fig. 14

perpendicular to the first, and in one in which left and right have places exchanged. If the plumb-line always comes to rest, the level is correct but if it only does so in the former case the error can be corrected by adjusting the position of the surface and that of the level.

The level here described is usually called *kūniya* (γωνία); the word, however, is also used for the wooden setsquare, as used by carpenters (see *Mafātīḥ al-ʿulūm*, ed. van Vloten, 255) and land surveyors like Abu 'l-Wafāʾ (see *Abhandlungen zur Geschichte der Naturwissenschaft und Medizin*, Heft iv [1922], 98). A synonym is *afāḏān*, according to al-S̲h̲īrāzī (*Nihāyat al-idrāk fī dirāyat al-aflāk, Maḳ*. 2, ch. 13). From the same root we have in Ibn Waḥs̲h̲iyya (ms. Leiden no. 1279, 527) *fawdān*, in Dozy (*Supplément*, ii, 246) *fādin* and *fādim*. Connected with this is *fawdān*, dual of *fawd*.

Sometimes one finds it stated that levelling is done with the *s̲h̲āḳūl*; e.g. in al-Battānī (ed. Nallino, text, 1903, 137), *mawzūn bi 'l-s̲h̲āḳūl*, and an exactly similar statement is made by Ibn Sīnā (ms. Leiden no. 1061). A setsquare is either brought up to the plumb-line and a perpendicular dropped on the surface from it, or the *s̲h̲āḳūl* is used for the level, the essential part of which is the plummet.

On larger surfaces, such as roofs, etc., a long rod (*ḳubṭāl* = *cubitale*) is first of all laid down, and on it the apparatus for testing the level is placed; this is called *mīzān al-izur* (or *al-bannāʾīn*, that of the architects; cf. Ibn Luyūn, see below).

5. At the apex A and B (fig. 15) of two sharp-pointed tetrahedra of equal height $A\ I\ H\ K$ and $B\ L\ M\ N$, a rod of some length $A\ B$ is laid, on which is fixed a triangle with a plumb-line hanging from it or an arrangement such as is already described for the scale-beam. If the plumb-line or the tongue comes to rest, the rod and therefore the surface is horizontal (al-Marrākus̲h̲ī).
Fig. 15

The necessity of making surfaces exactly level continually crops up in building, and also in setting up astronomical instruments, and in constructing the Indian circle with which the meridian and then the direction of the *ḳibla* is ascertained. In this case, the level surface is usually not prepared on the ground but on a firm foundation, perhaps of stone. The construction for the Indian circle is already described in the *Hypotyposis* of Proclus (*loc. cit.*) in the same way as by the Arabs.

We now deal with the tests used to see if a thing is perpendicular:

1. The simplest method is to hang a plumb-line beside it. In the case of level perpendicular surfaces, this must touch it all the way down if its point of suspension is on it. This method is always recommended in working with the quadrant (see also below).

2. If the point of suspension is a little in front of the surface, the thread must be equidistant from it all the way down.

3. In the side of the gnomon, a perpendicular rod, often with a cone-shaped top, Ibn Yūnus (see below) cut out a groove which ended in a hemispherical cavity. In the groove a thread is hung from the top of the gnomon with a ball-shaped weight. If this comes to rest in the hollow, the gnomon is perpendicular.

4. The gnomon is moved backwards and forwards (turned about on its foot: *muḳbal wa-mudbar*); its shadow must only move so far on the level surface, on which it stands, as is in keeping with the movement of the sun during the turning (Ibn Yūnus, see below).

5. A circle is described at the foot of the rod and a pair of compasses used to test whether the distance of the top of the gnomon is the same from all points of the circle.

6. Ibn Sīnā drills a small hole through the gnomon parallel to its base, puts it in a vessel with a horizontal bottom which is filled with muddy water and examines whether the surface exactly coincides with the level of the hole.

7. In order to examine whether a level surface is standing exactly perpendicular, two exactly equal parallelepipedal blocks of wood (fig. 16) are placed on it, L_1 and L_2, one above the other. From the upper edge of L_1 a plumb-line is hung; one watches whether its thread exactly touches L_2; the best plan is to place a very thin ruler between L_1 and the plummet and test the position of the thread with respect to L_2 (al-Marrākus̲h̲ī, see below).
Fig. 16

2. In order to ascertain the difference in height between two points s_1 and s_2 which are at a distance from one another, as is necessary in making a canal for example, one looks horizontally from s_1 with a apparatus which is at a height h from the ground to a vertical rod at s_2 and ascertains the height h_1 at which the point observed is above the ground. A mark can be made on it (in modern mensuration, the rod at s_2 has divisions marked on it); the difference in height is h_1-h. According to fig. 19, the Arabs, like Hero, seem to have used something similar. Ibn al-ʿAwwām (see below) uses a square board on which are marked a number of circles touching one another, which are distinguished by different colours or have different centres. In order to place the rods absolutely

perpendicular, plumb-lines are hung beside them (fig. 17).

The horizontal line of vision is obtained in various ways:

1. A rod (e.g. an ell long) with square sides is put up in such a way that the upper surface appears horizontal to the eye and one looks along this surface.
2. The rod (*ḳubṭāl*) is put on the above-mentioned dish or plate (fig. 8) and one looks along it.
3. At the end of the rod, nails are fastened at the same height and their heads are pierced and one looks through the holes.
4. For a rough examination, one can put, at two places, two tub-shaped bricks which for convenience may be made each out of two half-pipes (Ibn al-ʿAwwām, see below).
5. An astrolabe is put in a horizontal place such as the edge of a well or on its cover, and one looks through the eyepiece.

Other methods of ascertaining differences of level are as follows:

1. An assistant is sent from the higher positions to the lower holding a rod of a known length *l* vertically until one sees just the end of it; if *h* then is the level of the eye, *l-h* is the difference in height. If the distance is too great for the top of the rod to be distinguished, a light is put on it, e.g. a lighted candle, and the observation is made by night.
2. If it is a question of ascertaining whether a place outside a well is lower than the level of water in the well, the distance of the latter from the surface of the ground or from the edge is ascertained by letting a rod and thread down with a shining heavy object at the end and used in calculation.

Two apparatuses, closely connected with each other, are the following:

3. To a rod (fig. 17) the triangle with the plumb-line is attached. To its two ends, two threads with weights at the ends are attached, *a* and *b*. Two posts *1* and *2* are erected at the points, the difference in level of which is to be ascertained. The one thread is fastened to the end of the lower post *1* and the other hung along and over the post *2* until its weight comes to rest. The amount of shifting of the thread measures the difference in height (al-Khāzinī, see below).
Fig. 17

4. The *murdjiḳāl* (the bat, fig. 18) consists of an equilateral triangle with a plumb-line which hangs from the middle of one side. The triangle is suspended by this side. Two rods, an ell in length, are erected to 10 ells apart; a rope is passed from the rop of one to the top of the other and by two threads *a a* the *murdjiḳāl* is suspended in its centre. If the plumb-line goes through the triangle, both places are on the same level; if not, one is raised by putting stones below it for example. The end of the rope can, as in 3, be moved along (Ibn Luyūn, see below).

5. In the Paris manuscript no. 2468, an unknown author describes 3 apparatuses for levelling (figs. 19a-c). In the first (*al-mashhūr*, the known) a rod of wood
Fig. 18

an ell in length is bored through its entire length and tongs with a tongue are suspended from its centre (fig. 19a). Through the hole, a rope some 15 ells long is drawn which is fastened to the two vertical rods already mentioned. The second apparatus (fig. 19b: *al-shabīha*, the "similar") corresponds to the *murdjiḳāl*; only the two threads *a a* are replaced by rings which are put over the long rope *a a* . The third arrangement (fig. 19c: *al-anbūb*, the pipe) is also mentioned by al-Karkhī and Bahāʾ al-Dīn al-ʿĀmilī but not described;
Fig. 19a Fig. 19b Fig. 19c

(From the ms. Paris no. 1417, *a* is the known, *b* is the similar, *c* the pipe, *d* the weight.)

it probably corresponds to our canal-level, a communicating pipe filled with water, such as is very fully described by Hero (*Dioptra*, 197 and *loc. cit.*), but he gives it no particular name, probably because it is associated with a dioptra. On the plumb-line of the figure is written *thaḳḳāla* (cf. Wiedemann, *Beitr.*, xxxv, see below).

Al-Ṭighnārī mentions another instrument called *mīzān al-ḳaṭʿ*, and Ibn Waḥshiyya (see below), one of brass called *ḳafar* or *ḳaḳar*. Neither are described, however. Arab authors who give fuller descriptions of Arab instruments are the following:

1. Ibn Waḥshiyya (or Abū Ṭālib al-Zayyāt) [*q.v.*], in *Kitāb al-Filāḥa al-nabaṭiyya*, "the Book of Nabataean Agriculture" (cf. H. Schmeller, in *Abhandlungen zur Gesch. der Naturwissensch. und Medizin*, Erlangen 1922, Heft iv, 26). His data are supplemented by those of numerous commentators.
2. Al-Khāzinī, in the *Kitāb Mīzān al-ḥikma*; cf. Th. Ibel, *Die Wage im Altertum u. Mittelalter*, diss. Erlangen 1908, 159 ff.
3. Ibn al-ʿAwwām (*ca.* 524/1130) in *Kitāb al-Filāḥa* (cf. E. Wiedemann, *Beiträge*, x, see below).
4. Abū ʿUthmān b. Luyūn (d. 740/1349) in his *Radjaz fī 'l-filāḥa*, deals with levelling ground, etc., and gives notes on al-Ṭighnārī [see FILĀḤA. ii] and others (cf. E. Wiedemann, *Beiträge*, x, 317, and Dozy, *Supplément*, ii, 302, 579).
5. Bahāʾ al-Dīn al-ʿĀmilī (953/1547-1030/1622),

Essenz der Rechenkunst, ed. F. Nesselmann, see Wiedemann, *Beiträge*, x, 319).

Full details of levelling are given in the astronomical books in the treatment of the ascertainment of the meridian, e.g. in Ḳuṭb al-Dīn al-Shīrāzī (d. 710/1311 [*q.v.*]; cf. E. Wiedemann, in *Zeitschr. für Physik*, x [1922], 267), al-Khalkhālī, etc. Many books on the astrolabe give information on the subject in their treatment of surveying problems, e.g. in al-Bīrūnī (cf. Wiedemann, *Beiträge*, xviii, 59 ff.).

Once again are given here the names of the levelling instruments: *mīzān, mīzān al-bannāʾīn, mīzān al-ḳaṭʿ, mīzān al-izur, ḳubṭāl, kūniyya, fādin, ḳādin, afādayn, djafna, murdjiḳāl, kakar.*

The writer knows no comprehensive treatise on levelling in connection with canal building, etc., in the early Muslim period. For the literature, see Wiedemann, *Beiträge*, iii, 229; xviii, 26, and H. Schmeller, *op. cit.*, 41. For knowledge of these matters in ancient times, see C. Merkel, *Die Ingenieurtechnik im Altertum*, and H. Diels, *Antike Technik*², Leipzig 1920.

3. ASPECTS OF THE BALANCE IN INDIAN MUSLIM ART.

The "Straightforward" sense, the balance (centrally) pivoted (there seem to be no depictions of the steelyard), is shown in certain Mughal miniature paintings; e.g. in fol. 245 (artist: Mukund) of the Chester Beatty *Akbar-nāma*. Akbar is being weighed against silver and gold, seated on a square cushion occupying one of the balance-pans, on a large balance suspended from the roof of a pavilion (an occasion of court ceremony, with the *magas rān* and the *ḳur* conspicuous; see MARĀSIM. 5; the incidents are described in *Akbar-nāma*, iii, 177-8; tr. iii, 304). There is a similar incident of Djahāngīr's time where the young Prince Khurram is being similarly weighed against gold and silver on the anniversary of Djahāngīr's date of accession in the Ūrta garden at Kābul; the (unsigned) miniature is on a leaf which presumably formed part of the projected *Djahāngīr-nāma*, and refers to an incident of 1016/1607, although the painting is of some twelve years later (BM 1948-10-1069). The balance is shown also in some of Djahāngīr's commissioned "allegorical" paintings (to use the terminology of Asok Das for some paintings which seem to have been inspired by Djahāngīr's dreams, see *Bibl.*), always empty and level, and representing the "scales of justice" in the *ʿadl-i Djahāngīr*; there is an extraordinary scene in a miniature by Abu 'l-Ḥasan in the Chester Beatty Djahāngīr album (*Catalogue*, pl. 62) where Djahāngīr, standing on a globe in a (European) wooden stand atop an ox standing on a fish, transfixes the severed head of Malik ʿAnbar [*q.v.*], which stands on a spear fixed in the ground, with an arrow (European *putti* wait above him with spare arrows). Between the stand of the globe and the shaft of the spear is a chain of twelve bells running obliquely, from the middle of which is a balance; a Persian verse on the miniature refers to the "justice of Djahāngīr". The chain of bells represents the *zandjīr-i ʿadl* which Djahāngīr had directed to be suspended from the battlements of the Āgrā fort so that suppliants might advert him of their grievances (*Tūzuk-i Djahāngīrī*, i, 7). See Chester Beatty Catalogue, i, 3, for Wilkinson's interpretation, and tr. of the verses.

Also in the Chester Beatty collection (*Catalogue*, iii, pl. 86), the young Shāhdjahān is depicted standing on a globe (a direct reminiscence of Djahāngīr's "allegorical" paintings) which bears the representations of a lion and a lamb; over the beasts, directly under Shāhdjahān's feet, is an empty level balance (another version appears in the Kevorkian album, ? Hāshim, 1038/1628). A level balance appears also in a *darbār* scene in another Shāhdjahān album, where it figures as a device on the front of the throne; and, perhaps the most familiar example, carved on the translucent marble screen in the Red Fort in Dihlī between the Khʷābgāh and the Rang Maḥall, the *mīzān-i ʿadl* straddling the ornamental water-channel known as the Nahr-i bihisht. The intention again seems to have been to depict the emperor as the dispenser of Justice, following Djahāngīr's precedent.

Bibliography: T.W. Arnold, rev. and ed. J.V.S. Wilkinson, *The library of A. Chester Beatty: catalogue of the Indian miniatures*, Oxford 1936; Asok Kumar Das, *Mughal painting in Jahangir's time*, London Ph.D. thesis 1967, later publ. Delhi 1978. There is a full description of the weighing of Djahāngīr against various commodities on his birthday (29 Shaʿbān 1026/1 September 1617) in Māndū, with a description of the balance, in J.M. Campbell, *Mandu*, in *JBBRAS*, xix (1896), 194-5, based on statements by the travellers Roe, Terry and Coryat.

(J. BURTON-PAGE)

MĪZĀN ("balance"), an Ottoman political weekly (later daily), published in Istanbul, Cairo, Paris, Geneva and again in Istanbul between 1886 and 1909 (with interruptions). Founded, owned and edited by Mīzāndjī Meḥmed Murād [*q.v.*], it "contained nothing beyond the personal opinions of Mourad Bey" (Ahmed Emin). It described itself as "A Turkish Newspaper", but also stressed its "Muslim and Ottoman" character. The history of *Mīzān* reflects the main stages in the journalistic and political life of its founder. First published in Istanbul where it had to conform to the Ḥamīdian censorship requirements (nos. 1-158, October 1886-December 1890), *Mīzān* was re-established outside Ottoman control after Murād had fled to Europe and had eventually decided to publish his newspaper in Cairo, this time as a more polemical and combattive paper (nos. 159-84, January-July 1896). Following Murād's move to Paris in late summer 1896, *Mīzān* was re-

founded in the French capital as the official organ of the Committee of Union and Progress (*Ittiḥād we Terakkī Djemʿiyyeti* [*q.v.*] besides *Mechveret* (nos. 1-18, from December 1896), only to be transferred to Geneva a few months later (nos. 19-29, May-July 1897). Murād's final return to the Ottoman empire resulted, after the proclamation of the Constitutional Period, in yet another re-foundation of *Mīzān* in Istanbul in July 1908, now published as a daily and progressively critical of the ruling *Ittiḥād we Terakkī Djemʿiyyeti* (nos. 1-135, until April 1909). *Mīzān* was finally suspended soon after the incident known as the *31 Mārt waḳʿasī*.

Bibliography: An invaluable source lies in Meḥmed Murād's autobiographical works [see MĪZĀNDJĪ MEḤMED MURĀD. 2. Works, 1]. For a selection of leading articles from the *Mīzān* of the Egyptian and French-Swiss periods, see ʿÖmer Fārūḳ (ed.), *Ether-i Meḥmed Murād, taḥarrī-yi istiḳbāl. Mīṣirda ve Avrūpāda neshr olunan "Mīzān"dan muḳtebesdir*, 2 vols., Istanbul 1329-30/1911-12. At present, the most detailed general account is Birol Emil, *Mizancı Murad Bey. Hayatı ve eserleri*, Istanbul 1979, ch. 2, *Mizan*, 227-399.

(M.O.H. URSINUS)

AL-**MĪZĀN** [see MINṬAḲAT AL-BURŪDJ].

MĪZĀNDJĪ MEḤMED MURĀD, Ottoman politician, official and journalist: editor of the weekly (later daily) *Mīzān* [*q.v.*] and for some time leader of the *Ittiḥad we Terakkī Djemʿiyyeti* [*q.v.*]; lecturer in history at the Mekteb-i Mülkiyye and in the Dār al-Muʿallimīn, commisioner in the Public Debt administration and member of the Shūrā-yi Dewlet [*q.v.*]; political essayist, author of several history books, novelist and playwright (1854-1917). Murād is one of the most colourful, and controversial, figures of the Ḥamīdian era: a radical idealist in much of his political writings from the period of exile, but a moderate reformist when presiding over the Young Turk party; as an official in the service of the Sultan he was ambitious and reportedly "never content with the position he held, even if elevated to the highest rank" (ʿAbd al-Raḥmān Sheref, according to Ali Haydar Yücebaş). The historian Murād was sometimes compared with Treitschke (Yaḥyā Kemāl). As a Muslim, he did not hesitate to demonstrate his sympathies with Shaykh Badr al-Dīn [*q.v.*] and the Wahhābī [*q.v.*] movement (*Tārīkh-i Ebü 'l-Fārūḳ*, i, 262-7). Of the leading political intellectuals of his time, Murād is one of the most communicative with regard to his own person (cf. his 5-volume autobiography!), probably the result of his desire to explain and justify some of his most controversial moves.

1. Life. Mīzāndjī Meḥmed Murād (alias Emīrōf Murād, Ebū 'l-Fārūḳ) was born in 1270/1854 as the son of Muṣṭafā b. al-Ḳādī Ṭāhā, *ḳādī* of Ḥurāḳī in the republic of Dārghū, Dāghistān, and head of a local family of (Shāfiʿī?) *ʿulamāʾ*. He received a traditional education in Arabic and Ḳurʾānic studies until the age of ten, when he himself decided to be taught in Western subjects instead. Murād registered at a Russian school in the provincial capital where he soon acquired a profound knowledge of the Russian language, whereupon he was sent to Stavropol to continue his studies in a lycée at the expense of the Russian government. Here he found the opportunity to read Draper and Guizot as well as Rousseau and Montesquieu and to satisfy his interest in world politics by following the news in various Russian and French newspapers. It was during this period that Murād began publishing essays in Russian papers and periodicals, and regularly putting down notes in his *Defter-i khāṭirāt* (see below, 2. Works, *Alter Ego*). The news of the promotion of the liberal Aḥmed Midḥat Pasha [*q.v.*] to the rank of vizier, together with the tragic death of his best friend Ḥaydar Bāmātōf in 1288/1872, led Murād to leave Russia for Istanbul (according to his memoirs, the focus of all his hopes and dreams from early childhood). He arrived there in Dhu 'l-Ḥidjdja 1289/February 1873. After a prompt conversation with Midḥat Pasha (conducted in French as Murād—in his own words-"did not have any Turkish" at that time) and an audience with the Grand Vizier Aḥmed Esʿad Pasha, Murād was introduced to Shīrwānīzāde Meḥmed Rüshdī Pasha who became Grand Vizier the very day Murād was his guest (17 Ṣafar 1290/16 April 1873). This and the fact that Rüshdī Pasha saw Murād as his compatriot secured the latter a prominent place in the pasha's *ḳonaḳ*. Having been given an apprenticeship in the Maṭbūʿāt Ḳalemi of the Foreign Ministry instead of a military post offered to him at the instigation of Esʿad Pasha (which he refused), Murād was then additionally appointed *mühürdār* (private secretary) of the Grand Vizier. But the dismissal from the Grand Vizierate and subsequent death of Shīrwānīzāde Rüshdī Pasha on 11 Shaʿbān 1291/23 September 1874 suddenly left Murād without his patron, leaving him no other choice than to retreat from the inner circle of power. During the subsequent years of political instability, Murād lived through a personal crisis which came to an end only with his marriage in 1294/1877 and his appointment to a lectureship in the newly re-opened Mekteb-i Mülkiyye the same year. Teaching general history and geography, political and Ottoman history, "he made world history an Ottoman discipline" (Yaḥyā Kemāl). For use as a textbook in history classes, Murād compiled the first comprehensive modern *History of the Romans* to be written in Ottoman-Turkish (vol. ii of his *Tārīkh-i ʿumūmī*). His appointment to an additional lectureship in the Dār al-Muʿallimīn in Shawwāl 1297/October 1880 was followed by his installation as a member of the Inspection Committee of the Ministry of Education (Ṣafar 1299/January 1882, re-appointed Djumādā II 1305/February 1888), and by his promotion as director of the Dār al-Muʿallimīn on 9 Radjab 1299/ 27 May 1882. This marks the zenith of Murād's career in the Ottoman educational system; his manifest belief in the political press as a particularly suitable means of enlightening people and influencing politics soon led him to reduce his commitments as a history teacher and to establish a newspaper of his own: the first issue of *Mīzān* appeared on 22 Muḥarram 1304/20 October (*sic*) 1886. Although he had resigned from all his functions in the Dār al-Muʿallimīn by Rabīʿ I 1303/January 1886, he continued teaching history and geography in the Mekteb-i Mülkiyye until 1313/1895. Tensions between Murād and the central authorities arose after he had frankly commented in *Mīzān* on the Armenian question and had advocated the abolition of tax privileges for the Sultan's estates. The last issues of *Mīzān* appeared in Djumādā I 1308/December 1890 after the newspaper had been suspended several times. In 23 Shaʿbān 1308/4 April 1891, however, the Sultan appointed Murād commissioner of the Public Debt administration as some kind of douceur. An encounter between Murād and ʿAbd al-Ḥamīd II in Rabīʿ I 1313/September 1895 took place in an atmosphere of mutual understanding, and gave rise to expectations on Murād's side that he had a real chance to be appointed to a high-ranking post close to the Sultan

(whom he described at this occasion as "like an angel"). But as these hopes did not materialise, Murād finally decided to leave the country. He resigned from his functions in the Public Debt administration on 1 Djumādā II 1313/19 November 1895 and embarked on a Russian steamer later the same day, leaving his family behind. Travelling to Western Europe via the Crimea, Kiev and Vienna, Murād arrived in Paris early in December 1895. After a cool encounter with Aḥmed Rıḍā, the leader of the Society of Union and Progress in France, and with Lord Salisbury in London shortly thereafter, Murād decided to re-establish his newspaper in Cairo, under some kind of British protection. As Murād's exodus on a Russian steamer seemed to have confirmed widespread suspicions that he was a Russian spy, Murād was sentenced to death *in absentia*. The fear of being abducted by agents of the Porte, together with the fact that he was separated from his family, contributed seriously to the deterioration of his health. Suffering from nervous tension, Murād was declared mentally ill by many of his enemies who thus found an easy explanation for the increasingly radical stance of *Mīzān*. After Ottoman pressure on the British and Egyptian governments for his extradition, Murād was requested to leave Egypt. On 30 Muḥarram 1314/10 July 1896 he left Alexandria for Paris. Back in the French capital, Murād—despite several reservations—became a member of the Society of Union and Progress and was soon elected its leader. *Mīzān* was re-established again, this time as the official organ of the Society besides *Mechveret*. But tensions between Murād and Aḥmed Rıḍā resulted in the splitting-up of the Society, and in the transfer of its headquarters to Geneva on 22 Dhu 'l-Ḳaʿda 1314/24 April 1897. After continued disputes with Aḥmed Rıḍā, Murād resigned from the leadership on 29 Dhu 'l-Ḥidjdja 1314/31 May 1897. Less than two months later, he suddenly decided to return to Istanbul. The decisive factor in his decision appears to have been Aḥmed Djelāl al-Dīn Pasha, head of ʿAbd al-Ḥamīd's intelligence service, who met Murād in Paris and Geneva to convey the Sultan's conditions under which he could be pardoned. Murād boarded the train for Istanbul on 12 Rabīʿ I 1315/11 August 1897. But in spite of being promised an immediate audience with the Sultan on his return, Murād was refused entry and put under surveillance, eventually being offered a function in the intelligence service (which he appears to have refused). Almost two years passed until he was appointed a member of the Financial Department of the Council of State (Shūrā-yi Dewlet). Murād remained in this office until the beginning of the Second Constitutional Period, when he resigned, devoting himself again to the publication of *Mīzān* which was then refounded for the fourth and last time. Continuing the tradition of being an opposition paper, *Mīzān* soon turned against the now ruling *Ittiḥād we Terraḳḳī Djemʿiyyeti*. As a result, in Ramaḍān 1326/October 1908 Murād was taken into the custody of the Ministry of War for about a week, and his newspaper shut down. During the disturbances which followed the so-called *31 Mārt Waḳʿasi*, Murād was accused of being a partisan, if not a prominent figure, of the political reaction, whereupon he was arrested on 3 Rabīʿ II 1327/24 April 1909. After a badly-conducted trial, Murād was sentenced to life confinement in a fortress, the first two years of which he spent on Rhodes where he began to work on his famous multi-volume Ottoman history. In Rabīʿ II 1329/April 1911, he was transferred to the island of Lesbos or Midilli [*q.v.*]. Being pardoned by the cabinet of Ḥüseyin Ḥilmī Pasha, Murād returned to Istanbul in Djumādā I 1330/April 1912. Together with his son ʿÖmer Fārūḳ, he travelled to France and Switzerland for medical treatment in the summer of 1913. Murād died in his house at Anadolu Ḥiṣārī on 21 Djumādā II 1335/15 April 1917.

2. Works. 1. *Autobiographical*: *Khayāl ve ḥaḳīḳat-i ḥāl*, unpublished ms. (extensively used by B. Emil, see *Bibl.* below); *Alter Ego*, a "*defter-i khāṭirāt*" composed in Russian (known so far only through a quotation in *Meskenet*, 21); *Meskenet maʿdheret teshkīl eder mi?*, Istanbul 1329/1911 (covering Murād's early life until 1895); *Müdjāhede-i milliyye. Ghurbet we ʿawdet devirleri*, Istanbul 1326/1908; *Ḥürriyyet wādīsinde bir pen̄če-yi istibdād*, Istanbul 1326/1908 (covering most of the year 1908); *Tatlī emeller adjī ḥaḳīḳatlar*, ed. Ṭahazāde ʿÖmer Fārūḳ, Istanbul 1330/1911-12 (from the *31 Mārt Waḳʿasī* to Murād's banishment to Rhodes); *Enḳāḍ-i Istibdād ičinde zügürdün tesellīsi*, Istanbul 1329/1911 (largely overlapping with the preceding). 2. *Historical*: Some of the following titles were composed primarily as textbooks for use in the Mekteb-i Mülkiyye. The earliest of these is *Rōma tārīkhi*, first published in 1297/1879-80 as vol. ii of the following: *Tārīkh-i ʿumūmī*, 6 vols. Istanbul 1297-9/1879-80 to 1881-2 (first impression; fourth and last: 1327/1911); *Mukhtaṣar Tārīkh-i ʿumūmī*. Istanbul 1302/1884-5; *Mukhtaṣar Tārīkh-i Islām*, Baghčesarāy 1890; *Dewr-i Ḥamīdī āthārī*, Istanbul 1308/1890-1 (a bibliography for part of the Ḥamīdian period); *Tārīkh-i Ebü 'l-Fārūḳ, Tārīkh-i ʿOthmānīde siyāset we medeniyyet iʿtibāriyle ḥikmet-i aṣliyye taḥarrīsine teshebbüth*, ed. Ṭahazāde ʿÖmer Fārūḳ, 7 vols., Istanbul 1325-32/1909-16 (vol. i with another impression in 1330/1914). This remarkable Ottoman history has remained a torso; of the originally planned twelve vols. (see *muḥīṭ-i ether* on p. 2 of vol. i) only the vols. i-vii (the latter dealing with the Köprülü era) have been published. 3. *Political essays*: *Le Palais de Yildiz et la Sublime Porte*, Paris 1896; *Yīldīz Sarāy-i Hümāyūnī ve Bāb-i ʿĀlī*, Cairo 1313/1895-6; *Müdāfaʿa niyyetinde bir tedjāvüz*, Paris 1314/1896-97; *La force et la faiblesse de la Turquie*, Geneva 1897; a good deal of Murād's political writings first published in *Mīzān* (Egyptian and European periods) can be found reprinted in *Taḥarrī-yi istiḳbāl. Miṣīrda we Avrūpāda neshr olunan "Mīzān"dan muḳtebesdir*, 2 vols. Istanbul 1329-30/1911-12. 4. *Novels*: *Ṭurfanda mī yoḳsa ṭurfa mī?*, Istanbul 1308/1890-1 ("the way I spent the first months of employment in the Sublime Porte is accurately illustrated at the beginning of the novel *Ṭurfanda*" [Meḥmed Murād, in *Meskenet*, 40]). 5. *Plays*: *Tendjere yuwarlandī ḳapaghīnī buldī*, Istanbul 1325/1909.

Bibliography: By far the best general study of the life and works of Meḥmed Murād is Birol Emil, *Mizancı Murad Bey. Hayatı ve eserleri*, Istanbul 1979.

(M.O.H. Ursinus)

MIZMĀR (a.) means literally "an instrument of piping". In the generic sense, it refers to any instrument of the "wood-wind" family, i.e. a reed-pipe or a flute. In the specific sense, it refers to a reed-pipe (i.e. a pipe played with a reed) as distinct from a flute, as we know from Ibn Sīnā (d. 428/1037) who describes the *mizmār*—a reed pipe—as an instrument "which you blow into from its end which you swallow", as distinct from an instrument like the *yarāʿ*—a flute—"which you blow into from a hole". Ibn Zayla (d. 439/1048) writes similarly, but substitutes the Persian word *nāy* for the Arabic word *mizmār*. In Ibn Sīnā's Arabic treatise *al-Nadjāt*, we read of the *mizmār*, but in the identical passage in his Persian *Dānish-nāma* the word is *nāy*. Further, the

Mafātīḥ al-ʿulūm, 236, says, "the *mizmār* is the *nāy*." For the present purpose, "wood-wind" instruments (*mazāmīr*) may be divided into. 1. reed-blown types; and 2. pipe-blown types. Among the former we have single reed-pipes of the clarinet, oboe and saxophone types, as well as double reed-pipes, the bagpipe, and the *chêng*. Among the latter, we have the flute and recorder, as well as the pan-pipes.

a. Reed-blown types.—Single reed-pipes occur in ancient Semitic art and literary remains (Lavignac, i, 35 ff.). Hoary gossip attributes the "invention" to the Persians (al-Masʿūdī, *Murūdj*, viii, 90 = § 3214), whilst Djamshīd himself is claimed to have been the actual "inventor" (Ewliyā Čelebī, i, 641). With Islamic peoples, reed-pipes are found with a conical or cylindrical tube (*unbūb*) pierced with finger-holes (*thukūb*), and played with a single or double beating reed (*kaṣaba*, *kashsha*). Among the Arabs of the 6th century A.D., the *mizmār* finds a place at convivial parties (*Mufaḍḍaliyyāt*, xvii), and in the 1st/7th century, it is one of the martial instruments of the Jewish tribes of the Ḥidjāz (*Aghānī*, ii, 172). When Islam came, an anathema was placed on reed-pipes, mainly, it would seem, on account of the female reed-pipe player (*zammāra*) who, as was common in the East, was looked upon as a courtesan, and, indeed, the terms *zammāra* and *zāniya* became almost synonymous. It is improbable that the Prophet Muḥammad could have referred to a reed-pipe (*mizmār*) in a well-known *ḥadīth* in praise of the chanting (*ḳirāʾa*) of Abū Mūsā al-Ashʿarī. The reference was rather to "a *mazmūr* (Hebr. *mizmōr* "psalm") from the *mazāmīr* of the House of David" (cf. Farmer, *Hist. of Arabian music*, 33). In early days, what the Arabs called the *mizmār* the Persians called the *nāy*, and the latter distinguished the flute by the name *nāy narm* (soft *nāy*). Later, they called the reed-pipe the *nāy siyāh* (black *nāy*) and the flute the *nāy safīd* (white *nāy*) because of the colour of the instruments. About the beginning of the 3rd/9th century, a musician at the ʿAbbāsid court named Zunām invented a reed-pipe which was named after him the *nāy zunāmī* or simply *zunāmī* (TʿA). What the invention was we can only conjecture. It may have been the cylinder used for altering the pitch of the instrument, or perhaps it was the introduction of a conical tube (see Farmer, *Studies*, 79, 92). At this period we have no information whether the various reed-pipes had cylindrical or conical tubes or whether they were played with single or double beating reeds. The word *zunāmī* was accorded little recognition in the East, whatever favour the invention itself found. In the West, where the name eventually became vulgarised into *zullāmī*, it became the most important reed-pipe not only in Spain, as we know from al-Shaḳundī (d. 628/1231; al-Maḳḳarī, *Moh. dyn.*, i, 59), but also in the Maghrib (Ibn Khaldūn, ii, 353). It became the *xelami* of the Spaniards (see also Schiaparelli, s.v.).

The *mizmār* (= *mizmār wāḥid*) is described and delineated by al-Fārābī (d. 339/950). It had eight holes for fingering, giving a complete octave. He also describes a smaller reed-pipe called the *suryānay* (Kosegarten, 95; Land, 122; D'Erlanger, 262). One special feature of this instrument was called the *shaʿīra*. In the *Mafātīḥ al-ʿulūm*, 237, we read: "The *shaʿīra* of the *mizmār* is its head, and it is that by which is made narrow and wide [in compass]." It was actually the cylinder inserted into the head of the instrument which lowered the pitch when required (see Farmer, *Studies*, 82), a device called later the *ṭawḳ* (*Kanz al-tuḥaf*) or *faṣl* (Villoteau). It was called the *shaʿīra* perhaps on account of the button at the top of the cylinder which was turned round. The word *suryānay* came to be modified into *surnāy* and then *surnā*. Popular etymology opined that the word was derived from *sūr* "festivity" and *nāy* "reed", but this form only appears in the lexicons (*Burhān-i ḳāṭiʿ*). Some moderns even write *ṣūrnāy*. The *surnāy* found its way into martial music as early as the beginning of the 3rd/9th century (*Aghānī*, xvi, 139: the text has *surnāb*).

In the 5th/11th century, Ibn Zayla shows how, by devices in the fingering and embouchure, other notes were obtained on the reed-pipe (Pers. *nāy*). In the Persian *Kanz al-tuḥaf* (9th-15th cent.) the *mizmār*, also called the *nāy siyāh*, is both described and delineated. More valuable is the explanation of the actual making of the beating reed with which the instrument was played, from which we learn that it was a double reed. In the next century, a Turkish author Aḥmad-oghlu Shukr Allāh copied extensively from his work (Lavignac, i, 3012). Ibn Ghaybī (d. 838/1435) says that all the notes could be obtained on the *zamr siyāh nāy* by accommodating the fingering and the embouchure. The smaller instrument, the *surnā*, was defective in the upper octave, he says. A similar type of reed-pipe to the latter called the *balabān* is also mentioned by him. Ewliyā Čelebī says that it came from Shīrāz. In the treatise of Muḥammad b. Murād (9th/15th century), we learn that the *nāy aswad* (= *nāy siyāh* = *mizmār*) was 27 cm. long.

With the Turks, the Persian word *surnā* had been altered to *zūrnā* and the term had become common to both the *zamr* (= *mizmār*) and *surnā* in the East. Ewliyā Čelebī (11th/17th century) mentions among the Turkish reed-pipes of his day the *ḳabā zūrnā* or *ʿadjamī zūrnā*, the *ʿarabī zūrnā*, the *aṣafī zūrnā*, and the *shihābī zūrnā* (a Moroccan reed-pipe). He also speaks of the *ḳurnāṭa* which, he says, was an English invention (i, 642). If this is the same as the *ḳurnayṭa*, it was the clarinet, an instrument which Denner is said to have "invented" about 1690, which is after its mention by Ewliyā Čelebī. The Persians still continued to call their reed-pipe the *surnā*, and a 11th/17th century design of the instrument is given by Kaempfer. Both Russell in Syria (i, 155) and Villoteau in Egypt (i, 356-7) refer to several kinds of reed-pipes in use in the 18th century.

The latter delineates these and describes them fully. They are three, the *ḳabā zūrnā* or *zamr al-kabīr*, the *zamr* or *zūrnā*, and the *zūrnā djurā* or *zamr al-ṣughayyir*, the first being 58.3 cm. and the last 31.2 cm. in length. The modern instrument is also delineated by Lavignac, 2793; and Sachs, 428. For specimens, see Brussels, nos. 122, 355, 357; New York, no. 1331.

In the West also we find a new name, or instrument, the *ghayṭa* or *ghāyṭa* [*q.v.*]. It is said to have been introduced by the Turks (Delphin and Guin, 48), but the name is mentioned by Ibn Baṭṭūṭa (d. 779/1377), who likens the Mesopotamian *surnāy* to the Maghribī *ghayṭa* (ii, 126). There are, however, two kinds of *ghayṭa*, one being a cylindrical tube blown with a single reed, and another being a conical tube blown with a double reed. This may explain why *ghayṭa* does not always equate with *surnāy* and *mizmār* in the West (*Tadhkirat al-nisyān*, 93; Muḥammad al-Ṣaghīr, 34). The cylindrical tube instrument is known in Egypt as the *ghīṭa*. For details, see Bū ʿAlī, 103; Delphin and Guin, 47. For specimens and designs, see Höst, 261, tab. xxxi; Brussels, no. 351; New York, nos. 402, 2824; Lavignac, 2921.

A reed-pipe that became quite famous in Western Europe was the *būḳ* played with a reed. The original *būḳ* [*q.v.*] was a horn or clarion, and was made of horn or metal. Pierced with holes for fingering, and played

with a reed, a new type of instrument, somewhat similar to the modern saxophone, was evolved. In the 4th/10th century, this *būḳ* was "improved" by the Andalusian caliph al-Ḥakam II (*Bibl. de autores Españ.*, li, 410). Ibn Khaldūn, who describes it, says that it was the best instrument of the *zamr* family (ii, 353). Ibn Ghaybī, in his holograph ms. in the Bodleian Library, writes *bāḳ*, but adds "also called *būḳ*", but the latter remark has been deleted. It appears to be delineated in the *Cantigas de Santa Maria* (Riaño, fig. 41, b.).

Another interesting instrument is the *ʿirāḳiyya* or *ʿirāḳya*, which may have been the forerunner of the European rackett. It has a cylindrical pipe and is played with a double reed. It is probably the descendant of the *nāy al-ʿirāḳī* that al-Ghazālī (d. 505/1111) speaks of. It is delineated and fully described by Villoteau (i, 943 f.). Examples are given at Brussels, no. 124; New York, no. 2861.

With Islamic peoples, reed-pipes belong to outdoor music. Just as we see them in the *Alf layla wa-layla* as being essential to folk, ceremonial, processional, and martial music, so they are today, and probably have always been.

Double reed-pipes. Ibn Khurradādhbih says that the Persians "invented" the double reed-pipe called the *diyānay* (al-Masʿūdī, *Murūdj*, *loc. cit.*), the earliest instrument of this type that we know by name in Arabic literature, although it appears in the 2nd/8th century frescoes at Ḳusayr ʿAmrā (Musil, pl. xxiv). It has been suggested that the word should be *dūnāy*, but *diyānay* is also given by al-Fārābī (see Farmer, *Studies*, 57), who describes and delineates the instrument which, he says, was also called the *mizmār al-muthannā* or *muzāwadj*. The two pipes were of equal length and each was pierced by five finger-holes, which gave an octave between them. Probably the instrument known in the Middle Ages as the *zammāra* (vulg. *zummāra*) was actually the old *diyānay*, although it merely equates with *fistula* in the *Glossarium Latino-Arabicum* (5th/11th century) and the *Vocabulista* (7th/13th century). As early as the 7th/13th century we read of the *mawṣūl* in Egypt (al-Maḳrīzī, i/1, 136). The name itself means "joined" (see *Studies*, 78), and it was doubtless a double reed-pipe. Since the 18th century at least, *zummāra* has been the name for this instrument in the East (cf. Niebuhr, i, 145), and Lane (367) describes and delineates it. It has cylindrical tubes and is played with single beating reeds. It is to be found with a varying number of finger-holes and is named accordingly (Sachs, 433). In the Maghrib, it is called the *maḳrūn* and *maḳrūna* (Lavignac, 2793: *RA*, 1866), whilst in Syria it is given a vulgarised or metathetical form of the old *muzāwadj* (cf. Sachs, 257; Dalman, *Pal. Divan*). For specimens and descriptions, see Brussels, nos. 115-18; New York, nos. 2167, 2633; and *ZDPV* [1927], 19. Specimens in the collection of Farmer range from 18 to 43 cm. in length.

Another type of double reed-pipe has only one pipe pierced with finger-holes, whilst the other serves as a drone. This also carries the name of *zummāra* when the two pipes are of the same length (cf. Niebuhr, i, 145). When the drone pipe is longer than the chanter pipe it is known as the *arghūl* (*arghun*, Mushāḳa, 29; *ʿarḳūn*, Lavignac, 2812) in modern times (cf. Freytag, *Chrest. Arab.*, 1834, 34) in Egypt and Syria. Villoteau (i, 962) gives a detailed description with scales and designs of three sizes, 107, 82.6 and 38.6 cm. in length (in the South Kensington Museum, there is one 144 cm. long). Like the preceeding instrument, it is played with single beating reeds. The drone pipe is furnished with additional tubes (*ziyādāt*) which are affixed to lower the pitch. In Syria the smaller type of *arghūl* is named the *masḥūra*, a most significant name, in spite of it being ignored in the lexicons. Lane, 367, figures a six-finger holed instrument which, he says, was used at *dhikrs* and by Nile boatmen. For specimens see Brussels, nos. 342-6; *ZDPV* [1927], pl. 2.

Bagpipe. An ancient instrument in the Orient. Just prior to Islam we have it figured on Sāsānid sculptures (Ker Porter, *Travels*, ii, pl. 64). We do not know its ancient Semitic name, but Ibn Sīnā and Ibn Zayla mention it as the *mizmār al-djirāb*, describing it as being played by "an artificial contrivance". Although Niebuhr (i, 146) calls it the *zummārat al-ḳirba*, and Lane, 386, names it the *zummāra bi-suʿn*, the more general term used in Arabic speaking countries is *zukra*, although we find *mezwed*, pl. *mzāwd*, used in Tunisia (Von Hornböstl, 4) and in Algeria. The word *zukra* is given variations by some European authors, as in the *zūḳḳara* of Villoteau (i, 970) and the *suḳḳara* of Rouanet (Lavignac, 2812). In Persia, the bagpipe has long been known as the *nāy anbān* and *nāy mashk* or *mashkak* (*Burhān-i ḳāṭiʿ*), whence the Hindūstānī name *mashk* or *mushuk* (Tagore, 24; Day, 151). In Turkey, the older word was *ṭūlum*, *ṭulūm* or *tulūm* (Meninski, Sachs; cf. Ewliyā Čelebī, i, 642: *ṭulūm düdük*), but *ghaydā* would appear to be equally popular, and this name is to be found throughout the Balkan countries (cf. Arab. *ghayta*; Span. *gaita*; Eng. *wayghte*).

The bagpipe used by Islamic peoples is generally equipped with a chanter pipe (with five or six finger-holes) and mouthpiece, but rarely with a drone pipe. The chanter, terminating in a horn bell (*Schallstück*), is often double, a feature which was probably the original reason for the term *zummāra* being used with the bagpipe. The woodwork is sometimes inlaid with metal, whilst another feature is the adornment of the instrument with tassels, beads, shells, and other frippery. Designs may be found in Niebuhr (tab. xxvi) and Sachs (434), and actual specimens in Brussels, no. 372.

Instruments of free reeds. The Chinese *chêng* is such an instrument. Probably it was not used by Islamic peoples, although known to them. The *chêng* is described in the *Mafātīḥ al-ʿulūm* as follows: "The *mustaḳ* is a musical instrument of the Chinese. It is made of compounded tubes (*anābīb*), and its name in Persian is *bīsha mushta*" (237). We get a little more information from Ibn Ghaybī, who informs us that the *čubčīḳ* or *mūsīḳār-i khatāy* was made of tubes of reed joined together. It was blown through a tube and the notes were obtained by fingerholes. For description and designs, see Van Aalst, *Chinese music*, 80.

b. Pipe-blown types. —The flutes of the Arabs, Persians and Turks, unlike those of Western Europe, are played vertically, a current of air being blown across the orifice (*manfakh*) at its head. Ewliyā Čelebī (i, 623, 636, 642 read قوال, not قزال) is not sure whether it was Pythagoras or Moses who "invented" the first instrument of this type, the shepherd's flute, called the *ḳawāl* (cf. χαυδός). Ibn Khurradādhbih says that it originated with the Kurds (al-Masʿūdī, viii, 90 = § 3214), and Ibn Ghaybī (*Sharḥ al-adwār*) says that this instrument was the *nāy abyaḍ* (white *nāy*). We know from Ibn al-Aʿrābī (d. 231/846) that the Arabs called this flute or reed-pipe the *shiyāʿ*. A characteristic of the Arab flute was its length, hence the ancient Greek proverb which likened a talkative person to an Arabian flute (*Menandri Fragm.*).

In the early days of Islam, the Arabs called their flute the *ḳuṣṣāba* (later modified into *ḳaṣaba*), and this is the name used by the poets al-Aʿshā (d. 8/629) and Ruʾba b. al-ʿAdjdjādj (2nd/8th century). These terms

fell into desuetude in the East when Persian musical influence were at their height. The Persians called their flute the *nāy narm* (soft *nāy*) so as to distinguish it from the *nāy* proper and the *surnāy*, which were reed-pipes, and so the Arabs of the East called their flute the *nāy*, although in the West the old word *ḳuṣṣāba* or *ḳaṣaba* was retained. Another term for the flute in early days, perhaps a different kind, was *yarāʿ* (*Mafātīḥ al-ʿulūm*, 236), and in the 5th/11th century *Glossarium Latino-Arabicum* it equates with *calamaula*. In the 7th/13th century, it was still a common name with Ṣafī al-Dīn ʿAbd al-Muʾmin in the East, and with al-Shaḳundī in the West (al-Maḳḳarī, i, 59: read *yarāʿ* not *barāʿ*). In the contemporary *Vocabulista in Arabico*, it (*yarāʿ*) agrees with *fistula*. The words *hayraʿa* and *hariʿa* (al-Djawharī, al-Fīrūzbādī) would appear to be vulgar forms of *yarāʿ*.

Whilst the diminutive *ḳaṣība* (*ḳuṣayba*) sometimes occurs in reference to a small flute, *shabbāba* and *shabāb* (√*shabba* "to grow up") were the more general terms used in ʿIrāḳ (Ikhwān al-Ṣafāʾ, i, 97), Egypt (al-Maḳrīzī, i, 136), Spain (al-Shalāḥī, *Voc. in Arab.*), and the Maghrib (Ibn Khaldūn, ii, 352). It became the *exabeba* of Western Europe. Another name for a small flute was *djuwāḳ*, and this word also found a place with the Latins as the *joch* (Du Cange). In Persia, the small flute was called the *pīsha* (*Kanz al-tuḥaf*), hence the Balkan *piscoiu* and *pisak*.

We read of the *nāy* in the *Aghānī* (ix, 71), but we cannot be sure whether it was a flute or a reed-pipe. Al-Fārābī (Kosegarten, 45) ignores the flute (*nāy*) and says that it was inferior (*ukhur*) to the *mizmār* (reed-pipe), but it soon gained wide recognition in chamber music probably by reason of Ṣūfī appreciation and the *dhikr* of the *darwīsh*. Ṣafī al-Dīn ʿAbd al-Muʾmin (d. 693/1294) describes the *nāy* with eight holes for fingering, the thumb-hole at the back being called the *shudjāʿ* ("vehement"), its name revealing its function. In the Persian *Kanz al-tuḥaf* (8th/14th century) we find two very small flutes mentioned, but in the *Sharḥ al-adwār* (9th/15th century) we find that the *nāy abyaḍ* was normally 63 cm. long. Five larger sizes are given, the longest being 99 cm., with two smaller sizes, the limit being 31.5 cm. Ibn Ghaybī also registers several varieties including the *nāy bamm* of 67.5 cm. approximating in pitch to the *bamm* string of the lute, and the *nāy zīr* of 33.75 cm. approximating to the *zīmr* string. Ewliyā Čelebī (12th/18th cent.) gives the names of a number of Turkish flutes (i, 623) including the *shāh manṣūr*, the *dāwūdī*, and the *bolāheng*. Villoteau (i, 954) describes and delineates the Egyptian instruments of the late 12th/18th century. The largest, 77 cm. long, was the *nāy shāh* (= *shāh nāy*), and the smallest, 48.8 cm. long, was the *nāy djiraf*, the *kiraft* of modern Syria (Mushāḳa, 29). Other flutes named by him are the *nāy kushuk*, the *nāy sufurdja* (? *supurda*), the *nāy muṭlaḳ*, and the *nāy ḥusaynī*. In Turkey the *supurda* is the smallest flute used in chamber music (Lavignac, 3019). Turkish and Egyptian flutes are usually well made, with a head to support the lips. In Palestine and the Maghrib they still retain, more or less, a primitive appearance, and although the seven-holed flute is common (Christianowitsch, pl. 2), the five- and six-holed instrument has acceptance (Delphin and Guin, 45; *ZDPV* [1927], pl. 1). In the Maghrib, the flutes in the orchestras still retain the name of the *ḳaṣaba* (vulg. *ḳaṣba*), and they are generally about 40 cm. long, whilst the *djuwāḳ* or *shabbāba* (*shabāb*) is smaller. In the interior, longer flutes like the *giblī* and *sudāsī* may be found. Delphin and Guin give an account of these.

The recorder, or flûte à bec, also found favour in the East. This is the Arabic *nāy labak* (mouth *nāy*), the Persian *sūt*, the Turkish *dūduk*, and the Hindustānī *alghūza*. As early as the Ikhwān al-Ṣafāʾ and the *Mafātīḥ al-ʿulūm* (4th/10th century) we read of the *ṣaffāra*, which was doubtless a flûte à bec (see Farmer, *Studies*, 83). Villoteau (i, 951) says that it was an instrument of this type in his day in Egypt. The *dūduk* or *dūdūk* is mentioned by Ewliyā Čelebī in nine different species (i, 642), and is also mentioned by Ḥādjdjī Khalīfa (i, 400). The *shāhīn* would appear to have been a small three-holed recorder such as was common with pipe and tabor players in mediaeval Western Europe. It was played with the fingers of one hand, the other hand being used for beating the *ṭabl* or drum, hence the phrase in al-Ghazālī: "The *shāhīn* of the drummer (*ṭabbāl*)."

Pan pipes are also common to folk usage. Both Pythagoras and Moses are credited by Ewliyā Čelebī (i, 624, 636) with the "invention" of the *mūsīḳār* or pan pipes. Although the word stands for "a composer of melodies" in the *Mafātīḥ al-ʿulūm* (see also Meninski), it referred to a musical instrument in the 9th/15th century (*N. et E.*, xiv, 312). A contemporary writer, Ibn Ghaybī, says that "the *mūsīḳār* is one of the [wind instruments with] free pipes. Its notes are determined by size [of pipes]. The longest have the low notes, and the shortest the high notes." We find the instrument called *mūsīḳal* (*Farhang-i shuʿūrī*), whilst Ḥādjdjī Khalīfā (i, 400) has *mithḳāl*, and Toderini (i, 237) *mescal*, which probably gave birth to the Romanian *muscal*. The term *mūsīḳāl* survived up to modern times (Villoteau, i, 963), but the more general word used today (Mushāḳa, 29) is *djanāḥ*. (Pedro de Alcala [1503] mentions a harp by this name, but perhaps he confused the name with *djank*.) Russell (*The natural history of Aleppo*, i, 156), writing in Syria in the 18th century, says that pan pipes were to be found with from three to twenty-three pipes. Kaempfer, 743, delineates an 11th/17th century Persian instrument.

The names of instruments in the *mazāmīr* group in Arabic are legion. Many of those not mentioned in this article are regional and are of folk origin, their source being often discernible, such as in the *zamdjara* and *zamkhar*, to name only two. More interesting however, are the older words like *hunbūka*, *naḳīb* and *zanbāḳ*. The first two occur in al-Fīrūzābādī (d. 817/1414), and *naḳīb*, which equates with *mizmār*, reminds us of the much debated passage in Ezekiel, xxviii, 13. *Zanbaḳ* occurs in al-Azharī (d. 370/980) and even earlier (cf. Lane). The Greek σαμβύκη and the Latin *sambuca* were stringed instruments, and Isidore of Seville's *sambuca* as a "wood-wind" instrument has long been suspect, but since *zanbaḳ* is to be found in Arabic equating with *zammāra* and *mizmār* there would appear to be good reason for accepting Isidore of Seville.

MIZWALA (a.), sundial. This term and *sāʿa shamsiyya* are used in modern Arabic, but in mediaeval Islamic times horizontal sundials were referred to either as *rukhāma,* lit. "marble" or *basīṭa,* lit. "flat", and vertical sundials as *munḥarifa,* lit. "inclined". The gnomon was usually called *shakhṣ, shākhiṣ* or *miḳyās.* One expression of the Muslim concern with timekeeping and regulating the times of prayer [see mīḳāt] was an avid interest in gnomonics, the theory and practice of sundial construction. Muslim astronomers made substantial contributions to both aspects of the subject, and by the late mediaeval period there were sundials of one form or another in most of the major mosques in the Islamic world. Those which survived usually bear markings for the hours (seasonal or equinoctial) and for the midday (*ẓuhr*) and afternoon (*ʿaṣr*) prayers. Since the beginnings of the permitted intervals for these two prayers were defined in terms of shadow lengths, their regulation by means of sundials was singularly appropriate.

The earliest surviving Arabic treatise on sundials deals with their construction and is attributed to al-Khwārazmī [*q.v.*], active in Baghdād in the early 3rd/9th century. The work consists mainly of a set of tables of coordinates for constructing horizontal sundials serving 12 different latitudes. Each of al-Khwārazmī's sub-tables for a specific latitude displays for both of the solstices the solar altitude, the shadow of a standard gnomon, and the solar azimuth (see Pl. XVI, fig. 1). With these functions tabulated, construction of the sundial would have been almost routine. A 4th/10th-century treatise on the construction of vertical sundials has also survived. This is by one of the two Baghdād astronomers Ibn al-Ādamī or Saʿīd ibn Khafīf al-Samarḳandī (the copyist of the unique manuscript was not sure). Two auxiliary functions are tabulated with which one can generate pairs of orthogonal coordinates useful for marking vertical sundials serving any terrestrial latitude and inclined at any angle to the local meridian. Also from the ʿAbbāsid period, probably the 3rd/9th century, is the earliest text on the portable conical sundial.

Thābit b. Ḳurra (fl. Baghdād, *ca.* 300/900 [*q.v.*]) wrote a comprehensive work on sundial theory dealing with the transformation of coordinates between different orthogonal systems based on three planes: (1) the horizon, (2) the celestial equator, and (3) the variable plane of the sundial. As far as we know, Thābit's treatise, despite its merits, was not influential. Later Muslim astronomers were more interested in the practical side of gnomonics.

The major work on spherical astronomy and instrumentation in the later period of Islamic astronomy was the compendium by Abū ʿAlī al-Marrākushī [*q.v.*], who worked in Cairo *ca.* 680/1280. There are lengthy sections on sundials, with numerous tables and diagrams. The discussion concentrates on descriptions of the mode of construction; there is little underlying theory. The text deals with horizontal, vertical, cylindrical and conical sundials as well as simple, portable vertical sundials, in plane, cylindrical or conical format. Al-Marrākushī's treatise was widely influential in later astronomical circles in Egypt, Syria and Turkey.

A contemporary of al-Marrākushī in Cairo, Shihāb al-Dīn al-Maḳsī, prepared a set of tables for marking vertical sundials for the latitude of that city. For each degree of inclination to the local meridian he tabulated the coordinates of the points of intersection of the lines for the seasonal hours and the *ʿaṣr* curve with the shadow traces at the equinoxes and the solstices (see Pl. XVII, fig. 2). The astronomer Ibn al-Sarrādj, active in Aleppo some fifty years later, devised several ingenious sundials for all latitudes.

Only a few sundials survive from the mediaeval period. Hundreds or even thousands must have been constructed from the 3rd/9th century onwards, but the vast majority have disappeared without trace. The oldest surviving Islamic sundial (see Pl. XVIII, fig. 3) was made by Ibn al-Ṣaffār, an astronomer of some renown who worked in Cordova about the year 400/1000. Only one-half of the instrument survives, but the remains are adequate to establish that gnomonics was not the maker's *forte.* The sundial is of the horizontal variety and there are lines for each of the seasonal hours and the *ẓuhr* prayer; there would also have been markings for the *ʿaṣr.* The gnomon is now missing, but its length is indicated as the radius of a circle engraved on the sundial. Several other, later Andalusī sundials which survive are singularly poor testimonials to their makers' abilities; yet proper sundials must have existed in mediaeval al-Andalus.

The Tunisian sundial shown in Pl. XVIII, fig. 4 is a much neater production. It was made in 746/1345-6 by Abu 'l-Ḳāsim Ḥasan al-Shaddād, and it is of considerable historical interest because its markings display only the times of day with religious significance. For the afternoon (right-hand side) the curves for the *ẓuhr* and *ʿaṣr* are marked according to the standard Andalusī/Maghribī definitions. For the morning there is a curve for the *ḍuḥā,* symmetrical with the *ʿaṣr* curve with respect to the meridian, and a line for the time of the *taʾhīb* one equinoctial hour before midday, this institution being associated with the communal worship on Friday [see djumʿa]. It was the symmetry of the *ḍuḥā* and *ʿaṣr* on this sundial that first led to an understanding of the definitions of the times of the daylight prayers in Islam.

The astronomer Ibn al-Shāṭir, chief *muwaḳḳit* of the Umayyad Mosque in Damascus, constructed in 773/1371-2 a horizontal sundial, some 2 m × 1 m in size, which is undoubtedly the most splendid sundial of the Middle Ages (see Pl. XIX, fig. 5). It was erected on a platform on the southern side of the main minaret of the Mosque. It could be used to measure time after sunrise in the morning and time before

sunset in the afternoon, as well as time before and after midday. This means that it measured time relative to the *ẓuhr* and *maghrib* prayers, and the *ʿaṣr* curve enabled regulation of time relative to that prayer also.

No vertical sundials survive from the first few centuries of Islamic astronomy, but we know they were made because of the treatises on their use which were compiled from the 3rd/9th century onwards. The *munḥarifa*, meaning simply "vertical and inclined to the meridian", usually bore markings for each seasonal hour and the *ʿaṣr* prayer bounded by two hyperbolic shadow-traces for the solstices. Tables such as those of al-Maḳsī (see above) would be particularly useful for constructing such sundials on the walls of mosques.

Numerous sundials from the period after the 10th/16th century survive in mosques from Morocco to India. No inventory of these instruments has been made, beyond non-technical surveys of those in Istanbul. In any case, they constitute but a modest testimonial to a millennium of Muslim activity in gnomonics.

Bibliography: On Islamic sundial theory in general, see K. Schoy, *Gnomonik der Araber*, in E. von Bassermann-Jordan, ed., *Die Geschichte der Zeitmessung und der Uhren*, Band 1F, Berlin and Leipzig 1923, and idem, *Sonnenuhren der spätarabischen Astronomie*, in *Isis*, vi (1924), 332-60, both repr. in idem, *Beiträge zur arabisch-islamischen Mathematik und Astronomie*, Frankfurt 1988. A survey of Islamic tables for sundial construction is in preparation: see already D.A. King, *On the astronomical tables of the Middle Ages*, in *Studia Copernicana*, xiii (1975), 37-56, repr. in idem, *Islamic mathematical astronomy*, London, Variorum Reprints, 1986, II, esp. 51-3.

On a sundial used by Umayyad caliph ʿUmar b. ʿAbd al-ʿAzīz [*q.v.*] and other instruments which attest to the original association of the times of prayers with seasonal hours, see King, *On the origin of the prayers in Islam*, in *Oriens*, xxxiii (1990).

On al-Khwārazmī's tables for sundial construction, see B.A. Rosenfeld, ed., *Muhammad ibn Musa al-Khorezmi*, Moscow 1983, 221-34, and also King, *Al-Khwārizmī and new trends in mathematical astronomy in the ninth century*, in *Occasional Papers on the Near East* (New York University, Hagop Kevorkian Center for Near Eastern Studies), 2 (1983), esp. 17-22. On Thābit's treatise, see K. Garbers, *Ein Werk Ṯābit b. Qurra's über ebene Sonnenuhren*, in *Quellen und Studien zur Geschichte der Mathematik, Astronomie und Physik*, Abt. A, 4 (1936); and P. Luckey, *Thābit b. Qurra's Buch über die ebenen Sonnenuhren*, in *Quellen und Studien zur Geschichte der Mathematik, Astronomie und Physik*, Abt. B, Bd. 4 (1937-8), 95-148.

On al-Marrākushī's treatise, see J.-J. Sédillot, *Traité des instruments astronomiques des arabes composé au treizième siècle par Aboul Hhassan Ali de Maroc...*, Paris 1834-5, repr. Frankfurt 1985, and L.A. Sédillot, *Mémoire sur les instruments astronomiques des Arabes*, in *Méms. de l'Acad. Royale des Inscriptions et Belles-lettres de l'Institut de France*, i (1844), 1-229, repr. Frankfurt 1989.

On Andalusī sundials, see King, *Three sundials from Islamic Andalusia*, in *Jnal. for the Hist. of Arabic Science*, ii (1978), 358-93, repr. in idem, *Islamic astronomical instruments*, London, Variorum Reprints 1987, XV. Two more examples unearthed at al-Madīna al-Zahrāʾ are illustrated in [J. Vernet *et al.*, eds.], *Instrumentos astronómicos en la España medieval: su influencia en Europa*, Santa Cruz de la Palma 1985, 126-33. The Tunisian sundial is discussed in King, *A fourteenth-century Tunisian sundial for regulating the times of Muslim prayer*, in W. Saltzer and Y. Maeyama, eds., *Prismata. Festschrift für Willy Hartner*, Wiesbaden 1977, 187-202, repr. in King, *Instruments*, XVIII. On Ibn al-Shāṭir's sundial, see L. Janin, *Le cadran solaire de la Mosquée Umayyade à Damas*, in *Centaurus*, xvi (1971), 285-98, repr. in E.S. Kennedy and I. Ghanem, eds., *The life and work of Ibn al-Shāṭir: an Arab astronomer of the fourteenth century*, Aleppo 1976, 107-21.

Other mediaeval sundials are described in P. Casanova, *La montre du Sultan Noûr ad Dîn (554 de l'Hégire = 1159-1160)*, in *Syria*, iv (1923), 282-99; Janin and King, *La cadran solaire de la Mosquée d'Ibn Ṭūlūn au Caire*, in *JHAS*, ii (1978), 331-57, repr. in King, *Instruments*, XVI; A. Bel, *Trouvailles archéologiques à Tlemcen. Un cadran solaire arabe*, in *R. Afr.*, xlix (1905), 228-31; Janin, *Quelques aspects récents de la gnomique tunisienne*, in *ROMM*, xxiv (1977), 202-21; H. Michel and A. Ben-Eli, *Un cadran solaire remarquable*, in *Ciel et Terre*, lxxxi (1965) (describing an Ottoman polar sundial in Acre); and J. Livingston, *The Mukḥula, an Islamic conical sundial*, in *Centaurus*, xvi (1972), 299-308. Several Ottoman and Ṣafawid sundials on *ḳibla* indicators are illustrated in King, *Maps and instruments for finding the direction of Mecca (9th-19th century)*, in *Johann Wolfgang Goethe-Universität (Frankfurt-am-Main), Institut für Geschichte der Naturwissenschaften, Preprint Series*, no. 13 (1989).

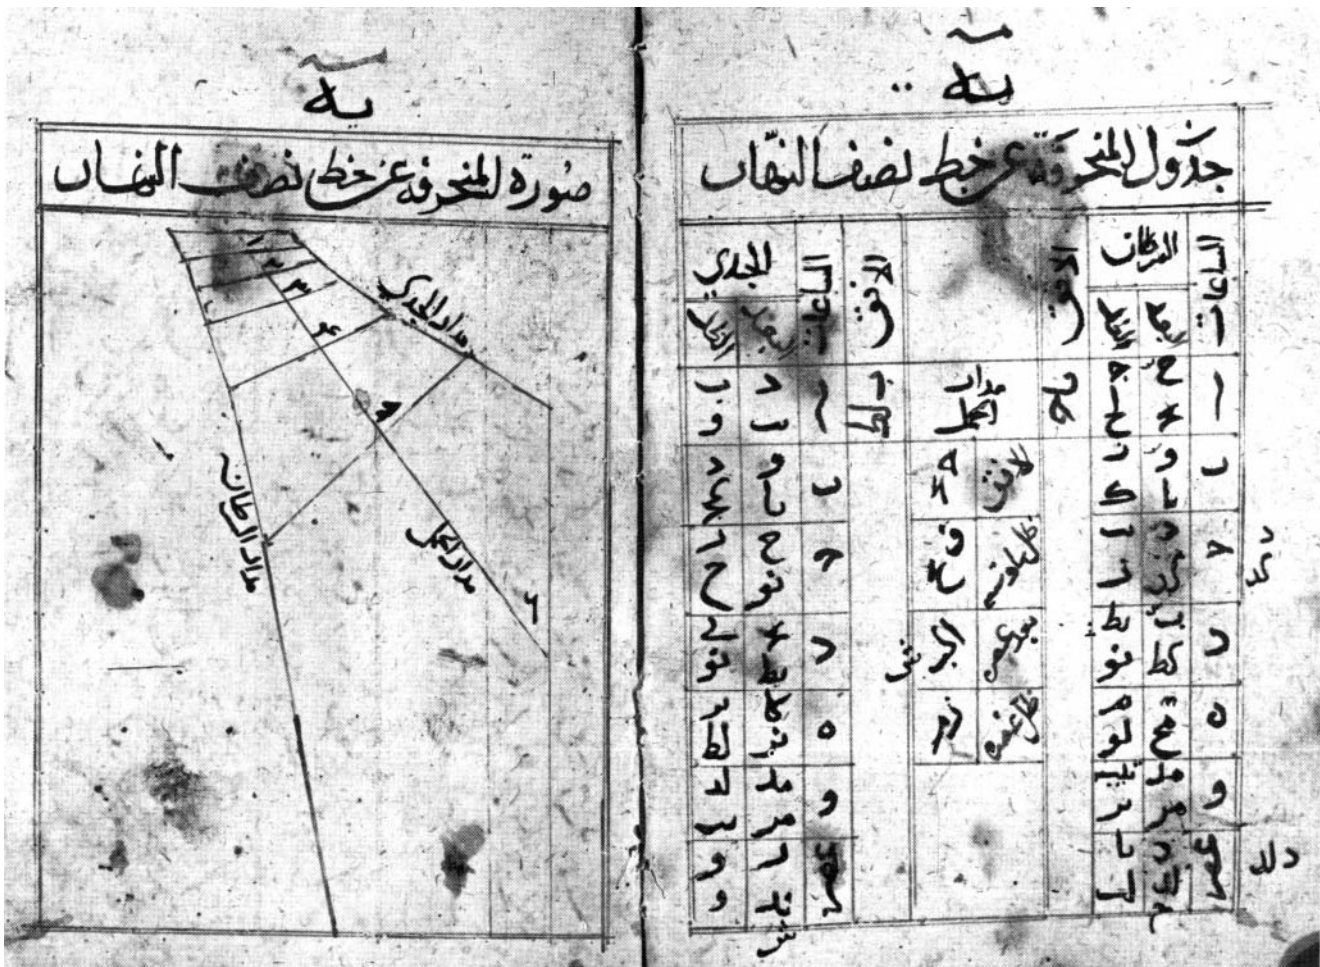
Non-technical surveys of the sundials are in A.S. Ünver, *Sur les cadrans solaires horizontaux et verticaux en Turquie*, in *Archives Internationales d'Histoire des Sciences*, xxviii-xxix (1954), 254-66, and W. Meyer, *Sundials of the Osmanic era in Istanbul*, in *Procs. of the International Symposium on the Observatory in Islam (Istanbul 1977)*, Istanbul 1980, 193-202, and idem, *Istanbul'daki güneş saatleri*, in *Sandoz Kültür Yayinlari* (Istanbul), no.7 (1985). (D.A. King)

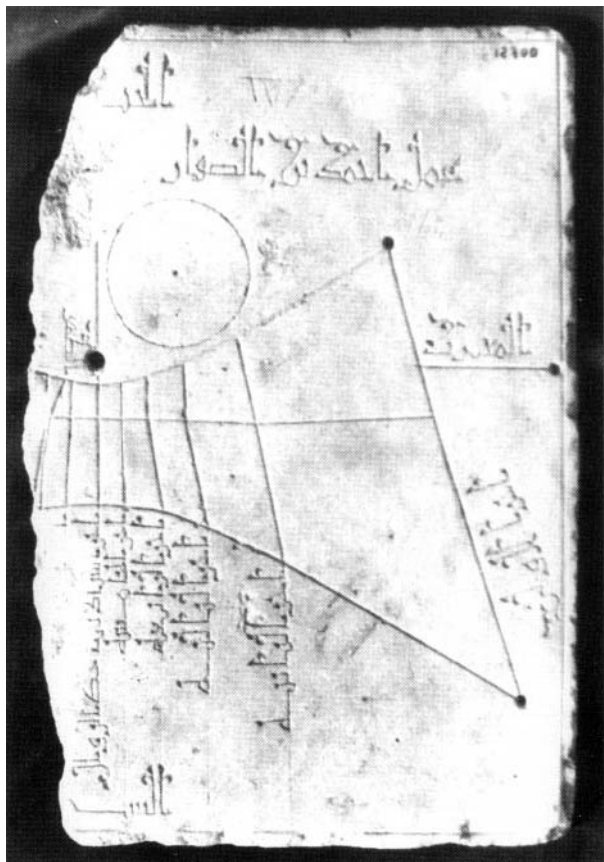
MIZWĀR, arabicised form of the Berber *amzwaru*, "he who precedes, he who is placed at the head", equivalent to the Arabic *muḳaddam* and, like this, frequently has in North Africa the meaning of chief of a religious brotherhood (*ṭarīḳa* [*q.v.*], the superintendent of a *zāwiya* [*q.v.*] or the chief of a body of *shorfā* [*q.v.*]. In those districts of the Maghrib where the old Berber organisation has survived, mainly in the Great Atlas and Central Atlas, *amzwār* is sometimes the equivalent of *anflūs*, the political adviser to a body (cf. R. Montagne, *Les Berbères et le Makhzen dans le Sud du Maroc*, Paris 1930, 222).

The term *mizwār* (or *mazwār*) is found early in the histories of the Maghrib in connection with Almohad institutions. There it means the head of a faction, and the corresponding office seems at this time to be often confused with those of *ḥāfiẓ* and *muḥtasib* [*q.v.*]. In the time of the Muʾminid caliph Abū Yūsuf Yaʿḳūb al-Manṣūr, each of the twenty-one Almohad tribes had two *mizwārs*, "one for the first rank of the hierarchy, i.e. the earliest recruits of the Almohads, and another for those who had joined them later (*ghuzāt*)" (*Kitāb al-Ansāb*, in E. Lévi-Provençal, *Documents inédits d'histoire almohade*, Paris 1928, 70; cf. also 63-4, and M. Gaudefroy-Demombynes, introduction to the translation of the *Masālik al-abṣār* of Ibn Faḍl Allāh al-ʿUmarī, Paris 1927, p. xxxvi). *Mazwār* was in constant use in Fās for the *naḳīb* [*q.v.*] of the principal Sharīfian groups who lived in this capital (see R. le Tourneau, *Fès avant le protectorat*, Casablanca 1949, 489). In Marrakech, the same title was borne, under the Almohads, by the head of a kind of guild of physicians in the town (see G. Deverdun, *Marrakech des origines à 1912*, Rabat 1959, 251).

1. An extract from al-Khʷārazmī's tables for sundial construction showing two pairs of sub-tables for each of latitudes 21°, 28°, 33°, 35° and 40°, based on obliquity 23;51° [see MAYL]. The final pair of tables is for latitude 29;30° but with obliquity 23;35°. These tables occur here in a treatise on astrolables and sundials by al-Sidjzī (*fl.* Iran, *ca.* 975). Taken from ms. Istanbul Topkapı 3342, 8 + 9, with kind permission of the Director of the Topkapı Library.

جدول المنحرفة عن خط نصف النهار

صورة المنحرفة عن خط نصف النهار


2. An extract from al-Maḳsī's tables for constructing vertical sundials for the latitude of Cairo. This particular sub-table serves an inclination of 15° to the meridian. Taken from ms. Cairo Dār al-Kutub *mīḳāt* 103, fols. 68b-69a, with kind permission of the Director of the Egyptian National Library.


3. The oldest surviving Islamic sundial, made about the year 400/1000 in Cordova by Ibn al-Ṣaffār. The curve for the *ẓuhr* is just visible on this fragment, and there would have been curves for the beginning and end of the *ʿaṣr* as well. Photo courtesy of the Museo Arqueológico Provincial de Córdoba.
4. A 8th/14th-century Tunisian sundial indicating four times of day with religious significance: the *ḍuḥā* and the *taʾhīb* before midday, and the *ẓuhr* and the *ʿaṣr* after it. Property of the National Museum of Carthage; photo courtesy of the late M. Alain Brieux, Paris.
5. The markings of the splendid sundial of Ibn al-Shāṭir which once graced the main minaret of the Umayyad Mosque in Damascus. The original sundial is in fragments, preserved in the garden of the nearby Archeological Museum. This copy is made from an exact replica made by the 13th/19th-century *muwaḳḳit* al-Ṭanṭāwī which is still *in situ* on the minaret. Courtesy of the Syrian Department of Antiquities and the late M. Alain Brieux, Paris.

Bibliography: Given in the article.

(E. LÉVI-PROVENÇAL*)

AL-**MIZZA**, modern form Mezzé, a village lying, according to the mediaeval geographers, half-a-*farsakh* (i.e. about 4 km./2½ miles) to the west of Damascus [see DIMASHK], described as extensive, populous and agriculturally rich, being irrigated by one of the streams of the Baradā river. It was also known as Mizzat Kalb, having been in the Umayyad period a locality heavily settled by South Arabian, Kalbī supporters of the Sufyānids, and being also the spot where the Companion of the Prophet Diḥya b. Khalīfa al-Kalbī was reputedly buried (al-Harawī, *Ziyārāt*, 11/27). In historical accounts of the Umayyads, it is mentioned several times as a centre of the Kalb, especially in the confused last years of the dynasty; thus in 127/745 Marwān II after suppressing the revolt of Ḥimṣ [*q.v.*] sent a force against his opponents in the Damascus area, and the properties of the Yamāniyya at al-Mizza were burnt down (al-Ṭabarī, ii, 1894; Ibn al-Athīr, ed. Beirut, v, 329; cf. G.R. Hawting, *The first dynasty of Islam, the Umayyad caliphate AD 661-750*, London 1986, 98).

By Ayyūbid and Mamlūk times, however, it is again described as flourishing. Ibn Baṭṭūṭa (i, 236, tr. Gibb, i, 148; cf. also Ibn Djubayr, 277, tr. R.J.C. Broadhurst, London 1952, 288) found it to be one of the largest villages of the Ghūṭa [*q.v.*], famed *inter alia* for its *ʿulamāʾ*, including the traditionist Djamāl al-Dīn Yūsuf b. al-Zakī ʿAbd al-Raḥmān al-Mizzī (d. 742/1341-2 [*q.v.*]). Al-Dimashkī (*Nukhba*, tr. Mehren, 265-6) mentions the renown of its rose water. The expanding modern city of Damascus has now crept towards al-Mizza, and the city's airport is located there.

AL-**MIZZĪ**, DJAMĀL AL-DĪN ABU 'L-ḤADJDJĀDJ YŪSUF B. AL-ZAKĪ ʿAbd al-Raḥman b. Yūsuf al-Kalbī al-Ḳuḍāʿī, famous Syrian traditionist. Born near Aleppo in 654/1256 of Arab stock, he moved early in life with his parents to al-Mizza [*q.v.*], a rich village just outside Damascus where he received a traditional education in Ḳurʾān and some *fiḳh*. When he was in his early twenties he embarked upon a career as a traditionist hearing *ḥadīth*s with the masters of his time. One of his fellow pupils was Taḳi 'l-Dīn Ibn Taymiyya (661-728/1263-1328 [*q.v.*]), who remained a life-long friend. Al-Mizzī travelled extensively in search of traditions in Syria, Palestine, Egypt and the Ḥijāz and developed into the greatest *ridjāl* expert the Muslim world had ever seen. Furthermore, he acquired a mastery in Arabic language and grammar. When he was still a young man, he had some contacts with controversial Ṣūfī circles but he soon discontinued these, probably as a result of Ibn Taymiyya's warnings against them. A Shāfiʿī as to his legal preference, he nevertheless wholeheartedly espoused the new ideas and the creed proposed by Ibn Taymiyya, something which even landed him for a short time in jail.

From 718/1319 onwards, al-Mizzī became the head of one of the major *ḥadīth* academies of Damascus, the Dār al-Ḥadīth al-Ashrafiyya, which was in a fact a *waḳf*. Before entering this *madrasa* he had to profess that he upheld the creed of al-Ashʿarī [*q.v.*], but in spite of his pledge to this effect, he had many adversaries who doubted his sincerity and who suspected him of having been "corrupted" by Ibn Taymiyya's creed. Even so, he taught *ḥadīth* in this academy until his death in 742/1341.

Among his students we find, apart from Ibn Taymiyya, such scholars as al-Dhahabī (d. 748/1347 [*q.v.*]), ʿAbd al-Wahhāb al-Subkī (d. 771/1369 [*q.v.*]), the author of the *Ṭabaḳāt al-Shāfiʿiyya al-kubrā*, and his son-in-law Ismāʿīl b. ʿUmar Ibn Kathīr (d. 774/1372 [*q.v.*]), the author of *al-Bidāya wa 'l-nihāya*.

Al-Mizzī's fame as a *muḥaddith* rests mainly in two voluminous works:

I. *Tahdhīb al-kamāl fī asmāʾ al-ridjāl*, a biographical lexicon listing all the transmitters of the *isnād*s occurring in the "Six" canonical collections as well as in some other minor tradition collections. It constitutes a milestone in the *ʿilm al-ridjāl* in that it is the first comprehensive lexicon that aims at being exhaustive, much more so than any of its predecessors. As Bashshār ʿAwwād Maʿrūf, the modern editor of the *Tahdhib*, points out, it not only comprises the biographical material collected in earlier works of that kind, but al-Mizzī has also brought together virtually every scrap of information on the *ruwāt kutub al-sitta* that he could lay his hands on (see Maʿrūf's introduction to his edition in progress, i, 41-9). Various scholars have produced compendia of al-Mizzī's original, none being more famous than the *Tahdhīb al-Tahdhīb* of Ibn Ḥadjar al-ʿAsḳalānī (d. 852/1448) [*q.v.*], which with its twelve volumes amounts to approximately one-third of the unwieldy original. For a survey of all the reworkings of the *Tahdhīb al-kamāl*, see Maʿrūf's introduction, i, 51-71.

II. *Tuḥfat al-ashraf bi-maʿrifat al-aṭrāf*, which is available in the complete and reliable edition of ʿAbd al-Ṣamad Sharaf al-Dīn. This work contains the *musnad*s of all those first generation transmitters, the Companions of the Prophet, arranged in alphabetical order, who, after the Prophet, had the *isnād*s of the "Six Books" and a few other minor collections. (In the final part of vol. xiii, the so-called *mursal* traditions [see ḤADĪTH] headed by the Successors are brought together.) The individual *musnad*s comprise complete *isnād*s or *isnād* bundles but do not contain the complete *matn*s supported by these *isnād*s. Only the *ṭaraf* (plural *aṭrāf*), a technical term which indicates the "gist" or an epitomising phrase of each *matn*, precedes the sometimes substantial list of names from the *isnād* as it occurs in the various collections. Within each Companion's *musnad* the material is presented in the alphabetical order of the second link after the Prophet, the Successors, and in large *musnad*s it is in turn divided up into material presented in the alphabetical order of the third and sometimes fourth links in the *isnād*s. The edition currently available is especially helpful in that it presents this complex material in an array of different letter sizes with many appropriate modern symbols, easily recognisable abbreviations and a variety of numberings inserted, thus greatly facilitating the use of an otherwise awesome textbook.

In the study of Muslim tradition, al-Mizzī's *Tuḥfa* is indispensable and this for the following reasons:

1. It is the only work of its kind which comprises also al-Nasāʾī's *al-Sunan al-kubrā*, a collection which that collector later excerpted to produce his *Sunan* as we know it today (also known by the name *al-Mudjtabā*). *Al-Sunan al-kubrā* was never edited, and although the *Tuḥfa*'s editor once announced that he was going to undertake a complete edition, except for one slim volume containing the chapter on *ṭahāra*, his plans have not yet been carried out. An analysis of al-Nasāʾī's *Kubrā isnād*s shows how that collector added masses of single strand *isnād*s to already existing *isnād*

bundles collected by his predecessors, strands which he diligently left unmentioned in his later, excerpted *Sunan*. Sezgin's *GAS*, i, does not yet know of any mss. of the *Kubrā*.

2. Repeated use of the *Tuḥfa* provides the analyst of *isnād*s with a host of important data which are otherwise difficult and time-consuming to unearth. Thus the *Tuḥfa* enables the user in the case of *ḥadīth*s supported by a sizable number of different *isnād* strands to determine at one glance the "common link", that is, the possible originator or (the proto-version of) the *matn*. For example, if one wishes to know the possible provenance and authorship of a certain canonical tradition quoted somewhere without *isnād*, the subsequent procedure could be followed. The tradition is first traced in Wensinck's *Concordance* and hence in any of the available collections listed there from where the Companion and the two or three oldest transmitters of its *isnād* can be gleaned. Then, consulting the extensive alphabetical lists of transmitters at the beginning of each volume of the *Tuḥfa*, the Companion's name is located, after that, within this Companion's *musnad*, that of the Successor whose name is always preceded by *, and, when necessary, within the collection of that Successor the name of the next transmitter which is always preceded by **. In some very large *musnads*, e.g. those of Anas b. Mālik and Abū Hurayra, in order to facilitate the search, one may want to trace also the name of the next transmitter preceded by ***. At this point, spotting the *ṭaraf* and tracing the *isnād* (bundle) is easy and hence the identification of its "common link", if there is one.

The *Tuḥfa*'s editor has, furthermore, obliged the users of this work by compiling a list (entitled *al-Kashshāf*, see *Bibl.*) of all the titles of the *bāb*s of all the different chapters of all the collections lying at the base of the *Tuḥfa*. Since Wensinck's at times idiosyncratic division of the canonical collections into *kitāb*s (and sometimes also *bāb*s), made before compiling his *Concordance*, never fails to bewilder users, ʿAbd al-Ṣamad's *Kashshāf* constitutes a welcome additional tool for tracing traditions to their sources. In brief, the publication of the *Tuḥfa* from the 8th/14th century together with the *Kashshāf* from the 20th century have initiated a totally new and time-saving method of *ḥadīth* analysis.

Juynboll, *Muslim tradition. Studies in chronology, provenance and authorship of early* ḥadīth, Cambridge 1983, index s.n. and 206-17.

(G.H.A. JUYNBOLL)

MKWAJA, a settlement on the modern Tanzanian coast of East Africa. Traditions of Shīrāzī descent are found along the whole eastern African coast from Somalia southward as far as Kilwa and Lindi [see SHĪRĀZĪ]. Investigation carried out in 1922-3 by E.C. Baker brought to light the existence in former times of a federation of fifteen small chiefdoms in the then Tanga District whose rulers were known as *jumbe*, pl. *majumbe*; and five similar chiefdoms in the Pangani District, and twelve in the Bagamoyo District. By that date colonial rule had reduced the former powers of these chiefs to a virtual nullity. All of these chiefs claimed Shīrāzī descent.

At this period, chiefs were notably cautious when approached by strangers who asked to see their *shajara*, pl. *mashajara* (Swa. from Ar., genealogical tree), but Baker succeeded in obtaining permission to copy that of Mkwaja, the principal jumbeate in the Pangani group, some twenty miles south of the R. Pangani. In the face of the claim of Shīrāzī or Persian descent, it states that the first ancestor of the *jumbe*s of Mkwaja was an Arab from Baghdād, by name Aman. The *shajara* contains no dates of birth or death, but mentions fifteen generations, that is, at thirty years each, 450 years back from 1922 or 1472 for the birth of the first-named. This Aman left Baghdād and first resided in Zanzibar, before founding a settlement on the mainland at Uzimia, whence, at an unknown date, his descendants extended to Ushongo, Buyuni, Mkwaja, Kipumbwe, Bweni and Pangani. Later there was a further, northward extension. Of this, Kipumbwe was the principal seat, where the mosque is said to have been built in 1789. Shortly after, the *Diwan*, as the Jumbe of Mkwaja was also called, moved to Mkwaja, where in 1954 there were visible the remains of a ruined 18th century mosque adjacent to the modern mosque. In the region about Mkwaja there are cemeteries at Kisikimto and Bimbuli, and at Mafui an elaborately decorated small mosque of 18th century date, and one 19th century tomb. The occupants of the tombs are all said to be named in the *shajara*, so that from its information it would be possible to establish some rough sort of sequence for the tombs. The earlier ones have intricate carvings in coral limestone, the later, more crudely, in plaster. Most of them also have Chinese porcelain plates let into them as a decoration, as also does the *miḥrāb* of the mosque at Mafui.

MŌBADH "chief of the Madjūs", the Farsi form of MP *magupat* (OP **magupati*). This title occurs in Manichaean Parthian as *magbed*, in Armenian as *mogpet* or *movpet*, in Syriac as *mōpaṭā* and *mōhpaṭē*, in Greek as μαυῖπτάς, μαυπιτάς, μαύτης, μαύπησ and μάπτα, and in Arabic as *mawbadh* or *mūbadh* with the plural *mawābidha*. The reputation of this Zoroastrian priest for religious learning and legal responsibility led al-Yaʿḳūbī to explain this term as *ʿālim al-ʿulamāʾ*, while al-Masʿūdī explained it as *ḥāfiẓ al-dīn* and derived it from *mu* = "religion" and *badh* = "protector". The lexicographers add that it meant "learned" (*dānishmand*), someone who answered questions put to him, a judge (*ḳāḍī*), and a *faḳīh*.

The theory of Wikander that the *magupat* originally predominated in Media and Ādharbāydjān, while the *ērpat* (*hirbadh*) predominated in Fārs, and that the former was imposed over the latter at the beginning of the Sāsānid period, was based on Kartīr's description

of his career advancing from *ērpat* to *magupat*. This was refuted by de Menasce, based on the lack of evidence for a hierarchy among different kinds of priests in the 3rd century. Although the existence of *mōbadhs* is sometimes retrojected back to earlier times, as in the *Ardā Vīrāz Nāmag* (i, 9), where Alexander is said to have killed many *magupatān*, the earliest attested use of this title is in the inscriptions of Kartīr (Kirdēr) in the reign of Bahrām II (276-93). Although Kartīr claims to have been both *magupat* and *ērpat* under Shāpūr I (*ca.* 241-72) in his inscription at Naksh-i Rustam (l. 28), in those at Sar Mashhad (l. 4) and the Kaʿba of Zoroaster (l. 3), he says that he signed contracts which he sealed for the fires and for the Magians under Shāpūr I as Kirdēr, *ēhrpat*. Under Ohrmazd I (272-3) he was made Ohrmazd *magupat* (sc. of the god Ohrmazd), which position he held under Bahrām I (273-76) and Bahrām II. As such he was in charge of the divine ceremonies which he increased, founded Vahrān fires and sealed contracts for the fires and testaments, contracts and documents for the Magians at court and throughout the state. Bahrām II made him *magupat* and judge (*datōbar*) of the entire state.

Whether or not a hierarchy of priests was established under Kartīr, the title of *magupat* is hierarchic in nature, meaning that one magus (*magomart*) is in charge of others. Although Herzfeld ascribes a *magupat* of Mēshān engraved on a gem to the 3rd century, local *magupats*, mainly of Adiabene, begin to be attested in Christian martyrologies during the reign of Shāpūr II (309-79). Their role in apprehending and executing Christians is emphasised, but one of them is said to have entered the fire temple to perform the cult, while another, Ādur-Ohrmazd (d. 407), is said to have recited the Avesta, Yashts and Drōn night and day as *mōbadh* of Balāshfarr. By the 4th or 5th century a three-level hierarchy had developed of local *mōbadhs*, grand *mōbadhs* of provinces or regions and a supreme *mōbadh* over the entire state. Expressions such as *rēshā dᵉmagoshē* (head of the Magians) in Syriac corresponding to the Greek ἀρχίμαγος, ἄρχων τῶν μάγον and ἀρχιερεὺς τῶν μάγων generally refer to local *mōbadhs*, while *mohpatā rabbā* would refer to a higher priest. The existence of a supreme *mōbadh* seems to be indicated in 358 when Ādur-Shābuh, the superior of the *mōbadh* of Adiabene, is called "head of the *mōbadhs*" (*rēshā dᵉ maupatē*) of the entire East. Under Yazdagird I (399-421), Ādur-Bōzīd, the *rēshā dᵉmagoshē* at Seleucia-Ctesiphon, was probably the head of the priestly hierarchy, while Ādur-Frāzgird, the grand Magian (*magoshā rabbā*) in 408, made subordinate appointments.

According to Wikander, the earliest attestation of the title of *magupatān magupat* for the office of supreme *mōbadh* occurs during the reign of Bahrām V (421-39) for Mihr-Shāpūr in a Christian source. The NP form of this title, *mōbedhān mōbedh*, was used in Arabic. The earlier Armenian form, *movpetan movpet*, comes from MP, while the later Armenian form, *mubitan mubit*, comes from NP. According to Wiessner, this title first appears in Syriac in the time of Mār Abā (540-52). Later sources use this title from the time of Shāpūr II and imply that he appointed the supreme *mōbadh*. Al-Bīrūnī claims that Shāpūr II made the descendants of Āturpāt Mihraspandān *mōbadhān mōbadhs*. According to al-Masʿūdī, there was a *mōbadhān mōbadh* under Yazdagird II (439-57), and the 6th century *Mātakdān* names Martbūt as *magupatān magupat* under Fīrūz (457-83). In Mazdakī doctrine as reported by al-Shahrastānī, the *mōbadhān mōbadh* (understood as the chief judge) was one of the four highest officials in the royal court. Zarādusht b. Khurragān, the founder of the Mazdakī movement, is said to have been a *mōbadh* or chief *mōbadh* from Fasā in Fārs, but the claim that Mazdak himself was *mōbadh mōbadhān* (*sic*) has been denied by Klima. Vēh-Shapuhr, the *magupatān magupat* of Khusraw I (531-79), is mentionded in the *Mātakdān*, as is the *magupatān magupat* Āturpāt-i Zartushtān, who is said to have lived 150 years and been supreme *mōbadh*. There is a list of supreme *mōbadhs* of the Sāsānid period and of *mōbadhs* contemporary with the last editors of the book in ch. 33 of the *Bundahishn*, in which it is claimed that all surviving *mōbadhs* were descended from the same family.

As head of the priestly hierarchy, the *magupatān magupat* was a member of the royal court, where he presided over a supreme council of *mōbadhs* and *hirbadhs*. He was also counsellor to the king, a source of wisdom, and shared the king's meals in wartime. However, his role in deciding the royal succession is exaggerated in the *Letter of Tansar*, according to which he and two other officials should be given sealed letters by the king to be opened on the latter's death. If his choice agreed with the other's choice, it was to be announced. If not, nothing should be divulged, he should spend a day in worship and the choice should be resolved by "whatever God has put into the *mōbadh*'s mind". According to the *Testament* of Ardashīr, the king was to name his successor in four signed, sealed documents given to four high officials, who were to open them at his death and compare them to determine his successor. Neither procedure is confirmed by historical accounts of Sāsānid succession, but the *mōbadhān mōbadh* is frequently described in the *Shāh-nāma* as placing the crown on the ruler's head. Islamic sources also describe the bi-annual court of justice held on the festivals of Nawrūz and Mihrdjān when the king held public audiences for complaints brought by commoners. Any charges against the king were heard first by the supreme *mōbadh*, the chief secretary, and the director of the fire temples. The supreme *mōbadh* judged the charges against the king, who rose and knelt before him without wearing his crown.

As the supreme religious and judicial authority, the *magupatān magupat* was supposed to indict enemies of God, enemies of the king and heretics, according to the *Mātakdān*. In exceptional cases he judged lawsuits from which appeals had been made to him without seeing the plaintiff or defendant. His decisions were above review, being considered more trustworthy than the ordeal. Vēh-Shāpūr, whose archives contained wills, promulgated a memorandum dealing with legal procedure, specifically on keeping records of the interrogation in capital crimes. Copies, authenticated by his seal, were circulated to the provinces. It was natural for Muslim writers, such as al-Masʿūdī, to translate *mōbadhān mōbadh* as supreme judge (*ḳāḍī 'l-ḳuḍāt*) and to say that his rank was almost equal to that of a prophet.

At the lower levels of the judicial hierarchy, *mōbadhs* were judges of first instance and of two degrees (*kas* lower, *mas* higher), above whom was the *mōbadh* of the district. The *Mātakdān* defines the function of the *magupat* as sealing documents in his district and says that Ḳubādh I (488-96, 499-531) introduced the use of an official seal for them. In the 6th century, the title of *magupat* was replaced by "advocate of the poor" on the seals of the *magupat* of Fārs, and this is attested on bullae. Although *mōbadhs* depended on secular officials to enforce their judgments, they were expected to act as a check in local tax collectors. The legal and administrative responsibilities of *mōbadhs* that are prominent in the sources were combined with ritual

responsibilities, such as reciting the liturgy and performing sacrifices, tending the fire temples and their endowments and religious education. They were repositories of sacred and secular learning. Their functions sometimes overlapped those of secular officials and other kinds of priests. It is not always clear whether *mōbadhs* included other forms of priestly dignity (such as *dastūr*), to what extent they were hereditary or what their position was relative to the *hirbadhs*. After Hurmizd IV (579-90) abolished the judgments and regulations of the *mōbadhān [mōbadh]*, *hirbadhs* appear to have been predominant at the end of the Sāsānid period, during the Muslim conquest and for a while afterwards.

In any case, *mōbadhs*, together with other priests, lost political support when the Sāsānids fell to the Muslims. The upper levels of the priestly hierarchy disappeared; there was no longer a unitary body of priests; and authority devolved on provincial and local priests, including *mōbadhs*. It is not always clear whether *mōbadh* is used as a generic term for any priest or is used in a specifically technical sense in sources referring to Islamic Iran, and this term is also used somewhat loosely in modern scholarship for Zoroastrian priests in early Islamic times. There was both a chief *hirbadh* and a *mōbadh mōbadhān* (*sic*) in Sīstān at the time of the conquest in 31/651-2. The latter is considered to be either the supreme *mōbadh* who had fled there (Sadighi) or a lower priest (Bosworth). There was also a *mōbadhān mōbadh* at the house of al-Faḍl b. Sahl [*q.v.*] in Khurāsān in the late 2nd/early 9th century who explained Nawrūz and Mihrdjān to al-Maʾmūn's general, Ḥusayn b. ʿAmr al-Rustamī. By the 3rd/9th century, a succession of priests exercised religious authority at least over Fārs and Kirmān, although Āturfarnbag son of Farrukhzāt, Zartōkhsht son of Āturfarnbag, and Āturpāt son of Ēmēt, are called *Hudinan peshobay* ("leader of those of the Good Religion") in Book 3 of the *Dēnkart* rather than *mōbadh*. They may, however, also have been *mōbadhs*. Manushčihr son of Goshn-Yam, a descendant of Āturfarnbag, who was chief of the Zoroastrians of Fārs and Kirmān in the second half of the 3rd/9th century, was either a *mōbadh* (de Menasce) or the chief *hirbadh* (Sadighi). His nephew, Ēmēt son of Ashavahisht, who succeeded him in the first half of the 4th/10th century, and Ēmēt's son and successor, Āturpāt, who edited Book 3 of the *Dēnkart*, are regarded as *mōbadhs* by de Menasce. The 6th/12th century *Kitāb-i ʿUlamāʾi Islām* purports to contain the replies of a *mōbadhān mōbadh* from an earlier MP work and remarks that only a few *mōbadhs* were left.

There are scattered references to local *mōbadhs* in early Islamic Iran. A *mōbadh* at Marw is said to have advised the governor Māhūya not to kill Yazdagird III in 31/651-2. The local *mōbadhs* and *hirbadhs* at Nīshāpūr asked Abū Muslim to suppress the revolt of Bihāfarīd b. Māhfurūdīn in 131/748-9. A *mōbadh* participated in Yaḥyā b. Khālid b. Barmak's session on love, and another explained the Iranian calendar to the caliph al-Mutawakkil (232-47/847-61). Al-Mutawakkil is also said to have sent a *mōbadh* to Fārs. Zātspram, the brother of Manushčihr, was *mōbadh* of Sīradjān in Kirmān in 267/880-1 and contested his brother's authority over the liturgy. Ḥamza al-Iṣfahānī quotes a list of Sāsānid kings compiled by the *mōbadh* Bahrām son of Mardanshāh. Marasfand, a *mōbadh* from Kāzarūn in Fārs, read the MP inscriptions at Persepolis for ʿAḍud al-Dawla in 344/955. Marasfand's son Ādurbad was a famous *mōbadh* of Fārs. Farnbag, who wrote the *Bundahishn* in 493/1098, was descended from the family of Manushčihr and Ēmēt son of Ashavahisht, and included a section in his work on the genealogy of major *mōbadh* families. *Mōbadhs* are also said to have preserved copies of the Sāsānid register of offices (*Gāh-nāma*) which was part of the *Āʾīn-nāma* (an *Āʾīn-nāma* was translated by Ibn al-Muḳaffaʿ with the title *Kitab al-Rusūm*).

As the Zoroastrian community contracted, *mōbadhs* as such decreased in number and in qualifications and shared their authority with other kinds of priests. *Dastūr* came to be used for higher priests. The priest of the small community at Rayy in the 7th/13th century was called *mōbadhān mōbadh*, but in the mid-7th/13th century, according to local tradition, the community at Kirmān invited to lead them a great *dastūr* from Khurāsān who claimed descent from the *mōbadhān mōbadh* of Khusraw II (591-628). In the late 7th/13th century or early 8th/14th century the leader of the community at Turkābād in northwestern Yazd was called *dastūrān dastūr*.

It is only in the Persian *Riwāyāts* of the Ṣafawid period that precise definitions of different kinds of priests are given, presumably in ascending order. The *herbed* is one who knows the Avesta and has been initiated as a priest. The *mōbed* is one who recites the *Zend-Avesta* continually and performs the Yasna service. The *dastūr* is one who knows the Avesta and the Zand, the MP literature, and has the authority to command Behdīns to do religious works. A *dahmōbed* is defined as a chief *mōbed* who is in charge of the ceremonies for the dead. In 1020/1611 there were *dastūrs* and *dahmōbeds* at Kīrman and a high priest, *dastūrs* and *dahmōbeds* at Yazd.

(M. Guidi [—M. Morony])

MODES, Musical [see maḳām].

MODON, a town in the Morea [*q.v.*] on the south-west point of Messenia, about 20 miles northwest of Cape Akritas, opposite the island of Sapienza at the foot of Mount Tomeus. Modon is frequently mentioned in ancient times under the names Μεθώνη and Μοδώνη; from the latter comes the Italian name of the town, Modon, under which it has been

known since the Middle Ages in Europe. In the Middle Ages it was of much greater importance than in antiquity. The good harbour of the town, sheltered by cliffs of varying heights, has long been a haven of refuge and of supply for ships going from the West to the Levant. Hence pilgrims frequently mention the town and their accounts of their travels even contain maps.

Mentioned by al-Idrīsī as a fortified town with a citadel (*Opus geographicum*, Naples and Rome 1970 ff., 638: M.thūniya; cf. *Géographie*, tr. Jaubert, Paris 1846, 305), Modon fell to the Venetians after the Latin capture of Constantinople in 1204 and remained in their possession for nearly three centuries; this was a golden age for the town, which became an important centre for trade with Egypt and Syria. During the second half of the 14th century, the population of Modon, already a mixture of Greeks, Jews, Albanians and Latins, increased considerably as many Christians and Jews of the Peloponnesus migrated thither to escape Turkish rule. The Ottomans raided the lands outside Modon, and in 1499-1500 launched naval attacks on Modon whilst Sultan Bāyezīd II advanced on the town by land. After a siege of 28 days, the outnumbered Venetians had to surrender (9 August 1500); the populace was now massacred or enslaved, and the Latin cathedral of St. John turned into a mosque.

In 1531 the Knights of St. John almost recaptured Modon, and carried off 1,600 Muslim prisoners. Ewliyā Čelebī visited the Morea 1667-8 and gives valuable information on Modon and its vicinity (*Seyāḥat-nāme*, vii, Istanbul 1928, 334 ff.). During the War of the Holy League against Turkey, which broke out in 1684, the Venetian commander Francesco Morosini recaptured Modon with the help of Greek and German troops, and the treaty of Carlowitz [see ḲARLOFČA] confirmed the Venetians' possession. Venetian census records from this time show that Modon and its district had become very depopulated, and Modon itself, including the citadel, had only 236 inhabitants, of whom some must have been Muslims.

The town remained for some nineteen years under Venetian rule. In 1715 the grand vizier Dāmād ʿAlī Shehīd with the help of a number of Greeks took not only Modon but almost the whole of the Morea from the Venetians in a very short time [see MORA. 2]. The Venetian garrisons of Navarino and Coroni as well as the inhabitants abandoned them when the Turkish army approached in the summer of 1715, in order to take refuge in Modon, which was much more strongly fortified. Soon afterwards the Turkish fleet and army began the siege of the town. After a brief resistance Modon surrendered voluntarily. After the capture of the town, the grand vizier ordered a general slaughter of the Christians. Many in the district thereupon adopted Islam in order to save life and property in this way. The Turks who had formerly owned property in Modon or the neighbourhood were allowed by imperial edict to resume possession of it. The Peace of Passarowitz (1718) finally ceded Modon to Turkey. The town recovered from the catastrophe of 1715. From 1725 onwards a busy trade developed between Modon and the lands of North Africa, especially Algeria and Tunis. Modon played a certain part during the war between Turkey and Russia in 1768-74. The Russian vice-general Dolgoraki in 1769 besieged Modon. The siege lasted a long time; the fighting was conducted mainly by the artillery on both sides. The Russians had also two warships co-operating on the sea. At the end of May 1769, Turks and Albanians from the interior of the Morea came to the help of the besieged. In the battle that now developed the Russians suffered heavily. They were forced to abandon most of their artillery and to escape to Navarino, from which they sailed with the rest of the Russian army and a few Greek notables. According to reliable sources, the Turkish population of Modon about 1820 was four to five hundred fighting men. About the same time, ʿAlī Agha was prominent among the Turks of the town for his wealth and in other respects also. The vicinity of Modon was almost exclusively inhabited by Greeks who cultivated the land, which mainly belonged to the Turks. During the Greek War of Independence of 1821-7, all the attempts of the Greeks to take the town failed. At the end of March 1821, a Peloponnesian force led by the Orthodox Patriarch of Methone and other notables, besieged Modon and the adjoining towns of Koroni and Neokastron. The besiegers were joined in the spring by Greeks from the Ionian islands and later by Philhellenes from Europe. On 18 May 1821, Greek ships blockaded Modon, and many fierce encounters took place between the Turks of Modon and their besiegers. In July 1821, Turkish ships re-provisioned Modon but they were not successful in their attempt to reprovision Neokastron, the garrison of which was in dire straits from want of food and even water. In August 1821, the Turks of Modon decided to attempt the relief of their compatriots in Neokastron, who had in the meanwhile been forced to capitulate to their Greek besiegers. On the road between Modon and Neokastron a battle was fought on 8 August 1821. On the same day, the Greeks took Neokastron; but they gradually abandoned the siege of Modon. The town was able to continue to hold out, only, however, with the frequent help of the Turkish fleet.

When the Egyptian Ibrāhīm Pasha [*q.v.*] undertook to suppress the Greek rising for the sultan and to pacify the Morea, Modon and its neighbourhood formed his main base. There he landed troops on 24 February 1825 and dug entrenchments. Modon became an important base for Ibrāhīm Pasha's operations. On 8 October 1828 the town was taken from him by the French General Maison. The French left in 1833, and Modon has since then belonged to Greece. According to the 1981 census, the population of Methōne was 1,251; the population has been dwindling over recent decades.

MOGADISCIO, MOGADISHU [see MAḲDISHŪ].

MOGADOR [see AL-ṢAWĪRA].

MOGHOLISTĀN "the land of the Mongols", the name used from the time of the Mongols (13th century) onwards to designate the steppe, plateau and mountain region of Inner Asia lying to the north of Transoxania or Mā warāʾ al-nahr [*q.v.*] and the Syr Darya, hence including *inter alia* the region of Semirečiye, Turkish Yeti-su "the land of seven rivers", which comprised the basins of the Ili and Ču rivers [*q.vv.*]; this part of Mogholistān corresponds in large measure with the modern Kazakh SSR. But the region also extended eastwards across the Tien Shan and Ala Tau ranges into the northern part of Eastern Turkestan and into Dzhungaria (the modern Uyghur Autonomous Region of Hsin-Chiang or Sin-Kiang in China). The term reflects the fact that under the Čaghatayids [see ČAGHATAY KHĀNATE] these lands were mostly taken over by the Turcol-Mongol nomadic hordes of the Khāns, the denasalised form Moghol being the usual one of the Islamic sources for the original Monggol.

The term became the standard one for the whole region up to modern times. It is used e.g. by Bābur [*q.v.*] in his memoirs (early 16th century) and by Mīrzā Muḥammad Ḥaydar Dughlat in his *Taʾrīkh-i Rashīdī* (mid-16th century). This latter author (whose original Mongol tribe of Dughlat nomadised across Mogholistān) defines it in detail as including the lakes Balkhash and Issïḳ Köl [*q.vv.*], with the upper basin of the Irtïsh river [*q.v.* in Suppl.] to its north and "Uzbekistan" to its south and the Tarim basin to its east (now often called "Uyghuristān" or Altï shahr "the land of the six towns", sc. Beshbalïḳ, Kuča, Ḳaraḳočo or Turfan, etc.). But the boundaries of Mogholistān were inevitably somewhat fluid, for its prime characteristic was that it was essentially a region for pastoral nomadism, with virtually no towns proper by that time unruined, and only semi-permanent nomadic encampments. The nomadic nature of its sparse population, composed of Turco-Mongols organiṣed into confederations but with many splinter-groups, explains also certain other names given to the tribal peoples of Mogholistān, such as Djete (apparently "lawless ones, brigands") and Ḳarawnas/Ḳaraʾunas , Marco Polo's Caraunes (probably "people of mixed origin, métis", cf. H. Yule, ed. and tr., *The book of Ser Marco Polo the Venetian*, London 1871, i, 92-3, 94-6, P. Pelliot, *Notes on Marco Polo*, i, Paris 1959, 184-96, and J. Aubin, *L'ethnogénèse des Qaraunas*, in *Turcica*, i [1969], 65-94).

(C.E. Bosworth)

MOGHOLS, an ethnic and, until recently, a linguistic group originally concentrated in west-central Afghānistān, in the modern province of Ghōrāt, and carrying on there a semi-pastoral and semi-agricultural way of life; now however groups of them have become dispersed throughout northern and central Afghānistān. They number at most 10,000 souls. For other communities in Afghānistān of mixed Turkish-Mongol origin, see HAZĀRAS in Suppl. Unlike the Shīʿī Hazāras, the Moghols are Sunnī.

The origins of these Moghols probably lie in the appearance in Afghānistān of mixed Mongol-Turkish elements in the wake of the Čingizid invasions of Western Asia, in particular, of the military following of Hülegü's general Nīkūdār, the so-called Nīkūdārīs or Ḳarawnas. Subsequently allied with the Kart [*q.v.*] of Kurt rulers of Harāt, certain of the Mongol elements of these retreated into southern Ghūr around their stronghold of Ḳayṣar, and have apparently lived there since then as a distinct group, their Mongol language and their physical features preserved until recently by strict endogamy. The language first attracted the attention of British observers from India in the early 19th century (see R. Leech, *A vocabulary of the Moghal Aimaks*, in *JASB*, vii [1838], 785-7) but linguistic missions of the last three or so decades have found the language almost forgotten even by the elderly, although the Mongoloid physical appearance of the people still remains clearly discernible. Today, most of the Moghols are Darī (i.e. Persian) speakers, whilst some on the southern fringes of Ghūr have adopted Pashto. Within two or three generations, it is likely that the Moghols will have been totally assimilated to their Tādjīk and Pashtūn surrounding environment.

MOGHUL [see MUGHAL].

MOHÁCS (Ottoman Mihāč), a town in the county of Baranya, in southern Hungary. In its vicinity two important battles (a, b) took place, while the settlement itself gave name to an Ottoman *sandjaḳ* (c) in the 16th-17th centuries.

(a) The first battle of Mohács, the more decisive of the two, was fought on 21 Dhu 'l-Ḳaʿda 932/August 1526. With Süleymān I's accession to the throne in 926/1520, a new era started in the western politics of the Ottoman Empire. While Selīm I had had mainly eastern targets, his son turned towards

Europe. Hungary, which had formerly been a strong and centralised kingdom under Matthias Corvinus (1458-90), gradually lost her wealth and political power under the Jagellons, mainly due to the heavy burdens of continuous warfare with the Ottomans. Seeking a way out from this situation, Louis II did not sign a renewed peace-treaty with Süleymān and detained his envoy. This led to the siege and capture of Belgrade, the key-fortress of the southern marches. For the following five years, the king and his entourage were unable to secure the necessary international help. and the country had to confront the Ottomans almost wholly by her own means (a fairly considerable monetary aid was, however, given by the Pope and Venice).

In the battle, the sovereigns of the two countries headed their armies. The actual leadership was in the hand of Pál Tomori, the Archbishop of Kalocsa, chief commandant of Lower Hungary, a well-proven soldier, and of Ibrāhīm, the new Grand Vizier, on the Ottoman side.

Since no muster was made on either side, the number of participants can only be estimated. This can be done with more accuracy for the Turks, thanks to figures in the 931/1525 state budget (the date of the pertinent manuscript was rectified by G. Káldy-Nagy, *Suleimans Angriff auf Europa*, in *Acta Orientalia Hungarica*, xxviii [1974], 170-1, n. 34). These suggest that an approximate total of 60,000 regular soldiers and timariots could be mobilised. To this, an equal amount of irregular and non-military elements can be added as a possible maximum. The lowest—but still generally accepted—value for the Hungarian contingents is 25,000 men, while others argue that 40,000 or even more troops are also conceivable. At any rate, the Ottoman army was superior in discipline and training. One important element was nevertheless absent from the Turkish forces, i.e. heavy cavalry, which they therefore feared.

The exact place of confrontation in unknown (only some thousand Hungarian skeletons have been found in one group, and almost none of the Ottomans). Tomori decided on a mounted attack against the Turks, who were descending a slope. This caused serious confusion for a short time, but the steadiness of the Janissaries and the unexpected side attack by Bali Beg's forces gave a new turn to the events. In one-and-a-half hours, the Hungarian army was completely defeated, losing its most prominent ecclesiastic and political leaders, including the king, who was drowned in the Csele stream.

Süleymān himself was surprised at his success. He was even able to enter the capital Buda without encountering resistance. Although he did not attach Hungary to his empire, he considered it his own possessions from that time onwards. This agrees with the general Ottoman ideology and method of conquest, and not even the fact that he accepted John I on the Hungarian throne as a vassal soon afterwards seems to contradict this concept (cf. Pál Fodor, *Magyarország és Bécs az oszmán hódító ideológiában* ["Hungary and Vienna in the Ottoman ideology of conquest"], in *Keletkutatás*, 1987 tavasz, 20-38).

The defeat was a turning-point in Hungarian history. The king's death gave rise to a long period of anarchy, while the loss of the Szerémség (Sirmium) made it impossible to defend the borders, and the country became the battlefield of two world powers. The splitting-up of her territory into three zones (i.e. Ottoman, Habsburg and Transylvanian [for this last, see ERDEL]) lasted for more than 150 years, hindering development in many spheres.

A good collection of various sources in Hungarian translation is: *Mohács emlékezete* ["The memory of Mohacs"], Budapest 1976. Commemorative volumes: *Mohácsi emlékkönyv* ["Mohács memorial volume"], ed. Imre Lukinich, Budapest n.d. [1926]; *Mohács*, ed. Lajos Rúzsás and Ferenc Szakály, Budapest 1986. More important separate studies: Pál Jászay, *A magyar nemzet napjar a mohácsi csata után* ["The life of the Hungarian nation after the Battle of Mohács"], i, Pest 1846; Tivadar Ortvay, *A mohácsi csata elvesztésének okai és következményei* ["The reasons and consequences of the defeat at Mohács"], Budapest 1910; László Bárdossy, *Magyar politika a mohácsi vész után* ["Hungarian politics after the Mohács disaster"], Budapest 1943; Lajos Bende, *A mohácsi casta* ["The Battle of Mohács"], in *Hadtörténelmi Közlemények*, 1966, 532-67; Ferenc Szakály, *A mohácsi csata* ["The Battle of Mohács"], Budapest 1975; Géza Perjés, *Mohács*, Budapest 1979 (who has worked out a theory concerning Süleymān's Hungarian policy which has led to long disputes and to a refutation of his views in journals, mainly in *Jelenkor*, 1976); András Kubinyi, *A mohácsi csata és előzményei* ["The Battle of Mohács and its antecedents"], in *Századok*, cxv (1981), 66-107.

(b) The place of the—less correctly—so-called "second battle of Mohács" was between the Harsány Mountain and Villány, a district 20 to 25 km. southwest of Mohács itself. It was fought between the forces of the Grand Vizier Süleymān Pas̲h̲a and Charles of Lotharingia, head of the Holy League's army, on 12 August 1687. With approximately 60,000 men on both sides, the fight ended with an Ottoman defeat, a result of the European superiority in warfare (mainly in fire-arms) by this time. Soon after this Christian success, their contingents easily took many smaller fortresses, so that the population of Slavonia pledged allegiance to Leopold I at the end of October. The Grand Vizier, on the other hand, was dismissed and later executed, while the Sultan, Meḥemmed IV, was replaced by Süleymān II [*q.v*].

Bibliography: *Budától-Belgrádig* ["From Buda to Belgrade"], ed. László Szita, Pécs 1987 (Hungarian translations of pertinent sources); Csaba D. Vevess, *Hol volt az úgynevezett "második mohácsi csata" 1687 augusztus 12-én?* ["Where was the place of the so-called 'second battle of Mohács' on 12 August 1687?"], in *Hadtörténelmi Közlemények*, xxxiv (1987), 691-715.

(c) The *sand̲j̲aḳ* of Mohács [Mihāč]—alternatively also called Pécs (Pečūy) and Szekcsö (Sekčōy), of which the former was more often considered as a separate unit—was rather large at the beginning. Later, it was partly divided (e.g. after 1552 most of the *sand̲j̲aḳ* of Koppány (Ḳōpān) was carved out from its territories), and partly diminished, losing villages to the *sand̲j̲aḳs* of Simontornya

(Shimōnṭōrna) and Szigetvár (Sigetvār). It belonged to the *wilāyet* of Budin (Buda) and consisted of 10 *nāḥiyes* in 1546 and 1552 (cf. Istanbul, Başbakanlık Arşivi, tahrir defteri 441, 443), but only 3 in 1580 and 1590 (Tahrir defteri 583, 632), and of one *ḳaḍā*ʾ. The first active *sandjaḳ-begi* here, Ḳāsîm, is known from 1543 onwards.

Bibliography: C. Káldy-Nagy, *Baranya megye XVI. századi török adóösszeírásai* ["16th century tax registers of the county of Baranya"], in *A Magyar Nyelvtudományi Társaság kiadványai 103*, Budapest 1960. (G. Dávid)

MOHMAND, the name of a Paṭhān or Afghān tribe on the North-West Frontier of what was formerly British India, now forming the boundary between Pakistan and Afghanistān. The Mohmands in fact straddle the frontier, and their members, estimated at *ca*. 400,000, are divided between the two countries. The Mohmand territories extend from northwest of the Peshāwar district, with Mālākand and the Yūsufzay territories on the east, up to and beyond the Afghan frontier on the west, and northwards towards the princely state of Dīr [*q.v.*]. The Mohmand Agency, created by Pakistan (see below), has an area of 750 sq. miles, with a population estimated at *ca*. 250,000, and included in the extreme northwest the mountainous district of Badjawr [*q.v.*], home of the Tarkanrī Paṭhāns, ostensibly related to the Yūsufzays.

According to traditional genealogical lore, enshrined for instance in Niʿmat Allāh's *Makhzan-i Afghānī* (early 17th century), the Mohmands are descendants of a legendary ancestor Kharshbūn and his son Kand through the Ghōriya Khēl, a parallel line to that of the Yūsufzays [see AFGHĀN. i. The people]. Local tribal tradition says that the Ghōriya Khēl and their kinsmen the Khakhay migrated from Afghānistān in the late 15th century, and by the early 16th century the Mohmands had reached the Khyber Pass [see KHAYBAR] region. They were for long a thorn in the flesh of successive rulers of India. Until 1552 they supported Kāmrān, brother and rival of Humāyūn [*q.v.*] in his attempt to re-establish his father Bābur's power in India, and they resisted Akbar in 1586 when he campaigned in the Frontier region. The Rōshāniyya religious movement [*q.v.*] of Bāyezīd, Pīr Rōshān, was influential amongst them also. In 1672, they helped to block the passage through the Khyber of Awrangzīb's general Uyghur Khān, and even the powerful Afghān leader Aḥmad Shāh Durrānī [*q.v.*] had in the 18th century to conciliate them and the Yūsufzay tribal chiefs with grants of *djāgīrs* [*q.v.*].

As noted above, like many other frontier tribes, such as the Mamands, Bangash, and the Darwēsh Khēl Wazīrīs, the Mohmands are to be found both in Afghānistān and in Pakistani territory. Those within the latter sphere on influence can be divided into the Kuz (plain) Mohmands, whose lands lie to the south of Peshāwar within the old British administrative border, and the Bar (hill) Mohmands of the semi-independent hills to the north-west. The Mohmands of the settled districts represent one of the many cases of fission, where a branch of section of the tribe has broken off from the parent stock and lost all connection with it. The Mohmands across the administrative border can be divided into three chief clans: the Tarakzay, Baezay, and the Khwaezay. In the thirty years following the annexation of the Pandjāb, no less than six punitive expeditions were required to punish them for raiding into British territory. By the Durand Agreement of 1893, certain Mohmand clans were definitely placed within the British sphere of influence, and by the year 1896 the Halīmzay, Kamali, Dawezay, Utmanzay and Tarakzay, afterwards known as the eastern or "assured" clans, had accepted the political control of the Government of India (*Parliamentary Papers*, 1908, Cd. 4,201, p. 123). But this did not prevent them from joining in the Paṭhān revolt of 1897, when under their leader, Nadjm al-Dīn, the Adda Mulla, they attacked the village of Shankargah and the neighbouring fort of Shabḳadar in the Peshāwar district.

The factors underlying Mohmand unrest were geographical, economic, and political. The barren nature of their stony hills and almost waterless holdings forced them to raid the settled districts in order to obtain the necessaries of life. Their position on the flank of the Khyber Pass was a standing invitation to plunder the caravans passing between Peshāwar and Kābul. There was considerable uncertainty as to the exact location of the Indo-Afghān boundary near Smatzay and Shinpokh. Afghān intrigues also played their part, and much of the unrest can be traced to anti-British propaganda emanating from Kābul.

At the close of the Zakka Khēl expedition of 1908, the Mohmands joined in the fighting but they were easily defeated, the eighteen-pounder quick-firing gun being used for the first time to disperse hostile *lashkars*. In April 1915, the Mohmands once more invaded British territory but were eventually dispersed and forced to pay a heavy fine. In August 1916, some Turkish emissaries arrived in the Mohmand country with money for the notorious Ḥādjdjī Ṣāḥib of Turangzay, one of whose counsellors was Muḥammad ʿAkī [*q.v.*], a graduate of Cambridge and a teacher in the Amīr's college at Kābul. In 1919, during the Third Afghān War, when the Amīr Amān Allāh [*q.v.* in Suppl.] proclaimed a *djihād* against the British, the Mohmands flocked to join his standards.

During the 1930s, the Mohmand country was in a state of chronic disaffection. In 1930, when the so-called "Frontier Gandhi" ʿAbd al-Ghaffār Khān [see KHĀN, ʿABD AL-GHAFFĀR, in Suppl.], was arrested by the British authorities for fomenting unrest, the Mohmands, under his kinsman by marriage, the Ḥādjdjī of Turangzay, were in a disturbed state. Soon afterwards, there was an internecine warfare within the tribe, with the British supporting the Lower Mohmands against the Upper Mohmands, the latter led by the Ḥādjdjī and by the Faḳīr of ʿĀlamgīr. After the establishment of Pakistan, the new government set up a special Mohmand Political Agency, in addition to the five previously existing; the Mohmands had in British India come within the Khyber Agency. During the Pushtūnistān agitation, the Mohmands were especially susceptible to propaganda from Kābul, with their tribal *malik* Mīrza Djān, famed as a poet under the *takhalluṣ* of Siyāl, prominent in advocating the idea of a Pushtūnistān. The aridity and poverty of the Mohmand country has meant that in recent decades Mohmands have often migrated to work in the Peshāwar region, whence they send back remittances to their families, or else they practice a seasonal migration pattern, usually in winter.

(C. Collin-Davies [-C.E. Bosworth])

MOHUR, an Indian gold coin. The name is the Persian *muhr*, which is a loanword from the Sanskrit *mudrā*, seal or die. The earliest occurence of the word on coins is on the forced currency of Muḥammad b. Tug̲h̲luḳ where it has the literal meaning of "sealed" or "stamped". By the 10th/16th century it had come to be used as a popular rather than precise name for gold coins in general.

Very little gold had been issued in India for two centuries before the reign of Akbar. One of his reforms was the issue of an extensive coinage in gold. In addition to many pieces which had only a brief circulation, he revived the old gold tanka of the sultans of Dihlī on a standard of 170 grains (11.02 gr.) to which he gave the name *muhr*. That the name at first could be applied to any gold coin is shown by D̲j̲ahāngīr's reference in his *Tuzuk* or *Memoirs* (tr. A. Rogers, Oriental Translation Fund, xix, 10) to *muhr*s of 100, 50, 20, 10, 5 and 1 *tola*. After the numismatic experiments of Akbar and D̲j̲ahāngīr, only one gold piece was struck, occasionally with subdivisions, so that the general name acquired a particular meaning, especially among the English merchants in India. *Muhurs* continued to be struck to the end of the Mug̲h̲al Empire and by the states into which it broke up in the 18th and 19th centuries. Akbar and D̲j̲ahāngīr issued square as well as round pieces and the former also struck a few *miḥrābī* pieces, so-called from their shape. Of the numerous large denominations recorded by Abu 'l-Faḍl and D̲j̲ahāngīr, only 5 *muhr* pieces of Akbar and of D̲j̲ahāngīr are known to exist.

As the silver rupee was the standard coin of India, the value of the *mohur* fluctuated with the price of gold. In the latter half of the 18th and early 19th centuries, the East India Company endeavoured to make gold the standard of India and issued *mohurs* (called gold rupees in Bombay) with the legends of the Mug̲h̲al Emperor. None of their attempts to keep gold and silver in a currency at a fixed rate was successful. When in 1835 a uniform currency was introduced for British India, a gold *mohur* or 15 rupee piece with English types was struck in name of William IV but never attained general circulation; this was the last attempt to restore the *mohur* to circulation. The *mohurs* occasionally seen of Victoria of 1861, 1862 and other dates are patterns.

MOK̲H̲Ā [see mukhā].

MOLDAVIA [see bog̲h̲dān].

MOLLĀ, a title derived from the Arabic *mawlā* [*q.v.*] in its sense of "lord" or "master", employed currently with composite forms of *mawlā*, incorporating pronominal or adjectival suffixes, in use in various periods and regions of the Muslim world: *mawlāy* [*q.v.*]/*mūlāy*, "my lord" among the S̲h̲arīfī sovereigns of Morocco (Saᶜdids, ᶜAlawids), the Naṣrids and the Ḥafṣids [see also laḳab]; *mawlānā*/(Turkish) *mewlānā*, "our master", a title very widespread in the Turco-Iranian world, and still in use today, especially in the Indo-Pakistan subcontinent where it denotes Muslims of high rank (*ᶜulamāʾ* and Ṣūfīs) in parallel with the traditional form of *mawlwī*, a popular derivation of *mawlawī*, this last term signifying both "my master" (a familiar designation applied by the Persians to Mawlānā D̲j̲alāl al-Dīn Rūmī [*q.v.*]) and that which pertains to the *mawlā* (hence the *ṭarīḳa* of the Mawlawī/Mawlawiyya [*q.v.*]).

As a Persian derivation from the Arabic *mawlā* (*TA*, *apud* Dihk̲h̲udā, *Lug̲h̲at-nāma*, s.v. *Mollā*), the term *mollā* exists in various forms and spellings. A derivation from the Turkish pronunciation of *mawlā* mutated into *mevlā* has also been suggested (cf. Popper). Turkish is also familiar with the pronunciation *munlā*/*monlā* (Dozy, *Suppl.*, ii, 608; *Burhān-i ḳāṭiᶜ*, ed. M. Muᶜīn, Tehran 1330 p., iv, 2030) or *menlā* (J. W. Redhouse, *A Turkish and English lexicon*, 1074, 2014). *Mollā* and *monlā* could be (independently) derived from *mawlā*/*mawlānā* (Dihk̲h̲udā, *loc. cit.*). A derivation from the Arabic verb *malaʾa* "to fill", whereby the *mollā* is a sage "full" of knowledge (Muḥammad G̲h̲iyāt̲h̲ al-Dīn, *G̲h̲iyāt̲h̲ al-lug̲h̲at*, Calcutta 1327/1909, 495), is a whimsical notion. The same applies to direct mutation from Arabic to Hindi (proposed by Yule, followed by P. Hardy, *Glossary*). The pronunciation *mollā* or *mawlā* has been noted in Bag̲h̲dād with its former sense of "slave", sometimes applied to freed white eunuchs (Kazimirsky, *Dict. arabe-français*, ii, 1609). In European languages, the term exists with various spellings: in French *mollah*/*molla*, in English *mullah*/*mulla*, formerly *moolah* (Yule, s.v.).

In its primary usage, *mollā* is simultaneously a title of function (*ᶜuhda*), of dignity or profession (*manṣab*) and of rank (*martaba*): cf. the classification of Garcin de Tassy revised by Gaborieau (1985), 14 ff. Although possessing various connotations in usage, this term indicates in the first instance any Muslim scholar who has acquired a certain degree of religious education and the aptitude to communicate it. In this sense, it is often confused with the term *ᶜālim*/*ᶜulamāʾ* which denotes the totality of Muslim religious persons who have been seen, especially in the Imāmī S̲h̲īᶜī context, as constituting a kind of "clergy", endowed with prerogatives on the spiritual and material planes. Distinguished by their clothing and physical appearance (in Iran: the turban (*ᶜimāma*, popularly *ᶜammāme*), black for the *sayyids*, white for others; a long and ample cloak, *ᶜabā*; sandals, *naᶜlayn*, easily removed for ablutions and prayers; a relatively long beard, a trimmed moustache), their prestige and their claims to knowledge, the *mollās* have succeeded in occupying a wide range of functions at many different levels. Later to appear (9th/15th century?), the title *mollā* is limited, with a few exceptions, to the Turco-Iranian and Indian World. Of circumscribed use in non-S̲h̲īᶜī Arab countries, it may designate religious dignitaries such as *Mollā* of Jerusalem, of Cairo, or of Medina (cf. Popper). But in current usage it is most often applied to the *ᶜulamāʾ* drawn from the lower and middle strata of soceity. Having completed their elementary classes (*maktab*), the students (*ṭullāb*), between the ages of eleven and fifteen years, are

admitted as novices to the *madrasa* [*q.v.*], where they pursue a traditional education. Few among them succeed in completing the full *cursus* of fifteen to eighteen years which will lead them to the superior rank (among the Shīʿīs) of *mudjtahid* [*q.v.*].

Whatever may be the level of education of its holder, the title of *mollā* confers certain privileges and "reserved" occupations which vary according to periods and regions. In the Ottoman Empire, the positions held by the *mollās* in civil and religious administration were known under the generic term of *mewlewiyyet* [*q.v.*] which embraces simultaneously the rank, the duties or jurisdiction and the tutorial functions of the *mollās* (see R. Repp in *Scholars*, 18; there is also the term *mollālīḳ*, cf. Redhouse, 2035). With the employment of the title of *khwādja* [*q.v.*], from the 10th/16th century onward denoting senior Ottoman dignitaries, *khwadjegān-i dīwān-i humāyūn* [*q.v.*], the term *mollā* loses some of its prestige. While continuing to be used, it tends to be supplanted by *khwādja*/*khodja*, modern Turkish *hoca*, which is applied, among others, to the totality of the *ʿulamāʾ*. The two titles can furthermore co-exist, prefixed and affixed to elements of the name. But the subject of amusing tales (*Mollā*) Naṣr al-Dīn Khodja (modern Turkish, Nasreddin Hoca) continues to be called Mollā Naṣr al-Dīn in the Iranian world.

In Mughal India and Ṣafawid Iran, religious Muslims are often designated under the generic term *ʿulamāʾ wa-mashāyikh*, including scholars, theologians and Ṣūfīs without any clear distinction between *ʿulamāʾ* and Ṣūfīs (for the latter, see Gaborieau (1989) 1199 f.). But here the title *mollā* embraces different values. Influenced by the caste system, Indian Islam is more hierarchical. The need to assert social position renders Muslim onomastic very emphatic (Gaborieau (1985), 18) and the most prestigious titles tend to replace those that have fallen into disuse. Until the beginning of the 19th century, with the exception of the Ṣūfīs who often prefer to describe themselves otherwise (*shāh, khwādja, pīr*, less frequently *shaykh*) numerous *ʿulamāʾ*, Sunnī and Shīʿī alike, bore the title of *mollā*, but also that of *mawlawī*/*mawlwī*. Besides its general sense of learned or scholarly, the title of *mollā* tends to be restricted to the occupations of an educator (of a *maktab*, occasionally of a *madrasa*; or of a teacher in the upper levels of society), of a jurist or a judge (sometimes as deputy of a *ḳāḍī*), of a preacher in mosques or at Shīʿī funeral gatherings. In the capacity of a schoolmaster, he was often responsible for the mosque of the village where he sometimes performed the profession of a butcher (Wilson, 354). The term *mollāgarī* or *mollāʾī* was used to denote the duties and the teaching of the *mollās*. *Mollānī*/*mollānnī* (Hindi derivation) denoted the wife of a *mollā* or a learned woman, a school-mistress (Platts, ii, 1063). Although causing no fundamental disruption to Muslim religious life, the arrival of the British led, in 1772, to the replacement of the *ḳāḍī* by a tribunal supervised by a *muftī*, a situation which continued until 1864 (Yule, 510 ff.; Gaborieau (1989), 1190). The *mollāyi ḳurʾānī* is charged with the duty of taking oaths sworn on the Ḳurʾān by Muslim witnesses (Wilson, *ibid.*; Platts, *ibid.*; Yule, 579). The magistrate entrusted with the interpretation of Islamic law is called *mawlā* (Garcin de Tassy, 86-7). While continuing to be employed in India during the 19th century, the term *mollā* is gradually supplanted by *mawlawī*/*mawlwī* which could also be applied to *mollās* of inferior rank (Popper). But it is most of all the prestigious title of *mawlānā* which replaces the "obsolete" *mollā* (Gaborieau (1989), 1195). Of relatively ancient usage in India (cf. Ibn Baṭṭūṭa, ii, 218), *mawlānā* has also come to denote a village school-teacher (Wilson, *ibid.*). A remarkable exception to the devaluation of the title *mollā* is supplied by the family of Ḥanafī theologians and *ṣūfīs* of the Farangī Maḥall, eminent members of which have borne this title from the 16th century to the end of the 19th century (F. Robinson, FARANGĪ MAḤALL, in Suppl.; idem, *The ʿulamāʾ of Farangī Maḥall and their adab*, in B. Metcalf (ed.), *Moral conduct and authority. The place of* adab *in South Asian Islam*, Berkeley-Los Angeles 1984, 152-83); see also below.

Stripped of its prestige, *mollā* has reached the point where it is applied to religious agitators (those who proclaim themselves *mahdīs* in India and in the Sudan have been given the epithet "mad mullah" by the British), bigots, soothsayers (Platts, ii, 1962). The term becomes entirely pejorative and even vulgar in metaphors such as *mollā-zāda*/*ḳalandar-bač* (for *membrum virile*: cf. Vullers, *Lexicon Perso-Latinum*, 1864, ii, 1208). The equivalent Urdu expression *mollā kā beṭā* "son of a *mollā*" is now employed in the sense of ruffian, hooligan, in a rural context. *Mollās* are often regarded as hidebound theologians, clinging to the literal sense of the *sharīʿa*. The poet Muḥammad Iḳbāl [*q.v.*] denounced the baneful influence of the spiritual master (*pīr*) and of the *mollā*, the narrow-minded theologian who had forgotten the dynamic message of the Ḳurʾān (cf. A. Schimmel, *Islam in the Indian subcontinent*, Handbuch der Orientalistik, Leiden-Cologne 1980, 230). But, despite its devaluation, the title of *mollā* continued to enjoy a certain prestige among scholars and religious persons. Thus the *dāʿī* of the Ismāʿīlī community of the Bohoras [*q.v.*], known respectfully by the old title of *sayyidnā*, is also called more familiarly *Mullā-djī ṣāḥib*, (*ibid.*, 71). Some Parsees have borne the title of *mollā*, and the name of one of them has been given to a *madrasa*, the "Mulla Feroze Madressa", founded in Bombay in 1854 (E. Kulke, *The Parsis in India*, Delhi 1974, 95). The "Parsee Panchayat" charitable foundation has been directed since 1962 by Seth Nadirshah Rustomji Mulla (*ibid.*, 70). The attribution of the title may denote lowly origins. Thus Sir Dinshah F. Mulla (1868-1934) was the son of Fardoonji Kavasji Mulla, an impoverished Parsee priest who became a solicitor and founded his own firm in Bombay, still known by the name of "Mulla and Mulla" (Piloo Nanavutty, *The Parsis*, New Delhi 1980, 108 f.). Even Hindu scholars currently bear the title of *mollā*.

Widespread throughout the territories living under the Iranian cultural influence, the title of *mollā* has naturally been diffused to the greatest extent in Iran. In the Ṣafawid period (1501-1722), it denoted *ʿulamāʾ* and Ṣūfīs of all ranks. Under Shāh Sulṭān Ḥusayn (1105-35/1694-1722), the office of *mollā-bāshīgarī*, held by the *mollā-bāshī* (chief of the *mollās*), was instituted. The first occupant of this office, Mollā Muḥammad Bāḳir Khātūnābādī, had been the Shāh's tutor. The prerogatives of the *mollā-bāshī* attained their most prestigious level under Nādir Shāh Afshār (1148-60/1736-47). Under the Ḳādjārs (1794-1925 [*q.v.*]), his role was limited to that of tutor to the royal household. In the provincial courts, since the Afshārid period, the princes had also appointed their own *mollā-bāshī*. The office remained a respectable sinecure until the middle of the 19th century, when it degenerated into frivolity, like other courtly functions (see Arjomand (1983) and (1988)).

In Ḳādjār Iran, the title of *mollā* referred both to theologians who had not attained the level of *mudjtahid* and to scholars irrespective of status. But certain *mudjtahids* retained their title of *mollā*, sometimes in

combination with others such as *āḳā* or *ākhūnd*. There were also female *mollās* and some non-Muslims bearing this title (see below).

Exercising the basic prerogatives in matters of education, ritual functions (prayers, marriages, funerals, etc.) and judicial functions, the *mollās* constitute the basis of what has been called, erroneously in the view of some, a veritable clergy. The *mollā* teaches at the primary school, *maktab*, also called *mollā-khāna/khāna-yi mollā* (house of the *mollā*), or as a tutor in the upper levels of society. Being of inferior knowledge, the Shīʿī *mollā* must be the emulator (*muḳallid*) of a *mudjtahid* who is *mardjaʿ-i taḳlīd* [*q.v.*]. Educating the faithful of his entourage, he occupies an intermediate position between the *mudjtahid* and the simple faithful whose material circumstances are similar to his. However, like the majority of Imāmī *ʿulamāʾ*, the *mollās* benefit from revenues which, though sometimes modest, guarantee them a degree of independence. They may receive gratuities by acting as representative (*nāʾib*) of a *mudjtahid* (certification of documents, collection of taxes), enjoy the benefits of pious foundations (*awḳāf*), receive free lodging, gifts or honoraria for their services as preachers (*wāʿiẓ, rawḍa-khwān*) at Shīʿī funeral gatherings, etc. They can also supplement their income by activity in commerce or in agriculture. The *mollās* can even render physical support to the power of the *mudjtahids*, who sometimes have armed bands at their disposal. Composed initially of brigands or urban ruffians (*lūṭīs* [*q.v.*]), enjoying the protection of sanctuaries or of the homes of *ʿulamāʾ*; towards the end of the 19th century, these militias, joined by true or false *sayyids*, were composed to an increasing extent of *ṭullāb*, whose agitation was a crucial factor in the events leading to the constitutional revolution of 1905-11 (see especially, Algar, 185 ff.; BAST, and J. Calmard, s.v. in *Encycl. Iranica*; DUSTŪR, iv., ĪRĀN).

Like Imāmī religious persons in general, the *mollās* are exempt from military service (see Richard (ed.) (1989), 45, 54-5). In the context of religious practice, it is their duty to enforce respect for the precepts of the *sharīʿa*. This often pedantic exercise of a censor's role and the privileges which they enjoy have had the effect of making them unpopular. The title of *mollā* becomes the subject of banter in numerous proverbs (cf. Dihkhudā, *Amthāl u ḥikam*, Tehran 1338 p., 4 vols.; proverbs, sayings, etc., quoted in *Lughat-nāma*, *loc. cit.*, with additions; see also MATHAL, ii, *Bibl.*). According to one popular belief, the *mollā* is somebody who is capable of reading but incapable of writing, in contrast to the *mīrzā* [*q.v.*] who possesses both literacy and knowledge (Djamālzāda, 405, who quotes the proverb *Mollā shudan če āsān, ādām shudan če mushkil*, "It is easy to become a *mollā*, difficult to become a man!"). During the 19th century, the term *mollā* tends to be supplanted by *ākhūnd* [*q.v.*], which in its turn takes on a pejorative connotation. But before being devalued, *ākhūnd* is frequently used in combination with *mollā*. The two terms are seen in parity in the expression *ākhūndbāzī/mollābāzī*, trickery or strategem of a *mollā*, i.e., recourse to means permitted by the letter of the *sharīʿa* but not by its spirit, associated with suspect practices or activities of the *mollās* (Algar, 21, quoting Dihkhudā; idem, *Āḳund*, in *Encycl. Iranica*). In response to the devaluation of this terminology as occasioned by the circumstances of the modern world, the generic term of *rūḥāniyyat* was created by Riḍā Shāh (1925-41) to designate the entire community of Iranian *ʿulamāʾ* in the capacity of a "clergy" (Richard, (1983), 11). Certain terms, however, have not been devalued as, for example, the title *āḳā*, formerly used sometimes in combination with *mollā* or *ākhūnd*, given by his associates to the Āyatallāh Khumaynī.

The status of the *mollās* in a Sunnī socio-religious context (Central Asia, Afghanistan, western India) in the early 19th century, reveals numerous points in common with their postion in Shīʿī Iran, especially as regards their means of subsistence (including lending money at interest), their role as censors (they organise armed bands, break musical instruments), their educational activities (in every village or nomad camp, a *mollā* school-teacher is given a portion of land and receives a contribution from his pupils; *mollās* also teach in wealthy circles): see Mountstuart Elphinstone, *An account of the Kingdom of Caubol*, London 1819, i, 299 ff., 340 ff.

Despite the conservative character of the Iranian *ʿulamāʾ*, "reformers of a non-secular type rather than social revolutionaries" (W. Floor in *Religion and politics*, 94), since the constitutional revolution, their influence among the mass of faithful Shīʿī has grown continuously, leading ultimately to the establishment of the Islamic Republic in 1979. Although they are divided into various tendencies (cf. Akhavi, 100 ff.), their prerogatives have been extended to all sectors of religious and social life, including economic and military matters. Their influence and its consequences have to a great extent overstepped the frontiers of Iran, emerging on the international scene in the context of recent events. Alongside the "Reign of the Ayatollahs" the expression "Iran of the Mullahs" is also used in a pejorative sense. This quasi-general disapproval takes little account of the courageous stance of some of them, for example Sayyid Ḥasan Mudarris, a brave and incorruptible man, compaigner for a genuine constitutional régime, opponent of Riḍā Shāh, and mysteriously assassinated in 1938 (Algar, in *Scholars*, 240; Mottahedeh, 224). In the confusion of the current political situation (end of 1989), a global evaluation of the role of the *mollās* in Iran and the neighbouring countries, Shīʿī and non-Shīʿī, is a subject to be approached with caution, being open to varieties of speculation. Thus, although the *mollās* have been vehemently opposed to the efforts in the direction of secularisation by the Literacy Corps, *sipāh-i dānish*, since 1963 (see V. Garoussian, *The ulema and secularization in contemporary Iran*, unpubl. Ph.D. thesis, Southern Illinois University 1974, 130 f.), this has not everywhere contributed to their popularity. A detailed anthropological survey conducted in an Iranian village has revealed a negative image of the Shīʿī clergy in evidence during the 1970s. This was scarcely improved following the eviction and replacement of the *mollā*, imprisoned as a member of SAVAK by the authorities of the Islamic Republic (see R. Loeffler, *Islam in practice. Religious beliefs in a Persian village*, Albany 1988, 17 ff., 227). As for the figures put forward for the number of *mollās* in Iran (180,000 or 120,000 in 1979 for a population of 37 million) compared with a much smaller number in ʿIrāḳ, these are not easily verified (cf. H. Batatu, in *Shiʿism and social protest*, 193).

In the specific context of Shīʿī Iran, female Muslims educated in the theological disciplines have been entitled to gain the title of *mollā* and even the rank of *mudjtahid* (on a work concerning the Imām ʿAlī written by Ḥādjdjiyya Khānum Amīn, a *mudjtahid* of Iṣfahān, see *Abstracta Iranica* [1982], v, 547). Disagreement exists, however, among the *ʿulamāʾ* regarding the attribution of the title *mudjtahid* to female *mollās* (N. Yeganeh and N. R. Keddie, in *Shiʿism and social protest*, 119). Some of them have gained renown as

preachers in female gatherings of Shīʿī mourning [see AL-MARʾA, iii, a; on Mollā Kulthūm, an eminent *rawḍa khʷān* of the Ḳādjār period, see ʿAbd Allāh Mustawfī, *Sharḥ-i zindagānī-i man*, Tehran n.d., i, 526). *Mollā-bādjīs*, teachers in schools reserved for girls, are sometimes tutors in the upper levels of society (Muʿīn, *Farhang-i fārsī*, s.v.; Thaiss, 77 f., underline the negative connotation of *bādjī*, from the Turkish "sister" or "servant"). The term *Mollā-bādjī čundak* refers to a very sorrowful woman who laments incessantly over her misfortunes and those of others (Dihkhudā, *Lughat-nāma*). In the Shīʿī communities of southern ʿIrāḳ, female *mollās* officiate in Shīʿī rituals. This vocation is often handed down within a family. Widows or girls who see no prospect of marrying choose to become a *mollā*—a respected and lucrative profession—follow a Ḳurʾānic education and learn to recite and sing the *ḳrāyāt* "recitations", equivalents of the *rawḍa-khʷānīs* which they interpret at female funeral gatherings in Muḥarram and Ramaḍān (R. and E. Fernea, in *Scholars*, 391 ff., 399; P. Chelkowski, *Popular Shiʿi mourning rituals*, in *Alserāt*, xii (London 1986), 209-26, esp. 221).

In the Iranian world, the term *mollā* has also been adopted by Jewish and Zoroastrian scholars (Dihkhudā, *loc. cit.*, following Nafīsī, *Nāẓim al-aṭibbā*). Since the Ṣafawid period, numerous Jewish scholars and theologians have borne this title. The situation of the Jews of Iran became critical under Shāh ʿAbbās I (996-1038/1588-1629 [*q.v.*]), when a Jewish butcher of Lār, Abū Ḥasan Lārī, a convert to Islam, organised the imposition of discriminatory measures against the Jews (see LĀR and LARISTĀN; L. Loeb, *The Jews of Southwest Iran: a study of cultural persistence*, unpubl. Ph.D. thesis, Columbia Univ. 1970, 315 ff., 423; Ḥabīb Liwī (Levy), *Tārīkh-i Yāhūd-i Īrān*, Tehran 1339 p., 224 ff.; V. B. Moreen, *Iranian Jewry's hour of peril and heroism. A study of Bābāʾī Ibn Luṭf's chronicle (1617-1662)*, New York-Jerusalem 1987, 80 ff.). Some Jewish *mollās* who refused to convert to Islam were devoured by dogs before Shāh ʿAbbās I (Moreen, 162, tr., 173 ff.; the testimony of Babāʾī ibn Luṭf is corroborated by Pietro della Valle). Persecutions continued under Shāh ʿAbbās II (1052-77/1642-66) and beyond (Liwī, *ibid.*, 291 ff.; Loeb, 61 ff., 423 ff.). The status of these Jewish *mollās* in the social hierarchy of their communities varied according to regions and periods. Some of those made martyrs under Shāh ʿAbbās I must have been rabbis (Moreen, 150). In order to escape the forced conversions of the Ṣafawids, some Jews left to join their communities in Central Asia, the most important of these since the turn of the 11th/17th century being that of Bukhārā. On the eve of the Russian conquest of the khānate of Bukhārā (1285/1868), the Jewish community was governed by a *kalāntar*, chief administrator, and a *mollā-yi kalān* or Chief Rabbi (lit. "Grand *Mollā*"). The supreme authority in matters of religion, the latter presided over the court of religious justice, directed the theological academy, appointed rabbis and ritual butchers. A *khāmlā* (from the Persian *khāna-yi mollā*), a primary school for boys under thirteen years of age, was affiliated to each synanogue (see M. Zand, *Bukhara. vii. Bukharan Jews*, in *Encycl. Iranica*, iv, 530-45, esp. at 535-6). A study of the Jewish community of Shīrāz, carried out in 1967-8, shows the persistence of the title *mollā* in Jewish nomenclature. As in the case of the Muslim *mollā*, there exists a distinction between the honorary nature of the term (denoting a teacher of theology or a Jew educated in his own religion, irrespective of status) and its application to religious "officials". More specifically, the *mollā* is a synagogue official of humble rank, inferior to the *ḥazzān* (steward), superior to the *shamash* (beadle, attendant) and to the *morde shūr* (corpse washer (see Loeb, 339 ff.). One may wonder whether these *mollās* are so-called out of politeness or derision. They read Hebrew but barely understand it, earn a little money as payment for reading prayers at funerals, singing psalms for the sick, reading the penitential prayers for Israel (*ibid.*, 334). Through mockery or derision, the Persian expression *Mollā Pīnās* denotes a miserly individual, of slovenly and ragged appearance, probably by allusion to the Jewish *mollās* (Djamālzāda).

Bibliography and abbreviations (in view of its ambivalent nature, the term *mollā* touches numerous aspects of the religious, social and economic life of the Muslim world over a vast cultural area, according to a chronology to a large extent overlapping contemporary history. All that are supplied here are general references comprising significant bibliographies. MOLLĀ BĀDJĪ, MOLLĀ BĀSHĪ, MOLLĀ BĀSHĪGARĪ [see MOLLĀ].

MOLLĀ ĶĀBID (?-934/1527), a member of the Ottoman *ʿulamāʾ* executed for heresy in Ṣafar 934/October-November 1527. Djalālzāde Muṣṭafā [*q.v.*], who was at this time Secretary to the *Dīwān* [*q.v.*] and private secretary to the Grand Vizier Ibrāhīm Pasha [*q.v.*], gives the earliest account of the case. He states that "some zealous *ʿulamāʾ*" brought Ķābiḍ before the Imperial *Dīwān* for preaching in public that Jesus was superior to Muḥammad. The *wazīrs* made the case over to the *ķāḍī ʿasker* [*q.v.*] of Rumelia, Fenārīzāde Muḥyī al-Dīn Čelebī and the *ķāḍī ʿasker* of Anatolia, Ķādirī Čelebī. These two men were unable to refute Ķābiḍ's beliefs, which he supported with *ḥadīths* and Ķurʾānic verses, and, "with gestures full of rage", they condemned him to death by extra-canonical (*ʿörfī*) decree. The Grand Vizier Ibrāhīm Pasha was unable to accept this outcome, which was not in conformity with the *sharīʿa*, and dismissed Ķābiḍ, his case apparently vindicated. Sultan Süleymān I [*q.v.*] had had an enclosed balcony built to overlook the *Dīwān*-room, from which he had witnessed the trial unobserved. When the *wazīrs* entered his presence, he reproached them for allowing the heretic Ķābiḍ to go unpunished. Ibrāhīm Pasha replied that the *ķāḍī ʿaskers* had been unable to refute Ķābiḍ by the *sharīʿa* and had given their reply in anger. The Sultan ordered a retrial before the *shaykh al-Islām* [*q.v.*] Kemāl Pasha-zāde [*q.v.*] and the *ķāḍī* of Istanbul Mewlānā Saʿd al-Dīn. The *wazīrs* despatched *čāvūshs* to arrest Ķābiḍ. On the following day, when Kemāl Pasha-zāde and Mewlāna Saʿd al-Dīn appeared in the *Dīwān*, the *ķāḍī ʿasker* of Rumelia fled, ostensibly because the *shaykh al-Islām* had precedence over him, but actually so as not to display his own ignorance. Kemāl Pasha-zāde sat on the Grand Vizier's left, with Mewlānā Saʿd al-Dīn in front. When Kemāl Pasha-zāde questioned Ķābiḍ, he repeated his beliefs, "adducing proofs which he took from ... the Ķurʾān and the *ḥadīth*", and refused to recant when his two interrogators told him "the true meaning of the verses ... and ... *ḥadīths*", and asked him, "Do you abandon your false creed? Do you accept the truth?" At this, Kemāl Pasha-zāde pronounced a *fatwā* authorising his execution and handed his case to the *ķāḍī*. He was executed when he again refused to renounce his beliefs.

It was in response to this case that Kemāl Pasha-zāde wrote his *Risāla fī taḥķīķ lafẓ al-zindīķ*, which defines a *zindīķ* as a heretic who, like Ķābiḍ, uses the "Truth"—that is, the Ķurʾān and *ḥadīth*—to vindicate heresy.

MOLLĀ KHUSREW [see KHUSREW MOLLĀ].

MOLLĀ KURĀNĪ [see GURĀNĪ, SHARAF AL-DĪN].

MOLLĀ ṢADRĀ [see MULLĀ ṢADRĀ].

MOMBASA (in Arabic script *Manbasa*, Swa. Mvita), an island and town on the east coast of Africa, lying in lat. 4° S. and long. 39° E. The island is about 3 miles in length from north to south, and nearly the same from east to west. It is so placed in the deep inlet formed by the convergence of several creeks as to be almost wholly surrounded by mainland, only the southeastern angle being exposed to the Indian Ocean. This peculiarity of situation suggested to W.E. Taylor the derivation of the name Mvita "the curtained headland", from Swa. *n(ta)* "point". The more usual derivation from *vita* "war", seems inadmissible on phonetic grounds. A 19th century traditional *History of Pate* connects it with *fita* "hidden", either from its hidden position, or from the inhabitants, as it is said, having hidden themselves in the bush during a raid from Pate.

Mombasa town is at the eastern end of the island, and, being at the terminus of the Uganda railway and the only modern port in the Republic of Kenya, is of considerable commercial importance. The latest figure available for the population (1978) is 246,000. The permanent residents are chiefly Swahili and a floating population of labourers from inland tribes. No precise figures are available for the small number of Arabs, Indians and Europeans. The Arabs, Swahili and many Indians are Muslims, the two former being chiefly Sunnīs of the Shāfiʿī rite. There are a number of mosques, very plain buildings, and without minarets; the *muʾadhdhin* stands on the flat roof to give the call to prayer.

The origin of Mombasa is obscure. The *Periplus of the Erythraean Sea* (*ca.* A.D. 106) records Arab trading stations on the East African coast where the traders intermarried with local women. The race of the native people is unknown, for the Bantu ancestors of the present Swahili population do not appear to have reached the coast before the 5th century A.D. There is no recorded local tradition of the date of foundation of the town, but Stigand (*Land of Zinj*, 29) reports a Pate tradition which states that the caliph ʿAbd al-Malik b. Marwān (65-86/685-705) sent out Syrians, who "built the cities of Pate, Malindi, Zanzibar, Mombasa, Lamu and Kilwa". There is no evidence, either documentary or archaeological, to support this view. The first documentary record is a somewhat confused report by al-Idrīsī, who speaks of it as a small place whose inhabitants work in iron mines and hunt tigers (sc. leopards, for there are no tigers in Africa). Nor are there any iron mines as such, but pig iron is recoverable from numerous nearby beaches. Here the King of the Zunūdj had his residence. Some recent excavations on the Coast General Hospital site (1976) produced some ceramic evidence that is dated to *ca.* 1180-1280, but nothing demonstrably earlier. Because the modern town overlies the ancient town site, little excavation has so far been possible. The town was visited by Ibn Baṭṭūṭa in 1331. Fruit, bananas, lemons and oranges were plentiful, but agriculture was not practised: grain was imported from the coast. The people were of the Shāfiʿī rite, "devout, chaste and pious", and their mosques were contructed of wood.

The Swahili of Mombasa, both traditionally and at the present day, are divided into the *Thenashara Taifa*, the Twelve Tribes. Some also identify themselves as Shīrāzī, claiming Persian descent, and most probably have a thin line of descent from traders from the Gulf. Five of the *mataifa* are named from localities near Mombasa, the remaining seven from towns and islands to the north, as far as southern Somalia. There is little evidence of migration from Pemba, Zanzibar or the Tanzanian coast. There seem, however, to have been some connections with Kilwa, for a report made in 1506 by Diogo de Alcaçova to the King of

Portugal states that the *sulṭān* of Kilwa collected customs dues at Mombasa from vessels that had sailed past Kilwa. Whatever their origin, the *Thenashara Taifa* speak a distinct dialect of Swahili, *Kimvita*, which is the dominant form of the language from Malindi in the north to Gazi in the south. Two of the *taifa*, the Jomvu and the Changamwe, speak slightly differentiated subdialects. It is with curious prescience, as it might seem, that in 1776 a Mwinyi (or Prince) Kombo of Mombasa wrote to the French Governor of Île de France of Swahili as "my national language". In structure, the *Thenashara Taifa* group divided themselves into *Thelatha Taifa* (Three Tribes) and *Tisa Taifa* (Nine Tribes). In the 19th century, the ʿUmānī sulṭāns recognised these political groupings by accepting a *tamim* (Swa. spokesman; pl. *matamim*), from each of the two. These offices still exist under the present republic, but are largely honorific. Their origins and antiquity are unknown.

There are several recognisable stages in the development of the town. The first is a tradition of a queen, Mwana Mkisi. Then followed a "Shīrāzī" dynasty founded by Shehe Mvita, who gave his name to the town. This dynasty died out in the late 16th century, when the Portuguese filled the vacancy by bringing from Malindi a *sulṭān* of a "Shīrāzī" dynasty. The last of these, Yūsuf b. al-Ḥasan, after rebelling against the Portuguese in 1631, fled in the following year. The Portuguese then ruled directly until 1698, when the town was taken by the ʿUmānī Arabs, who ruled until 1890, when the British Protectorate (1890-1963) was proclaimed. This was ended when the Republic of Kenya was proclaimed on 12 December 1963.

Of the first stage we know nothing. Of the "Shīrāzī" dynasty, the *History of Mombasa*, a Swahili traditional history translated into Arabic in 1824, and which now exists only in English, French and German translations, records nothing but the name of the last ruler, Shahu Misham. It is equally taciturn about the Portuguese occupation. Vasco da Gama reached Mombasa on 7 April 1498, but did not land for fear of treachery. He then went on to Malindi, the traditional enemy of Mombasa, whose ruler hoped to find in him a useful ally against Mombasa. Mombasa town was taken and sacked by the Portuguese in 1505 by Francisco d'Almeida, in 1528 by Nuno da Cunha, and in 1588 by Tomé de Sousa Coutinho. The reason for the last of these sacks was that in 1585 the town had declared its allegiance to the Ottoman Sultan when the Turkish *amīr* ʿAlī Bey came down to the coast. He returned in 1588, at the same time as a land invasion of the Zimba, a warlike tribe that had made its way up from south of the River Zambezi, killing and pillaging as it went. From Mombasa the Zimba went on to Malindi, where the Portuguese were assisted by a war-party of the Segeju tribe. Together they annihilated the Zimba, who then disappear from history. But the two Turkish incursions, even if they were unsuccessful, determined the Portuguese to transfer the seat of their Captain from Malindi to Mombasa, and to erect the fortress there known by them as Fort Jesus, and by the Swahili as *ngome* ("fortified enclosure"). The architect was an Italian, Giovanni Batista Cairati, but the work-force was principally provided by the Swahili. It is constructed of cut coral, the most copiously available local building stone. The work began in 1592 and was largely complete by 1596, although additions and alterations were made long after. It was at this time that the "Shīrāzī" dynasty failed, and the *sulṭān* of Malindi was brought in to fill the vacancy in 1592. By a settlement made in 1594 the island was divided into two equal parts; it was grossly favourable to the Portuguese because the part to the *sulṭān* was in the interior of the island, without access to the sea. This was modified in 1596, the *sulṭān* being given land near the modern harbour of Kilindini and one-third of the customs revenue. The *sulṭān* then applied for permission to send trading voyages to China, to send a vessel annually to the Red Sea for the pilgrimage to Mecca, and to be made ruler of Pemba. He seized the latter without further ado. He died in 1609, being succeeded by a son, al-Ḥasan b. Aḥmad. He quarrelled with the Portuguese over Pemba; they retorted by demanding the deposit of his entire stock of grain in Fort Jesus. He refused, and was forced to flee to Kilifi [*q.v.*]; after a brief return to Mombasa, he fled again and was treacherously murdered.

His brother Muḥammad was then installed as regent, and his son, Yūsuf, was sent to Goa to be educated as a Christian by the Augustinian Order, who had started a mission in Mombasa in 1597. Yūsuf was baptised as Dom Jerónimo Chingulia. In 1626 (as recently discovered manuscripts have made clear) he returned to Mombasa. He had had a period of service in the Portuguese fleet, had married a Portuguese wife, and had been solemnly with her in Goa. A considerable body of evidence sustains his complaints of the gratuitous insults, affronts and injustices of the Portuguese Captains. In 1631, with the aid of pagan tribesmen known as Mozungulos, he murdered the Captain Leitāc de Gamboa, and fired on the Portuguese town, an area separate, as a map of 1635 shows, from that of the Swahili. Portuguese, both men and women, fled to the Augustinian monastery. At the same time, Dom Jerónimo returned to the Islamic faith as Sultan Yūsuf b. al-Ḥasan, and he gave the Augustinian clergy, and to the Christians in the monastery, Africans, Goans, Indians and Portuguese, men, women and children, all told some 250, the choice between Islam or death. The Augustinian Postulature Archives in Rome preserve the *processus* or ecclesiastical judicial inquiry into their deaths, with a view to their canonisation as saints: it contains the evidence of twenty-three witnesses. At the same time there were minor uprisings elsewhere on the coast, but there was nothing to suggest a systematically-organised revolt. In 1632, when the Portuguese fleet arrived from Goa to recover the town, some 1,000 men were said to be under arms, The Portuguese besieged the town until May 1633 and then withdrew. Sultan Yūsuf b. al-Ḥasan had ostensibly succeeded. But then, quite abruptly, he withdrew to the Red Sea, taking to a life of piracy and pillage. Likewise, the inhabitants fled, and later the Portuguese returned to an empty town. What had started as an anti-colonial uprising with religious overtones ended like a damp squib.

In 1650 the ʿUmānīs succeeded in expelling the Portuguese from Maskaṭ [*q.v.*]. A Mombasan delegation shortly sailed for Maskaṭ, asking for aid. During the next half-century the ʿUmānīs frequently raided the eastern African coast, even reaching as far as Mozambique. Their aim was by no means altruistic; it was to break the Portuguese monopoly of the ivory trade in which Arabs and the coastal folk had collaborated since before the time of the *Periplus*. These raids culminated in the ʿUmānī siege of Fort Jesus in March 1696. We possess two detailed accounts of the siege. The Portuguese were assisted by Swahili from Pate, jealous of Mombasa. When defeat was at last acknowledged in December 1698, there were only eleven survivors from what had been a force of some

3,000. The ʿUmānīs then extended along the coast as far as Tungi, just south of the River Ruvuma. Governors were placed at Kilwa, Zanzibar, Mombasa, Lamu and other principal towns. When internal dissension rent Mombasa in 1728-9, the Portuguese made a brief comeback. They were expelled by a popular insurrection. The history of the next 140 years is of sporadic and disorganised resistance to the ʿUmānīs. In Mombasa the Mazrui (Swa., Ar. Mazraʿi) virtually became hereditary governors (Swa. *liwali*) after 1734, with Fort Jesus as their residence. In 1749, when Aḥmad b. Saʿīd seized ʿUmān from the Yaʿāriba, the Mazrui proclaimed themselves independent. This was soon stopped, but it did not prevent another attempt *ca.* 1815. An uneasy tension persisted until 1823, when, at their request, British protection was asked from Captain W.F.W. Owen. This he granted provisionally, in the belief that it would assist in putting down the slave trade. A British Protectorate was proclaimed (1824-6), but shortly afterwards disowned by Whitehall. The British Government by no means wished to quarrel with Sayyid Saʿīd of ʿUmān, whose state lay athwart communications with India. Saʿīd made his first visit to the coast in 1827, but it was ten years before he was able to gain control of Mombasa from the Mazrui. Soon afterwards he made Zanzibar his principal residence, and from there Mombasa and its coast was controlled until it was leased to the British East Africa Company in 1887. From then on it shared the history of what was to become Kenya after the First World War.

In the 19th century Mombasa was the centre of a circle of a number of distinguished Swahili poets. Amongst these were Mād̲j̲id b. D̲j̲ābir al-Rijeby (*ca.* 1800-8), Muḥammad b. Aḥmad b. S̲h̲ayk̲h̲ al-Mambassī (*fl.* 1865-90), Suʿūd b. Baʿīd al-Maʿāmirī (*ca.* 1810-78), and the well-known Muyaka b. Mwinyi Haji. The late S̲h̲ayk̲h̲ al-Amīn b. ʿAlī al-Mazrui, for many years *ḳāḍī* of Mombasa, was also the author of an Arabic history of his family, as yet unpublished. For an understanding of modern times, the work by Hyder Kindy, one of the *matamim, Life and politics in Mombasa* (1972), is valuable and illuminating.

In the sphere of archaeology, there is still much to be learnt in Mombasa. J.S. Kirkman's excavations and clearing of Fort Jesus during 1958-69 are important not only for the study of the fort but because it resulted in a study of imported ceramics, Islamic and Far Eastern, from the 17th to 19th centuries. This work was begun by him at Gedi in 1948, and a complete and reliable picture of East African imports is now available from the 12th to the 19th centuries. But this does not affect the historical archaeology of Mombasa before the 12th century, now begun by H. Sassoon. Outside Fort Jesus, it remains to recover the archaeological story of an Islamic town which in mediaeval eastern Africa was second only to Kilwa.

(A. Werner-[G.S.P. Freeman-Grenville])

MONARCHY [see mamlaka; mulk; salṭana].

MONASTERY [see dayr; k̲h̲ānḳāh].

MONASTIR (classical orthography, Munastīr, popular pronunciation Mnestīr, Mestīr; *nisba* Mestīrī), a town and port in the Sahel, the eastern coast of Tunisia, near the site of the ancient Ruspina at the end of a cape which runs out to the south-east of Sūsa.

Due to the proximity and special position of three little islands, the anchorage of Monastir is considered the best on the east coast of Tunisia (U.S. Hydrographic Office, *Sailing directions for the Mediterranean*, i, 9F-16; France, Service hydrographique de la marine, *Instructions nautiques*, série D (II), Paris 1958, 347). This circumstance contributed to the site's long history and special rôle which it on occasion played. Originally selected and named by the Phoenicians as Ruspina, it witnessed in 46 BC the anchoring of the Roman fleet and Caesar's encampment during the final stage of the consul's drive against his opponents in the civil war (*Pauly-Wissowa*, s.v. *Ruspina*).

After the Arab conquest of the area in the second half of the 1st/7th century, increasing raids by Byzantine fleets as well as by those of the newly established maritime powers of the Central Mediterranean such as Naples, Amalfi and Gaeta, prompted the caliph Hārūn al-Ras̲h̲īd to instruct the governor Hart̲h̲ama b. Aʿyan [*q.v.*] to fortify the coast; the *ribāṭ* of Monastir is usually mentioned as the first such fortification (founded 180/796; according to M. Talbi, *L'Émirat ag̲h̲labide*, Paris 1966, 394, the *ribāṭ* of Sūsa, founded during the governorship of Yazīd b. Ḥātim al-Muhallabī (155-71/772-88), would have been the earliest; Sūsa's routine later dating may be due to an inscription on its guard tower commemorating this portion's construction in 206/821-2. Monastir, in addition to its function as a maritime frontier fortification, formed a link in the chain of signal towers that stretched from Alexandria all the way to Tangiers (Talbi, *loc. cit.*).

The name may indicate the presence of an earlier, Christian monastery (Ch.-J. Tissot, *Exploration scientifique de la Tunisie*, Paris 1884-91, ii, 165-6), but equally plausible is the suggestion that the local population, still partly Christian or using older terminology, applied the Graeco-Roman term to the superficially similar Muslim institution (S.M. Zbiss, *al-Munastīr: maʿālimuhā al-āt̲h̲āriyya*, Tunis n.d., 3). In subsequent centuries the original *ribāṭ* was joined by two or more additional ones, hence the frequent way of referring to the site as *Ḳuṣūr al-Munastīr* (al-Muḳaddasī, 4-5; Yāḳūt, iv, 661, mentions five *ḳaṣrs* enclosed by a wall, and al-Bakrī, 36, asserts the existence of five *maḥāris* in the main *ribāṭ*'s vicinity). Subsequently, houses and land were given in *ḥubus* (*waḳf*) endowment to the *murābiṭūn*. Service in the *ribāṭ* of Monastir came to be considered especially meritorious and gave rise to such *ḥadīt̲h̲s* as "He who keeps watch in the frontier town of Monastir for three

days has the right to Paradise" (Abu 'l-ʿArab Muḥammad b. Aḥmad b. Tamīm al-Ḳayrawānī, *Ṭabaḳāt ʿulamāʾ Ifrīḳiya wa-Tūnus*, ed. and tr. Mohammed Ben Cheneb, *Classes des savants de l'Ifriqiya*, Algiers 1920, 5, 7, 9, 14, 15; ed. ʿAlī al-Shābbī and Nuʿaym Ḥasan al-Yafī, Tunis 1968, 47-8; Tidjanī, *Riḥla*, Tunis 1958, 30-2). Monastir's fame as the most venerated *ribāṭ* of the Maghrib was less due to its military or political assets, in which the neighbouring Sūsa and Mahdiyya gained primacy, than to this intrinsic religious reputation that made it the permanent home of holy anchorites as well as a temporary religious retreat of the people of Ifrīḳiya (Ibn Ḥawḳal, i, 73) and a favourite burial ground; the last-named function is mentioned especially in connection with Mahdiyya (al-Idrīsī, 3rd climate, 2nd section, see *Opus geographicum*, 282), and more specifically with the last members of the Zīrid dynasty, who were upon their deaths and after the initial ceremonies in the capital transported by sea here to their final resting place (Ibn Khallikān, *Wafayāt*, Cairo 1310/1892-3, ii, 241; Ibn al-Athīr, Beirut 1966, x, 512-113). An especially revered sanctuary became the tomb of the Mālikī *imām* al-Māzarī [*q.v.*], a native of Sicily subsequently active in Mahdiyya and ultimately buried in Monastir (d. 536/1141; H.H. ʿAbd al-Wahhāb, *al-Imām al-Māzarī*, Tunis 1955; H.R. Idris, *La Berbérie Orientale sous les Zirides*, Paris 1962, 691-2). The integrity of the principal *ribāṭ*'s occupants in performing their avowed mission had declined by the time this *imām* was charged by the Zīrid sultan to inspect Monastir, and Māzarī described in his *fatwā* the situation: many of the *murābiṭūn* no longer lived inside the *ribāṭ* but nevertheless kept receiving the alms (*maʿrūf*); the countryside became more cultivated, and some of the *murābiṭūn* had become hereditary landowners; the people of Monastir engaged in certain practices, reminiscent of those of Christian monks, that were qualified by him as *bidʿa* (al-Wansharīshī, *al-Miʿyar, fatwās* of al-Māzarī: vii, 119-22, xii, 243-7, cited by Idris, *op. cit.*, 691). Al-Māzarī's strictures nevertheless reveal a certain prosperity; Monastir's fields and orchards, whose yield was in large part sent to Mahdiyya thus reflecting the intimate relationship of the two cities, indeed appear to have been spared by the Hilālī Arabs on religious grounds (al-Idrīsī, *loc. cit.*; M. Makhlūf, *Shadjarat al-nūr al-dhakiyya fī ṭabaḳāt al-mālikiyya*, Cairo 1250/1834-5, ii, 193, cited by Idris, 447); moreover, the *imām*'s own tomb eventually contributed to the continuing religious role and reputation of Monastir.

The principal *ribāṭ* of Monastir, called al-Ribāṭ al-Kabīr (G. Marcais, *L'Architecture musulmane d'Occident*, Paris 1954, index s.v. *Monastir*; A. Lézine, *Le ribat de Sousse suivi de notes sur le ribat de Monastir*, Tunis 1956, 35-43 and pls. xxxi-xli; G. Marçais, review of this book, in *CT* [1956], 127-35), considerably modified and expanded in the course of time, still presents its imposing façade with crenellated walls rising above the site's shoreline. Al-Bakrī's 5th/11th century book describes, according to Lézine (*Architecture de l'Ifriqiya*, Paris 1966, 122-6), the same structure but, utilising two consecutive sources, captures both its initial and later, expanded, state. The earlier source reflects the original *ribāṭ*: a lofty and solid citadel (*ḥiṣn ʿālī 'l-bināʾ mutḳan al-ʿamal*), enclosing a rectangular courtyard lined by two storeys of cells; in the middle of the southern row's upper level was a mosque (in fact, a prayer hall of no great height with cradle vaulting) where an ever-present virtuous *shaykh* presided over the occupants: the latter were a community of holy men and anchorites (*djamāʿa min al-ṣāliḥīn wa 'l-murābiṭīn*) who had left the world and committed their lives [to service in this *ribāṭ*]. The whole represented a complex that included rooms and cells (*buyūt, ḥudjar*), Persian mills (*ṭawāḥīn al-fārisiyya*) and cisterns (*mawādjil*), and where a great fair (*mawsim ʿaẓīm*) took place on the day of *ʿĀshūrā*. Of this original *ribāṭ*, only the round guard-tower—the *nāḍōr*—in the south-eastern corner, a remnant of the ancient wall attached to this tower, and the above-mentioned southern row with the mosque on the upper floor (which now serves as a museum), are preserved. The actual state of the *ribāṭ*, with an expanded surface and a second generation of walls, would reflect the *ribāṭ* as it was described, according to Marçais, by al-Warrāḳ (d. 973), al-Bakrī's later source. Al-Bakrī's subsequent description would pertain to this expanded *ribāṭ*: a great citadel (*ḥiṣn*) with many dwellings (*buyūt*), mosques and fortifications (*ḳiṣāb*) in several storeys; al-Bakrī also mentions a *rabaḍ*, which should mean here the new space created between the two generations of walls. To the south of this *ribāṭ* and directly attached to it was another courtyard with lofty and solid pavilions (*ḳibāb ʿāliya mutḳana*), occupied by female anchorites (*al-nisāʾ al-murābiṭāt*); these pavilions were known as domes of the mosque (*ḳibāb djāmiʿ*), because of the proximity of the Friday mosque. This mosque, dated to about 1000 A.D., as well as the small mosque of Sayyida to the west of it, have conserved *miḥrāb*s of an unusual transitional type. As to the above-mentioned round guard-tower, the *nāḍōr*: of the same type as the *nāḍōr* of Sūsa, its form is characteristic of the fortifications of Ifrikiyya's coastline (G. Marçais, *Note sur les ribâṭs en Berbérie*, in *Mélanges René Basset*, ii, 430; *nāḍōr*, dialectal for *nāẓūr*, would be the local synonym of *manār* [*q.v.*]. Al-Bakrī's later source also mentions numerous baths of the city and a feature showing that Monastir's religious importance spanned the full range of society: besides functioning as a burial ground of the dynasty ruling from Mahdiyya, it enjoyed the veneration of people from other places such as al-Ḳayrawān who regularly came there as an act of devotion with goods and fine offerings (*ṣadaḳāt djazīla*).

Monastir conserved its religious significance also in later centuries. Thus Pīrī Reʾīs mentions it as a town with a *zāwiya* inhabited by *murābiṭs* and students (*murābiṭlar olur we oghlandjiḳlar oḳurlar; Kitāb-i baḥriyye*, version of 926/1520, ms. Topkapı Sarayı, Bagdat 337, fol. 112a); Lanfreducci and Bosio in their report of 1587 state that Turkish corsairs kept visiting Monastir out of devotion for its *murābiṭs* (*Costa e discorsi di Barberia*, ed. and tr. Ch. Monchicourt and P. Grandchamp, in *R. Afr.* [1925], 450, 512). Equally characteristic are such legends as that narrated by Pīrī Reʾīs (*Kitāb-i baḥriyye*, version of 932/1526, facs. ed., Istanbul 1935, 656) and the Flemish traveller Adorne (R. Brunschvig, *Deux récits*, Paris 1936, 178) about a raiding Christian galley that was transformed into a rocky islet through the intercession of the *murābiṭs*. Also worthy of mention are architectural additions carried out in the *ribāṭ* and the town by the Ḥafṣids and Turks. Moreover, in the Turkish period Monastir's walls were modified so as to accommodate artillery.

Modern Monastir has the distinction of being the birthplace of Habib Bourguiba, first president of independent Tunisia. This circumstance is responsible for the construction of two remarkable monuments of contemporary Islamic architecture: the mosque of Bourguiba (*Djāmiʿ Burḳība*) and the mausoleum of the president's family (*Turbat Āl Burḳība*). The economy of

Monastir, whose traditional forms referred to in the article included a nearby saline whose salt was exported by sea (al-Bakrī, 36), also benefited from sardine and tunny fishing and the olive tree; the last-named became in recent centuries dominant to the point of being qualified as "monoculture" (X. Thyssen, *Des manières d'habiter dans le Sahel tunisien*, Paris 1983, 10), and made Monastir, together with Sūsa, a busy olive oil exporting port (L. Valensi, *Tunisian peasants in the eighteenth and nineteenth centuries*, Cambridge 1985, 255-6). Since the 1960s, the town and the area have acquired an unprecedented but characteristic dimension with a growing tourist industry, exemplified by the development of beaches and construction of numerous hotels; in the 1970s Monastir also became a university town, the seat of such new establishments as a faculty of medicine (F. Stambouli, *Urbanisme et développement en Tunisie*, in *Revue tunisienne des sciences sociales* [March 1967], 98).

MONASTIR in Yugoslavia [see MANĀSTĪR].

MONDROS, the Turkish name of a harbour on the Aegean island of Limnī [*q.v.*] or Lemnos; it is alternatively known by its Greek name of MUDROS or Moudros.

Mondros's claim to fame is that it was the site of the armistice of 30 October 1918 which ended the Ottoman Empire's participation in the First World War. The decision of the Unionist cabinet of Meḥmed Ṭalʿat Pasha [see ITTIḤĀD WE TERAḲḲĪ DJEMʿIYYETI] to seek an armistice was prompted by the rapidly deteriorating military position of the Ottoman Empire and its German and Austro-Hungarian allies. By the end of September 1918, Ottoman armies on the Syrian and Mesopotamian fronts had effectively collapsed, while Bulgaria's acceptance of a separate armistice had exposed the Empire to the threat of Entente attack in Thrace; in Western Europe, the armies of Germany and Austria-Hungary were in full retreat. On 4 and 5 October 1918 the Ottoman, German and Austro-Hungarian governments addressed identically worded armistice appeals to President Wilson of the USA; this proved to be the last manifestation of their wartime alliance. Ṭalʿat's cabinet resigned on 13 October; his successor Aḥmed ʿIzzet Pasha established direct contact with Entente commanders, and on 27 October armistice negotiations opened at Mondros on board the British warship *Agamemnon*. The Ottoman delegation was led by the Navy Minister Ḥüseyin Raʾūf Bey; the Entente Powers were represented by Vice-Admiral Calthorpe, the commander of British forces in the Aegean. The negotiations were brief: Calthorpe was bound by terms previously agreed between Britain and her allies, and the Ottoman side obtained few modifications. The armistice was signed on 30 October, and came into effect on the following day. It was followed within a fortnight by the Austro-Hungarian and German armistices.

The Mondros armistice comprised twenty-five articles, whose chief provisions may be divided into three groups. The first provided for an immediate cessation of hostilities between the Ottoman Empire and the Entente Powers, the demobilisation of the Ottoman army and the surrender of the fleet, the withdrawal of Ottoman forces from Trans-Caucasia and north-west Persia, the surrender of garrisons in Arabia, Syria, Mesopotamia and North Africa, the cessation of all relations between the Ottoman Empire and its erstwhile allies and the expulsion of all German and Austro-Hungarian personnel from its territory (arts. 5, 6, 11, 16, 17, 18, 19, 23). The second group provided for the opening of the Dardanelles and Black Sea Straits, for the occupation by the Entente Powers of the Dardanelles and Bosphorus forts and the Taurus tunnel system, and for the future occupation of any other strategic points if the security of the Entente Powers were threatened (arts. 1, 7, 10). The third group gave the Entente Powers access to all Ottoman naval facilities and supplies of fuel and other *matériel*, together with control of all railway and cable and wireless stations (arts. 8, 9, 12, 13, 14, 15, 20, 21).

In theory, the armistice was a ceasefire only and did not prejudge the terms of an eventual peace settlement; in practice, this proved questionable. First, the armistice violated previous Anglo-French understandings in not insisting on a complete evacuation of Ottoman forces from Cilicia; this provoked a suspicion that Britain had taken the opportunity to strike a blow at French aspirations in Cilicia, a suspicion reinforced by the fact that the British government had instructed Calthorpe to exclude French representatives from the Mondros negotiations. Second, British forces in Mesopotamia occupied Mawṣil after the conclusion of the armistice, thus eventually causing a serious territorial dispute between the Turkish Republic and the British-mandated territory of ʿIrāḳ which was not resolved until 1925. Finally, the exigent fashion in which Britain and her Entente partners attempted to enforce the provisions for demobilisation and the surrender of strategic points in the months following the armistice gave rise to Turkish fears that the real aim was the dismemberment of what was left of the Ottoman Empire in Thrace and Anatolia, and these in turn played a large part in the rise of the Turkish nationalist movement from the spring of 1919 onwards. In the event, the nationalists successfully resisted the armistice's provisions for demobilisation and a withdrawal of Ottoman forces from territories conquered in eastern Anatolia.

MÖNGKE, fourth Great Khān of the Mongol Empire. He was the son of Čingiz Khān's youngest son Toluy, the eldest of four by Toluy's chief wife Sorḳoḳtani Beki (the other being Ḳubilay [*q.v.*], Hülegü [*q.v.*] and Arigh-böke). He was born on 10 January 1209, according to the Chinese dynastic history of the Mongols, the *Yüan-shih* (W. Abramowski, *Die Chinesisichen Annalen des Möngke: Übersetzung des 3. Kapitels des YUAN-SHIH*, in *Zentralasiatische Studien*, xiii [1979], 7-71, at p. 16). His principal significance in the history of the Muslim world lies in the fact that it was at his behest that Hülegü mounted the expedition that resulted in the establishment of the Īlkhānate.

His fortunes were linked with those of Batu [*q.v.*], under whose command he served in at least the early stages of the great invasion of Russia and eastern Europe in 1237-42. On the death of the Great Khān Ögedey in 1241, a long interregnum followed. Ögedey's son Güyük only gained recognition as his successor in 1246; he and Batu had been enemies since the Russian campaign. Open conflict between them was averted only by Güyük's sudden death in 1248. A further interregnum lasted until 1251, when it was brought to an end by a coup d'état on the part of Batu and Möngke. In this the senior (Djočid) and junior (Toluyid) branches of the Čingizid house prevailed over the other two branches, the Čaghatayids and the Ögedeyids, many of whom were killed in the aftermath of Möngke's "election" and enthronement, which occurred on 1 July 1251. Batu himself had declined election, preferring to remain in his own lands of the Golden Horde; but the price of his support was autonomy in those lands. The Mongol Empire became a Batu-Möngke condominium, though see, for a different view, T.A. Allsen, *Mongol imperialism: the policies of the Grand Qan Möngke in China, Russia, and the Islamic lands*, Berkeley, etc. 1987, 54-63.

After ascending the throne, Möngke despatched major military forces in two directions. His brother Ḳubilay was sent to begin the subjugation of the Sung Empire in South China, while Hülegü was commissioned to march west against the Ismāʿīlīs of Persia and the ʿAbbāsid caliphate. Each of the expeditions, according to the Persian historian Djuwaynī, was granted two out of every ten soldiers available in the empire (Djuwaynī, iii, 90; Djuwaynī-Boyle, ii, 607). Both of these campaigns were still under way when Möngke died in China, according to the *Yüan-shih* in August 1259 (Abramowski, 33). His death precipitated a civil war over the succession to the Great Khānate between Ḳubilay and Arigh-böke, in which the former was victorious in 1264. It was possibly during Möngke's reign that the Islamic lands under Mongol control first had imposed on them the new "poll-tax" variety of *ḳübčür* [*q.v.*], though this may have begun earlier (Allsen, *op. cit.*, 147-9).

Möngke, though apparently remaining personally attached to his ancestral Shamanism, was notable for his interest in and tolerance of a wide range of religions. The Franciscan missionary William of Rubruck travelled to Mongolia in 1253-5 and visited Möngke's court at Ḳaraḳorum, at which he was a participant in a religious debate between Christians, Muslims and Buddhists. He also gives an account of the dramatic events of 1251 which is strikingly similar to Djuwaynī's and which like his own one doubtless reflects the version propagated by the victorious side in the dynastic conflict.

(D.O. Morgan)

MONGOLIA. Muslims in the modern Mongolian People's Republic.

The sole Muslim communities of the Republic live today within the Turkish-speaking Kazakh [see ḲAZAḲ] (Mo. *Hasag*) and Choton (Mo. *Hoton*) groups.

According to the 1960 census, 36,700 Kazakhs lived in the westernmost *aimak* or administrative division of the Republic, that is in existence since 1940 as the Bayan Ölgiy *aimak*; the *aimak* is also called Hasag *aimak*, "that of the Kazakhs". These Kazakhs of Mongolia are linguistically, culturally and historically closely linked with the Kazakhs of the Kazakh SSR or the Soviet Union, but at present only partially acknowledge themselves as Sunnī Muslims. The mosque (Mo. *lalyn süm*) of the Kazakh Muslims (Mo. *lal*ʿ, Tibetan *kla-klo* "barbarians, Muslims") in the administrative centre of the *aimak*, Ölgiy, is now no longer used for religious purposes. The Muslim ethnic group of the Chotons (no census figures are available) are settled to the south of the Uvsnuur lake in the Uvs *aimak* in existence since 1931 in the northwestern part of the Republic. The ancestors of the Chotons probably belonged to the section of the Muslim Turkish population of Eastern Turkestan (modern Sinkiang or Xinjiang in western China) who were in the 18th century deported by the West Mongolian Oirat-Dörbet and who settled in Mongolia. To what extent the Chotons are practising Muslims today is unknown.

(M. Weiers)

Finally, it may be noted that there are Muslims of Mongolian stock and speaking languages of the Mongolian family—presumably the remnants of ethnic migrations or deportations of earlier times—in the province of Kansu [*q.v.*] or Gansu in the Chinese People's Republic. These comprise the small group of Baoʾan (*ca.* 9,000) in north central Kansu, and the more numerous Dongxiang (*ca.* 300,000) in the autonomous country of that name in northwestern Kansu (see R. V. Weekes (ed.), *Muslim peoples, a world ethnographic survey*[2], London 1984, i, 167, 236).

(Ed.)

MONGOLS, the name of a tribe whose original home was in the eastern part of the present-day Mongolian Peoples' Republic. In the 7th/13th and 8th/14th centuries, under Čingiz-Khān [*q.v.*] and his successors, they established by military conquest the most extensive continuous land empire known to history. At its greatest extent, it stretched from Korea to Hungary, including most of the mainland of Asia apart from India and the south-east of the continent. What is perhaps a form of the Mongol name has been found in Chinese sources of the Tʾang Dynasty (A.D.

618-907), but they became prominent only in the 6th/12th century, when north China was ruled by the Chin Dynasty, of Tungus origin. The Mongols' definitive formation as a people appears to date from the time of the Liao Dynasty (A.D. 907-1125), who ruled in Eastern Mongolia and north China. The Liao emperors were Khitans, related ethnically and linguistically to the Mongols (on the Liao, see K.A. Wittfogel and C. Fêng, *History of Chinese society: Liao 907-1125*, Philadelphia 1949, and on the Mongols in this period, O. Lattimore, *The geography of Chingis Khan*, in *Geogr. Jnal.*, cxxix/1 [1963], 1-7). The sequence of political events in the history of the Mongol Empire is dealt with in other articles: see especially ČINGIZ-KHĀN; ČINGIZIDS; BATU; BATUʾIDS; ČAGHATAY KHĀN; ČAGHATAY KHĀNATE; HÜLĀGŪ; ĪLKHĀNS; GHĀZĀN. This article is concerned with more general themes: the effects of the conquests, particularly in the Islamic world; institutions; and organisation.

1. *Effects of the Mongol conquests.*

The testimony of contemporary writers is unanimous when it describes the horrors that accompanied the Mongol invasion of the Khʷārazm-Shāh's empire in 616-20/1219-23. The most important of these historians are Ibn al-Athīr (in vol. xii), Nasawī (*Histoire du Sultan Djelal ed-Din Mankobirti*, ed. and tr. O. Houdas, 2 vols., Paris 1891-5) and Djūzdjānī (*Ṭabaḳāt-i Nāṣirī*, ed. ʿA.Ḥ. Ḥabībī, 2 vols., 2nd ed., Kabul 1342-3/1964-5; tr. H.G. Raverty, 2 vols., London 1881). These are supplemented by local histories such as Sayfī's *Taʾrīkh-nāma-yi Harāt* (ed. M.Z. al-Ṣiddīḳī, Calcutta 1944). Staggeringly high figures are quoted for the numbers of people alleged to have been massacred by the Mongols when they sacked the great cities of Khurāsān: Harāt—1,600,000 (Sayfī, 60) or 2,400,000 (Djūzdjānī, text, ii, 121); Nīshāpūr—1,747,000 (Sayfī, 63). Such examples are typical. They should not, however, be interpreted literally. Considerable uncertainty exists over the possible size of the populations of such cities in the mediaeval period, but it seems unlikely that Khurāsān could have possessed cities that were so much larger than the capital of the Sung Empire in South China, Hangchou, which contained perhaps a million inhabitants in the mid-7th/13th century (see J. Gernet, *Daily life in China on the eve of the Mongol invasion*, London 1962). It is probable that the normal population of the cities of Khurāsān was considerably swollen at the last minute by influxes of refugees from the countryside. But even if the chroniclers' fingers ought not to be approached as though they were statistics arrived at scientifically, they are certainly evidence of the state of mind created by the character of the Mongol invasion. The shock induced by the scale of the catastrophe had no precedent; this must imply that the death and destruction which produced that shock had no precedent either. Immediate shock will not suffice as a total explanation, however. Later writers such as Djuwaynī, Rashīd al-Dīn and Ḥamd Allāh Mustawfī Ḳazwīnī, recounting events of which they were not themselves contemporaries, do not attempt to minimise the extent of the disaster. Nor, despite the fact that they were all officials in the Mongol government of the Īlkhānate, do they suggest that their predecessors had exaggerated the degree of Mongol destructiveness.

The sources naturally concentrate their attention on the massacres in the cities. The effect of the Mongol invasions on agriculture, especially in Persia, is likely in the long run to have been more serious. Persian agriculture was, in the absence of great rivers on the plateau, heavily dependent on irrigation by means of *ḳanāts* [*q.v.*]. Some of these underground water channels were destroyed during the invasions, but more significant is the fact that a *ḳanāt* quickly ceases to operate if it is not constantly maintained. Hence if peasants were killed in large numbers, or fled from their land and stayed away, that land could well suffer substantial damage simply through neglect of the *ḳanāts*. If the agricultural hinterland of the cities was markedly reduced in extent as a result of destruction, neglect or a permanent reduction in the labour force, it might prove difficult to support those cities adequately and therefore to rebuild them to anything approaching their size. The question of the impact of the later invasion by Hülegü on the agriculture of ʿIrāḳ is a rather different one, since ʿIrāḳī irrigation was river-based. The part played by the Mongols in the decline of the fertility of the land between the Tigris and the Euphrates has been much discussed (see e.g. R.M. Adams, *Land behind Baghdad*, Chicago and London 1965, and the reservations on Adams's methodology expressed by A.M. Watson, *A medieval green revolution: new crops and farming techniques in the early Islamic world*, in A.L. Udovitch (ed.), *The Islamic Middle East, 700-1900: studies in economic and social history*, Princeton 1981, 53, n. 29). But whatever may be laid at the door of the Mongols' predecessors and successors as rulers of ʿIrāḳ, the Īlkhāns may well have contributed much to decay by allowing the irrigation canals to be neglected. In terms of actual loss of life, there seems no reason to doubt that Hülegü's invasion of the Islamic lands was a much less severe blow that Čingiz-Khān's had been. Again it is impossible to arrive at reliable figures. Ḥamd Allāh Mustawfī's estimate of the death toll (800,000) at the sack of Baghdād in 656/1258 is often quoted (*Taʾrīkh-i guzīda*, ed. ʿA. Nawāʾī, Tehran 1336-9/1958-61, 589); but this seems improbably high, and is perhaps refuted by Hülegü's own estimate, in a letter of 660/1262 to King Louis IX of France, of more than 200,000 (P. Meyvaert, *An unknown letter of Hulagu, Il-Khan of Persia, to King Louis IX of France*, in *Viator*, xi [1980], 256).

It seems likely, then, that the traditional view of the appalling immediate effects of the Mongol invasions should be accepted, at least as far as Transoxania and Khurāsān are concerned (for the contrary view, using 20th century parallels to suggest that the destructive impact of the Mongols has been much exaggerated, see B. Lewis, *The Mongols, the Turks and the Muslim polity*, in his *Islam in history*, London 1973, 179-98 and 324-5). The devastation was not, however, universal. South Persia, possibly unattractive to the Mongols because of its climate and, in terms of Mongol demand, the limited areas of pasture to be found there, escaped virtually unscathed. Similarly, it is now thought that the destruction resulting from the Mongol invasion of Russia in 635-9/1237-41, though serious, was patchy in its distribution, some areas sustaining little if any damage (see J.L.I. Fennell, *The crisis of medieval Russia 1200-1304*, London 1983, 86-9). It is clear that the havoc wrought by the Mongol campaigns in the lands of the Chin Empire of north China was not matched when, under the Great Khāns Möngke and Ḳubilay, they conquered the Sung Empire to the south. There they were concerned to acquire new territory as far as possible undamaged. Nevertheless, the following population figures for China, if they are accurate, remain to be explained: over 100 million in Sung and Chin times, declining to 70 million in the 1290s and 60 million a century later (J.D. Langlois, Jr. (ed.), *China under Mongol rule*, Princeton 1981, 20).

The more long-term effects of the period of Mongol

rule in the Islamic world are likely to have been, for the most part, deleterious. The 40 years of pagan Īl<u>kh</u>ānid government before the accession of <u>Gh</u>azan in 694/1295 seem to have been characterised by ruthless and short-sighted exploitation, if the testimony of Ra<u>sh</u>īd al-Dīn, the principal authority, is to be accepted. There are perhaps some grounds for reserving judgment on this point, since Ra<u>sh</u>īd al-Dīn was chief minister to the reforming <u>Gh</u>azan, and hence may have had an interest in overstating the disorders of the preceding decades. Other contemporary writers such as Waṣṣāf do, however, confirm Ra<u>sh</u>īd al-Dīn, at least in general terms. The administration appears to have lurched from one financial crisis to another, with some taxes being levied 20 or 30 times each year. According to Ra<u>sh</u>īd al-Dīn, the results of such maladministration were a general flight from the land on the part of the peasantry and the reduction of nine-tenths of the cultivable land to waste (*<u>Dj</u>āmiʿ al-tawārī<u>kh</u>*, iii, ed. A.A. Alizade, Baku 1957, 457, 558). A low point was reached during the reign of Gay<u>kh</u>atu (690-4/1291-5) with the attempt by his minister Ṣadr al-Dīn to solve the Īl<u>kh</u>ānate's economic problems by the introduction of paper money, *čāw*, on the Chinese model. The expedient was a disastrous failure (see K. Jahn, *Paper currency in Iran*, in *Jnal. of Asian History* iv/2 [1970], 101-35).

<u>Gh</u>azan on his accession declared his conversion to Islam, and the Mongols of Persia duly followed his example, at least in name. The shock which the Islamic world had suffered, in that the Mongol conquests had brought infidel rule over a large part of the *Dār al-Islām*, was thus alleviated. (Indeed, one ultimate result of the conquest, following the conversion of other Mongol rulers to Islam, was an extension of the boundaries of the *Dār al-Islām*, notably in the lands of the Golden Horde and in Central Asia.) <u>Gh</u>azan's conversion, coupled with the celebrated programme of administrative reforms which he promptly initiated, no doubt marked a considerable improvement in Persia's fortunes. The reforms dealt with such matters as the rates and methods of payment of taxes; the reorganisation of the *Yam*, the postal courier system; the reformation of the coinage and of weights and measures; the activities and payment of *ḳāḍīs*; the offer of incentives to encourage the recultivation of land that had fallen out of use; and the employment of a form of the *iḳṭāʿ* to provide a means of paying the army (on <u>Gh</u>azan's reforms see A.K.S. Lambton, *Landlord and peasant in Persia*, London 1953, ch. 4; Spuler, *Mongolen*[4], Leiden 1985, I.P. Petrushevsky, in *Camb. hist. of Iran*, v, ed. J.A. Boyle, Cambridge 1968, 494-500; and idem, *Zemledelie i agrarnie otno<u>sh</u>eniya v Irane XIII-XIVvv.*, Moscow-Leningrad 1960, 55-62). The texts of many of the reforming edicts (*yarli<u>gh</u>s*) are preserved by Ra<u>sh</u>īd al-Dīn. They are certainly convincing evidence that <u>Gh</u>azan was aware of which abuses required the attention of the government. What cannot be stated with any degree of certainly is the extent to which, and for how long, the reforms were actually implemented. It is probable that the reforms had at least some beneficial effect, and that that effect, albeit decreasingly, continued to be felt after <u>Gh</u>azan's early death. But throughout the Īl<u>kh</u>ānid period, increasingly substantial quantities of property were made into *awḳāf*, which may suggest both that there was a lack of real security of tenure (despite <u>Gh</u>azan's efforts) and that people had little confidence in the justness of Mongol government even after it had become Muslim.

2. *The Mongol army.*

The central and most essential institution of the Mongol Empire was its army. The nature of steppe nomadic society was such that normal life doubled as a process of military training: e.g. Mongol hunting practices were reflected in military tactics (see <u>Dj</u>uwaynī, i, 21). All adult male Mongols below the age of 60 were liable for military service; there were in principle no Mongol civilians. The Mongols were thus able to mobilise a force, composed exclusively of cavalry, which was highly trained and could consist of an extremely high proportion of the available Mongol manpower. This is part of the explanation for the very large numbers given by contemporary sources for the size of Mongol armies. Nevertheless, there are other relevant factors. The extreme manœuvrability of the Mongol forces may have caused observers to exaggerate the numbers involved, as may such expedients as the mounting of dummies on spare horses (each Mongol soldier went on campaign with a string of five or more horses). The *Secret history of the Mongols* estimates that in 1206 Čingiz-<u>Kh</u>ān had an army of around 105,000 men; and according to Ra<u>sh</u>īd al-Dīn (drawing on a now lost Mongolian source, the *Altan debter*), the army in Mongolia proper at the death of Čingiz included some 129,000 men (see D.O. Morgan, *The Mongol armies in Persia*, in *Isl.*, lvi/1 [1979], 83). These figures may bear some relation to reality, which is unlikely to be true of such estimates as those of <u>Dj</u>ūz<u>dj</u>ānī, who claims that the army that invaded the <u>Kh</u>ʷārazm-<u>Sh</u>āh's empire was 700,000 or 800,000 strong (ed. Ḥabībī, i, 311, ii, 104). On the other hand, the Mamlūk writer al-ʿUmarī's statement that in the 8th/14th century there were 2-300,000 men on the *dīwān* registers of the Īl<u>kh</u>ānate is not implausible if this is taken to mean that there were in the kingdom that number of Mongol and Turkish adult males who could be called on to act as troops (K. Lech (ed. and tr.), *Das mongolische Weltreich*, Wiesbaden 1968, text, 79, tr., 145). The main objection to acceptance of very high estimates for the size of the Mongol army, aside from the difficulties of organising such huge forces in pre-modern conditions, lies in the question of how their animals could have been fed while on campaign; an army of 800,000 might have marched with 4 million or more horses, to say nothing of sheep and goats. Hülegü alleged that lack of adequate fodder and grazing forced his withdrawal from Syria in 658/1260 (Meyvaert, *op. cit.*, 258), and similar problems may help to explain the failure of the Īl<u>kh</u>āns in subsequent decades to incorporate Syria into the Mongol Empire (see Morgan, *The Mongols in Syria, 1260-1300*, in P.W. Edbury (ed.), *Crusade and settlement*, Cardiff 1985, 231-5). The Mongols, then, were effective militarily because of their competence rather than as a result of the sheer weight of numbers (for this view, see Morgan, *Mongol armies*). For the argument that the chroniclers' high figures should be taken seriously, and that the Mongol conquests were won by huge numbers rather than by military efficiency, see J.M. Smith Jr., *Mongol manpower and Persian population*, in *JESHO* xviii/3 [1975], 271-99; idem, *ʿAyn Jālūt: Mamlūk success or Mongol failure?*, in *HJAS*, xliv/2 [1984], 307-45).

Organisationally, the Mongol soldiers were grouped in multiples of 10, rising to the *tümen* (*tūmān*) of 10,000—a system that had long been conventional in Asian steppe armies. It is not probable that *tümens* usually had as many soldiers as the theoretical number would suggest (see e.g. C. Hsiao, *The military establishment of the Yuan dynasty*, Cambridge, Mass.

1978, 170-1, n. 27). Čingiz-Khān appears to have utilised the military decimal system to bring about a radical reorganisation of the Turco-Mongolian tribal structure; defeated tribes were broken up and their surviving manpower distributed among other units. Hence something like an artificial new tribal structure was created, thus manufacturing new foci of loyalty and possibly helping to avert any attempt on the part of another tribe to overthrow the supremacy of the Čingizids. The élite force was the imperial guard, 10,000 strong in 1206, which was recruited across tribal boundaries and, forming as it did Čingiz's household, provided the personnel through whom the empire was administered in its early stages.

The Mongol cavalryman relied chiefly on the standard horn and sinew compound bow of the steppes, which had impressive range and power of penetration. Conquest of the cities of the sedentary empires required also the enlistment of siege engineers from both China and the Islamic lands. Auxiliary troops of non-Mongol origin were used, especially in China. After the conquest of China, they provided infantry and garrison troops. In Persia, native soldiers were made use of for such duties as the provision of garrisons and the guarding of passes: Ghazan is said to have organised them decimally (Rashīd al-Dīn, iii, ed. Alizade, 518).

Forces known as *tamma* or *tanma* were contingents selected from the total available Mongol power. Their purpose was to maintain and extend Mongol rule, and they were initially stationed on the steppe-sedentary borders. Some *tamma* units later formed the bases of the permanent armies of the subsidiary khānates into which the Mongol Empire was divided (P.D. Buell, *Kalmyk Tanggaci people: thoughts on the mechanics and impact of Mongol expansion*, in *Mongolian Studies*, vi [1980], 41-59). The puzzling Ḳarawnas or Negüderis (Nīkūdarīs) of the Indian borderlands have been shown to have originated in a *tamma* formation (J. Aubin, *L'ethnogénèse des Qaraunas*, in *Turcica* i [1969], 65-94).

3. *Law.*

One of the indispensable institutional foundations of the Mongol Empire is generally said to have been the "Great *Yasa* of Čingiz-Khān", allegedly a comprehensive legal code laid down, in all probability, in 1206, though perhaps supplemented later. The custody of this code was entrusted by Čingiz-Khān to his adopted brother Shigi-ḳutuḳu. The code has not survived, but it may be reconstructed, it has been believed, from fragments that are quoted in a variety of sources (see especially V.A. Riasanovsky, *Fundamental principles of Mongol law*, The Hague 1965). Many difficulties are, however, involved in holding this view. The main primary source, the *Secret history of the Mongols*, appears in the relevant passage to be concerned with the keeping of a record of *ad hoc* judicial decisions and with the beginnings of a kind of case law rather than with the creation of a legal code; and it does not use the term *yasa* (*jasaq: Secret history*, §203, tr. F.W. Cleaves, Cambridge, Mass., 1982, 143-4. Elsewhere in the *Secret history*, *jasaq* means an individual order or decree). So far as the supposed fragments are concerned, it has been shown that all those of significance derive ultimately from one source, Djuwaynī (see D. Ayalon, *The Great* Yāsa *of Chingiz Khān: a reexamination. A*, in *SI*, xxxiii [1971], 97-140). Examination of Djuwaynī's material (i, especially 17-18) shows that he was recording the writing down for consultation of Čingiz-Khān's precepts on such matters as military training, communications and taxation; there is no reference to a general legal code.

The belief—certainly to be found reflected in later sources—in the existence of the Great *Yasa* is probably to be explained as having been founded on a knowledge of the unwritten Mongol customary law, the evolution of which began long before the time of Čingiz-Khān and continued after his death. In addition, there may well have been some recollection of Čingiz's maxims (*billig, bīlīk*), which were preserved and respected; Rashīd al-Dīn records them at length, though he has nothing at all to offer on the contents of the "Great *Yasa*". One further possibility is that written records of certain legal cases (*yarghu-nāma*), which we know to have been made and preserved for future reference (see Muḥammad b. Hindūshāh Nakhdjawānī, *Dastūr al-kātib*, ii, ed. A.A. Alizade, Moscow 1976, 29-35) may have given rise to the notion that Mongol law was written down, despite the absence of convincing contemporary evidence that anything of the kind was in fact done. Mongol customary law was no doubt enforced, and in the Islamic world continued in uneasy co-existence with the *sharīʿa*, but precisely how this worked is difficult to recover from our sources (for the above view, see Morgan, The *"Great* Yāsā *of Chingiz Khān" and Mongol law in the Īlkhānate*, in *BSOAS*, xlix/1 [1986], 163-76; the more usual opinion is well represented by P. Ratchnevsky, *Die Yasa (Jasaq) Činggis-khans und ihre Problematik*, in *Schriften zur Geschichte und Kultur des alten Orients*. v. *Sprache, Geschichte und Kultur der altaischen Völker*, Berlin 1974, 471-87; idem, *Činggis-Khan, sein Leben und Wirken*, Wiesbaden 1983, 164-72).

4. *Taxation.*

This may be dealt with briefly, see KHARĀDJ. II. In Persia, and ḲŪBČŪR. Many terms are used in the sources for taxation, but the principal taxes of Mongol origin seem to have been three in number. *Ḳūbčūr* [*q.v.*] was at first a 1% levy on the nomads' flocks and herds, but later the term is used to denote a poll-tax payable by the conquered sedentary population. It is possible that the Mongols may have derived this latter usage from the Uyghur Turks, who exercised a pervasive influence on the administration of the early Mongol Empire (see T.A. Allsen, *The Yüan Dynasty and the Uigurs of Turfan in the 13th century*, in M. Rossabi (ed.), *China among equals: the middle kingdom and its neighbors 10th-14th centuries*, Berkeley 1983, 263, 278 n. 141). The precise meaning of *ḳalan*, the other Mongol tax most commonly mentioned (and abused) in the Persian sources, remains unclear (for an attempt at definition, seeking to show that *ḳalan* was a general term used to cover pre-Mongol, Islamic taxation, see J.M. Smith Jr., *Mongol and nomadic taxation*, in *JHAS*, xxx [1970], 46-85). The most likely explanation would seem to be that it was in fact a general term for occasional exactions of a specifically Mongol rather than Islamic character, imposed on the sedentary population by the Mongols and including some kind of corvée. The third of the most important taxes was *tamgha*, a levy on commercial transactions whose prominence testifies to the importance in Mongol eyes of trade.

The purpose of such taxes was the maximum possible degree of exploitation of the conquered population. This exploitation was normally limited, if at all, only by the common-sense consideration that enough should be left to the peasants to permit their survival and thus a further year's payment of taxes. Mongol taxation was more a pragmatic series of exactions, as seemed appropriate and profitable, than a fixed

system, despite the willingness of some modern historians to discern the existence of such a system. The burden imposed by the specifically "Mongol" taxes was the greater in that the conquered people of the Islamic lands were also required to continue payment of the old pre-Mongol taxes. As in other fields, the burden may well have become for a time more supportable as a result of the reforms of Ghazan.

5. *Communications.*

The vast extent of the Mongol's empire made it necessary for them to establish an effective network of communications. Such a network, the *Yam*, was duly set up: according to the sources by the second Great Khān, Ögedey, rather than by Čingiz-Khān himself (*Secret history*, §279, tr. Cleaves, 225; Rashīd al-Dīn, ii/1, ed. Alizade, Moscow 1980, 121-2, 143-4). The *Yam* was designed to facilitate the travels of envoys going to and from the Mongol courts; for the transportation of goods (especially on the route between North China and Mongolia); for the speedy transmission of royal orders; and to provide a framework whereby the Mongol rulers could receive intelligence. It was also frequently, if illegitimately, used by officials and private individuals of influence, a practice that was forbidden so often as to suggest that such prohibitions were of limited and temporary effect.

Post stations were erected throughout the empire at stages equivalent to a day's journey: about every 25 or 30 miles, or more in desolate areas, according to Marco Polo (*Travels*, tr. A. Ricci, London 1931, 153). Responsibility for the maintenance of the facilities fell to the local army units; horses and supplies were contributed by the population of the area, the incidence of exactions being determined on the basis of the census returns which also regulated the imposition of poll-tax, *ķūbčūr*. Urgent messages could travel very much faster than 25 miles a day: Marco Polo (tr. Ricci, 157) speaks of 2-300 miles, and Rashīd al-Dīn (iii, ed. Alizade, 484) of 60 *farsakhs*. The traveller's authorisation took the form of a wooden or metal tablet (*paiza*; Chinese *p'ai-tse*, Mongolian *gerege*). The efficiency of the system impressed European observers, and although Rashīd al-Dīn has much to say of the abuses to which it was subjected in the Īlkhānate, it seems on the whole to have worked well. The *barīd* of the Mamlūk state may have been influenced by its example (J. Sauvaget, *La poste aux chevaux dans l'empire des Mamelouks*, Paris 1941, 13), as was the later *ulak* system of the Ottoman Empire. The search for influences on the Mongols themselves leads to China; the courier system of the Liao Dynasty had too many similarities to the Mongol *Yam* for them to have been entirely coincidental (see e.g. I. de Rachewiltz, *Personnel and personalities in north China in the early Mongol period*, in *JESHO*, ix [1966], 111-2. On the *Yam* in China, see P. Olbricht, *Das Postwesen in China unter der Mongolenherrschaft im 13 und 14 Jahrhundert*, Wiesbaden 1954. There is no detailed study for any other part of the empire).

6. *Administration.*

In general terms, the Mongols' approach towards the administration of their empire was a pragmatic one. They were prepared to learn from other peoples, especially those who had both a respectable steppe pedigree and experience in the techniques necessary for the government of an empire that included a large sedentary sector. The most marked influence in the empire's early decades was exercised by the Uyghurs and the Khitans. The Mongols speedily adopted both the Uyghur alphabet for the writing of Mongolian (previously an unwritten language) and elements of Uyghur chancery practice. The Khitans were probably even more influential. During the initial stages of the empire's administrative evolution, the most important all-purpose Mongol official was the *darughači*. Study of his role (see e.g. Buell, *Sino-Khitan administration in Mongol Bukhara*, in *Jnal. of Asian History* xiii/2 [1979]) has left little doubt about its Khitan origin. This is merely one example of such institutional borrowing (see further Morgan, *Who ran the Mongol Empire?*, in *JRAS* [1982], 124-36). The Khitans provided personnel as well as administrative machinery; the careers of a number of them who entered Mongol service have been traced (see de Rachewiltz, *op. cit.*; Buell, *Sino-Khitan administration*).

After they had conquered Persia and China, the Mongols became the rulers of great sedentary societies that possessed complex administrative traditions of long standing. In Persia, the Mongols permitted a considerable degree of administrative continuity with the past to be maintained. Prior to the setting up of the Īlkhānate, non-Persians frequently held the highest governmental offices, and even after the time of Hülegü, members of minority groups, such as the Jew Saᶜd al-Dawla, were influential at times, their promotion causing resentment among the Muslim population. But throughout the period of the Īlkhānate, the administration of Persia seems to have rested largely in the hands of members of the established Muslim Persian bureaucracy. The most conspicuous example of this was the Djuwaynī family. When the *ṣāḥib-dīwān* Shams al-Dīn Djuwaynī was executed in 683/1284 (his brother the historian having died of natural causes in the previous year), members of the family had held high governmental offices virtually without a break for around 80 years, serving Khʷārazm-Shāhs and Mongols in turn. Our sources leave us with the impression that, by and large, the administrative machine continued to work in the traditional fashion, and that the Mongols were reasonably content to leave the task of administration to their Persian officials, so long as they showed themselves capable of securing the requisite revenue from taxation. It should however be remembered that this impression is based largely on the works of Djuwaynī, Rashīd al-Dīn, Waṣṣāf and Ḥamd Allāh Mustawfī Ķazwīnī, all of whom were Persians and members of that same bureaucracy. The Mongols themselves left no written sources on the history of their rule in Persia.

The administration of China was not left in the hands of native officials to the same extent as was that of the Īlkhānate. Lower-ranking officials were retained in office, but there were no Chinese equivalents to Shams al-Din Djuwaynī or Rashīd al-Dīn. The Chinese were excluded from the highest positions, which were reserved for foreigners: Middle Eastern and Central Asian Muslims, Khitans, Uyghurs, Europeans. This policy may have been adopted (as Marco Polo, himself one of its beneficiaries, suggested) because the Great Khāns regarded foreigners as more trustworthy than the Chinese since they had no local loyalties (*Travels*, tr. Ricci, 127). The traditional civil service examinations, which tested candidates' knowledge of the Chinese classics, were not held until 715/1315; and they never, under the Mongols, recovered their former importance as a road to high office in the state.

Overall, it may be said that the Mongols were prepared to adopt almost any institutional arrangements and to employ any potential servant, as

long as this appeared likely to facilitate the maintenance of effective government. This effectiveness was measured chiefly by the revenue receipts. There is little that is identifiably "Mongol" in the governmental institutions of the Mongols' empire, except the way in which they made so extraordinary disparate an assemblage work. The principal constraint was always the consideration that nothing should be done that might endanger Mongol military supremacy, on which in the last analysis the perpetuation of Mongol rule depended.

Bibliography: The primary and secondary sources for the history of the Mongols are extant in great bulk and in numerous languages. It is possible here to list only a selection. Primary sources: (i) Mongolian. There are several editions of the text of the *Secret history of the Mongols*, and English translations by F.W. Cleaves (Cambridge, Mass., 1982) and I. de Rachewiltz (*Papers in Far Eastern History*, 1971-85), French translation by P. Pelliot, Paris 1949. (ii) Chinese. The principal source is the official dynastic history, the *Yüan-shih*. Only parts of this have been translated, e.g. on genealogies and appanages by L. Hambis, *Le chapitre CVII du Yuan-che* and *Le chapitre CVIII du Yuan-che*, Leiden 1945, 1954; on the economy by H.F. Schurmann, *Economic structure of the Yüan Dynasty*, Cambridge, Mass. 1956; on military organisation by C. Hsiao, *The military establishment of the Yuan Dynasty*, Cambridge, Mass. 1978. For Chinese travellers, see the account of the journey of the Taoist Chʾang Chʾun, *The travels of an alchemist*, tr. A. Waley, London 1931, and of two Sung embassies to the Mongols, P. Olbricht and E. Pinks, *Meng-Ta pei-lu und Hei-Ta shih-lüeh*, Wiesbaden 1980. (iii) Persian. Djūzdjānī, ed. and tr. as in the article; Djuwaynī, and tr. Djuwaynī-Boyle; Waṣṣāf, ed. M.M. Iṣfahānī, Bombay 1269/1852-3; convenient modern Persian abridgement by ʿA. Āyatī, *Taḥrīr-i Taʾrīkh-i Waṣṣāf*, Tehran 1346/1968; Rashīd al-Dīn: numerous editions and translations of sections of the *Djāmiʿ al-tawārīkh*, e.g. vol. i, part 1 (Tribes), ed. A.A. Romaskevič, L.A. Khetagurov and A.A. Alizade, Moscow 1965; vol. ii, ed. E. Blochet, GMS, Leiden and London 1911, tr. J.A. Boyle, *The successors of Genghis Khan*, New York and London 1971; vol. ii, part 1, ed. Alizade, Moscow 1980; vol. iii (Īlkhāns), ed. Alizade, Baku 1957 (also contains a Russian translation); vol. iii is also covered by the following three publications: *Histoire des Mongols de la Perse*, ed. and tr. E. Quatremère (reign of Hülegü; also includes the general introduction to the work, and valuable annotation), Paris 1836, Abaḳa-Gaykhatu, ed. K. Jahn, The Hague 1957, and reign of Ghazan, ed. Jahn, GMS, London 1940. Jahn has also edited and translated several sections of the "Universal History" part of the work. See also Rashīd al-Dīn's letters (possibly spurious), ed. M. Shafīʿ, Lahore 1945, new ed. by M.T. Dānishpazhūh as *Sawāniḥ al-afkār-i Rashīdī*, Tehran 1358/1980-1; Ḳāshānī, *Taʾrīkh-i Ūldjāytū*, ed. M. Hambly, Tehran 1348/1969; Ḥamd Allāh Mustawfī, *Nuzhat*; idem, *Taʾrīkh-i guzīda*, ed. ʿA. Nawāʾī, Tehran 1336-9/1958-61. There is a wealth of Persian local histories; one of the most interesting (on Kirmān) is the anonymous *Taʾrīkh-i shāhī*, ed. M. Bāstānī Pārīzī, Tehran 2535 Sh/1976-7. (iv) Arabic. Especially on the first Mongol invasions: Ibn al-Athīr, xii; Nasawī, ed. and tr. as in the article, see also the early Persian translation, ed. M. Minovi, Tehran 1344/1965. On the later period, there is much valuable information in Mamlūk sources [see MAMLŪKS]. (v) Armenian. J.A. Boyle, *Kirakos of Ganjak on the Mongols*, in *CAJ*, viii (1963), and the references cited there; Grigor of Akner, *The history of the nation of the archers*, ed. and tr. R.P. Blake and R.N. Frye, Cambridge, Mass. 1954. (vi) Syriac. Bar Hebraeus, *The chronography of Gregory Abū'l Faraj... commonly known as Bar Hebraeus*, ed. and tr. E.A. Wallis Budge, 2 vols., London 1932; also an Arabic version, *Taʾrīkh mukhtaṣar al-duwal*, ed. A. Ṣāliḥānī, Beirut 1890; *Histoire de Mar Jab-alaha, patriarche, et de Rabban Sauma*, ed. P. Bedjān, 2nd ed., Paris 1895, tr. Wallis Budge, *The monks of Ḳūblāi Khān, emperor of China*, London 1928. (vii) European. The most important sources are travel narratives. Those of the Franciscan emissaries are collected in *Sinica Franciscana*, i, ed. A. van den Wyngaert, Quaracchi-Florence 1929. Most are translated in *The Mongol mission*, ed. C. Dawson, London and New York 1955; Marco Polo, tr. A. Ricci, London 1931, tr. A.C. Moule and P. Pelliot, 2 vols., London 1938. A large body of correspondence is extant: letters between Mongol rulers and the Popes are collected in K. Lupprian, *Die Beziehungen der Päpste zu islamischen und mongolischen Herrschern im 13. Jahrhundert anhand ihres Briefwechsels*, Vatican City 1981. Secondary sources: The best general account is J.J. Saunders, *The history of the Mongol conquests*, London 1971. See also D.O. Morgan, *The Mongols*, Oxford 1986, for a more detailed justification of the views expressed in the article. J.F. Fletcher, *The Mongols: ecological and social perspectives*, in *HJAS*, xlvi/1 (1986), 11-50, is the best introduction to the Mongol phenomenon as a whole. Čingiz-Khān: P. Ratchnevsky, *Činggis-Khan, sein Leben und Wirken*, Wiesbaden 1983, supersedes earlier studies; but see also H.D. Martin, *The rise of Chingis Khan and his conquest of north China*, Baltimore 1950. China: see J.D. Langlois Jr. (ed.), *China under Mongol rule*, Princeton 1981. Islamic world: Barthold, *Turkestan*[4], London 1977, retains its importance; Spuler, *Mongolen*[4], Leiden 1985; Boyle (ed.), *Camb. hist of Iran. v. The Saljuq and Mongol periods*, Cambridge 1968; A.K.S. Lambton, *Continuity and change in medieval Persia*, New York 1987. Golden Horde: Spuler, *Horde*[2], Wiesbaden 1965; see also J.L.I. Fennell, *The crisis of medieval Russia 1200-1304*, London 1983, and C.J. Halperin, *Russia and the Golden Horde*, Bloomington 1985. Many of the above works contain good bibliographies. Further secondary studies are cited in the article.

MONTH [see TAʾRĪKH].

MOORS, in Arabic *al-Mār*, a rather vague term, used until the 19th century in virtually all Western European languages, to indicate the ancient Muslims of Spain and the inhabitants of the Mediterranean ports of North Africa. The origin of the term is not yet clear. It derives either from Semitic *mahourím* "the people of the West", or from Berber (Rinn, in *RAfr.*, xxix, 244 ff.). The Greek word Μαύροίςτιος appears for the first time in

Polybius (iii, 33,15), in earlier times the term Λίβυες having been used to indicate all inhabitants of North Africa [see LĪBIYĀ. I.]. After the destruction of Carthage in 146 B.C., the Latin word *Mauri* indicates a group of relatively sedentary tribes who lived between the Atlantic and the rivers Moulouya and Chélif in the Roman provinces of *Mauretania Caesariensis* and *Mauretania Tingitana* [see ṬANDJA]. Later, the Latin word *Maurus* passed into Greek in the form of Μαυρος (Pauly-Wissowa, xiv [1930], cols. 2348-51), and both terms were then used to indicate, in a rather general way, the Berbers. In Spain, *Mauri* became *Moros*, and it was under this name that the inhabitants of the Peninsula designed the Muslim conquerors during the whole period of the Muslim domination (711-1492). The term *Moros*, which has been adopted into the various languages of Western Europe (Mauren, Maures, Mauri, Mohren, Moors, Moren, etc.), thus has a geographical meaning, i.e. indicating the people coming from the African coast, rather than an ethnographical one, for the conquerors were Arabs and Berbers, the latter both arabicised and non-arabicised. The arabisation of the latter took place in Spain, where the mixture of Roman and Arab elements led to a kind of symbiosis which expressed itself in a true bilingualism, which in its turn created an Arabo-Christian literature [see MOZARABS] on the one hand, and an Arabo-Islamo-Spanish literature, using the Arabic script and the Romanesque language [see ALJAMÍA] on the other. Yet the *Moros* were in general considered as conquerors, and the religious differences have contributed to a rather hostile attitude on the part of the inhabitants of the Peninsula. Consequently, the term Moors, in the various Western languages, was not dissociated from a certain depreciatory connotation, even when the Moor was represented as "noble", like Othello. In some translations of the Bible (e.g. Isa., xi, 12), the term "land of the Moors" indicates Ethiopia, and it was perhaps under such influences that in mediaeval Europe the term was also used for all those whose colour lay somewhere between light-brown and black. In heraldry, Moor indicated a black, and everyday life knew expressions like Moorish coffee, etc.

On the other hand, the adjective "Moorish" indicated also, in a vague but recognisable way, an artistic style which was thought to have originated from the Arabs, or even from the Muslims in general. In architecture, the Moorish art could indicate the Alhambra in Granada [see GHARNĀṬĀ], the Giralda in Sevilla [see ISHBĪLIYA], and the mosque in Marrakech [see MARRĀKUSH]. The earliest phase of Renaissance architecture in Spain, usually called the Plateresque (from *platero* "silversmith", because its rich ornamentation resembles silversmith's work) is said to have been influenced by Moorish art. In other fields, the term referred to miniatures in Arabic manuscripts, like those of the *Maḳāmāt* of al-Ḥarīrī [*q.v.*], to lustre faïence and, in general, to art objects fashioned in Muslim countries of European countries under Arabo-Muslim influence, like Sicily, the Balkans, and especially Spain. During the long Arab occupation, furniture in the so-called Mudéjar style evolved, in which the form was essentially European but the decoration oriental. A type of cabinet known as *vargueno* was often inlaid with ivory in a Moorish manner.

In modern times, the term Moors is also found outside of Mauretania [*q.v.*]. In Mali [*q.v.*] the word is used to indicate the Arabo-Berber group. In northern Senegal [*q.v.*] there are stock-raisers or traders known by this name. The Muslims of Sri Lanka (Ceylon [*q.v.*]), estimated at about 900,000 out of a total population of 13 million, are often named "the Ceylon Moors". They are partly descended from Arab seafarers who, some time during the 2nd/8th century, settled at a place near the site of the modern port of Colombo, called Calembon by Ibn Baṭṭūṭa. Until the arrival of the Portuguese in 1505, the Arabs had enjoyed a virtual monopoly of the foreign trade of Ceylon. In the Philippines [*q.v.*], more precisely on the island of Mindanao, the term "Moro Wars" (1901-13) is used for a series of scattered battles which took place between American troops and Muslim groups, who were fighting for religious rather than for political reasons. Finally, the Spanish word *Moros* designates the various Muslim populations of the Southern Philippines, especially in the Sulu archipelago and on Mindanao. By extension, the term is also used for any of the Austronesian languages of the Moro peoples.

MORA, Turkish for Morea, the usual name in mediaeval and modern times for the peninsula of the Peloponnesus (which itself appears in Arabic geographical sources in forms like the *B.L.būn.s* of Ibn Ḥawḳal, ed. Kramers, 194, tr. Kramers and Wiet, 189), regarded in ancient times as the heartland of Greece. For the various forms of the name, see Bées, *EI*[1], s.v.

1. The pre-Ottoman period to 1460.

This may subdivided into (a) the Byzantine period to 1204 and the Frankish one to 1262 (or to the late early 16th century for certain areas); and (b) the Byzantine despotate of Morea to 1458/1460.

(a) The pre-1262 period. There may be a reference to Muslims from Ifrīḳiya (*Aphrikous Sarakenous*) aiding the Slav besiegers of Patras in 805-6 or 806-7 (cf. Constantine Porphyrogenitus, *De admin. imp.*, ed. Moravcsik-Eng. tr. Jenkins, 288-9, cf. comm., 184); and it has been proposed that the *Kaphēroi* then settled by the Emperor Nicephorus I after the Patras victory over the Slavs were, conceivably, Anatolian frontier peoples of Muslim origin who had come over to Christianity (the name from *kāfir*, pl. *kafara*, "infidel"?). During the naval conflicts of the Byzantines and Arabs in the 9th and 10th centuries, there were frequent raids on the Morea by Arab corsairs from the amīrate of Crete [see IḲRĪTISH and ḲURṢĀN. i], especially on coastal regions like Corinthia, where Islamic coins from Crete and pottery fragments with Kūfic designs have been found (see Miles, in *DOP*, xviii [1964], 5-6 and fig. 93; Christides, *The conquest of Crete*, 119, 127, 162). At various dates in the later 9th century, defeats of the Arabs by the Byzantine navy are recorded in Greek sources. The Arab geographers were well-informed on the topography of the Morea, including Ibn Ḥawḳal (who *inter alia* mentions the *zanaḳa* "narrow place", i.e. the isthmus canal), al-Idrīsī, Ibn Saʿīd and Abu 'l-Fidā, with the name Morea appearing in the last three authors in forms like Lamariyā and al-Muriya (see N. Oikonomakes, *Athens and Peloponnesus in the 10th century according to temporary information provided by Arab authors* [in Greek], in *Graeco-Arabica*, iii [1984], 123-4; Manuela Marín, *"Rūm" in the works of three Spanish Muslim geographers*, in *ibid.*, 115 ff.).

(b) the period of the Morean despotate and the Turkish conquest. The connections of the Morea with the Turks go back to the later 13th century, for the *Morea chronicle* records the arrival in

spring 1263 of 6,000 Turkish mercenary cavalrymen in the service of the Emperor Michael VIII Palaeologus's step-brother, the *sebastocrator* Constantine (whose troops also included Christianised Muslim mercenaries, *tourkopoloi* [*q.v.*], used against the Frankish occupiers of the Morea (see A. Savvides, *Late Byzantine and Western historiographers on Turkish mercenaries in Greek and Latin armies*, in *Festschrift for D.M. Nicol*; idem, *The origins and role of the Turcophone mercenaries in the Morea in the course of the Byzantine-Frankish war of 1263-4* [in Greek], in *Acts of the Fourth Internat. Pelop. Congr.*, Corinth 1990). Troops like these often returned to Anatolia, but over the years some of them settled down in Morea and became Christians. In the early 14th century there are mentions of combined Catalan-Turkish raids on the Morean coasts, and there can be little doubt that the Turks stemmed from the maritime principalities (*beyliks*) of western Anatolia [see AYDÎN; MENTESHE-OGHULLARÎ].

Ottoman incursions began from *ca.* 1358 onwards, but definite progress by the Ottomans began in 1387-8 and is associated with the *ghāzī* leader, possibly himself of Greek descent, Ewrenos Beg [*q.v.*], during the reigns of sultans Murād I and Bāyezīd I [*q.vv.*]. At the outset, Ewrenos roamed the Morea with the consent of the despot of Mystras [see MEZISTRE in Suppl.] Theodore I Palaeologus, in the hope of dislodging the Frankish Navarese Military Company, but soon changed sides in the continually-changing pattern of Byzantine-Frankish relations there. By the end of the century, both Theodore and the Navarese had to acknowledge Ottoman suzerainty and pay tribute to Bāyezīd. However, in the years after the latter's defeat at the hands of Tīmūr [*q.v.*] at Ankara in 1402, the sultans Sülaymān I and Meḥemmed I Čelebi [*q.vv.*] maintained peaceful relations with Manuel II Palaeologus. But fresh devastations of the Morea began in 1423 under Turakhan Beg, sent by Murād II to invade it as a punishment for Manuel's support of the "false" (*Düzme*) Muṣṭafā Čelebi [*q.v.*]; the *Hexamilion*, Manuel's six-mile long rampart across the mouth of the isthmus, with the fortifications known to the Turks as the Česhme Ḥiṣārî, failed to keep back the invaders.

Over the following years, the Byzantines strengthened their position in the north of the Morea and the Venetians in the south at Navarino, Modon and Koron [*q.vv.*]. The crusade of Varna in 1444 emboldened the despot Constantine Palaeologus, the future last Byzantine Emperor, to refortify the *Hexamilion*, but in 1446 it was again breached by Murād's artillery and stormed by the Janissaries; it was never again repaired, and the despotate of Morea became an Ottoman vassal state. The Morea was again invaded by Turakhan in 1452, with the aim of preventing the despots from sending aid to the beleaguered Constantinople (for the conquest of which, see MEḤEMMED II), and in 1456, tribute owed to the Ottomans having fallen into arrears, Meḥemmed and his commander ʿÖmer Beg annexed the Florentine duchy of Athens. Two years later, in 1458, the sultan decided to send a massive army into the Morea, occupying one-third of the peninsula, now placed under the governorship of ʿÖmer, and imposing an even heavier tribute on the Palaeologi. Meḥemmed's final invasion of 1460 is recorded in great detail by the Greek and Turkish sources. In the spring, the Greek renegade Zaghanos Pasha [*q.v.*] was sent to raid Patras and Achaia, and gradually, the Byzantine towns all fell, the last stronghold to surrender being Salmenikon under Constantine Graetzas Palaeologus (July 1461), who then sought refuge in Naupactus (cf. Savvides, *Naupactus from the early Byzantine years to the Ottoman conquest of 1499* [in Greek], in *Acts First Aetolian-Akarnanian Congr.*, Agrinion 1988).

Through the mediation of the historian Critobulus, Meḥemmed acted with clemency towards the despot Demetrius, brother of the emperor Constantine XII, and assigned to him the revenues of the islands of Thasos [see TASHÖZ], Samothrace [see SEMENDIREK] and Lemnos [see LIMNI]. Only the fortress of Monemvasia [see MENEKSHE], which placed itself under the protection of the Pope and of Venice, was not Ottoman by the late 1460s, together with the Venetian acquisitions of Modon, Koron, Navarino, Argos and Nauplion, plus the interior parts of the Mainote peninsula where in *ca.* 1465 the local chieftain Corcodeilus Cladas began an insurrection against the Ottoman conquerors.

2. Turkish domination (1460-1821) and the Greek War of Independence (1821-33).

The plan which Meḥemmed had decided on when he entered Morea, was carried through. Except for a few places, the peninsula was now Turkish territory. Zag̲h̲anos Pas̲h̲a was installed as governor of the Morea by the sultan and entrusted with the reorganisation of the peninsula, which had become much depopulated and was a great deal poorer economically. In 1458 and again in 1460 the sultan temporarily combined the Morea with Thessaly for administrative purposes. The Morea now became a *sand̲j̲aḳ* by itself with 109 *ziʿāmets* and 342 *tīmārs*. Down to about 1570, the residence of the governor was by turns in Corinth, Londari (Leontari) or Mystra, then in Nauplion and in 1786-1821 in Tripolitza (cf. T. Gritsopoulos, *History of Tripolitsa* [in Greek], i-ii, Athens 1972-6; M. Lamprynides, *Nauplia*[3] [in Greek], Nauplion 1975; S. Runciman, *Mistra*, London 1980). The division of the country under Turkish rule, usual from the middle of the 17th century, into 22 or 25 provinces or *beyliks* is partly suggested by nature and partly a survival of the older Byzantine organisation.

The Turks introduced their own feudal system after their occupation of the Morea so that the Turkish-Muslim element in the country was thus able to expand. Even during the first period of Turkish rule (1458-1687), other factors contributed to this, like the immigration into the Morea of Muslims from other parts of the Ottoman empire, the conversion of Christian Moreots to Islam, etc. While in the north of the Balkan Peninsula and in Asia minor countless Christians adopted Islam either voluntarily or under compulsion, the Christian element in the Morea at the time of the Turkish conquest in the mass remained faithful to the Christian religion. Comparatively few Moreots became Muslims, and these were principally Albanians, who always adopted Islam more readily (cf. thereon: C. Jireček, *Studien zur Geschichte und Geographie Albaniens im Mittelalter*, Budapest 1916, and also M. Lamprynides, *The Albanians in mainland Greece and the Peloponnese, 1320-1821* [in Greek], Athens 1907, repr. 1987; on the Lalian "Turkish Albanians", cf. J. Vosdravelles, *Information on the Turkish-Albanian Laliots from the Turkish Archives of Macedonia* [in Greek], in *Acts 1st Pelopon. Congr.*, iii, Athens 1981-2, 381 ff.; A. Photopoulos, *The Lalian Turkish Albanians* [in Greek], in *Epiteris Hetaureias Eleiakon Meleton*, [1983], 419 ff.). As in Asia Minor, Bosnia, Crete, etc., so in the Morea also, members of the nobility and middle classes, especially those of Frankish origin, adopted Islam in order to retain possession of their estates. There were also in the Morea crypto-Christians, as well as people whose Islam was very superficial. These were usually called *murdat* (impure) in the Morea. The Barduniots were also for the most part superficially Muslims (cf. G. Kapsales, *Bardounia and the Turkish Bardouniots* [in Greek], in *Peleponnesiaka*, ii [1957]). As to the survival of the Greek Moreot element, it has been said, e.g., that Meḥemmed II's ordinance regulating the relations of the Christian subjects to the Ottoman empire benefited also the Christian Moreots; yet it is wrong to credit him with any such ordinance (cf. Fr. Giese, in *Isl.*, xix [1931], 264 ff.). It is, however, a historical fact that the Greek Orthodox Church contributed a great deal to maintain the Christian element in the Morea, as in the East generally (see Runciman, *The Great Church in captivity*, Cambridge 1968). The Christian clergy of the Morea were frequently able to maintain a privileged attitude towards the Turkish officials and thus to further the interests of their co-religionists (on the privileges [Greek *pronomoia*] of Meḥemmed to the Patriarchate, cf. C. Amantos, *Islam's privileges in favour of Christianity* [in Greek], in *Hellenika*, ix [1936], 140 ff.; Runciman, *op. cit.*, 165 ff.; refs. in A. Vakalopoulos, *History of Modern Hellenism*[2] [in Greek], Thessalonica 1976, 164 ff.). The Christian Moreots were also often able to avoid having their children taken by the Turks for the *devs̲h̲irme* [*q.v.*]. After the death of Süleymān the Magnificent (1566), the lot of the Christian Moreots gradually became worse. Ownerless lands were confiscated by the sultan and given to his soldiers or allotted to the mosques as *waḳfs* or given to private individuals as gifts. During the long period of Turkish rule in the Morea, the largest and best part of the land was in Turkish hands, and as a rule, Christians were not allowed to own large estates. The peasants had to pay over annually the fifth of the produce of the land and pay all kinds of annual taxes.

In the view of the abuses of the Turkish authorities, the Christian Moreots preferred to abandon the fertile regions and retire to barren lands and into the mountains, hence within the period 1460-1821 the mountains of the Morea were predominantly inhabited by Christians. Of the factors which contributed to the survival of Greek culture in the Morea during Turkish rule, special stress must be laid on the political concessions which were made to them by the Ottomans. These lay mainly in the freedom to govern their own communities, although, especially after 1715, the freedom of the Greek community was not infrequently limited by the Turkish authorities, who interfered indirectly in the appointment of local officials. Undoubtedly, those Moreots were better off who lived in towns or villages which were allotted to the Holy Shrines of Islam or to members of the Ottoman ruling family. The town of Dimitzana in Gortynia for example was originally a *waḳf* of Mecca under the protection of the sultan's mother (see P. Kontoes-A. Iliopoulos, *Album of Gortynia* [in Greek], Athens 1937; T. Gritsopoulos, *Gortynia Arachova and the popular song of Demos the Klepht* [in Greek], 1948; *The Archbishopric of Demetsana and Argyrokastron* [in Greek], in *Epeteris Hetaureias Byzantinon Spoudon*, xx, 1950; *Varia Arcadica* [in Greek], *Gortyniaka*, i, 1972; J. Gianniaropoulou, *Various notes on Gortynian Codices* [in Greek], in *ibid.*; G. Karvelas, *History of Demetsana* [in Greek], i-ii, Athens 1972-8; A. Petronotes, *Settlements and architectural monuments in mountainous Grotynia* [in Greek], 1975).

The peace between their Turkish rulers and Christians could only be an uneasy one. In the Morea also there were the so-called "Klephts" who would not submit to the existing government and took up arms against it. Against them the Turks used the Armatoli force, a gendarmerie of Christians organised on military lines (cf. T. Kandeloros, *Peloponnesian*

Armatolism, 1500-1821 [in Greek], Athens 1924; G. Vlachoyannes, *Moreot Klephts* [in Greek], 1935, P. Rodakes, *Klephts and Armatoloi*[2] [in Greek], i-ii, 1975). In the period 1715-1821 the Turks for the security of the country built watchhouses (*derbent*) in which a garrison was stationed to watch those who passed, especially at the passes. The Derbanekia (*küčük derbent*) between Corinth and Argos and the Derbenia of Lontari, the passes between Arcadia and Messenia (Makryplagi; cf. above) were all very important. The Mainots in their wild mountains felt little of the Turkish yoke, and were from 1460 to 1821 in constant rebellion against every foreign power (cf. D. Mexes, *Maina and the Mainots* [in Greek], Athens 1977). The Porte found itself forced to recognise officially the independence of Maina, in return for which the Mainots were supposed to pay tribute (cf. A. Daskalakes, *Maina and the Ottoman Empire, 1453-1821* [in Greek], Athens 1923; C. Passayannes, *Mainot dirges and songs* [in Greek], 1928; P. Lee Fermor, *Mani*, London 1959; S. Kougeas, *Historical sources for Mainot hegemony, 1774-1821* [in Greek], in *Peloponnesiaka*, v [1962]; id. (ed.) *Niketas Nephakos, Mainot historical verses* [in Greek], 1964; E. Alexakes, *Clans and family in Maina's traditional society* [in Greek], Athens 1980; D. Vayakakos, *The Mainots of diaspora* [in Greek], i-ii, 1980; *War and family love in Maina* [in Greek], in *Acts 1st Pelopon. Congr.*, iii, 302 ff.; C. Mertzios, *Maina in the Venetian Archives, 1611-74* [in Greek], in *Lakonikai Spoudai*, i, [1972]; J. Kiskiras, *Dirges as a source of Mainot jurisprudence* [in Greek], in *ibid.*, ii [1975]; Th. Papadopoulos, *Mainot immigrants to Italy in the 17th century*, in *ibid.*, vi [1982]).

For a long period after 1460, when Meḥemmed II had made the greater part of the Morea a province of his empire, it became the scene of desperate fighting between Turks and Venetians (cf. A. Monferratos, *Sigismondo Pandolfo Malatesta. Venetian-Turkish war in Peloponnesos, 1463-6* [in Greek], Athens 1914; also the information in J. Alexandropoulos, *Two Ottoman registers of the Morea, 1460-3* [in Greek], in *Peloponnesiaka*, suppl. v [1987], 339 ff.). The Albanian national hero Skanderbeg [see ISKENDER BEG], the leader of the Venetian mercenaries, died in 1468. Two years later, Turkish rule over Euboea was firmly established and they could record further successes in the Morea.

In the spring of 1499 a new war between Venice and Turkey broke out, and Lepanto had to surrender to the Turks (M. Tayyib Gökbilgin, *Un registre de dépenses de Bayazid II durant la campagne de Lépante de 1499*, in *Turcica*, v [1975], 80 ff.; other refs. in A. Savvides, *Naupaktos... until the Ottoman conquest of 1499* [in Greek], in *Acts 1st Aetolian-Akarnanian Congr.*, Agronion 1988-9). In 1500 Bāyezīd II [*q.v.*] ordered Yaʿḳūb Pas̲h̲a to blockade Modon [*q.v.*] with his fleet, while he himself set out by land from Istanbul for the Morea. Modon fell after a long siege in the presence of the sultan. Bāyezīd II turned the cathedrals at Modon and Koron [*q.v.*] into mosques and offered up thanks in them, and gave these towns to Mecca as *wakfs*. In 1502-3 Venice concluded a treaty of peace with Turkey in which he surrendered her Messenian colonies and also Maina (cf. G. Ploumides, *Venetian-occupied Greek lands between the 2nd and 3rd Turkish-Venetian Wars, 1503-37* [in Greek], Ioannina 1974; Irène Mélikoff, *Bayezid II et Venise. Cinq lettres imperiales (Name-i Hümayun) provenant de l'Archivio di stato di Venezia*, in *Turcica*, i [1969], 123 ff.). In 1532 the Morea became the scene of notable battles, The Emperor Charles V decided to intervene in the Morea (cf. J. Chasiotes, *Peloponnesos in the framework of Charles V's Mediterranean policy* [in Greek], in *Peloponnesiaka*, xv [1984], 187 ff.). A considerable fleet assembled in Messina in June 1532. The Pope and the Knights of St. John, the Genoese and the Sicilians also showed a readiness to join in the expedition, the leader of which was the Genoese Andrea Doria (Turkish: Andrevirius) (cf. details in K. Setton, *The Papacy and the Levant*, iii-iv, Philadelphia 1984, *passim.*). The allies succeeded in taking a considerable part of the lower town of Koron, the citadel, and also Patras (cf. A. Moustoxydes, *Fall, defence and abandonment of Korone by the forces of Emperor Charles V* [in Greek], in *Hellenomnemon*, i [1843-53], 142 ff.). He then returned with rich booty. Sultan Süleymān, who was now on the throne, gave the *sand̲j̲ak* of the Morea to Beg, a son of Yaḥyā Pas̲h̲a, and commissioned him in 1537 to reconquer the fortresses taken by Andrea Doria. Ḳāsim Pas̲h̲a, the *sand̲j̲ak beg* of the Morea, was commissioned to conquer the Venetian colonies there. K̲h̲ayr al-Dīn Barbarossa [*q.v.*] had inflicted several defeats on Venice in her colonies, and in the summer of 1540 Venice made peace in order to save what was left of her possessions. The majority of the Venetian colonies in the East, including Nauplion and Monemvasia, was the price paid (for the historical background, cf. R. Cessi, *Venezia e l'acquisto di Nauplia ed Argo*, in *Nuovo Archivio Veneto*, xxx [1915]). The Turks endeavoured to populate once more their new possessions in the Morea (cf. T. Vrokines, *The emigration of Naupliotes and Monemvasiotes in Corfu, mid-16th century* [in Greek], Corfu 1905; M. Kolyva-Karaleka and E. Moatsou, *Settlement of Naupliote and Monemvasiote fugitives on Crete in 1548* [in Greek], in *Byzant.-Neugr. Jahrb.*, xxii [1985], 375 ff.). About 1550, there were about 42,000 Christian families in the whole Morea. We know nothing definite of the Muslim population at this time, but it may be assumed, however, that, then as later, Muslims were in a minority. On the other hand, rich references concerning the Ottoman Morea's economic conditions during Süleymān II's time are provided by several western travellers (cf. Constantina Philopoulou-Desylla, *Western Travellers as a source for the Ottoman Empire's economic life in the reign of Süleymān the Magnificent, 1520-66* [in Greek], Univ. of Athens 1984, 124 ff.). Two Turkish sources of the 17th century are of considerable importance for the history of the Morea. These are the *D̲j̲ihān-numā* of Ḥād̲j̲d̲j̲ī K̲h̲alīfa [*q.v.*] and the *Siyāḥet-nāme* of Ewliyā Čelebī [*q.v.*] who visited the Morea in 1668 and 1670. The latter's narrative was based on personal observation and enquiry, and what he tells us about Muslim buildings and religious orders and of the Christians is of importance (cf. *Siyāḥet-nāme*, viii, Istandbul 1928; Fr. Babinger, *GOW*, 219 ff.; Fr. Taeschner, in *Isl.*, xviii [1928], 299 ff.). When Ewliyā Čelebī visited the Morea, various Muslim orders and corporations had settled there, including Ṣūfī orders such as the Bektas̲h̲īs [*q.v.*] (cf. F.W. Hasluck, *Christianity and Islam under the Sultans*, Oxford 1929; also refs. in K. Simopoulos, *Foreign travellers in Greece* [in Greek], i-iii, Athens 1970-5).

At the end of 1683 another coalition against the Porte, the so-called "Holy League", was formed by Venice, Poland, Germany, Russia and the Pope. Francesco Morosini was given command of the allied naval forces, capturing Koron. During 1685-6 Old and New Navarino, Kalamata, Modon, Zarnata, Passava, Celefa and Vitilo as well as other fortified places in southern Morea were taken from the Turks. The *Serʿasker* Ismāʿīl Pas̲h̲a was defeated in several battles and had to retire to the interior of the Morea. Ḥasan Pas̲h̲a, who was in Maina, negotiated with

Morosini and surrendered voluntarily. The Turkish garrisons of many towns, on the other hand, offered a desperate resistance. It cost the Venetians and their allies much time and heavy sacrifices to take Nauplion, but by the end of 1687 the Morea up to Monemvasia was Venetian. By the peace of Carlowitz or Karlovča [*q.v.*] (26 Jan. 1699), the Porte had to cede the Morea to Venice. For the last period of Venetian rule in the Morea (1699-1715 or 1718), see L. Ranke, *Die Venezianer in Morea (1685-1715)*, repr. in his *Zur venetianischen Geschichte*, Leipzig 1878, 277-361 (cf. also Th. Krimpas, *Venetian rule in Peloponnesos, 1685-1715* [in Greek], in *Peloponnesiaka*, i, 1956; C. Dokos, *Peloponnesian ecclesiastical property during the 2nd Venetian rule. Unedited documents from Venetian Archives* [in Greek], in *Byz. Neugr. Jahrb.*, xxi [1971-27]; P. Topping, *Studies on Latin Greece, 1205-1715*, London 1977, Variorum Reprints, nos. IX: *Domenico Gritti's Relation on the organization of Venetian Morea, 1688-91* [1974], and X: *Premodern Peloponnesus: the land and the people under Venetian rule, 1685-1715* [1976]).

The Turkish empire, which had been able to profit a good deal by the warfare in Europe at the beginning of the 18th century, resolved at the end of 1714 to reconquer the Morea. Many Greeks felt that the Venetians had not respected their rights in religious and family matters, were hostile to their own government and even wanted the Turks back again (cf. De la Montray, *Voyage*, i, 462). Except for a few larger towns which offered a resistance, the land was easily taken by the Turks and so the Morea once again became Turkish (cf. M. Sakellariou, *The recapture of Peloponnesos by the Turks in 1715* [in Greek], in *Hellenika*, vi [1936]; *Peloponnesos during the 2nd Turkish Domination, 1715-1821* [in Greek], Athens 1939, repr. 1978; also S. Deviazes, *Historical notes on Westerners in Peloponnesos during Turkish Domination* [in Greek], in *Harmonia*, iii [1902]; A. Photopoulos, *Contributions of Peloponnesian land tenure during the 2nd Turkish Domination* [in Greek], in *Acts 1st Pelopon. Congr.*, iii, Athens 1981-2, 168 ff.).

The peace of Passarowitz (10 June 1718) ceded Morea finally to the Turks. We are most fully informed about their rule from 1718 to 1821 (see refs. above). The extant sources, especially in Greek, enable us to study the period down to the smallest detail. After 1715 many Christians again adopted Islam. A census taken in 1720 gave 60,000 male Christians of 11 years of age and over, whilst the Muslim inhabitants are said to have been in the minority at this time. On the other hand, the Turkish element increased in the period 1769-80, while the number of Christians diminished considerably, as did the total number of the population (cf. P. Topping, *The Population of the Morea, 1685-1715*, in *Acts 1st Pelop. Congr.*, i, 1976, 119 ff.; V. Panayotopoulos, *Population and settlements of Peloponnesos, 13th-18th century* [in Greek], Athens 1985; J. Wagstaff, *Settlement in the southcentral Peloponnesos, c. 1618*, in F. Carter (ed.), *Hist. geography of the Balkans*, London 1977, 1977 ff.; idem and Helen Frangaki, *Settlement pattern change in the Morea, c. 1700-1830*, in *Byzantine and Modern Greek Studies*, xi [1987], 163 ff.; cf. also Panayotopoulos, *The Venetian census of Peloponnesos in 1700* [in Greek], in *Acts 1st. Pelop. Congr.*, iii, 203 ff.; *Family extent and synthesis in Peloponnesos, c. 1700* [in Greek], in *Ta Historika*, i [1983]). From 1715 to *ca.* 1780 the Morea was governed by a Pas̲h̲a, the Morowalesi, who had three *ṭug̲h̲s* and the title of *wazīr*; his period of office was indefinite. He was usually assisted by two other Pas̲h̲as, who were under him and were granted two *ṭug̲h̲s*. A change was made in 1780. From this date to 1821, the government of the Morea was no longer given to a particular Pas̲h̲a but to a simple *muḥaṣṣil* of the Porte, who was, however, given the title of Pas̲h̲a. The higher offices were held by a *muḳābeled̲j̲i*, a *defterkahya* and a Christian dragoman (= "translator"), the senior Christian official in the Morea, whose main duty was participation to the Ottoman governor's (*pas̲h̲a*'s) council and the administration of local issues in collaboration with the Greek notables (*ḳod̲j̲abas̲h̲is*) (cf. A. Photopoulos, *The Dragomans of the Morea* [in Greek], in *Journal of Oriental and African Studies*, i [Athens 1989], 49 ff.; also B. Slot, *Foreign diplomatic protection of locals in Turkish-dominated Morea. The Dragomans of the Low Countries of Mystras* [in Greek], in *Lakonikai Spoudai*, iii [1977]). Under the official system of administrative divisions, the Morea was divided into 22 districts. The Moreots now came to look to Russia to liberate them from the Turkish yoke. From the time of Peter the Great, the bonds between Greeks and Russians had been growing stronger, and in the middle of the 18th century, Russian propaganda increased very much among the Orthodox of the Balkans. Under Catherine II, the Russians easily succeeded by 1767-8, with the help of Greek agents, in stirring up Greek notables and clergy in the Morea to rebel against the Turks. On 15 October 1768, Turkey declared war on Russia, and Russian fleets appeared in the Mediterranean, but those appearing at Vitylo in 1770 had neither sufficient men, gun or munitions (cf. S. Kougeas, *Contributions to the history of the Peloponnesian Revolution under the Orloffs, 1770* [in Greek], in *Peloponnesiaka*, i [1956]; T. Gritsopoulos, *The Orloffika. The Peloponnesian Revolution of 1770 and its consequences* [in Greek], Athens 1967; B. Slot, *Orloffika out of Dutch Archives* [in Greek], in *Lakonikai Spoudai*, ii [1975]). In 1774, a treaty of peace was concluded at Küčük Ḳaynard̲j̲ï [*q.v.*] between Russian and Turkey. Full religious liberty and other concessions were granted to the Christian subjects of the Turks. About three months later, the Porte granted a general amnesty to the Christians of the Morea and resolved to clear the land of Albanian bandits. After 1770 the Porte had confiscated a number of Christian estates in the Morea and granted them to mosques and *ʿimārets*. The Turks now promised to return these or to compensate their owners, but the promises were not kept. Nevertheless, the Moreot Christians benefited considerably by the treaties between Russia and Turkey; the right given the Christians of the Morea to trade under the Russian flag contributed to their economic expansion in the period 1775-1821 (cf. relevant pts. in S. Asdrachas, ed., *Economic structures of the Balkan countries, 15th-19th centuries* [in Greek], Athens 1979; *Mechanisms of rural economy during the Turkish Domination, 15th-16th century* [in Greek], 1978; also V. Kremmydas, *An attempt toward the setting-up of soap industries at Korone in the 18th century* [in Greek], 1968; *Peloponnesian trade in the 18th century, 1715-92* [in Greek], 1972; V. Panayotopoulos, *Au 18e s. en Péloponnèse: l'absorption des ressources économiques et humaines par le développement de l'agriculture*, in *Cahiers de la Méditerranée* [Nice 1975], 111 ff.). Intellectual relations between western Europe and the Greeks of the Morea became closer after 1790. Since the peace of Paris of 1815, the Moreots and other Greeks had become convinced that only their own efforts could relieve them of the Turkish yoke. In the spring of 1821 open rebellion broke out among the Greeks of the Morea, when the Turkish governor K̲h̲urs̲h̲īd Pas̲h̲a was besieging the rebel ʿAlī Pas̲h̲a Tepedelenli [*q.v.*] at Yanina (see C.M. Woodhouse, *The Greek war of independence*, London 1952; D. Dakin, *The Greek*

struggle for independence (1821-33), London 1973). Soon after the beginning of the rising, the Moreots were masters of the lowlands and even occupied several strongholds. At the end of 1824, however, the Porte commissioned Ibrāhīm Pasha of Egypt [*q.v.*] to put down the Greek rising. Ibrāhīm was able to restore Turkish rule over most of Morea, but he failed to put down the rebellion (cf. Durant-Viel, *Les campagnes navales de Mohammed Aly et d'Ibrahim*, Paris 1935; E. Prevelakes, *Ibrahim Pasha's campaign in Argolis* [in Greek], Athens 1950; D. Vayakos, *Ibrahim against Maina, 1826* [in Greek], 1961; C. Kotsonis, *Ibrahim's 1st campaign in Lakonia, Sept. 1825* [in Greek], in *Lakonikai Spoudai*, iii [1977]). In the meanwhile, philhellenism had made progress in Europe and America, and it thus came about that the cabinets of Europe began to take an interest in the question of Greek freedom (see Woodhouse, *The Philhellenes*, London 1969, and the bibls. in L. Droulia, *Philhellénisme... Répertoire bibliographique*, Athens 1973). On 6 July 1827, England, France and Russia concluded a treaty in London by which the Morea and other parts of the Greek mainland were to form an independent principality but to pay tribute to the Porte. The Turks insisted on their point of view and declined the intercession of the great powers as regards the rebel Greeks. On 20 Oct. 1827, the combined fleets of the above-mentioned powers destroyed the Turco-Egyptian fleet at Navarino (see Woodhouse, *The Battle of Navarino*, London 1965). On 18 January 1828, Johannes Kapodistrias came to Nauplion, having been elected President of the Greek Free State by the National Assembly at Troezene (see Woodhouse, *Capodistria, the founder of Greek independence*, Oxford 1973; Helen Koukkou, *I. Kapodistrias, man and diplomat* [in Greek], Athens 1988). On 6 August 1828, England concluded a treaty with Mehmed ʿAlī of Egypt for the evacuation of the Morea by the Egyptian troops. French troops, led by General N.J. Maison, soon afterwards landed in Messina by order of Charles X to drive the Turco-Egyptian troops out of the Morea (cf. P. Perrotes, *The campaign of Maison in Peloponnesos* [in Greek], in *Hellenika*, ix [1936]). In the autumn of 1828 Ibrāhīm Pasha withdrew to Egypt. After long diplomatic negotiations, Prince Otto, the second son of the philhellene Ludwig of Bavaria, landed at Nauplion on 6 February 1833 as the first king of Greece. Henceforth the Morea formed a part of the kingdom of Greece (cf. Dakin, *The unification of Greece, 1770-1923*, London 1972). During the rising of 1821-7 and later, many Moreot Muslims adopted Christianity. To this day, many buildings and inscriptions, and especially place-names, recall the days when the Morea was under the Crescent.

Bibliography: Most of the refs. relating to Morea's connections with Islam (Turkish domination) are given in the article. For earlier bibl., see N. Bees, *EI*[1], s.v. On the post-Byzantine period (Tourkokratia) until 1821 and the era of the Greek Revolution until 1833, see the detailed accounts and bibls. in vols. ii-viii of A. Vakalopoulos' *History of modern Hellenism* [in Greek] and vols. x-xii of the collective *Hist. of the Greek nation* [in Gr.] by Ekdotike Athenon, 1974-5; cf. also the detailed bibliographical appendix compiled by S. Asdrachas in N. Svoronos, *Survey of modern Greek history* [in Greek], Athens 1976, repr. 1986, esp. 197 f. (N.A. Bées-[A. Savvides])

MORA [see mukhāradja].

MORĀDĀBĀD [see murādābād].

MORALS [see akhlāk].

MORDVINS [see burtās].

MORISCOS, in modern historical terminology is

used to refer (a) to those Spanish Muslims who under various degrees of duress, were, between 1499 and 1526, converted to Christianity and (b) to their descendants who continued to live in Spain until the Expulsion of 1609-14. Spanish authors at first referred to them as *nuevos cristianos/convertidos de moros*, etc., New Christians or converts of Moorish origin, and it is not until the second half of the century that the term Morisco became current in this specific historical sense (it always continued to have its general sense of Moorish, as in *traje morisco* "Moorish dress"). Sometimes the term Morisco is also applied to refugees after their arrival in North Africa and other Islamic lands, where they resumed their Islamic religion, although to a certain extent they retained for some generations a distinct identity. In Arabic such people were described as *Andalus* (*sic*); the term *Muriskiyyūn* is a 20th-century loan word.

History. The first conversions occurred some years after the fall of Granada in 897/1492. The capitulation (publ. by M.A. Ladero Quesada, *Los Mudéjares de Castilla en tiempos de Isabel I*, Valladolid 1969, doc. 50) seemed to guarantee the coming into being of a stable Mudéjar [*q.v.*] minority, such as had existed for centuries elsewhere in Spain. This, however, was not to be. At first, under the first Archbishop of Granada Hernando de Talavera, the settlement was in general respected (although some capitulations were violated, e.g. prohibition on the bearing of arms, fiscal policy). A rapid and massive emigration of the upper classes to North Africa (perhaps under the influence of *fatwās*, e.g. by Aḥmad b. Yaḥyā al-Wans̲h̲arīsī [*q.v.*] (*al-Miʿyār al-muʿrib wa 'l-d̲j̲āmiʿ al-mug̲h̲rib ʿan fatāwā ahl Ifrīḳiya wa 'l-Andalus wa 'l-Mag̲h̲rib* (Rabat 1401/1981), ii, 119-41) started. The arrival of the Archbishop of Toledo, Francisco Jiménez de Cisneros, in 1498 marked the abandonment of the initial policy (change of laws of heritage in 1499), and an energetic drive to achieve conversions. Converts to Islam from Christianity and their descendants (*elches*, A. *ʿild̲j̲*) had had their rights guaranteed in the capitulation, but it seems that Cisneros' methods to secure their return to Christianity led in December 1499 to a revolt in the Albaicín (a quarter in Granada [see G̲H̲ARNĀṬA]) (al-Maḳḳarī, *Analectes*, ii, 812-15) which spread to the Alpujarras and had to be put down by military force (1501). Massive conversions followed, while many continued to emigrate. In February 1502 the Mudéjares of Castile (which included Granada) were offered the choice between conversion, emigration or death (Ladero Quesada, *op. cit.*, doc. 148). We may conclude, from the difficulties placed in the way of those who opted for emigration (they could only leave via the harbours in the Bay of Biscay and had to abandon most of their possessions) that conversion was what the Castilian authorities sought to achieve. In 1515 the new Castilian legislation was made applicable to Navarre when that was incorporated into the Spanish crown. Many Navarrese Mudéjar communities took refuge in Aragonese territory, but the lands of the crown of Aragon (Aragon, Valencia) were not to remain long as a refuge. In 1521-2 during the disorders of the *Germanía*, the mob turned against Mudéjar vassals who had remained steadfastly loyal to their Christian lords and subjected them to forcible baptism. The validity of such baptism was contested, but a *Junta* of theologians confirmed it in 1525. In 1526 the general conversion order of all Muslims in Aragon and Valencia was decreed. Risings in the Sierra de Espadán and Benaguacil were suppressed. Circumstances in the lands of the crown of Aragon differed from Castile, where Muslims were only a small, highly assimilated and mainly urban minority, estimated as 20,000 persons at the end of the 15th century. In Valencia they numbered approximately 30% of the population. They were mainly concentrated on secano (non-irrigated) estates belonging to the nobility, although they also occupied some irrigated land (*regadío*, esp. the *huertas*). The majority lived in rural areas, often isolated from the Christian population. In Aragon they numbered about 21%. Here too many worked in agriculture, often on *regadío* along the Ebro. In the towns many worked as craftsmen. In Catalonia numbers were small. The Moriscos in general belonged to the lower strata of society, although some, such as physicians, merchants and master builders, were able (despite the *limpieza de sangre* policy) to attain a certain well-being. Christianisation was pursued by means of evangelisation, legislation and ecclesiastical organisation. Until 1568 efforts were concentrated on the kingdom of Granada, where they numbered about 40% of the population. The possession of Islamic books was prohibited, followed by prohibitions of customs which were supposed to be connected with Islam, such as bathing, etc. The Moriscos of Granada (and Valencia) were able to negotiate postponement of interference from the Inquisition for several decades. It is not clear how far either State or Church backed the policy of assimilation and acculturation which apparently prevailed at this stage; at all events, the implementation of the policy was, for a variety of reasons, much circumscribed. Moreover, many Moriscos, especially those in the service of lords, remained subjected to taxes which they had paid as Mudéjares, to which now were added the taxes which corresponded to their new status. In Granada a new tax, the *farda*, which was to be paid by the new Christians only, was introduced before 1510. This fiscal inequality turned these lords eventually into protectors of Morisco Islam and the Moriscos into their dependants. At the beginning of the second half of the 16th century Christianisation had made little progress. In 1567 new legislation in Granada was directed not only against religion but against all manifestations of traditional culture, such as all oral and written use of Arabic, traditional dances (*zambras*), etc. At the same time, a crisis in the silk industry (aggravated by the Crown's fiscal policy) affected many Granadan Moriscos adversely. The Morisco Francisco Nuñez Muley officially put the fierce protests into words. At the end of 1568 a revolt broke out in the Alpujarras and spread throughout the kingdom of Granada. After its suppression in 1570, about 84,000 Moriscos were deported and scattered throughout Castile (some subsequently returned clandestinely). As a consequence, phenomena such as banditry, e.g. of the *monfíes* (A. *munfī*) and other manifestations of tension between the two communities, hitherto virtually unknown in Castile, became a cause of concern. Fear of contacts between Moriscos and foreign powers such as Morocco, France, the Ottoman Empire and the North African pirates, led to a ban on Moriscos residing near to the coasts. After 1570, we have to distinguish in Castile Moriscos Antiguos and Granadinos. These latter did not easily integrate into Castilian society. From 1570 onwards several radical repressive solutions were advanced, and there was in government circles already by 1582 a preference for expulsion, but the economic consequences were feared. Some individual members of the clergy, such as the Valencian Archbishop Ribera, also favoured (partial) expulsion. However, other important elements among the ecclesiastical leadership, such as

the Valencian bishops in their meeting of 1608-9, refused to declare the Moriscos collectively apostates and opted for a renewed effort to convert them. It seems that the Vatican did not approve of drastic measures. When the final decision to expel all Moriscos was taken in 1609 (doc. publ. in M. García Arenal, *Los Moriscos*, Madrid 1975, 251-5) by the Spanish authorities, it was mainly justified on grounds of national security (an alleged Morisco conspiracy with foreign powers). Moriscos at that time numbered about 320,000, probably 3% of the population. Christian lords were indemnified for the losses caused by the departure of their workforce. Between 1609 and 1614 the Moriscos were expelled in phases. Some communities were directly transported via the harbours in the south to North Africa, others crossed to France, and went — sometimes via Italy — to the Ottoman Empire, Egypt, Algeria, but above all to Morocco and Tunisia. (It is known that some Moriscos escaped expulsion and remained in Spain.) Moriscos from Hornachos founded a pirate republic in Salé which was for some time independent. Tunisia was the prefered place of exile. Important here was the favourable policy of the dey [*q.v.*] ʿUthmān. In Portugal, from which the Mudéjares had been expelled (to Castile!) in 1497, no native crypto-Muslim population has been attested.

Religious life. In Radjab 910/December 1504, ʿUbayd Allāh Aḥmad b. Bū Djumʿa al-Maghrāwī *thumma* al-Wahrānī allowed the Moriscos in a *fatwā* to practise *taḳiyya [q.v.]* (see L.P. Harvey, *Crypto-Islam in sixteenth-century Spain*, in *Actas primer congreso de estudios árabes e islámicos*, Madrid 1964, 163-78). This *fatwā* was later translated into Spanish and copied out in *aljamía [q.v.]*, which implies that it also circulated among the Hispanophone Moriscos of Castile and Aragon. Among the Arabic literature available to Moriscos one finds mainly simple, older works on the religious sciences and Arabic grammar (see P.S. van Koningsveld, *Andalusian-Arabic manuscripts from Christian Spain*, in *IOS* [1990]). Most works in *aljamía* are anonymous (see A. Galmés de Fuentes, *La literatura española aljamiado-morisca*, in *Grundriss der romanischen Literaturen des Mittelalters*, ix/1, fasc. 4, Heidelberg 1985, 117-32). Aljamiado literature almost certainly flourished exclusively among the Hispanophone Moriscos (A. Labarta pointed out that an allegedly Granadan Aljamiado document should be localised in Aragon or Toledo, see *Al-Qanṭara*, ix [1988], 137-49). Some religious sciences, such as *fiḳh* and *tafsīr*, were continued in Romance, though on a basic level (see C. López Morillas, *The Qurʾān in sixteenth-century Spain*, London 1982). A number of important religious works in Romance show the influence of a *faḳīh* from Segovia, ʿĪsā b. Djābir (*ca.* 1460). Among these are the works of the Mancebo de Arévalo Harvey, *El Mancebo de Arévalo y la literatura aljamiada*, in *Actas del coloquio internacional sobre literatura aljamiada y morisca*, Madrid 1978, 21-42). This author adapted for Islamic devotional purposes extensive passages from Thomas à Kempis's *De Imitatione Christi* (in his *Sumario de la relacion y ejercicio espiritual*, see G. Fonseca Antuña, unpubl. thesis, Univ. of Oviedo 1987). Some acculturation seems to appear from the fact that at the end of the 16th century works in Arabic script were transcribed in Latin script (e.g. Toledo, *Biblioteca Pública*, ms. 235, cf. Harvey, *La leyenda morisca de Ibrahim*, in *Nueva Revista de Filología Hispànica*, xxx [1981], 1-20). The pressure of Christian society on religious life is reflected in the Inquisition documents (e.g. J. Vidal, *Quand on brûlait les Morisques (1514-1621)*, Nîmes 1986). Also connected with Christian influence are the syncretistic ideas of the Lead Books, which were from 1595 onwards discovered in the Sacramonte in Granada. It is assumed that the Moriscos Miguel de Luna and Alonso del Castillo, interpreters in the service of Philip II, were involved in the fabrication of these lead tablets written in Arabic, which claimed to be early Christian documents (D. Cabanelas Rodríguez, *Intento de supervivencia en el ocaso de une cultura*, in *NRFH*, xxx [1981], 334-58). After the expulsion, the use of Spanish and Arabic continued, although from then onwards Spanish was almost exclusively written in Latin characters (an exception is Florence, *B.N. Centrale*, ms. II, IV, 701-1, probably copied in Salonica in 1021/1612). The majority of religious works written after the expulsion have an anti-Christian character (see on religious polemic, L. Cardaillac, *Morisques et Chrétiens. Un affrontement polémique (1492-1640)*, Paris 1977). Aḥmad b. Ḳāsim al-Ḥadjarī al-Andalusī became after his flight from Spain in *ca.* 1599 interpreter at the Moroccan court. He also was a scholar and a diplomat who visited Northern Europe and wrote a *riḥla*, of which a summary, entitled *Kitāb Nāṣir al-dīn ʿalā 'l-ḳawm al-kāfirīn*, is extant.

Bibliography (in addition to the literature mentioned above and in ALJAMÍA): The literature mentioned below mainly appeared after A. Domínguez Ortíz and B. Vincent, *Historia de los moriscos*, Madrid 1978. The bibliography of this standard work is used as a point of departure. Sources. W. Hoenerbach, *Spanish-Islamische Urkunden*, Bonn 1965; important sources are being published in the *Colección de literatura española aljamaido-morisca* (directed by A. Galmés de Fuentes, 7 vols. have appeared since 1970); R. Kontzi, *Aljamaidotexte*, 2 vols., Wiesbaden 1974; Mª. J. MORÓN [see MAWRŪR].

MORRA [see MUKHĀRADJA].

MOSAIC [see FUSAYFISĀ'].

MOSQUE [see MASDJID].

MOSTAGANEM [see MUSTAGHĀNIM].

MOSTAR, town and centre of a district in Herzegovina, the southern part of the Yugoslav republic of Bosna i Hercegovina (population 1895: 17,010; 1921: 18,176; 1961: 35,242; 1971: 47,600). With a yearly precipitation of 14.14 cm and an average temperature in July of 26.9 °C, Mostar is the most arid place in Yugoslavia. As a town, it is one of the relatively few clearly Ottoman foundations.

During the last decades preceding the first occupation of the Dukedom of St. Java (In Turkish, Hersek Ili) by the forces of the *sandjaḳ begi* of Bosnia, ʿĪsā Beg b. Isḥāḳ, in 871/1467 or, at the latest, early in the following year, Mostar had been a small settlement by a wooden bridge guarded by two fortification towers which spanned the river Neretva (Narenta). As a stronghold, Mostar is first mentioned in a letter dated April 1452 which, it is true, does not reveal its toponym ("do castelli al ponte de Neretua"). The earliest reference to the settlement itself and its name is an abridged *(idjmāl) taḥrīr defteri* of the *wilāyet-i Bosna* (Atatürk Kitaplığı, former Belediye Kütüphanesi, Cevdet Yazmaları, 0-76) which is dated, according to Šabanović, to the period from 26 January 1468 to 12 May 1469. In the *defter* Mostar is listed as a market (*bāzār*) with the alternative names of "Mosdar" and "Köprülü Ḥiṣār", and with a total of 16 (non-Muslim) households. Mostar's territory (*wilāyet*) at that time numbered 30 villages. Unlike nearby Blagaj, which had been the administrative centre of the dukedom in the pre-Ottoman period and which, together with Drin and Foča, had become a major Herzegovinian *ḳāḍīlīk* by the early 1470s, Mostar was only the seat of a *nā'ib* under the authority of the *ḳāḍī* of Foča (from 877/1473). It became an independent *ḳaḍā'* only after 911/1505-6, but before 925/1519 (Šabanović). From 1522 until 1522 Mostar was the seat of the *sandjaḳ begi* of Hersek Ili, who earlier had resided in Foča. By this time, the formerly small market had developed into a major commercial and administrative centre in the *sandjaḳ* of Herzegovina.

Originally, Mostar was confined to a central area on the left bank of the Neretva (around the present-day Stari grad). The oldest *maḥalle*, the nucleus of Ottoman Mostar, appears to be that of Sinān Pasha, with its Friday mosque and probably also its *ḥammām* built in 878/1474 (both buildings have not been preserved; the oldest surviving mosque being the *mesdjid* of Sultan Selīm I). The first *maḥkeme* was situated here too. By 925/1519, according to Šabanović, Mostar had 75 Christian and 19 Muslim households. The town's urban growth accelerated dramatically from about the middle of the 10th/16th century: the *djāmiʿ* around which the *maḥalle* of Geyvān Ketkhudā developed was erected in 960/1552 (to which was added a *mekteb* in 1554, a *khān* before 1558 and a *medrese* after 1558); that of Karagöz Meḥmed Beg dates from 965/1557-8 (the *maḥalle* was given a *medrese* and a *khān* before 1570, and a library in that year). Only now did Mostar begin to extend across the river to the right bank of the Neretva (*djāmiʿ* of Dizdār Naṣūḥ, middle of the 16th century), which was accompanied by the construction of two stone bridges ("Kriva ćuprija" and "Stari most"). Despite its modern name, the famous Stari most appears to be the later of the two, erected in 974/1566-7 (dated by chronograms and an inscription) as a replacement for its wooden predecessor. By 993/1585, Mostar had 14 Muslim and two Christian *maḥallāt*, one of which (Zahum) possessed a Catholic church. The earliest extant *sidjill* from Mostar contains a list of 22 Muslim and two Christian quarters (1041/1631-2). After more than a century of intense development, little was added after *ca.* 1060/1650. However, the fortified town walls were extended to include the *maḥallāt* on the right bank of the Neretva (after 1699). In the 12th/18th and early 13th/19th centuries, the judicial and fiscal district of Mostar, excluding the *nāḥiye* of Libuška, comprised *ca.* 60 villages. During this period, Mostar developed into an important *ḳapudanlīḳ* (by 1829 there were twelve towns in the *sandjaḳ* of Herzegovina headed by a *ḳapudan* [from Italian *capitano*]). From 1248/1833 Mostar was the centre of the *mutaṣarrīflīḳ* of Hersek under its *wālī* ʿAlī Pasha Rizvanbegović (until 1851). A new complex of governmental and residential buildings (Pasha Sarāyī, erected from 1833) as well as a summer residence (completed after 1844) are the architectural expression of ʿAlī Pasha's high-flying political ambitions. Significantly, he also built a *mesdjid* (1847), founded a (Nakshbandī) dervish convent and erected a *türbe* (Šejh-Jujino turbe) over the supposed grave of a *sheykh* who had died more than a century before. With the establishment of a municipal administration (*baladiyya* [*q.v.*]), new street names (1867) and, for the first time, house numbers were introduced. Mostar became the centre of the newly-created *Hersek wilāyeti* in 1292/1875, and during the year 1293/1876 an official provincial newspaper ("Neretva") was published in Mostar. It ceased to appear when the *wilāyet* of Hersek was abolished by the end of the same year. Herzegovina again became part of the *wilāyet* of Bosna. On 5 August 1878, Austro-Hungarian troops occupied the town without firing a shot. Mostar

regained its central function when it became the administrative centre of the "Kreis" Herzegovina ("Occupationsgebiet"). In 1884, the railway line from Metkocić (Dalmatia) reached the town. Mostar's last two traditional *medreses* closed their gates in 1924, and its *rüshdiyye* school ceased operation in 1925.

Mostar houses three institutions where documents and manuscripts in oriental languages are kept (Arhiv Herzegovine [see H. Hasandedić, *Katalog arapskih, turskih i perzijskih rukopisa Arhiva Hercegovine*, Mostar 1977]; Zavičajni muzej hercegovine; and Provincijalat hercegovačkig franjevaca). A small collection of *sidjills* from Mostar is preserved in the Orijentalni Institut (Sarajevo).

(M.O.H. URSINUS)

MOSUL [see AL-MAWṢIL].

MOULAY [see MAWLĀY].

MOUNTAIN [see DJABAL].

MOVEMENT [see ḤARAKA].

MOZAMBIQUE, in origin the name of a town, is the legal name of the People's Republic of Moçambique in south-east Africa. It lies south of Tanzania, and borders on Malawi, Zimbabwe, the Republic of South Africa and Swaziland. The state became independent from Portugal in 1975, and is formally Marxist and atheist, but the constitution "guarantees the freedom of citizens to practise or not to practise a religion". In 1980 the population was *ca.* 12.5 m., of whom 13.5%, or 1,685,000, were Muslims, 15 to 20% Roman Catholics, 5% Protestants, and the rest pagan. The Muslims are found chiefly among the coast from the R. Ruvuma to *ca.* 25°S, and are Swahili-speakers, and inland in the provinces of Cabo Delgado, Niassa and Nampula, being mostly members of the Makua and Yao tribes, each of which has its own language. Disregarding Portuguese orthography, the form of Swahili is close to the Standard Swahili of Zanzibar.

The name Mozambique does not occur in Arabic literature before Aḥmad b. Mādjid (end of 9th/15th century) who writes it as *Musanbīdj*; we find it next in the *History of Kilwa* as *Musanbīh*, a work now ascribed to *ca.* 1550. In Swahili, it is *Musambiki* or *Msambiki*. In Arabic literature, and in the 16th and 17th century Portuguese writers, it is simply the name of one town among others, and never the name of the country. The practice of ascribing the name first to the coast and then to the whole area grew only slowly after Mozambique Island became the principal Portuguese settlement in 1568. The earlier name was *Bilād al-Sufāla*, as explained below.

The statement in the *Area handbook for Mozambique*, 1977 edn., that Roman coins of the 3rd and 4th centuries have been found on the coast is without foundation, and has been omitted from the 1985 edition. There is no literary or archaeological evidence for Greek, Roman or Arab visitors or of imported artefacts antedating al-Masʿūdī's voyage of 304/916, when he visited Ḳanbalū in the Bilād al-Zandj, that is to say, Pemba [*q.v.*]. He uses the term *sufāla* in a general manner, speaking of the Sufālas of the *Zandj* as the limit of the Bilād al-Sūdān; and, elsewhere, that "the sailors of ʿUmān ... travel on the Sea of the Zandj as far as the island of Ḳanbalū and Sufāla and the Waḳwaḳ." In these contexts, *sufāla* may be interpreted as "low-land" or "shoal". Al-Masʿūdī's contemporary Buzurg b. Shahriyār appears also to think of it as an area rather than what later was the settlement of Sofala, south of the present city of Beira, which at the turn of the 9th/15th century was ruled by a *shaykh* appointed by the Sultan of Kilwa [*q.v.*]. The distinctions become yet clearer in al-Idrīsī, who divides the eastern African coast into four sectors: Bilād al-Barbarā (or Barābara), the present Somali coast [see SOMALIA]; Bilād al-Zandj [see ZANDJ], the present coasts of Kenya and Tanzania, and the islands opposite them, with a capital at Mombasa. Bilād al-Sufāla, also known as Sufāla of the Zandj, Arḍ al-Tibr or Arḍ al-Dhahab, the "Land of Gold" par excellence; and finally Arḍ al-Waḳwaḳ, presumably an onomatopoeic word to describe a land of click-speakers such as the Bushmen (Khoisan). He lists a number of towns on the Mozambique coast, but the names are very distorted. The only one which has survived the mangling of the copyists is Ṣayūna/Ṣafūna, which is presumably the Sena of the Portuguese. This, he says, is the capital of the Sufāliyyūn, who are pagan Zandj.

The *Ḥudūd al-ʿālam*, *ca.* 372/982-3, did not separate the Zandj from the Waḳwaḳ, but combines them as *Zangiyān-i Waḳwaḳī*. It relates that Chinese merchants go there in great numbers to barter for gold, using sign language. Reciprocally, the Sung Annals speak of the reception of envoys from the area in 1071 and again in 1083, apparently with Persian interpreters, and describe their animals, domestic products and coinage. The description of their dress is very similar to that given by the Portuguese 400 years later, as mentioned below. We do not know in detail how the gold trade developed from the hinterland of the Mozambique coast, the present Zimbabwe. The *History of Kilwa* claims that it was first controlled from Mogadishu [see MAḲDISHŪ], but that Kilwa obtained the monopoly in the 12th eentury A.D. It is not until the 16th century that Duarte Barbosa's *Book* (*ca.* 1517-18) provides us with a description of the coastal trade place by place. The southernmost settlement of "Moors"—presumably Swahili—was on the Bazaruta Islands. It traded with the mainland, collecting ambergris, pearls and seed pearls for export. Farther north at Sofala, the "Moors" spoke Arabic and had been settled for a long time. Coasting vessels from Kilwa, Mombasa [*q.v.*] and Malindi [*q.v.*] brought them cotton and silk cloths and beads; they exchanged them for gold "at such a price that those merchants departed well pleased", and for ivory and ambergris. The local people wore silk or cotton loin-cloths, with cloths over their shoulders like capes, and turbans or caps. This Sofala has long since been eroded and swept away by the sea. Inland lay the great Kingdom of the Mwene Mutapa, and his great town of Zimbaoche (Zimbabwe), the source of the gold. There were further trading centres on the River Cuama and the town of Mangaló, to which much gold came, and the great town of Angoya, now Angoche. Here there were many merchants, who traded in the same way as at Sofala. The natives spoke their own language,

"that of the heathen", "but some speak Arabic". Still farther along was Mozambique, a city on three islands and with a very good harbour, with a *sharīf* as governor, presumably an appointee of Kilwa.

In 1505 Dom Manuel I had forts built at Sofala and Kilwa, to control the coastal trade and to provide refreshment stations on the way to India. Sofala had an undue reputation for wealth: Camões speaks of *a rica Sofala*, and Milton of "Sofala, thought Ophir", a false stress as well as a misleading statement. In 1554 Portuguese establishments were set up at Sena, Tete and Quelimane, where Muslims had long been settled as traders, but outside these settlements and the Fortress of São Sebastião, which the Portuguese had built on Mozambique Island in 1568, the Portuguese writ never ran more than feebly. An attempt to conquer the Mwene Mutapa in 1570 was a disaster. In the 16th century, he was paramount in the interior, which in the 17th and 18th centuries came to be dominated by the Maravi. On the coast, hereditary chiefs, almost all Muslims, ruled a number of chiefdoms; the most important were at Quitangonha, Sancul, Sangage and Angoche. The Portuguese paid the chiefs salaries as vassals, while the chiefs regarded their salaries as tribute paid by the King of Portugal. The Portuguese were never more than few in number, as the accounts of the forts at Sofala and Mozambique, published by A. da Silva Rego up to 1588, show. When the Makua tribesmen came down and attacked Mozambique in 1750, the Portuguese could muster only thirty defenders, and in reality, the Portuguese were dependent upon the chiefs for armed support in times of friction or minor war. It was not until 1895, under international pressure, that the Portuguese instituted an effective occupation of what became known as Portuguese East Africa, until 1975 the official name for Mozambique.

Lack of materials, none known in Arabic or Swahili, and exiguous in Portuguese, makes it difficult to gauge the religious situation. There is no evidence for when Islam percolated down the coast beyond a statement in João de Barros that it came "like a slow plague". In the absence of literary evidence, a thorough archaeological survey could offer the only prospect of a solution. Francisco Raymundo Moraes Pereira, who conducted an administrative survey along the coast in 1752, and has left a unique thumb-nail sketch of coastal life at that time, missed the sailing season, and so made the journey from Quibungo to Mozambique town on foot. He found the small settlements of Portuguese and "Kafirs" to be "more Moorish than pagan". There was not much evidence of religion, and cultivation included the preparation of *nipa* brandy from wild palms. The Chief of Inhamarungo "follows the Mohammedan religion, of which he gives no indication beyond not eating pork". Only at Angoche did he find an Islam worthy of the name. A powerful chief received him, dressed in silken robes and with a gold-fringed head-dress. He spoke passable Portuguese and excellent Arabic. Throughout his chiefdom, there were public schools where the Ḳurʾān was taught and the mosques used daily.

Inland, the first conversions to Islam amongst the Makua were noted in 1771, with an increase after 1839. After 1880, two Muslim fraternities, based on the Comoro Islands [see ḲUMR], made progress in eastern Africa, the Shādhiliyya and the Ḳādiriyya. A Comorian author records the migration of "learned men" to Angoche to teach Arabic and Islamic law. In 1905 a Portuguese account records *côteries* of devout Muslims in the extreme north of Mozambique, who practised Islam strictly and were assiduous in attending the mosques. By 1906 Islam had reached the northern shores of Lake Malawi, within Mozambique. The conversion of the Yao seems to have taken place between 1870 and 1910. It is not known which Ṣūfī fraternity was responsible, nor do we know of the motives, general or individual, for the conversions. An account survives of the installation of a chief at Quitangonha in 1874 which suggest a high degree of syncretism. The ceremony combined Islamic, Makua, Portuguese and Swahili rituals. The Portuguese official dignitaries arrived by boat. Two lines of women, singing and dancing, and playing *cuche-cuches* (wooden spoons), walked into the water to greet them. A procession formed, and the Portuguese Army played the National Anthem, Catholic hymns and patriotic marches. There followed a service of prayers in the mosque. Flour was then placed on the new chief's head. Seven months later the Makua shot him in the back.

At the present time (1990) the disturbed state of the country and the fact that the nominal government is not in full control makes any research or accurate assessment of the situation impossible.

(G.S.P. Freeman-Grenville)

MOZARAB, Spanish *mozarabe*, Portuguese *moçarabe*, Catalan *mossarab*, a word of uncertain origin for which two etymologies have been propounded. In the 13th century, the Archbishop Rodrigo Ximenez (*De rebus Hispaniae*, iii, 22) declared

that the Christians living under Muslim rule after the conquest of 92/711 "Dicti sunt *mixti arabes*, eo quod mixti Arabibus convivebant". This Latin-based interpretation is the earliest known etymology of the word Mozarab. However, Arabist scholars of the 19th century (following F.J. Simonet) considered it an arabism, derived from *musta^crab*, *musta^crib* with the sense of "arabised, one who becomes arabised", an opinion generally accepted.

It is however disturbing to note that Hispano-Arabic texts are quite unaware of this term and never use it to describe the indigenous Christians, who are designated by the names *^cadjam*, *naṣrānī*, *dhimmī*, *mu^cāhid*, *mushrik* or *rūmī*. The first known reference is in a document from Léon *ca.* 1024, which mentions "muzaraves de rex tiraceros". It would seem appropriate to deduce from this that the name in question is not an original nomenclature, conveyed by emigrants themselves, but a sobriquet. It would thus be an insult, cast by the Christian conquerors against those who preferred to stay rather than flee from the invader and were thus open to the charge of "collaborating" with the occupying power. The Mozarab was thereby considered a dubious element, having suffered the contagion of the Arabo-Muslim enemy; in other words, he was "arabised", "impure", a type of hybrid, of mixed blood hence *mixti arabes*. This interpretation has the advantage of clarifying the "severe" policy of Alfonso VI towards this group, after the conquest of Toledo in 1085, according in this respect with the directives of the monks of Cluny and the position of Pope Gregory VII who had decided to extirpate the "superstitio Toletanae".

The term Mozarab (variants: *muzaraves*, *muztarabes*, *moçarabes* and *mozarabos*) would therefore have originated in Christian territory and not in the Arab-Islamic zone. It is thus perfectly legitimate to apply it to their artistic manifestations outside the frontiers of al-Andalus (illumination of the manuscripts of the *Beatus*, chapels constructed in the kingdom of Léon during the 9-10th centuries, etc.) and to their liturgy, which is preserved at Toledo. On the other hand, to insist (as with Simonet, Cagigas, Lévi-Provençal and others) on accepting as authentic Mozarabs only the Christians of al-Andalus, is paradoxical. This approach, running counter to the attitude of historians of art, music and literature, has the effect of limiting the study of Mozarabism to the *naṣārā dhimmiyyūn* alone, hindering the understanding and appreciation of the breadth of the historical phenomenon.

The existence and continuing presence of Christians in al-Andalus were among the consequences of the Arabo-Muslim occupation of 92/711 and the manner in which the latter was administered. It is now generally accepted that it is not appropriate to talk of conquest, but rather of the political submission of the inhabitants, there being virtually no resistance, with the exception of the battle of the Wādī Lakko [*q.v.*]. The absence of resistance and the fact of capitulation imply the preservation of former structures (capped by an Islamic political superstructure) in the sense of *mu^cāhidūn* and *dhimmiyyūn* [see MU^cĀHADA and DHIMMA]. We are fortunate in knowing the text of the "treaty of Tudmīr", dated 94/713, which guaranteed the maintenance of the previous order (non-intervention in internal affairs, protection of property, freedom of worship and freedom from enslavement). Those who were covered by the *dhimmat Allāh* were bound not to give sanctuary to fugitive slaves or to enemies, not to conceal information concerning adversaries and to pay annually a *djizya* [*q.v.*], a sum calculated partly in gold and partly in kind. The maintenance of property in the ownership of those who capitulated is a fact known and confirmed by the case of the possessions of Tudmīr, the Bānū Ḳasī [*q.v.*] of Aragon, the descendants of Witiza, etc.

The indigenous Christians also retained their administrative, judicial and religious structures. It is thus that we find a *comes/ḳūmis* [*q.v.*] acting as chief representative of his community in dealing with the Islamic state. In view of the fact that the state did not deal directly with individuals as such, but with their community, considered responsible for the economic status of each of its members, the *comes* found himself invested with fiscal functions (*exceptor/mustakhridj*) and judicial functions (*censor/ḳāḍī 'l-naṣārā, ḳāḍī 'l-^cadjam*) which he could either exercise personally or delegate. The preservation of religious structures is evident from our knowledge of the existence of numerous churches and convents, the maintenance of the episcopal sees of Toledo, Saragossa, Seville, Cordova, Mérida, Malaga, Ecija, Péchina and Elvira, the "voluntary martyrdom" movement, the expedition of Alphonso I of Aragon in 1125-6 against Granada, from which he withdrew followed by 10,000 Mozarabs and the *fatwā* [*q.v.*] of Abu 'l-Walīd Ibn Rushd justifying the deportation to the Maghrib ordered by the Almoravid ^cAlī b. Yūsuf, as well as the conversion decreed by the Almohad ^cAbd al-Mu^ɔmin.

It is indisputable that in the 2nd/8th century the overwhelming majority of the population of al-Andalus was composed of indigenous Christians. But the Muslim community very quickly added to its strength through a combined programme of immigration, mixed marriages (Muslim and *dhimmiyya*), and, especially, through the conversion of numerous native *musālima* [*q.v.*] and through the *muwallad* [*q.v.*] descendants of mixed marriages. Conversions were conducted, after renunciation of the former faith, according to precise legal formulae, of which we possess examples from the 4th-5th/10th-11th centuries for Christians, Jews and Madjūs [*q.v.*] (*Le passage à l'Islam dans al-Andalus*, in *Actes UEAI* [1986], 161-83). This explains the numerical diminution of the *naṣārā dhimmiyyūn*, coinciding with a significant cultural erosion (absence of creativity, isolation, simple repetition of meagre Visigothic patterns of learning which had fallen into disuse, etc.) as the Christians found themselves in a position of inferiority, confronted with a brilliant world-wide civilisation which was, furthermore, occupying a status of political and socio-economic dominion. To this may be added the weight of oppressive taxation, which was applied in particular to the Christian subjects of the state. In the 3rd/9th century, during the emirate of Muḥammad I, it is known that the latter paid three-and-a-half times more than the Muslims (M. Barcelo, *Estudio sobre la estructura fiscal...*, in *Acta Mediaevalia*, vi [1985], 45-72). This oppressive taxation did not fail to accelerate the process of conversion to Islam.

It was thus in a climate of economic crisis, demographic recession and cultural erosion that there came into being the extremist movement of "provocative martyrdom", which Simonet and his followers regard as the symbol of Mozarabism. In fact, in sociological terms, we are confronted with a violent reaction in face of a loss of cultural identity. It is a case of forward-looking defiance, seeking, by the use of "suicide martyrs" to provoke an irreversible rupture of Islamo-Christian coexistence in al-Andalus, a coexistence which implied, within a relatively short period—according to the analysis of the agitators themselves—the disappearance of the

Romano-Christian personality and its assimilation into Arabo-Muslim society. In this sense, there has been misunderstanding of the testimony provided in 854 by the *Indiculus luminosus* (constantly repeated) regarding the increasing ignorance of Latin. The emphasis and the anguish of Alvarus were not concentrated on this point but, judging by the length and the violence of the paragraph, on Islamisation, and, in a subsidiary fashion, on its historical corollary, arabisation. The real danger felt was cultural: the adoption of clothing, hair-styles, fashions, circumcision, polygamy, dietary restrictions, music, literature, etc.

The technique followed by the "suicide martyrs" was simple. In the majority of cases there was first a "provocation", consisting in insulting in a manifest and public manner either the person of the Prophet, or the Islamic religion, or both. These actions took place preferably during the communal Friday prayers, or even before the bench of the *ḳāḍī*. This constituted the legal crime of blasphemy (*istikhfāf*) requiring the execution of the culprit. Four-fifths of the 51 cases recorded belong expressly to this genre. The eight other cases are technically apostasies, the consequences of "conversion by consanguinity", the *sharīʿa* stipulating that minors become Muslims *ipso facto* with the conversion of the father. It was among these former minors who, on attaining their majority, sought to reclaim their Christianity, that there were recruited the majority of lay persons executed for the crime of apostasy (*irtidād* [see MURTADD]). It may be noted that at least 75% of those condemned were priests or monks and that cases of *istikhfāf* were an almost exclusively male phenomenon. With three exceptions, all the known cases took place at Cordova. This is explained by the nature of the available sources (all emanating from Cordova) and, especially, by the fact that the centre of agitation was located in the capital.

It is clear that the ideologue was the priest Spera in Deo (the principal actors were all his disciples or had been in contact with them). The focus of the movement was located in the monastery of Tabanos (the activity ended of its own accord following the destruction of the monastery by Muḥammad I). The agitator and propagandist was, indisputably, Eulogius, who composed the *Memoriale sanctorum* (during the latter's absence from Cordova, agitation eased, fading away definitively after his execution). Finally, there is the apologist and historian of the movement, Alvarus, author of the *Vita Eulogii* and *Indiculus luminosus*. Naturally, such an extremist attitude could not fail to polarise opinions. On the one hand, there was the small activist group of potential "suicide martyrs", and on the other, the overwhelming majority of Christians, supporters of the *status quo*, wanting only to live their lives, if possible without drawing attention to themselves and thus causing problems.

The latter position was also that of the Umayyad amīrate, seeking, politically, to maintain public order (at the least expense) and, fiscally, to retain the value of its tax levies undiminished. It was in this spirit of continuity that the Council of Cordova was convened in 852, presided over by Recafred, Bishop of Seville, and the *exceptor* Gomez, representing the Islamic administration. The Council (with the single exception of Saul, bishop of Cordova) condemned voluntary sacrifice as a form of disguised suicide. The dissidents were imprisoned by the ecclesiastical authorities. The execution in 858 of Eulogius marks the end of the "martyrdom" movement.

During the amīrate of Muḥammad I, the pressure of taxation was intensified considerably. As a result of the new census carried out by the Bishop Hostegesis, it extended to all parishes, even the most remote. There was thus a new reaction against Muslim society but, this time, discontent was to be expressed differently. The movement benefited from the instability caused by the crisis of adaptation of the structures of the primitive Arabo-Muslim conquering society to the conditions of a new situation, the situation created by the growing number of neo-Muslims (*muwallad, muladi*) and their need for integration. There was a series of widespread rebellions, and the Christians seized the opportunity to express their separatist tendencies. It may be noted that the "martyrs" had constituted an urban and religious reaction; now it was the rural areas which were affected, and the manifestations of revolt of a political nature (Ibn Ḥayyān, *Muktabas*, iii; Ibn Ḥawḳal, *K. Ṣūrat al-arḍ*). In this sense it is symptomatic that ʿAbd al-Raḥmān III, during his first campaigns to recapture rebel-held fortresses (e.g. Juviles), executed only their Christian defenders, no doubt considered "incorrigible". But the fact should not be ignored that there was, within Bobastro itself, a significant group of supporters of the *pax islamica*, led by the bishop Ibn Maḳsim and other Christian dignitaries (Ibn Ḥayyān, *Muḳtabas*, v, 74, 92, 92, 119, 135) and clearly opposed to the rebellious Ḥafṣūnid policy since 300/912 at least.

Simonet sought to make of ʿUmar b. Ḥafṣūn [*q.v.*] the "symbol and champion of Christian nationalism", whereas in fact this was a simple political revolt. The conversion of ʿUmar is far from being historically proved (*Precisiones acerca de ʿUmar b. Ḥafṣūn*, in *Actas Jornadas Cultura Arabe* [1985], 163-75); in addition, he never sought to ally himself with the Christian kingdoms of Spain and remained under Islamic (ʿAbbāsid and Fāṭimid) sovereignty. His capitulation to the Umayyad caliphate in 303/915 and the surrender of the last Ḥafṣūnids in 315/927 marked the end of Christian political movements.

Henceforward, there was room for only two tendencies: integration of the *naṣārā dhimmiyyūn* into Muslim society or emigration towards the Christian zones. Very soon, the *naṣārā* are seen acting as aides to the policies of the the caliphate. Thus in 329/941, the bishops of Seville, Péchina and Elvira were sent to the court of Ramiro II with the object of obtaining the release of Muḥammad b. Hāshim al-Tudjībī. Thus in 955 Bishop Recemundus (alias Rabīʿ b. Zayd) was *inter palatina offitia*, ambassador to the court of Emperor Otto I; a little later he was sent on a similar mission to Constantinople. The same Recemundus served as interpreter to John of Gorza and Walīd b. Khayzurān for Ordoño IV; and it was Aṣbagh b. Nabīl who, in 394/1004, arbitrated in the dispute between Menendo Gonzales and the Castilian Count Sancho Garcia. These Mozarabs also participated in the cultural movement; Rabīʿ b. Zayd composed in 350/961 the *Kitāb al-Anwāʾ/Calendar of Cordova*, and other indigenous Christians collaborated in the translation of the *Materia medica* of Dioscorides. There is much discussion regarding a supposed Mozarabic Romance lyric which allegedly led, by means of the *khardja* [*q.v.*], to the appearance of strophic forms such as the *zadjal* and the *muwashshaḥ* [*q.vv.*]. Later, the *dhimmīs* are found acting (for political and fiscal reasons) as the indispensable administrative assistants of the petty monarchs of the *ṭāʾifas* [see MULŪK AL-ṬAWĀʾIF. 2. In Spain].

The other alternative was emigration from Andalusian territory. Evidently, for ideological reasons, the *naṣārā dhimmiyyūn* were drawn towards their co-religionists of the north, but there were other motives

too. The Christian kingdoms could only continue to expand by successfully colonising the territories that they had occupied to the north of the Douro. These territories were virtually uninhabited, and it was therefore necessary to repopulate them. One method used was to induce the Asturian mountain-dwellers to leave their traditional homes and settle the land (guaranteeing to them their own law, tax exemptions, rights of tenure and agriculture); the other was to attract immigrants from al-Andalus. Such was the policy which enabled Alfonso III to colonise the conquered territories and to rebuild fortresses (Zamora 893), designed to protect the new "frontier". Naturally, the Christian appeal worked most strongly on monks and those with religious vocations, and among the emigrants one was to become Bishop of Orense and others were to found monasteries (San Miguel de Escalada in 913, San Cebrian de Mazote in 916, San Martín de Castañeda in 921, San Facundus/Sahagún in 935) which consituted typical examples of Mozarabic architecture. These emigrants brought with them their knowledge of the language (writing Arabic glosses on Latin manuscripts, disseminating Arabo-Islamic works and composing the *Glossarium latino-arabicum* of Leiden), constituted the base of the intellectual movement of the "School of Translators of Toledo", introduced Arabo-Islamic tastes, usages, crafts and official posts (for example the *ṣāḥib al-sūḳ/çavaçougue* who appears from 1020 onward in the *fuero* of Léon). In this sense, it is undeniable that they contributed powerfully to the intellectual and cultural arabisation of the Christian kingdoms.

These emigrants were well aware of the internal political situation of the *mulūk al-ṭawāʾif*. They thus had an innate vocation as "experts on Islamic affairs" and as such, were bound to exert a certain influence over Christian policy in the 11th century. It is thus that we see Sisnando Dividiz (Amīr ʿAbd Allāh, *Tibyān*; García Gómez and Menéndez Pidal, *El conde Sisnando Davidiz y la política de Alfonso VI con los Taifas*, in *al-Andalus*, xii [1947], 24-41), a native of Tentugal, in the service of al-Muʿtadid [*q.v.*], and later in that of Ferdinand I, to whom in 1064 he recommended the conquest of Coimbra, of which he was the first governor: "Ego Sesnandu gratia Dei *consul* conimbriensis... et *alvacilem* dominum Sisnandum Colimbricensem." He subsequently became assistant and adviser on Islamic affairs to Alfonso VI, and the one responsible for his policy of economic harassment against the Andalusian petty monarchs (the *parias*). It is evidently he who was behind the surrender of Toledo and the conditions stipulated for nascent Mudéjarism. This is clearly the case, since the firm and intransigent line taken by the monks of Cluny and Queen Constance were to lead to his replacement as governor of Toledo by Pedro Ansurez.

The Mozarabs were by this time no longer indispensable, being replaced demographically by the influx of European emigrants, and the land being no longer neglected but cultivated by the Mudéjars [*q.v.*]. Culturally, they were to be replaced in the future by Cluny and the French influence. It was during this period that Pope Gregory VII decided to extirpate what he called the "superstitio Toletanae" (which was nothing other than the ancient Visigothic liturgy and chant). In order to do this, in 1077, Alfonso VI resorted to a double ordeal (by fire and judicial combat), of which he did not accept the result, suppressing the ancient Hispanic rite in his dominions in 1080 "for all those who were not Mozarabs or their descendants". (The Mozarabic rite was to be revived in Toledo in 1500 by Cardinal Cisneros.) Paradoxically, following the seizure of Toledo, it was no longer the kingdom of Castile-Léon which was the centre of the Mozarab movement, the latter migrating towards the Levant (where the Cid exercised a rather more tolerant policy) and Aragon, where Alfonso I was to concede to them the *fuero* of 1126 (imitated in 1156 by Alfonso VII of Castile).

(P. Chalmeta)

MSHATTA [see al-mus̲h̲attā].

MSĪD [see kuttāb].

MSĪLA [see masīla].

MTAMBWE MKUU, an islet off Weti, Pemba Island, Tanzania, is in all probability mentioned twice by al-D̲j̲āḥiẓ, and is given as one of the two independent cities mentioned on the island by Yāḳūt, s.v. *al-D̲j̲azīra al-K̲h̲aḍrāʾ*, the ordinary name for Pemba in Arabic. He records the name as متنبي *M.T.N.BY*, and the second city as مكنبلوا *M.K.NB.LŪ*, the Ḳanbalū mentioned by al-D̲j̲āḥiẓ, al-Masʿūdī and numerous others. Yāḳūt reports that the sultan was an Arab from al-Kūfa who had emigrated in order to settle there, which might suggest that the settlement was of no great antiquity; but al-D̲j̲āḥiẓ's reference would suggest that it was already in existence in the 9th century, and that perhaps in Yāḳūt's time it had undergone a change of government. The toponym *M.T.N.BY* does not occur earlier than al-D̲j̲āḥiẓ. The site was investigated in 1984-6 by Dr M.C. Horton, and covers 800 × 400 yards. There are the remains of stone buildings and fortifications. Ceramic finds so far have not antedated *ca.* 1050, and continue to the 19th century. On the surface, however, an ʿAbbāsid *dīnār* and a Fāṭimid *dīnār*, together with a fragment of an Axumite gold piece, possibly of the 6th century ruler Joal, have been found, and, some 40 yards away, some 2,000 silver pieces loose in sand. With them were seven Fāṭimid gold pieces, ranging from 969 to 1065, and three imitations, together with a cloth pouch in which the whole hoard had evidently been contained before it was disturbed by agricultural operations. This remarkable find, the first such of silver south of the Equator, disclosed the

names of nine Muslim rulers hitherto unknown. They are clearly local, and in the style described by J. Walker as Kilwa type. The obverses have a pious expression with one of the Beautiful Names of God (or a similar epithet), chosen to rhyme with the name of the ruler on the reverse. The script, in floriated Kūfic of great delicacy and refinement, resembles certain of the issues of ʿAlī b. al-Ḥasan of Kilwa and of al-Ḥasan b. ʿAlī of Zanzibar, as hitherto described. Together with copper pieces of other rulers, it is possible to reconstruct a genealogy that covers four or five generations. The other finds, which vary in quantity from place to place all the way from Shanga in the Lamu archipelago to Kilwa in Tanzania, and including Pemba, Zanzibar and Mafia, suggest a local dynasty somewhat resembling the Ayyūbids, who ruled contemporaneously with different members of the family in different capitals. The close resemblance of the coins, scarcely distinguishable in style from one another without close inspection, suggests a single workshop and a short-lived dynasty. Their high standard of craftsmanship may be taken as a reflection of the local standard of civilisation. That the ceramic does not antedate *ca.* 1050 provides a certain difficulty, that can be overcome if it is accepted that the capital may then have recently moved.

The name Mtambwe is of special interest, because the Bantu root—*tamb*—is recorded otherwise only in connection with a secret witchcraft cult and with sacrifices for the dead. For such a cult, or cults, Pemba is celebrated (or notorious) throughout eastern Africa, and as far away as Zaïre.

MUʾADHDHIN [see ADHĀN; MASDJID. I. G. 4].

MUʾADHDHIN [see ADHĀN; MASDJID. I.C.3, D.2.b,e].

MUʿĀHADA (A.) treaty, agreement: 1. In earlier times: See for this, ʿAHD; BAKṬ; IMTIYĀZĀT.

2. In modern times. We find *muʿāhede* or *muʿāhedet* in Ottoman Turkish: *moʿāhede, moʿāhedat*, in Persian and Urdu.

The Ottoman official term for "treaty" was either *muʿāhede*, borrowed from the Arabic, or *ʿahd-nāme*, borrowed from the Persian. At the height of Ottoman power, most treaties constituted one-sided proclamations, phrased as expressions of the Sultan's own will to grant privileges to foreign states or their subjects. These were generally called *ʿahd-nāme* [see IMTIYĀZĀT, esp. at iii, 1189 ff.], such as the 1604 agreement of Aḥmed I with Henry IV of France; and the treaty with Spain (reprinted in Ferīdūn's collection, ii, 389). More rarely, treaties were known as *muʿāhede*, e.g. Süleymān's agreement with Austria in 970/1563. Treaties (both bilateral and multilateral) were often imposed on the Ottoman Empire, as its political and military power declined, particularly since the end of the 11th/17th century. Their style changed, accordingly, from proclamations to negotiated documents, of which the first was probably the agreement drawn up at the Peace of Carlowitz [see KARLOFČA] in 1699. This and subsequent treaties were contracted in the spirit of Hugo Grotius's *Law of Nations*, which was considered neutral by both Islam and Christendom. After that, the term *muʿāhede* was increasingly employed, although *ʿahd-nāme* was still used at times. The general structure of these treaties, however, remained constant (as did other Ottoman documents; see DIPLOMATIC, esp. at ii, 314-15); (a) Praise to Allāh; (b) Blessing of the Prophet Muḥammad; (c) The scope and importance of the treaty; (d) Declaration of intent to refrain from any action contrary to the treaty; (e) A detailed explanation of the nature of the treaty; (f) Why the treaty must be observed; (g) Beseeching Allāh to aid the contracting parties in remaining loyal to one another; and (h) Date.

These changes in substance and style were reflected in dictionaries of the Ottoman and Turkish Republican eras. Those of Meninski (1680 and 1780) and even Bianchi (1837) merely mentioned that *muʿāhede* meant "treaty", whereas later dictionaries, such as those of Redhouse (1890), the *Ḳāmūs-u Türkī* of Sāmī and the *Lughat-i Nādjī* (both 1318/1900-1) emphasised bilateral features. Official and private usage continued to employ the term *muʿāhede* during the 1920s and early 1930s (see examples in the *Bibl.*, below). In 1935, the Türk Dil Kurumu's *Osmanlıcadan Türkçeye cep kılavuzu* translated *muʿāhede* as *antlaşma*; the latter term (sometimes written *andlaşma*) generally superseded the former. Still, in 1944, the Türk Hukuk Kurumu's *Türk hukuk lûgatı* listed the following uses: *muahede*—treaty; *hakem muahedesi*—bond of arbitration; *ittifak muahedesi*—alliance agreement; *ticaret muahedesi*—commercial convention; *ikamet muahedesi*—convention respecting conditions of residence and business; *sulh muahedesi*—treaty of peace; and *dostluk muahedesi*—treaty of friendship. According to V. Heyd (*Language reform in modern Turkey*, Jerusalem 1954, 99), on the same day in 1953, three different newspapers in Istanbul used, respectively, *muahede*, *andlaşma* and *pakt* for the same agreement. While Ottoman treaties were always in Turkish, they were usually accompanied by versions in European languages, generally French, although English, Italian and other languages were also used at times. Those of the Turkish Republic were in Turkish, frequently accompanied by a translation: into French in the early years, subsequently into the languages relevant to the signatories.

In Arabic, *muʿāhada* or *ʿahd* has sometimes been used interchangeably with *ittifāḳ* or *ittifāḳiyya* (the former may also mean "contract", while the latter means, more strictly, "agreement"). Its employment in the sense of "treaty" appears to have been borrowed from 19th century Ottoman usage by officials, scholars and journals concerned with international relations. Al-Ṭahṭāwī, *al-Taʿrībāt al-ṣāfiya*, Cairo 1834, i, 77, and Ḥasan Ḳāsim, *Taʾrīkh mulūk fransā*, Cairo 1264, 305, use *muʿāhada* to describe the Swiss confederation; but *al-Waḳāʾiʿ al-Miṣriyya* (Cairo), no. 92 (1847), 2, employs the term for a commercial agreement, and no. 126 (1848), 3, uses *muʿāhadat al-ṣulḥ* for peace treaty. In 1870, Buṭrus al-Bustānī's *Muḥīṭ al-muḥīṭ* (ii, 1491) defined *muʿāhada* as follows: "The *muʿāhada*, as used by politicians, is a contract (*ittifāḳ*) undertaken by two states, generally referring to defined aspects of commerce, politics (*siyāsa*), or other matters; also known as *ʿahidnāme*." A collection of documents, chiefly from the Arabic-language periodical *al-Djawāʾib*, published in Istanbul in seven volumes and entitled *Kanz al-raghāʾib fī muntakhabāt al-Djawāʾib*, included (v, 1294/1877, 6-15) the text of the

1856 Paris Peace Treaty, rendered as *Muʿāhadat sanat 1856*. The term *muʿāhada*, as employed by officials and journalists in the late 19th century, apparently first achieved widespread usage in a collection of official documents, not coincidentally comprising Ottoman treaties since 1740, in an Arabic translation, entitled *al-Muʿāhadāt al-dawliyya 'llatī ʿaḳadathā 'l-dawla al-ʿaliyya* (Cairo 1896).

Later, the term was increasingly employed by Arab states achieving independence or a semi-independent status, as in the 1915 agreements between Great Britain, al-Idrīsī, and Ibn Saʿūd (texts in ʿAlam al-Dīn's *ʿUhūd*, 62-3 and 64-6). Since the end of the First World War, the term was employed both for bilateral treaties between Arab states themselves (e.g. the 1931 treaty for the extradition of offenders between ʿIrāḳ and Egypt) and with the Powers (as in the 1930 Treaty of Alliance between ʿIrāḳ and Great Britain, or between Egypt and Great Britain in 1936), as well as for mutilateral treaties (e.g. the Convention and Statute of Freedom of Transit, Barcelona 1921, or the Convention and Statute on the International Régime of Maritime Ports, Geneva 1923). The same applied to Arabic collections of treaties (e.g. by Djānā, 1355/1937) or studies in international law (e.g. by Ghānim, 1961). The term was also referred to by *ʿulamāʾ*, particularly in connection with secular politics: the authorities of al-Azhar, after due consideration, published a lengthy statement supporting the Egyptian-Israeli peace treaty (*al-Muʿāhada taḳūm fī ḥudūd al-ḥukm al-Islāmī*, in *al-Ahrām*, 10 May 1979, 1, 10). Arabic treaties are frequently accompanied by translations, generally in French or English.

In Persian, *moʿāhedeh* or *ʿahd-nāmeh* has been sometimes used interchangeably with *ḳarārdād* (which also means "contract"), *paymān* (often employed in the sense of "pact" as well) and recently *muwāfaḳat-nāmeh* (which also means "agreement"). The term appears in sources of the 5th/11th and 6th/12th centuries in the sense of "alliance" or "agreement" (Nīshābūrī's *Ḳiṣaṣ al-anbiyāʾ*, *Taʾrīkh-i Bayhaḳī*, etc.) and was later adopted to mean "treaty". By the 19th century, these terms were used in common; the dictionaries of Charles Wilkins (1806) and Francis Johnson (1852) render *moʿāhedeh* as "agreement" and *ʿahd-nāmeh* as "letters of agreement".

As a long-standing independent state, Persia has contracted numerous treaties over the years. In 969/1561-2, a mission from the Ottoman Sultan Süleymān came to the Ṣafavid court of Shāh Ṭahmāsp I and contracted a treaty (*ʿahd-nāmeh*) of friendship and an agreement for extradition of political criminals, as a result of which Bāyezīd, son of Süleymān, who had found refuge in Persia, was handed over to the Sultan's representatives. In April 1617, a commercial treaty was signed between Shāh ʿAbbās I and King James I of England. The first treaty with France was signed at Versailles in 1664, followed by a second in 1708. In 1148/1735-6, Nādir Shāh contracted a peace treaty with the Russian Government, according to which the cities of Derbend and Baku were returned to Persia. In the 19th century, several treaties were contracted with Great Britain (political and commercial agreements in 1801, a definitive treaty of friendship and alliance in 1812 and many others) and with Russia (Treaty of Gulistān, 1813; of Türkmančāy, 1828; Peace and Friendship, 1828; and numerous others)—these being the two Powers most actively interested in Persia at the time. However, while most earlier treaties were freely negotiated, the treaty of Türkmančāy with Russia was signed under duress and granted to Russia extraterritorial rights, similar to the capitulations in the Ottoman Empire [see IMTIYĀZĀT, esp. at iii, 1191-2). As Persia commenced modernisation, numerous other treaties were drawn up; in 1857 alone, treaties were contracted with Austria, Belgium, Denmark, Great Britain, the Netherlands and Sweden, to which treaties of friendship and commerce with other states were added subsequently. Such treaties were usually written in Persian and French and later—since the end of the Second World War—in Persian and English. Traditionally, treaties contracted by Persia had the following general structure: (a) Praise to Allāh; (b) A preamble, presenting the signatories and noting the intent of the treaty; (c) The treaty itself; (d) Ratification and validity; and (e) Place and date.

Bibliography. For the term *muʿāhada:* Franciscus à Mesgnien Meninski, *Thesaurus linguarum orientalium turcicae, arabicae, persicae ...*, Vienna 1680 (2nd ed. 1780); C. Wilkins, *Dictionary, Persian, Arabic and English*, i, London 1806; T.X. Bianchi, *Dictionnaire turc-français à l'usage des agents diplomatiques et consulaires*, Paris 1837; F. General collections of treaties comprise treaties contracted by Muslim states as well. Indexes of such treaties can be found in: *Catalogue of treaties 1814-1918*, Washington 1919 (repr. New York 1964); P.R. Rohn, ed., *World treaty index*, i-v, Santa Barbara, Calif. 1974; and an annual, entitled *Multilateral treaties: index and current status* (London). For some of these collections: P. Albin, *Les grands traités politiques*², Paris 1912, 126-387 (19th century treaties); H. Triepel (ed.), *Nouveau recueil général de traités*, 3ᵉ série, i-xli, Aalen and Greifswald 1909-44; League of Nations, *Treaty series*, i-ccv, London and Lausanne 1920-46; *Sbornik dogovorov Rossii s drugimi gosudarstvami, 1856-1917*, Moscow 1952; L. Shapiro (ed.), *Soviet treaty series*, i-ii, Washington, D.C. 1950-5; R.M. Slusser and J.F. Triska (eds.), *A calendar of Soviet treaties 1917-1957*, Stanford, Calif. 1959 (summaries and evaluations); M.S. Wionczek (ed.), *Economic cooperation in Latin America, Africa and Asia*, Cambridge, Mass. 1969, 284-317 (economic agreements between Muslim states); C. Parry, ed., *The consolidated treaty series*, i-ccxxxi, Dobbs Ferry, N.Y. 1969-81 (for 1648-1799); R. Pinto and H. Rollet, eds., *Recueil général des traités de la France, 2ᵉ série: Accords bilatéraux non-publiés, 1958-1974*, i-ii, Paris 1976-7; *United States treaties and other international agreements*, i-xxxii, Washington, D.C. 1952-

83; United Nations, *Treaty series*, i-mxciii, New York 1947-85.

General collections of Middle Eastern and Muslim treaties: T. Yuzefovič' (ed.), *Dogovori Rossii s' Vostokom'*, St. Petersburg 1869 (Ottoman Empire, 1-181; Persia, 183-227); R.Ch. Ghosh, ed., *Constitutional documents of the major Islamic states*, Lahore 1947; H.M. Davis, ed., *Constitutions, electoral laws, treatise of states in the Near and Middle East*, Durham, N.C. 1947 (2nd ed. 1953); Muḥammad ʿAbd al-Fattāḥ Ibrāhīm (ed.), *al-Muʿāhadāt wa 'l-ittifāḳāt al-iḳlīmiyya fī bināʾ al-Sharḳ al-Awsaṭ*, n.p. [Cairo] 1955 (texts and commentary for treaties, 1888-1948); R.H. Magnus (ed.), *Documents on the Middle East*, Washington, D.C. 1969; J.C. Hurewitz (ed.), *The Middle East and North Africa in world politics: a documentary record*, i-ii, New Haven-London 1975-9; H.W. Degenhardt (ed.), *Treaties and alliances of the world*[3], Burnt Mill, Essex, U.K. 1981, 337-51 ("The Middle East and Islamic states").

Ottoman treaties were officially published by the Government, along with laws, in *Düstūr*, Istanbul 1289-1302; a sequel was issued in Istanbul 1329-37/1928. Collections: One of the earliest collections of Ottoman treaties is Aḥmed Ferīdūn's *Medjmūʿa-yi münsheʾāt el-selāṭīn*, i-ii, Istanbul 1274-5 (for the 10th/16th century; Ferīdūn himself died in 991/1583). Others are: The Librarian and Keeper of the Papers, Foreign Office, ed., *Treaties, &c. between Turkey and Foreign Powers, 1535-1855*, London 1855; E. Charrière, *Négociations de la France dans le Levant*, i-iv, Paris 1848-60; Baron de Testa (ed.), *Recueil des traités de la Porte Ottomane avec les Puissances Étrangères depuis le premier traité conclu en 1536 entre Süleyman I et François I jusqu'à nos jours*, i-xi, Paris 1864-1911 (comprises treaties and other official documents as well as background material); *Devlet-i ʿAliyye ile düvel-i mutaḥābbe beynlerinde teyemmunan munʿaḳid olan muʿāhedāt-ī ʿatīḳa we-djadīdeden meʾmūrīn-i Salṭanet-i Sīniyyeye mürādjaʿatī lāzim gelen fiḳrāt-ī ʿahdiyeyeye mutazammin risāledir*[3], Istanbul 1284; G. Aristarchi (ed.), *Législation ottomane*, i-vii, Constantinople 1873-8 (includes a number of treaties). *Imtiyāzāt we-muḳāwelāt*, i-ii, continued as *Medjmūʿa-yi muḳāwelāt*, iv-vii, Istanbul 1302-15 (treaties in chronological order); *al-Muʿāhadāt al-duwaliyya 'llatī ʿaḳadathā al-dawla al-ʿaliyya maʿa al-duwal al-Urūbāwiyya*, Arabic tr. Yūsuf Āṣāf, Cairo 1891, 3rd ed. Cairo 1896; G. Noradunghian (ed.), *Recueil d'actes internationaux de l'Empire ottoman*, i-ii, Paris 1897-1900; Reşat Ekrem (Koçu) (ed), *Osmanlı muahedeleri ve kapitülasyonlar 1300-1920 ve Lozan muahedesi 24 temmuz 1923*, Istanbul 1934 (Ottoman treaties and documents, some *in extenso*, others only referred to); Nihat Erim, ed., *Devletlerarası hukuku ve siyasi tarih metinleri*, i, Ankara 1953 (comprises the Capitulations and Ottoman treaties, 1606-1920). Examples of single treaties: *Conférence de Constantinople*, Constantinople 1877; *Convention between Great Britain, Austro-Hungary, France, Germany, Italy, the Netherlands, Russia, Spain and Turkey, respecting the free navigation of the Suez Maritime Canal*, Constantinople 1888; *Traité de paix entre les Puissances alliées et associées et la Turquie, signé le 10 août à Sèvres*, Paris 1920; J. Reychman and A. Zajączkowski, *Handbook of Ottoman Turkish diplomatics*, tr. and revised by A.S. Ehrenkreutz, The Hague and Paris 1968, 183-5, lists publications of Ottoman-Polish treaties.

In the Turkish Republic, the treaties themselves can be found in the official gazette, *Resmi gazete*. Indexes to the treaties: Gündüz Ökçün, *A guide to Turkish treaties (1920-1964)*, Ankara 1966, also in Turkish, G. Ökçün and A.R. Ökçün, *Türk antlaşmaları rehberi (1920-1973)*, Ankara 1974; Ahmet Yavuz, *Türkiye Cumhuriyetinin akdettiği milletlerarası andlaşmalar*, Ankara 1976. Collections: An early one was issued during the 1920s by the Ministry for Foreign Affairs, Khāridjiyye Wekāleti, *Muʿāhedāt medjmūʿasī*, i-viii, Ankara 1924-31 (texts in Turkish and the relevant foreign language). The most recent (and probably exhaustive) is Ismail Soysal's *Tarihçeleri ve açıklamaları ile birlikte Türkiye'nin siyasal andlaşmaları*, i-ii, Ankara 1983 (for 1920-81). Examples of single treaties: *Projets de traités de paix et de conventions proposées par les Puissances alliées et les modifications demandées par la Turquie*, Constantinople 1923; *Conférence de Lausanne sur les affaires du Proche Orient: actes signés à Lausanne le 30 janvier et le 24 juillet 1923*, Paris 1923; *Treaty between the United Kingdom and Iraq and Turkey regarding the settlement of the Frontier between Turkey and Iraq, Angora, June 5, 1926*, London 1926 (= Cmd. 2679); *Actes de la conférence des capitulations, Montreux, 12 avril-8 mai 1937*, Liège 1937; S.L. Meray (ed.), *Lozan barış konferansı, tutanaklar, belgeler*, 7 vols., Ankara 1969-73.

Collections of treaties relating to the Arab states: F. Rouard de Card (ed.), *Traités de la France avec les pays de l'Afrique du Nord: Algérie, Tunisie, Tripolitaine, Maroc*, i, Paris 1906; Maḥmūd Tawfīḳ Djānā (ed.), *Madjmūʿat al-muʿāhadāt wa 'l-wathāʾiḳ al-taʾrīkhiyya fī ḥayāt al-umam al-ʿArabiyya*, n.p. [Damascus] 1355/1937; Djarīdat al-Ayyām, *al-Wathāʾiḳ wa 'l-muʿāhadāt fī bilād al-ʿArab*, Damascus n.d. [1937?]; Djāmiʿat al-Duwal al-ʿArabiyya, *Madjmūʿat al-muʿāhadāt wa 'l-ittifāḳiyyāt al-maʿḳūda fī niṭāḳ Djāmiʿat al-Duwal al-ʿArabiyya*, Cairo, n.d. [1955]. Also in English: League of Arab States, *Treaty series: Agreements and conventions concluded between member states...*, n.p. n.d. [Cairo 1955]. Also in French: *Ligue des États Arabes, Texte des traités et conventions conclus entre les États Membres...*, n.p. n.d. [Cairo 1955]. *Sefer haḥōzīm la-Mizraḥ ha-tīkhōn* (Hebrew: *The book of Middle East treaties*), Tel-Aviv 1956; Muḥammad Khalīl, ed., *The Arab states and the Arab League. A documentary record*, i-ii, Beirut 1962 (inter-Arab treaties); Wadjīh ʿAlam al-Dīn, ed., *al-ʿUhūd al-mutaʿalliḳa bi 'l-waṭan al-ʿArabī 1908-1922*, Beirut 1965; Bureau de documentations syriennes et arabes, éd., *Recueil des accords internationaux*, Damascus 1969 (for 1962-8); Djāmiʿat al-Duwal al-ʿArabiyya, *Madjmūʿat al-muʿāhadāt wa 'l-ittifāḳiyyāt al-maʿḳūda fī niṭāḳ Djāmiʿat al-Duwal al-ʿArabiyya wa-maʿa baʿḍ al-hayʾāt al-duwaliyya*, i-iii, Cairo n.d. [1965] (inter-Arab treaties as well as with international organisations). Examples of single treaties: Salīm Fāris (ed.), *Kanz al-raghāʾib fī muntakhabāt al-Djawāʾib*, Istanbul 1294/1877, v, 5-16; *Actes diplomatiques et firmans impériaux relatifs à l'Égypte*, Cairo 1886, 5-17, 24-34 (Convention of London, 1840-1); D.J. Becker y Gonzalez, ed., *Tratados, convenios, acuerdos referentes á Marruecos y la Guinea Española*, Madrid 1918; Gouvernement Égyptien—Ministère des Affaires Étrangères, *Accord Franco-Égyptien concernant la position en Égypte des personnes originaires du Maroc*, Cairo 1925; *Muʿāhadat wa-niẓām ḥurriyat al-trānsīt, Barcelona fī 20 nīsān sanat 1921*, Baghdād 1927; *Agreement between Palestine and Syria and the Lebanon to facilitate good neighbourly relations in connection with frontier questions, Jerusalem, February 2, 1926*, London 1927 (= Cmd. 6916); *Muʿāhada wa-niẓām bi-shaʾn al-naẓm al-dawlī bi 'l-mawānī 'l-baḥriyya wa-prōtōkōl al-tawḳīʿ—Geneva fī*

9.12.1923, Baghdād 1928; *Muʿāhadat al-taḥāluf bayna al-ʿIrāḳ wa-Brīṭāniyā ʾl-ʿUẓmā, 1930*, Baghdād 1930; *Muʿāhada bayna al-Wilāyāt al-Muttaḥida al-Amīrīkiyya wa-Brīṭāniyā ʾl-ʿUẓmā wa ʾl-ʿIrāḳ*, Baghdād 1930. *Muʿāhada bi-shaʾn taslīm al-mudjrimīn bayna al-ʿIrāḳ wa-Miṣr, 1931*, Baghdād 1931; *Treaty of alliance between His Majesty, in respect of the United Kingdom and His Majesty the King of Egypt*, London 1936 (= Cmd. 5270); *Treaty of alliance between His Highness the Amir of Transjordan. London, 22nd March 1946*, London 1946 (= Cmd. 6916); *Agreement between the Government of the United Kingdom of Great Britain and Northern Ireland concerning self-government and self-determination for the Sudan, Cairo, February 12, 1953*, London 1953 (= Cmd. 8904); *Special agreement between the Government of the United Kingdom of Great Britain and Northern Ireland and the Government of Iraq, Baghdad, April 4, 1955*, London 1955 (= Cmd. 9544); Sāmī Ḥakīm, ed., *Muʿāhadāt Lībiyā maʿa Brīṭāniyā wa-Amīrīkā wa-Fransa*, Cairo 1964; Ḥalīm Saʿīd Abū ʿIzz al-Dīn, *Siyāsat Lubnān al-khāridjiyya: ḳawāʿiduhā, adjhizatuhā, wathāʾiḳuhā*, Beirut 1966; H. Abou Fadl *et alii*, eds., *Lebanon, its treaties and agreements*, i-iv, Dobbs Ferry, N.Y. 1967; Djumhūriyyat Miṣr al-ʿArabiyya—Wizārat al-Khāridjiyya, *Muʿāhadat al-salām bayna Miṣr wa-Isrāʾīl wa-mulḥaḳātuhā wa ʾl-ittifāḳ al-takmīlī ʾl-khāṣṣ...*, i-iii, Cairo 1979.

Collections of treaties relating to Iran: Eduard Hertslet, ed., *Treaties, etc. concluded between Great Britain and Persia, and between Persia and other foreign powers, wholly or partially in force on the 1st April, 1891*, London 1891 (comprises treaties since 1801); C.U. (J.M. Landau)

MUʾĀKHĀT (a.) "brothering", is a practice found in the early days of Islam by which two men became "brothers".

The best-known example is the "brothering" by Muḥammad of Emigrants from Mecca with Muslims from Medina. This may have happened soon after he reached Medina, but is placed by Ibn Isḥāḳ just before the battle of Badr, accompanied by a list of thirteen such pairs (Ibn Hishām, 344-6). It is clear, however, from Ibn Ḥabīb (*Muḥabbar*, 70 f.) that there had previously been some "brothering" at Mecca, and he gives a list of nine pairs. This is confirmed partly by Ibn Isḥāḳ's statement that Muḥammad himself was "brothered" with ʿAlī and his uncle Ḥamza with Zayd b. Ḥāritha, and also by a number of statements in the notices of individual Meccan

Muslims in Ibn Saʿd's *Ṭabaḳāt*, even though there are some discrepancies. Ibn Ḥabīb goes on to speak of "brotherings" at Medina between an Emigrant and an Anṣārī, and has a list of over fifty pairs. He says this "brothering" was made on the basis "of right (?) and of sharing" (*ʿalā 'l-ḥaḳḳ wa 'l-muʾāsāt*), and implied that, if a man died, his "brother" was to inherit from him in preference to his kinsmen. This arrangement may be referred to in the first part of Ḳurʾān, VIII, 72, though it only speaks of the Emigrants and Anṣār as *awliyāʾ*, presumably in the sense of giving mutual protection. The right of inheritance by a "brother" is said to have been abrogated by VIII, 75 (or IV, 33 or XXXIII, 6); and Ibn Ḥabīb says VIII, 75, was revealed before any one had inherited in this way. There are several accounts of how the wealthy Anṣārī Saʿd b. Rabīʿ gave his "brother" ʿAbd al-Raḥmān b. ʿAwf not only half of his property but also one of his two wives. The statement of Ibn Hishām (933) that Muḥammad "brothered" the later caliph Muʿāwiya [*q.v.*] with a man of Tamīm (which must have been about the year 10/631) remains mysterious, though when the man died during Muʿāwiya's caliphate the latter claimed his inheritance. Al-Wāḳidī (724, 778) mentions leaders of expeditions pairing men and telling them not to separate from one another in battle, but the word he uses is *allafa*.

AL-**MUʾALLAFA ḲULŪBUHUM** (A.), lit. "those whose hearts are won over", the term applied to those former opponents of the Prophet Muḥammad who are said to have been reconciled to the cause of Islam by presents of 100 or 50 camels from Muḥammad's share (the fifth or *khums* [*q.v.* in Suppl.]) of the spoils of the battle of Ḥunayn [*q.v.*], after Muḥammad's forces had defeated the Hawāzin [*q.v.*] confederation, and divided out at al-Djiʿrāna. The list (given in Ibn Hishām, 880-1, tr. Guillaume, 594-5; al-Wāḳidī, ed. J.M.B. Jones, 939 ff., tr. Wellhausen, 373 ff.; cf. al-Ṭabarī, i, 1679-80) included the Meccan leader Abū Sufyān [*q.v.*] and his sons Muʿāwiya [*q.v.*] and Yazīd and various Bedouin chiefs from the tribes of western Arabia. The actual phrase is connected with Ḳurʾān, IX, 60, which W.M. Watt has, however, shown to refer to gifts from the *ṣadaḳa* [*q.v.*] to two Bedouin chiefs on a previous occasion, the two incidents having been subsequently conflated by tendentious opponents of the Umayyads (see his *Muhammad at Medina*, Oxford 1956, 73-5, 348-53; cf. M. Gaudefroy-Demombynes, *Mahomet*², Paris 1969, 182-4).

Bibliography: Given in the article. See also all the *fiḳh* books, in the sections on *zakāt*. (ED.)

AL-**MUʿALLAḲĀT** (A.) a collection of pre-Islamic Arabic poems, generally numbered at seven. The tradition of poetical anthologies is old, and has left traces in every aspect of later poetic criticism. The *Muʿallaḳāt* form the most celebrated of these, and the place assigned to them by Arab literary men has not been without a certain overshadowing effect on western criticism in its turn.

It seems that the anthology was, like several others, put together towards the middle of the 2nd/8th century by the transmitter Ḥammād [*q.v.*], called "al-Rāwiya"; it seems to have been already known to Ibn Ḳutayba [*q.v.*] in the next century not under that title but as "the Seven" (*Shiʿr*, ed. Shākir, i, 188). The qualification of *muʿallaḳāt*, of uncertain origin, probably appears around this time. Among the proposed etymologies, the oldest, and probably the one most to be regarded with caution, claims that the universal admiration for these poems led the ancients to write them on cloth in letters of gold (whence the other appellation of *mudhahhabāt*, applied to collections which contain all or a part of these same poems) and to suspend them (*ʿallaḳa*) on the walls of the Kaʿba. Among those giving this explanation, one might mention Ibn ʿAbd Rabbihi (d. 329/940), Ibn Rashīḳ (mid-5th/11th century), Ibn Khaldūn (d. 808/1406), al-Suyūṭī (d. 911/1505) and some modern critics who are little affected by knowledge of criticism. Others, such as Ibn al-Naḥḥās (d. 338/950), reject this without being able to substitute for it any more satisfactory etymology. Modern Arabists, since the time of Lyall (*Ancient Arabian poetry*, London 1885), hold the more feasible view that the connection with the use of *ʿilḳ*, pl. *aʿlāḳ* in the sense of "necklace, ornament" often found in the titles of old works of the anthology or collection type, makes a rendering with the meaning of "collars" or "hanging jewels" more likely.

Since the time of the origins of the poems, the number and identity of the authors of the *Muʿallaḳāt* have themselves varied. The present-day observer, whose own subjective choice naturally has no validity here, can only take cognisance of the lists successively put forward through the ages. Al-Aṣmaʿī (d. 213/828) seems already to have gathered together six poems under the title of *K. al-Ḳaṣāʾid al-sitt*, according to Ibn al-Nadīm (*Fihrist*, Cairo n.d., 88). Abū ʿUbayda (d. 209/824) and then Ibn Ḳutayba (d. 276/889) knew of a collection of seven poems, a tradition which seems to take fixed shape with the *Djamhara* of Abū Zayd al-Ḳurashī (end of the 3rd/9th century), which contains the names of Imruʾ al-Ḳays, Zuhayr b. Abī Sulmā, al-Nābigha al-Dhubyānī, al-Aʿshā Maymūn b. Ḳays, Labīd b. Rabīʿa, ʿAmr b. Kulthūm and Ṭarafa b. al-ʿAbd. Ibn al-Naḥḥās for his part lists Imruʾ al-Ḳays, Ṭarafa, Zuhayr, Labīd, ʿAmr, al-Ḥārith b. Ḥilliza and ʿAntara b. Shaddād. These fairly varying lists are perhaps to be explained in certain cases by the evolution of cricitism, but more likely from combinations of circumstances involving tribal rivalries. All these persons lived substantially before the coming of Islam, in highly diverse and often antagonistic changes of circumstance: Christian, Jewish, Ghassānid environments, tribal confederations, etc., whose tensions must only have become gradually relaxed, leaving their traces in the literary judgments of the earliest, and often in much later, times.

Moreover, around the same time there appeared the collection of nine poems, adding to Ibn al-Naḥḥās's selection the names of al-Nābigha and al-Aʿshā (e.g. in al-Zawzanī, 5th/11th century).

Finally, another critic of the opening years of the 6th/12th century, al-Tibrīzī, enumerates ten *Muʿallaḳāt* by adding to the previous names that of ʿAbīd b. al-Abraṣ. Clearly, the only names common to all the lists are those of Imruʾ al-Ḳays. Ṭarafa, Zuhayr, Labīd and ʿAmr.

The personality of each of all these authors is delineated, as far as the evidence allows, and their work analysed in the individual *EI* articles on them. In general, other poems are attributed to them as well as their *Muʿallaḳa*, sometimes collected together into a *dīwān*.

Here we will note only the problems raised by these famous poems, beginning with that regarding their authenticity. The personality of the "transmitters"

such as Ḥammād, the presumed "originator" of the *Muʿallaḳāt*, and the uncertainties which surround their actions lead one to think that the attribution of these poems to persons duly classified and identified should be strongly regarded with caution. The faculties of adaptation, even of imagination, by these intermediaries—themselves poets—do not authorise us to see in the "official" anthologies anything more than the reflection of an ancient poetical situation, expressing itself by poems more or less arbitrarily taken from a much greater and more varied production, at least as representative in any case of the ancient poetic genius.

Out of the lively debate raised up by Ṭāhā Ḥusayn in the nineteen-twenties when, as the first person in the Arabic-speaking environment, he cast doubt on the authenticity of pre-Islamic poetry, a middle position has emerged which is also that of the orientalists: in their form and content, and given that they comprise in part elements almost certainly apocryphal, the *Muʿallaḳāt* must be considered as fixed, if not stereotyped, specimens of a poetic tradition—already very old—vigorously flourishing in different parts of the Arabian peninsula. This tradition was made up of the *ḳaṣīda*, comparatively lengthy, with a monorhyme, in the long metres which became classical, and dealing with the limited themes, in various proportions, which are described in the article ḲAṢĪDA.

(G. LECOMTE)

MUʿALLIM NĀDJĪ, Ottoman Turkish poet, born in Istanbul in 1850 and died there in 1893. He had a career as a school teacher, state employee and journalist, and later in his life was appointed official historian by the sultan ʿAbd al-Ḥamīd II [*q.v.*].

Nādjī's father died when he was very young, hence he was brought up by relatives and had to earn his living at a very early age. The little education which he received was a highly traditional one. Then he came into contact with the modern writers of his time, Aḥmed Midḥat, Redjāʾī-zāde Ekrem and Nāmīḳ Kemāl [*q.vv.*]. Aḥmed Midḥat, Nādjī's father-in-law, put him in charge of the literary section of the newspaper which he owned, *Terdjümān-ĭ Ḥaḳīḳat*. There, Nādjī seemed to support the poets following the old tradition and clashed with those upholding modern poetry, and after some clashes between him and the modernists, Aḥmed Midḥat released him from his duties on the newspaper.

At the beginning of his career as a poet, Nādjī wrote modern poetry in a simple language, but then he turned to classical *Dīwān* poetry and excelled in its techniques, especially in the use of the *ʿarūḍ* metre. Although he seemed to be siding with the old, he was actually caught up between the old and the new trends in Turkish literature, himself writing both modern and classical poetry. He believed that there was no difference between what was good in the East and the West, except that for him, the Turkish national spirit entailed upholding the traditions which included classical poetry.

Some of the themes in his poems are very modern in that they are about common people within everyday surroundings, and in such poems he uses everyday language. Most of his poems reflect his own feelings, with such themes as loneliness, alienation and escape. Although his poems are usually good in structure, with perfect metre, rhyme and harmony, the content is trivial; he lacked imagination and was very simplistic in his views, being only concerned with poetic style. As a reaction to *Tanẓīmāt* poetry that stressed content, Nādjī stressed structure, foreshadowing the *Therwet-i Fünūn* [*q.v.*] school of writers.

He was highly concerned about the Ottoman Turkish language, and regretted the deterioration of the language in the name of simplification and modernisation. He was likewise concerned about the relations between *ʿarūḍ* metre and the Turkish language, and worked on harmonising them.

His works include collections of his poems *Āteshpāre* (1883), *Sherāre* (1884) and *Fürūzan* (1885); essays, *Muʿallim* (1886) and *Demdeme* (1887); memoirs; *ʿÖmer'in čodjuḳlughu* (1889); a play, *Heder* (1920); a book on literary terms, *Iṣlāḥat-ĭ edebiyye* (1889); and an unfinished dictionary, *Lughat-ĭ Nādjī* (1890).

MUʿĀMALĀT (A.), a term which designates in works of *fiḳh* the bilateral contracts as opposed to the *ʿibādāt* [*q.v.*] which constitute the "ritual of Islamic law". Also, in its strict and first sense *muʿāmalāt* are supposed to mean transactions concerning credit granted by a donor to a beneficiary (al-Shāfiʿī, *K. al-Umm*, iii, 239 f.).

More generally, within *fiḳh* understood as the deontology forced upon the Muslim, the *muʿāmalāt* "preside over the relations of men among themselves" (H. Laoust). In other words, they define juridico-human relations and ensure that the Muslim's behaviour conforms to juridico-moral theories (R. Brunschvig). Here we are in the field of *kalām fiḳhī* and, more precisely, *ʿamalī*, dealing with problems of conduct, as opposed to *kalām naẓarī* which is the branch that treats of dogmatic theology dealt with in *ʿilm* of *mukāshafa* (al-Ghazālī, *Iḥyāʾ*). But it is still actually *kalām*, in the sense that the *muʿāmalāt* were established by a process of reflection which aims to regulate the conduct of Muslims in their communal

relations. Also, we can read in the *Lumaᶜ*, 68, of Abū Isḥāḳ al-Shīrāzī, the Shāfiᶜī and Ashᶜarī author (d. 476/1083), that the *muᶜāmalāt* in their detailed prescriptions (*furūᶜ al-muᶜāmalāt*) are dependent on rational examination (*naẓar*) and argumentation (*istidlāl*). However, the decisions with regard to this regulation are dependent on *idjmāᶜ*.

The concept of *ᶜamal* is often attested in the Ḳurʾān, but that of *muᶜāmala* is absent. If we have recourse to the *LA*, xi, 476, we read there that *muᶜāmala* in the language of the people of ᶜIrāḳ is *musāḳāt* [*q.v.*] in the language of the people of the Ḥidjāz. The *Lisān* thus retains the meaning relating to transactional relations in agriculture as being specific to the term *muᶜāmala*. In other words, a practice concerning lands acquired as shared allotments and kept up by the community is seen as originating in an Islamic ethic governing the behaviour of the members of the *umma* and as having its basis in a certain way of conceiving relations between farming partners (*muzāraᶜa* [*q.v.*]). In its original meaning, the term *muᶜāmala* thus reflects the community's way of life at the beginning of Islam. We will see that with the development of Islamic civilisation, the concept was to become diversified and to develop its areas of application.

According to Mālik (d. 179/795), according to al-Shāfiᶜī, and in general according to the *fuḳahāʾ*, the original and technical meaning of *muᶜāmala* is constantly attested (*Muwaṭṭaʾ*; *K. al-Umm*; al-Ṭabarī, *Ikhtilāf*). In their works of *fiḳh*, these authors use this term to express their dominant preoccupation, i.e. the arithmetical determination of transactions and credit operations concerning the cultivations of the Arabic regions inhabited by the *umma*. In relation to this problem, Schacht demonstrated that *muᶜāmala*, understood in the strict sense of transaction, is a subterfuge (*ḥīla*) allowing them to bypass the prohibition on taking interest (*ribā* [*q.v.*]). It is a euphemistic name adopted as a modest word for *mukhāṭara*, more commonly called *ināʾ*. In this sense *muᶜāmala* appears to be a credit agreed by a lender called *tādjir* or merchant (note that *muᶜāmala* in this sense of the term is retained in the modern language). In fact, the merchant operates as a lender. This custom, Schacht states, was practised in Medina and goes back to the time of Mālik b. Anas (*Introduction*, 79, 151-3). To sum up, already in this period, at least in the Ḥidjāz, the term *muᶜāmala* extended beyond contracts of cultivation (*muzāraᶜa*) and designated a whole body of rental transactions governing employer-employee relations.

With the humanist al-Djāḥiẓ (d. 255/869), the concept took on a psycho-social significance and took on a cultural colouring in the broad sense of the term. The word *muᶜāmala* designates in this author's writing the behaviour dictated by a body of moral rules (*ādāb*; cf. *Risāla fī 'l-maᶜāsh wa 'l-maᶜād*). According to these ethics, spiritual behaviour and material behaviour are governed by rules "established in terms of basic material elements" which are the same for both types of behaviour (Fr. tr. Ch. Vial).

In the classical period, the *muᶜāmalāt* were supposed to be contained in a body of knowledge which had as its subject juridical human relations and the deontological rules of a disciplinary ethic. Keeping the quantitative aspect of this discipline, the Ikhwān al-Ṣafāʾ were to categorise the *muᶜāmalāt* into disciplinary (*riyāḍiyya*) sciences and moralising sciences (*ᶜilm al-ādāb*). This category of knowledge is treated with that of arithmetic (*ᶜilm al-ḥisāb wa 'l-muᶜāmalāt*; Ikhwān, *Rasāʾil*, ii, 266). According to the Ikhwān, the science of *muᶜāmalāt* depends on the knowledge of others; it implies a pragmatic psychology.

In the Iḥyāʾ of al-Ghazālī (d. 505/1111), the study of *muᶜāmalāt* is contained in that of *fiḳh*. God's right forms the basis for the ritual obligations (*al-ᶜibādāt*), such as purification, prayer, legal alms, etc. The right of created beings forms the basis for the "customs (*al-ᶜādāt*) that can be looked at from two viewpoints: (a) exchanges (*al-muᶜāmalāt*), such as buying, selling, association, giving, lending, debt, etc. (b) contracts (*al-muᶜāḳada*), such as marriage, divorce, emancipation, slavery, rights of succession, etc." (Gardet-Anawati, 119). Here *fiḳh* forms part of the *ᶜādāt* or community customs which themselves are nothing but the translation into concrete form of the concept of *ādāb*. In this context, the *muᶜāmalāt* are the manifestations of a certain etiquette regulated by a deontology in response to juridico-moral considerations. This deontology supplies solutions to the problems of conduct posed by socio-economic situations. There is, according to al-Ghazālī, continuity between the cultural concept of *ādāb* and the juridico-religious (*fiḳhī*) concept of *muᶜāmalāt*. It is the subject of the second *rubᶜ* of the *Iḥyāʾ*, the first dealing with the *ᶜibādāt*, the third with the *muhlikāt* and the fourth with the *mundjiyāt*. Also, the *muᶜāmalāt* are integrated into a rigorously structured body of ethics. Finally, the constitution of this code of conduct of the Muslim calls for knowledge of the states of the soul (*ḥāl*) which condition actions and the qualification (*Iḥyāʾ*, iv, 306; Laoust, *Politique*).

Ibn Khaldūn himself was to stress the sociological aspect of the question, insisting on the fact that this problematic situation is dependent on reasoning. According to this author, the science of *muᶜāmalāt* represents a branch (*farᶜ*) of *ᶜilm al-ḥisāb* which forms part of rational, positive (*ᶜaḳliyya, ṭabīᶜiyya*) knowledge as opposed to traditional, scriptural (*ᶜaḳliyya waḍᶜiyya*) knowledge, in which Ibn Khaldūn ranks *ḥadīth*, *fiḳh*, the *uṣūl al-fiḳh* and *kalām* (*Muḳaddima*, 129 f. and especially 484). These two types of knowledge are diversified and refined in proportion to the development of civilisations. In this sense, Ibn Khaldūn is a forerunner of the modern theories on the matter.

According to the former Muḥammad ᶜAbduh (d. 1905 [*q.v.*]), followed in this by his disciple Rashīd Riḍā (d. 1935 [*q.v.*]), only the general principles of *muᶜāmalāt* were revealed. Also in Ḳurʾān, II, 188, and IV, 29, God forbids men from mutually robbing one another. The jurists derived detailed consequences from it (Arnaldez, 27). This way of looking at things is adopted by the moderns, both Sunnī and Shīᶜī. The latter also have their reformers, represented by al-Wāḥid al-Bihbahānī, who are reacting against the Akhbārī school. This viewpoint is taken up by contemporary authors such as the Pakistanis Muḥammad Iqbal and K. Faruki and only recently by the Egyptian judge M. al-ᶜAshmawī. Reviving the tradition of Shaykh ᶜAlī ᶜAbd al-Rāziḳ (d. 1965), al-ᶜAshmawī published a short work entitled *al-Islām al-siyāsī*. The fundamental idea of this work is to distinguish clearly between the perennial value of cultic prescriptions (*ᶜibādāt*) established by revelation and the relative character of juridical relations betwen men (*muᶜāmalāt*) subject to the requirements of history (cf. Anawati, unpubl. communication to the UEAI Congress, Budapest 1988). Despite the attempts of certain contemporary jurists to return to an obscurantist literalism, we may say that in all the Islamic countries there is a clear tendency to revive religious jurisdiction with regard to *muᶜāmalāt* (*Colloques*, 118-19).

As for that which related to the manner in which this discipline is conceived by the different juridical schools, we can say that, if the divergences regarding

the *ʿibādāt* are very few between Sunnī and Ismāʿīlī Shīʿīs, they are well-known as regards the *muʿāmalāt*. This is especially true for the transactions dealing with marriage, divorce and inheritance. It will be noted in this regard that the Ismāʿīlī practice differs as much from the Sunnī as from the Twelver Shīʿī ones (*Iḳtiṣār*, xxxviii).

(M. BERNAND)

MUʿAMMĀ (A.), literally, "something made obscure, hidden".

1. In the sense of word puzzle, riddle [see LUGHZ].

2. In the sense of secret writing, code. Codes were regularly used in classical Antiquity. Thus the *skytalē* of the Spartans, mentioned by Plutarch, in which a message was written on a parchment or leather ribbon which was wrapped round a tapered wooden baton for purposes of writing and then could only be read by a recipient possessing a baton of the same shape and size, is an early example of a typical transposition cipher. But the Greeks also used more scientific, numerical ciphers based on the substitution principle, and it was a Greek author, Aeneas Tacticus (4th century BC) who wrote the earliest discussion of cryptography so far known in a larger work of his on military techniques. Within the Near East, the ancient Egyptians certainly used cryptography, and Talmudic scholars were interested in secret writing and used certain techniques of a cryptographic nature in their cabbalistic writings.

Mediaeval Islamic society was heir to much of the heritage of previous cultures like these, seen in a marked interest of antiquarian scholars in secret writings, unknown scripts and numerology. This is exemplified at an early date in the *K. Shawḳ al-mustahām fī maʿrifat rumūz al-aḳlām* attributed to Ibn Waḥshiyya (*flor.* 3rd/9th century [*q.v.*]); some of the alphabets which he describes may have been used as ciphers, according to T. Fahd (*loc. cit.*). But the genius of Islamic civilisation itself and its strong literary bias, brought a concern with word games, literary conceits, paronomasia, riddles, acrostics, etc. [see LUGHZ]. Out of all these strands arose an interest in and an employment of codes for secret communication within the caliphate, at a period when distances were great, roads were dangerous and messages could not safely be left *en clair*. Handling secret messages and codes, the use of invisible inks and other methods of concealment, must have been part of the training of the secretary or *kātib* [*q.v.*], and we know, for instance, that the Ghaznawid chancery under Masʿūd b. Maḥmūd sent letters (*muʿammā-nāma*) in code (Bayhaḳī, *Taʾrīkh-i Masʿūdī*, ed. Ghanī and Fayyāḍ, 318). It was not, however, apparently until Mamlūk times that we have a work specifically devoted to such topics, a work mentioned by Ḥādjdjī Khalīfa (ed. Flugel, vi, 30, no. 12603) as the *Miftāḥ al-rumūz fī īḍāḥ al-marmūz* of Tādj al-Dīn ʿAlī b. Muḥammad al-Mawṣilī (712-62/1312-61, known also as the author of a theological work, see Brockelmann, II², 214, S II, 213). This is lost, but seems to be the basis of what the slightly later writer al-Ḳalḳashandī [*q.v.*] has to say in his monumental manual for secretaries, the *Ṣubḥ al-aʿshā* (ix, 229-48). This last author writes in detail about the chemical processes involved in recording and revealing secret messages; about cryptography proper (*taʿmiya*), including methods for enciphering a message, either by using an ancient and obscure script or by using a transposition cipher; and about cryptanalysis (*ḥall al-mutardjam*), dealing in practice only with codes in Arabic and enunciating such basic principles as counting letter frequencies and taking into account the characteristic combinations of letters in Arabic words, according to the phonetic structure of the language (see C.E. Bosworth, *The section on codes and their decipherment in Qalqashandī's* Ṣubḥ al-aʿshā, in *JSS*, viii [1963], 17-33, also in idem, *Medieval Arabic culture and administration*, London 1982, xiii).

What might be termed modern cryptography begins in late mediaeval and Renaissance Italy, and soon becomes part of the common stock of diplomacy and intelligence-gathering. The Ottomans used codes and secret writing, as did the rulers of Persia. Thus a work on codes and secret writing, called *al-Durar al-muntakhaba*, was published at Istanbul in 1221/1806-7 by one Meḥmed Ḥafīd; whilst three works on cryptography, cryptanalysis and the use of codes for private and state correspondence respectively, were composed in the late 19th and early 20th century Persia by Mīrzā Maḥmūd b. Yūsuf (the *Miftāḥ al-rumūz*, the *Kashf al-asrār-i Nāṣirī* and the *K. Nāsikh al-rumūz wa-ramz-i Maḥmūdī*, Tehran 1313, 1319, 1320 AH), who was awarded the *laḳab* [*q.v.*] of Miftāḥ al-Mulk by Nāṣir al-Dīn Shāh Ḳādjār for his services to the government as an encoder and decipherer (see Cl. Huart, review in *JA*, Ser. 10, vol. ix [March-April 1907], 360-2).

their use, see D. Kahn, *The codebreakers*, New York and London 1967. (C.E. Bosworth)

MUʿAMMAR (A.), appellative of legendary as well as historical people who are alleged to have lived to an exceptionally great age.

Like Judaism and other ancient religions, Islam knows a category of people, almost always men, who are characterised by extreme longevity granted by God. These persons walked the earth immediately following the Creation and are believed to have done so intermittently until today (for a 20th century example, see H. St. John B. Philby, *Arabian days*, London 1948, the 23rd photograph between pp. 224 and 225). Whereas for Jews Methuselah is the longest living patriarch, for Muslims this is Noah. Definitions of how old a person must be to deserve the appellative differ widely. Since the Prophet Muḥammad is credited with the statement that people who reach the age of seventy are especially blessed, this age is sometimes taken as starting point for the appellative to be applicable (cf. Goldziher, *Abhandlungen*, ii, pp. xxix f.), although the lower limit of eighty years is also given. Usually the lower limits fluctuate between one hundred and one hundred and twenty, while there is not really an upper limit. Various *muʿammarūn* are believed to have reached ages of three to six hundred years, but reports about still longer living persons have emerged through the centuries in all the regions of the Islamic world.

Still the most complete survey of *muʿammarūn* today is I. Goldziher's study with which he introduced his edition of one of the oldest collections of poetry attributed to various long-lived poets, sc. Abū Ḥātim al-Sidjistānī, d. 255/869 [*q.v.*], *Kitāb al-Muʿammarīn*, in his *Abhandlungen zur arabischen Philologie*, ii, Leiden 1889. (Abū Ḥātim's is not the oldest work on this subject; al-Haytham b. ʿAdī, d. 206/821 [*q.v.*], is also credited with a book on *muʿammarūn*.) The poems preserved in this anthology deal with descriptions of the hardships of old age—often heralded by the greying of hair and beard—mixed with outbursts of nostalgia about lost youth and vigour. Verses of this sort constitute a separate genre in Arabic poetry practised by many poets of all times, also by those who do not (yet) deserve the appellative of *muʿammarūn*.

Apart from the richly annotated edition of this poetry and the accompanying *akhbār*, Goldziher gives a general introduction to the phenomenon which can be summarised under the following headings: a survey of the oldest *muʿammarūn* from pre-Islamic history: tribal patriarchs, princes, heroes and sages; the different ways in which old age is said to debilitate; a list of works written and compiled after Abū Ḥātim in which there are occasional references to, as well as special chapters about, *muʿammarūn* and their poetry; and the alleged role played by *muʿammarūn* in the evolution of guilds (*futuwwa* [*q.v.*]) in Islam, which by means of long-lived patrons seek to project their origins back to a time long before the advent of Islam.

Goldziher also devotes space to the position of alleged *muʿammarūn* in the religious theorising of Sunnī and Shīʿī scholars. For the Shīʿa, this boils down to the spreading of the belief in a hidden place from where he will emerge one day as the expected *mahdī* [*q.v.*] to rule the world once more with justice. The *muʿammar* phenomenon is adduced here to bolster the doctrine and to lend the alleged re-emergence plausibility (cf. *Abhandlungen*, ii, pp. lxii ff.). In this way Shīʿa doctrine benefitted from the ancient lore of the *muʿammarūn*, doctrine and folklore mutually strengthening each other.

Sunnī Muslims have also made considerable use of the belief in the existence of the long-lived. *Muʿammarūn*, legendary as well as historical persons—the latter not necessarily themselves responsible for the advanced ages they are alleged to have attained—are depicted as having played an important role as transmitters of Prophetic traditions. This is especially attested in the earliest development of Kūfan *isnāds*, but on a lesser scale also in that of Baṣran *isnāds*. From the canonical collections it appears that *ḥadīth* transmission in Kūfa is connected in particular with Companions whose names are closely linked to Kūfa, among whom Ibn Masʿūd [*q.v.*] is the most famous and prolific. Well, in the *isnād* strands from the Prophet, whose words are transmitted by a Companion via one or two other authorities, to the "common link" (for this term, see *Bibl.*), Ibn Masʿūd's traditions required the names of two or three of Kūfa's distinguished jurisconsults, e.g. Ibrāhīm al-Nakhaʿī (d. 96/714 [*q.v.*]) before the time gap between Prophet and "common link" was properly bridged. Ibrāhīm was born too late (*ca.* 50/670) to assume—or be placed in—the position of direct pupil of Ibn Masʿūd (d. 32-3/652-3), so one more transmitter had to be inserted between them to create an uninterrupted *isnād*: this position was mostly filled by a member of Ibn Masʿūd's so-called "circle", e.g. ʿAlḳama, Masrūḳ, al-Aswad b. Yazīd and several others. It is here that *muʿammarūn* make their entrance: the strands: Prophet > Ibn Masʿūd > one of his circle > Ibrāhīm > "common link" acquired eventually large numbers of alternative strands supporting more or less the same *matns*, parading instead of five names only four: Prophet > Ibn Masʿūd > a *muʿammar* > "common link". Sometimes this *muʿammar* was a historical person who claimed to have reached an advanced age, this claim being eagerly emphasised after his death by his pupil, the "common link", who profited from this age. At other times the *muʿammar* was a fictitious person, wholly invented, complete with his allegedly advanced age at death, by the "common link" who pretended to have heard his traditions. The early sources yield in all a dozen or so names of persons populating Kūfan *isnāds* whose ages at death mark them as *muʿammarūn*, two of whom may have been historical personalities, the rest fictitious. In Baṣran *isnāds* there are only two such *muʿammarūn*, but both were probably historical while one of these was even a "common link" in his own right. For their names and dates, see al-Dhahabī's *Ahl al-miʾa fa-ṣāʿidan*, and *WZKM* (1991).

In the course of the 2nd/8th century the *muʿammar* phenomenon lost its usefulness and popularity, but it never died out completely. There is even one legend about a *muʿammar* who was some 700 years old when he died, Bābā Ratan [*q.v.*] (cf. J. Horovitz, *Bābā Ratan, the Saint of Bhatinda*, in *Journal of the Panjab Historical Society*, ii [1913-14], 97-117, an Indian saint revered by adherents of several local religions. The Muslims of the region maintain that he was already alive at the time of Muḥammad and once did him a good turn. Ibn Ḥadjar (*Iṣāba fī tamyīz al-ṣaḥāba*, ed. Badjāwī, ii, 523-39) duly included him among the Companions.

Bibliography: Given in the article. Fundamental is Goldziher's work. Virtually all centenarians from ancient times until his own day are mentioned by Dhahabī, *Ahl al-miʾa fa-ṣāʿidan*, ed. J. Sublet, in *Cahiers d'onomastique arabe*, i (1979), 99-159; G.H.A. Juynboll, *The role of* muʿammarūn *in the earthly development of the* isnād, in *WZKM* (1991); for the technical *ḥadīth* term "common link", see idem, *Muslim tradition. (G.H.A. JUYNBOLL)

MUᶜAMMAR B. ᶜABBĀD AL-SULAMĪ, Abū ᶜAmr or Abu ʾl-Muᶜtamir, a leading Muᶜtazilī theologian from Baṣra who lived during the reign of Hārūn al-Rashīd (reigned 170-93/786-809) and died in 215/830.

According to Ibn Ḥazm (*al-Fiṣal*, iv, 194, 1 f.) he was a client (*mawlā*) of the Banū Sulaymān and seems to have earned his livelihood as a druggist (*ᶜaṭṭār*). Apparently for his doctrine of endless *maᶜānī*, he was accused by his Muᶜtazilī colleagues before the governor of Baṣra and fled to Baghdād. There he appears to have hidden in the house of Ibrāhīm b. al-Sindī [*q.v.*], the son of the Police Chief al-Sindī b. Shāhik. Not reliable is the report that Muᶜammar was sent by Hārūn al-Rashīd to the Indian king for discussions of theological questions and was poisoned on the way. Among his pupils are mentioned Hishām b. ᶜAmr al-Fuwaṭī [*q.v.*] and above all Bishr b. al-Muᶜtamir [*q.v.*], the founder of the Muᶜtazilī school in Baghdād. One of his famous disputants was al-Naẓẓām [*q.v.*]. According to the *Fihrist* of Ibn al-Nadīm, he wrote four treatises on central themes of his philosophy (*Kitāb al-Maᶜānī; Kitāb al-Istiṭāᶜa; Kitāb al-djuzʾ alladhī lā yatadjazzaʾ; al-Ḳawl bi ʾl-aᶜrāḍ wa ʾl-djawāhir*), but also on natural sciences (*Kitāb ᶜIllat al-ḳarasṭūn wa ʾl-mirʾāt*, "On the principle of the steelyard and the mirror"; *Kitāb al-Layl wa ʾl-nahār wa ʾl-amwāl*, "On night and day and their end (?)").

The only sources on Muᶜammar's philosophy are preserved in later sources which give us a fragmentary idea of his doctrine, which is not yet clear in all details. They reflect the continuing discussions of his time, especially of Ḍirār b. ᶜAmr [*q.v.* in Suppl.] and al-Naẓẓām, on God, His creation and man. Like Ḍirār and other Muᶜtazilīs, he presupposes the concept of God's transcendence; however, he refrained from the systematic development of a negative theology as we find it in Ḍirār. God's willing and knowing is endlessly effective and not determinable or definable as something effected by God. Against Abu ʾl-Hudhayl al-ᶜAllāf [*q.v.*], they cannot even be identified with God himself. Muᶜammar's doctrine of God as endless active power which is not reflected in His creation is taken over by his pupil Hishām b. ᶜAmr al-Fuwaṭī. It was the starting-point of his theories on substance (*djawhar, djism*), accidents (*aᶜrāḍ*), nature (*ṭabᶜ, ṭabīᶜa*) and *maᶜānī*. As God's endless power is not reflected in the visible world, he has not created the accidents, the phenomena, but the substrates, the substances in which by nature inhere the accidents. Contrary to Ḍirār and similar to al-Naẓẓām, who here replaces the doctrine of the God-created "cause" (*sabab*) as taught by the Shīᶜī Hishām al-Ḥakam [*q.v.*], nature appears to be a causal principle which causes "accidents", the "generations" (*mutawallidāt*) and "forms" (*hayʾāt*) of substances. Different from al-Naẓẓām, who interprets nature as something imposed on the substances by God, Muᶜammar considers nature as an independent factor, as a determinating element which makes superfluous any involvement of the transcendent deity in the world of phenomena.

This idea of God's unconcernedness with the visible world is further developed in a unique manner in Muᶜammar's theory of the *maᶜānī*, determinant factors which themselves are determined by other determinant factors *ad infinitum*. If we implicate in this endless series of *maᶜānī* the notion of God as first determinant Who Himself is not determined by another determinant, we may detect here parallels with Aristotle's doctrine of the πρῶτον κινοῦν ἀκίνητον and of the ἄνθρωπος-ἄνθρωπον-γεννᾷ argument. However, the emphasis of Muᶜammar is different: *maᶜānī* are determinating causes of similarity and dissimilarity between two things and guarantee the undeterminedness of God's endless dynamis. Muᶜammar does not give a solution of the problem of how determinating *maᶜānī* at the same time can be determined entities (and in this are similar to the accidents). His doctrine appears to be a strange mixture of "Platonising" ideas, preformations and "Aristotelian" conceptions of matter, of substance void of εἶδος.

This becomes evident in Muᶜammar's definition of the primary substance, the atom: it already contains eidetically three dimensions, length, breadth and depth, which become visible in the combination of eight to each other identical atoms to a cube. This is a further development of Ḍirār's explanation of substances as a conglomeration of "accidents", of "parts"; apparently it was not taken up by later Muᶜtazilīs (cf. Daiber, *Muᶜammar*, 333 ff.).

The theory here described of determinating *maᶜānī* as constituents of God-created substances and their accidents which inhere in them by "nature" becomes the basis for Muᶜammar's theodicy and his doctrine of free will. The evil in the world is a causal effect of nature and not based on God's predestination. Consequently, man is gifted with free will: he can decide about his actions which, however, are determined by the causality of nature. Man's actions appear to be accidents of his God-created substance. Here, too, Muᶜammar differs from the more "materialistic" explanation by Ḍirār and his "school" of man as a conglomerate of perceivable accidents. We find some similarities to al-Naẓẓām and his pupils (cf. Daiber, *op. cit.*, 342 ff.). Muᶜammar's theory of free will appears to be more expanded in the teaching of his pupil Bishr b. al-Muᶜtamir (cf. Daiber, *op. cit.*, 399 ff.); it is already a serious attempt to develop the theory of Hishām b. al-Ḥakam and his contemporary Ḍirār concerning man's actions as created by God and "acquired" by man who has freedom of choice, to a more complex doctrine which differentiates between man's free will, the causality of nature and the createdness of substances in which accidents inhere by the necessity of nature. Al-Naẓẓām considered nature as something created by God; Muᶜammar, however, could classify nature as an independent factor, as a principle which regulates the causality between the "forms" (*hayʾāt*) of substances, their accidents on the one hand and the determining-determined endless chain of *maᶜānī* on the other hand.

Muᶜammar's doctrine is a lively mirror-picture of continuing discussions on the relation between God, man and world; it influenced the Muᶜtazilī school of Baghdād in a decisive manner and contributed to the development of the Muᶜtazilī theory of the createdness of the Ḳurʾān which during the reign of al-Maʾmūn was propagated as official dogma of the state [see MIḤNA]. God's word as every attribute cannot be defined and appears as endless power of acting which is not reflectable in actions, accidental realisations; it is not identical with the spoken or written

word, the Ḳurʾān, which can only be classified as an accident, as accidental action of that substance in which it inheres as heard or written word.

In his theory of the Imāmate, Muᶜammar follows the neutral attitude of his contemporaries Ḍirār b. ᶜAmr and Abu 'l-Hudhayl al-ᶜAllāf; ultimately it can be traced back to Wāṣil b. ᶜAṭāʾ (on whom cf. now Daiber, *Wāṣil Ibn ᶜAṭāʾ als Prediger und Theologe*, Leiden 1988, 8, 14 ff.). Muᶜammar refrains from any judgment on the question which party of the participants in the Battle of the Camel was right; at the same time he follows the pro-ᶜAlid tendencies of the ᶜAbbāsids.

MUᶜAMMIR [see muᶜammar].

al-**MUᶜAMMARIYYA** [see al-khaṭṭābiyya].

MUᶜANᶜAN (a.), a technical term in the science of *ḥadīth* [*q.v.*]. It is used to indicate that established transmission methods, e.g. as indicated by terms such as *ḥaddathanī*, *akhbaranī* or *samiᶜtu*, are not known to have occurred, or have not been observed, between the transmitters of one or more links in an *isnād* [*q.v.*]. The method described by the term *muᶜanᶜan* solely consists of the preposition *ᶜan* "on the authority of". *Isnāds* with one or more times the preposition *ᶜan* between two transmitters are called *muᶜanᶜan isnāds*. Closely connected with this sort of *isnād* and often dealt with in the same breath is the so-called *muʾannan isnād*, which introduces the information transmitted by an older to a younger authority simply by means of the conjunction *anna*, "that", similarly without indications such as *ḥaddathanī* etc. In al-Khaṭīb al-Baghdādī, *Kitāb al-Kifāya fī ᶜilm al-riwāya*, 407, Mālik b. Anas (d. 179/795 [*q.v.*]) is mentioned as probably the first to equate both *isnāds* (see also Ṣubḥī al-Ṣāliḥ, *ᶜUlūm al-ḥadīth wa-muṣṭalaḥuh*, 236).

The term *muᶜanᶜan*, or at least discussions about the phenomenon, can be traced to relatively early times. Allegedly the first great *ridjāl* expert, Shuᶜba b. al-Ḥadjdjādj (d. 160/777 [*q.v.*]) from Baṣra, is reported to have said *Fulān ᶜan fulān laysa bi-ḥadīth* ("Someone *on the authority of* someone [else] does not constitute a [proper] *ḥadīth*", see Ibn Radjab, *Sharḥ ᶜilal al-Tirmidhī*, 269). It is also alluded to in the *Risāla* of al-Shāfiᶜī (d. 204/820 [*q.v.*]) (ed. A. M. Shākir, 378-80).

The *ᶜanᶜana* issue first receives a good deal of attention in discussions among *ḥadīth* experts referred to in the introductory chapter with which Muslim b. al-Ḥadjdjādj (d. 261/875 [*q.v.*]) begins his tradition collection, the *Ṣaḥīḥ*. The third and final part of this introduction (ed. M.F. ᶜAbd al-Bāḳī, i, 29-35, translated in *JSAI*, v [1984], 293-302) is devoted to a discussion on the admissibility of *isnāds* with one or more links being described merely by *ᶜan*. Muslim mentions one self-styled *ḥadīth* expert (*baᶜḍ muntaḥilī al-ḥadīth*), whom he does not identify, as having stipulated that the mere use of *ᶜan* is not sufficient to assert the reliability of the transmission procedure between each pair of transmitters in an *isnād*. Rather, this expert insists that *samāᶜ*, "hearing", should be established between pairs of transmitters in the case of every single *isnād* in which *ᶜan* occurs. Muslim, on the other hand, declares himself to be content with *ᶜan*, as long as contemporaneity (*muᶜāṣara*), and hence even encounter (*liḳāʾ*), may be deemed likely on the basis of the fact that both transmitters are known to have been reliable (*thiḳa*) and as long as no-one is suspected of having committed *tadlīs* [*q.v.*], a rather vague term indicating a wide range of different ways of deceit in tradition transmission. Muslim's argument in favour of his lenient stance vis-à-vis *muᶜanᶜan isnāds* is simple and direct: none of the recognised *ḥadīth* experts of old has ever stipulated the discarding of such *isnāds*, as can be proven by the occurrence of dozens and dozens of traditions supported by such *isnāds* in all the prestigious collections known at the time he makes the statement, traditions which have never caused anyone to doubt their historicity. He has this argument followed by an extensive list of such traditions.

The "pseudo-traditionist", as Muslims calls his anonymous opponent, was tentatively identified by mediaeval Muslim scholars as Ibn al-Madīnī (d. 239/853 [*q.v.*]) and/or al-Bukhārī (d. 256/870 [*q.v.*]) (see for instance Ibn Radjab, *op. cit.*, 272; Ibn al-Ṣalāḥ, *Muḳaddima*, 158; cf. Goldziher, *Muhammedanische Studien*, ii, 248, Eng. tr., ii, 228-9), but this seems unlikely for three reasons: *firstly*, because the text in Muslim's introduction speaks consistently of only one man who propagated these ideas and not more than one; *secondly*, because all the tradition collections preceding that of al-Bukhārī, as well as al-Bukhārī's *Ṣaḥīḥ* itself, in addition to those collections compiled later, are riddled with *muᶜanᶜan isnāds*; and *thirdly*, because it is hard to accept that rivalry such as there may have been among collectors like Muslim and al-Bukhārī would have been of the magnitude that the former called the latter a "pseudo-expert". There are reports which claim that Muslim felt respect for his older colleague (see al-Samᶜānī, *Kitāb al-Imlāʾ wa 'l-istimlāʾ*, 136). Besides, there are good grounds for assuming that the "pseudo-expert" taken to task by Muslim in his introduction was somebody else. A case could be made for al-Ḥusayn b. ᶜAlī al-Karābīsī (d. 245/859 [*q.v.*]) (for arguments supporting this surmise, see Juynboll in *JSAI*, v, 293 f.).

The matter of admissibility of *muᶜanᶜan isnāds* never seems to have been settled definitively, but the overall majority of *ḥadīth* scholars bracketed them with *muttaṣil* (uninterrupted) *isnāds*. On the other hand, the phenomenon has never again given rise to wide-ranging discussions violent enough to upset the applecart. Until the present day, these *isnāds* are dealt with in books dealing with technical terms in the science of tradition and are invariably marked as acceptable, as long as the conditions, also formulated by Muslim, are met: *thiḳas* who are each other's contemporaries, on whom there rests no suspicion of *tadlīs*, can be considered to be honest when they claim that they have something "on the authority of" someone else; *muᶜāṣara* is then almost a guarantee for *liḳāʾ*, It must be realised that if those rejecting the admissibility of *muᶜanᶜan isnāds* had had their way, Islam's canonical tradition literature would have attained a mere fraction of the bulk it actually did attain. Reading between the lines of Muslim's chapter of his introduction on this issue leaves the reader with the impression that Muslim himself was aware that that might have happened.

MUʾANNATH [see MUDHAKKAR].

MUᶜĀRAḌA (A.) "opposition". This term indicates in Arabic literature imitation or emulation; the poet composes his work in the same rhyme and metre, and in doing so, often tries to surpass the original. The imitating of someone's work was also used sometimes as a deliberate act of hommage. The concept of *naḳāʾiḍ* ("polemic or contest or repartee poems" by, among others, Djarīr and al-Farazdaḳ [*q.vv.*]), however, is not regarded as an emulation or imitation, although poems which are based on this idea are often composed in the same rhyme and metre. In his book concerning the history of *naḳāʾiḍ* in Arabic literature, Aḥmad al-Shāyib (6 ff.) attempts to delineate the various, related concepts of *muᶜāraḍa*, *naḳīḍa* [*q.v.*], *mufākhara* [*q.v.*] and *munāfara*. A synonymous term is perhaps *muḥādhā* (see al-Ḥātimī, *Ḥilyat al-muḥāḍara*, Baghdād 1979, ii, 28 ff.). The concept of *muᶜāraḍa* was in use as early as the period of the *Djāhiliyya*, when the two poets Imruʾ al-Ḳays and Ṭarafa b. al-ᶜAbd [*q.vv.*] competed with each other in their description of a horse (two poems in the rhyme *b*). One Umm Djundad acted as their arbiter (*Aghānī*[1], vii, 128, and [3], viii, 194).

A separate place is occupied by the *muᶜāraḍa* of the Ḳurʾān. It is likely that the imitating of the Ḳurʾān in this manner was regarded by most Arabs as a blasphemy. One such imitation of the Ḳurʾān, by al-Mutanabbī [*q.v.*], relates to his supposed pretentions to being a prophet. The seventeen-year old poet composed, in the year 332/943, a large number of *ᶜibar* ("admonitions"), which imitated Ḳurʾānic verses from the Meccan period. One verse appears to have been preserved (F. Gabrieli, *Studi su al-Mutanabbi*, Rome 1972, 5-6; R. Blachère, *Un poète arabe du IVième siècle: Abou ṭ-Ṭayyib al-Motanabbi*, Paris 1935, 67; al-Badīᶜī, *al-Ṣubḥ al-munabbī ᶜan ḥaythiyyat al-Mutanabbī*, Cairo 1963, 55 ff.). Another poet, al-Maᶜarrī [*q.v.*], is rebuked for imitating the Ḳurʾān. His *Kitāb al-Fuṣūl wa 'l-ghāyāt*, which relates cryptic verses and allegories, caused his contemporaries to accuse the poet of attempting to criticise the Ḳurʾān. (Moustapha Saleh, in *BÉt. Or.*, xxii [1969], 142, 146; P. Smoor, *Kings and Bedouins in the palace of Aleppo*, Manchester 1985, 215-16). On the other hand, many poets are said to have imitated another work by al-Maᶜarrī, called the *Mulḳā al-sabīl*, and written in rhymed prose. In this context, we may point to the *Aḥkām ṣanᶜat al-kalām* by Ibn al-Ghafūr al-Kalāᶜī (see Saleh, *op. cit.*, 150-1; Iḥsān ᶜAbbās, *Taʾrīkh al-Naḳd al-adabī ᶜind al-ᶜArab*, Beirut 1978[2], 509 ff.). This author realised that he could not surpass his example.

In the field of literary theory, ᶜAbd al-Ḳāhir al-Djurdjānī [*q.v.* in Suppl.] in his *Dalāʾil al-iᶜdjāz* is generally regarded as the first to have developed original ideas about the *muᶜāraḍa*. Von Grünebaum (*Kritik und Dichtkunst*, 112, see also 120) says that Djurdjānī interprets the concept of *muᶜāraḍa* as a stylistic imitation of a certain passage with the purpose of surpassing the predecessor. According to Djurdjānī, the explanation which says that *muᶜāraḍa* intends the substitution of every word by a synonym is to be rejected. At present, however, the originality of Djurdjānī's remarks is given a more limited value, since his thoughts are to be placed within the context of his time (see Lidia Bettini, *Lingua e retorica nel V secolo*, in *Quaderni di Studi Arabi*, vi [1988] (*Atti del XIII Congresso dell 'U.E.A.I.*)).

E. Wagner (*Abū Nuwās*, Wiesbaden 1965, 246 and 333) gives examples of *muᶜāraḍa* by the ᶜAbbāsid poet Abū Nuwās [*q.v.*] and of those taken from him.

The concept of *muᶜāraḍa* is also frequently found in Andalusian poetry, e.g. in the work of Ibn Khafādja [*q.v.*]; apart from quotations of complete hemistichs (*muḍammanāt*), especially from the Eastern poets, he also uses real *muᶜāraḍāt* in which he imitates Andalusian poets such as Ibn Ṣāra (*Dīwān*, ed. Ghāzī, 366, no. 306). The Hebrew Andalusian poets also imitated Eastern Arabic poetry. In this respect we can draw attention to the "fever poem" of Moses ben Ezra, which is composed in the same rhyme and metre as the "fever poem" by al-Mutanabbī (see D. Ṣemaḥ, in *Tarbīṣ*, xxviii [1959], 397 ff.). There are also Hebrew imitations of Arabic *muwashshaḥāt* [*q.v.*].

In his book *Das Muwaššaḥ* (Weimar 1897, 227-8), M. Hartmann showed that in the 7th/13th century especially, the *muᶜāraḍa* was a popular form of art among the Arabic *muwashshaḥ* poets.

MUᶜĀRAḌA (A.) "collation" [see MUḲĀBALA].

MUᶜARRAB (A.) denotes an arabicised loan or foreign word. During their intensive study of the Arabic language, the Arab philologists did not fail to notice that numerous lexemes in Arabic are of foreign origin. They were called *muᶜarrab* (from *ᶜarraba* "to arabicise"; *aᶜraba*, with the same meaning, occurs also), and often also *dakhīl* "intruded, penetrated". A difference between the two terms cannot be determined. In its literal meaning, *muᶜarrab* comprises only the loan words which were integrated into the Arabic of pre- and early Islamic times (*kalām al-ᶜarab al-fuṣaḥāʾ*), while those of the post-classical period are called *muwallad*. However, the term *muwallad* does not only refer to loan words, but to all kinds of linguistic neologisms which came up in post-classical Arabic. The difference between *muᶜarrab* and *muwallad* is not taken into consideration by all philologists, and so *muᶜarrab* often is the general term for "loan word, foreign word". Al-Suyūṭī, in his *Muzhir*, consistently

classifies the Arabic lexicon, with the exception of the truly Arabic lexemes which were passed down, into three periods: *al-muʿarrab*, i.e. loan words which have penetrated into Arabic during pre- and early Islamic times (*Muzhir, al nawʿ* 19); *al-alfāẓ al-islamiyya*, i.e. neologisms and loan words originating from Islam (*al-nawʿ* 20), and *al-muwallad*, i.e. neologisms and loan words of the post-classical period (*al-nawʿ* 21).

Even the oldest Ḳurʾān interpreters, Ibn ʿAbbās and his pupils, are said to have recognised the foreign origin of words which occur in the Ḳurʾān, like *sidjdjīl, mishkāt, yamm, ṭūr, abārīḳ, istabraḳ* (al-Djawālīḳī, *Muʿarrab*, 5,1). More or less elaborate statements about the *muʿarrab* are given by almost all philological authorities, in the first place al-Khalīl, who already expounds criteria to identify foreign words. In his *Kitāb* (Būlāḳ 1316/17, ii, 342 f.: *mā uʿriba min al-aʿdjamiyya,* and *iṭṭirād al-ibdāl fī 'l-fārisiyya*), Sībawayh devotes two chapters to the loan words from Persian. Authors who deal in greater detail with the *muʿarrab* problem, include Abū ʿUbayd (*al-Gharīb al-muṣannaf*, cf. Ramadan Abdel-Tawab, 169 ff.), Ibn Durayd (*Djamhara*, iii, 499-503), al-Thaʿālibī (*Fiḳh al-lugha*, Cairo 1954, 285-6), and in particular, al-Djawālīḳī, who summarises the knowledge of his predecessors in his *Kitāb al-Muʿarrab min al-kalām al-aʿdjamī*. Of the later philologists may be mentioned Abū Ḥayyān al-Gharnāṭī and al-Suyūṭī, who deal with the theme in several of their works, as well as the Ottoman scholar Aḥmad Kamāl Bāshāzāda and the Egyptian Shihāb al-Dīn al-Khafādjī, each of whom composed a work on loan words in Arabic. The loan words which have penetrated into post-classical Arabic (*muwallad*) are occasionally treated in the works that deal with the "language errors of the common people" (*laḥn al-ʿawāmm*). Here, too, al-Djawālīḳī must be brought into prominence with his work *Takmilat iṣlāḥ mā taghlaṭu fī 'l-ʿāmma*, but Ibn Ḳutayba too devotes a chapter of his *Adab al-kātib* (526 ff.) to this theme.

The Arab scholars deal with the question from which languages the loan words originate—especially mentioned are Persian, Syriac, Greek (*rūmiyya*), Ethiopic, Hebrew, Coptic and Nabataean (?)—and with the degree and way in which they were integrated. They distinguish phonemic and morphemic aspects. Sībawayh states that Persian *g* is represented in Arabic by *dj* or *ḳ*, Persian *p* by *b* or *f*, and Persian *sh* by *s*. He notes that the ending *-ah*, which goes back to Middle Persian *-ak*, occurs in Arabic as *-adj* or *-aḳ*. He also distinguishes between loan words which were borrowed unchanged (like *ibrīsam, ādjurr*) and others which were adapted to the noun system (like *dirham, djawrab*). From the methodological viewpoint, later scholars hardly surpassed Sībawayh since they, because of their one-sided orientation towards Arabic, did not lend enough weight to the knowledge of the languages of origin. Most of them were familiar with Persian only, and consequently wrong judgments are often found. The Arabic philologists mention three criteria to determine the foreign origin of a lexeme: it has not been integrated into the noun system; it shows certain phonematic combinations which are excluded in authentic Arabic roots, a viewpoint which had already been discovered by al-Khalīl (cf. *Muzhir*, i, 270, 6 ff.); and finally, can it be derived from a verbal root? In the latter case, some philologists consider the integration of a loan word as completed, so that it has become part of the *ʿarabiyya* (cf. Ibn Djinnī, *Khaṣāʾiṣ*, i, 357: *mā ḳīsa ʿalā kalām al-ʿarab fa-huwa min kalām al-ʿarab*). The Baṣran scholar Abū ʿUbayda is said to have upheld the opinion that the Ḳurʾān cannot contain any foreign element, because, according to sūra XXVI, 195, it was composed "in pure Arabic" (*bi-lisānⁱⁿ ʿarabiyyⁱⁿ mubīn*). The other scholars do not take over this view and point out that foreign words, through arabicisation, have become an integral element of the *ʿarabiyya* (cf. Ibn Fāris, *al-Ṣāḥibī fī fiḳh al-lugha*, 59; al-Djawālīḳī, *Muʿarrab*, 5, 7).

The numerous loan words existing in Arabic already in pre-Islamic times originate mainly from Aramaic or Persian. It is occasionally difficult to determine whether loan words come from Semitic languages which are older than Arabic, because formally they cannot be distinguished from lexemes which are genuinely Arabic, cf. *kataba* "to write", which, as a cultural term, is of Northwestern Semitic origin, while *kataba* in the meaning of "to sew together" may belong to the authentic Arabic lexicon. Borrowings from Greek or Latin have usually come into Arabic through Aramaic, cf. *zawdj*<Aram. *zawgā*<Greek ζεῦγος; *Ḳaṣr*<Aram. *ḳaṣṭrā*<Lat. *castra*. Iranian words too have often reached Arabic via Aramaic. With Islam, there came a series of Judaeo-Christian religious terms, originating from Hebrew, cf. *ṣalāt, zakāt* and *ṣadaka*. Christian religious notions were taken from Ethiopic, too, from which derive however also many a word of everyday language, e.g. *khubz* and *baghl*. A new epoch began when Arabic developed into the cultural language of the Islamic world. The classical cultural heritage, appropriated through the translation of Greek words into Arabic, brought a great number of loan words, like *djughrāfiyā, mūsīḳī, hayūlā* and *athīr*, used until today. The rise of Turkish dynasties has left relatively few traces in Arabic, with the exception of the Ottoman domination whose influence is shown by a greater number of borrowings. The basic truth for all loan words is that those which do not fit into the morphemic system of the Arabic language show in the long run the tendency of being replaced by Arabic neologisms. Thus *arithmāṭīḳī*, "arithmetic", was replaced at an early stage by *ʿilm al-ḥisāb*, in the same way as *utumūbīl*, "automobile", is in our days replaced by *sayyāra*, whereas *falsafa*, "philosophy", (with *faylasūf*<Greek φιλόσοφος) or *talfan*, "to phone", (with *tilīfūn*) have become integral elements of the lexicon.

(W. FISCHER)

AL-MUʿASKAR (Mʿaskar in the local pronunciation; in French, MASCARA), Arabic "military encampment", a town of Algeria, situated in lat.

35°26′ N. and long. 4°32′ W. at a distance of 60 miles/96 km. to the south-east of Oran (Wahrān).

It lies on the southern slope of the Beni Chougran (Banū Shuḳrān) range (which rise to 3,054 feet/900 m.), called by the local people *Shāreb errīḥ* "drinker of the wind", and is built on the edge of a ravine at the bottom of which flows the Wādī Sīdī Tūdjimān and on the other side of which there stretches towards the north-west the suburb of Bāb ʿAlī. Mascara dominates one of the most fertile plains of Algeria, one which measures 25 to 30 miles/40 to 50 km. from west to east and 10 to 12 miles/15 to 20 km. from north to south. Here, the people have from earliest times grown cereals, whilst the Europeans introduced here the cultivation of tobacco and created vineyards whose product is renowned. As the market centre for a prosperous region, Mascara had in 1926 30,660 inhabitants, including 13,237 Europeans and 4,481 Jews; since then, the population has considerably increased, whilst the extraneous elements have been reduced to a negligible number.

Mascara is a small Berber town of considerable antiquity. According to al-Bakrī (*Masālik*, tr. de Slane, rev. Fagnan, 160), it included among its inhabitants people who came from Tahert (Tiaret), some of whom went and settled at Ifgan, a day's journey to the south-east when this town was founded by Yaʿlā b. Muḥammad b. Ṣāliḥ al-Ifrānī, in 338/949-50. Ibn Ḥawḳal (tr. Kramers-Wiet, 87) and al-Idrīsī (*Opus geographicum*, 251) mention Mascara as a large, well-watered village rich in fruits. The Almohads seem to have built a fortress there. The Zayyānids of Tlemcen kept a governor and a garrison there. Leo Africanus (tr. Epaulard, 338) notes the importance of the market which was held at Mascara, "one of the towns of the Beni Rasid" (Banū Rāshid), where one could buy, along with cereals in large quantities, cloth and articles of harness manufactured in the country. The rulers of Tlemcen drew considerable revenues from it: 25,000 ducats according to Leo, 40,000 pistoles, according to Marmol (*Africa*, ii, 356).

The Turks established themselves at Mascara in the 16th century and placed a garrison there. In 1701 they made it the capital of the *beylik* of the west, which had hitherto been Mazūna in Dahra. The beys lived there till Oran was reoccupied by the Algerians in 1792. During this period, Mascara, which had hitherto only been an insignificant place, began to look like a regular town. The beys built two mosques and a *madrasa*, a wall and a *ḳaṣba* and brought in a water-supply. The manufacture of burnuses and *ḥāʾiks*, celebrated throughout the Regency, enriched the inhabitants. This prosperity began to decline after the beys left Mascara and especially after the risings, which broke out in the province of the West in the beginning of the 19th century. The Darḳāwī Ibn Sharīf seized the town in 1805 and held it for a time. In 1827 it was attacked by the marabout Muḥammad al-Tidjānī. Supported by the Hāshim, he gained possession of the suburb of Bāb ʿAlī, but was killed by the Turks when preparing to storm the town itself. At the end of the Turkish rule, ʿAbd al-Ḳādir [*q.v.*] who had been proclaimed Sultan by the tribes of the plain of Ghrīs, established his seat of government at Mascara, but rarely lived there. A French expedition in December 1836, led by Marshal Clauzel, occupied Mascara, which the French abandoned next day, after burning down part of it. The *amīr* returned to the town and held it till 30 May 1841, when a column under Bugeaud occupied it finally for the French. Mascara, then half in ruins, had only a population of 2,840 inhabitants.

Africaine* (1857); Lespinasse, *Notice sur les Hachem de Mascara*, in *ibid.* (1877); *Correspondence du capitaine Daumas*, Algiers 1912; *Tableau des Etablissements français dans l'Algérie*, year 1839; Guides Bleues, *Algérie-Tunisie*, index s.v.

(G. Yver*)

MUʿATTILA [see TAʿṬĪL].

MUʿĀWAḌA (A.), barter, exchange.

1. *Muʿāwaḍa*, barter, is historically an early form of the exchange of commodities between two parties and the predecessor of buying and selling (*bayʿ*; Roman law, *emptio-venditio*). In course of time, sale developed out of exchange when, with the coming of money, a sum was given in place of the goods which the other party had to give in return. In Islamic law we find the following four kinds of sale:

a. Exchange of one thing for another. This is the primitive method of exchange (*muʿāwaḍa*). Exchange is a transaction in kind. Payment takes place "hand upon hand" (*yadᵃⁿ bi-yadⁱⁿ*).

b. Exchange of a thing for a definite sum (*thaman*). By *thaman* (gold or silver) a sum of money is meant. Here we have a sale in the proper sense of the word [see BAYʿ].

c. Exchange of one definite sum (*thaman*) for another; this is the case of gold or silver being exchanged for each or one another. This is called *ṣarf* (money-changing).

d. Exchange of a claim (*dayn*, debt) for a definite sum. The main business under this head is the *salam* or *salaf* [*q.v.*].

2. *Muʿāwaḍa* is a subdivision of the form of agreement called *ṣulḥ*. According to Ibn al-Ḳāsim's definition, 338, and other *fuḳahāʾ*, such an agreement is either *ṣulḥ al-ibrāʾ*, reduction of debt (not wiping it out), or *ṣulḥ al-muʿāwaḍa*, exchange of debts. Ibn al-Ḳāsim thus defines the latter: "And the exchange, i.e. the composition, is the ceding of one's right to a third person, e.g. when someone claims a house or a part of it and he allows this claim and concludes an agreement with him by which the debt is paid in some definite thing, e.g. in clothes." In this case the creditor, instead of the thing claimed by him which the debtor is unwilling to give up, takes another to wipe out the disputed debt. An agreement may also be made about a legal claim instead of a thing. The following is a practical illustration. Zayd has a legal claim against ʿAmr. ʿAmr raises a claim against Zayd. Each of them abandons his claim in *ṣulḥ al-muʿāwaḍa* and the demands are cancelled.

3. Lastly, *muʿāwaḍa* is a technical term in the general Islamic law of contract, on which there is no comprehensive study taking full account of the sources. A contract (*ʿaḳd*) may be based on a one-sided or a mutual obligation (*contractus unilateralis* or *bilateralis*). The latter form, which is the basis for mutual obligations, claim and counterclaim, is called *muʿāwaḍa* in Islamic law. Examples of contract of this sort are those of sale, lease, marriage, etc.

(O. Spies)

MUʿĀWIYA I b. Abī Sufyān, the founder of the Umayyad dynasty of caliphs based in Syria (although not, as is often asserted, the first Umayyad caliph: that was ʿUthmān b. ʿAffān [*q.v.*], his second

cousin), ruled as generally acknowledged caliph from 41/661 to 60/680. His father was Abū Sufyān (Ṣakhr) b. Ḥarb b. Umayya al-Akbar b. ᶜAbd Shams [*q.v.*] and his mother was Hint bint ᶜUtba b. Rabīᶜa [*q.v.*], on account of whom Muᶜāwiya is sometimes referred to as Ibn Hind and *Ibn ākilat al-akbād*, "the son of the liver-eater" (cf. below).

The sources provide conflicting reports of the date of Muᶜāwiya's birth and of his age when he died: he is said to have been born 5, 7 or 13 years before Muḥammad's call to prophethood, conventionally set in 610 A.D. (Ibn Ḥadjar, *Iṣāba*, Cairo 1328, iii, 433), and to have been aged 73, 75, 78, 80 or 85 years when he died in Radjab 60/April-May 680 (al-Ṭabarī, ii, 198, 199-200; see also Wellhausen, *Arab kingdom*, 139. Several different dates in Radjab are proposed; it can be added that Theophanes, *Chronographia*, ed. de Boor, 356, believed him to have died on 6 Artemisios, May). His father, a prominent figure in pre-Islamic Mecca, being the leader of ᶜAbd Shams there, acted as the leader of the Meccans at the battle of Uḥud [*q.v.*] in 3/625 (in the course of which Hind mutilated the corpse of the Prophet's uncle, Ḥamza, and chewed his liver as an act of vengeance), and organised the confederacy that unsuccessfully besieged Medina in 5/627. Thereafter, however, he ceased to figure as a leading member of the Meccan opposition to Muḥammad. In 7/629 his widowed daughter, Muᶜāwiya's sister Umm Ḥabība, married the Prophet; in 8/630 Abū Sufyān went to Medina to negotiate with him; and when in the same year Muḥammad entered Mecca, Abū Sufyān submitted and became a Muslim. According to Ibn Ḥadjar (*Iṣāba*, iii, 433, where the information is ascribed to al-Wāḳidī and preferred to a variant account), Muᶜāwiya also made his Islam manifest at this time (thus too al-Balādhurī, *Futūḥ*, 473), but in fact had been a crypto-Muslim since the treaty of Ḥudaybiyya [*q.v.*] in late 6/628. Both he and his father were nonetheless reckoned among the *ṭulaḳāʾ* and *ᶜutaḳāʾ*, enemies of the Prophet who had fallen into his hands, either at al-Ḥudaybiyya (al-Ḳurṭubī, *al-Djāmiᶜ li-aḥkām al-Ḳurʾān*, Cairo 1953-60, xvi, 281, *ad* Ḳurʾān, XLVIII, 24) or by virtue of the conquest of Mecca, and who had been released by him (cf. Ibn Hishām, 821; A.J. Wensinck *et alii*, *Concordance et indices de la tradition musulmane*, Leiden 1936-69, s.v. *ṭalīḳ*). They were also among "those whose hearts [were] reconciled", as was Yazīd b. Abī Sufyān (W.M. Watt, *Muhammad at Medina*, Oxford 1956, 73; and see AL-MUʾALLAFA ḲULŪBUHUM). Muᶜāwiya went on to serve as one of the Prophet's scribes (al-Ṭabarī, i, 1782; al-Balādhurī, *Futūḥ*, 473), being—so it is said—one of the seventeen literate Ḳurashīs at the time (al-Balādhurī, *Futūḥ*, 471-2).

In 13/634 the caliph Abū Bakr sent Muᶜāwiya to Syria, where he functioned as the commander of the vanguard of the Arab army led by his brother Yazīd in various operations against the Byzantines (al-Ṭabarī, i, 2085, 2090; al-Balādhurī, *Futūḥ*, 108, 117, 119, 126); and, according to Sayf b. ᶜUmar, he was present when the Arabs occupied Jerusalem in 16/637 (al-Ṭabarī, i, 2406, wrongly dated). When Yazīd b. Abī Sufyān died in the plague of ᶜAmwās [*q.v.*] in 18/639, the caliph ᶜUmar put Muᶜāwiya in his brother's place (al-Ṭabarī, i, 2520 [*sub anno* 17]; al-Balādhurī, *Futūḥ*, 141; Khalīfa b. Khayyāṭ, *Taʾrīkh*, ed. al-ᶜUmarī, Nadjaf 1967, 109), and in the following year Muᶜāwiya was in command of the Arab conquest of Ḳaysariyya (*q.v.* for details; and note in particular al-Balādhurī, *Futūḥ*, 142, ll. 14-17). The extent of the responsibilities assigned to Muᶜāwiya when his brother died is not entirely clear. According to one report, ᶜUmar put him in charge of the *djund* of Dimashḳ and its *kharādj*, and assigned the *djund* and *kharādj* of al-Urdunn to someone else (al-Ṭabarī, i, 2520, citing Ibn Isḥāḳ, who also provides a confusing report at p. 2646 in respect of the year 21); but according to another, ᶜUmar put him over both Dimashḳ and al-Urdunn (al-Ṭabarī, i, 2866, citing Sayf); and a third says that he appointed him over "Syria", apparently in the sense of Dimashḳ, al-Urdunn, Ḥimṣ and Ḳinnasrīn to the exclusion of Filasṭīn (al-Balādhurī, *Futūḥ*, 141, citing Hishām b. ᶜAmmār; cf. also 172, l. 5; and Theophanes, *Chronographia*, 340, where the whole of the greater Syria is included). The situation is hardly any clearer in respect of 23/644, the year of ᶜUmar's death, or the arrangements made by ᶜUthmān; on the one hand, Muᶜāwiya was ᶜUmar's governor of Dimashḳ (or Dimashḳ and al-Urdunn) in 23, the governor of Ḥimṣ (or Ḥimṣ and Ḳinnasrīn) being ᶜUmayr b. Saᶜd al-Anṣārī (al-Ṭabarī, i, 2737 [note e], 2798, 2866); but on the other hand, ᶜUthmān put Muᶜāwiya and ᶜUmayr b. Saᶜd in charge of (? confirmed their appointment over) "Syria" and al-Djazīra respectively (al-Balādhurī, *Futūḥ*, 183). The solution seems to be that Ḥimṣ, Ḳinnasrīn and al-Djazīra were distinct from "Syria" at this stage (*pace* Hishām b. ᶜAmmār, cited above) and formed an entity of their own, just as they had in 18/639 (al-Balādhurī, *Futūḥ*, 172, l. 16, citing al-Wāḳidī); they did not lie within Muᶜāwiya's remit until ᶜUmayr stood down or was dismissed, when they were made over to Muᶜāwiya by ᶜUthmān (who had by then also made Filasṭīn over to him) (al-Ṭabarī, i, 2866 f., citing Sayf; al-Balādhurī, *Futūḥ*, 183-4). According to Sayf, this bringing together of Syria (now in the conventional sense) and al-Djazīra under the sole control of Muᶜāwiya took place two years after ᶜUthmān's accession (*idjtamaᶜa ʾl-Shaʾm ᶜalā Muᶜāwiya li-sanatayn min imārat ᶜUthmān*; al-Ṭabarī, i, 2867), which would give us late 25/646 or early 26/647; and al-Wāḳidī knew that it had taken place by 31/651-2 (al-Ṭabarī, i, 2865).

While expressions of discontent with ᶜUthmān and the representatives of his caliphal authority became increasingly manifest in ᶜIrāḳ, Egypt and Medina in the course of the early 30s/650s, Muᶜāwiya's Syro-Djazīran domain remained immune from such inconveniences, with the single exception of Abū Dharr [*q.v.*], who was quickly stifled. This was a front where there was plenty to do: Muᶜāwiya had held it energetically against the Byzantines, establishing strong garrisons along the coast and instituting Arab maritime warfare in the Mediterranean—an activity earlier forbidden by ᶜUmar (al-Ṭabarī, i, 2820-4; al-Balādhurī, *Futūḥ*, 152-3). His firm government and continuing presence in Syria provided an element of stability. In addition, Syria had been the main Arab front in the time of Abū Bakr and, for much of the time, of ᶜUmar, with the result that the fighting men sent there were made up largely of cohesive Arab clan groups keen to campaign; by contrast, those whom it had been possible to muster for the secondary front of ᶜIrāḳ had for the most part been a miscellany of tribal oddments. This, together with the retention of the existing *djund* system in Syria, and the abandonment of any idea of establishing a single garrison city at al-Djābiya [*q.v.*] (or anywhere else) meant that each administrative unit was occupied by cohesive groups, whereas there was a mélange of diverse groups in Kūfa (see M. Hinds, *Kūfan political alignments*, in *IJMES*, ii [1971]). Arab newcomers could be accommodated in the appropriate *djunds*, and tensions of the

kind arising in Kūfa were obviated by the fact that the position of the tribal leaders was already established. In addition, it is possible that Muᶜāwiya may have taken the opportunity to station in Cyprus some of those Syrian early-comers whose standing was "Islamic" rather than tribal (al-Balā̲dh̲urī, *Futūḥ*, 153-4).

Thus, when the caliph ᶜUth̲mān was besieged in his Medinan residence by discontented provincials and others in 35/656, these elements did not include Arabs from Syria (Hinds, *The murder of the Caliph ᶜUth̲mān*, in *IJMES*, iii [1972], 464). Muᶜāwiya was among those governors to whom ᶜUth̲mān sent word, asking for help, and (perhaps after some extemporising) he did indeed despatch a relief force, which turned back at Wādī 'l-Ḳurā on learning that ᶜUth̲mān had been killed (al-Ṭabarī, i, 2959, 2985 [inconsistency in respect of the name of the leader]; al-Balādh̲urī, *Futūḥ*, 204-5). Thereafter, Muᶜāwiya simply bided his time in Syria while ᶜAlī b. Abī Ṭālib [*q.v.*] sought to establish himself as leader and had to deal with Meccan-led opposition at the Battle of the Camel [see AL-DJ̲AMAL] at Baṣra in 36/late 656. ᶜAlī made no secret of his intention to dismiss Muᶜāwiya from office in Syria (al-Ṭabarī, i, 3085-6), and Muᶜāwiya studiously avoided paying any allegiance to him (al-Ṭabarī, i, 3089-90). By the time when, after the Battle of the Camel, ᶜAlī sent a representative to elicit Muᶜāwiya's oath of allegiance (al-Ṭabarī, i, 3254), there was mounting Syrian resistance to him, coupled with a desire to hold him responsible for the murder of the dead caliph (Wellhausen, *Arab kingdom*, 74-5); and, crucially, it was at this point too that ᶜAmr b. al-ᶜĀṣ [*q.v.*] agreed to support Muᶜāwiya in return for a promise of Egypt when it could be detached from ᶜAlī's control (al-Ṭabarī, i, 3249-54, 3397). It was ᶜAmr who advised Muᶜāwiya to rally the notables (*wudj̲ūh*) of Syria by pinning the responsibility for ᶜUth̲mān's death on ᶜAlī (al-Ṭabarī, i, 3255); they were called upon to fight for *s̲h̲ūrā* (i.e. the appointment of the caliph by consultation, as had been the case with ᶜUth̲mān) and vengeance for ᶜUth̲mān; and they responded by swearing allegiance to Muᶜāwiya in those terms, in his capacity of *amīr* (not caliph) (al-Balādh̲urī, *Ansāb al-as̲h̲rāf*, ii, ed. Maḥmūdī, Beirut 1974, 300, 327). ᶜAlī's representative returned without Muᶜāwiya's oath of allegiance to him, bearing instead the information that the Syrians had resolved to fight him on the grounds that he had killed ᶜUth̲mān and harboured his [other] killers (al-Ṭabarī, i, 3255). The confrontation at Ṣiffīn [*q.v.*] ensued in late 36 and early 37/657 (see Wellhausen, *Arab kingdom*, 77-83; Hinds, *Kūfan political alignments*, 362-5).

Concerning the battle itself, it will be sufficient here to note that, against the widely reported view that the Syrians were losing, whereupon Muᶜāwiya ordered the raising of the *maṣāḥif* and the call for a cessation of hostilities (Hinds, *The Siffin arbitration agreement*, in *JSS*, xvii [1972], 93-4), there can be set the non-Muslim contention that it was the Syrians who won this battle, a contention which is moreover corroborated by Umayyad court poetry (P. Crone and M. Hinds, *God's Caliph*, Cambridge 1986, 69). As for the subsequent arbitration (see ᶜALĪ B. ABĪ ṬĀLIB, at I, 383-4; Hinds, *The Siffin arbitration agreement*), it is best summed up by K̲h̲alīfa b, K̲h̲ayyāṭ in one sentence: "the arbiters agreed on nothing" (*Taʾrīk̲h̲*, 174). In D̲h̲u 'l-Ḳaᶜda 37/April-May 658 ᶜAmr and the Syrians acknowledged Muᶜāwiya as caliph (*sallamū ᶜalayhi bi 'l-k̲h̲ilāfa*: al-Ṭabarī, i, 3359 ult., 3396; ii, 199).

Four more years were to pass, however, before Muᶜāwiya was able to enjoy general recognition as caliph. His immediate goal was achieved relatively easily; Egypt was taken in Ṣafar 38/July 658 and ᶜAmr formally took over as governor there two months later (al-Ṭabarī, i, 3407; al-Kindī, *al-Wulāt wa 'l-ḳuḍāt*, 31; Wellhausen, *Arab kingdom*, 93-8). This constituted a blow to the prestige of ᶜAlī, who was by then preoccupied with K̲h̲āridj̲ites [*q.v.*] in ᶜIrāḳ; and although Muᶜāwiya's attempt to subvert Baṣra in the same year through the agency of Ibn al-Ḥaḍramī [*q.v.*] failed, ᶜAlī's position in ᶜIrāḳ grew weaker, while his control of territories further east was largely non-existent (Wellhausen, *op. cit.*, 99, and note in particular al-Ṭabarī, i, 3449). Muᶜāwiya waited, limiting his activities to small roving expeditions against the fringes of ᶜIrāḳ and into the Ḥidj̲āz and the Yemen (Wellhausen, *op. cit.*, 100), and may have gone so far as to make a truce with ᶜAlī in 40/660-1 (al-Ṭabarī, i, 3453; Wellhausen, *op. cit.*, 101); if so, it was presumably at the very beginning of that year (May 660), for in July 660 there took place at Jerusalem a formal ceremony of allegiance to him as caliph (T. Nöldeke, *Zur Geschichte der Araber im 1. Jahr. d. H. aus syrischen Quellen*, in *ZDMG* xxix [1875], 95-6; al-Ṭabarī, ii, 4; Wellhausen, *op. cit.*, 101-2). Any plans ᶜAlī may have had to march against Muᶜāwiya were cut short in Ramaḍān 40/January 661, when he was struck with a poisoned sword in Kūfa by the K̲h̲āridj̲ite Ibn Muldj̲am [*q.v.*] and died some days later (Wellhausen, *op. cit.*, 102-4).The subsequent succession of al-Ḥasan b. ᶜAlī Ṭālib [*q.v.*] was a short-lived affair, for Muᶜāwiya now moved on ᶜIrāḳ with an army; al-Ḥasan settled for compensation in return for abdication and Muᶜāwiya entered Kūfa in Rabīᶜ I or Dj̲umādā I 41/July or September 661 (Wellhausen, *op. cit.*, 104-12). It is this year, the so-called *ᶜām* or *sanat al-dj̲amāᶜa*, "the year of [unification of] the community" (e.g. al-Ṭabarī, ii, 199; K̲h̲alīfa, *Taʾrīk̲h̲*, 187), that is conventionally regarded as having marked the beginning of Muᶜāwiya's caliphate.

Thereafter, Muᶜāwiya had much to do in order to consolidate Sufyānid rule. Externally, there was above all the matter of Byzantium. In the Mediterranean he had already successfully challenged Byzantine seapower: in addition to having dealt with Cyprus [see KUBRUS] and raided Rhodes and Sicily, he had in 655 been in command of an Arab fleet of 200 vessels that had resoundingly defeated Constans II's fleet of 700-1000 vessels at the Battle of the Masts (on this and other operations against the Byzantines, see D̲H̲ĀT AL-ṢAWĀRĪ in Suppl. and R.-J. Lilie, *Die Byzantinische Reaktion auf die Aussbreitung der Araber*, Munich 1976, 60 ff.). On the land frontier to the north, he had, as early as 646, advanced into Anatolia as far as Amorium [see ᶜAMMŪRIYA], but further progress had been limited and the actual frontier had been more in the area of Adana by the time the onset of war with ᶜAlī had forced Muᶜāwiya to come to terms with the Byzantines on the basis of payment of tribute (Theophanes, *Chronographia*, 347). Now, however, he busied himself with settling Syrian coastal towns and improving their fortifications; Alexandria too was completely fortified (the work was completed by 670), and Egypt once more became the springboard of expansion into North Africa. The land offensive westwards was accompanied by an aggressive Arab policy at sea following the death of Constans II in 668. An expanded Arab navy raided as far as Sicily in 669, while the army in North Africa established al-Ḳayrawān [*q.v.*] as a base and forayed into what is now Algeria. Rhodes and Crete were overrun in 672 and 674 respectively and

the naval expeditions that followed amounted to a seven-year blockade of Marmora and Constantinople—a blockade that came to an end shortly before Muᶜāwiya's death, when the Arab fleet was beaten off with Greek fire in 679. The same period witnessed regular annual incursions by land into Anatolia—incursions that had the advantage of providing booty and keeping the Arab army in trim. But late in his reign, Muᶜāwiya once more may have had to enter into arrangements involving the payment of tribute to the Byzantines, this time in order to cope with the Mardaites (Theophanes, *Chronographia*, 355) [see DJARĀDJIMA].

Internally, Muᶜāwiya was faced with the task of defining and running a Syria-based caliphate capable of pulling together the sundered parts of the Arab domain and maintaining authority over an unruly tribal soldiery. In the Djazīra and the East, matters were particularly complex because the first conquests there had involved a double invasion of Arabs. The relatively united troops that resided in garrison cities under leaders backed by Medina were mainly Arabs from settled and semi-settled backgrounds; but their conquests were paralleled or, at times, even spearheaded by incursions of nomadic Arabs over whom the military leaders appointed by the caliphs had little or no control. In the Djazīra, the nomadic Sulamīs and other Ḳaysīs had enjoyed a free run for many decades, though Muᶜāwiya had settled tribesmen of Muḍar and Rabīᶜa on abandoned land in that region, permitting them to engage in agriculture, during the caliphate of ᶜUthmān (al-Balādhurī, *Futūḥ*, 178); and the situation had been further complicated by the influx of Kūfans and Baṣrans hostile to ᶜAlī who "abandoned their *hidjra*" in favour of the Djazīra in the course of the civil war (al-Ṭabarī, i, 2673; al-Balādhurī, *Ansāb al-ashrāf*, ii, 297-8; al-Minḳarī, *Waḳᶜat Ṣiffīn*, ed. Hārūn, Cairo 1382, 12, 146; al-Yaᶜḳūbī, *Taʾrīkh*, ii, 218; al-Ḳushayrī, *Taʾrīkh al-Raḳḳa*, ed. al-Niᶜsānī, Ḥamā 1387, 43; al-Dhahabī, *Taʾrīkh*, ii, 222; P. Crone, *Slaves on horses*, Cambridge 1980, appendix I, nos. 13, 14, 16, 19). According to Sayf, Muᶜāwiya responded by detaching Ḳinnasrīn-Djazīra from Ḥimṣ and setting it up as a *djund* of its own (al-Ṭabarī, i, 2673). The *tadjnīd* of Ḳinnasrīn-Djazīra is, however, attributed to Yazīd I elsewhere (al-Balādhurī, *Futūḥ*, 132).

In the case of ᶜIrāḳ, few of the Tamīmīs and Bakrīs who had participated in the conquests settled at Kūfa and only relatively small numbers settled at Baṣra; for the most part they either returned to their own neighbouring pastures or pushed on into the remoter parts of ᶜIrāḳ or beyond, into Khūzistān, Fārs, Kirmān and Sīstān. They had neither the desire nor the need to settle in garrison cities or other centres; and they were decidedly against any authority seeking to impose itself from outside. But the tightening up of control over the garrison cities themselves was also problematic. The basic problem here was that there were too many Arabs competing for too few resources, the lack of immigration controls having produced Arab over-population. Ziyād b. Abīhi [*q.v.*], Muᶜāwiya's virtually autonomous viceroy in the East, dealt with this problem in a way which permitted him also to consolidate the conquests made in Khurāsān. He weeded out the *dīwān* lists of Kūfa and Baṣra, reorganised the tribal groupings, and moved an estimated 50,000 tribesmen and their families to Khurāsān in 51/671; these tribesmen were settled in the villages of the Marw oasis and were used to extend the Arab conquests in Khurāsān as far as the river Oxus (M.A. Shaban, *The ᶜAbbāsid revolution*, Cambridge 1970, 31 ff.). Within ᶜIrāḳ, Ziyād presided over a reorganisation which included confiscation of the *ṣawāfī*, erstwhile Sāsānid crown lands and other lands that had since the time of ᶜUmar been locally regarded as the collective property of the original conquerors (Ṣ.A. al-ᶜAlī, *al-Tanẓīmāt al-idjtimāᶜiyya wa 'l-iḳtiṣādiyya fi 'l-Baṣra*, 2nd edn., Beirut 1969, 141; Hinds, *Kūfan political alignments*, 350, 367); and old-guard opposition to this was stifled by the exemplary execution of the veteran Ḥudjr b. ᶜAdī [*q.v.*]. At the same time, tribal leaders (*ashrāf*) who were ready to toe the Sufyānid line formed the base of the power structure.

The nature of this *ashrāf*-based power structure has been best described by Crone (*Slaves on horses*, 31-3, and, in more detail, *The Mawālī in the Umayyad period*, Univ. of London Ph.D. diss. 1973, unpubl., 27 ff.). Their *sharaf* was usually carried over from the Djāhilī period and they therefore represented "the continued efficacy of pre-Islamic tribal stratification"; since individual *ᶜashīras* [*q.v.*] were too small to function as autonomous units, some re-shaping had been essential: the tribal groupings at Kūfa had originally been *aᶜshār*, then they were *asbāᶜ*, and under Ziyād they were turned into *arbāᶜ*; at Baṣra they were *akhmās*. Sometimes existing confederacies accounted for these divisions and sometimes the divisions were organised specifically in order to break up such confederacies. The divisions themselves were like semi-artificial *ḳabāʾil* and, indeed, the *ashrāf* of the Umayyad period are sometimes styled *ruʾūs al-ḳabāʾil*. The creation of these divisions engendered much rivalry for leadership, both between the divisions and within them, and also refusals to submit to particular leaders, as for example by the early Khāridjites or Ḥudjr b. ᶜAdī. The balance was thus a delicate one. Equally delicate was the role of the individual *sharīf* as an intermediary in the Sufyānid power structure, supporting and in turn being supported by the ruling authorities. The *ashrāf* would come together in the governor's *madjlis* and would be present at the Friday worship when the governor came face-to-face with the tribesmen; the governor's own *shurṭa* [*q.v.*] was drawn from the tribesmen, apparently by vote.

The governors of the provinces were drawn from among kinsmen of the caliph and people who were otherwise close to the caliphal family circle. In Medina, the governors were Umayyads: in Mecca, Umayyads and then a Makhzūmī; in Egypt, ᶜAmr b. al-ᶜĀṣ and then notably Maslama b. Mukhallad [*q.v.*], who was one of the more important Anṣārīs who had stuck with Muᶜāwiya; in ᶜIrāḳ there was in particular Ziyād, whom Muᶜāwiya had adopted as his brother by the process of *istilḥāḳ* (Wellhausen, *Arab kingdom*, 121). The governors functioned as the link between the caliph and the *ashrāf* of the provinces, and the preference for kinsmen helped "to secure the impermeability of the state...vis-à-vis the *qabīla*s" (Crone, *Mawālī*, 29). The principle, in short, was one of indirect rule, with a good deal of provincial autonomy. The governors of the Sufyānid period had full civil and military authority within their huge provinces: the *amīr* or *ᶜāmil* (the terms seem to have been indistinguishable at this time) organised the army, conducted expeditions, led the worship, built mosques, administered justice, maintained order, ran the information network, appointed sub-governors (also called *amīr*s or *ᶜāmil*s), supervised the entire taxation system and (in principle at least) sent the surplus to Damascus. The use of pre-existing bureaucratic machinery, run by indigenous elements, meant that

the revenues were kept separate from the tribal framework; payments were made to tribesmen via the *ashrāf*, who themselves received stipends at the highest level (*sharaf al-ᶜaṭāʾ*). The *amīr* himself received a salary and allowances, while also being in a position to acquire riches from gifts, speculation in the sale of crops, trade and general appropriation of revenues. It was only in his person that the military and fiscal arms of the provincial administration met.

There was virtually no central bureaucracy, as distinct from the provincial bureaucracy of Syria. Muᶜāwiya is said to have set up a *dīwān al-rasāʾil* and a *dīwān al-khātam* (chancellery), as well as a *dīwān al-barīd* [see DĪWĀN. i); and he also compelled the provinces to contribute to the central treasury. But the evidence suggests a central administration of the most rudimentary kind, and the contributions of the provinces were not impressive. Out of an annual Egyptian revenue of three or five million *dīnārs*, Muᶜāwiya is said to have received a balance of only 600,000 *dīnārs* (thus Ibn ᶜAbd al-Ḥakam, *Futūḥ Miṣr*, 102, in conjunction with al-Maḳrīzī, *Khiṭaṭ*, ed. Wiet, ii, 61, and al-Yaᶜḳūbī, *Buldān*, 339; differently al-Yaᶜḳūbī, *Taʾrīkh*, ii, 277); and out of an annual ᶜIrāḳī revenue of 100 million *dirhams* (120 million according to al-Yaᶜḳūbī, *Taʾrīkh*, ii, 277) he received no more than 6.66 million *dirhams* (al-Balādhurī, *Ansāb al-ashrāf*, iv/1, ed. ᶜAbbās, 218-19). He was thus heavily dependent upon the revenues of his own province of Syria, the income from the *ṣawāfī* he had taken over in ᶜIrāḳ and elsewhere (al-Yaᶜḳūbī, *Taʾrīkh*, ii, 258-9, 277-8), the fifth of the booty made over to him at times of conquest, and other irregular income. There was no imperial body of troops. The caliph's troops were the Syrian troops, and the capital in effect moved around with the caliph.

Like his predecessor ᶜUthmān, Muᶜāwiya adopted the title *khalīfat Allāh*, "deputy of God" (Crone and Hinds, *God's Caliph*, 6-7). But despite the claim to divine sanction and religious authority implied by this title, the caliphate was still a fluid institution. When Muᶜāwiya took over, there had been (we are told) four caliphs, only three of whom had gained general recognition, but each of whom had attained the caliphate by different means and three of whom had been murdered: the rights and duties of the caliph, the mode of succession and the general character of the power structure were matters that were neither spelt out nor agreed upon.

In practice, Muᶜāwiya does not seem to have pressed the divine sanction for his rule very far. He operated the system of clan and tribe—albeit within the changed conditions of life in ᶜIrāḳī cantonments and Syrian towns—as being the only viable form of Arab social order; his was a style that involved indirect rule through the *ashrāf*, supplemented by his own personal touch with delegations (*wufūd*) and, not least, by his *ḥilm* [*q.v.*], "the patient and tireless cunning in the manipulation of men through knowledge of their interests and passions" (M. Rodinson, *Muhammad*, London 1971, 221), which in his case included "the prudent mildness by which he disarmed and shamed the opposition, slowness to anger, and the most absolute self-command" (Wellhausen, *Arab kingdom*, 138). In one of those semi-apocryphal stories with which Arabic literature is so rich, Muᶜāwiya is quoted as having said, "If there were but a single hair between myself and my people, it would never be severed.... I would let it go slack if ever they tugged it, and I would tug it myself if ever they slackened it" (thus, e.g., al-Yaᶜḳūbī, *Taʾrīkh*, ii, 283). Muᶜāwiya's success at this style of rule is attested by the fact that he managed to hold his kingdom together without ever having to resort to using his Syrian troops; and his contemporary John of Phenek, a Nestorian monk of north Mesopotamia, gives impressive testimony when he says, "Justice flourished in his time, and there was great peace in the regions under his control.... Once Mᶜawyā had come to the throne, the peace throughout the world was such that we have never heard, either from our fathers or from our grandparents, or seen that there had ever been any like it" (S. Brock, *North Mesopotamia in the Late Seventh Century. Book XV of John Bar Penkāyē's Rīš Mellē*, in *JSAI*, ix [1987], 61). The fact that his system of indirect control was "vulnerable in both structural and temporal terms" (Crone, *Slaves on horses*, 33) is more apparent to the modern historian than it was to contemporaries.

In Syria itself, Muᶜāwiya's position was underpinned by his troops, who were above all from the confederacy of Ḳuḍāᶜa [*q.v.*]. The leading tribe of Ḳuḍāᶜa was Kalb [see KALB B. WABARA] camel-breeding nomads of the Syrian desert who had earlier been employed by the Byzantines under Ghassānid leadership to defend the Syrian *limes* against the Sāsānids and the Lakhmids; they were accustomed to military discipline and had become Monophysite Christians. They stood aside when the Arab conquest of Syria took place, however, and were brought into the Arab power structure by Muᶜāwiya, who married Maysūn bint Baḥdal al-Kalbiyya [*q.v.*], the daughter of Baḥdal b. ᶜUnayf [*q.v.*] of the Ḥāritha b. Djanāb clan, which was the *bayt* of Kalb; this Maysūn became the mother of Muᶜāwiya's son Yazīd [*q.v.*]. On this basis, Muᶜāwiya built up a strong confederacy in which his Kalbī and other Ḳuḍāᶜī support was welded with that of immigrant tribesmen stationed in central and southern Syria, mainly Kindīs from the *wādīs* of southern Arabia. The leaders of the resultant confederacy were successively Mālik b. Baḥdal and his son Ḥassān b. Mālik [*q.v.*], and the arrangements included the awarding of stipends at the highest level to each of 2,000 men, together with privileges of consultation and precedence in the *madjlis* (*al-amr wa'l-nahy wa-ṣadr al-madjlis*: al-Masᶜūdī, *Murūdj*, v, 200 = §1963).

Towards the end of his life, Muᶜāwiya had the oath of allegiance taken to his son Yazīd as his successor (see Wellhausen, *Kingdom*, 140-3; Lammens, *Le califat de Yazīd Ier*, in *MFOB*, v/1 [1911], ch. vi). It was not simply that Yazīd was of noble birth, mature years and acknowledged judgment; most important of all was the fact that he represented a continuation of the link with Kalb and so a continuation of the Kalb-led confederacy on which Sufyānid power ultimately rested (a point overlooked by Ibn Khaldūn in his celebrated defence of Muᶜāwiya's action, *ᶜIbar*, i, 175). From the main elements that made up the confederacy there was, understandably enough, no sign of protest that such an oath of allegiance marked a break with past Arab practice of choice by acclaim, and Muᶜāwiya did his best to grease the palms of others—notably members of Banū Hāshim—who might have been assailed by qualms. Nonetheless, his initiative met with resistance, notably on the part of ᶜAbd Allāh b. al-Zubayr [*q.v.*] and al-Ḥusayn b. ᶜAlī [*q.v.*] in the Ḥidjāz. The resistance increased when Yazīd succeeded his father in 60/680; and with his early death in 64/683, civil war broke out again.

To posterity, Muᶜāwiya's accession marked the end of the rightly-guided caliphate. "It was as if Muhammad had worked and preached all for the greater glory and profit of his enemies. He had conquered an

empire for those who had rejected him, the Quraysh" (Rodinson, *Muhammad*, 295). At the same time, the transfer of the caliphate from Medina to Syria, the introduction of hereditary succession and the growth, however modest, of the state apparatus suggested that Muᶜāwiya had transformed the caliphate into a monarchic institution of the Persian or Byzantine type, the very institution that the Muslims had been sent to destroy (Lammens, *Études sur le règne du Calife Omaiyade Moᶜâwia Ier*, Paris, London and Leipzig 1908, 191-5; Crone and Hinds, *God's Caliph*, 115). But even so, Muᶜāwiya's image is ambivalent (G.R. Hawting, *The first dynasty of Islam*, London 1986, 42); he was seen, not just as the man who perverted the caliphate into kingship, but also as a clever and successful ruler, and there is considerable admiration for him in the sources. Attempts at dispassionate analysis of his reign were rare, however. To Ibn Rus͟hd, his caliphate represented a shift from the ideal constitution to a timocratic one (*Averroes' commentary on Plato's Republic*, tr. E.I.J. Rosenthal, Cambridge 1956, 223); and to Ibn K͟haldūn it was a stage in the inevitable transformation of *ᶜaṣabiyya* into *mulk* (*ᶜIbar*, i, 176). But more commonly, Muᶜāwiya was either cursed or venerated, the legitimacy of his caliphate being a far more important issue than its historical nature (cf. Pellat, *Le culte de Muᶜāwiya*, in *SI*, vi [1956]; M.A.J. Beg, *The reign of Muᶜāwiya*, in *IC*, li [1977], 84). Modern Muslim writings on Muᶜāwiya and the Umayyads are also highly *parti pris* (see W. Ende, *Arabische Nation und islamische Geschichte*, Beirut 1977).

Bibliography: Basically given in the article. See also H. Lammens, *Études sur le siècle des Omayyades*, Beirut 1930: ᶜU. Abu 'l-Naṣr, *Muᶜāwiya b. Abī Sufyān wa-ᶜaṣruhu*, Beirut 1962; E. Ladewig Petersen, *ᶜAlī and Muᶜāwiya in early Arabic tradition*, Copenhagen 1964; I. Hassan, *Recherches sur Muᶜāwiyah ibn Abī Sufyān*, Jerusalem 1982 (in Hebrew, unpublished). (M. Hinds)

MUᶜĀWIYA II b. Yazīd b. Muᶜāwiya I, last caliph of the Sufyānid line of the Umayyads, reigned briefly in 64/683-4.

When Yazīd I b. Muᶜāwiya [*q.v.*] died at Ḥuwwārīn in the Syrian Desert in Rabīᶜ I 64/November 683, he left behind three young sons by free mothers; Muᶜāwiya and his brother K͟hālid b. Yazīd [*q.v.*] cannot have been much more than 20 years old, Muᶜāwiya's age being given by the sources variously at between 17 and 23. Most of the surviving Sufyānids were in fact young and inexperienced, with their leadership qualities unproven. Yazīd had had the *bayᶜa* [*q.v.*] made to Muᶜāwiya before his death (see Lammens, *Le califat de Yazîd Ier*, Beirut 1921, 112, 425 ff.), and Muᶜāwiya succeeded in Damascus with Kalbī support, but was not recognised in the lands acknowledging the anti-caliph ᶜAbd Allāh b. al-Zubayr [*q.v.*]. The name of Muᶜāwiya's mother is not recorded, but she was a member of the powerful Kalb group; those sources (e.g. Muḥammad b. Ḥabīb, *al-Muḥabbar*, 22; etc.) making him the son of Umm Hās͟him Fāk͟hita bt. Abī Hās͟him confuse Muᶜāwiya's mother with that of his half-brother K͟hālid.

The length of Muᶜāwiya's reign is given in the sources as from 20 days up to 4 months, but given the fact that virtually nothing is known of his reign, a duration of at most one or two months seems likely. It is known that the Christian Sard͟jūn b. Manṣūr continued to serve the new caliph as head of the *dīwān*, as he had done in the previous two reigns (al-Ṭabarī, ii, 837), and Muᶜāwiya's closest adviser seems to have been the Ḳuras͟hī head of the Ḳays group, al-Ḍaḥḥāk b. Ḳays al-Fihrī [*q.v.*], subsequently to be vanquished at Mard͟j Rāhiṭ [*q.v.*] by Marwān b. al-Ḥakam, and al-Walīd b. ᶜUtba, son of Muᶜāwiya I's only full brother and probably the eldest living Sufyānid.

Some of the very few incidents recounted for his reign by the historians must be regarded as fabricated for political or sectarian aims, hence unreliable. Thus the report of ᶜAwāna in al-Ṭabarī, ii, 468 (but not in al-Wāḳidī's account at ii, 577) and in al-Balād͟hurī, *Futūḥ*, 229, that he abdicated the throne (*tabarraʾa min al-k͟hilāfa*) before his actual death, stems from subsequent Marwānid propaganda to confuse the fact that the Marwānids supplanted the Sufyānids; it was probably for this reason that Muᶜāwiya's name does not appear in some of the lists of caliphs, e.g. K͟halīfa b. K͟hayyāṭ, *Taʾrīk͟h*, ed. Suhayl Zakkār, Damascus 1387-8/1967-8, i, 318. Likewise, the assertion that he was an adherent of the Ḳadariyya sect may have resulted from a later belief in an abdication, which would have been in accord with Ḳadarī beliefs on human responsibility as a factor in political behaviour [see ḳadariyya, at IV, 369b]. Of S͟hīᶜī inspiration is the report in al-Yaᶜḳūbī, *Taʾrīk͟h*, ii, 302-3, that, at the meeting of Syrian leaders at the opening of his reign, Muᶜāwiya denounced the tyranny and perfidiousness of his own father and grandfather and their maltreatment of the ᶜAlids, the true inheritors of the Prophet (see Lammens, *Moᶜâwia II*, in *Études*, 192-202). The attribution to Muᶜāwiya of the *kunya* Abū Laylā, given ironically because, as several sources explain (e.g. Ibn Ḳutayba, *Maᶜārif*, ed. ᶜUkkās͟ha, 352; al-Ṭabarī, ii, 428-9; al-Masᶜūdī, v, 168-9 = §1932), it was especially applied to weak persons, is equally suspect; Muᶜāwiya does not in any case seem to have left behind any progeny.

What seems definite is that, on his accession, Muᶜāwiya remitted one-third of the taxation due, and a Latin chronicle of the Byzantine period states that Muᶜāwiya followed in the same commendable ways of conduct as his father Yazīd (Lammens, *Moᶜâwiya II*, 177-8, 179). But his ill-health compelled him to remain within the palace of al-K͟haḍrāʾ, the *dār al-imāra* of Damascus constructed by Muᶜāwiya I (see Ibn ᶜAsākir, tr. N. Elisséeff, *La description de Damas d'Ibn ᶜAsākir*, Damascus 1959, 228), leaving the practical conduct of affairs to al-Ḍaḥḥāk and not emerging from his residence till he died. It seems likely that his authority was only recognised in Damascus and southern Syria, and even possible that, already before his death, some of the partisans of the Umayyads may have started to look elsewhere for a more energetic ruler.

The exact cause of Muᶜāwiya's death is unclear. It may have resulted from jaundice (*al-ṣufār*), indicating a liver complaint, or it may have been the result of a sharp outbreak of plague which ravaged ᶜIrāḳ and Syria at this time and which could also have carried off al-Walīd b. ᶜUtba (al-Ṭabarī, ii, 468; Ibn ᶜAsākir, ms. Ẓāhiriyya, notice on Muᶜāwiya b. Yazīd). Muᶜāwiya had either refused to nominate a successor (al-Ṭabarī, ii, 577) or, more probably, had never had time to hold a ceremony of *bayᶜa*. Al-Walīd b. ᶜUtba recited the funeral prayers over Muᶜāwiya but seems himself to have died before he could assert a claim to the throne; and Muᶜāwiya's uncle ᶜUt͟hmān b. ᶜAnbasa b. Abī Sufyān, who enjoyed some support among the Kalb of the province of Jordan, went to join his mother's brother ᶜAbd Allāh b. al-Zubayr in the Ḥid͟jāz, where his claim to the caliphate had already been raised. Muᶜāwiya's death thus not only meant a complete cessation of the military operations begun in the Ḥid͟jāz by Yazīd against the rebels but led also to the temporary collapse of Umayyad power

in its own heartland of Syria, where only the resolute behaviour of Marwān b. al-Ḥakam [*q.v.*], from a parallel branch of the Umayyad family, was to secure the situation for the dynasty.

(C.E. Bosworth)

MUᶜĀWIYA b. **HIS̲H̲ĀM** b. ᶜAbd al-Malik, Umayyad prince. As the eldest son of His̲h̲ām [*q.v.*], caliph from 105 to 125/724-43, he was designated heir presumptive by his father, but died prematurely, at a date variously located between 117 and 119/735-7, at about thirty years of age. Although he did not himself accede to the throne, he was the father of ᶜAbd al-Raḥmān [*q.v.*], known as al-Dāk̲h̲il, who fled to Spain where he restored the dynasty founded in Damascus by Muᶜāwiya b. Abī Sufyān [*q.v.*]. Muᶜāwiya b. His̲h̲ām, who had thirteen sons, was thus the ancestor of the *amīrs* and caliphs who reigned at Cordova until the 5th/11th century [see umayyads of spain].

Bibliographical information concerning him is scanty. His mother was probably an *umm walad*, and his father had him participate in about a dozen summer expeditions (*ṣāʾifa*) from 106/724 onwards.

Bibliography: Muṣᶜab al-Zubayrī, *Nasab Ḳurays̲h̲*, ed. Lévi-Provençal, Cairo 1953, 168; Ibn Ḥazm, *D̲j̲amharat ansāb al-ᶜArab*, ed. Lévi-Provençal, Cairo 1948, 84-5; Ṭabarī, index; Ibn al-ᶜImād, *S̲h̲ad̲h̲arāt*, i, 156-7; Ṣ. al-Munad̲j̲d̲j̲id, *Muᶜd̲j̲am Banī Umayya*, Beirut 1970, s.v. and index.

(Ch. Pellat)

MUᶜĀWIYA b. **ḤUDAYD̲J̲** (K̲h̲adīd̲j̲ in the *D̲j̲amhara* of Ibn al-Kalbī, Tab. 240) b. D̲j̲afna al-Sakūnī al-Tud̲j̲ībī, Abū Nuᶜaym or Abū ᶜAbd al-Raḥmān, Companion of the Prophet who took part in the conquest of Egypt and remained in the country with the Muslim occupying forces.

He was an ᶜUt̲h̲mānī, much attached to the memory of ᶜUt̲h̲mān b. ᶜAffān and hostile to ᶜAlī b. Abī Ṭālib; also, when Muḥammad b. Abī Bakr [*q.v.*], who had been involved in the murder of ᶜUt̲h̲mān, arrived at Fusṭāṭ in mid-Ramaḍān 37/24 February 658, in order to govern Egypt in the name of ᶜAlī, Ibn Ḥuday̲d̲j̲ showed him violent hostility, in which he was joined by Maslama b. Muk̲h̲allad [*q.v.*] who was, like him, the leader of a powerful contingent ready to lend support to potential rebels. Meanwhile, Muᶜāwiya b. Abī Sufyān, still merely the governor of Syria, but pre-empting the decision of the two arbitrators appointed after Ṣiffīn and engaged in the effort to avenge the murder of ᶜUt̲h̲mān, appointed ᶜAmr b. al-ᶜĀṣ [*q.v.*], governor of Egypt. To prevent him accomplishing his mission, the son of Abū Bakr mobilised his troops, among whom was the actual murderer of ᶜUt̲h̲mān, Kināna b. Bis̲h̲r, who was killed in battle; abandoned by his army, the titular governor took flight, so that ᶜAmr b. al-ᶜĀṣ was able to enter Fusṭāṭ. Ibn Ḥuday̲d̲j̲ took part in the hunt for the fugitive, whom he discovered in hiding; he received orders from ᶜAmr to conduct him to Fusṭāṭ out of respect for his brother ᶜAbd al-Raḥmān, who was among his ranks, but he refused and killed his adversary, placing his skin in the hide of a donkey and setting fire to it; it is also said that he sent his head to Muᶜāwiya b. Abī Sufyān and that the latter paraded it through the streets of Damascus.

These events, which took place in 38/658, have engaged the main interest of historians and biographers, but Muᶜāwiya b. Ḥuday̲d̲j̲ also achieved renown through actions concerning the Mag̲h̲rib. He is in fact credited with three expeditions in Ifrīḳiya. In the course of the first, which took place in 34/654-5, he "took possession of numerous fortresses and gained a considerable quantity of booty. He established a garrison-camp near al-Ḳarn and resided there until his return to Egypt" (Ibn ᶜAbd al-Ḥakam, partial ed.-tr. A. Gateau, Algiers[2] 1957, 56/57); it was on this occasion that he awarded his troops "in the form of a special gratuity (*nafala*), half of the booty, having taken a fifth for himself" [see g̲h̲anīma]. The site of al-Ḳarn, which is a hill 171 m. in height "12 km. to the north-west of the present town of al-Ḳayrawān on the road from D̲j̲alūlā" [see al-ḳayrawān. i] may be considered as having determined the choice of location of the capital of Ifrīḳiya. The early historians—such as Ibn ᶜAbd al Ḥakam or al-Bakrī—describe with fantastic details the miraculous capture of D̲j̲alūlā by ᶜAbd al-Malik b. Marwān or by the leader of the expedition himself. The other mission, which took place in 40/660-1 (or 41, with the conquest of Bizerta [see banzart], or 45) and finally in 50/670, with the support of a contingent from Medina commanded by ᶜAbd al-Malik b. Marwān, again led Muᶜāwiya b. Ḥuday̲d̲j̲ to al-Ḳarn, which was to some extent his operational base. Al-Ṭabarī (ii/1, 84, 93) states that he was appointed governor of Egypt in 47/667 and dismissed in 50/670, but in fact it was his comrade-in-arms Maslama b. Muk̲h̲allad who held this function. He died shortly afterwards, in 52/672, but historians such as Ibn al-At̲h̲īr (*s.a.* 58) or Ibn Tag̲h̲rībardī (*Nud̲j̲ūm*, i, 151) describe him receiving bountiful honours, in Damascus in 58/678, from Muᶜāwiya b. Abī Sufyān, to whom he explained his refusal to accept appointment by the nephew of the caliph, ᶜAbd al-Raḥmān b. Umm al-Ḥakam, as governor of Egypt; there is evidently some confusion here, the cause of which is unclear.

Bibliography: Besides the sources quoted, see Balā̲d̲h̲urī, *Futūḥ*, 221, 227, 228, 235, 237; Ṭabarī, i, 3404 ff.; Masᶜūdī, *Murūd̲j̲*, iv, 421-3 = §1726; Ibn ᶜAbd al-Barr, *Istīᶜāb*, commentary on the *Iṣāba*, iii, 406; Ibn ᶜId̲h̲ārī, *Bayān*, i, ed. Colin and Lévi-Provençal, Leiden 1948, 15, 16; Bakrī, *Mug̲h̲rib*, ed.-tr. de Slane, index; ᶜAsḳalānī, *Iṣāba*, no. 8062; Mālikī, *Riyāḍ al-nufūs*, ed. (Ch. Pellat)

MUᶜĀWIYA b. **ᶜUBAYD ALLĀH** [see abū ᶜubayd allāh].

al-**MUᶜAWWID̲H̲ATĀNⁱ**, "the two sūras of taking refuge [from evil]", the name given to the two last sūras (CXIII and CXIV) of the Ḳurʾān, because they both begin with the words *ḳul: aᶜūd̲h̲u bi-rabbī* ... *min* ..., "Say: I seek refuge in the Lord of ... against ...", and are pronounced as prayers intended to dispel the evils engendered by the devil, evil spirits, the practice of magic, etc. The plural *al-muᶜawwid̲h̲āt* is also found equally applied to these two sūras and to

the preceding one, set forth in the form of a *credo*; this plural appears especially in al-Bukhārī (*daʿawāt, bāb* 12) in regard to the Prophet, who recited these sūras when he was about to go to sleep.

The *muʿawwidhatān*i are considered to be Meccan, although they are also considered as having been revealed at Medina in order to frustrate an attempt to lay a spell on the Prophet (on the use which he made of them, see al-Bukhārī, *loc. cit.*; Aḥmad b. Ḥanbal, *Musnad*, iv, 155). They have continued to be employed, especially to avert the evil eye (Lane, *Manners and customs of the modern Egyptians*, London 1899, 259).

Bibliography: Given in the article, but see also the dictionaries, s.v. (ED.)

AL-**MUʾAYYAD** [see HISHĀM II].

AL-**MUʾAYYAD BIʾLLĀH MUḤAMMAD**, the name of two Ḳāsimī Zaydī *imāms* of Yemen.

1. Ibn al-Imām al-Manṣūr biʾllāh al-Ḳāsim, known best as the *imām* in whose time the Ottoman Turks were expelled from Yemen after a continuous presence of a century (945-1045/1538-1635).

Born in 990/1582, widespread recognition of his scholarly and leadership capabilities assured him unchallenged election to the imāmate upon his illustrious father's death in Rabīʿ I 1029/February 1620. One of *Imām* Muḥammad's first acts was to renew the ten-year truce which his father had latterly concluded with Meḥmed Pasha, the governor of the Ottoman Turks still occupying numerous centres in Yemen. This agreement was upheld until early 1036/late 1626 when, following the execution of an eminent supporter of the *imām* by Ḥaydar Pasha, the current Ottoman governor, assaults on several Ottoman strongholds were mounted by the *imām*'s forces. Indigenous support for *Imām* Muḥammad proved considerable, and before the year's end the Turks had lost all of their holdings in the central and northern highlands except Ṣanʿāʾ, their main base, which was under close investment. With the surrender of both Ṣanʿāʾ and Taʿizz during 1038/1629, the Ottoman forces remained confined to Zabīd and Mocha in the Tihāma, despite their substantial augmentation with reinforcements. A series of short truces with the *imām* enabled the strife-torn Ottoman garrison to survive at Zabīd until mid-1045/late 1635, when Ḳānṣūh Pasha, the last Ottoman governor, capitulated and departed from Yemen, followed shortly by most of the remaining Ottoman soldiery. *Imām* Muḥammad died at Shahāra, his capital, in Radjab 1054/September 1644, the sources reporting no significant events during his final years.

Although during his time Yemen freed itself from foreign rule, thereby becoming the first Arab country to secede from the Ottoman empire, *Imām* Muḥammad entrusted all military affairs to his capable brothers, principally to al-Ḥasan (d. 1048/1639), al-Ḥusayn (d. 1050/1640) and Aḥmad (d. *ca.* 1060/1650), while he devoted himself to scholarship and to leading the Zaydī community. Al-Ḥibshī (*Muʾallafāt*, 137-9) has identified and located thirteen works of his authorship, mainly legal opinions and interpretations based on Zaydī dogma.

2. Ibn al-Imām al-Mutawakkil ʿalā ʾllah Ismāʿīl b. al-Imām al-Manṣūr biʾllāh al-Ḳāsim, who succeeded *Imām* al-Mahdī Aḥmad (d. Djumādā II 1092/June-July 1681) and held the imāmate until his death on 3 Djumādā II 1097/27 April 1686, possibly from poisoning. Unwarlike, and distinguished by his extreme ascetism, piety and devotion to learning, this incumbent, who was *imām* in little more than name only, was initially challenged and later largely disregarded by several aggressive competitors among his brothers and cousins.

Bibliography (combined): 1. Primary sources. An extant biography of *Imām* Muḥammad b. al-Ḳāsim is *al-Djawhara al-munīra* by Djurmūzī (d. 1077/1666-7), yet unpublished. Other ms. sources include the *Sīrat al-Manṣūr biʾllāh al-Ḳāsim*, of unknown authorship, described by A. Sayyid (*Maṣādir taʾrīkh al-Yaman*, Cairo 1974, 332) as a history of Yemen 985-1085/1577-1674; Yaḥyā b. al-Ḥusayn (d. *ca.* 1100/1689), *Bahdjat al-zaman*, the *dhayl* to his *Anbāʾ al-zaman* chronicling events in Yemen between 1046/1636-7 and 1099/1687-8; Ḥasanī (d. 1104/1692-3), *Takmilat Kitāb al-ifāda*; ʿĀmir b. Muḥammad al-Rashīd (d. 1135/1722-3), *Bughyat al-murīd*. Two useful published chronicles are Yaḥyā b. al-Ḥusayn, *Ghāyat al-amānī* (the abridgement of his *Anbāʾ al-zaman*), ed. S. ʿĀshūr, Cairo 1968, ii, 813-39 (to 1045/1635-6) and Ibn al-Wazīr (d. 1147/1734-5), *Ṭabaḳ al-ḥalwā*, ed. Djāzim, Ṣanʿāʾ 1405/1985, which treats events in Yemen from 1045-90/1635-80.

2. Published secondary materials include Naʿīmā, *Tārīkh*, Istanbul 1280/1863-4, ii, 445-7, iii, 153-62; Muḥibbī, *Khulāṣat al-athar*, Cairo 1284/1867-8, iii, 297-9, 396 f., iv, 122 f., 297 f.; Aḥmed Rāshid, *Tārīkh-i Yemen*, Istanbul 1291/1874-5, i, 222-58; Wüstenfeld, *Jemen*, Göttingen 1884, 48-56, 60-3; ʿĀṭıf Pasha, *Yemen tārīkhi*, Istanbul 1326/1908, i, 96-104; Zabāra, *Itḥāf al-muhtadīn*, Ṣanʿāʾ 1343/1924-5, 80, 84; Shawkānī, *al-Badr al-ṭāliʿ*, Cairo 1348/1929-30, ii. 139 f., 238-40; ʿArshī, *Bulūgh al-marām*, ed. Karmalī, Cairo 1939, 66-8; Djurāfī, *al-Muḳtaṭaf*, Cairo 1951, 145-55, 169 f.; Muṣṭafā Sālim, *al-Fatḥ al-ʿUthmānī*, Cairo 1969, 369-89; Bayḥānī, *Ashiʿʿat al-anwār*, Cairo 1391/1971-2, ii, 245-9; Ḥibshī, *Muʾallafāt ḥukkām al-Yaman*, Wiesbaden 1979, 136-9, 143-5.

(J.R. BLACKBURN)

AL-**MUʾAYYAD FI ʾL-DĪN** ABŪ NAṢR HIBAT ALLĀH B. ABĪ ʿIMRĀN MŪSĀ B. DĀWŪD AL-SHĪRĀZĪ, an eminent Ismāʿīlī *dāʿī*, who played a leading role as an intermediary between the Fāṭimids and AL-BASĀSĪRĪ [*q.vv.*] in the famous campaign against the Saldjūḳs. He was born in Shīrāz during the eighties of the 4th/nineties of the 10th century (*Dīwān al-Muʾayyad*, ed. Muḥammad Kāmil Ḥusayn, Cairo 1949, 21-2, 234-5, 253, 282). His father, also an Ismāʿīlī *dāʿī*, was a prominent man in the Būyid court circle, and Abū Ghālib Muḥammad b. ʿAlī al-Wāsiṭī, the vizier of Bahāʾ al-Dawla [*q.v.* in Suppl.] used to visit him frequently (*Sīrat al-Muʾayyad*, ed. Ḥusayn, Cairo 1949, 15). He probably succeeded his father in the headship of the *daʿwa* in Fārs. In 429/1038, the administration became alarmed at his rising influence over the Daylamīs, one of the main groups in the Būyid army, and over the people of Shīrāz, and wanted him deported. Al-Muʾayyad, who was on good terms with the vizier al-ʿĀdil, contrived to buy time and arranged a meeting with the young prince Abū Kālīdjār [*q.v.*]. The story of his life and adventures thenceforth until the year 450/1058 are well documented in his autobiography, whereas the preceding and following periods of his life remain somewhat obscure.

Through his wits, learning, and eloquence, al-Muʾayyad succeeded in winning the sympathies of Abū Kālīdjār and eventually converted him to the Ismāʿīlī faith. The favour shown to him by the prince aroused envy at court, but al-Muʾayyad was not deterred from propagating the Fāṭimid doctrine publicly. After the vizier al-ʿĀdil's death in 433/1041-

2 he journeyed to Ahwāz, restored an old mosque, inscribed the names of the Fāṭimid *imāms* on the *miḥrāb*, and read the *khuṭba* in name of the Fāṭimid caliph al-Mustanṣir (*Sīrat al-Mu'ayyad*, 54-5). On his return to Shīrāz he found a hostile reception from the new vizier. Finally, on account of the ʿAbbāsid caliph's pressure and of intrigue at his own court against al-Mu'ayyad, Abū Kālīdjār was obliged to withdraw his support and advised him to leave the city. Probably at the beginning of 435/1043, he migrated secretly to Ahwāz and stayed with *amīr* Manṣūr b. al-Ḥusayn al-Asadī on his estate for seven months. The *amīr*'s intervention on behalf of al-Mu'ayyad might have reconciled the prince, who was also in Ahwāz, but the death of Djalāl al-Dawla in Shaʿbān of the same year made it impossible, as Abū Kālīdjār renewed his claims to the throne in Baghdād. Consequently, al-Mu'ayyad left for Nadjaf and Karbalā'. After spending a year in al-Mawṣil, he arrived in Cairo in 438/1046, but failed to get an audience with the *imām* until Shaʿbān 29, 439/February 18, 1048.

Despite his superior accomplishment and great literary ability, al-Mu'ayyad did not find favour with the courtiers until 444/1052-3 when he was appointed to the chancery. In 446/1054-5, after receiving information through a Byzantine source that Ṭoghrıl Beg had entered into a secret agreement with the Byzantines against the Fāṭimids, he corresponded with al-Basāsīrī, a Turkish slave who had become a military commander in the last years of the Būyid dynasty, promising Fāṭimid aid and encouraging him to conquer Baghdād. The following year he was sent as a Fāṭimid plenipotentiary in this matter to ʿIrāḳ with money, exquisite robes, horses and weapons. By way of Damascus and Aleppo he went to al-Raḥba and handed over to al-Basāsīrī an investiture from al-Mustanṣir. His intense efforts at dealing with numerous *amīrs* and military leaders resulted in the formation of a coalition under the leadership of al-Basāsīrī which inflicted a bloody defeat on the Saldjūḳ army at Sindjār in 448/1057, and al-Mustanṣir was acknowledged in al-Mawṣil. However, a lack of further support from Cairo and the greed of military leaders led al-Mu'ayyad to withdraw to Aleppo.

He returned to Cairo in 450/1058 and became *dāʿī al-duʿāt*, but his good fortune did not last long and he was briefly vanished by a vizier to Jerusalem. He was in direct communication with the Yamanī *daʿwa*, since the Yamanī *dāʿī* al-Ḳāḍī Lamak b. Mālik, the Ṣulayḥid emissary in Cairo, had stayed with him during his sojourn (454-9/1062-7) in Cairo and had received special instructions from him. He died in 470/1077 and was buried in the Dār al-ʿIlm.

His *al-Madjālis al-Mu'ayyadiyya* (vol. i ed. Muṣṭafā Ghālib, Beirut 1974; a compendium compiled by *dāʿī* Ḥātim b. Ibrāhīm al-Ḥāmidī, ed. Muḥammad ʿAbd al-Ḳādir, Cairo 1975) in 8 vols. is considered to be the apogee of Ismāʿīlī learning.

(I. POONAWALA)

AL-**MU'AYYAD SHAYKH** (AL-MALIK), Circassian Mamlūk sultan. He was brought to Egypt by the *khʷādjā* Maḥmūd Shāh (732/1380-1), and bought by al-Ẓāhir Barḳūḳ [*q.v.*] whence his *nisba*s of al-Maḥmūdī al-Ẓāhirī.

He was then about 12 or possibly (following Ibn Taghrībirdī) some 10 years older, and was in due course emancipated and promoted in the sultan's entourage. In 802/1400 he was appointed governor of Tripoli by al-Nāṣir Faradj [*q.v.*], and spent the next 12 years in Syria, holding various appointments. He was deeply involved in the factional politics in which the Ẓāhiriyya, while generally opposed to Faradj and his Nāṣiriyya household, were also at odds amongst themselves. In 812/1410 Shaykh allied with his rival, Nawrūz al-Ḥāfiẓī al-Ẓāhirī, and ultimately they defeated and deposed Faradj (Muḥarram 815/May 1412). With the caliph al-Mustaʿīn as nominal sultan, the realm was partitioned, Nawrūz retaining Syria, while Shaykh ruled Egypt as *atābak al-ʿasākir*. This settlement was overturned when Shaykh usurped the sultanate (Shaʿbān 815/November 1412). Nawrūz refused to recognise his title, and endeavoured to organise the Syrian governors against him.

This led to Shaykh's first Syrian campaign (817/1414), when Nawrūz was lured out of the citadel of Damascus to his death. The ensuing settlement of Syria proved ephemeral, as the governors appointed by Shaykh conspired against him, and the sultan led a second campaign (818/1415) to suppress their revolt. The third campaign (820/1417) was very different in its purpose and scope. Shaykh advanced to Aleppo, which became his base for operations in the northern marches. Two Turcoman principalities were here the immediate neighbours of the sultanate: the Ramaḍānids (Ramaḍān-oghulları [*q.v.*]) dominated Cilicia [*q.v.*] from Adana [*q.v.*], while to their east were the Dulḳādirids (Dhu 'l-Ḳadr [*q.v.*]) of Elbistan [*q.v.*] with their other principal towns at Marʿash and Malaṭya [*q.vv.*]. Greater powers flanked these client-states: westwards the Ḳaramānids (Ḳaramān-oghulları [*q.v.*]), and eastwards the Turcoman confederacies of the Aḳ-Ḳoyunlu and the Ḳara-Ḳoyunlu [*q.vv.*]. Shaykh's immediate aim was to capture Ṭarsūs, which had been taken from his Ramaḍānid client by the Ḳaramānid Nāṣir al-Dīn Meḥmed Beg. This was achieved, while the main thrust of the expedition was developed towards the east with an offensive against Elbistan and the Dulḳādirid fortresses, most of which surrendered, at least temporarily. The Ḳaramānids and the growing power of the Ḳara-Ḳoyunlu under their greatest chief, Ḳara Yūsuf, continued to be Shaykh's chief anxieties. In 812/1418, fearing that fighting between the two Turcoman confederacies threatened Aleppo, he obtained a *fatwā* justifying *djihād* against Ḳara Yūsuf, who however withdrew. An expedition accompanied by Shaykh's son, Ṣārim al-Dīn (al-Ṣārimī) Ibrāhīm, invaded Ḳaramānid territory in 822/1419. Kayseri surrendered, and Shaykh's suzerainty was recognised. Meḥmed Beg withdrew as the sultan's army advanced to Konya, Niğde and Laranda. Here, however, the decision was taken to return to Aleppo. The expedition, like that of Baybars in 675/1276, had demonstrated the limitations and impermanency of Mamlūk ascendancy in Anatolia. There were no further campaigns in Shaykh's reign, although in his last months he was again preparing an expedition against Ḳara Yūsuf.

These transient victories partially masked the unsound condition of Egypt. The currency was unstable. Epidemics of plague were recurrent. A serious dearth resulting in bread riots occurred in 818/1415-16, while in 820/1417-18 the *ustādār* Fakhr al-Dīn b. Abi 'l-Faradj carried out extortionate levies in Lower Egypt, which he followed with a punitive expedition against the Arabs of Upper Egypt. The booty then acquired (including enslaved free women) was disposed of by enforced purchase at arbitrarily fixed prices (*tarḥ*).

Shaykh suffered from a condition in his legs which

at times made walking impossible, and his health deteriorated throughout 823/1420. On 15 Djumādā II 823/27 June 1420, al-Ṣārimī Ibrāhīm died, leaving no obvious successor to the sultanate. Shaykh designated his infant son, Aḥmad (born 2 Djumādā I 822/27 May 1419) as his heir. Shaykh himself died on 9 Muḥarram 824/14 January 1421, and was buried in the Mu'ayyadī mosque, which he had built by the Zuwayla Gate. Less than a year later, al-Muẓaffar Aḥmad was deposed by the usurper Ṭaṭar al-Ẓāhirī.

Bibliography: There are two contemporary accounts of the reign: by Maḳrīzī (d. 845/1442), *K. al-Sulūk li-maʿrifat duwal al-mulūk*, iv/1, 243-551, Cairo 1972; and by his younger contemporary, Ibn Taghrībirdī (d. 874/1470), *al-Nudjūm al-zāhira fī mulūk Miṣr wa 'l-Ḳāhira*, xiv, 1-166 (Cairo edn.) = Popper, vi/2, 322-431; tr. iii, 15-120. A later account is given by Ibn Iyās (b. 852/1448), *Badā'iʿ al-zuhūr fī waḳā'iʿ al-duhūr*, ii, 3-63, Wiesbaden 1972 (translation by G. Wiet, *Journal d'un bourgeois du Caire*, Paris 1955-60, index).

(P.M. HOLT)

MU'AYYAD-ZĀDE or MÜ'EYYED-ZĀDE, ʿABD AL-RAḤMĀN B. ʿALĪ ČELEBĪ, an important Ottoman theologian and legist.

Born in 860/1456 in Amasya of the family of Mu'ayyad-zāde (his father ʿAlī was one of the three sons of Diwrigli-zāde Shams al-Dīn Mu'ayyad Čelebī, d. 851/1447, Shaykh of the Yaʿḳūb Pasha *zāwiye* in Amasya), he became, as a young student of theology, acquainted with prince Bāyezīd, the younger son of Sultan Meḥemmed Fātiḥ and afterwards Sultan, who had been appointed *wālī* of Amasya as a seven year-old boy, and became a member of his circle. It is to this period that his relations with the famous poetess Mihrī Khātūn [*q.v.*] belong. The relations between the gifted youth and the prince, who was about 9 years older than he (born 851/1447), became so intimate that Mu'ayyad soon became the inseparable comrade of Bāyezīd. When Sultan Meḥemmed heard from various sources, especially from a complaint in verse by Ḥalīmī Luṭf ʿAllāh, *ḳāḍī* of Sīwās, who had been gravely insulted by the entourage of the prince, of alleged abuses at the prince's court, especially the orgies of drug-taking (*mukeyyefāt: bersh, afiyūn, maʿdjūn*), he sent a commission of enquiry which arrived in Amasya when the prince was with Mu'ayyad on a pleasure trip to Ladik. The result of the enquiry was the issue of an order for the execution of the two chief culprits, one of whom was Mu'ayyad (this *ḥükm-i sherīf* is given in Ferīdūn, *Medjmūʿa-yi münshe'āt*², Istanbul 1274/1857-8, i, 270-1). From a note by Mu'ayyad in a book bought by him during his stay in Ladik in Rabīʿ I 882/June 1477 (the *Zīdj* of Shems al-Dīn) the date is exactly fixed (the date in Ferīdūn should therefore be altered from 884 to 883; cf. Ḥusām al-Dīn, *Amasya ta'rīkhi*, Istanbul 1927, iii, 230 n. 1). Mu'ayyad, receiving timely warning of the fate threatening him, escaped from Amasya, provided with everything necessary by Bāyezīd, and after a short stay in Ḥalab or Aleppo went to Shīrāz, where he completed his theological studies under the celebrated Djalāl al-Dīn al-Dawwānī [*q.v.*].

When Mu'ayyad returned home, on hearing of Bāyezīd's accession, he received an *idjāza* (teacher's diploma) from al-Dawwānī. In 887/1482 he reached Amasya, where his father had died three months earlier. After staying six weeks here, he went to Istanbul, where his extensive learning soon gained him a reputation among the theologians. Bāyezīd appointed him *müderris* at the Ḳalender-khāne *medrese* in Istanbul. In 891/1486 Mu'ayyad married the daughter of the famous legist Muṣliḥ al-Dīn Kasṭallānī (Mawlāna Kestellī) who was the last *ḳāḍī-ʿasker*-general of the Turkish empire, and after the reforms by which this office was divided, became *ḳāḍī-ʿasker* of Rumelia. Mu'ayyad had a brilliant career: in 899/1494 he became *ḳāḍī* of Edirne; in 907/1501 *ḳāḍī-ʿasker* of Anatolia; in 910/1504-5, *ḳāḍī-ʿasker* of Rumelia and head of all the *ʿulamā'*. In 917/1511 the Janissaries who had taken the part of prince Selīm plundered his house because his sympathies were with Aḥmad, the favourite son of Bāyezīd. He himself was dismissed by the now-senile sultan under pressure from the Janissaries. Selīm I soon after his accession recalled him, however, to his old office, as he saw in him the right man to carry through the important duties of a *ḳāḍī-ʿasker*. Selīm took him with him on his campaign to Persia against Shāh Ismāʿīl. But on the way back, Mu'ayyad was deprived of his office in Čoban Köprü, as symptoms of a mental breakdown had begun to show themselves (920/1514). He died in 922/1516 in Istanbul and was buried in Eyyūb.

Mu'ayyad wrote a number of treatises on law and theology, especially on Ḳur'ānic exegesis. Brockelmann, *GAL*, II², 293-4, S II, 319, and Bursalı Meḥmed Ṭāhir, *ʿOthmanlı mü'ellifleri*, Istanbul 1333/1915, i, 355, give a list of his works that survive in ms. Under the nom-de-plume of Khātimī, Mu'ayyad also wrote poetry in Arabic, Persian and Turkish. His great service to Turkish literature lies, however, less in his own original work than in the magnificent liberality with which he encouraged rising young talent, like the poets Nedjātī and Dhātī, the historians Kemāl-Pasha-Zāde and Muḥyī al-Dīn Meḥmed, the jurist Abu 'l-Suʿūd, and others. Mu'ayyad was also famed as a calligraphist. He was the first Ottoman to form a private library of over 7,000 volumes, a huge figure for the time.

Dichtkunst*, i, 305; Gibb, *HOP*, ii, 29-31; *İA*, art. Müeyyed-zade (M. Tayyib Gökbilgin).

(TH. MENZEL)

MU'AYYID AL-DAWLA, ABŪ MANṢŪR BŪYA B. RUKN AL-DAWLA ḤASAN, Būyid ruler in Iṣfahān, Rayy and most of Djibāl 366-73/976-84. His father Rukn al-Dawla had before his death partitioned his lands between Mu'ayyid al-Dawla (in Iṣfahān, Rayy and their dependencies) and another son Fakhr al-Dawla ʿAlī [*q.v.*] (in Hamadān and Kurdish Djibāl). In the event, Mu'ayyid al-Dawla acknowledged the overlordship of their other brother, ʿAḍud al-Dawla [*q.v.*] of Fārs, and with the latter's support prevented Fakhr al-Dawla from assuming control in the greater part of his allotted territories. Coins minted at Rayy during the years 366 to 373 bearing the names of ʿAḍud al-Dawla and Mu'ayyid al-Dawla show that the latter generally controlled this city. Only after Mu'ayyid al-Dawla's death in Djurdjān whilst campaigning against Fakhr al-Dawla's allies the Ziyārids and Sāmānids (Shaʿbān 373/January 984) was Fakhr al-Dawla able to recover his patrimony and control the whole of the northern Būyid amīrate.

Mu'ayyid al-Dawla had as his secretary and then

vizier the famous Ṣāḥib Ismāᶜīl b. ᶜAbbād [*q.v.*], and the latter is said to have got his sobriquet "the companion" from his long contact with the Būyid prince [see IBN ᶜABBĀD].

Bibliography: See the general sources for Būyid history (Miskawayh, Rū̲dh̲rāwarī, Sibṭ b. al-D̲j̲awzī, Ibn al-At̲h̲īr); G.C. Miles, *The numismatic history of Rayy*, New York 1938, 166-70; Zambauer, *Manuel*, 213. (C.E. BOSWORTH)

AL-**MUᶜAẒẒAM**, AL-MALIK, the title of several Ayyūbid princes. Among these the most important and intriguing figure is doubtless al-Malik al-Muᶜaẓẓam S̲h̲araf al-Dīn ᶜĪsā b. al-Malik al-ᶜĀdil Abī Bakr b. Ayyūb b. S̲h̲ād̲h̲ī b. Marwān. Born in Cairo in 576/1180, he was made ruler of Damascus in 594/1198, a position which he retained until his death from natural causes in 624/1227. Al-Muᶜaẓẓam's career as prince of Damascus, especially its last six years, illustrates with extraordinary clarity the political dynamics of the Ayyūbid confederation's middle phase between the death of Ṣalāḥ al-Dīn [*q.v.*] in 589/1193 and the rise of al-Ṣāliḥ Ayyūb after 637/1240.

Al-Muᶜaẓẓam's career falls into four phases: his youth (576-94/1180-98); his rulership in Damascus under the tutelage of his father al-ᶜĀdil (594-615/1198-1218); the crisis of the Fifth Crusade (615-18/1218-21); finally, the struggle against his brothers al-Kāmil Muḥammad [*q.v.*] and al-As̲h̲raf Mūsā to secure his position in Syria (618-24/1221-7).

His early youth, passed during the heyday of his uncle Ṣalāḥ al-Dīn's wars against the Crusaders and the Ayyūbid succession crisis (589-92/1193-6), is naturally obscure. But the political events of the time must have left a deep impression, and he received the foundations of a thorough education in Arabic letters and the Islamic sciences. He emerged into public life when he became prince of Damascus in 594/1198, but for the next twenty years he was under the close (not to say oppressive) tutelage of his redoutable father al-ᶜĀdil. These years were far from wasted, to be sure: he completed his education, he undertook an ambitious program of construction and restoration in Jerusalem, and he was handed a growing number of important political and military assignments by his father.

The training he had received during the previous two decades was put to a severe test immediately on al-ᶜĀdil's death, when he was called upon to play a major role during the Fifth Crusade. Indeed, al-Muᶜaẓẓam's decisiveness and unwavering support for his elder brother al-Kāmil Muḥammad, now the head of the Ayyūbid confederation, perhaps spelled the difference between victory and catastrophe in this long crisis. In the winter of 615/1219, al-Muᶜaẓẓam nipped in the bud a conspiracy among al-Kāmil's *amīrs* which aimed to replace the sultan with one of his brothers. He was also instrumental in inducing al-As̲h̲raf Mūsā, very much preoccupied with D̲j̲azīran and North Syrian affairs during these years, to come to Egypt and help repel the Crusaders during the critical summer of 618/1221. Perhaps most significantly, al-Muᶜaẓẓam concurred in al-Kāmil's offer (made on three separate occasions) to return Jerusalem and much of Palestine to the Franks in exchange for their withdrawal from Egypt. Al-Muᶜaẓẓam's willingness to go along with this proposal is astonishing; not only did the regions in question represent a substantial part of his own appanage, but he had devoted great sums to the defence and beautification of Jerusalem.

The final phase in his career began with the departure of the Crusaders from Egypt in 618/1221. Al-Muᶜaẓẓam, determined to defend his autonomy and interests in Syria, embarked on a stubborn and daring campaign to undercut all efforts by the sultan al-Kāmil to assert his own authority as head of the confederation there. Gottschalk argues that al-Muᶜaẓẓam was aiming at supremacy within the entire Ayyūbid confederation, but this surely exaggerates his ambitions. Rather, his goal was paramountcy in Syria and Palestine, in order to secure his appanage from the political and military threat posed by his brothers al-As̲h̲raf Mūsā (al-D̲j̲azīra and Armenia) and al-Kāmil of Egypt. The six years between the end of the Fifth Crusade (autumn 618/1221) and al-Muᶜaẓẓam's death (autumn 624/1227) were filled with constantly shifting alliances. But in all the confusion there are some constants. (1) Al-Kāmil and al-As̲h̲raf were allied throughout this period against al-Muᶜaẓẓam; al-Kāmil never took the field, but the mere existence of his 12,000 regular cavalry—a force four times the size of al-Muᶜaẓẓam's—severely limited the latter's freedom of action. (2) Unable to face Egypt directly, al-Muᶜaẓẓam focused on undercutting al-As̲h̲raf's hegemony in D̲j̲azīra by constructing alliances with local rulers' discontent with the status quo in that region. His most consistent ally was Muẓaffar al-Dīn Gökböri of Irbil, but he also drew in the Artuḳid [*q.v.*] princes of Āmid and Mārdīn and al-As̲h̲raf's (and his own) younger brother al-Muẓaffar G̲h̲āzī. (3) Al-Muᶜaẓẓam's own direct aims were limited to establishing a kind of protectorate over the autonomous Ayyūbid appanages of Ḥimṣ and Hamāt, an achievement which would have secured his paramountcy in Syria. But however modest, this goal persistently eluded him. (4) The dynamics of the situation inevitably led to the calling in of powerful outsiders: The K̲h̲ʷārazms̲h̲āh D̲j̲alāl al-Dīn Mingburnu [*q.v.*] by al-Muᶜaẓẓam, the Rūm Sald̲j̲ūḳid sultan ᶜAlāᵓ al-Dīn Kayḳubād̲h̲ [*q.v.*] by al-As̲h̲raf, and the Emperor Frederick II by al-Kāmil. These men of course had ambitions of their own, and their intervention came near to undermining Ayyūbid rule throughout Syria and al-D̲j̲azīra. The threat which they posed was resolved only after al-Muᶜaẓẓam's demise.

Al-Muᶜaẓẓam made an abortive effort to seize Ḥamāt in 619-20/1223, but this was frustrated by the opposition of al-As̲h̲raf and al-Kāmil. Realising that he lacked the resources to act alone, al-Muᶜaẓẓam formed an alliance against al-As̲h̲raf with al-Muẓaffar G̲h̲āzī and Gökböri in 621/1224, but this achieved nothing; indeed, al-As̲h̲raf's domination of North Syria and al-D̲j̲azīra was only strengthened. In the following year (622/1225), al-Muᶜaẓẓam took advantage of the sudden appearance in ᶜIrāḳ of the K̲h̲ʷārazms̲h̲āh D̲j̲alāl al-Dīn to frame a new alliance with him. Al-Muᶜaẓẓam went so far as to accept robes of honor from the K̲h̲ʷārazms̲h̲āh, but the statement of al-Maḳrīzī that the K̲h̲ʷārazms̲h̲āh's name was substituted for al-Kāmil's in the *k̲h̲uṭba* and *sikka* finds no support in surviving coinage or contemporary texts. Al-Muᶜaẓẓam wanted D̲j̲alāl al-Dīn as an ally, not as a suzerain. Hostilities opened in D̲j̲umādā II 623/June 1226; fighting throughout the summer and autumn was severe and widespread, but again it led to little. Al-As̲h̲raf meantime countered by calling in the Rūm Sald̲j̲ūḳid Kayḳubād̲h̲, while al-Kāmil secretly opened negotiations with Emperor Frederick II, who was known to be planning a new Crusade. By now the situation was nearly out of control. Finally, in Ramaḍān 623/September 1226 al-As̲h̲raf travelled to Damascus to try to negotiate an end to the spiraling conflict. His hopes were quickly disappointed; al-

Muʿaẓẓam in effect detained him as a hostage for nearly ten months (Djumādā II 624/May-June 1227), until al-Ashraf conceded a free hand in Ḥimṣ and Ḥamāt to him. Upon his release, of course, al-Ashraf at once denounced this agreement. The struggle was now reopened, complicated all the more by the arrival of Frederick II's advance forces in Acre in Shawwāl 624/October 1227. Al-Muʿaẓẓam seemed cornered, but he was as bold and resourceful as ever, and he had maintained his alliance with the Khʷārazmshāh. Only his unexpected death in Dhu 'l-Ḳaʿda 624/November 1227 averted open civil war, and perhaps catastrophe for the Ayyūbid confederation.

With a sudden power vacuum in Damascus, which al-Muʿaẓẓam's son and successor al-Nāṣir Dāwūd could not fill, al-Kāmil, al-Ashraf, and Frederick were quickly able to settle matters to their mutual satisfaction. Jerusalem was turned over to the Emperor under the terms of a ten-year truce, the hapless al-Nāṣir Dāwūd was evicted from Damascus in 626/1229 and made lord of Transjordan, and al-Ashraf avenged his humiliation at the hands of his late brother by becoming prince of Damascus. Finally, as the guiding force behind this settlement, al-Kāmil for the first time achieved uncontested (though hardly unlimited) authority over all the princes of the Ayyūbid confederation.

However turbulent al-Muʿaẓẓam's relations with his fellow princes, his administration of his own territories seems to have been remarkably stable. In contrast to his father al-ʿĀdil, his reign was untroubled by turbulence among his senior *amīrs*—in large part, no doubt, because he had been able to replace the old guard with his own men during the years he had ruled Damascus under al-ʿĀdil's firm guidance. Some of al-Muʿaẓẓam's territories had been assigned in hereditary *iḳṭāʿ* to various younger brothers—e.g. Bānyās to al-ʿAzīz ʿUthmān and Buṣrā to al-Ṣāliḥ Ismāʿīl—but these men were firmly under his thumb. Likewise, the important town and fortress of Ṣalkhad was held in *iḳṭāʿ* by his *mamlūk* ʿIzz-al-Dīn Aybak al-Muʿaẓẓamī. For the most part, however, al-Muʿaẓẓam governed his principality through almost anonymous lieutenants (*nuwwāb*) whom he could rotate or replace at will. During the summer of 622/1225, he did face an uprising in the Ghūṭa led by a rural bandit named Shams al-Dīn b. al-Kaʿkī, but this was quickly suppressed. Other signs of social unrest are conspicuous by their absence.

The tortuous political history of al-Muʿaẓẓam's reign gives a very partial and distorted picture of his character and achievements, for he was himself a learned man and a committed patron of literature, the Islamic sciences, and architecture. He sponsored an Arabic translation of the *Shāh-nāme*, he ordered the Ḥanbalī scholar Djamāl al-Dīn ʿAbd al-Ghanī to reorganise the traditions in Aḥmad b. Ḥanbal's *Musnad* according to topic, and he had a ten-volume compilation of Ḥanafī *fiḳh* made up for his personal use. Al-Muʿaẓẓam, an ardent Ḥanafī, took an active part in polemical disputations among the schools. He regarded himself as a *faḳīh*, and his entourage perforce agreed with him.
